Sickness Contingency Plan

Dr. Joe Dervay

**Current ISS Prebreathe Protocols**
- Four hour In-suit (Originally accepted by testing. Currently acceptable by analysis)
- Campout (Accepted by analysis of related data/similarity to shuttle 10.2 psi staged protocol)
- Exercise Prebreathe (Accepted by testing utilizing the criteria below)

**Accept Criteria for ISS EVA Prebreathe Protocols***
- One-year “DCS Risk Definition & Contingency Plan” effort designated accept criteria of research protocol
  - Decompression Sickness (DCS) < 15 % at 95% CL
  - Grade 4 Venous Gas Emboli (VGE) < 20 % at 95% CL
  - No Type II (serious) DCS

*This criteria was not applied to the shuttle protocols*
• Operational Experience
  – To date, there have been 141 person-EVAs conducted with 10.2 psi Staged PB Protocol
    » 12-16 hr stay at 10.2 --- 20 Final PB
      » 75 min
    » 16-20 hr stay at 10.2 --- 4
      » 60 min
    » 20-24 hr stay at 10.2 --- 12
      » 50 min
    » 24 hr > stay at 10.2 ---- 105
      » 40 min
  – In no case has there been any reported symptoms or signs of DCS
OBJECTIVE:

- Develop enhanced plan to diagnose, treat, and manage on-orbit DCS
- Achieve new level of DCS awareness among flight controllers, astronauts, and the medical community

Historically, few drivers to modify existing plan

Significant upcoming increase in EVA activity to build and maintain ISS - "Wall of EVA's"

Important to involve International Partners with plan
**APPROACH:**

- Johnson Space Center multi-disciplinary team: Medical Operations, Astronaut Office, EVA Office, Mission Operations Directorate

- Consultation with military, civilian, and commercial experts

- Review of literature and databases

- Analysis of past Mission Control “Simulation” scenarios

- Overall plan reviewed by expert committee chaired by Dr. Lambertson (1998)
EVA “CUFF CLASSIFICATION” SYSTEM:

- Simple operational classification of DCS symptoms relevant to EVA crewmember
- Provides clear communication of symptoms and associated operational response.
- Defines actions required to place payload in safe configuration and repress affected crewmember
- Sensible system to encourage symptom reporting
## EVA CUFF CLASSIFICATIONS

<table>
<thead>
<tr>
<th>Cuff Class</th>
<th>Symptoms</th>
<th>Response</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Mild pain</strong>, at single or multiple sites and/or single extremity paresthesia. Difficult to distinguish from suit pressure points. <em>Symptoms do not interfere with performance.</em></td>
<td>Report in post EVA 1-8 PMC. No future EVA impact.</td>
<td>1-8</td>
</tr>
<tr>
<td>2</td>
<td><strong>Moderate cuff 1 symptoms that interfere with performance.</strong></td>
<td>Terminate EVA for both crew members, perform worksite clean-up only, minimize activity of affected crew member. Perform repress.</td>
<td>3,6 9-10</td>
</tr>
</tbody>
</table>

*Set up PMC post repress.*
## EVA CUFF CLASSIFICATIONS (cont.)

<table>
<thead>
<tr>
<th>Cuff Class</th>
<th>Symptoms</th>
<th>Response</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Severe cuff 1 symptoms or migratory, trunkal or multiple site paresthesia, unusual headache.</td>
<td>Terminate EVA. Assisted return of affected crew member to airlock, buddy perform worksite safing, then airlock repress. Set up PMC.</td>
<td>12,13</td>
</tr>
<tr>
<td>4</td>
<td>Serious symptoms – Central neurological, cardiopulmonary.</td>
<td>Abort EVA. Crew assisted return to airlock. Repress affected crew member. Buddy perform worksite safing, then airlock depress, repress. Set up PMC.</td>
<td>14-19</td>
</tr>
</tbody>
</table>
RATIONAL: 

- Spacesuit itself creates pressure points, joint pains, and local paresthesias
- Majority of pain symptoms (86%) in historic database improved or remained the same with time
- Low risk of mild or moderate symptoms progressing to serious
- Worksite safing important for potential Shuttle de-orbit as well as Station operations
- May require 30-45 min. transit to airlock from worksite location
- With serious symptoms, may need to repress affected crewmember ASAP while solo crewmember completes clean-up tasks
TREATMENT PHILOSOPHY:

• Oxygen, pressure, and time are definitive measures
  – Fluids and medications are adjunctive

• Provide higher pressures and longer times than proven 2-hr. Ground Level Oxygen (GLO) – treat gas phase, not just symptoms

• Avoid breaking suit integrity for 20-30 min. for installation of Bends Treatment Apparatus (BTA) [increases suit pressure to 8 psi]

• Development of treatment flows, extensions

• Conversion into Malfunction (MAL) Procedures

• Enhanced Medical Checklist
  – Aftercare
  – Addresses late and recurrent “hit”
If STS at 10.2 psi

- Stay in Press Mode
- 20 Min in Suit
- (10.2 + 4.3 = 14.5 psi)

If any symptoms remain, Check MCC/PMC
(Possible Additional O₂, BTA, Orlan Ops.)

Sx Resolved

- CMO PE/Neuro Check
- Hydrate (Isotonic Fluid po, 1 liter/hr)
- Limit activity
- PMC

Sx Unresolved, Worse or No Change

- 20 Min. Extension

Sx Unresolved, Worse or No Change

- 20 Min. Extension

Block 1

Aftercare

- Periodic Medical Eval.
- RTD 24 Hr.
- Reduced Pressure/EVA
  (Case by Case)
  (72 Hr. - 7 Days)

If any symptoms remain, Check MCC/PMC
(Possible Additional O₂, BTA, Orlan Ops.)

Sx Resolved

Class 1

No Rx Required

If STS at 14.7 psi

- ISS at 14.7 psi

- Repress STS to 14.7 psi

Sx Resolved

Remain in Suit 150 Min.
- (14.7 + 4.3 = 19 psi)

Sx Unresolved, Worse or No Change

- 20 Min. Extension

Sx Unresolved, Worse or No Change

- 20 Min. Extension

Doff Suit

Block 1

Aftercare

- RTD 24 Hrs.
- Medical Check Prior to EVA
  (72 Hr.)

Sx Resolved

Class 2, 3

Terminate EVA; In Airlock on SCU

Repress

Possible Suit LiOH Change out

Remain in Suit Additional 160 Min.

1

Doff Suit

1

A

B
**DCS Neurological exam:**

- Simple exam to assess symptoms, and follow over time (in-suit & out-of-suit)
- Can be performed by non-physician Crew Medical Officer (CMO)
- Challenge to perform exam with patient in the suit

MEDICAL KITS

• IV Fluids
  – Shuttle: 3.1 liters normal saline
  – ISS: 12.1 liters normal saline

• Medication
  – Compiled to cover broad range of potential conditions
    » Includes limited quantities of Dexamethasone and Lidocaine

• ISS Respirator – Autovent 2000 (Allied Health)

• ISS Defibrillator – PD 2000 (Zoll Medical)
FLIGHT RULES:

• Pre-established rules for Flight Control Team to respond in coordinated manner

• Avoid miscommunication across multiple disciplines

• Documents Cuff Classes, deorbit requirements to Primary Hyperbaric Care site (3 CONUS, Hickam, Guam), deorbit within 10 hrs. for unresolved Type II symptoms
TRAINING:

- Astronauts
  - MAL checklists
  - New class on Medical Evaluation of DCS
    » Physiology, symptoms, treatment, neuro exam
    » Video of DCS Neurological exam

- Flight Surgeon/Biomedical Engineer
  - DCS syllabus, console requirements, CME courses

- Mission Control Simulations
DCS EMERGENCY LANDING SITES

• Primary Hyperbaric Care Landing Sites
  – Chamber capabilities, proximity to trauma center, points of contact being coordinated with DDMS medical personnel

• Russian Landing Site Capability and Response
  – Work in progress to further document plan

  - Crew Flight Surgeon Training

- **Ground Support Infrastructure**
  - Primary Hyperbaric Landing Sites
  - Cooperative USAF/NASA Programs
  - Russian EMS Plan

- **DCS Disposition Policy**
EVA “CUFF CLASSIFICATION” SYSTEM:

- Simple operational classification of DCS symptoms relevant to EVA crewmember
- Provides clear communication of symptoms and associated operational response
- Defines actions required to place payload in safe configuration and repress affected crewmember
- Sensible system to encourage symptom reporting
FLIGHT RULES:

- Pre-established rules for Flight Control Team to respond in coordinated manner

- Avoid miscommunication across multiple disciplines

- Documents Cuff Classes, deorbit requirements to Primary Hyperbaric Care site (3 CONUS, Hickam, Guam), deorbit within 10 hrs. for unresolved Type II symptoms
DCS TREATMENT

1. Determine Cuff Class
   - Cuff Class 1
   - Cuff Class 2 or 3 (Report to MCC)
   - Cuff Class 4 (Report to MCC)

2. Continue EVA
   - If symptoms resolve upon REPRESSION, go to Cuff Class 2
   - Report to Surgeon next PMU

3. Terminate EVA (Cuff CL 7)
   - Unaffected crewmember slow safety tether
   - Perform worksite cleanup and/or PLB salting
   - MCC for PLB config
   - Perform INGRESS (Cuff CL 4)

   If terminating for Cuff Class 3:
   - FMC on AVG 1
   - COMM Mode – HL
   - AUD CTR UHF AVG 2 – T/R
   - A/G 1 – OFF

   (L2)
   - O2/N2 CTNR VLV SYS 1.2 (two) – OP
   - Perform PRE-REPRESSION (REPRESSION Cue Card)
   - Perform REPRESSION, omit step 2 (REPRESSION Cue Card)
   - Perform DCS exam (MED CL)
   - Remain on SCU

   Class MCC requires EMU LCH changeout?

   YES
   - Perform LCH REPLACEMENT (CREWMEMBER IN SUIT) EMU CONT PMCS, omitting steps 3, 17, 18

   NO

4. Perform O2 ACT – PRESS for 20 min
   - O2 ACT – PRESS for addl. 160 min
   - CMO report changes in DCS symptoms per DCS 2 exam criteria to Surgeon as requested
RESULTS: 90 MIN PROTOCOLS
(not to scale)
