Spaceflight Decompression Sickness Contingency Plan

Joe Dervay, M.D.
Spaceflight Decompression Sickness Contingency Plan

- Approach
- DCS Contingency Plan Overview
- Extravehicular Activity (EVA) Cuff Classifications
- On-orbit Treatment Philosophy
- Long Form Malfunction Procedure (MAL)
- Medical Checklist
- Flight Rules
- Crew Training
- Flight Surgeon / Biomedical Engineer (BME) Training
- DCS Emergency Landing Site
Medical Operations

Spaceflight Decompression

Sickness Contingency Plan

Dr. Joe Dervay
Mission Support

On-orbit Flight Control Room (FCR) Staffing

Surgeon Console - FCR
• **Current ISS Prebreathe Protocols**
  - Four hour In-suit (Originally accepted by testing. Currently acceptable by analysis)
  - Campout (Accepted by analysis of related data/similarity to shuttle 10.2 psi staged protocol)
  - Exercise Prebreathe (Accepted by testing utilizing the criteria below)

• **Accept Criteria for ISS EVA Prebreathe Protocols***
  - One-year “DCS Risk Definition & Contingency Plan” effort designated accept criteria of research protocol
    » Decompression Sickness (DCS) < 15 % at 95% CL
    » Grade 4 Venous Gas Emboli (VGE) < 20 % at 95% CL
    » No Type II (serious) DCS

*This criteria was not applied to the shuttle protocols*
• Operational Experience
  – To date, there have been 141 person-EVAs conducted with 10.2 psi Staged PB Protocol
    » 12-16 hr stay at 10.2 --- 20 Final PB
    » 16-20 hr stay at 10.2 --- 4 75 min
    » 20-24 hr stay at 10.2 --- 12 60 min
    » 24 hr > stay at 10.2 ---- 105 50 min
    » 24 hr > stay at 10.2 ---- 40 min
  – In no case has there been any reported symptoms or signs of DCS
OBJECTIVE:

• Develop enhanced plan to diagnose, treat, and manage on-orbit DCS
  – Achieve new level of DCS awareness among flight controllers, astronauts, and the medical community

• Historically, few drivers to modify existing plan

• Significant upcoming increase in EVA activity to build and maintain ISS - “Wall of EVA’s”

• Important to involve International Partners with plan
APPROACH:

- Johnson Space Center multi-disciplinary team: Medical Operations, Astronaut Office, EVA Office, Mission Operations Directorate

- Consultation with military, civilian, and commercial experts

- Review of literature and databases

- Analysis of past Mission Control “Simulation” scenarios

- Overall plan reviewed by expert committee chaired by Dr. Lambertson (1998)
DCS Contingency Plan

- EVA Checklist Development
  - Shuttle / EMU
  - ISS / EMU
  - Russian / ORLAN

- Improved On-Orbit DCS Treatment
  - Insuit Treatment
  - BTA Mods
  - Hyperbaric Chamber Technology Dev.
  - Adjunctive Drug Therapy

- DCS Flight Rules Development
  - Mission Control DCS Simulation Program
  - Crew Flight Surgeon Training

- Ground Support Infrastructure
  - Primary Hyperbaric Landing Sites
  - Cooperative USAF/NASA Programs
  - Russian EMS Plan

- DCS Disposition Policy
EVA “CUFF CLASSIFICATION” SYSTEM:

- Simple operational classification of DCS symptoms relevant to EVA crewmember.

- Provides clear communication of symptoms and associated operational response.

- Defines actions required to place payload in safe configuration and repress affected crewmember.

- Sensible system to encourage symptom reporting.
# EVA CUFF CLASSIFICATIONS

<table>
<thead>
<tr>
<th>Cuff Class</th>
<th>Symptoms</th>
<th>Response</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Mild pain, at single or multiple sites and/or single extremity paresthesia. Difficult to distinguish from suit pressure points. <em>Symptoms do not interfere with performance.</em></td>
<td>Report in post EVA PMC. No future EVA impact.</td>
<td>1-8</td>
</tr>
<tr>
<td>2</td>
<td>Moderate cuff 1 symptoms that interfere with performance.</td>
<td>Terminate EVA for both crew members, perform worksite clean-up only, minimize activity of affected crew member. Perform repress.</td>
<td>3,6 9-10</td>
</tr>
<tr>
<td></td>
<td></td>
<td><em>Set up PMC post repress.</em></td>
<td></td>
</tr>
</tbody>
</table>
## EVA CUFF CLASSIFICATIONS (cont.)

<table>
<thead>
<tr>
<th>Cuff Class</th>
<th>Symptoms</th>
<th>Response</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td><strong>Severe cuff 1 symptoms</strong> or migratory, trunkal or multiple site paresthesia, unusual headache.</td>
<td>Terminate EVA. Assisted return of affected crew member to airlock, buddy perform worksite safing, then airlock repress. Set up PMC.</td>
<td>12,13</td>
</tr>
<tr>
<td>4</td>
<td>Serious symptoms – Central neurological, cardiopulmonary.</td>
<td>Abort EVA. Crew assisted return to airlock. Repress affected crew member. Buddy perform worksite safing, then airlock depress, repress. Set up PMC.</td>
<td>14-19</td>
</tr>
</tbody>
</table>
RATIONALÉ:

• Spacesuit itself creates pressure points, joint pains, and local paresthesias

• Majority of pain symptoms (86%) in historic database improved or remained the same with time

• Low risk of mild or moderate symptoms progressing to serious

• Worksite safing important for potential Shuttle de-orbit as well as Station operations

• May require 30-45 min. transit to airlock from worksite location

• With serious symptoms, may need to repress affected crewmember ASAP while solo crewmember completes clean-up tasks
TREATMENT PHILOSOPHY:

- Oxygen, pressure, and time are definitive measures
  - Fluids and medications are adjunctive

- Provide higher pressures and longer times than proven 2-hr. Ground Level Oxygen (GLO) – treat gas phase, not just symptoms

- Avoid breaking suit integrity for 20-30 min. for installation of Bends Treatment Apparatus (BTA) [increases suit pressure to 8 psi]

- Development of treatment flows, extensions

- Conversion into Malfunction (MAL) Procedures

- Enhanced Medical Checklist
  - Aftercare
  - Addresses late and recurrent “hit”
If STS at 10.2 psi

Stay in Press Mode
20 Min in Suit
(10.2 + 4.3 = 14.5 psi)

Yes
Sx Resolved

Remain in Suit
Additional 160 Min.

Doff Suit

- CMO PE/Neuro Check
- Hydrate (Isotonic Fluid po, 1 liter/hr)
- Limit activity
- PMC

Aftercare
- RTD 24 Hrs.
- Medical Check Prior to EVA
(72 Hr)

No

Sx Unresolved,
Worse or No Change

20 Min. Extension

Doff Suit

If any symptoms remain, Check MCC/PMC
(Possible Additional O₂, BTA, Orlan Ops.)

Block 1

Aftercare
- Periodic Medical Eval.
- RTD 24 Hr.
- Reduced Pressure/EVA
(Case by Case)
(72 Hr. - 7 Days)
20.1 DCS TREATMENT

1. Determine Cuff Class
   - Cuff Class 1
   - Cuff Class 2 or 3 (Report to MCC)
   - Cuff Class 4 (Report to MCC)

2. Continue EVA.
   - If symptoms resolve upon DEPRESS, go to Cuff Class 2.
   - Report to Surgeon next PMC.

3. Terminate EVA (Cuff Cl 7).
   - Unaffected crewmember slow safety tether, perform worksite cleanup and/or PLB salvaging.
   - MCC for PLB config.
   - Perform DEPRESS (Cuff Cl 7).

4. If terminating for Cuff Class 3:
   - PMC on AG 1.
   - COMM Mode – HL.
   - A/V CTR UHF AG 2 – T/R.
   - AG 1 – OFF.

5. O2/N2 CNTLR VLV SYS 1, 2 (two) – OP.
   - Perform DEPRESS (DEPRESS, DEPRESS Cuff Card).
   - Perform DEPRESS, omk step 2 (DEPRESS, DEPRESS Cuff Card).
   - Perform DCS exam (MED C1).
   - Remain on SCU.
   - PMC.

6. Does MCC require EMU LOCH changeout?
   - YES
   - NO

7. Perform LOCH REPLACEMENT (CREWMEMBER IN SUIT) EMU CONT PROC.
   - Continue steps 3, 17, 18.

8. Can crewmember speak in full sentences w/o respiratory distress?
   - YES
   - NO

9. Leave O2 ACT - PRESS for 20 min.
   - OCS signs or symptoms resolved?
   - YES
   - NO

10. Leave O2 ACT - PRESS for 20 min.
    - EMU report changes in OCS symptoms per OCS exam criteria to Surgeon as requested.
**DCS Neurological exam:**

- Simple exam to assess symptoms, and follow over time (in-suit & out-of-suit)
- Can be performed by non-physician Crew Medical Officer (CMO)
- Challenge to perform exam with patient in the suit

Medical Operations

Spaceflight Decompression Sickness Contingency Plan

Dr. Joe Dervay
MEDICAL KITS

• IV Fluids
  – Shuttle: 3.1 liters normal saline
  – ISS: 12.1 liters normal saline

• Medication
  – Compiled to cover broad range of potential conditions
    » Includes limited quantities of Dexamethasone and Lidocaine

• ISS Respirator – Autovent 2000 (Allied Health)

• ISS Defibrillator – PD 2000 (Zoll Medical)
FLIGHT RULES:

• Pre-established rules for Flight Control Team to respond in coordinated manner

• Avoid miscommunication across multiple disciplines

• Documents Cuff Classes, deorbit requirements to Primary Hyperbaric Care site (3 CONUS, Hickam, Guam), deorbit within 10 hrs. for unresolved Type II symptoms
TRAINING:

- Astronauts
  - MAL checklists
  - New class on Medical Evaluation of DCS
    » Physiology, symptoms, treatment, neuro exam
    » Video of DCS Neurological exam

- Flight Surgeon/Biomedical Engineer
  - DCS syllabus, console requirements, CME courses

- Mission Control Simulations
DCS EMERGENCY LANDING SITES

• Primary Hyperbaric Care Landing Sites
  – Chamber capabilities, proximity to trauma center, points of contact being coordinated with DDMS medical personnel

• Russian Landing Site Capability and Response
  – Work in progress to further document plan
**PRP EXERCISE STRATEGIES**

- **Upright dual arm and leg cycle exercise (ALE)**
- **Semi-recumbent intermittent light exercise simulating astronaut tasks (ILE)**

<td></td>
</tr>
<tr>
<td>EVA PET = 6:30</td>
<td></td>
</tr>
<tr>
<td>POST SLEEP 75 min</td>
<td></td>
</tr>
<tr>
<td>60 min Mask PB</td>
<td></td>
</tr>
</tbody>
</table>

*If the EVA is scheduled within 36 hours of 10.2 Dep, this table may be used to calculate the Final EMU PB time.

**The less time spent at 10.2, the longer the Final EMU Prebreathe time will be; thus, resulting in an overall longer crew day length. See chart.

***If the EVA is scheduled later than 36 hours from 10.2 Dep, the initial PB may be eliminated and the final in-suit PB is 40 mins.

**Note:** Assume depress with AIRLK DEPRESS vlv; 15 min. With 2 hours of Pre-sleep, **STS Crew Day length = 14:17.**

### EVA DAY SUMMARY (continued)

- In-suit Prebreathe (40 to 75 mins depending on the time at 10.2 psi)
- Crewlock Depress to vacuum (15 mins)
- EVA tasks (6 hours 30 mins)
- Airlock Repress (20 mins)
- Post EVA without EMU H2O Recharge or METOX Regeneration (1 hour)
- Pre Sleep (2 hours)
