Weather and Flight Testing

Edwards 412th

SCOTT WILEY
METEOROLOGIST
FLIGHT INSTRUCTOR
Flight Testing Weather Hazards

- Aircraft and Mission Dependent
- Turbulence
- Icing
- Thunderstorms
- Winds/Windshear
- IFR CIGS/VSBY
- Unknown Weather Hazards????
- Aircraft configuration susceptible
ICING

WORST: SLD ICING

- Supercooled Large Droplets
- Freezing Rain FZRA
- Freezing Drizzle FZDZ
- Ice pellets PL
Lessons learned

- De-ice boots/hot wings overwhelmed by SLD icing BEWARE RUNBACK
- Roll excursions and tailplane stalls are incideous and hints are:
  - Sloppy controls, ice on antenna, wipers but not on winshield or massive amount of ice
FIG. 7. Map of the terrain, low level flow through passes and canyons, and convergence zones for patterns when the southeasterly flow reaches the valley areas west of the mountains (Adapted from DeMarrais et al. 1965).
FIG. 6. Map of the terrain, low level flow through passes and canyons, and convergence zones for patterns when the westerly sea breeze flow pushes into the deserts (Adapted from DeMarrais et al. 1965).
Shearline thermals
Shearline wave hybrid
CLEAR AIR TURBULENCE-CAT

- CAT has catastrophic effects on aircraft
- Mountain wave flight into the rotor
- Aircraft landed safely, program cancelled
February 17, 1986

Scott,
This picture was taken at Inyokern Feb 17, 1986, 9:30 PST. It was a good wave day!! Regards, Bob Harris
12Z 19 Feb 1986

University of Wyoming
ADDs winds FL240

Wind speed (kts) at 24,000 ft MSL (400 mb)

Analysis valid 2300 UTC Tue 27 Nov 2007

(knots)
Wind speed (kts) at 30,000 ft MSL (300 mb)

Analysis valid 2300 UTC Tue 27 Nov 2007
ADDs winds FL360

Wind speed (kts) at 36,000 ft MSL (225 mb)

Analysis valid 2300 UTC Tue 27 Nov 2007
Turbulence AIRMETs (green) and SIGMETs (red)

chart created at 2255 UTC Tue 27 Nov 2007
AIRMETs valid until 0300z/28th, SIGMETs expire at or before 0215z/28th

Thunderstorms
ASK 21 Two Seat Glider

Manufactured in Germany by A Schleicher. Wing span 17m  Max AUW = 1320 lbs
Wreckage of GBP

Cockpit and tail structures were relatively undamaged until impact with the ground

Figure 4
Detail of right wing structure in region of aileron actuator rod/bellcrank*

Upper surface (inverted)  I/E  Lower surface
Southeast of a super cell TS near the tropopause

- Jetstream Winds
- Backshear Anvil
- Overshooting top
- Turbulence extends 100 nm downstream of TS
- Downdraft
- Developing Flanking Line
- Main Updraft
• TS contain every known aviation weather hazard!
• FAR 121.419 “Escaping from severe weather situations ...inadvertent encounters...Operating in or near TS, GR, TURB, FC, ICG, etc.”
• Supercells, Severe TS, and Microbursts must be avoided!
• Southwest of TS
• Looking Northeast
• Building tower in foreground
• Multicellular storm
• Flanking line under wing extending south
Low Level Wind Shear (LLWS)

- LLWS is a sudden change in wind speed and/or direction below 2000 feet AGL
- TAF LLWS ...
  - VRB004KT P6SM SKC...
  - WS010/15030
- Decoded: Wind shear is forecast to occur at 1000 feet AGL due to winds of 150 degrees at 30 knots.
- Since winds are light and variable at the surface pilots could encounter a 26 knot headwind loss when descending through 1000 feet AGL.
OUTFLOW from TS or MB

- PARENT TS/CB/AC
- TURBULENT EDDIES
- COLD AIR OUTFLOW
- STRONG WIND SHEAR BOUNDARY
- OUTFLOW BOUNDARY-GUST FRONT/MICROBURST

MILES FROM THE OUTFLOW BOUNDARY

- 6,000 feet
- 3,000 feet
“No wind” microburst diagram
DFW MICROBURST

- Wet or Dry Microbursts
  - Wet - TS or SHRA common Midwest-Eastern US
  - Dry - BLDU, ring shaped dust whirls, VIRGA common Desert Southwest-Rockies KEDW

- Pilot must recognize and avoid
  - 90 seconds to impact
- Danger is tailwind and not the downdraft
- For every knot of tailwind there is a 1-2% loss of lift on the wing ex.-50KTS=no lift!
- Strong ones are not survivable by any aircraft
Microburst footprint
Vertical Atmospheric Motions

- LIFT - Lots of Increased Flight Time
- Types:
  - Thermal
  - Ridge
  - Mountain wave, pressure wave
  - Shear-line, Sea breeze fronts
  - Dynamic Soaring
  - Combo: Thermal/shearline waves
  - Other: Lift is where you find it!
Thermals

- Solar powered
- Hot air rises / cold air sinks
- Adiabatic superadiabatic process
  - Defn: no heat added/subtracted
  - “Parcel” theory
  - Atmospheric Soundings RAOB
  - ATMOSPHERIC LAYERS
    - PRANDTL
    - ECKMAN
    - FREE GEOSTROPHIC
