Spaceflight Decompression Sickness Contingency Plan

Dr. Joe Dervay

• Current ISS Prebreathe Protocols
  – Four hour In-suit (Originally accepted by testing. Currently acceptable by analysis)
  – Campout (Accepted by analysis of related data/similarity to shuttle 10.2 psi staged protocol)
  – Exercise Prebreathe (Accepted by testing utilizing the criteria below)

• Accept Criteria for ISS EVA Prebreathe Protocols*
  – One-year “DCS Risk Definition & Contingency Plan” effort designated accept criteria of research protocol
    » Decompression Sickness (DCS) < 15 % at 95% CL
    » Grade 4 Venous Gas Emboli (VGE) < 20 % at 95% CL
    » No Type II (serious) DCS

* This criteria was not applied to the shuttle protocols
• Operational Experience
  – To date, there have been 141 person-EVAs conducted with 10.2 psi Staged PB Protocol
    » 12-16 hr stay at 10.2 --- 20  Final PB
    » 16-20 hr stay at 10.2 --- 4    75 min
    » 20-24 hr stay at 10.2 --- 12   60 min
    » 24 hr > stay at 10.2 ---- 105  50 min
    » 24 hr > stay at 10.2 ---- 105  40 min
  – In no case has there been any reported symptoms or signs of DCS
OBJECTIVE:

- Develop enhanced plan to diagnose, treat, and manage on-orbit DCS
  - Achieve new level of DCS awareness among flight controllers, astronauts, and the medical community

- Historically, few drivers to modify existing plan

- Significant upcoming increase in EVA activity to build and maintain ISS - “Wall of EVA’s”

- Important to involve International Partners with plan
Spaceflight Decompression Sickness Contingency Plan

Dr. Joe Dervay

Approach:

- Johnson Space Center multi-disciplinary team: Medical Operations, Astronaut Office, EVA Office, Mission Operations Directorate
- Consultation with military, civilian, and commercial experts
- Review of literature and databases
- Analysis of past Mission Control “Simulation” scenarios
- Overall plan reviewed by expert committee chaired by Dr. Lambertson (1998)
EVA “CUFF CLASSIFICATION” SYSTEM:

- Simple operational classification of DCS symptoms relevant to EVA crewmember

- Provides clear communication of symptoms and associated operational response.

- Defines actions required to place payload in safe configuration and repress affected crewmember

- Sensible system to encourage symptom reporting
## EVA CUFF CLASSIFICATIONS

<table>
<thead>
<tr>
<th>Cuff Class</th>
<th>Symptoms</th>
<th>Response</th>
<th>Rationale</th>
</tr>
</thead>
</table>
| 1          | Mild pain, at single or multiple sites and/or single extremity paresthesia. Difficult to distinguish from suit pressure points. 
- Symptoms do not interfere with performance. | Report in post EVA PMC. No future EVA impact.     | 1-8        |
| 2          | Moderate cuff 1 symptoms that interfere with performance.                 | Terminate EVA for both crew members, perform worksite clean-up only, minimize activity of affected crew member. Perform repress. 
Set up PMC post repress. | 3,6        |

*PMC: Paresthesia Management Center*
### EVA CUFF CLASSIFICATIONS (cont.)

<table>
<thead>
<tr>
<th>Cuff Class</th>
<th>Symptoms</th>
<th>Response</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Severe cuff 1 symptoms or migratory, trunkal or multiple site paresthesia, unusual headache.</td>
<td>Terminate EVA. Assisted return of affected crew member to airlock, buddy perform worksite safing, then airlock repress. Set up PMC.</td>
<td>12,13</td>
</tr>
<tr>
<td>4</td>
<td>Serious symptoms – Central neurological, cardiopulmonary.</td>
<td>Abort EVA. Crew assisted return to airlock. Repress affected crew member. Buddy perform worksite safing, then airlock depress, repress. Set up PMC.</td>
<td>14-19</td>
</tr>
</tbody>
</table>
**RATIONALE:**

- Spacesuit itself creates pressure points, joint pains, and local paresthesias

- Majority of pain symptoms (86%) in historic database improved or remained the same with time

- Low risk of mild or moderate symptoms progressing to serious

- Worksite safing important for potential Shuttle de-orbit as well as Station operations

- May require 30-45 min. transit to airlock from worksite location

- With serious symptoms, may need to repress affected crewmember ASAP while solo crewmember completes clean-up tasks
TREATMENT PHILOSOPHY:

• Oxygen, pressure, and time are definitive measures
  – Fluids and medications are adjunctive

• Provide higher pressures and longer times than proven 2-hr. Ground Level Oxygen (GLO) – treat gas phase, not just symptoms

• Avoid breaking suit integrity for 20-30 min. for installation of Bends Treatment Apparatus (BTA) [increases suit pressure to 8 psi]

• Development of treatment flows, extensions

• Conversion into Malfunction (MAL) Procedures

• Enhanced Medical Checklist
  – Aftercare
  – Addresses late and recurrent “hit”
Terminate EVA; In Airlock on SCU

If STS at 10.2 psi

Stay in Press Mode
20 Min in Suit
(10.2 + 4.3 = 14.5 psi)

Yes

Sx Resolved

Remain in Suit Additional 160 Min.

Doff Suit

- CMO PE/Neuro Check
- Hydrate (Isotonic Fluid po, 1 liter/hr)
- Limit activity
- PMC

No

Sx Unresolved, Worse or No Change

20 Min. Extension

Sx Unresolved, Worse or No Change

Doff Suit

If any symptoms remain, Check MCC/PMC
(Possible Additional O₂, BTA, Orlan Ops.)

Sx Resolved

- RTD 24 Hrs.
- Medical Check Prior to EVA
(72 Hr)

Block 1

A

Aftercare

- Periodic Medical Eval.
- RTD 24 Hr.
- Reduced Pressure/EVA
(Case by Case)
(72 Hr. - 7 Days)

B

If STS at 14.7 psi

ISS at 14.7 psi

Repress STS to 14.7 psi

Possible Suit LiOH Change out

Remain in Suit 150 Min.
(14.7 + 4.3 = 19 psi)

Sx Unresolved, Worse or No Change

20 Min. Extension

Sx Unresolved, Worse or No Change

Doff Suit

Block 1

No Rx Required

Class 1

No Rx Required

Class 2,3

Terminate EVA; In Airlock on SCU

Repress

PMC

PMC

Sx Resolved
DCS Neurological exam:

- Simple exam to assess symptoms, and follow over time (in-suit & out-of-suit)
- Can be performed by non-physician Crew Medical Officer (CMO)
- Challenge to perform exam with patient in the suit

FLIGHT RULES:

• Pre-established rules for Flight Control Team to respond in coordinated manner

• Avoid miscommunication across multiple disciplines

• Documents Cuff Classes, deorbit requirements to Primary Hyperbaric Care site (3 CONUS, Hickam, Guam), deorbit within 10 hrs. for unresolved Type II symptoms
TRAINING:

- Astronauts
  - MAL checklists
  - New class on Medical Evaluation of DCS
    » Physiology, symptoms, treatment, neuro exam
    » Video of DCS Neurological exam

- Flight Surgeon/Biomedical Engineer
  - DCS syllabus, console requirements, CME courses

- Mission Control Simulations
DCS EMERGENCY LANDING SITES

• Primary Hyperbaric Care Landing Sites
  – Chamber capabilities, proximity to trauma center, points of contact being coordinated with DDMS medical personnel

• Russian Landing Site Capability and Response
  – Work in progress to further document plan
Upright dual arm and leg cycle exercise (ALE)

Semi-recumbent intermittent light exercise simulating astronaut tasks (ILE)

**EVA PET = 6:30**

**POST EVA w/o H2O**

* EV1 must start exercise within 10 min after PB initiate, EV2 must start exercise within 25 min after PB initiate to maintain 45 minute of mask time after exercise per FR*

**Note:** Assume depress pump and EMERG MPEV & AL VAJ; 40 min C-Lk depress with built in hold at 5psi PET = 25. With 2 hours of Pre-sleep, **STS Crew Day length = 15:42.**
### Shuttle 10.2 PSI Staged Protocol Timeline

#### Spaceflight Decompression Sickness Contingency Plan

**Dr. Joe Dervay**

**A/L Dep (15 min)**

<table>
<thead>
<tr>
<th>Time</th>
<th>Event</th>
<th>Duration</th>
</tr>
</thead>
<tbody>
<tr>
<td>4:23</td>
<td>A/L Dep</td>
<td>15 min</td>
</tr>
</tbody>
</table>

**Note:** Assume depress with AIRLK DEPRESS vlv; 15 min. With 2 hours of Pre-sleep, **STS Crew Day length = 14:17**.

**1 OR MORE DAYS PRIOR TO EVA DAY**

- Mask Prebreathe (1 hour)
- Depress Shuttle Crew Cabin to 10.2 psi (12 hours minimum)

**EVA DAY SUMMARY**

- Post Sleep (1 hour 15 mins total)
- EVA Prep (1 hour 30 mins)
  - EVA Prep for Donning (30 mins)
  - Suit Donning at 10.2 (1 hour)
- Suit Purge (8 mins)

**EVA PET = 6:30**

</thead>
<tbody>
<tr>
<td>10:53</td>
<td>12:13</td>
</tr>
<tr>
<td>POST SLEEP 75 min</td>
<td>EVA PREP 90 min</td>
</tr>
</tbody>
</table>

**12 HOURS AT 10.2 psi**

- 60 min Mask PB

**10.2 Dep**

- 45 min before 12.5

**POST EVA w/o H2O Recharge or METOX Regeneration (1 hour)**

**Pre Sleep (2 hours)**

**If the EVA is scheduled within 36 hours of 10.2 Dep, this table may be used to calculate the Final EMU PB time.**

**The less time spent at 10.2, the longer the Final EMU Prebreathe time will be; thus, resulting in an overall longer crew day length. See chart.**

**If the EVA is scheduled later than 36 hours from 10.2 Dep, the initial PB may be eliminated and the final in-suit PB is 40 mins.**

**Note:** Assume depress with AIRLK DEPRESS vlv; 15 min. With 2 hours of Pre-sleep, **STS Crew Day length = 14:17**.

**EVA DAY SUMMARY (continued)**

- In-suit Prebreathe (40 to 75 mins depending on the time at 10.2 psi)
- Crewlock Depress to vacuum (15 mins)
- EVA tasks (6 hours 30 mins)
- Airlock Repress (20 mins)
- Post EVA without EMU H2O Recharge or METOX Regeneration (1 hour)
- Pre Sleep (2 hours)
