CUMULATIVE INDEX

to

NASA Tech Briefs

1963-1969

February 1970

National Aeronautics and Space Administration
Introduction

Tech Briefs are short announcements of new technology derived from the research and development activities of the National Aeronautics and Space Administration. These briefs emphasize information considered likely to be transferrable across industrial, regional, or disciplinary lines and are issued to encourage commercial application.

This Cumulative Index to NASA Tech Briefs lists those published from 1963 through 1969. The main listing is divided into six categories: Electrical (Electronic), Physical Sciences (Energy Sources), Materials (Chemistry), Life Sciences, Mechanical, and Computer Programs.

A typical entry has these elements:

TECH BRIEF NUMBER       TITLE
B69-10012               MICROWAVE INTERFEROMETER CONTROLS CUTTING
DEPTH OF PLASTICS
HEISMAN, R. M. ICELAND, W. F. /N. AM. ROCKWELL
CORP./ DATE- FEB. 1969
M-FS-14673

Microwave interferometer system controls the cutting of plastic materials to a prescribed depth. The interferometer is mounted on a carriage with a spindle and cutting tool. A cross slide, mounted on the carriage, allows the interferometer and cutter to move toward or away from the plastic workpiece.

ORIGINATING SOURCE NUMBER

To help users locate information of value, four indexes are provided. The first is a subject index, arranged alphabetically:

SUBJECT HEADING

ABLATIVE MATERIALS

TITLE
New rapid-curing, stable polyimide polymers with high-temperature strength and thermal stability
LEWIS-10576

ORIGINATING SOURCE NUMBER

TECH BRIEF NUMBER       CATEGORY
B69-10118  03

Note that in this index several routes are opened for obtaining further information. If the title seems promising, the Tech Brief number and category may be used to locate the abstract, which will be found in the main section arranged sequentially by Tech Brief number within each category. Further, the Tech Brief number can of course be used for obtaining a copy of the original Tech Brief.
The second index is a personal author index arranged alphabetically.

**AUTHOR**

**WALLACE, E. D.**

**TITLE**

Improved poppet valve provides positive damageproof seal  
M-FS-293

Weld preparation tool for pipes and tubing  
KSC-09955

**ORIGINATING SOURCE NUMBER**

**TECH BRIEF NUMBER**

**CATEGORY**

05

05

The third index relates all items by the originating source and number to the Tech Brief number and category.

**ARC-10105**

**ORIGINATING SOURCE NUMBER**

**B69-10117**

**TECH BRIEF NUMBER**

**CATEGORY**

01

The fourth index relates all items by the Tech Brief number and category to the originating source and number.

**B69-10002**  
**TECH BRIEF NUMBER**  
**CATEGORY**  
**ARG-10235**  
**ORIGINATING SOURCE NUMBER**
Availability of Tech Briefs

Subscriptions to Tech Briefs may be purchased from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151 (Attention: Code 410.4).

This index lists six categories of Tech Briefs. The Tech Briefs issued in 1970 will be divided into nine categories. The charge for an annual subscription to all nine categories is $20. Subscription rates for single categories are:

- Electronics/Electrical: $6.00
- Electronic/Electrical Systems: 3.00
- Physical Sciences: 4.00
- Materials/Chemistry: 5.00
- Life Sciences: 2.50
- Mechanics: 3.00
- Machinery, Equipment, and Tools: 2.50
- Fabrication Technology: 2.50
- Computer Programs: 3.00

A complete set of Tech Briefs issued prior to 1970 may be purchased for $110. All Tech Briefs issued in 1963 or 1964 may be purchased for $10; and all Tech Briefs issued in each year since then for $20 per year.

Requests for individual copies of Tech Briefs, and questions regarding the Tech Brief program, should be directed to:

TECHNOLOGY UTILIZATION DIVISION (Code UT),
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
Washington, D.C. 20546

This cumulative index replaces all previous issues of the Index to NASA Tech Briefs (NASA SP-5021). It was prepared by the Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by Informatics Tisco, Inc.

01 ELECTRICAL (ELECTRONIC)

B63-10006
SETTING OF ANGLES ON MACHINE TOOLS SPEEDED BY MAGNETIC PROTRACTOR
VALE, L. B. DATE- MAY 1964
ARC-5
An adjustable protractor facilitates transference of angles to remote machine tools. It has a magnetic base incorporating a beam which can be adjusted until its shadow coincides with an image on the screen of a projector.

B63-10024
SOLENOID PERMITS REMOTE CONTROL OF STOP WATCH AND ASSEMBLES RESTARTING
KODAJ, C. DATE- JUN. 1964
PBC-17
Stop watch which may be remotely controlled by the use of a solenoid mechanism is described. When the solenoid is energized, the coil spring pulls the lever arm and starts the balance wheel. When it is not energized, the spring pulls the lever and stops the watch.

B63-10027
INCREASED PERFORMANCE RELIABILITY OBTAINED WITH DUAL /REDUNDANT/ OSCILLATOR SYSTEM
WELLIS, W. R. /IBM/ DATE- MAR. 1964
GSPC-36
Two crystal-controlled oscillators, each with an associated buffer stage, provide an output at a common point. The circuit design gives high reliability control of output frequency and amplitude.

B63-10033
INDIUM FOIL WITH BERYLLIA WASHER IMPROVES TRANSISTOR HEAT DISSIPATION
BILLIARD, J. JOHN, J. E. A. DATE- APR. 1964
GSPC-38
Indium foil, used as an interface material in transistor mountings, greatly reduces the thermal resistance of beryllia washers. This method improves the heat dissipation of power transistors in a vacuum environment.

B63-10091
MODIFIED FILTER PREVENTS CONDUCTION OF MICROWAVE SIGNALS ALONG HIGH-VOLTAGE POWER SUPPLY LEADS
KELLISON, B. P. DATE- MAY 1964
JPL-63
Very lossy powdered iron material, in the lining of a polyester resin, replaces the dielectric material in the short coaxial transmission line of a simple filter. The lossy material absorbs microwave signals along high voltage power supply leads.

B63-10118
STEP SWITCH WITH SIMPLE ACTUATOR PROVIDES MANY CONTACTS IN SMALL SPACE
SILVER, J. V. DATE- MAY 1964
JPL-122
To reduce the space required for a stepping switch with many contacts, a simple electromechanical actuator with a maximum number of wipers has been incorporated into a compact assembly. This small sized unit is inexpensive to fabricate.

B63-10174
MODULAR CHASSIS STEREOPHONICS PACKAGING AND INTERCONNECTING OF CIRCUIT BOARDS
ABENS, W. E. BOLINE, K. G. DATE- MAY 1964
JPL-236A
A system of modular chassis structures has simplified the design for mounting a number of printed circuit boards. This design is structurally adaptable to computer and industrial control system applications.

B63-10193
REMOVABLE PREHEATER ELEMENTS IMPROVE OXIDE INDUCTION FURNACE
LEIFOLD, E. H. DATE- JAN. 1964
JPL-288
Heat and corrosion resistant preheater elements are used in oxide induction furnaces to raise the temperature to the level for conducting electricity. These preheater elements are then removed and the induction coil energized.

B63-10227
ELECTROMECHANICALLY OPERATED CAMERA SHUTTER PROVIDES UNIFORM EXPOSURE
FOHL, A. G. DATE- MAR. 1964
JPL-357
A unidirectional camera shutter employing a solenoid and mechanical linkages permits uniform exposure and minimizes distortion of the image formed in the camera.

B63-10229
FLANGE ON MICROWAVE ANTENNA SUBREFLECTOR CUTS GROUND NOISE
POTTEN, P. D. DATE- MAY 1964
JPL-362
The subreflector of a microwave antenna has been redesigned so that its outer edge has a conical flange. This reduces noise by causing ground energy radiation to cancel out before entering the antenna.

B63-10238
SHAPED SUPERCONDUCTOR CYLINDER RETAINS INTENSE MAGNETIC FIELD
MILLIGAN, G. C. DATE- MAR. 1964
JPL-397
A superconducting cylinder is plotted from the flux lines of the magnetic field to be contained. This shaping reduces maximum flux densities and permits a stronger and more uniform magnetic field.

B63-10250
LEVEL OF SUPER-COLD LIQUIDS AUTOMATICALLY MAINTAINED BY LEVELOMETER
TENNBR, W. R. DATE- MAR. 1964
JPL-397
A levelometer system, in which the level of cryogenic liquid to be controlled affects the level of an electrolyte, automatically switches a pump on and off. A pressure sensitive diaphragm can also throw a microswitch to start or stop the pump.

B63-10255
TRANSFLUXOR CIRCUIT AMPLIFIES SENSING CURRENT FOR COMPUTER MEMORIES
MILLIGAN, G. C. DATE- MAR. 1964
JPL-406
To transfer data from the magnetic memory core to an independent core, a reliable sensing amplifier has been developed. Later the data in the independent core is transferred to the arithmetical section of the computer.

B63-10258
DOUBLET-THROW MICROWAVE DEVICE SWITCHES TWO LINES QUICKLY
CLAUS, R. STELBERG, C. T. DATE- FEB. 1964
JPL-410
By combining a single-throw microwave switch with a microwave circulator in a circuit, two input lines can be switched quickly. There is only a brief transition time when both/ or neither/ of the two lines are connected to an output line.

B63-10262
IGNITING SYSTEM FOR MERCURY LAMPS PROTECTS TRANSISTORIZED SUSTAINING SUPPLY
GUSTFRED, J. R. DATE- JUL. 1964
JPL-421
A current from a sustaining power supply flows through the mercury vapor lamp and, as there are no resistors in series with this supply, the power is efficiently used. This high voltage igniting device protects the transistorized high current, low voltage power supply.

B63-10264
NOVEL SPOON ANTENNA REDUCES SIDE LOBES, IMPROVES RADIATION PATTERN
POTTER, P. D. DATE- APR. 1964

A horn antenna, combining two propagation modes at selected power ratios, reduces side lobes, and improves the radiation characteristics. Noise and unwanted signals are considerably suppressed.

B63-10280
MEASURER ACCURATELY MEASURES FLOW OF LOW-CONDUCTIVITY FLUIDS
LOVE, S. G. DATE- MAY 1964

An electromagnetic flowmeter has been adjusted to minimize the errors inherent in measuring the flow of low conductivity fluids through use of a direct-coupled, differential cathode follower, whose grid potential is adjustable with respect to ground levels.

B63-10284
SMALL DIGITAL RECORDING HEAD HAS PARALLEL BIT CHANNELS, MINIMIZES CROSS TALK
ELLER, R. E. DATE- MAY 1964

A small digital recording head consists of closely spaced parallel wires, imbedded in a ferrite block to concentrate the magnetic flux. Parallel-recorded information bits are converted into serial bits on moving magnetic tape and cross talk is suppressed.

B63-10221
IMPROVED VARIABLE-RELUCTANCE TRANSDUCER MEASURES TRANSIENT PRESSURES
MORSON, R. W. PATTERSON, J. L. DATE- MAY 1964

A flush-diaphragm pickup and a feedback stabilized carrier amplifier are among the features incorporated into an improved variable-reluctance transducer. This low impedance device responds to steady-state as well as transient pressures.

B63-10325
OPTICS USED TO MEASURE TORQUE AT HIGH ROTATIONAL SPEEDS
KUSEK, A., JR. TIPFERMAN, M. DATE- DEC. 1964

In measuring torque transmitted by a high speed rotation shaft, an apparatus has been devised which includes a shaft, an optical system and readout mechanisms. This highly accurate method uses only optical contact with moving part and is statically calibrated.

B63-10342
RAYON HEATER FOR VACUUM FURNACES OFFERS HIGH STRUCTURAL RIGIDITY, LOW HEAT LOSS
VARY, A. DATE- MAY 1964

Some problems associated with high temperature heaters for vacuum furnaces have been eliminated by the use of shaped filaments of refractory metal. These filaments, supported in cylindrical array by ceramic spacers, operate at high voltage, low current power.

B63-10463
IMPROVED SENSOR COUNTS MICROMETEOROID PenETRATIONS
DAVISON, R. E. DATE- MAY 1964

A sensor, consisting of a thin dual-capacitor assembly with an outer film of thermal-control material, is used to detect micrometeoroid particles. A coincidence counting circuit is used to count the penetrations.

B63-10493
TWO-STAGE EMITTER FOLLOWER IS TEMPERATURE STABILIZED
SPRUCH, H. E. DATE- DEC. 1964

Two-stage temperature stabilized circuit using two transistors is described. Increase in temperature causes the base-to-emitter voltage of n-p-n transistor to become less positive whereas the base-to-emitter voltage of p-n-p transistor becomes less negative, so the temperature-induced variation in V sub 1 and V sub 2 cancel out.

B63-10508
CIRCUIT SWITCHES LATCHING RELAY IN RESPONSE TO SIGNALS OF DIFFERENT POLARITY
SMITH, L. S. DATE- MAY 1964

A circuit using one power supply and two storage capacitors, which may be separately discharged in opposite directions through a relay in response to change in polarity of a signal, is described.

B63-10511
FREQUENCY-SHIFT-KEYER CIRCUIT IMPROVES PCM CONVERSION FOR RADIO TRANSMISSION
MIESBACH, D. P. DATE- JUN. 1964

By affixing perforated magnetic recording tape to the falling end of a body, acceleration and velocity were measured. The measurement was made by allowing the tape to pass between a light source and a photoelectric sensor. Data was obtained from a readout device.

B63-10514
COMPUTER CIRCUIT WILL FIT ON SINGLE SILICON CHIP
SMITH, C. DATE- JUN. 1964

A simplified computer logic circuit of two NAND/NOT gates and three additional inputs to accomplish the count and shift function is described. The circuit has capacity for parallel read-in, counting, serial shiftout, complement input and set and reset.

B63-10529
CONNECTOR FOR THERMOCOUPLE LEADS SAVES COSTLY WIRE, MAKES RELIABLE CONNECTORS
MILLER, R. B. DATE- APR. 1964

A connector for use in the thermocouple circuits which is silver-brazed to the metal thermocouple sheath on one end and crimped over the insulation of the flexible lead on the other, assures protection against breakage and abrasion. A moisture-proof insulating material is used to encapsulate the wire junctions.

B63-10536
ROTARY SOLDERING TECHNIQUE PREVENTS OVERHEATING OF ELECTRICAL COMPONENTS
SPON- INNOVATOR NOT GIVEN /HUGHES AEROSPACE CO./
DATE- FEB. 1964
GSPC-91

By using a hot-air gun with a small orifice, heat may be localized to the soldering area of the chassis. The solder is placed around the capacitor which is inserted in the mounting hole so the ring is in contact with the chassis.  

B63-10537
SIMPLE CIRCUIT PROVIDES ADJUSTABLE VOLTAGE WITH LINEAR TEMPERATURE VARIATION
MOORE, L. W. /DATAFIC BRANCH/ DATE- MAR. 1964
JPL-WO0-029

A bridge circuit giving an adjustable output voltage that varies linearly with temperature is formed with temperature compensating diodes in one leg. A resistor voltage divider adjusts to temperature range across the bridge. The circuit is satisfactory over the temperature range of minus 20 degrees centigrade to plus 80 degrees centigrade.  

B63-10551
UNKNOWN SEISMOGRAPH LEVELS SELF, CORRECTS DIFFERENT ERRORS
SUPTON, G. /COLLEGE CITY./ DATE- MAY 1964
GSPC-120

Four-component, three-axis, feedback-controlled seismograph incorporates electronic circuitry for leveling and for monitoring the feedback signal required for servo-centering. Viscous damping of the earth-motion signal, compensation of the residual long-term drift, and centering of the seismometers are provided by automatic mechanisms.  

B63-10553
TRANSISTORIZED TRIGGER CIRCUIT IS FREQUENCY-CONTROLLABLE
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- JUN. 1964
GSPC-111

A trigger circuit employing two unijunction transistor oscillators, whose frequency is varied by changing the base-to-base voltage, provides variable electrical control of the frequency.  

B63-10554
HIGH EFFICIENT SQUARE-WAVE OSCILLATOR OPERATOR AT HIGH POWER LEVELS
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- JUN. 1964
GSPC-112

A square-wave oscillator circuit containing only simple resistor-capacitor combinations and transistors operates with high efficiency at relatively high power levels.  

B63-10555
COMPUTER DETERMINES HIGH-FREQUENCY PHASE STABILITY
NICHOLS, G. B. DATE- JUL. 1964
GSPC-113

A method of phase stability of a high frequency signal using a computer is accomplished by a circuit using two auxiliary oscillators, multipliers and low-pass filters in cross correlation with the oscillator producing the signal of interest.  

B63-10561
TINY SENSOR-TRANSMITTER CAN WITHSTAND EXTREME ACCELERATION, GIVES DIGITAL OUTPUT
MOSSINO, R. L. ROBBINSON, G. DATE- NOV. 1964
ABC-22

A self-pulsing oscillator transmits a pulsed signal. The time between pulses and the frequency are controlled by two networks. Variations in the component values in each of the two networks, due to environmental changes, appear as changes in frequency and time between pulses in the transmitted signal. Such a sensor is used to measure physical magnitudes.  

B63-10567
SIMPLE CIRCUIT CONTINUOUSLY MONITORS THERMOCOUPLE SENSOR
GREENWOOD, T. L. DATE- AUG. 1964
M-PS-61

A series circuit was developed to check the continuity in thermocouple sensors. This method may be used in monitoring continuity in any dc voltage-operated control circuit.  

B63-10572
DEVICE CALIBRATES VIBRATION TRANSDUCER AT AMPLITUDES UP TO 20 G
GREENWOOD, T. L. DATE- AUG. 1964
M-PS-86

A piezoelectric transducer provides accurate calibration of vibration amplitudes up to 20 G. The calibration system uses an electrosigraphically driven resonant beam to generate mechanical vibrations at a fixed frequency.  

B63-10579
SMALL FOAMED POLYSTYRENE SHIELD PROJECTS LOW-FREQUENCY MICROPHONES FROM WIND NOISE
TEDELL, R. L. DATE- MAY 1964
M-PS-123

A foamed polystyrene noise shield for microphones has been designed in teardrop shape to minimize air turbulence. The shield slips on and off the microphone head easily and is very effective in low-frequency sound intensity measurements.  

B63-10596
FRONT AND BACK PRINTED CIRCUIT LAYOUTS PRESENTED ON SINGLE SHEET
PERRY, J. DATE- OCT. 1964
GSPC-93

A diazo photographic process of clear plastic masters is used in reproducing front and back printed circuit layouts of differing intensity on a single sheet.  

B63-10597
PRECISION GAGE MEASURES ULTRAHIGH VACUUM LEVELS
HADDEN, J. B. SEARS, G. W. /GEN. DYN. CORP./ DATE- JUN. 1964
GSPC-119

Ionization gage in which internally generated X-rays are minimized is described. This gage permits the measurement of gas pressures in ultrahigh systems of micro-pico torr.  

B63-10599
LIQUID SWITCH IS REMOTELY OPERATED BY LOW DC VOLTAGE
MOORE, E. T. /DUKE UNIV./ DATE- MAY 1964
GSPC-120

A liquid switch which does not depend on any mechanical, gravitational, or inertial actuation is developed for use in space environments. It may be remotely operated on low dc voltage.  

B63-10600
CIRCUIT CONTROLS TRANSIENTS IN SCR INVERTERS
MOORE, E. T. WILSON, T. G. /DUKE UNIV./ DATE- JUN. 1964
GSPC-120

Elimination of starting difficulties in SCR inverters is accomplished by the addition of two taps of the output winding of the inverter. On starting or under transient loads, the two additional taps deliver power through diodes without requiring quenching of SCR currents in excess of normal starting load.  

B63-10603
MONOSTABLE CIRCUIT WITH TUNNEL DIODE HAS FAST RECOVERY
HEFFNER, F. DATE- MAY 1964
GSPC-132

A monostable multivibrator circuit using a tunnel diode makes it possible for the HSPV to exceed the performance of present multivibrators in two respects. The rise time of the output voltage is faster and the duty cycle is raised to approximately 95 percent.  

B63-10606
NEW SINTERING PROCESS ADJUSTS MAGNETIC VALUE OF FERRITE CORES
VIRAL, A. W. /IBM/ DATE- MAY 1964
GSPC-129

A two-phase sintering technique based on time and temperature permits reversible control of the
coercive threshold of sintered ferrite cores. Threshold coercivity may be controlled over a substantial range of values by selective control of the cooling rate.

B63-10609
TEMPERATURE-SENSITIVE NETWORK DRIVES ASTABLE MULTIVIBRATOR
SPOON- INNOVATOR NOT GIVEN /ECA/ DATE- OCT. 1964

Development of a simple circuit using two Zener diodes and five resistors, which provides a temperature-sensitive voltage to drive the astable multivibrator, is described.

B63-10613
CRYSTAL WAVEGUIDE WINDOW IS SEALED WITH PLASTIC FOAM
CLAESS, R. STILLE, G. C. DATE- JUN. 1964

Waveguide windows made with polystyrene preformed plastic and sealed with foamed-in-place plastic are useful in any microwave waveguide system using cryogenic cooling.

B64-10002
CIRCUIT RELIABILITY BOOSTED BY SOLDERING PINS OF DISCONNECT PLUGS TO SOCKETS
PFEBC, W. B. DATE- MAR. 1964

Where disconnect pins must be used for wiring and testing a circuit, improved system reliability is obtained by making a permanent joint between pins and sockets of the disconnect plug. After the circuit has been tested, contact points may be fused through soldering, brazing, or welding.

B64-10004
ULTRA-SENSITIVE TRANSDUCER ADVANCES MICRO-MEASUREMENT RANGE
REGALO, V. L. DATE- MAY 1964

An ultrasonic piezoelectric transducer, that converts minute mechanical forces into electrical impulses, measures the impact of micrometeoroids against space vehicles. It has uniform sensitivity over the entire target area and a high degree of stability.

B64-10007
LOW-POWER TRANSISTORIZED CIRCUIT PROVIDES STAIRCASE WAVEFORM
BRENN, G. D. DATE- JULY 1964

A low input power transistorized circuit is used to generate a staircase waveform of high step uniformity. Other characteristics are low step droop, fast transition time, and no feedback.

B64-10010
MODIFIED RF COAXIAL CONNECTOR ENDS VACUUM CHAMBER WIRING PROBLEM
WEINER, D. DATE- MAY 1964

A standard radio frequency coaxial connector is modified so that a plastic insulating sleeve can be mounted in the wall of a vacuum chamber. This eliminates ground loops and interference from cable connections.

B64-10016
COMPACT COAXIAL CONNECTOR FOR PRINTED CIRCUIT ADDS RELIABILITY
BROCK, T. Z. DATE- MAY 1964

Soldering and welding techniques are used to connect a coaxial cable to a printed circuit board. This device aids reliability control of equipment as standard connectors are bulky and heavy.

B64-10017
BLOCKING OSCILLATOR USES LOW-TRIGGERING VOLTAGE
SPOON- INNOVATOR NOT GIVEN /ECA/ DATE- DEC. 1964

To prevent premature triggering of a blocking oscillator, a smaller magnetic core is added to the conventional oscillator circuit. This serves as a second blocking oscillator and has a lower triggering threshold.

B64-10019
NEW METHOD USED TO FABRICATE GALLIUM ARSENIDE PHOTOVOLTAIC DEVICE
EILLIS, G. S. /ECA/ DATE- JUN. 1964

WO-062
A new method for fabricating photocells, or solar cells, substitutes copper iodide for zinc diffusion. This produces a p-type surface layer and a photovoltaic junction.

B64-10024
EFFICIENT CIRCUIT TRIGGERS HIGH-CURRENT, HIGH-VOLTAGE PULSES
GREEN, E. D. /WESTINGHOUSE ELEC. CORP./ DATE- JUN. 1964

MSC-18
Modified circuit uses diodes to effectively disconnect the charging resistors from the circuit during the discharge cycle. Result is an efficient parallel charging, high voltage pulse modulator with low voltage rating of components.

B64-10042
COMPUTER SENSES DEPLETION OF LUBRICANT IN JOURNAL BEARINGS
ROSS, A. DATE- DEC. 1964

LWIS-97
An ohmmeter is used as a sensor to determine when the lubricating oil in a high speed journal bearing becomes depleted.

B64-10064
DIGITAL LOGIC ELEMENTS PROVIDE ADDITIONAL FUNCTIONS FROM ANALOG INPUT
MATTY, T. C. /MCDONnell AIRCRAFT CORP./ DATE- JUN. 1964

MCC-64
A dc analog input can be used to produce an integrator with high dynamic range or a position servo with inherent stability. This is done by a switching system using digital-to-analog converters and an electronic switch to obtain the desired outputs.

B64-10065
CONTINUITY TESTER SCREENS OUT FAULTY SOCKET CONNECTIONS
GOLDING, G. DATE- MAY 1964

JPL-596
A device, used before and after assembly, tests the continuity of an electrical circuit through each pin and socket of multiple connector sockets. Electrically insulated except at the contact area, a test probe is dimensioned to make contact only in properly formed sockets.

B64-10080
IMPROVED INSERTION-LOSS TESTER
FINNIE, C. J. SCBUSTER, D. DATE- JUN. 1964

JPL-358
As improved test method accurately measures the insertion loss of RF components while avoiding amplifier drift. Currents are balanced across a bridge transformer with shorted probes and then with each component to be tested. Differences in adjustments indicate the loss.

B64-10109
ANALOG DEVICE SIMULATES PHYSIOLOGICAL WAVEFORMS
SHYKRA, D. M. DATE- NOV. 1964

MSC-51
An analog physiological simulator generates representative waveforms over a wide range of physiological conditions. Direct comparison of these waveforms with those from telemetry inputs permits quick detection of signal parameter degradation.

B64-10114
INSTRUMENT CRITICAL FOR TWO-STEP VOLTAGE DISCHARGE CHARACTERISTICS OF SILICON ZINC CELLS
CHESTER, A. M. /ELECR STORAGE BATTERY CO./ DATE- JUN. 1964
In silver-zinc cells, an auxiliary silver electrode is electrically connected to the positive terminal only during discharge. This eliminates the two-step discharge characteristic of such cells.

A simple transducer is used to measure low rates of convective and conductive heat transfer from a fluid to a cooled surface under steady-state conditions. Temperature drop is measured by two thermocouples embedded in a rod of low thermal conductivity.

A novel circuit combines pulse stretcher with N02 gate.

A simple emission-testing circuit for high-power vacuum tubes.

A simple transistor circuit uses a thermistor to change the vidicon target potential in relation to temperature differences.

A subminiature biotelemetry transmitter permits the measurement of biopotential response in humans or animals to controlled environmental stimuli without discomfort while engaged in normal activities.
cardiometer with solid state circuit elements has been developed. This computes the beat every 15 seconds and visually presents the data on numerical display tubes.

B64-10259
PNEUMOTACHOMETER COUNTS RESPIRATION RATE OF HUMAN SUBJECT
OTTS, J. W. DATE- NOV. 1964
To monitor breaths per minute, two rate-to-analog converters are alternately used to read and count the respiratory rate from an impedance pneumograph sequentially displayed numerically on electroluminescent matrices.

B64-10271
IMPROVED TECHNIQUE FOR LOCALIZING ELECTROPOLISHING FEATURES NOVEL NOZZLES
LEVERONE, P. T. /Positive-Temperature-Coefficient/ DATE- NOV. 1964
An improved electropolishing is accomplished by use of an electrolyte film, which is evenly distributed by an insulated nozzle designed to match the contour of the workpiece to be treated. The workpiece is connected to the positive terminal of a generator and the nozzle to the negative terminal.

B64-10280
SERVO SYSTEM FACILITATES PHOTOELASTIC STRAIN MEASUREMENTS ON RESINS
LEVERONE, E. M. DATE- NOV. 1964
To facilitate photoelastic measurements of the strains developed by stresses applied to birefringent resins, a servomechanism is employed.

B64-10281
PTC THERMISTOR PROTECTS MULTILOAD POWER SUPPLIES
LEVERONE, B. MANDELL, B. DATE- NOV. 1964
A PTC /Positive-Temperature-Coefficient/ thermistor placed in series with each branch load of a multiload circuit prevents power loss in parallel branches. This thermistor may be used in any circuit requiring current limiting or intended overload resetting.

B64-10283
MOUNTING FOR DIODES PROVIDES EFFICIENT HEAT SINK
M-PS-197
Efficient heat sink is provided by soldering diodes to metal support bars which are brazed to a ceramic base. Electrical connections between diodes on adjacent bars are made flexible by metal strips which aid in heat dissipation.

B64-10299
RADIATION-DETECTOR OPTICAL-IMAGING DEVICE IS OF SIMPLIFIED CONSTRUCTION
-spont- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC./ DATE- JAN. 1965
A simplified radiation detector was designed which employs an activated continuous front surface consisting of either the diffused or barrier type of semiconducting material with a grid structure on the nonactivated side of the detector. Its form may be either a rectangular coordinate or a polar coordinate system.

B64-10305
TRANSISTORIZED CONVERTER PROVIDES NONDISSIPATIVE REGULATION
-spont- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- DEC. 1964
A transistorized regulator converter efficiently converts fluctuating input voltages to a constant output voltage, avoiding the use of saturable reactors. It is nondissipative in operation and functions in an open loop through variable duty cycles.

B64-10309
TRANSISTORIZED CONVERTER PROVIDES NONDISSIPATIVE REGULATION
-spont- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- DEC. 1964
A transistorized regulator converter efficiently converts fluctuating input voltages to a constant output voltage, avoiding the use of saturable reactors. It is nondissipative in operation and functions in an open loop through variable duty cycles.

B64-10320
VOLTAGE GENERATOR SWEEPS OSCILLATOR FREQUENCY LINEARLY WITH TIME
-spont- INNOVATOR NOT GIVEN /MELPAR, INC./ DATE- JAN. 1965
A voltage-tuned oscillator circuit is described which sweeps the output signal frequency linearly exponentially with time.

B64-10330
ECONOMICAL FABRICATION PROCESS PRODUCES HIGH QUALITY JUNCTION TRANSISTORS
-spont- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DATE- DEC. 1964
A convenient, three-step fabrication process, with a p-type layer of gallium arsenide vapor deposited on a starting wafer of germanium, is used to produce heterojunction-homojunction p-n-p transistors. These are of high quality with good injection efficiency and low capacitance.

B65-10001
CIRCUIT CONVERTS AM SIGNALS TO FM FOR MAGNETIC RECORDING
-spont- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
Convert AM signals to FM by relaxation-type voltage-controlled oscillator /VCO/. This circuit may be used in radar, telemetry, and test equipment.

B65-10002
TUNNEL-DIODE CIRCUIT FEATURES ZERO-LEVEL CLIPPING
-spont- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
-spont- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DATE- DEC. 1964
A circuit, in a wide bandwidth mode, overcomes transient-producing capacitance switching by maintaining an equivalent voltage at all times. Bandwidth switching may be done at any time, and integrity of the loop lock is maintained.

B65-10005
COMPUTER MODIFICATION REDUCES TIME OF PERFORMING ITERATIVE DIVISION
-spont- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965
Time reduction in performing iterative division results from using a serial-by-parallel divider employing a look-ahead feature that predetermines the sign relationships of several iterations before the computer cycle begins. This method can be employed in any data handling system performing high-speed division.

B65-10266
MODIFICATION INCREASES LIGHT OUTPUT OF INJECTION-LUMINESCENT DIODES
-spont- INNOVATOR NOT GIVEN /RCA/ DATE- JAN. 1965
See also B64-10263
-spont- INNOVATOR NOT GIVEN /BARSHALL/ DATE- DEC. 1964
Modifying a section of the electrode area from the N-face of injection-luminescent diodes for injection-luminescent diodes increases light output. Light is emitted from the N-face as well as from the four edges of the diode.
B65-10010
INEXPENSIVE, STABLE CIRCUIT MEASURES HEART
DATE
VICK, R. A. DATE- JAN. 1965
MSC-95
Inexpensive transistorized circuit provides
reliable analog indications of heart rate in
response to preamplified electrocardiograph signal
applied to its input.

B65-10011
CIRCUIT IMPROVEMENT PRODUCES NONSTABLE
MULTIVIBRATOR WITH LOAD-CARRYING CAPABILITY
DATE
GOLDMAN, N. E. SCHELLHART, J. C. DATE- JAN. 1965
GSFC-304
Improved circuit provides greater reliability and
load-carrying capabilities for monostable
multivibrator.

B65-10012
HELICAL COAXIAL-RESONATOR MAKES EXCELLENT
RF FILTER
DATE
SPON- INNOVATOR NOT GIVEN /EC/ DATE- JAN. 1965
GSFC-243
Isolation of closely spaced transmitting and
receiving frequencies of an antenna without
insertion loss by filtering the receiver input is
accomplished by an inner conductor with two
winding helices and an outer conductor of
aluminum. A tuning slug is at either end of the
inner conductor form.

B65-10013
SIXTEN DIODE FUNCTION GENERATOR REQUIRES NO
EXTERNAL REFERENCE VOLTAGE
DATE
BOLTE, G. BURN, R. DATE- JAN. 1965
JPL-0031
Function generator utilizing parallel impedance
networks with zener diodes produces functions
which are discontinuous in slope. The function
generated appears at the output of the parallel
network in the form of a voltage varying in time.

B65-10016
CARBON ARC IGNITION IMPROVED BY SIMPLE
AUXILIARY CIRCUIT
DATE
SPON- INNOVATOR NOT GIVEN /EC/ DATE- JAN. 1965
MSC-103
High voltage, low current pulse in series with arc
power supply efficiently ignites a carbon arc.
The easily and economically produced circuit is
useful with arc burners and searchlights and with
plasma jets.

B65-10023
MINIATURE STRESS TRANSDUCER HAS DIRECTIONAL
CAPABILITY
DATE
SAD SIGUEL, A. SILVER, R. H. DATE- JAN. 1965
JPL-591
Miniature stress transducer uses a semiconductive
piezoresistive element to detect stress only on
specific axes. Measurement of internal mass
stress is based on the compressive deformation of
the transducer. The device is applicable to
constant stress monitoring in building and dam
structural parts.

B65-10025
LOGIC REDUNDANCY IMPROVES DIGITAL SYSTEM
RELIABILITY
DATE
SPON- INNOVATOR NOT GIVEN /STANFORD RES. INST./
JPL-SC-069
Reducant-channel system automatically corrects
any single error in a set of three binary signal
channels. This system is especially adaptable to
digital computers where data is transmitted in parallel
channels.

B65-10026
STEPPING MOTOR DRIVE CIRCUIT DESIGNED FOR LOW
POWER DRIVE
DATE
SPON- INNOVATOR NOT GIVEN /HARVARD COLL./ DATE-
FEB. 1965
GSFC-198
High power drain is eliminated by a circuit
consisting of a divide-by-two stage, two identical
inputs, a wiggle amplifier, driver, and power
output stages to drive the step motor.

B65-10028
TRANSISTOR VOLTAGE COMPARATOR PERFORMS OWN
SENSING
DATE
CLIFF, R. A. DATE- FEB. 1965
GSFC-228
Detection of the highest voltage input among a
group of varying voltage inputs is accomplished by a
transistorized voltage comparison circuit. The
collector circuits of the transistors perform the
sensing function. Input voltage levels are
governed by the transistors.

B65-10030
LIBRARY OF DOCUMENTS COMPRESSED INTO LAP-HELD
DISPLAY KIT
DATE
SPON- INNOVATOR NOT GIVEN /HATL. CASH REGISTER
CO./ DATE- FEB. 1965
MSC-123
A lightweight Apollo flight kit containing
microfilmed data is packaged in a hinged box with
a viewing screen cover, and a writing surface.
It is secured to the user's lap.

B65-10033
PHOTOELECTRIC SEMICONDUCTOR SWITCH OPERATES
WITH LOW LEVEL INPUTS
DATE
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965
JPL-SC-068
Photoelectric semiconductor switch with a buried
emitter region avoids high-leakage currents across the
emitter. It exhibits high emitter to
collector transport efficiency beta at low signal
levels.

B65-10041
PULSE HEIGHT ANALYZER OPERATES AT HIGH
REPETITION RATES, LOW POWER
DATE
SPON- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS.,
INC./ DATE- FEB. 1965
W00-046
Simple multistage transistor gating circuit
provides a pulse height analyzer that operates at
high repetition rates and low power. The circuit
compares the input pulse heights to discrete
reference voltages.

B65-10045
THERMISTOR CONNECTOR ASSEMBLY INCREASES
ACCURACY OF MEASUREMENTS
DATE
SPON- INNOVATOR NOT GIVEN /ATLANTIC RES. CORP./
DATE- FEB. 1965
LANGLEY-62
Isolation of the thermistor from spurious heat
transfer for accurately measuring ambient air
Temperatures is accomplished by a mounting
consisting of a transparent plastic film bonded to a
U-shaped phenolic board with depositions of
aluminum on each face and upper edge, and a
variable capacitor for fine tuning.

B65-10047
CIRCUIT DETECTS ERRORS IN ADDRESS
DATE
BEG, R. DATE- FEB. 1965
M-PS-234
Whenever any error producing conditions arise in
an address, the circuit detects them and
signals the presence of the error to the computer
equipment and memory storage units.

B65-10050
MICROPARTICLE IMPACT SENSOR MEASURES ENERGY
DATE
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- FEB. 1965
PL-10050
Hulling pyrometer uses Kerr cell shutter for
fast response
01 ELECTRICAL (ELECTRONIC)

B65-10010
Conventional pyrometer, in which Kerr cell replaces mechanical shutter and polarizers are added to filters, yields rapid shutter response.

B65-10051
Metall SHEATH IMPROVES THERMOCOUPLE USING GRAPHITE IN ONE LEG
SUPR- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- MAR. 1965
B65-10042
Thermocouple using graphite in one leg is sealed in a moistureproof metal sheath which permits high heat output and good mechanical strength.

B65-10052
ZENER DIODE IS STARTER FOR TRANSISTOR REGULATED POWER SUPPLY
SUPR- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE- MAR. 1965
B65-10053
Zener diode in parallel with a silicon transistor supplies the starting current for a transistor-regulated power supply.

B65-10054
PULSE GENERATOR PERMITS NONDESTRUCTIVE TESTING OF COMPONENT BREAKDOWN VOLTAGE
SUPR- INNOVATOR NOT GIVEN /HODGE/P/躅EE/ DATE- MAR. 1965
B65-10058
Nondestructive testing of the breakdown voltage of transistors and other electronic components is achieved by a simple relay circuit. The circuit operates by applying low-energy, high-voltage microsecond pulses to the components under test.

B65-10055
FEED-THROUGH HAS POLYTERMAL FEATURE
SANDERS, L. H. DATE- MAR. 1965
B65-10059
Feed-through connector with individual solders pair in the polyterminal side provides good connections with small amounts of solder and permits visual inspection of boards. Polyterminal also provides a friction mechanical bond to position conductors prior to soldering.

B65-10061
SIMPLE CONTROL DEVICE SENSES SOLAR POSITION
LOMBORG, J. O. RANDALL, J. C. DATE- MAR. 1965
JPL-618
The amount of solar radiation incident on a specially coated bimetallic strip is simply and reliably controlled by a light valve. This device is valuable for systems requiring temperature regulation.

B65-10062
PULSED PLASMA ACCELERATOR OPERATES REPEITIVELY WITHOUT COMPLEX CONTROLS
SABOL, A. P. DATE- MAR. 1965
LANGLEY-48
Self-repeating pulsed plasma accelerator operates with a wide variety of gases over a large range of pressures without complex control equipment. The accelerator combines a circular channel with a tangential channel at the entrance way of a high-velocity gas.

B65-10066
FUEL CELL SERVES AS OXYGEN LEVEL DETECTOR
SUPR- INNOVATOR NOT GIVEN /GE/ DATE- MAR. 1965
JPL-SC-072
Monitoring the oxygen level in the air is accomplished by a fuel cell detector whose voltage output is proportional to the partial pressure of oxygen in the sampled gas. The relationship between output voltage and partial pressure of oxygen can be calibrated.

B65-10067
SENSITIVE LEVEL SENSOR MADE WITH SPIRIT LEVEL GIVES ELECTRICAL OUTPUT
BRYANT, E. L. DATE- MAR. 1965
LANGLEY-49
Sensor incorporating a circular spirit level, electrical lamp and two pairs of photocells, provides an electrical indication of flat surface level deviation.

B65-10068
AUTOMATIC THERMAL SWITCH ACCELERATES COOLING-DOWN OF CRYOGENIC SYSTEM
WEBER, H. R. DATE- MAR. 1965
JPL-55
Automatic switch uses short stainless steel tube with copper heat sinks to accelerate helium gas cooling and provides good thermal conductivity and good thermal insulation.

B65-10069
FEEDBACK OSCILLATOR FUNCTIONS AS LOW-LEVEL PULSE STRETCHER
SUPR- INNOVATOR NOT GIVEN /SPERRY RAND CORP./ DATE- MAR. 1965
GSFC-74
Low trigger pulses of the pulse stretcher circuit are obtained by forward biasing the transistor oscillator. The loop gain is kept below unity and prevents free-running oscillation. Two parallel feedback loops improve the stretching capabilities.

B65-10072
SYNCHRONIZED PULSE GENERATOR NEEDS NO EXTERNAL POWER
CARDO, C. A. JR. DATE- MAR. 1965
GSFC-574
Simple circuit with high input and low output impedance generates a fast rise-time pulse synchronized with an input pulse of slower rise and fall times. Circuit requires no external power.

B65-10073
SYSTEM MEASURES ANGULAR DISPLACEMENT WITHOUT CONTACT
DAVIS, W. T. DATE- MAR. 1965
LANGLEY-46
Optic system coupled to an electronic detection and measuring system converts angular movement of reflected light to a direct readout, without any direct contact with the object.

B65-10076
LIGHT-SENSITIVE POTentiOMETER MEASURES PRODUCT OF TWO VARIABLES
BAUR, G. C. DATE- MAR. 1965
GSFC-76
The output voltage from a photoconductive potentiometer circuit using galvanometer mirror reflecting the light beam is directly proportional to the product of the input voltage.
B65-10079
PHOTORELCTRIC SENSOR OUTPUT CONTROLLED BY
EYEBALL MOVEMENTS
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
M-P-274
The difference between the infrared absorption of the iris and infrared reflectivity of the eyeball controls the operation of a device consisting of an infrared source and amplifier, a cadmium selenide infrared sensor, and an infrared filter.

B65-10080
PHASE DETECTOR CIRCUIT SYNTHESIZES OWN
REFERENCE SIGNAL
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
I-PS-247
Circuit with isolation amplifier connected to a frequency multiplier and synchronous phase detector synthesizes the phase reference signal from the phase modulated input signal.

B65-10085
TRANSDUCER SENSES DISPLACEMENTS OF PANELS
SUBJECTED TO VIBRATION
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
ARC-37
Inductive vibration sensor measures the surface displacement of nonferrous metal panels subjected to vibration or flutter. This transducer does not make any physical contact with the test panel when measuring.

B65-10086
SIMPLE CIRCUIT FUNCTIONS AS FREQUENCY
DISCRIMINATOR FOR FPM SIGNALS
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
I-PS-247
This discriminator can be used as a constant current integrator in such circuits as linear sweep and time delay.

B65-10087
APPARATUS MEASURES SWELLING OF MEMBRANES IN
ELECTROCHEMICAL CELLS
SPON- INNOVATOR NOT GIVEN /AM. OPT. CO./ DATE- MAR. 1965
GSFC-280
Apparatus consisting of a pressure plate unit, four springs of known spring constant and a micrometer measures the swelling and force exerted by the polyether membranes of alkaline electrochemical cells.

B65-10089
TRANSUDER MEASURES TEMPERATURE DIFFERENTIALS
IN PRESENCE OF STRONG ELECTROMAGNETIC FIELDS
SPON- INNOVATOR NOT GIVEN /AMES/ DATE- APR. 1965
ARC-27
Measurement of temperature rise of cooling water under pressure and in strong electromagnetic fields is accomplished by a transducer using a magnetically shielded thermocouple arrangement. The thermocouple junctions are immersed in oil to isolate them from electric currents in the water.

B65-10091
SIMULATOR PRODUCES PHYSIOLOGICAL WAVEFORMS
SPON- INNOVATOR NOT GIVEN /HOSBUELL/ DATE- APR. 1965
GSFC-306
Physiological waveform simulator is capable of producing signals to simulate an auxiliary and a sternal electrocardiogram, blood pressure, respiratory rate and body temperature. This may be used to check out bioinstrumentation.

B65-10093
COMPUTER PROGRAMS SIMPLIFY OPTICAL SYSTEM
ANALYSIS
SPON- INNOVATOR NOT GIVEN /HOSBUELL/ DATE- APR. 1965
GSFC-306
The optical ray-trace computer program performs geometrical ray tracing. The energy-trace program calculates the relative monochromatic flux density on a specific target area. This program uses the ray-trace program as a subroutine to generate a representation of the optical system.

B65-10096
DIGITAL SYSTEM ACCURATELY CONTROLS VELOCITY
OF ELECTROMECHANICAL DRIVE
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
GSFC-297
Digital circuit accurately regulates electromechanical drive mechanism velocity. The gain and phase characteristics of digital circuits are relatively unimportant. Control accuracy depends only on the stability of the input signal frequency.

B65-10097
VARIABLE VOLTAGE SUPPLY USES ZENER DIODE AS
REFERENCE
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
GSFC-249
Using a zener diode as the reference element, a simple transistorized circuit provides a stable variable reference voltage.

B65-10102
SIMPLE CIRCUIT FUNCTIONS AS FREQUENCY
DISCRIMINATOR FOR FPM SIGNALS
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
GSFC-249
Improved magnetometer employs a cylindrical, high permeability magnetic core with a toroidal gating coil and a solenoid pickup coil. Flux interaction can be reduced by electrostatically shielding the pickup coil from the gating coil. The magnetometer principle can be applied to navigation devices.

B65-10105
SIMPLE FREQUENCY DIVER COMPOSED OF RELAXATION
OSCILLATORS USES TOPOLOGICAL GATING
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
GSFC-297
Improved variable load automatically tests dc power supplies over an extended current range. External meters monitor current and voltage, and multipliers at the outputs facilitate plotting the power curve of the unit.

B65-10108
MAGNETIC FIELD CONTROLS CARBON ARC TAIL FLAME
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
MSC-139
Polarity of two electromagnets placed near the exhaust flue cancels out a high carbon-arc field. The arc tail flame is correctly drawn to the exhaust flue and contamination is diverted. This device should reduce maintenance cycles on any arc-powered illuminator.

B65-10112
UNJUNCTION FREQUENCY DIVIDER IS FREE OF
BACKWARD LOADING
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
JPL-100-010
Simple frequency divider composed of relaxation oscillators uses unijunction transistors to reduce backward loading to a minimum. This circuit design is applicable in timing devices and sync generators for television systems.

B65-10118
TRANSISTORIZED CIRCUIT CLAMPS VOLTAGE WITH
0.1 PERCENT ERROR
SPON- INNOVATOR NOT GIVEN /FAIRCHILD STRATOS/ DATE- MAR. 1965
GSFC-319
Transistorized clamping circuit clamps either of two voltage levels to input of digital-to-analog
resistive matrix with 0.1 percent error. Clamping circuit technique has analog, digital, and hybrid circuit applications.

B65-10119  
VARIABLE FREQUENCY TRANSISTOR INVERTERS USE MULTIPLE CORE TRANSFORMERS  
SPON- INNOVATOR NOT GIVEN /DUKE UNIV./ DATE- APR. 1965  
GSFC-183

Magnetic-coupled multivibrators containing two or more square-loop cores with multiple windings in a single transformer package, provide indirect frequency control and improved operational characteristics. This multivibrator can be used for power oscillators, nonlinear magnetic circuitry and telemetry circuits.

B65-10120  
MULTIPLE TEST TUBES STIRRED MECHANICALLY  
LEON, B. J. STRONG, I. J. DATE- APR. 1965  
ARC-62

Mechanical device simultaneously stirs multiple test tubes under controlled laboratory conditions. The invention provides a variable stirring rate, minimal amount of contamination of tube contents, unattended and simple operation, and easy maintenance and cleaning.

B65-10123  
EFFICIENT THIN FILM HEATING ELEMENT TAKES MINIMUM SPACE  
BUSCH, A. H. DATE- APR. 1965  
GSFC-289

Light, thin-film heating element is formed by vacuum deposition of metal onto a nonconductive surface to be heated. This small-sized heater has a very fast response time.

B65-10128  
VARIABLE FREQUENCY MAGNETIC MULTIVIBRATOR GENERATES STABLE SQUARE-WAVE OUTPUT  
PAUL, S. DATE- MAY 1965  
GSFC-291

Variable frequency magnetic multivibrator operates in a full wave fashion to provide a stable square wave output over wide variations in temperature and power supply potential. This invention is applicable in clocks and control devices.

B65-10125  
SIMPLIFIED ELECTROSMETER HAS EXCELLENT OPERATING CHARACTERISTICS  
BRENTNER, R. E. DATE- MAY 1965  
JPL-413

Simplified and improved electrosmeter circuit provides high-input impedance, stability of gain and operating point, linear response, and low power requirements.

B65-10127  
TRAVELING-WAVE TUBE CIRCUIT SIMPLIFIES MICROWAVE RELAY  
ALLEN, W. W. IPPOLITO, L. J. NACE, D. A. DATE- MAY 1965  
GSFC-299

Circuit with a sawtooth-modulated traveling-wave tube, which acts as a frequency converter and as an amplifier, simplifies microwave transmission. Lower power losses and reduced size and weight are also realized in this circuit.

B65-10128  
PIONEERING GAGE TESTS PIN-CONNECTOR SOCKETS  
BOND, W. W. DATE- MAY 1965  
JPL-675

Connector pin consisting of a piezoresistive crystal, retainer spring and a bridge circuit with voltmeter is used to test connector sockets and may be adapted for multiple socket testing.

B65-10137  
INSTRUMENT CALIBRATES LOW GAS-RATE FLOMETERS  
COPELAND, A. C. FULTON, W. C. SMITHERS, W. A. DATE- MAY 1965  
MSC-134

Electronically measuring the transit time of a soap bubble carried by the gas stream between two fixed points in a burette calibrates flowmeters used for measuring low gas-flow rates.

B65-10130  
HIGH-GAIN AMPLIFIER HAS EXCELLENT STABILITY AND LOW POWER CONSUMPTION  
KLEINBERG, L. I. DATE- MAY 1965  
GSFC-272

Transistorized amplifier, in which an external reference voltage controls gain, combines high gain with stability and low power consumption. This circuit is useful in electronic servo and portable audio equipment.

B65-10139  
SPHERICAL ELECTRODE ELIMINATES HIGH-VOLTAGE BREAKDOWN  
FINK, R. C. VETRON, E. H. DATE- MAY 1965  
LEWS-155

Spherical electrodes surrounding electrode-dielectric junctions eliminate high-voltage breakdown. The gap between the spherical electrode and the dielectric must be of an optimum size for proper operation. Modified, this electrode should be suitable as a high-voltage feedthrough between various liquid and gaseous media.

B65-10142  
 AUXILIARY CIRCUIT ENABLES AUTOMATIC MONITORING OF EKG'S  
SPON- INNOVATOR NOT GIVEN /TEX. INST. FOR REHABILITATION AND RES. / DATE- MAY 1965 REAN- SEE ALSO B65-10143 AND B65-10101  
MSC-106

Auxiliary circuits allow direct, automatic monitoring of electrocardiograms by digital computers. One noiseless square-wave output signal for each trigger pulse from an electrocardiogram preamplifier is produced. The circuit also permits automatic processing of cardiovascular data from analog tapes.

B65-10143  
DIGITAL-OUTPUT CARDIOTACHOMETER MEASURES RAPID CHANGES IN HEARTBEAT RATE  
VICK, R. DATE- MAY 1965 REAN- SEE ALSO B65-10101 AND B65-10142  
MSC-133

Cardiotachometer circuits produce an output voltage proportional to the heartbeat rate on a beat-by-beat basis. This is less complex and less costly than the digital cardiotachometers.

B65-10145  
LOGARITHMIC AMPLIFIER USES FIELD EFFECT TRANSISTORS  
STEWART, J. L. DATE- MAY 1965  
JPL-509

Solid-state amplifier utilizes field effect transistors and planar junction diodes to provide a logarithmic response to a wide range of input signals.

B65-10146  
FREQUENCY OFFSET IN LINEAR FM/CW TRANSPONDER ELIMINATES CLUTTER  
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1965  
M-PS-289

Clutter is eliminated by offsetting the frequency of a transponder signal with respect to an interrogation signal. This improves the tracking of aircraft and spacecraft by FM/CW transponders.

B65-10151  
ROTOR POSITION SENSOR SWITCHES CURRENTS IN BRUSHLESS DC MOTORS  
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1965  
GSFC-315

Resistance switch incorporated in an induction motor is used for sensing rotor position and switching armature circuits in a brushless dc motor. This device drives the solar array system of an unnamed spyre satellite.

B65-10152  
CIRCUIT REDUCES DISTORTION OF FM MODULATOR
Correction circuit improves the linearity of a semiconductor laser used to modulate a free-running oscillator. This improvement only applies to audio frequency modulation and will not correct for slowly varying dc input in some telemetry systems.

**B65-10158**
LASER BEAM TRANSMITS ELECTRIC POWER
SPOON- INNOVATOR NOT GIVEN / RCA/ DATE- MAY 1965
GSFC-293
Semiconductor laser beam supplies sustained level of electrical power to remote location not served by conventional conductors. This system would be useful where transmission of energy is critical, such as in nuclear reactors, or other hazardous environments.

**B65-10159**
SOLID-STATE SWITCHING USED TO SPEED UP CAPACITIVE INTEGRATOR
BERCOMB, A. L., JR. DATE- JUN. 1965
LANGLEY-104
Capacitive integrator circuit using silicon-controlled switches/IGTs/ insures output voltage linearly proportional to input pulse width. This circuit provides high input impedance and relatively low output impedance.

**B65-10161**
INTERFEROMETER COMBINES LASER LIGHT SOURCE AND DIGITAL COUNTING SYSTEM
SPOON- INNOVATOR NOT GIVEN / RIT/ DATE- JUN. 1965
M-151
Measurement of small linear displacements in digital readouts with extreme accuracy and sensitivity is achieved by an interferometer. The instrument combines a digital electro-optical fringe-counting system and a laser light source.

**B65-10165**
SUPERCONDUCTOR MAGNETS USED FOR STAGGER-TUNING TRAVELING-WAVE MASER
SPOON- INNOVATOR NOT GIVEN / RCA/ DATE- JUN. 1965
GSFC-292
Superconducting materials reduce size and weight of magnets used for stagger-tuning individual traveling-wave maser crystals. The invention is useful in microwave communication systems requiring a high information rate.

**B65-10169**
PHASE SHIFT FREQUENCY SYNTHESIZER IS EFFICIENT, SMALL IN SIZE
SPOON- INNOVATOR NOT GIVEN / SPACE TECHNOLOG LABS./ DATE- JUN. 1965
M-150
Phase shift frequency synthesizer produces suppressed-carrier signals at the sum and difference frequencies. All unwanted frequencies are suppressed by this small-sized synthesizer.

**B65-10170**
DC TO AC CONVERTER OPERATES EFFICIENTLY AT LOW INPUT VOLTAGES
SPOON- INNOVATOR NOT GIVEN / DUKE UNIT./ DATE- JUN. 1965
GSFC-130
Self-oscillating dc to ac converter with transistor switching to produce a square wave output is used for low and high voltage power sources. The converter has a high efficiency throughout a wide range of loads.

**B65-10180**
FORCE CONTROLLED SOLENOID DRIVES MICROWAVE TESTER
SPOON- INNOVATOR NOT GIVEN / N. A. AVIATION/ DATE- JUN. 1965
WOO-125
Solenoid-driven device tests the integrity of a microwave joint between an electronic component lead wire and a wire ribbon by applying tension stress to the joint. Variable measured force is provided when either destructive or nondestructive testing is performed.

**B65-10181**
MODIFIED INTERELEMENT SPACING IMPROVES YAGI ANTENNA ARRAY
BECK, F. B. DATE- JUN. 1965
LANGLEY-130
Symmetrical antenna array is designed by adjusting the Yagi disk interelement spacing so that the grating lobe of the array factor coincides with the first sidelobe of the element pattern.

**B65-10184**
PRESSURE SENSOR RESPONDS ONLY TO SHOCK WAVE
SPOON- INNOVATOR NOT GIVEN / BOEING CO./ DATE- JUN. 1965
M-FS-238
Pressure sensor responds only to high pressure crest of a shock wave, and will not respond to conditions of overpressure. The sensor uses plates of a battery to produce voltage output used to activate an alarm signal or crew escape system.

**B65-10187**
CRITICAL MEASURES SHORT TERM, LARGE-MAGNITUDE FORCES
PFIEFFER, C. G. DATE- JUN. 1965
JPL-7-7
By using the magnitude of piezoelectric crystal response to distortion and compression, this device measures transient accelerations and their rate of change. The invention could be used in a servo control system by supplementing the accelerometer and taking over its function when its range is exceeded.

**B65-10193**
LOGIC CIRCUIT EXHIBITS OPTIMUM PERFORMANCE
Hudson, C. DATE- JUN. 1965
LANGLEY-129
Performance of circuits are compared to determine the optimum circuit configuration for implementation into microelectronic functions. Comparison is made in terms of power drain, propagation time, and component variations with temperature and load.

**B65-10194**
ANALOG-TO-DIGITAL CONVERTER HAS INCREASED RELIABILITY AND REDUCED POWER CONSUMPTION
THORNWALL, J. C. DATE- JUN. 1965
GSFC-246
Eight-bit analog-to-digital converter decreases average power consumption and increases component reliability. The converter uses solid-state components in pulse operation and magnetic core components for minimizing power consumption. The magnetic core components also increase reliability.

**B65-10195**
DEVICE MEASURES FLUID DRAG ON TEST VEHICLES
FREEMAN, H. JUDD, J. H. LEISS, A. DATE- JUN. 1965
LANGLEY-34
Electrochemical drag balance device measures the aerodynamic drag force acting on a vehicle as it moves through the atmosphere and telemeters the data to a remote receiving station. This device is also used for testing the hydrodynamic drag characteristics of underwater vehicles.

**B65-10196**
IMPROVED ELECTRICAL CONNECTOR IS MOISTURE AND CORROSION PROOF
SPOON- INNOVATOR NOT GIVEN / N. A. AVIATION/ DATE- JUN. 1965
MSC-164
Compression-sealed electrical connector made principally of plastic components is used in a corrosive atmosphere. This inexpensive and acutestproof connector can be modified to provide a multiple-pin connector.

**B65-10197**
IMPROVED SOLDERLESS CONNECTOR IS EASILY DISCONNECTED
SPOON- INNOVATOR NOT GIVEN / HUGHES AIRCRAFT CO./ DATE- JUN. 1965
JPL-134
Solderless type solderless connector is easily
disconnected and reassembled and resists vibration. The connector, which uses a tapered split sleeve that is tightened by a nut into a mating lug, is used where standard solder lugs and to connect unsolderable wire.

B65-10199
MODULAR THERMOELECTRIC CELL IS EASILY PACKAGED IN VARIOUS ARRAYS
NIST, J. DATE- JUN. 1965
GSPC-339

Modular thermoelectric cells are easily packaged in various arrays to form power supplies and have desirable voltage and current output characteristics. The cells employ two pairs of thermoelectric elements, each pair being connected in parallel between two sets of aluminum plates. They can be used as solar energy conversion devices.

B65-10200
DENSITY TRACK MADE WITH COMPUTER PRINTOUT
WILSON, M. DATE- JUN. 1965
GSPC-322

Special drum for a computer-controlled printer improves density trace of scientific data. The drum provides uniformly shaped characters and even spaced variations of print density that precisely reflect data magnitude. This device plots temperature profiles, geographic contours, pressure gradients, electric potential gradients, and magnetic field configurations.

B65-10202
QUICK-DISCONNECT COUPLING PROVIDES SAFE TRANSFER OF HAZARDOUS FLUIDS
DR. K. B. SCHROED, H. W. DATE- JUN. 1965
LWTS-125

Quick-disconnect coupling is used for uncopling of plumbing during ground-to-vehicle transfer of cryogenic and hazardous fluids. The coupling allows remote positive control of liquid pressure and flow during the transfer operation, remote connection and separation capabilities, and negligible liquid spillage upon disconnection.

B65-10203
TINT BIOMEDICAL AMPLIFIER COMBINES HIGH PERFORMANCE, LOW POWER DRAW
DEMOO, G. J. DATE- JUL. 1965
ARC-41

Transistorized, portable, high performance amplifier with low power drain facilitates biomedical studies on mobile subjects. This device, which utilizes a differential input to obtain a common-mode rejection, is used for amplifying electrocardiogram and electromyogram signals.

B65-10204
VOLTAGE VARIABLE OSCILLATOR HAS HIGH PHASE STABILITY
MELN, C. P. DATE- JUL. 1965
LAMBERT-123

Two or more series RLC circuits are used with a negative feedback amplifier to make a voltage variable oscillator. This combination results in high phase stability and optimum frequency modulation.

B65-10206
SENSITIVE ELECTROCHEMICAL FEATURES DIGITAL OUTPUT
DOONG, H. DATE- JUL. 1965
GSPC-285

Four-stage transistorized electrotherm eliminates the need for a logarithmic compression network. It measures very low currents and produces a digital output directly indicative of the input current magnitude.

B65-10208
HYBRID COMPUTER TECHNIQUE YIELDS RANDOM SIGNAL PROBABILITY DISTRIBUTIONS
CAPERSON, R. D. DATE- JUL. 1965
ARC-34

Hybrid computer determines the probability distributions of instantaneous peak amplitudes of random signals. This combined digital and analog computer system reduces the errors and delays of manual data analysis.

B65-10209
OSCILLATOR CIRCUIT MEASURES LIQUID LEVEL IN TANKS
SPOR- INNOVATOR NOT GIVEN /IBM/ DATE- JUL. 1965
M-PS-245

Oscillator circuit automatically measures the liquid level in tanks. The circuit employs a twin transmission line as a liquid level probe.

B65-10212
DETECTOR CIRCUIT COMPENSATES FOR VIDICON BEAM CURRENT VARIATIONS
SPOR- INNOVATOR NOT GIVEN /RCA/ DATE- JUL. 1965
GSPC-310

Signal detector circuit compensates for black level shifts in vidicons by dark current cancellation. It clamps the video signal to the dark current component of the signal. The device also compensates for background noise variation or transducer bias fluctuations in other repetitive pulse systems.

B65-10213
MULTIAXIAL ANALYZER DETECTS LOW-ENERGY ELECTRONS
GSPC-329

Three curved plate energy analyzers coupled with three electron multiplier tubes detect and measure low energy electron flux in several directions simultaneously.

B65-10215
ELECTRICAL PROBE ENSURES RELIABLE CONTACT IN SOCKET
SPOR- INNOVATOR NOT GIVEN /IBM/ DATE- JUL. 1965
M-PS-315

Spring-loaded probe makes a reliable electrical contact by producing a circular wiping motion at the tip when inserted into a mating socket.

B65-10218
GRAPHITE ELEMENT SERVES AS RADIANT HEAT SOURCE
DATE- JUL. 1965
M-PS-105

Radiators using a graphite heating element as a radiant heat source have high heat flux and long operational lives. They are used to test the thermal resistance of materials.

B65-10221
INSTRUMENT ACCURATELY MEASURES EXTREMELY LOW AIR DENSITIES
SPOR- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE- AUG. 1965
M-PS-193

Gauge accurately measures low air densities in high-vacuum systems. It relies on the detection of near-visible light radiated from nitrogen molecules present in the system.

B65-10223
VOLTAGE CONTROLLED OSCILLATOR IS EASILY ALIGNED, HAS LOW PHASE NOISE
STDNOR, R. L. DATE- AUG. 1965
JUL-510

Voltage Controlled Oscillator /VCO/, represented by an equivalent Rf circuit, is easily adjusted for optimum performance by varying the circuit parameter. It contains a crystal drive level which is also easily adjusted to obtain minimum phase noise.

B65-10225
SAMPLE RC CIRCUIT ACCURATELY COUNTS TO 24
STAFFORD, R. L. DATE- AUG. 1965
GSPC-317

Ripple-through counter with divide-by-24 output pulse is used in digital control clocks to register hours and give a daily output signal. It uses commercially available digital modules that incorporate and gates with flip-flops.

B65-10226
MAGNETIC-SHIFT-REGISTER CIRCUIT CONTROLS STEP
Motor Operator

Veillette, L. J. Date- Aug. 1965

GSC-340

A magnetic-shift-register circuit controls bidirectional operations of a phase-pulsed step motor. The circuit draws no power in standby, is nonregenerative, and is insensitive to switching transients.

B65-10228

Simple Circuit Produces High-Speed, Fixed Duration Pulses

Garrahon, N. M. Date- Aug. 1965

GSC-285

Circuit generates an output pulse of fixed width from a variable width input pulse. The circuit consists of a tunnel diode in parallel with an inductance driven by a constant current generator. It is used for pulsed communications equipment design.

B65-10232

Field Effect Transistor Presents High Input Impedance in AC Amplifier

Marshall, J. H. Date- Aug. 1965

JPL-500

Four-stage transistorized ac amplifier provides high input impedance and operates at low intrinsic noise levels. It is suited to carrier or narrow band sine wave applications.

B65-10233

High-Speed Square-Wave Current Limiter Operates Efficiently

Gronvold Innovator Not Given /Labko Sci./ Date- Aug. 1965

JFL-009

Transistorized high speed circuit limits currents from a square-wave ac power supply. The current limiter resets after each half cycle of the square wave and thus minimizes power losses.

B65-10234

Simple Circuit Reduces Transistor Switching Time

Gronvold Innovator Not Given /Westinghouse Elec. Corp./ Date- Aug. 1965

GSFC-316

Silicon-Controlled Rectifier (SCR), gated by a voltage divider, controls the potentiometer in transistorized switching circuits. The SCR acts as a gate to trigger the switching transistor only when the input signal reaches an amplitude that will switch the transistor rapidly.

B65-10237

Brushless DC Motor Uses Electron Beam Switching Tube As Compressor

Gronvold, P. Date- Aug. 1965

GSC-345

Electron beam switching tube eliminates physical contact between rotor and stator in brushless dc motor. The tube and associated circuitry control the output of a dc source to sequentially energize the motor stator windings.

B65-10238

Solid-State Laser Transmitter Is Amplitude Modulated

Bildesbach, S. Date- Aug. 1965

MSC-121

Amplitude modulated laser transmitter affords radio frequencies unlimited bandwidth. The system, which is solid state and compact, uses a gallium arsenide diode that emits in the near infrared.

B65-10242

Electrometer Has Automatic Zero Bias Control

Gronvold Innovator Not Given /Applied Physics Corp./ Date- Aug. 1965

GSC-350

Zero biasing circuit in a vibrating reed type electrometer counterbalances residual potential. It charges a capacitor to the residual potential and connects that capacitor in series with the vibrating reed so that the voltages cancel. This enables the electrometer to read zero output potential in the absence of an input current.

B65-10263

Novel Probe Simplifies Electronic Component Testing

Syener, W. F. Date- Aug. 1965

GSC-342

Test probe, in conjunction with standard equipment, tests axial-lead electronic components in their original packages. The probe can be modified to test any electronic component with automatic or nonautomatic equipment.

B65-10244

Lightweight Coaxial Cable Connector Reduces Signal Loss

Hutchins, A. G., Jr. Date- Aug. 1965

JPL-720

Connectors with milled interface surfaces for perfect electrical contact eliminate secondary-emission discharge and low signal loss in RF coaxial cables. The connectors which contain alignment and centering components for proper joint concentricity are used in communications systems designs.

B65-10247

Servo Calorimeter Measures Material Heating Rate

Gilmore, G. Wilson, J. H. /Westinghouse Elec. Corp./ Date- Aug. 1965

Nu-0024

Servo calorimeter accurately measures the heating rate of a material exposed to nuclear radiation independently of the specific heat thermal conductivity of the material. The electrical power used is a direct measure of the nuclear heating rate.

B65-10249

Manual-Feed Adapter Permits Microfilming of Continuous Oscilloscope Output

Berrett, J. /Westinghouse Elec. Corp./ Date- Aug. 1965

Nu-0029

A manual-feed adapter used with a microfilm recording unit permits continuous filming and reduces oscillograph output to manageable dimensions.

B65-10255

Boron Trifluoride Nuclear Detector Preamplifier Uses Single-Cable Connection

Beckelman, J. D. /Shumaker, R. E. Date- Aug. 1965

Lewis-178

Preamplifier for a nuclear particle detector operates with a single interconnecting cable. Isolating and bypass networks permit this simple cable operation.

B65-10257

Inductor Flyback Characteristic Gives Voltage Regulator Fast Response

Kite, G. Date- Aug. 1965

GSFC-361

Voltage regulator alternately connects an inductor in parallel and in series with the input voltage source. This flyback voltage regulator provides a regulated dc voltage to varying loads from a varying dc supply and gives fast response to load and supply changes.

B65-10258

Gapped Toroid Provides Infinite Resolution of Delay-Line Pickup

Borish, G. B. Date- Aug. 1965

GSC-370

Gapped toroid magnetically coupled to a delay line provides continuous adjustment of the delay line signal retrieval. A rotating screw moves the toroid pickup parallel to the delay line. This device can be used in signal detection devices and instrumentation equipment.

B65-10259

Increased Junction Lead Inductance Ballasts High-Frequency Transistors

Gilbert, G. J. /ECA/ Date- Sep. 1965

GSFC-387

Segmentation of transistor bonding stripes and the inherent inductance of individual leads provides
ballast for even current distribution across the junction of a high-frequency transistor.

B65-10260
SINGLE PULSE COUNTING CIRCUIT COMPUTES SUM
OF SQUARES
SCHAEFFER, D. H. DATE- SEP. 1965
GSPC-391
Pulse counting circuit with an extra chain of flip-flops, delay lines, and gates computes the sum of the squares of the pulse sequences. A pulse train and the sum of the squares of the pulses are simultaneously completed.

B65-10263
INDICATING DEVICE ENSURES PROPER MATING OF
ELECTRICAL CONNECTORS
JENKINS, L. H. SIMMONS, W. H. DATE- SEP. 1965
MSC-155
Indexing splines with modified standard male and female connectors eliminates the possibility of incorrect mating. Large stock quantities of differently indexed connectors are unnecessary since connectors from a single stock can be indexed as desired at installation time.

B65-10264
PLASTIC BAGS IN EVACUATED CHAMBER MAKE
LIGHTWEIGHT GAS SAMPLING SYSTEM
SHAPER, W. M. /GE/ DATE- SEP. 1965
FRC-31
Portable, lightweight system collects the exhaust gas of an aircraft during flight for use in analyzing combustion efficiency. The system uses an evacuated chamber and plastic bags.

B65-10265
WELD LEAKS RAPIDLY AND SAFELY DETECTED
SPENCER, L. D. DATE- SEP. 1965
N-FS-362
Test method detects leaks that occur during hydrostatic pressure testing of welded joints in metal tanks. A strip of aluminum foil and a strip of water-soluble paper are placed over the weld. A voltage applied between the tank wall and the foil strip is monitored to detect a decrease in ohmic resistance caused by water leakage into the paper layer.

B65-10267
ELECTROUMETER PREAmPLIFIER HAS DRIFT CORRECTION
FEEDBACK
LABARTE, L. C. /AERO SCI./ DATE- SEP. 1965
JPL-SET-074
Negative feedback circuit corrects output drift in an electrometer. The negative feedback is used in the no signal state to maintain the output level at zero reference. Drift voltage storage in the signal on state is also used to provide a drift-free readout.

B65-10268
MULTIPLE TEST CHAMBER EXPOSES MATERIALS TO
VARIOUS ENVIRONMENTS
JOHNSTON, R. L. DATE- SEP. 1965
MSC-179
Multiple compartment test chamber exposes several material specimens to various environmental conditions for prolonged periods. The specimens are individually mounted in chamber compartments, rotated to various positions, and measured through optical windows to determine progressive changes in the material properties.

B65-10269
SAMPLE DEVICE PRODUCES ACCELEROMETER
CALIBRATION PULSE
SPENCER, D. W. DATE- SEP. 1965
N-FS-363
Shock-impulse exciter produces a remote checkout of the amplitude calibration and frequency response of a piezoelectric vibration accelerometer. The exciter employs a bimetal spring to apply a mechanical acceleration pulse of a known amplitude and frequency to the accelerometer.
AT PRESENT LEVEL
SPOK- INNOVATOR NOT GIVEN /AVCO CORP./ DATE- SEP. 1965

K-FS-331
Optimum decision-level circuit maintains the decision threshold at any preselected percentage of the input-signal amplitude. Communications equipment involving recognition of transmitted digital information can benefit from this circuit.

B65-10282
CONSTANT-CURRENT REGULATOR IMPROVES TUNNEL DIODE THRESHOLD-DETECTOR PERFORMANCE
CANCRO, C. A. DATE- SEP. 1965

GSFC-239
Grounded-base transistor is placed in a tunnel diode threshold detector circuit, and a bias voltage is applied to the tunnel diode. This provides the threshold detector with maximum voltage output and overload protection.

B65-10284
FIELD-EFFECT TRANSISTOR REPLACES BOLLY TRANSFORMER IN ANALOG-GATE CIRCUITS
SPON- INNOVATOR NOT GIVEN /RADIATION, INC./ DATE- SEP. 1965

GSFC-351
Metal-Oxide Semiconductor Field-Effect Transistor /MOSEF/ analog-gate circuit adapts well to integrated circuits. It provides better system isolation than a transformer, while size and weight are appreciably reduced.

B65-10286
UPPERCASE AND LOWERCASE COMPUTER PRINTOUT INCREASES BRANABILITY
BAND, W. W. /DOC., INC./ JONESEGG, M. B. DATE- SEP. 1965

NO-12
Print chain of 120 characters facilitates production of computer printout in both uppercase and lowercase characters. Although the output speed is reduced, the use of the print chain increases the computer printout readability.

B65-10287
PHOTO-RESISTANCE ANALOG MULTIPLIER HAS WIDE RANGE
HARTENSTEIN, R. G. DATE- SEP. 1965

GSFC-360
Photoactivated bridge facilitates equal performance of analog multipliers over a wide frequency range. The multiplier operates from direct current to an upper frequency limited by either the light source or the closed-loop amplifier.

B65-10289
BORON NITRIDE HOUSING COOLS TRANSISTORS
SPON- INNOVATOR NOT GIVEN /SPACE TECHNOL. LABS./ DATE- SEP. 1965 REAN- SEE ALSO B65-10033 AND B65-10186

NO-079
Boron nitride ceramic heat sink cools transistors in r-f transmitter and receiver circuits. Heat dissipated by the transistor is conducted by the boron nitride housing to the metal chassis on which it is mounted.

B65-10290
F6/CW SYSTEM MEASURES AIRCRAFT ATTITUDE
SPON- INNOVATOR NOT GIVEN /BELPAR/ DATE- SEP. 1965

K-FS-276
F6/CW radar system measures attitude of an approaching aircraft relative to a ground station. The F6/CW transmitter on board the aircraft transmits through two antennas to a ground-based receiver.

B65-10293
ELECTROSTATICALLY DRIVEN DYNAMIC CAPACITOR EMPLOYING CAPACITIVE FEEDBACK
LONGBURG, J. O. DATE- OCT. 1965

JEL-771
Three-part signal electrode provides capacitive feedback to an oscillator driven dynamic capacitor in an electrometer circuit.

B65-10298
TITANIUM DIAPHRAGMS MAKES EXCELLENT AMPLIFIER CATHODE SUPPORT
TEICH, W. W. /RAYTHEON CO./ DATE- OCT. 1965

GSFC-394
Cathode support structure designed around a titanium diaphragm prevents radial misalignment between the cathode and anode in amplifiers. The titanium exhibits low thermal conductivity, tolerates lateral thermal expansion of the cathode, and is a poor primary and secondary emission medium.

B65-10299
ELECTROPHORETIC RESISTOR REGULATES HIGH CURRENT
BAECEER, J. P. JEDLICKA, J. B. WAGNER, C. B. DATE- OCT. 1965

ABC-04
Electrophoretic resistor maintains a constant direct current in each of several high-power parallel loads, of variable resistance, across a single source. It provides current regulation at any preset value by dissipating the proper amount of energy therally, and uses a column of mercury to vary the effective length of a resistance element.

B65-10300
IMPURITY DIFFUSION PROCESS FOR SILICON SEMICONDUCTORS IS FAST AND PRECISE
MC LUSKI, R. M. MC LUSKI, R. M. SKONEN, G. W. /WESTINGHOUSE ELECTRICAL CORP./ DATE- OCT. 1965

GSFC-397
Impurity diffusion process produces precision silicon semiconductor junctions economically and fast. Oxide is deposited on a silicon wafer and a controlled concentration of impurity atoms in gas form is simultaneously introduced into the reaction.

B65-10301
REMOTE RAPIDLY VARYING PressURES ACCURATELY MEASURED
SPON- INNOVATOR NOT GIVEN /GE/ DATE- OCT. 1965

FAC-28
Transmitting-damping tube with one end closed, the other open to a pressure source, has a pressure sensor connected to a port close to the pressure source. This accurately measures transient or rapidly varying fluid pressures.

B65-10304
IMPROVED STRAIN-WIRE FLOWMEASURES HAS FAST RESPONSE TIME
DILLON, R. C. DUNBAR, W. R. DATE- OCT. 1965

LAB-241
Strain-sensitive resistance wires in a Wheatstone bridge arrangement form the sensing element of a flowmeter. The change in resistance of the wires is measured as a function of stream velocity. Thus the electrical output is a measure of both rapidly varying and steady fluid-flow rates.

B65-10305
THIN-FILM RESISTORS USED IN FUNCTIONAL ELECTRONIC BLOCKS
SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELECTRICAL CORP./ DATE- OCT. 1965

GSFC-380
Vapor-deposited thin-film resistors replace diffused resistors in p-n tank circuits in a solid state electronic block. This allows an optimum parallel capacitance to be obtained for circuit applications requiring a high resistance and a low capacitance.

B65-10306
OPAQUE MICROFICHES MASTERED PERMITS EASY READING
LOWE, E. S. /DOC., INC./ DATE- OCT. 1965

NO-7
White-pigmented backing applied to the reverse side of microfilm master sheets makes the area opaque and easily readable. This technique is of value for organizations involved in large volume information storage and retrieval.
B65-10307
FREQUENCY CORRECTION DEVICE USES DIGITAL CIRCUITRY
SCHARFEN, B. DATE- OCT. 1965
SSPC-268
Signal acquisition and tracking system covering a wide range of frequencies uses digital circuitry to sample the frequency of an incoming signal and provide correction pulses to the voltage-controlled oscillator. The circuit can also sense the presence of a signal on any one of the input lines.

B65-10308
ELECTRONIC ASPER-BHOUR INTEGRATOR IS ACCURATE TO ONE PERCENT
FALICOTTICH, J. DATE- OCT. 1965
SSPC-203
Electronic asper-hour integrator is based on current-to-frequency conversion. It operates on low power and is accurate to one percent. This device can measure the asper-hour capacity of batteries and can be adapted for other functions.

B65-10309
THERMOELECTRIC ELEMENTS DIFFUSION-BONDED TO TUNGSTEN ELECTRODES
SPON- INNOVATOR NOT GIVEN /TYCO LABS./ DATE- OCT. 1965
H65-10366
Solid-state diffusion process bonds lead telluride and lead telluride-tin telluride thermoelectric elements to tungsten electrodes. The resulting bond is nonmagnetic and has high strength and low electrical and thermal resistance. This method is also used with tantalum electrodes.

B65-10310
THRESHOLD DETECTOR PRODUCES NARROW PULSES AT HIGH REPEITION RATES
GARRAHAN, R. M. DATE- OCT. 1965
GSPC-383
Solid state device generates fixed width output pulses from variable width input pulses in the nanosecond range. The circuit produces pulse repetition rates in the megacycle range and exhibits low power drain.

B65-10311
PCB MAGNETIC TAPE SYSTEM EFFICIENTLY RECORDS AND REPRODUCES DATA
COLE, P. T. DATE- OCT. 1965
GSPC-375
Split-phase PCB technique consists of data and clock signal recording and reproduction systems. This PCB magnetic tape system achieves a high packing density on the tape and provides a symmetrical reproduction of the recorded signal.

B65-10313
PLANETARY CAMERA CONTROL IMPROVES MICROFICHE PRODUCTION
CHEESEFORD, W. L. LEWIS, B. B. /DOCS., INC./ DATE- OCT. 1965
HG-1
HG-5
Microfiche is prepared using an automatic control system for a planetary camera. The system provides blank end-of-row exposures and signals card completion so the legend of the next card may be photographed.

B65-10314
HYBRID CIRCUIT ACHIEVES PULSE REGENERATION WITH LOW POWER DRAIN
CAMBO, C. A. DATE- OCT. 1965
GSPC-382
Hybrid tunnel diode-transistor circuit provides a solid-state, low power drain pulse regenerator, frequency limiter, or gated oscillator. When the feedback voltage exceeds the input voltage, the circuit functions as a pulse normalizer or a frequency limiter. If the circuit is directly coupled, it functions as a gated oscillator.

B65-10315
MAGNETIC MEASURES ORTHOGONAL COMPONENTS OF MAGNETIC FIELDS
SPON- INNOVATOR NOT GIVEN /SPECTRA PHYS./ DATE- OCT. 1965
GSPC-395
Driven magnetometer accurately measures the components of a low strength magnetic field in each of three mutually perpendicular directions. To accomplish this, it employs the principle of magnetic resonance in optically pumped rubidium vapor.

B65-10317
INSTRUMENT PERFORMS NONDESTRUCTIVE CHEMICAL ANALYSIS, DATA CAN BE TELEMMETERED
TURKUSCH, A. /CHICAGO UNIV./ DATE- OCT. 1965
JPL-SC-076
Instrument automatically performs a nondestructive chemical analysis of surfaces and transmits the data in the form of electronic signals. It employs solid-state nuclear particle detectors with a charged nuclear particle source and an electronic pulse-height analyzer.

B65-10318
REMOTE CONTROL ELECTRICAL SWITCHING SYSTEM HAS 1000-OUTPUT CAPABILITY
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- OCT. 1965
J-P,S-380
Electromechanical remote control system has a capacity of 1000 individual on-off functions yet uses only seven pairs of telephone-type lines for interconnection. Installation and maintenance costs are decreased by using this system.

B65-10320
BROGDED PRESSED DISK ELECTRODE HAS LOW CONTACT POTENTIAL
DATE, J. L. BOSIE, B. /INST. OF RES. AND INSTRUMENTATION/ DATE- OCT. 1965
BD-10025
MSC-158
Pressed-disk electrode with low contact potential monitors physiological processes. It consists of silver and silver chloride combined with bentonitic clay. The clay affords a surface that permits use over extended periods without contact deterioration.

B65-10322
CAR-OPERATED LIMIT SWITCH FEATURES SAFE FUSE REPLACEMENT
WEBB, G. J. /MCDONNELL AIRCRAFT CORP./ DATE- OCT. 1965
MSC-216
Two hermetically sealed, short travel, limit switches permit fuse replacement without danger of a spark or arcing. The switches are wired in parallel circuits and actuated by manually operated cams containing the circuit fuses.

B65-10324
SELECTOR BOND DECREASES RESISTANCE OF LIGHT-ACTIVATED SWITCH
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JUN. 1965
JPL-SC-101
Vapor-deposited amorphous selenium bond decreases the ON resistance of a gallium arsenide-silicon light-activated, low-level switch. The switch is used under a pulse condition to prolong switch life and minimize errors due to heating, dewetting, and overdrawing.

B65-10325
DIRECT FORCE-MEASURING TRANSDUCER USED IN BLOOD PRESSURE RESEARCH
RICE, J. J. /STAFFORD RES. INST./ NEWGERD, P. M. /STANFORD INST./ DATE- NOV. 1965
ARC-83
Direct force measuring transducer acts as an arterial tonometer, gives a direct readout to instrumentacion, and is unaffected by ambient noise. It uses a semiconductor strain gage which is deflected by pressure pulses in the artery. The deflection changes the resistance of the gage and alters the voltage reading on the associated instrumentation.

B65-10328
FEED-THROUGH CONNECTOR WITHSTANDS HIGH TEMPERATURES IN VACUUM ENVIRONMENT
REIDSMAN, W. S. /GEOPHYS. CORP. OF AM./ DATE- NOV. 1965
COMMUNICATION SYSTEM USES MODULATED LASER BEAM

JCHNSTON, A.

FOECE-R65-10333

GSFC-440

KREISMAN, J.

R65-10329

GSFC-442

CLIFF, W.

NOV. 1965

ULTRAHIGH VACUUM RANGE

ELFINAT

FREQUENCY DISCRIMINATOR UITB BINARY OUTPUT

U-FS-371

FOSTER, M.

B65-10347

B65-10343

MINIATURE SERVO ACCELEROBOMETER IS FORCE-BALANCED

JOHNSON, R. /CALIF. INST. RES. FOUND./ DATE-NOV. 1965

JPL-155

Miniature servo accelerometer measures unusually small forces of torques. The pendulous mass of the accelerometer is suspended by fused quartz torsion fibers in an electrostatically force-balanced environment. It is used in gravity surveys for exploring mineral deposits.

B65-10343

DELAYED RIPLEY COUNTER SIMPLIFIES SQUARE-ROOT COMPUTATION

CLIFF, R. DATE-NOV. 1965

GSFC-398

Ripple subtract technique simplifies the logic circuitry required to perform binary addition and subtraction. The adder uses dual input and delayed output flip-flops in one register. The contents of this register are summed with those of a standard register through conventional AND gates.

B65-10345

VARIABLE WORD LENGTH ENCODER REDUCES TV BANDWIDTH REQUIREMENTS

SIEVERSON, N. E., JR. DATE-NOV. 1965

LANGLEY-67

Adaptive variable resolution encoding technique provides an adaptive compression pseudo-random noise signal processor for reducing television bandwidth requirements. Complementary processors are required in both the transmitting and receiving systems. The pretransmission processor is analog-to-digital, while the postreception processor is digital-to-analog.

B65-10347

COMPACT SCR TRIGGER CIRCUIT FOR IGNITION SWITCH OPERATES EFFICIENTLY

POSTER, L. Z. DATE-NOV. 1965

M-FS-371

Trigger circuit with two series-connected SCR triggers an ignitron switch used to discharge high-energy capacitor banks. It does not require a warmup period and operates at relatively high efficiency.

B65-10349

FREQUENCY DISCRIMINATOR WITH BINARY OUTPUT ELIMINATES TUNED CIRCUITS

DE VELDE, K. /EDM/ DATE-NOV. 1965

M-FS-376

Frequency discriminator has a binary output and permits microminiaturized packaging techniques. It uses a bandpass amplifier and standard logic elements that convert two input frequencies to two discrete logic pulses.

B65-10350

ZENER DIODE CONTROLS SWITCHING OF LARGE DIRECT CURRENTS

SPRON- INNOVATOR NOT GIVEN /IBM/ DATE-NOV. 1965

MSC-189

High-current zener diode is connected in series with the positive input terminal of a dc supply to block the flow of direct current. A high-frequency current control signal is applied across the zener diode. This circuit controls the switching of large dc signals.

B65-10352

VIBRATING DIAPHRAGM MEASURES HIGH ELECTROSTATIC FIELD STRENGTHS

SPRON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE-NOV. 1965

MSC-189

Meter with flexible conductive diaphragm measures electrostatic charge density on a conducting surface in a vacuum. The diaphragm is supported from an insulated conductive support ring rigidly attached to the conductive surface whose electrostatic charge density is to be measured.

B65-10353

MULTIPHASE CLOCK-PULSE GENERATOR USES SIMPLIFIED CIRCUITRY

SPRON- INNOVATOR NOT GIVEN /IBM/ DATE-NOV. 1965

MSC-189

Multiphase clock-pulse generator converts a simple pulse train into nonoverlapping clock pulses. The generator employs multistable circuits to minimize the number of electronic components.

B65-10355

SIMPLE CIRCUIT PERFORMS BINARY ADDITION AND SUBTRACTION

CLIFF, R. A. SCHEEGER, D. R. DATE-NOV. 1965

GSFC-399

Ripple adder reduces the number of logic circuits required to perform binary addition and subtraction. The adder uses dual input and delayed output flip-flops in one register. The contents of this register are summed with those of a standard register through conventional AND gates.

B65-10359

IMPROVED Wire MEMORY MATRIX USES VERY LITTLE POWER

PSDEE, J. A. /SPERRY RAND CORP./ DATE-NOV. 1965

JPL-SC-167

Thin-film, plated-wire memory matrix for computer applications requires little power yet has higher speed and four times greater storage capacity than ferrite-core memories of the same size.

B65-10361

HIGH-INTENSITY FLASHING BEACON POWERED BY MERCURY CELLS

SPRON- INNOVATOR NOT GIVEN /LANGLEY/ DATE-NOV. 1965

LANGLEY-80

Pair of xenon flashlamps powered by mercury batteries in a transistorized circuit provides a flashing beacon with an effective intensity of a second-magnitude star at a distance of ten statute miles. This beacon is lightweight, long lasting and it withstands shock and vibration.

B65-10362

TEMPERATURE TRANSUDER HAS HIGH OUTPUT, IS TIME STABLE

FOLLETT, M. H. /BALL BROTHERS RES. CORP./ DATE-NOV. 1965

GSFC-446

Compact, lightweight temperature transducer requires no amplification of its output signal and is time stable. It uses two temperature-dependent characteristics of a silicon transistor to provide a zero-to-five-volt signal proportional to temperature.
B65-10363

HYDROGEN/OXYGEN REGENERATIVE FUEL CELL COMBINES HIGH EFFICIENCY WITH LOW COST

DOYLE, H. F. AND STEPHENS, C. W. /ELECTRO-OPT. SYSTEMS/ DATE- DEC. 1965

W00-091

Hydrogen/oxygen regenerative fuel cell stores electrical energy efficiently and inexpensively. The fuel cell has a high energy-to-weight ratio, and is adapted for a large number of cycles with deep discharge.

B65-10369

THREE-POSITION ROCKER SWITCH ACTUATOR HAS POSITIVE CENTERING

PUCINNHELLI, A. A. SMITH, J. R., JR. DATE- DEC. 1965

ARC-1

Quick-acting, remote controlled valve connects either one of two oxygen or air supplies to a breathing tube. The valve, which is fall-safe, incorporates a cammed piston arrangement that is driven by a remote controlled reversible rotary solenoid or reversible electric motor.

B65-10377

BINARY COUNTER USRS FLUID LOGIC ELEMENTS

SPOK- INNOVATOR NOT GIVEN /HAI CORP./ DATE- DEC. 1965

N-FS-323

Binary counter with two fluid flip-flops in each stage has an output taken from the output of the second flip-flop. The flip-flops each contain three fluid logic elements.

B65-10379

THREE-DIMENSIONAL WIRE-MESH CAPACITOR SYSTEM MEASURES FLUID DENSITY

SPOK- INNOVATOR NOT GIVEN /GARRETT CORP./ DATE- DEC. 1965

W00-194

Gaging system automatically measures the bulk density of a stored, electrically nonconductive fluid containing varying portions of liquid and vapor. The system employs a three-dimensional wire-mesh capacitor whose capacitance varies with the bulk density of the fluid dielectric medium between the capacitor plates.

B65-10380

DEVICE DETECTS UNBONDED AREAS IN PLASTIC LAMINATES

SPOK- INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1965

W00-204

Device generates an acoustic signal whose frequency changes disclose the presence of delaminated or unbonded areas in plastic laminates. A microphone makes the frequency change audible.

B65-10381

KEYED PLUGS AND SOCKETS PREVENT IMPROPER CONNECTIONS

SUCKER, B. L. LAMKIN, N. /McDONNELL AIRCRAFT CORP./ DATE- DEC. 1965

MSC-231

Plugs and sockets individually keyed so that no plug can be mated with other than its proper socket facilitates multiple connection in electrical systems.

B65-10382

PHOTOELECTRIC SYSTEM CONTINUOUSLY MONITORS LIQUID LEVEL

SPOK- INNOVATOR NOT GIVEN /BOEING CO./ DATE- DEC. 1965

M-FS-417

Photoelectric system continuously monitors liquid level.

B65-10386

IN SITU CORE AND WINDOW MANUFACTURE

SPOK- INNOVATOR NOT GIVEN /BOEING CORP./ DATE- DEC. 1965

MSC-256

Molds insulating spacer with one or more cavities is used as an insulated holder for mounting metal-cased transistors in a chassis containing densely packed electronic components. The transistors are mechanically supported on their bases and electrically isolated from each other by the holder.

B65-10387

SHRINKABLE SLEEVE ELIMINATES SHIELDING GAP IN RF CABLE

SPOK- INNOVATOR NOT GIVEN /GENERAL DYN. CONV AIR/ DATE- DEC. 1965

W00-207

Shrinkable sleeve between the connector and the terminated portion of the shielding. The assembly is enclosed in a heat-shrinkable plastic sleeve which completes the continuous RF shield.

B65-10389

INSULATOR-HOLDER PROTECTS TRANSISTORS IN DENSE ELECTRONIC ASSEMBLIES

SPOK- INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1965

MSC-14

Molded insulating spacer with one or more cavities is used as an insulated holder for mounting metal-cased transistors in a chassis containing densely packed electronic components. The transistors are mechanically supported on their bases and electrically isolated from each other by the holder.

B65-10392

NONCONTACTING VIBRATION TRANSUDER HAS CONSTANT SENSITIVITY

FLAGG, B. DATE- DEC. 1965

LABLET-99

Noncontacting transducer with constant sensitivity automatically measures the vibration amplitudes along the span of a vibrating structure of irregular contour. A system employing a feedback control position the transducer at a constant height above the test surfaces. A differential transformer facilitates calibration and extends the amplitude range of the system.

B65-10396

ADHESIVE-BACKED TERMINAL BOARD ELIMINATES MOUNTING SCREWS

SPOK- INNOVATOR NOT GIVEN /H. AN. AVIATION/ DATE- DEC. 1965

MSC-173

Low-profile terminal board is used in dense electronic circuits where mounting and working space is limited. The board has a thin layer of pressure-sensitive adhesive backing which eliminates the need for mounting screws.

B65-10398

BINARY COUNTER ACCUMULATES TIME BY COMPLEMENTARY PRESENT

ZAREYEN, G. E. /H. AN. AVIATION/ DATE- DEC. 1965

MSC-242

Binary counter reduces the number of logic elements required to furnish electrical control functions. The counter is automatically preset to the complement of the desired time increments in milliseconds. An output pulse is produced each time it reaches its capacity.

B65-10400

ELECTRICALLY HEATED DIAPHRAGM ELIMINATES USE OF THERMITECHNICS

NATHANSON, R. C. /H. AN. AVIATION/ DATE- DEC. 1965

MSC-241

Membrane-type diaphragms is used in systems where fluids are contained under pressure until a certain pressure threshold or point of time has been reached when the fluids are automatically released. The diaphragm is resistance heated until its strength is degraded to the point of rupture, thus releasing the contained fluids.
COMPUTER CIRCUIT CALCULATES CARDIAC OUTPUT

CUPROUS

REACTION HEAT USED IN STATIC WATER REMOVAL

B66-10026
IMPROVED CARBON ELECTRODE REDUCES ARC SPATTERING
SPON- INNOVATOR NOT GIVEN /UNION CARBIDE CORP./
DATE- JAN. 1966
MSC-219
Carbon rod core with a smaller proportion of rare earth compounds than in standard cores reduce arc spattering in optical equipment. This core is produced without additional cost or equipment.

B66-10028
PORTABLE SELF-POWERED DEVICE DETECTS INTERNAL FLAWS IN TUBULAR STRUCTURES
GILMOUR, G. /WESTINGHOUSE ELEC. CORP./
DATE- JAN. 1966
NU-0019
Portable probe and eddy-current-sensitive circuitry detects internal flaws or hard spot inclusions in an electrically conductive tubular channel by recording the conductivity change at the defect point.

B66-10034
CIRCUIT EXHIBITS POWER EFFICIENCY GREATER THAN 75 PERCENT
HANCOVITZ, F. J. /N. AM. AVIATION/ DATE- FEB. 1966
MSC-254
Variable duty cycle pulser increases circuit power efficiency by more than 75 percent when operating solenoid valves. The pulser provides a low-level holding current after a high-level current has actuated the solenoid valves.

B66-10036
FLOWMETER MEASURES LOW GAS-FLOW RATES
WELLS, F. E. DATE- FEB. 1966
M-PS-215
Positive-displacement flowmeter measures low gas-flow rates by gating the time required for a slug of mercury to pass between two reference levels in a tube of known volume.

B66-10038
CIRCUIT OPERATES AS SINE FUNCTION GENERATOR
BOGART, T. J. /N. AM. AVIATION/ DATE- FEB. 1966
MSC-255
Electronic circuit drives sine function generator using square wave and sawtooth sweep generators. The circuit replaces electromechanical driver and increases accuracy.

B66-10039
CONTROL SYSTEM MAINTAINS SELECTED LIQUID LEVEL
BERGSEON, R. L. SCHUCK, J. W. /HONEYWELL/ DATE- FEB. 1966
M-PS-470
Single-sensor control system maintains liquid hydrogen at a preselected desired level within a tank, regardless of boiloff. It calibrates output in percentage. Thus, when the fuel is at the desired level, the system output will indicate 100 percent regardless of what percent of tank capacity the fuel has reached.

B66-10041
COLD CATHODE IONIZATION GAUGE HAS RIGID METAL HOUSING
HERSOG, R. K. KRISMAN, W. S. /GEOPHYS. CORP. OF AM./ DATE- FEB. 1966
GSPC-445
Cold cathode ionization gage is a stainless steel housing accurately measures high pressures. The penning effect is used with a high voltage discharge in the presence of a magnetic field for an ion current proportional to the gas pressure in
22

01 ELECTRICAL (ELECTRONIC)

HOMEWORK-CORE PANELS
DATE- MAR. 1966
LANGELEY-202
Overall thermal conductivity of homework-core panels at elevated temperatures is measured by an apparatus with a heater assembly and a calibrated heat-rate transducer. The apparatus has space between the heater and transducer for insertion of a test panel and insulation.

B66-10128
OPTICAL GYRO PICKOFF OPERATES AT CRYPTOGENIC TEMPERATURES
SPON- INNOVATION NOT GIVEN /AER/ DATE- MAR. 1966
H-TS-407
Two-axis pickoff for cryogenic gyros uses solid-state light sources and sensors. This compact system operates efficiently at cryogenic temperatures.

B66-10129
DIGITALLY CONTROLLED PULSE-LEVEL DISCRIMINATOR OPERATES OVER WIDE VOLTAGE RANGE
CAMERON, L. A. DATE- MAR. 1966
GSF-324
Low power drain discriminator circuit generates an output pulse when an input pulse exceeds a discrete digitally controlled threshold voltage. The discriminator operates over a wide linear or nonlinear range of threshold levels. It uses several amplifier stages ahead of a fixed-reference threshold detector.

B66-10130
MATERIALS PHYSICALLY TESTED IN VARIABLE-ENVIRONMENT CHAMBER
KESSLER, A. C. DATE- MAR. 1966
JPL-785
Controlled environment chamber for physical tests of crushable materials encloses both the test specimen and the devices for performing the tests. The chamber may be stepped through a range of changing environment.

B66-10133
OMIDIRECTIONAL ANTENNAS TRANSMIT AND RECEIVE OVER LARGE BANDWIDTH
WOODWARD, G. N., JR. /RCA/ DATE- MAR. 1966
GSF-425
For exchanging wideband signals between two distant ground stations, low-gain antennas with wide angular coverage and circular polarization are mounted on a single mast extending from a satellite. The transmitting antenna has two decoupled ports or inputs for eliminating switching problems when using two transmitters on different frequencies.

B66-10134
HIGH TEMPERATURE THERMOCOUPLE OPERATES IN REDUCTION ATMOSPHERE
HOFF, R. G. /KELFRED-130/ CORP./ DATE- MAR. 1966
NEO-0048
Thermocouple continuously measures a flowing gas up to 4500 degrees F in a hazardous environment. The thermocouple combines rhodium and tungsten in the probe, housing, and swaged extension lead. The wires extend continuously from the cold junction to the probe tip to eliminate errors from secondary thermocouple effects.

B66-10141
OPTICALLY DRIVEN SWITCH TURN-OFF TIME REDUCED BY OPAQUE COATING
SPON- INNOVATION NOT GIVEN /IBM/ DATE- APR. 1966
JPL-50-107
Turn-off response time of an optically driven switch is reduced by placing an opaque covering over the passivating silicon dioxide layers. The coating prevents photon absorption so that carriers are not trapped or stored on the base region, thus shortening turn-off time.

B66-10142
DIFFUSION TECHNIQUE STABILIZES RESISTOR VALUES
GALLAGHER, R. C. /GULIA/ M. N. /WESTINGHOUSE ELEC. CORP./ DATE- APR. 1966
SMC-203
Reduction of the contact resistance stabilizes the values, over a broad temperature range, of resistors used in linear integrated circuits. This reduction is accomplished by p-plus diffusion under the alloyed aluminum contacts.

B66-10144
MOUNTING IMPROVES HEAT-SINK CONTACT WITH BERYLLIA WASHER
SPON- INNOVATION NOT GIVEN /COLLINS RADIO CO./ DATE- APR. 1966
REB- SEE ALSO 66-10033
MSC-194
To conduct heat away from electrical components that must be electrically insulated from a metal heat sink, a metal washer and a coil spring are placed between one end of the electrical component and the beryllia washer mounted on the heat sink. The thermal paths are formed by the component lead and base, the metal and beryllia washers, and the compressed spring.

B66-10146
POLYMER DEFORMATION GAUGE MEASURES THICKNESS CHANGE IN TENSILE TESTS
SHOYLES, R. F. /BRO/ DATE- APR. 1966
JPL-745
Lightweight deformation gauge attached to a polymer specimen determines the thickness changes undergone by the specimen during the testing of its tensile and elongation properties. Mechanical noise from outside sources is dampened when the assembly is hung on a light rubber band.

B66-10148
TESTER PERIODICALLY REGISTERS DC AMPLIFIER CHARACTERISTICS
CRES, D. WENZEL, G. E. DATE- APR. 1966
MSC-190
Motor-driven switcher-recorder periodically registers the zero drift and gain drift signals of a dc amplifier subjected to changes in environment. A time coding method is used since several measurements are shared on a single recorder trace.

B66-10150
SWITCHING MECHANISM SENSES ANGULAR ACCELERATION
SPON- INNOVATION NOT GIVEN /BALL BROS. RES. CORP./ DATE- APR. 1966
GSF-462
Switching mechanism actuates an electrical circuit when a predetermined angular acceleration and displacement are reached. A rotor in the mechanism overcomes the restraint of a magnetic field when the case in which the detector is mounted reaches the predetermined angular acceleration.

B66-10159
IMPROVED SYSTEM MEASURES OUTPUT ENERGY OF PYROTECHNICAL DEVICES
SHOYLES, R. N. /N. AM. AVIATION/ DATE- APR. 1966
WOO-256
System for measuring the output energy of pyrotechnic devices discharges the reaction products into a test chamber. It measures the radiant heat output from a pinhole aperture as well as internal pressure changes on a common time base.

B66-10160
ELECTROPHYSICAL TRANSDUCER AUTOMATICALLY LIMITS MOTOR CURRENT
LOVITT, J. F. DATE- APR. 1966
LEWIS-253
Pneumatic controller regulates the load on a centrifugal freon compressor in a water cooling system, thus limiting the current input to an electric motor driving it. An electro-mechanical transducer monitoring the motor input current sends out air signals which indicate changes in the current to the pneumatic controller.

B66-10161
TRANSDUCER MEASURES FORCE IN VACUUM ENVIRONMENT
GLENN, D. C. DATE- APR. 1966
LEWIS-210
Transducer assembly measures force in a vacuum environment. The assembly consists of a standard capacitance probe and a torque beam. This transducer can be used in high-pressure as well as in low-pressure environments for static and dynamic force measurements.

B66-10162
FIXTURE AIDS SOLDERING OF ELECTRONIC COMPONENTS ON CIRCUIT BOARD
Hoggs, E. B. DATE- APR. 1966
ARC-56
Spring clamp fixture holds small electronic components in a desired position while they are being soldered on a circuit board. The spring clamp is clipped on the edge of the circuit board and an adjustable spring-steel boom holds components against the board. The felt pad at the end of the boom is replaced with different attachments for other holding tasks.

B66-10163
TWO-LIGHT CIRCUIT CONTINUOUSLY MONITORS AC GROUND, PHASE, AND NEUTRAL WIRES
NRC, D. W. /N. A. AVIATION/ DATE- APR. 1966
MSC-356
Two-transistor, two-lamp circuit monitors the continuity of ac ground, neutral, and phase wires. The circuit gives different visual indications if any one of the three lines should become open circuited.

B66-10168
FATIGUE TESTER ACHIEVES TRUE AXIAL MOTION
THROUGH FLEX PLATES AND BARS
HENGSTENBERG, T. F. /WESTINGHOUSE ASTRONUCLEAR LAB./ KOEHLER, C. R. DATE- APR. 1966
NU-0021
Lever load-amplifying fatigue testing machine with a load cycle frequency of 100 to 900 cycles per minute applies the load through true axial motion. First friction and bearing wear are eliminated by replacing these parts with flex plates and bars.

B66-10170
SCANNING PHOTOMETER SYSTEM AUTOMATICALLY DETERMINES ATMOSPHERIC LAYER HEIGHT
WOLFF, H. /MIT/ DATE- APR. 1966
MSC-245
Two photometers, placed a given distance apart, determine the height of nonuniform luminous layers in a synchronous manner. Photometer outputs are correlated by a simple analog correlation computer to automatically give the luminous layer height. This system is used to determine visibility ceilings at airports.

B66-10177
BINARY FLUID AMPLIFIER SOLVES STABILITY AND LOAD PROBLEMS
LARSEN, R. B. KEEPER, E. D. /GIANNINI CONTROLS CORP./ DATE- MAY 1966
ERC-15
Digital fluid amplifier has load intensity, high stability, and operates at low Reynolds numbers. It contains specially designed nozzles to provide uniform exit-velocity profiles and to ensure jets of low turbulence.

B66-10179
COMPLEMENTARY MONOSTABLE CIRCUITS ACHIEVE LOW POWER DRAIN AND HIGH RELIABILITY
KLEMBERG, L. L. LAYTON, R. C. DATE- MAY 1966
GSP-4-33
Two-transistor multivibrator has minimum power dissipation and maximum reliability. It simplifies the use of components that are subject to environmental changes or other unpredictable behavior.

B66-10180
TEIN-FILM GAGE MEASURES LOW HEAT-TRANSFER RATES
SPITZER, C. H. DATE- MAY 1966
LANOLITY 205
Low heat-transfer gage facilitates determination of the transition between laminar and turbulent conditions, in the boundary layer surrounding slender and moderately slender coves under test in a hypersonic blowdown helium tunnel. The gage consists of a thin layer of vacuum-evaporated platinum on a heat resistant glass substrate contoured to fit model surfaces.

B66-10182
SUBMINIATURIZED GAS CHROMATOGRAPH GIVES FAST, EFFICIENT ANALYSIS
WILKINS, W. F. DATE- MAY 1966
JPL-735 JPL-737 JPL-736 JPL-740
Space oriented, lightweight, subminiaturized gas chromatograph analyzes gas samples in a few seconds with a carrier gas flow of one milliliter per second. In extraterrestrial exploration, the system could be used with a mass spectrometer for detection of life-supporting compounds.

B66-10193
SOLED STATE THERMOSTAT HAS INTEGRAL PROBE AND CIRCUITRY
SPRO- INNOVATOR NOT GIVEN /METRO PHYS., INC./ DATE- MAY 1966
R-PS-204
Compact, reliable thermostat provides a temperature readout signal and a continuous temperature-control output for temperature monitoring by automatic checkout equipment or telemetry systems. It employs a solid state circuit in a housing rigidly attached to a thermistor probe.

B66-10198
DEVICE WITHOUT ELECTRICAL CONNECTIONS IN TANK MEASURES LIQUID LEVEL
SHERMAN, J. S. /R. C. ARBORETUM-GEN. CORP./ DATE- MAY 1966
W00-235
Vertical static float in a tank measures the liquid level without the use of electrical connections in the tank. The float transmits the buoyant force of the liquid to an external force transducer. It is insensitive to tank pressure and temperature changes.

B66-10200
APPARATUS PRESENTS VISUAL DISPLAY OF SEMICONDUCTOR SURFACE CHARACTERISTICS
SHUMER, R. A. DATE- MAY 1966
JPL-665
Apparatus presents a representation of the physicochemical condition of the surface layers of a semiconductor. It is based on the principle that the surface layers of a semiconductor will conduct an electric current when exposed to a beam of light.

B66-10203
SOLDERING IRON TEMPERATURE IS AUTOMATICALLY CONTROLLED
LIU, J. Y. DATE- MAY 1966
ARC-57
Bridged cradle-microswitch arrangement maintains a soldering iron at less than peak temperature when not in use. The microswitch introduces a voltage reducing element into the soldering iron power circuit when the iron is placed on the cradle. The iron, when removed from the cradle, returns to operating temperature in 15 to 30 seconds.
In-like transducers systems measure flow rate of chemically active propellant fluids. The system uses one low-flow transducer and one high-flow transducer. Each consists of separate heater and temperature-sensing elements.

**B66-10220**

**ULTRASONIC RECORDING SCANNER USED FOR NONDESTRUCTIVE WELD INSPECTION**

**SPOW- INNOVATOR NOT GIVEN /BOEING CO./ DATE- MAY 1966**

Portable ultrasonic recording scanner is used for nondestructive inspection of welds. It is adaptable to continuous operation in one direction while maintaining oscillatory motion at a right angle to this direction. The scanning speed and oscillation frequency are independently adjustable.

**B66-10223**

**MULTICOLOR STROBOSCOPE PINPOINTS RESONANCES IN VIBRATING COMPONENTS**

**SPOW- INNOVATOR NOT GIVEN /CALIF. INST. RES. FOUND./ DATE- MAY 1966**

Stroboscopic system, which uses three different colored lights, rapidly scans a multicomponent assembly and provides a visual indication of resonant frequencies. The lights are pulsed at the same flash frequency but at different phases.

**B66-10224**

**FET COMPARATOR DETECTS ANALOG SIGNAL LEVELS WITHOUT LOADING ANALOG DEVICE**

**WALLACE, W. L. /GE/ DATE- MAY 1966**

FET comparator circuit detects discrete analog computer output levels without excessively loading the output amplifier of the computer. An FET common source amplifier is coupled to a differentiator amplifier to a bistable transistor flip-flop. This circuit provides a digital output for analog voltages above or below a predetermined level.

**B66-10225**

**SINGLE-CRYSTAL SEMICONDUCTOR FILMS GROWN ON FOREIGN SUBSTRATES**

**VOHL, F. /ECA/ DATE- MAY 1966**

Intermediate alloy formed between foreign substrates and semiconductor material enable the growth of single crystal semiconductor films on the alloy layer. The melted film must not ball up on the surface of the substrate and neither chemically react nor alloy with the intermediate alloy formed on the substrate.

**B66-10232**

**ELECTRONIC PHASE-LOCKED-LOOP SPEED CONTROL SYSTEM IS STABLE**

**STORE, F. A. /RAYMOND ENG. LAB./ DATE- JUN. 1966**

Phase locked-loop circuit is used for playback motors in digital tape recorders where the reproducer output remains in exact synchronism with an external reference clock over extended periods. It removes the motor dynamics from the control loop so that the loop is stable without damping.

**B66-10245**

**ROGUE MICROELECTRONIC MODULE PACKAGE SUPPORTS CIRCUITRY ON HEAT SINK**

**JOHNSON, A. L. /MINNEAPOLIS-HONEYWELL REGULATOR CO./ DATE- JUN. 1966**

Rugged module package for thin film hybrid microcircuits incorporated a rigid, thermally conductive support structure, which serves as a heat sink, and a lead wire block in which T-shaped electrical connectors are potted. It protects the circuitry from shock and vibration loads, dissipates internal heat, and simplifies electrical connections between adjacent modules.

**B66-10251**

**POLARIZING KEYS PREVENT MISMATCH OF CONNECTOR**

**PLUGS AND RECEPTABLES**

**CHAPIRO, A. /AER. AV. AVIATION/ DATE- JUN. 1966**

Keying prevents mismatching of plugs and receptacles in connector patching of instrumentation involving several thousand leads. Each receptacle and plug contains three polarizing keys that must mate in a complementary mode before the connector pins and sockets will engage.

**B66-10260**

**MULTIPLE TEMPERATURES SAMPLED USING ONLY ONE REFERENCE JUNCTION**

**COPE, G. F. DATE- JUN. 1966**

In a multitemperature sampling system where the test thermocouples are a distance from the reference thermocouples, an intermediate thermal junction block is placed between the sets of thermocouples permitting switching between a single reference and the test thermocouples. This reduces the amount of cabling, reference thermocouples, and cost of the sampling system.

**B66-10261**

**SIMPLIFIED CIRCUIT CORRECTS FAULTS IN PARALLEL BINARY INFORMATION CHANNELS**

**GOLDBERG, J. /STANFORD RES. INST./ DATE- JUN. 1966**

Simplified circuit prevents the appearance of erroneous output signals from the possible failure of any single-channel element interconnected in parallel binary information channels. The circuit is simplified and economical because it does not use redundant channels.

**B66-10268**

**BINARY SEQUENCE DETECTOR USES MINIMUM NUMBER OF DECISION ELEMENTS**

**PEHLIBA, K. DATE- JUN. 1966**

Detector of an n-bit binary sequence code within a serial binary data system assigns states to memory elements of a code sequence detector by employing the same order of states for the sequence detector as that of the sequence generator when the linear recursion relationship employed by the sequence generator is given.

**B66-10270**

**MAGNETICALLY OPERATED LIMIT SWITCH HAS IMPROVED RELIABILITY, MINIMIZES ACOUSTIC NOISE**

**STEINER, R. /A. AV. AVIATION/ DATE- JUN. 1966**

Limit switch for reliable, low-travel, snap action with negligible arcing uses an electrically nonconductive permanent magnet consisting of a ferrimagnetic ceramic and ferromagnetic pole shoes which form a magnetic and electrically conducting circuit with a ferrous-metal armature.

**B66-10271**

**PN ACQUISITION DEMODULATOR ACHIEVES AUTOMATIC SYNCHRONIZATION OF A TELEMETRY CHANNEL**

**CONVILLION, L. DATE- JUN. 1966**

Data demodulator for automatic sync acquisition provides as automatic means for obtaining initial word and bit synchronization in a pulse-code-modulated/phase-shift-keyed digital communications system.

**B66-10272**

**EXCLUSIVE-OR LOGIC CIRCUIT HAS USEFUL PROPERTIES**

**DATE, W. G. DATE- JUN. 1966**

Single, simple exclusive-or logic connective eliminates excessive hardware and the number of interconnections between logic modules. This circuit performs the necessary switching for the exclusive-or operation and amplifies, restores, and inverts the signal.

**B66-10278**

**BRASS ALLOYS USED AS TEMPERATURE INDICATORS**

**RICE, E. E. /AEROJET-GEN. CORP./ DATE- JUL. 1966**
DATE- JUN. 1966
RU-0063
Patches of braze alloys having known fusion are applied to portions of a metal surface where temperature indicators are required. This method is used to measure temperatures over the range of 175 degrees to 2100 degrees Fahrenheit where it is not feasible to employ conventional temperature detectors.

B66-10280
STRAIN GAGE NETWORK DISTINGUISHES BETWEEN THERMAL AND MECHANICAL DEFORMATIONS
CROWLING, F. J. /DATE- JUN. 1966
GSFC-478
Strain gage network measures the thermal coefficient of linear expansion of composite metal structures. The network consists of a test gage and two dummy gages arranged to distinguish thermally induced deformation from mechanical strain.

B66-10282
SIMPLE CIRCUIT PROVIDES RELIABLE MULTIPLE SIGNAL AVERAGE AND REJECT CAPABILITY
GERSHAN, R. L. /AUGUST-GEN. CORP./ DATE- JUN. 1966
NU-0069
Substitution average and reject circuit based on diode clamping allows detection of individual functional deviations in a multiple signal system without shutting down the entire system.

B66-10286
VACUUM TEST FIXTURE IMPROVES LEAKAGE RATES MEASUREMENTS
MATEK, H. MARK, H. /GUMMAN AIRCRAFT CORP./ DATE-JUN. 1966
MSC-271
Cylindrical chamber, consisting of two matching halves, forms a vacuum test fixture for measuring leakage rates of individual connections, brazed joints, and entrance ports used in closed fluid flow line systems. Once the chamber has been sufficiently evacuated, atmospheric pressure holds the two halves together.

B66-10287
DETECTION SYSTEM SECURES POSITIVE ALARM ACTIVATION IN DIGITAL MESSAGE LOSS
ROKOS, P. BERSTEIN, A. NELSON, E. D. /RCA/ DATE- JUN. 1966
WQ-208
Lost word detection system /NOW/ provides special identification for each error detection message transmitted from receiver to transmitter. The message is identified as an original message or an n-times retransmitted message so the receiver can detect where a retransmission request was not fulfilled and activate an alarm.

B66-10291
LARGE CAPACITOR PERFORMS AS A DISTRIBUTED PARAMETER PULSE LINE
GOODING, T. J. /GEN. SYS./ASTRONOMICS/ DATE- JUL. 1966
LEWIS-176
Capacitor of extended foil construction performs as a distributed parameter pulse line in which current, amplitude, and period are readily controlled. The capacitor is used as the energy storage element in a pulsed plasma accelerator.

B66-10292
CIRCUIT PROTECTS REGULATED POWER SUPPLY AGAINST OVERLOAD CURRENT
AFTIB, E. B. /WESTINGHOUSE ELEC. CORP./ DATE- JUL. 1966
GSFC-453
Sensing circuit in which a tunnel diode controls a series regulator transistor protects a low voltage transistorized dc regulator from damage by excessive load currents. When a fault occurs, the faulty circuit is limited to a preset percentage of the current when limiting first occurs.

B66-10293
DAMPING TECHNIQUE GIVES ACCELEROMETER FLAT
SALKORSKI, ILLUST
B66-10324
DATE- JUL. 1966
M-YS-850

Photometric analyzer measures NBA /nonvolatile residue/ in trichloroethylene and other organic solvents. The analyzer converts the liquid solvent to aerosol and passes it between an optically focused light beam and a photodetector that is connected to standard amplifying and readout equipment.

B66-10329
INSTRUMENT TRANSITS VANISHING POINT TO ILLUSTRATION POINT
ALVAREZ, R. R. /N. AM. AVIATION/ DATE- JUL. 1966 MSC-267A

Instrument transmits the vanishing point of an illustration to a point on the illustration on a diminishing scale that also serves as a straightedge.

B66-10328
CORK IS USED TO MAKE TOOLING PATTERNS AND MOLDS
B66-10329
HOFMAN, F. J. /N. AM. AVIATION/ DATE- JUL. 1966 MSC-425

Sheet and waste cork are cemented together to provide a tooling pattern or mold. The cork forms a workpiece that withstands moderately high temperatures under vacuum or pressure with minimum expansion, shrinkage, or distortion.

B66-10339
INSPECTION OF FINE WIRE TRANSFORMERS BY CAPILLARY TUBE WIRE HOLDER
Raphael, R. A. /N. AM. AVIATION/ DATE- JUL. 1966 MSC-150

Capillary tube wire holder provides a mount for fine wires for photomicrographs. The holder is mounted in a stainless steel tube and cast in a transparent casting material. It protects and permits easy location of the wire.

B66-10333
VIBRATOR IMPROVES SPARK EROSION CUTTING PROCESS
THOMAS, L. R. /NORTHROP-GEN. CORP./ DATE- JUL. 1966 NO-0071

Variable frequency mechanical vibrator improves spark erosion cutting process. The vibration of the cutting tip permits continual flushing away of residue around the cut area with nondestructive electric transformer oil during the cutting process.

B66-10334
STRAIGHTEN GRID FACILITATES REMOVAL OF GRID-SURFACED CORNICAL WORKPIECE FROM DIE
BUPEF, E. F. /N. AM. AVIATION/ DATE- JUL. 1966 NG-716

Female die facilitates the removal of a sheet metal structure from a die used for explosive forming of the metal. The female die consists of a smooth conical frustum made of fiber glass with a cured epoxy-resin surface on which a molded grid pattern made of a polyurethane resin is overlaid.

B66-10341
ULTRASONIC EMISSION METHOD ENABLES TESTING OF ADHESIVE BONDS
PHARR, L. SCHMITZ, G. /GEN. AM. TRANSPORTATION CORP./ DATE- AUG. 1966 UC-799

Detection of acoustic energy emitted by adhesive bonds subjected to tensile stresses at frequencies above sixteen kilocycles per second is used as a method for determining bond strength. This method is used in measuring adhesive bond strengths on metal honeycomb core panels.

B66-1034A
PHASE INVERTER PROVIDES VARIABLE REFERENCE
SPOR- INNOVATOR NOT GIVER /RCA/ DATE- AUG. 1966 RG-23

Dual-transistor difference amplifier provides a push-pull output referenced to a dc potential which can be varied without affecting the signal levels. The amplifier is coupled with a feedback circuit which can vary the operating points of the transistors by equal amounts to provide the variable reference potentials.

B66-10347
BEST PARTICLE INJECTOR FOR HYPERSONIC VELOCITY ACCELERATORS PROVIDES HIGH CHARGE-TO-MASS RATIO
BRUNO, O. S. DATE- AUG. 1966 B66-10349

Injector imparts a high charge-to-mass ratio to microparticles and injects them into an electrostatic accelerator so that the particles are accelerated to meteoric speeds. It employs relatively large apertures in the anode and cathode structures with a relatively wide separation, thus permitting a large increase in the allowable injection voltages.

B66-10349
ELECTRICALLY CONDUCTIVE FIBERS THERMALLY ISOLATE TEMPERATURE SENSORS

Mounting assembly provides thermal isolation and an electrical path for an unbacked thermal sensor. The sensor is suspended in the center of a plastic mounting ring from four plastic fibers, two of which are coated with an electrically conducting material and connected to electrically conductive coatings on the ring.

B66-10350
TRANSISTOR CIRCUIT INCREASES RANGE OF LOGARITHMIC CURRENT AMPLIFIER
GILMOUR, G. /WESTINGHOUSE ASTRONUCLEAR LAB./ DATE- AUG. 1966 BG-50-11

Circuit increases the range of a logarithmic current amplifier by combining a commercially available amplifier with a silicon epitaxial transistor. A temperature compensating network is provided for the transistor.

B66-10351
FUNCTION GENERATOR ELIMINATES NECESSITY OF SERIES SUBRATION

Mode generator using four building-block circuits produces complex waveforms without the necessity of series summation. This highly specialized method of producing complex waveforms requires less power than present methods and uses simpler circuitry.

B66-10353
ACCELERATION-CONDITIONED PRESSURE TRANSDUCER HAS PAST RESPONSE
SPOR- INNOVATOR NOT GIVER /CONNELL AEBOR. LAB./ DATE- AUG. 1966 LATHER-713

Flush-diaphragm transducer accurately measures small dynamic pressures when it is subjected to high accelerations and severe temperature environments. The transducer uses piezoelectric crystals for measuring the pressure and balancing out acceleration forces.

B66-10355
BRUSHLESS DC MOTOR HAS HIGH EFFICIENCY, LONG LIFE
STUDER, P. A. DATE- AUG. 1966 GSFC-181

Brushless dc motor operates as a commutator in a vacuum environment with high efficiency and long life. Because of its excellent response time, it can be used in the servomechanism field.

B66-10356
SNIPPER USED AS PORTABLE HYDROGEN LEAK DETECTOR
BIGNER, F. H. KOMMER, M. A. /N. AM. AVIATION/
Sniffer type portable monitor detects hydrogen in air, oxygen, nitrogen, or helium. It indicates the presence of hydrogens in contrast with activated palladium black by a change in color of a thermochromic paint, and indicates the quantity of hydrogen by a senor probe and continuous readout.

Device serves as hinge and electrical connector for circuit boards. Hinge makes both sides of electrical circuit boards readily accessible for component checkout and servicing. The hinge permits mounting of two circuit boards and incorporates connectors to maintain continuous electrical contact between the components on both boards.

New computer system simplifies programming of mathematical equations. Automatic Mathematical Translator (AMTRAN) permits scientists or engineers to enter mathematical equations in their natural mathematical format and to obtain an immediate graphical display of the solution. This automatic-programming, on-line, multiterminal computer system allows experienced programmers to solve nonroutine problems.

Automated drafting system uses computer technique. Drafted system produces schematic and block diagrams from the design engineers freehand sketches. This system codes conventional drafting symbols and their coordinate locations on standard size drawings for entry on tapes that are used to drive a high speed photocomposition machine.

Infrared television is used to detect hydrogen fires. Television system detects hydrogens fires in test facilities. It sees in the infrared and displays on a standard cathode ray monitor screen.

Hydrogen fire detection system features sharp discrimination. Fire detection system discovers fires by detecting the flickering ultraviolet radiation emitted by the OH molecule, a short-lived intermediate combustion product found in hydrogen-air flames. In a space application, the system discriminates against false signals from sunlight and rocket engine exhaust plume radiation.

Pneumatic binary encoder replaces multiple solenoid system. Pneumatic binary encoder replaces solenoid system in the pilot stage of a digital actuator. The encoder operates in flip-flop manner to valve gas at either high or low pressures. By rotating the disk in a pinion-to-encoding gear ratio, six to eight adder circuits may be operated from single encoder.
B66-1032
INDUCTIVE SYSTEM DETECTS LEVEL OF CONDUCTING FLUIDS
ROESKE, P. W. DATE- AUG. 1966
LEWIS-322
Inductive system monitors the liquid level of a conductive fluid that is at a high temperature in a fully closed opaque container. The system is useful in high temperature liquid-metal systems. It shows fast response and is relatively insensitive to temperature fluctuations.

B66-10393
COMPOSITE FILTER STEPS UP REJECTION SLOPES IN MICROWAVE APPLICATION
SPOR- INNOVATOR NOT GIVEN /DOME AND MARGOLIS/
DATE- AUG. 1966
GSPC-480
Composite filter is used to obtain sharp rejection slopes in microwave transmission by filtering techniques. It consists of a bandpass filter to shape the passband and a bandreject filter on each edge of the bandpass filter to steepen the rejection slopes.

B66-10394
HIGH PRESSURE CRYOGENIC LIQUID FLOW SIGHT ASSEMBLY PROVIDES STREAMLINED FLOW FOR EASY OBSERVATION
ROBERT, H. E. MINKIN, H. L. DATE- AUG. 1966
LEWIS-310
Window assembly facilitates observation of cryogenic liquids flowing through a narrow pipe at pressures up to several hundred pounds per square inch. This high-pressure cryogenic observation assembly which houses a thin wall glass pipe held within a steel retainer can accommodate fluids under a wide range of pressures and temperatures.

B66-10396
SOLID STATE DEVICES MONITOR RELAY CONTACTS
QUIBN, J. B. DATE- SEP. 1966
JPL-755
Hand carried, solid state, 16-channel detector system constantly monitors contact conditions in relays. The system is relatively insensitive to external noise and is powered by standard 110 volt ac.

B66-10397
MINIMUM PERMISSIBLE LEAKAGE RESISTANCE ESTABLISHED FOR INSTRUMENTATION SYSTEMS
FREEMAN, J. L. /H. M. AVIATION /
DATE- SEP. 1966
N-FS-348
Mathematical formulas are used to determine if, and to what extent, an instrumentation system that has been exposed to the elements should be dried out to restore minimum permissible leakage resistance to ground. Formulas are also derived and used for an intermediate number of systems that are exposed to moisture penetration.

B66-10401
DIELECTROMETER DESIGN PERMITS MEASUREMENT IN VACUUM UNDER IRRADIATION
SPOR- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./
DATE- SEP. 1966
N-FS-355
Dielcctrometer permits measurement of dielectric constant and dielectric losses in a vacuum environment exposed to radiation. It is not necessary to remove the sample from the chamber during testing.

B66-10404
NEW COMPUTER PROGRAM SOLVES WIDE VARIETY OF HEAT FLOW PROBLEMS
ALMOND, J. C. /BOEING CO./
DATE- SEP. 1966
N-FS-421
Bowling Engineering Thermal Analyzer /BETA/ computer program uses numerical methods to provide accurate heat transfer solutions to a wide variety of heat flow problems. The program solves steady-state and transient problems in almost any situation that can be represented by a resistance-capacitance network.

B66-10407
DIRECTION INDICATOR SYSTEM DOES NOT REQUIRE COMPLICATED OPTICS
MILNE, A. W. /GEN. DIN./CONVAIR /
DATE- SEP. 1966
WOO-305
Direction indicator which aligns a system relative to a light source uses two photocells as light sensors to form a set. Each set indicates one direction. This indicator has no moving parts and provides very fine vernier acquisition.

B66-10409
MODULAR POROUS PLATE SUBLIMATOR /EPPS/ REQUIRE ONLY WATER SUPPLY FOR COOLANT
KATHRIN, H. J. /IBM/
DATE- SEP. 1966
M-FS-1374
Modular porous plate sublimators, provided for each location where heat must be dissipated, conserve the battery power of a space vehicle by eliminating the coolant pump. The sublimator requires only a water supply for coolant.

B66-10412
LEAK LOCATOR FOR VACUUM JACKETED PIPELINES ELIMINATES NEED FOR REMOVAL OF OUTER JACKET
WELLS, G. B. /H. M. AVIATION /
DATE- SEP. 1966
N-FS-662
Device for locating leaks in a vacuum-jacketed liquid-hydrogen transfer line consists of two Mylar discs, a source of nitrogen and helium gas, and an mass spectrometer. The outer jacket of the pipeline does not need to be removed for the locator to be used.

B66-10413
ANALOG SOLAR SYSTEM MODEL RELATES CELESTIAL BODIES SPATIALLY
BAERG, H. DATE- SEP. 1966
JPL-195
Portable analog planetarium indicates the relative time and space angular locations of the sun and planets. Distance measuring scales, angular direction indicators, and typical probe trajectories are included.

B66-10414
ELECTRICALLY CONTROLLED OPTICAL LATCH AND SWITCH REQUIRES LESS CURRENT
STEINWIAK, W. A. 1966
M-PS-112
Electronic optical latch and switch requires less current to activate an optically activated switch than in prior art.

B66-10419
METAL OXIDE SILICON /MOS/ TRANSISTORS PROTECTED FROM DESTRUCTIVE DAMAGE BY WIRE DEVICE
DEBRO, G. J. DEVINS, R. J. DATE- SEP. 1966
ABC-65
Loop of flexible, small diameter, nickel wire protects metal oxide silicon /MOS/ transistors from a damaging electrostatic potential. The wire is attached to a music-wire spring, slipped over the MOS transistor case, and released so the spring tensions the wire loop around all the transistor leads, shorting them together. This allows handling without danger of damage.

B66-10420
ELECTRONIC BIDIRECTIONAL VALVE CIRCUIT PREVENTS CROSSTIE DISTORTION AND THRESHOLD EFFECT
KERNICK, A. /WESTINGHOUSE ELEC. CORP./
DATE- SEP. 1966
MCC-193
Four-terminal network forms a bi-directional valve which will switch or alternate an ac signal without crossover distortion or threshold effect. In this network, an isolated control signal is sufficient for circuit turn-on.

B66-10423
AN INVESTIGATION OF PHASE-LOCK LOOP SWEEP-FREQUENCY SYNCHRONIZATION
DYTE, R. A. /LOCKHEED MISSILES AND SPACE CO./
DATE- SEP. 1966
RAPID SYNCHRONIZATION OF PHASE-LOCKED OSCILLATORS IS BEST ACHIEVED BY THE SWEPT-FREQUENCY ACQUISITION TECHNIQUE, WHEREIN THE VOLTAGE-CONTROLLED OSCILOCKER (VCO) IS LINEARLY SWEPT THROUGH THE UNCERTAINTY BAND. THE THEORETICALLY PREDICTED SWEET SPOT Rates OF THIS TECHNIQUE AND THE OBSERVED EXPERIMENTAL RESULTS DIFFER BY LESS THAN SEVEN PERCENT.

B66-10426
COMPUTER SIMULATION PROGRAM IS ADAPTABLE TO INDUSTRIAL PROCESSES
SCHULTE, F. E.//BEB-240
LAWRENCE-240

THE REACTION KINETICS ABLATION PROGRAM /HEAP/, DEVELOPED TO SIMULATE ABLATION OF VARIOUS MATERIALS, PROVIDES MATHEMATICAL FORMULATIONS FOR COMPUTER PROGRAMS WHICH CAN SIMULATE CERTAIN INDUSTRIAL PROCESSES. THE PROGRAMS ARE BASED ON THE USE OF NONSYMMETRICAL DIFFERENCE EQUATIONS THAT ARE EMPLOYED TO SOLVE COMPLEX PARTIAL DIFFERENTIAL EQUATION SYSTEMS.

B66-10427
ELECTRICAL CABLE WITHSTANDS SEVERE ENVIRONMENTAL CONDITIONS
KAYE, J. A. //B.A. AVIATION/ DATE- SEP. 1966

MULTICORE ELECTRICAL CABLES RETAIN THEIR CIRCUIT INTERTY AND REMAIN FLEXIBLE AND ABRASION RESISTANT IN SEVERE ENVIRONMENTAL CONDITIONS OF HEAT, VIBRATION, AND WATER.

B66-10429
VIDEO SIGNAL PROCESSING SYSTEM USES GATED CURRENT MODE SWITCHES TO PERFORM HIGH SPEED MULTIPLICATION AND DIGITAL-TO-ANALOG CONVERSION

VIDEO SIGNAL PROCESSOR USES SPECIAL-PURPOSE INTEGRATED CIRCUITS WITH NONSATURATING CURRENT NODE SWITCHING TO ACCEPT TEXTURE AND COLOR INFORMATION FROM A DIGITAL COMPUTER IN A VISUAL SPACEFLIGHT SIMULATOR AND TO COMBINE THESE DISPLAY ON COLOR CRT WITH ANALOG INFORMATION CONCERNING FADING.

B66-10430
SOLID-STATE SWITCH INCREASES SWITCHING SPEED
MAC GOWAN, G. M. /MARTIN CO./ DATE- OCT. 1966

SOLID STATE SWITCH FOR COMMUTATING CAPACITORS IN AN RC COMMUTATED NETWORK INCREASES SWITCHING SPEED AND EXTENDS THE FILTERING OR COMMUTATING FREQUENCY SPECTRUM WELL INTO THE KILOCYCLE REGION. THE SWITCH IS EQUIVALENT TO THE STANDARD DOUBLE-POLE DOUBLE-THROW /DPDT/ RELAY AND IS DRIVEN FROM DIGITAL MICROCIRCUITS.

B66-10431
CONTROL CIRCUIT MAINTAINS UNITY POWER FACTOR OF REACTIVE LOAD
KRAEGER, H. MATTISON, L. H.//BIB/ DATE- OCT. 1966

CIRCUIT INCLUDING FEEDBACK CONTROL ELEMENTS AUTOMATICALLY CORRECTS THE POWER FACTOR OF A REACTIVE LOAD. IT MAINTAINS POWER SUPPLY EFFICIENCY WHERE NEGATIVE LOAD REACTANCE CHANGES AND VARY BY PROVIDING CORRECTIVE ERROR SIGNALS TO THE CONTROL WINDINGS OF A POWER SUPPLY TRANSFORMER.

B66-10432
REMOTE PREAMPLIFIER CIRCUIT MAINTAINS STABILITY OVER WIDE TEMPERATURE RANGE
MAC HAUGHTON, R. G. /VARIAN ASSOCIATES/ DATE- OCT. 1966

CIRCUIT REMAINS STABLE OVER A WIDE TEMPERATURE RANGE WHILE PREAMPLIFYING LIGHT SIGNALS FALLING ON A PHOTOCELL AND TRANSMITTING THEM THROUGH A TRANSMISSION LINE TO A REMOTE AMPLIFIER. THE CIRCUITS PREAMPLIFIER CONSISTS OF A GROUNDED EMMITTER NF StAGE FOLLOWED BY A PMI EMMITTER.

B66-10433
LINEAR SIGNAL NOISE SUMMER ACCURATELY DETERMINES AND CONTROLS S/N RATIO
SUNDBY, J. L. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1966

LINEAR SIGNAL NOISE SUMMER PRECISELY CONTROLS THE RELATIVE POWER LEVELS OF SIGNAL AND NOISE, AND MIXES THEM LINEARLY IN ACCURATELY KNOWN RATIO. THE S/N RATIO ACCURACY AND STABILITY ARE GREATLY IMPROVED BY THIS TECHNIQUE AND ARE ATTAINED SIMULTANEOUSLY.

B66-10436
SHAFT ENCODER PRODUCES DIGITAL OUTPUT
BILLIS, D. A. /HUGHES AIRCRAFT CO./ DATE- OCT. 1966

SHAFT ENCODER SYSTEM USING SOLID STATE COMPONENTS ACTS AS A SINGLE-SIDEBAND MODULATOR TO ACCURATELY REPRODUCE PHASE INFORMATION IN 2-MC SIGNALS. THIS SYSTEM IS USEFUL IN TELEMETRY, AIRCRAFT COMMUNICATIONS AND POSITION-FINDING STATIONS, AND RF WAVE TEST CIRCUITRY.

B66-10437
SINGLE-SIDEBAND MODULATOR ACCURATELY REPRODUCES PHASE INFORMATION IN 2-MC SIGNALS
REINHOLD, G. F. /SPERRY MICROWAVE ELECTRONICS CO./ DATE- OCT. 1966

PHASE-Locked OSCILLATOR SYSTEM USING SOLID STATE COMPONENTS ACTS AS A SINGLE-SIDEBAND MODULATOR TO ACCURATELY REPRODUCE PHASE INFORMATION IN 2-MC SIGNALS. THIS SYSTEM IS USEFUL IN TELEMETRY, AIRCRAFT COMMUNICATIONS AND POSITION-FINDING STATIONS, AND RF WAVE TEST CIRCUITRY.

B66-10438
SENSITOMETER SYSTEM FOR LIQUID HYDROGEN HAS HIGH ACCURACY, FAST RESPONSE
SPOK- INNOVATORS NOT GIVEN /FRANKLIN GRO CORP./ DATE- OCT. 1966

SENSITOMETER SYSTEM FOR CRYOGENIC LIQUIDS USES TWO BALANCED IONIZATION CHAMBERS CONTAINING XENON GAS, WITH X RAYS AS THE RADIATION SOURCE. THE X RAYS ARE HEAVILY FILTERED WITH A LEAD SHIELD TO MAKE THE ENERGY SPECTRUM SUCH LESS DEPENDENT ON THE VOLTAGE APPLIED TO THE X RAY TUBE.

B66-10439
ION CHAMBERS SIMPLIFY ABSOLUTE INTENSITY MEASUREMENTS IN THE VACUUM ULTRAVIOLET
SCHRAMM, J. A. N. /UGMR. CORP. OF AM./ DATE- OCT. 1966

SINGLE OR DOUBLE ION CHAMBER TECHNIQUE MEASURES ABSOLUTE RADIATION INTENSITIES IN THE EXTREME VACUUM ULTRAVIOLET REGION OF THE SPECTRUM. THE ION CHAMBERS USE RARE GASES AS THE ION CARRIERS. PHOTONS ABSORBED BY THE GAS CREATE ONE ION PAIR FOR A MEASURE OF THESE IS A MEASURE OF THE NUMBER OF INCIDENT PHOTONS.

B66-10440
PHOTOELECTRIC SCANNER MAKES DETAILED WORK FUNCTION MAPS OF METAL SURFACE
RASOR, R. S. /THOMO ELEC. ENG. CORP./ DATE- OCT. 1966

PHOTOELECTRIC SCANNER MAKES THE WORK FUNCTION OF A METAL SURFACE BY SCANNING IT WITH A LIGHT SPOT AND MEASURING THE RESULTING PHOTOCURRENT. THE DEVICE IS CAPABLE OF USE OVER A RANGE OF SURFACE TEMPERATURES.

B66-10441
STANDARD ARC WELDERS PROVIDE HIGH AMPERAGE DIRECT CURRENT SOURCE
BASLEY, G. D. BROOKS, J. D. DATE- OCT. 1966

STANDARD ARC WELDERS OR POWER SUPPLIES ARE HOOKED UP IN PARALLEL OR SERIES CONNECTIONS TO OBTAIN AN ADEQUATE SUPPLY OF CURRENT OR VOLTAGE FOR VARIOUS
VIDICONs DURING VIBRATION

ALLEN, OCT. THERMIONIC JPL-SC-113

1966 

B66-10444

THERMIONIC SCANNER PINPOINTS WORK FUNCTION OF EMITTER SURFACES 

BASON, R. H. /THROO ELECTRON ENG. CORP./ DATE- OCT. 1966

JPL-SC-177

In the electron tube testing, a thermionic scanner was used for checking the performance of vidicons in mechanical vibration tests. The vidicon electron beam is modulated with an external signal during the write period thereby storing the image on the vidicon face.

B66-10462

INSTANT AUTOMATICALLY SELECTS PEAK ACCELERATION SIGNAL FROM SEVERAL ACCELEROMETERS 

CHAPMAN, C. F. DATE- OCT. 1966

JPL-794

Solid state circuit selects the highest of several ac accelerometer signals and gates this signal to an output amplifier, preserving all the frequency information in the peak signal. If the amplitudes of the accelerometer signals change with time, the circuit will continually switch to the highest signal, rejecting the smaller signals.

B66-10465

SOLID STATE CIRCUIT SWITCHES AC LOAD 

CHAPMAN, C. F. HUGHES AIRCRAFT/ DATE- OCT. 1966

JPL-798

Differential amplifier circuit switches ac signals with peak amplitudes greater than 5 volts. This solid state circuit biases a switching transistor on and off by a 0.1 to 5.0 dc control voltage.

B66-10466

STUDY COMPARES METHODS FOR THE NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS 

SPROW, INNOVATOR NOT GIVEN /GEORGE INST. OF TECHNOL./ DATE- OCT. 1966 SEE ALSO NASA-CR-51060

B66-10489

BIPOLAR CURRENT DRIVER FOR MEMORY CIRCUITS 

CHONG, C. P. DATE- OCT. 1966

JPL-785

Study compares the use of five different methods for the computer solution of the restricted three-body problem. It describes the implementation of each method on a Burroughs B-5000 computer and in terms of speed and accuracy.

B66-10486

DEVICE TO COLOR MODULATE A STATIONARY LIGHT SOURCE 

RAND DATE- DEC. 1966

M-1C

Signal controlled system color modulates a beam of light while also providing high intensity and a stationary beam, either collimated or focused. The color modulation acquired by the present system can be compatible with any color film by employing color filters forced to provide a color wedge having a color distribution compatible with the film color sensitivity.

B66-10578

PLUG-IN CONNECTOR SOCKET ACCEPTS COAXIAL CABLE END 

MITCHELL, D. VAN LOON, J. A. DATE- NOV. 1966

ARG-9

Connector which includes a spring-loaded contact that receives a protruding center conductor and an internal collet to clamp against a collar attached to a woven outer conductor, is used as a receptacle for the end of a coaxial cable. This plug-in connector socket is used successfully with remote manipulators.

B66-10480

SIMPLE, ONE TRANSISTOR CIRCUIT BOOS'TS PULSE AMPLITUDE 

MEOD, T. CUTLER HAMMER/ DATE- OCT. 1966

M-2E-400

Electrical pulse generator uses power transistors and solid-state controlled rectifiers for producing a high current pulse having fast rise and fall times. At quiescent conditions, the standby current consumption of the circuit is equal to zero.

B66-10456

PULSER GENERATOR USING TRANSISTORS AND SILICON CONTROLLED RECTIFIERS PRODUCES HIGH CURRENT PULSES WITH FAST RISE AND FALL TIMES 

WOOLFSON, M. G. DATE- OCT. 1966

M-2E-405

Electrical pulse generator uses power transistors and silicon controlled rectifiers for producing a high current pulse having fast rise and fall times. At quiescent conditions, the standby current consumption of the circuit is equal to zero.

B66-10461

MODIFIED THERMOCOUPLE IS EFFECTIVE FROM MINUS 250 DEG TO 5000 DEG F 

MORN, W. H. /H. AR. AVIATION/ DATE- NOV. 1966

M-2E-420

Modified, commercially available thermocouple which measures the temperature of a spacecraft heat shield, is capable of continuous measurement in the range of minus 250 deg to 5000 deg F. The modified thermocouple and a metal shield are used for monitoring metal treating furnaces in high temperature technology, and in certain corrosive environments.
**B66-10481**
**MODIFIED McNEOLD PRESSURE GAGE ELIMINATES MEASUREMENT ERRORS**
KELLS, R. C. DATE- NOV. 1966
ABC-62
Modification of a McNeold gage eliminates errors in measuring absorbed pressure of gases in the vacuum range. A valve which is internal to the gage and is magnetically actuated is positioned between the mercury reservoir and the sample gas chamber.

**B66-10482**
**AUTOMATIC CRYOGENIC LIQUID LEVEL CONTROLLER IS SAFE FOR USE NEAR COMBUSTIBLE SUBSTANCES**
LEWIS, R. DATE- OCT. 1966
LEWIS-195
Automatic mechanical liquid level controller that is independent of any external power sources is used with safety in the presence of combustibles. A gas filled capillary tube which leads from a pressurized chamber, is inserted into the cryogenic liquid reservoir and becomes a liquid level sensing element or probe.

**B66-10486**
**SOLID STATE CIRCUIT CONTROLS DIRECTION, SPEED, AND BRAKING OF DC MOTOR**
KANNA, N. F. DATE- OCT. 1966
JPL-757
Full-wave bridge rectifier circuit controls the direction, speed, and braking of a dc motor. Gating in the circuit of Silicon Controlled Rectifiers/SCRs/controls output polarity and braking is achieved by reversing SCR thyristor to short circuit the reverse voltage generated by reversal of motor rotation.

**B66-10488**
**SPIRAL SPRING/STRAIN GAGE COMBINATION ACCURATELY MEASURES SHOCK INDUCED DEFLECTION**
BIBWEN, R. A. WALKER, R. R. /W. A. AVIATION/ DATE- OCT. 1966
MSC-789
Spiral springs equipped with strain gages which are hard-wired to readout instrumentation, measure deflection between two relatively smooth surfaces in a drop test that causes them to close near flatness. This technique has been successfully used on Apollo spacecraft, and should be adaptable to short circuit the reverse voltage generated by reversal of motor rotation.

**B66-10490**
**SOLENOID MAGNETIC FIELDS CALCULATED FROM SUPERPOSED SEMI-INFINITE SOLENOIDS**
BROWN, G. V. PLAY, L. DATE- NOV. 1966 REAM- SEE ALSO NASA-TH-D-2494
LEWIS-184
Calculation of a thick solenoid coil's magnetic field components is made by a superposition of the fields produced by four solenoids of infinite length and zero inner radius. The field produced by this semi-infinite solenoid is dependent on only two variables, the radial and axial field component coordinates.

**B66-10491**
**MINIATURE CAPACITIVE ACCELEROMETER IS ESPECIALLY APPLICABLE TO TELEMETRY**
COOG, G. W. HARRISON, B. R. DATE- NOV. 1966
REAM- SEE ALSO B66-10425
ABC-72
Capacitive accelerometer design enables the construction of highly miniaturized instruments having full-scale ranges from 1 g to several hundred g. This accelerometer is applicable to telemetry and can be tailored to cover any of a large number of acceleration ranges and frequency responses.

**B66-10492**
**CIRCUIT PREVENTS OVERCHARGING OF SECONDARY CELL BATTERIES**
HENDRIKS, T. J. POTTER, N. H. SIEKORE, K. O. DATE- NOV. 1966
GSFC-454
Circuit prevents battery cell overcharging by detecting and reducing the charging voltage to the open-circuit voltage of the battery when this current falls to a predetermined value. The voltage control depends on the fact that the charging current falls significantly when the battery nears its fully charged state.

**B66-10493**
**STUDY SHOWS EFFECT OF SURFACE PREPARATIONS ON IMPROVING THERMIONIC EMISSION**
VAN SORREN, L. VAN SORREN, L. /THERMO ELECTRON ENG. CORP./ DATE- NOV. 1966
JPL-2C-740
Specimens thermonic emitters were electropolished and electroetched to study the effect of surface preparations on improving thermionic emission. The best technique found was to electropolish the annealed rhenium surface and then electroetch it. The effect of electroetching was to remove other crystal planes faster than basal planes.

**B66-10494**
**OPTICAL MONITOR PANEL PROVIDES FLEXIBLE TEST PANEL CONFIGURATIONS**
GRIFFIN, F. D. DATE- NOV. 1966
KSC-66-18
Optical monitor panel projects a chosen panel configuration upon a translucent screen by using a master projector and appropriate slide to project panel board nomenclature and a series of smaller individual projectors to superimpose sensor indicators upon the projected panel board.

**B66-10496**
**COMPUTER PROGRAM PERFORMS FLOW ANALYSIS THROUGH TURBINES**
LBF-236
Computer program based on an equation for the velocity gradient along an arbitrary quasi-orthogonal analysis flow through a turbomachine. The program obtains meridional solutions for a hub-to-shroud analysis and blade-to-blade analysis at the hub, shroud, and shroud surfaces in a single computer run.

**B66-10497**
**HIGH VOLTAGE POTENTIAL DIVIDER CALIBRATED BY SIMPLE DEVICES**
LEWIS, R. W. DATE- NOV. 1966
ABC-53
Resistance divider device incorporates a potentiometer, switches, and a null detector to calibrate high potential dividers under high voltage operation conditions. Calibration can be performed within one minute or less than 0.001 percent.

**B66-10500**
**DIGITAL SYSTEM PROVIDES SUPERREGULATION OF NANOSECOND AMPLIFIER-DISCRIMINATOR CIRCUIT**
FORGES, R. G. DATE- NOV. 1966
ABC-61
Feedback system employing a digital logic comparator to detect and correct amplifier drift provides stable gain characteristics for nanosecond amplifiers used in counting applications. Additional anticoincidence logic enables application of the regulation circuit to the amplifier and discriminator while they are mounted in an operable circuit.

**B66-10501**
**ELECTRONIC CIRCUIT DELIVERS PULSE OF HIGH INTERVAL STABILITY**
FISHER, B. /W. A. AVIATION/ DATE- NOV. 1966
MSC-673
Circuit generates a pulse of high interval stability with a complexity level considerably below systems of comparable stability. This circuit is being used as a linear frequency
Circuit incorporating a bisynchronous demodulator for an electro-optic star-tracking sensor provides a signal proportional to star intensity without interference from background light in the field of view. The system works best on a sharply focused star image and requires a 50 percent duty cycle.

COMPUTER PROGRAM DETERMINES PERFORMANCE EFFICIENCY OF REMOTE MEASURING SYSTEMS

M-PB-1137

Computer programs control and evaluate instrumentation system performance for numerous rocket engine test facilities and prescribe calibration and maintenance techniques to maintain the systems within process specifications. Similar programs can be written for other test equipment in an industry such as the petrochemical industry.

SOLID STATE ANNUNCIATOR FACILITATES COMPLEX SYSTEM TROUBLESHOOTING

N-PB-1136

Solid state annunciator monitors up to 60 parameters for a dc voltage change from zero to 28 volts in the testing of complex systems. This annunciator is presently being used for testing of the complex J-2 rocket engine.

COMPUTER PROGRAM DETERMINES INVENTORY SIZE

FASPAN, R. "/N. AM. AVIATION/

DATE- NOV. 1966

N-PB-1135

FORTRAN 4 computer program calculates optimum size of a small inventory of relatively complex or expensive items. This program can be used in situations where the initial cost of purchase is large or when there is a need for a balanced inventory on a short production run.

PULSE STRETCHER HAS IMPROVED DYNAMIC RANGE AND LINEARITY

LARSEN, R. M. DATE- NOV. 1966

ASCII-82

Current-switching pulse stretcher overcomes the diode nonlinearity and capacitive feedthrough of voltage switching diode-capacitor stretchers and lengthens nanosecond pulses so that their amplitude may be determined and extends the dynamic range of the pulse stretcher. The rise time of the output pulse in response to a step function is approximately 5 nanoseconds.

LOG LEVEL ACCELEROMETER TEST METHODS ARE INVESTIGATED

NELSON, R. H., JR. ELOSEBRE, H. S. "/DYN. EES. CORP./ DATE- NOV. 1966

N-PB-1066

Problems associated with testing accelerometers to an accuracy where the standard error is less than .0000001 g are centered around the elimination of uncertainties in the acceleration input to the accelerometer. By placing a test rig in free fall, the uncertainty in the earth's gravity field can be eliminated.

COMPUTER ROUTINE ADDS FLOATING CAPABILITIES TO EXISTING PROGRAMS

HARRES, J. C. LINNEKEIN, J. S. /LIITON IND./ DATE- NOV. 1966

GSU-430

FLOATAN, a generalized plot analysis routine written for the IBM 7094 computer, minimizes the difficulties in adding plot capabilities to large existing programs. FLOATAN is used in conjunction with a binary tape writing routine and has the ability to plot any variable on the intermediate binary tape as a function of any other.

MIXED TUBE DISPLAY UNIT EMPLOYS TIME-SHARED LOGIC

GRAY, J. DATE- NOV. 1966

ABB-117

Cathodes of display tubes wired in parallel achieve input switching simplification of a mix tube display system. Use of time-shared logic energizes the appropriate anode and inhibits all unnecessary cathodes.

DIGITAL SYSTEM DETECTS BINARY CODE PATTERNS CONTAINING ERRORS

MULLER, R. H. THARPE, H. R., JR. DATE- NOV. 1966

GSFC-541

System of square loop magnetic cores associated with code input registers to react to input code patterns by reference to a group of control cores in such a manner that errors are canceled and patterns containing errors are accepted for amplification and processing. This technique improves reception capabilities in PCM telemetry systems.

ANTENNA SIMULATOR PERMITS REINSTALLATION SYSTEM CHECKOUT

ELtz, A. D. SCHMIDT, R. F. DATE- NOV. 1966

GSFC-522

Antenna simulator provides for evaluation checkout of corporate feeds, monopulse sum-and-difference networks etc., in a shielded environment prior to system checkout on an antenna pattern range. This technique is useful wherever simulation of monopulse antenna element characteristics is desired for checkout of ancillary equipment in a controlled environment.

PYROMETRY HANDBOOK DESCRIBES PRACTICAL ASPECTS OF SURFACE TEMPERATURE MEASUREMENTS OF OPAQUE MATERIALS

BEARSTEET, J. E. BUCCIO, D. R. DATE- NOV. 1966

BEAN- SEE ALSO NASA-79-D-3604

LEWIS-349

Handbook contains extensive reference literature and results from pertinent experiments to provide a collection of applied technology and reference sources for engineers and technicians. Fundamental equations of radiation, off-design corrections, characteristics of pyrometers, and calibration apparatus and techniques are discussed.

FLOWMETER MEASURES FLOW RATES OF HIGH TEMPERATURE FLUIDS

VARY, A. DATE- NOV. 1966

LEWIS-328

Flowmeter in which flow rate is determined by measuring the position and thus the displacement of an internal float acted upon by the flowing fluid determines the flow rates of various liquid metals at elevated temperatures. viscous forces cause the float to move from its mounted position, affording several means for measuring this motion and the flow rate.
B66-10526

STUDY OF VORTEX VALVE FOR MEDIUM TEMPERATURE SOLID PROPELLANTS

BILAS, W. E. /RCA CORP./ JAMES, R. G. /RCA CORP./ DATE- NOV. 1966

Fluid state vortex valve secondary injection control system shows considerable promise for future application to solid propellant rocket engine thrust vector control. The single axis injection system tested was capable of providing secondary injection thrust vector control using 2000 deg F gas.

B66-10525

COMPUTER PROGRAM PERFORMS STATISTICAL ANALYSIS FOR RANDOM PROCESSES

B66-10525

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

DATE- NOV. 1966

Random Vibration Analysis Program /HAYAN/ performs statistical analyses on a number of phenomena associated with flight and captive tests, but can also be used in analyzing data from many other random processes.

B66-10526

IMPROVED DESIGN PROVIDES FASTER RESPONSE TIME IN PHOTOMULTIPLIER

DATE- NOV. 1966

B66-10529

COMPUTER PROGRAM SEARCHES CHARACTERISTIC DATA OF DIODES AND TRANSISTORS

DATE- NOV. 1966

Computer programs perform statistical spectral analyses of up to seven time series. These programs should have applicability to a variety of engineering systems in the fields of geophysics, physiology, acoustics, and structural analysis.

B66-10531

HEAT FLUX SENSOR DESIGN REDUCES EXTRAMOUS SOURCE EFFECTS

DATE- NOV. 1966

B66-10533

METHOD PERMITS MECHANICAL AND ELECTRICAL CHECKOUT OF PIEZOELECTRIC TRANSDUCERS WHILE INSTALLED IN A SYSTEM

DATE- NOV. 1966

B66-10534

MICROFILM OF THE TEXT IS AVAILABLE UPON REQUEST.

DATE- NOV. 1966

Inspection system for bonded honeycomb assemblies is accurate, fast, and automated. The ultrasonic system consists of inner and outer transducer positioning assemblies with suitable motor controls, a centerless turntable assembly, water squirters assemblies, and an inspection program completely encoded on tape suitable for use on a
SECURITY MONITORS UP TO FIFTEEN REMOTE AREAS SIMULTANEOUSLY

Security warning system consisting of 15 television cameras is capable of monitoring several remote or unoccupied areas simultaneously. The system uses a comutator and decommutator, allowing time-multiplexed video transmission. This security system could be used in industrial and retail establishments.

MINIATURE ELECTROPLATED PREAMPLIFIER

Effective compensation for input capacitance

Negative capacitance preamplifier using a dual MOS/Metal Oxide Silicon transistor in conjunction with bipolar transistors is used with intracellular microelectrodes in recording bioelectric potentials. Applications would include use as a pickup plate video amplifier in storage tube tests and for photographic chamber measurements.

COMPUTER PROGRAMS CALCULATE POTENTIAL AND CHARGE DISTRIBUTIONS IN A PLASMA

Computer program determines the potential and charge distributions between two electrodes in a plasma. Solutions of the Vlasov equations for intracellular storage tube tests and for ionization chamber measurements.

A FAST-NEUTRON SPECTROMETER OF ADVANCED DESIGN

Fast neutron spectrometer combines helium filled proportional counters with solid-state detectors to achieve the properties of high efficiency, good resolution, rapid response, and effective gamma ray rejection.

SIMPLIFIED FIXTURE PERMITS PRECISION ALIGNMENT OF AN OPTICAL TARGET

Optical target holder is permanently placed for instrument sighting, yet is adjustable and easily aligned.

TRISPHERE SPARK GAP ACTUATES OVERVOLTAGE RELAY

Trisphere spark gap and high voltage relay provide a positive, fast acting, high current capacity device that will sense an overvoltage condition and remove power from the circuit before ionization breakdown. When an overvoltage occurs, the spark gap breaks down and conducts an actuating current to the relay which removes power from the circuit.

ONE-COUNT MEMORY CIRCUIT PREVENTS MACHINE RUDE INTERACTION

One-count memory logic circuit used with electromechanical counter-printer machines operates in either count or print mode. The circuit advances the counter when the machine is in the count mode and provides storage for the count pulse when the machine is in the print mode.

PULSE TECHNIQUE PROVIDES MORE ACCURATE CHECKOUT OF EXPLODING BRIDGE WIRE DEVICE

Expanding Bridge Wire /EBW/ is treated as a transmission line system and pulse reflection techniques are used for checking the electrical integrity of an EBW cartridge. A step voltage is propagated into the system and the reflected voltage waves are monitored.

COLLECTOR/COLLECTOR GUARD BIAS BALANCING CIRCUIT ELIMINATES EDGE EFFECTS

Circuit in which an emitter is maintained opposite a concentric collector and guard structure is achieved by matching the temperature and potential of the guard with that of the collector over the operating range. This control system is capable of handling up to 100 asperes in the guard circuit and 200 asperes in the collectors circuit.

PHOTOCELL SHADOWING TECHNIQUE IMPROVES LIGHT SOURCE DETECTOR

Lightweight, compact modular system that includes an acquisition photocell is used as a light source tracking detector that exhibits minimum scale factor change with increased light source angle. Photocells of various types, responsive to other portions of the spectrum, could be used to acquire and track infrared, ultraviolet, and other source fluxes.

COMPUTATIONAL PROCEDURE FOR FINITE DIFFERENCE SOLUTION OF ONE-DIMENSIONAL HEAT CONDUCTION PROBLEMS REDUCES COMPUTER TIME

Computational procedure reduces the numerical effort whenever the method of finite differences is used to solve ablation problems for which the surface recession is large relative to the initial slab thickness. The number of numerical operations required for a given maximum space mesh size is reduced.

MONITORING CIRCUIT ACCURATELY MEASURES MOVEMENT OF SOLENOID VALVE

Solenoid operated valve in a control system powered by direct current issued to accurately measure the valve travel. This system is currently in operation with a 28-vdc power system used for control of fluids in liquid rocket motor test facilities.

DEVICE ACCURATELY MEASURES AND RECORDS LOW GAS-FLOW RATES

Free-floating piston in a vertical column accurately measures and records low gas-flow rates. The system may be calibrated, using an
adjustable flow-rate gas supply, a low pressure gage, and a sequence recorder. From the calibration rates, a nomograph may be made for easy reduction. Temperature correction may be added for further accuracy.

B66-10574
NONDESTRUCTIVE TEST METHOD ACCURATELY SORTS MIXED BOLTS
DEZIER, C. J. DATE- DEC. 1966
K-FS-1426
Neutron activation analysis method sorts copper plated steel bolts from nickel plated steel bolts. Copper and nickel plated steel bolt specimens of the same configuration are irradiated with thermal neutrons in a test reactor for a short time. After thermal neutron irradiation, the bolts are analyzed using scintillation energy readout equipment.

B66-10576
A CONTINUOUSLY OPERATING SOURCE OF VACUUM ULTRAVIOLET BELOW 500 ANGSTROMS
SHOTTON, W. /INNOVATION NOT GIVEN /SPACE SCI. INC./ DATE- DEC. 1966
GSFC-545
Duo planar type source of ultraviolet radiation operates in the wavelength region below 500 angstrom. Since the spectra produced are determined almost completely by the gas injected, and because the source operates continuously, this arrangement is beneficial in the development and calibration of filters and detectors within discrete wavelength ranges.

B66-10577
ULTRASONIC WATER COLUMN PROBE SENSORS FOR Testing OF WELDS
HOOP, J. R. /MC DONALD, J. A. /GE/ DATE- DEC. 1966
NQ-58
Ultrasound device consisting of a coaxial rod and transducer enclosed in a cylindrical probe which is filled withazonized or distilled water speeds up the test of welds. Rubber diaphragms are molded to produce the desired test beam angle.

B66-10579
AN ORTHONORMALIZATION PROCEDURE FOR MULTIVARIABLE FUNCTION APPROXIMATION
STEIGER, H. DATE- DEC. 1966
M-FS-1313
Where a function of several variables is given numerically in tabular form, an orthonormalization technique allows an approximation of the numerical data to be determined in a convenient functional form. In this technique, the speed and accuracy of coefficient computation are much improved.

B66-10580
RESISTOR MONITORS TRANSFER OF LIQUID HELIUM
DEESEES, W. D. DATE- DEC. 1966
LANGLEY-229
Large resistance change of a carbos resistor at the liquid helium temperature distinguishes between the transfer of liquid helium and gaseous helium into a closed Dewar. The resistor should be physically as small as possible to reduce the heat load to the helium.

B66-10581
DETECTOR MEASURES POWER IN 50 TO 30,000 GHZ RADIATION BAND
ABARS, F. K. /HUGHES LAB./ DATE- DEC. 1966
ER-26
Broadband power detector assembly measures electromagnetic radiation in the 50 to 30,000 GHz band. The assembly includes a matched pair of detectors which incorporate thin-films radiation absorbers. The detector is effective with either coherent or incoherent radiation.

B66-10584
OPTICAL SUPERHETERO DyNE RECEIVER USES LASER FOR LOCAL OSCILLATOR
LORD, E. F. /SYLVANIA ELECTRON. SYSTEMS/ DATE- DEC. 1966
M-FS-1605
Optical superheterodyne receiver uses a laser coupled to a frequency translator to supply both the incident signal and local oscillator signal and thus permit reception of amplitude modulated video bandwidth signals through the atmosphere. This receiver is useful in scientific propagation experiments, tracking experiments, and communication experiments.

B66-10590
STUDY MADE OF APPLICATION OF STEREOSCOPIC DISPLAY SYSTEM TO ANALOG COMPUTER SIMULATION
M-FS-1263
Stereooscopic visual display system provides both a qualitative and measurable presentation for functions of several variables. A primary application of such a display system is in analog computer simulation of sets of differential equations.

B66-10591
ELECTRONIC CIRCUIT PROVIDES ACCURATE SENSING AND CONTROL OF DC VOLTAGE
LOTTUS, M. B. /WESTINGHOUSE ASTRONUTL. LAB./ DATE- DEC. 1966
HU-0069
Electronic circuit used relay coil to sense and control dc voltage. The control relay is driven by a switching transistor that is biased to cutoff for all input up to slightly less than the threshold level.

B66-10592
SENSORS MEASURE SURFACE ABLATION RATE OF REENTRY VEHICLE HEAT SHIELD
LANGLEY-287
Sensors measure surface erosion rate of ablating material in reentry vehicle heat shield. Each sensor, which is placed at precise depths in the heat shield is activated when the ablator surface erodes to the location of a sensing point. Sensor depth and activation time determine ablator surface erosion rate.

B66-10598
DESIGN CONCEPT FOR PRESSURE SWITCH CALIBRATOR
SLINGEVELAND, M. G. /GE DATE- DEC. 1966
NQ-36
Calibrator and switch design enables pressure switches to operate under 150 g shock loads. The design employs a saturated liquid- to- vapor phase transition at constant pressure to produce a known force independent of displacement over a usable range.

B66-10599
PRESSURE PROBE COMPENSATES FOR DIMENSIONAL TOLERANCE VARIATIONS
BANNER, R. A. /AREQUT-GEN. CORP./ DATE- DEC. 1966
LEWIS-302
Flexible, compressible spring- loaded pressure probe measures the static pressure between the rotor stages on an axial- flow fuel pump. This probe is used in installation where a drilled static pressure tap or a rigid impulse tube cannot be used. Its parameters must be specially determined for each installation.

B66-10600
HIGH FREQUENCY WIDE-BAND TRANSFORMER USES COAX TO ACHIEVE HIGH TURN RATIO AND FLAT RESPONSE
DE PARRY, T. DATE- DEC. 1966
ARG-107
Center-tap push- pull transformer with toroidal core helically wound with a single coaxial cable creates a high frequency wideband transformer. This transformer has a high coupling coefficient, and a flat broadband response.

B66-10603
NOFFIT ANALOG MEMORY CIRCUIT ACHIEVES LONG
DURATION SIGNAL STORAGE
SPON- INNOVATOR NOT GIVEN /JBM/ DATE- DEC. 1966
NESC-560
Memory circuit maintains the signal voltage at the output of an analog signal amplifier when the input signal is interrupted or reversed. The circuit uses MOSFET/Metal Oxide Semiconductor Field-Effect Transistor/devices as voltage-controlled switches, triggered by an external voltage-sensing device.

B66-10605
ELECTRICAL CONTINUITY SCANNER FACILITATES IDENTIFICATION OF WIRES FOR SOLDERING TO CONNECTORS
BOULTON, H. C., D'ILEMENDANT, R. A. /W. AR.
AVIATION/ DATE- DEC. 1966
NESC-626
Electrical continuity scanner automatically scans 50 wires in 2 seconds to correlate all wires in a circuit with their respective known ends. Modifications made to the basic plan provide circuitry for scanning up to 250 wires.

B66-10606
A RADIOATTER-PYROMETER
DATE- DEC. 1966 NASA SEE ALSO NASA-TN-D-2405
LMS-284
Radiometer-pyrometer measures the spectral absorption, emission, and temperature of gases. The major problems involved in spectro-radiometric measurements are nonuniform spectral sensitivity, nonlinearity, poor absolute accuracy, wide range of intensities, and wide range of wavelengths.

B66-10607
DEVELOPMENTAL INSTRUMENT SUPPLIES ACCURATE ATTITUDE AND ATTITUDE-RATE DATA
SPON- INNOVATOR NOT GIVEN /KOLT, HESSNER, AND NEWMAR, INC./ DATE- DEC. 1966
NO-97
Three orthogonal-plane projection provides accuracy of readout of both attitude and attitude-rate information in an easily interpreted, uncluttered arrangement where blind navigation of a moving body is involved. The longitudinal length of the projection is constant, and independent of the pitch and roll attitudes of the moving body.

B66-10612
RESISTANCE THERMOMETER HAS LINEAR RESISTANCE-TEMPERATURE COEFFICIENT AT LOW TEMPERATURES
KUTZ, W. /GEN. DYN./ DATE- DEC. 1966
WGO-190
Resistance thermometer incorporating a germanium resistance element with a platinum resistance element in a wheatstone bridge circuit has a linear temperature-resistance coefficient over a range from approximately minus 140 deg C to approximately minus 253 deg C.

B66-10614
STUDY OF THEORY AND APPLICATION OF LONG DURATION BEAM FLUX TRANSDUCERS
HEZAN, J. R., ROBBERTSON, S. J. /HEAT TECHOL.
LAB./ DATE- DEC. 1966
N-FS-1265
Theory and application of transducers used to measure heat flux in tests of more than one second duration.

B66-10617
UROVEMO MEMORY WORD LINE CONFIGURATION ALLOWS HIGH STORAGE DENSITY
SPON- INNOVATOR NOT GIVEN /UNIVAC/ DATE- DEC. 1966
GSPC-559
Plated wire memory word drive line allows high storage density, good plated wire transitions, and a simplified memory plane configuration. A half-turn word drive line with a magnetic keeper is used. The ground plane provides the return path for both the word current and the plated wire transmission line.

B66-10619
COMPUTER PROGRAM SIMPLIFIES TRANSIENT AND STEADY-STATE TEMPERATURE PREDICTION FOR COMPLEX BODY SHAPES
GILLEN, K. N. /W. AR. AVIATION/ DATE- DEC. 1966
NESC-589
Computer program evaluates heat transfer modes and calculates either the transient or steady-state temperature distributions throughout an object of complex shape when heat sources are applied to specified points on the object. It uses an electrothermal model to simulate the conductance, heat capacity, and temperature potential of the object.

B66-10621
CONNECTOR ACTS AS QUICK COUPLING IN COAXIAL CABLE APPLICATION
BECHL, A. G., JR. DATE- DEC. 1966
JPL-803
Quick-coupling connector whose inner shells are threaded to the cable ends and whose outer shells have tracks that register in channels machined in the inner shells are rotated 90 deg to effect a locking of the coupling. This connector faithfully reproduces excellent electrical characteristics no matter how frequently assembled and disassembled.

B66-10622
POINT-SOURCE DETECTION SYSTEM REJECTS SPATIALLY EXTENDED RADIATION SOURCES
MAYWELL, P. F., JR. /WESTINGHOUSE ELECTRIC CORP./ DATE- DEC. 1966
GSPC-446
System employing digital space correlation to suppress false target signals in a point-target tracking device is a reliable method for discriminating a distant target from false targets in the field of view of an infrared detection system or tracking device.

B66-10623
THERMOCOUPLES ELECTRICALLY CHECKED WHILE CONNECTED TO DATA SYSTEM
SPON- INNOVATOR NOT GIVEN /REP. AVIATION CORP./ DATE- DEC. 1966
LANGLEY-182
Constant current source is connected across the output of the millivolt measuring system to monitor the electrical continuity and resistance of multiple thermocouple installations without disconnecting them from a data system. This technique monitored gage thermocouple leads during the assembly and preflight testing of the Project Fire reentry packages.

B66-10624
MINIATURE TELERAY SYSTEM ACCURATELY MEASURES PRESSURE
FREEm, T. B. DATE- DEC. 1966 NASA SEE ALSO B66-10771 AND B66-10057
ARC-74
Miniature, low power, teleray system that can be used with commercially available strain gage pressure transducers accurately measures pressure with a small implantable pressure cell and transmitter. The system has been used to date only with pressure transducers, but the circuit is equally applicable to any measurement using a strain gage sensor.

B66-10625
COMPACT MICROWAVE MIXER HAS HIGH CONVERSION EFFICIENCY
PEREEN, R. J., ROBBINS, H. A. /HUGHES AIRCRAFT CO./ DATE- DEC. 1966
GSPC-197
Compact, lightweight microwave mixer has a relatively high conversion efficiency and power output. The mixer employs a pair of back-to-back voltage-variable capacitors in a stripline network.

B66-10629
PRECISION CW LASER AUTOMATIC TRACKING SYSTEM INVESTIGATED
N-FS-1606

36
Precision laser tracker capable of tracking a low acceleration target to an accuracy of about 20 microradians is being constructed and tested. This laser tracking has the advantage of discriminating against other optical sources and the capability of simultaneously measuring range.

B66-10632
ACCURATE DEPTH CONTROL PROVIDED FOR THERMOCOUPLE JUNCTION LOCATIONS

LANGLEY-289
Flight reentry experiments define the total heating on a large blunt-nosed body by means of imbedded thermocouples. The thermocouples, installed in a beryllium layered forebody, were designed to provide minimal feasible disturbance of local heat flow with accurate depth control of the thermocouple junction locations.

B66-10636
AUTOMATIC SYSTEM DETERMINES MOMENTS OF INERTIA OF ASTRONAUTICAL OBJECTS

SPON- INNOVATOR NOT GIVEN /SPACE, INC. /DATE- DEC. 1966

M-PS-1769
Automatic system rapidly and accurately determines moments and products of inertia of asymmetrical objects. The system combines a torsional pendulum arrangement and a precision rate table with simplified analog computers to determine the desired quantities directly, without the need for additional calculations.

B66-10637
INSTRUMENT ACCURATELY MEASURES SMALL TEMPERATURE CHANGES ON TEST SURFACE

HARVEY, W. D. /MILLER, R. B. /DATE- DEC. 1966

REAR- SEE ALSO NASA-TN-D-2846

LANGLEY-174
Calorimeter apparatus accurately measures very small temperature rises on a test surface subjected to aerodynamic heating. A continuous thin sheet of a sensing material is attached to a base support plate through which a series of holes of known diameter have been drilled for attaching thermocouples to the material.

B66-10640
VOLUME-RATIO CALIBRATION SYSTEM FOR VACUUM GAGES

SPON- INNOVATOR NOT GIVEN /LEWIS/ /DATE- DEC. 1966

LEWIS-303
Volume-ratio calibration system consists of a gas source, a pressure gauge, small volume tank, large volume chamber, plus appropriate piping, valves, and vacuum source. This system used in conjunction with commercial vacuum gauges evaluates its ability to accurately produce desired pressures in the .000001 to .01 torr range.

B66-10644
THEORY-EXIS ATTITUDE AND DIRECTION REFERENCE INSTRUMENT HAS ONLY ONE MOVING PART

BOSSLER, F. B. /BELL AEROSPACE CORP. /DATE- DEC. 1966

M-PS-1819
Lunar vehicle instrument combines the functions of attitude reference, direction reference, and display in a unit having only one moving part. The device, using bubble levels and a calibrated dial, is used as a sextant prior to takeoff, and as a backup navigation system during flight.

B66-10645
CONCEPT FOR USING LASER BEAMS TO MEASURE ELECTRON DENSITY IN PLASMAS

LONG, S. H. /BOEING CO. /DATE- DEC. 1966

M-PS-965
Concept is proposed for using laser beams as a means of measuring electron density at various points in flame or plasma exhausts. Measurement of the electron density is obtained by detecting reflected waves in the plasma that were activated by the laser.

B66-10650
MAGNETORESISTORS MONITOR RELAY PERFORMANCE

KNEES, D. Q. /BOEING CO. /DATE- DEC. 1966

M-PS-1754
Magnetoresistor monitors the action of relays without disturbing circuit parameters or degrading relay performance. The magnetoresistor measures the relay magnetic flux produced under transient conditions to establish the characteristic signature of the relay.

B66-10653
THERMOCOUPLES EASILY INSTALLED IN HARD-TO-GET-TO PLACES

GROFFER, F. G. /N. AM. AVIATION/ /DATE- DEC. 1966

M-PS-1946
Thermocouple wires attached to charged capacitors are inserted in a drilled hole. An electric charge fuses the thermocouple wires to the host material. This method has shown excellent results in fusing nichrome, chromel, Inconel, and stainless steel wires to nickel, beryllium, iron, steel, Inconel, and stainless steel.

B66-10658
DIGITAL FREQUENCY COUNTER PERMITS READOUT WITHOUT DISTURRING COUNTING PROCESS

WINKELSTEIN, W. /DATE- DEC. 1966

JPL-906
Digital frequency counter system enables readout accurately at one-second intervals without interrupting or disturbing the counting process. The system incorporates a master counter and a slave counter with novel logic interconnections. The counter can be readily adapted to provide frequency readouts at 0.1 second intervals.

B66-10659
LOGIC CIRCUITRY USED TO AUTOMATICALLY TEST SHIELDED CABLES

DIBB, G. /DATE- DEC. 1966

HG-60
Automatic cable tester checks multiple shielded conductors assembly cable connections. The tester uses logic circuitry to sequentially test all conductors and their shields to reveal any connection error in a GO-NO GO test.

B66-10661
STUDY OFFAST RESPONSE THERMOCOUPLE MEASUREMENT OF TEMPERATURES IN CRYPTOGENIC GASES

SIEBASHK, T. /LOWE, A. R. /BOEING CORP. /DATE- DEC. 1966

M-PS-1659
Thermocouples fabricated from uninsulated small diameter wire have fast reproducible response times. The thermocouple is thermally isolated from its supports by making the leads of sufficient length so that the heat conduction down the leads is small and assuming that the leads adjacent to the junction are subjected to the same thermal conditions.

B66-10664
PACKAGING OF ELECTRONIC MODULES

FITTER, L. /DATE- DEC. 1966

JPL-881
Study of design approaches that are taken toward optimizing the packaging of electronic modules with respect to size, shape, component orientation, interconnections, and structural support. The study does not present a solution to specific packaging problems, but rather the factors to be considered to achieve optimum packaging designs.

B66-10668
PHOTOGRAPIHC METHOD MEASURES PARTICLE SIZE AND VELOCITY IN FLUID STREAMS

DICKERSON, E. A. /N. AM. AVIATION/ /DATE- DEC. 1966

M-PS-1536
Method employing a nonframing motion picture camera, a continuous front light source, and a strobe light determines the size and velocity of small particles in nonturbulent fluid streams. This method is used in the study of the motion of
solid and liquid particles in research and industrial fluid flow systems.

B66-10669
GAS LEAK DETECTOR IS SIMPLE AND INEXPENSIVE
MITCHELL, D. K. /BOEING CO./ DATE- DEC. 1966
N-PS-1206

Pressure sensor monitors small gas leaks in piping and pressure vessels. A combination of a paper ribbon and adhesive plastic tape is used to cover the area to be monitored and the pressure sensor is placed over a hole in the tape and paper.

B66-10670
COMPUTER PROGRAM DETERMINES CHEMICAL COMPOSITION OF PHYSICAL SYSTEM AT EQUILIBRIUM
KWONG, S. S. /W. AERO. AVIATION/ DATE- DEC. 1966
MSC-119

FORTRAN 4 digital computer program calculates equilibrium composition of complex, multiphase chemical systems. This is a free energy minimization method with solution of the problem reduced to mathematical operations, without concern for the chemistry involved. Also certain thermodynamic properties are determined as byproducts of the main calculations.

B66-10671
COMPUTER PROGRAM DETERMINES CHEMICAL EQUILIBRIUM IN COMPLEX SYSTEMS
GORDON, S. ZELEZNIK, F. X. DATE- DEC. 1966
GSFC-559, 560

Computer program numerically solves nonlinear algebraic equations for chemical equilibrium based on iteration equations independent of choice of coordinates. This program calculates theoretical performance for frozen and equilibrium composition during expansion and Chapman-Jouguet flame properties, studies combustion, and design hardware.

B66-10675
GAGE ACCURATELY CONTROLS FORCE FOR PLACING CHIPS ON SUBSTRATES
BERES, W. F. /IBM/ DATE- DEC. 1966
M-PS-1941

Device is developed to control the force used in manually placing chips on substrates. It controls the compression load between 2 small members at least as low as 25 grams by means of a force control gage that is preset by varying the spring deflection.

B66-10679
BLACKBODY CAVITY RADIOMETER HAS RAPID RESPONSE
HALEY, F. C. DATE- DEC. 1966
JPL-521

Fast response, spectrally linear standard detector in the form of a blackbody cavity radiometer calibrates rapidly responding photodetectors and a calibrated standard detector. A power amplifier with new automatic gain reduces error signal without stability loss. It may be used as a blackbody radiator by manipulation of the bridge variable arm.

B66-10680
SLIDE RULE-TYPE COLOR CHART PREDICTS REPRESSED PHOTO TONES
GRIFFIN, J. P. /A. E. AVIATION/ DATE- DEC. 1966
MSC-1227

Slide rule-type color chart determines the final reproduced gray tones in the production of briefing charts that are photographed in black and white. The chart shows both the color and intensity of the gray tones resulting from black and white photographic reproduction.

B66-10685
PROCESS REDUCES SECONDARY RESONANT EMISSION IN ELECTRONIC COMPONENTS
EBENBACH, H. DATE- DEC. 1966
JPL-934

Process reduces secondary electron emission in coaxial connector and in waveguides in the atmosphere. The assembly is placed in a vacuum chamber and is gradually vented to the atmosphere. It is exposed to high voltage, argon gas, and a hydrocarbon gas during the process.

B66-10687
STUDY OF HOT WIRE TECHNIQUES IN LOW DENSITY FLOWS WITH HIGH TURBULENCE LEVELS
HANSON, A. R. KRAUSE, P. R. LARSON, R. E. DATE- DEC. 1966
N-PS-1269

Prediction of heat, mass, species, and momentum fluxes in a space vehicle and aerodynamic noise production by supersonic jet and rocket exhausts requires a predictable method of the associated turbulence fields. The hot wire is a technique that will allow an experimental determination of turbulent properties.

B66-10690
LOW INPUT VOLTAGE CONVERTER/REGULATOR MUTES EXTERNAL DISTORTIONS
BOW- INNOVATOR NOT GIVEN /BOWEYELL, INC./ DATE- DEC. 1966
GSFC-527

Low-input voltage converter/regulator constructed in a coaxial configuration minimizes external magnetic field distortion, suppresses radio noise interference, and provides excellent heat transfer from power transistors. It converts the output of fuel and solar cells, thermionic diodes, thermoelectric generators, and electrolytical batteries to a 28 V dc output.

B66-10691
EQUIVALENT CIRCUIT FOR A FIELD EFFECT TRANSISTOR ESTABLISHED FOR COMPUTER SIMULATION
KING, L. J. /IBM/ DATE- DEC. 1966
M-PS-1752

Equivalent circuit for the field effect transistor made up of circuit elements can be simulated by existing computer programs.

B66-10692
SOLID-STATE RECOVERABLE FUSE FUNCTIONS AS CIRCUIT BREAKER
THOMAS, E. F. JR. DATE- DEC. 1966
GSFC-560

Molded, conductive epoxy recoverable fuse protects electronic circuits during overload conditions, and permits them to continue to function immediately after the overload condition is removed. It has low resistance at ambient temperature, and high resistance at an elevated temperature.

B66-10693
ELECTRODEALLY SEALED CELLS PROTECTED FROM INTERNAL GAS PRESSURE
CASBRON, W. R. /GE/ DATE- DEC. 1966
GSFC-555

Manufacturing process prevents damage to hermetically sealed nickel-cadmium secondary cells by buildup of gas pressure during overcharging and reversed charging conditions. The cells are manufactured with less charge capacity in the positive electrode than in the negative electrode, and two additional electrodes are added.

B66-10696
LOW RATE FLOW SWITCH CAN BE USED FOR GAS OR LIQUID
DARK, R. T. JR. DATE- DEC. 1966
JPL-867

Flow switch operable at low flow rates is used for detecting the flow of a water coolant in a vacuum deposition apparatus. This switch utilizes one or more reed switches which are actuated by a sliding magnet.

B66-10699
MONITORING SYSTEM DETERMINES AMPLITUDE AND TIME OF VIBRATION CHANNEL PEAKS
ANDERSON, V. O. DATE- DEC. 1966
JPL-879

Adaptive scheme advocated in this innovation will reduce processing time and is applicable to
environmental testing and to space-borne or aircraft-borne vibration monitoring devices requiring a large number of channels.

**B66-10706**
LOGARITHMIC CURRENT SIMULATOR GENERATES ELECTRICAL CURRENTS ACCURATELY BETWEEN 10 TO THE MINUS 11 AMPERE TO 10 TO THE MINUS 3 AMPERE
WILSON, J. /WESTINGHOUSE ASTRONUC. LAB./ DATE-DEC. 1966
NU-0087
Current generator accurately simulates electric currents in the range of 10 to the minus 11th power to 0.001 ampere. Compensation networks have been devised to improve the accuracy at the lower current levels.

**B66-10709**
THERMOCOUPLE-FLEXIBLE CABLE CONNECTOR
INSULATOR IS HIGHLY RELIABLE
GRACEY, C. M. /RENOJET-GEN. CORP./ DATE-DEC. 1966
NU-0082
Plastic/polycarbonate/insulator improves thermocouple reliability in test operations. The insulator is molded in half sections, assembled mechanically and eliminates electrical shorting.

**B67-10001**
PROGRAM COMPUTES SINGLE-POINT FAILURES IN CRITICAL SYSTEM DESIGNS
BROWN, E. R. /PAR. AN. AVIATION/ DATE- JAN. 1967
MSC-603
Computer program analyzes the designs of critical systems that will either prove the design is free of single-point failures or detect each member of the population of single-point failures inherent in a system design. This program should find application in the checkout of redundant circuits and digital systems.

**B67-10002**
COMPUTER PROGRAM DETECTS TRANSIENT MALFUNCTIONS IN SWITCHING CIRCUITS
CALVIN, E. L. /PAR. AN. AVIATION/ DATE- JAN. 1967
MSC-604
A program which accepts a system model in the form of Boolean equations and solves these equations using a ternary algebra will determine the response of large combinational and sequential switching circuits to given input changes, taking into account malfunctions due to races, hazards, and oscillations.

**B67-10009**
TESTER FOR STUDY OF ROLLING ELEMENT BEARINGS
ZEITZEN, E. V. DATE- FEB. 1967
LEWIS-305
Five-ball fatigue tester makes possible the study of rolling element phenomena. The device consists of a driven test ball pyramided upon four lower balls positioned by a separator and free to rotate in an angular contact raceway.

**B67-10013**
SELF-STARTING PROCEDURE SIMPLIFIES NUMERICAL INTEGRATION
DATE- JAN. 1967 REAR- SEE ALSO NASA-TN-D-2936
ARC-50
A self-starting, multistep procedure for the numerical integration of ordinary differential equations is devised to produce all the required backward differences directly from the initial equations. The self-starting element eliminates nonessential tallying to determine starting values.

**B67-10015**
ALUMINIZED THIN-WINDOW PROPORTIONAL-COUNTER
TURN IS STRONGER, MORE RESPONSIVE IN LONG WAVELENGTH REGION
SCHOPPER, R. W. /SHELD, R. A. /CORNELL UNIV./ DATE- JAN. 1967
JPL-689
A thin-window proportional counter tube of 0.25-mil Mylar with a thin aluminum coating on one side permits efficient detection of long wavelength X rays. It is sufficiently rugged for long-term use in space or other demanding environments.

**B67-10017**
SHORTENED HORN-REFLECTOR ANTENNA
LAMB, F. A. DATE- JAN. 1967
GS-562
A shortened horn-reflector antenna overcomes the mechanical disadvantages and complexity of the conventional horn-reflector antenna. The shortened antenna offers broadband performance, economic construction, very low antenna temperature, and excellent pattern performance.

**B67-10020**
MINIATURE CAPACITOR FUNCTIONS AS PRESSURE SENSOR
BABKET, R. G. DATE- FEB. 1967
JPL-903
Miniature capacitor operates as a differential pressure telemetry sensor during free flight of the test model in a hypersonic wind tunnel. The capacitor incorporates a beryllium copper diaphragm. It is also used as an absolute pressure sensor.

**B67-10022**
VARIABLE-PULSE SWITCHING CIRCUIT ACCURATELY CONTROLS SOLID-STATE ACTUATIONS
GILLOT, J. D. /PAR. AN. AVIATION/ DATE- FEB. 1967
RI-25-1956
Solid state circuit generating adjustable square wave pulses of sufficient power operates a 28 volt dc solenoid valve at precise time intervals. This circuit is used for precise time control of fluid flow in combustion experiments.

**B67-10025**
COMPUTER/PERT TECHNIQUE MONITORS ACTUAL VERSUS ALLOCATED COSTS
HESSEY, E. WALKER, J. R. DATE- FEB. 1967
LEWIS-260
A computer method measures the user's performance in cost-type contracts utilizing the existing NASA program evaluation review technique without imposing any additional reporting requirements. Progress is measured by comparing actual costs with a value of work performed in a specific period.

**B67-10027**
FEED-THROUGH CONNECTOR COUPLES RF POWER INTO VACUUM CHAMBER
GRANDY, G. L. /WESTINGHOUSE ASTRONUC. LAB./ DATE- FEB. 1967
NU-0096
Feed-through device connects RF power to an RF coil in a vacuum chamber. The coil and leads are water cooled and vacuum tight seals are provided at the junctions. The device incorporates silver soldered copper tubes, polytetrafluoroethylene electrical insulators, and O-ring vacuum seals.

**B67-10028**
MONITOR ASSURES AVAILABILITY AND QUALITY OF COMMUNICATION CHANNELS
SMITH, G. P. /RCA/ DATE- FEB. 1967
KSC-66-38
System monitors a communication channel for proper circuit parameters and energizes an alarm if these parameters do not fall within allowable limits. It comprises a monitor-signal transmitter at the transmitting end of the channel and a monitor-signal receiver at the receiving end.

**B67-10029**
INSTRUMENT SEQUENTIALLY SAMPLES AC SIGNALS FROM SEVERAL ACCELEROMETERS
CHAPMAN, C. P. DATE- FEB. 1967 REAR- SEE ALSO
B66-10462
JPL-884
Scanner circuit sequentially samples the ac signals from accelerometers used in conducting noise vibration tests, and provides a time-averaged output signal. The scanner is used in conjunction with other devices for random noise vibration tests.
LOCAL MEASUREMENTS IN TURBULENT FLOWS
THROUGH CROSS CORRELATION OF OPTICAL SIGNALS
FISHER, M. J. DATE- FEB. 1967
NASA-1268
Crosed beam correlation method measures turbulent fluctuations in transonic and supersonic flows. Two crosed beams of radiation are crossed at the point of interest in the flow, and the power loss of each beam is measured with two independent photodetectors, which yield information about the turbulent properties.

HIGH TRANSIENTS SUPPRESSED IN ELECTROMAGNETIC DEVICES
HATTON, C. W. DATE- FEB. 1967
ESC-66-13
A bifilar winding around the magnetic core of electromagnetic devices suppresses high transient voltages. The winding is alternately spaced vertically and radially from the core to achieve a high coefficient of coupling.

THERMOELECTRIC METAL COMPARATOR DETERMINES COMPOSITION OF ALLOYS AND METALS
STONE, C. C. WALKER, D. E. DATE- FEB. 1967
ARC-215
Emf comparing device nondestructively inspects metals and alloys for conformance to a chemical specification. It uses the Seebeck effect to measure the difference in emf produced by the junction of a hot probe and the junction of a cold contact on the surface of an unknown metal.

RESIDUAL MAGNETISM HOLDS SOLENOID ARMATURE IN DESIRED POSITION
CRAWFORD, R. F. /GEN. ENG./ DATE- MAR. 1967
INFS-343
Holding solenoid uses residual magnetism to hold its armature in a desired position after excitation current is removed from the coil. Although no electrical power or mechanical devices are used, the solenoid has a low tolerance to armature displacement from the equilibrium position.

STUDY MADE OF EXPLOSIVE CUTTING IN SIMULATED SPACE ENVIRONMENTS
COLEMAI, R. H. HAMILTON, L. G. /HAYS INTERN./ CORP. DATE- MAR. 1967
NASA-SP-4-53440
M-PS-1597
Study indicates the feasibility of explosive cutting and establishes techniques applicable to in-space cutting operations. Results show no degradation of the explosive and that work hardening of the target material is limited to the cut edge.

ABSOLUTE VISCOSITY MEASURED USING INSTRUMENTED PARALLEL PLATE SYSTEM
BROOKS, H. H. DATE- MAR. 1967
JPL-878
An automatic system measures the true average shear viscosity of liquids and viscous materials, using the parallel plate method and automatically displays the results on a graphic record. This eliminates apparatus setup and extensive calculations.

IMPROVED FLUID CONTROL CIRCUIT OPERATES ON LOW POWER INPUT
GEHLEN, V. DATE- MAR. 1967
LEVTS-225
Standard electromagnetic relay actuates fluid control circuits with low level electrical signals by switching a fluid amplifier that drives a spool valve.

MULTIPURPOSE INSTRUMENTATION CABLE PROVIDES INTEGRAL THERMOCOUPLE CIRCUIT
ZELLER, G. /WESTINGHOUSE AVIATION/ BNL./ DATE-
MAR. 1967
MB-0108
Multipurpose cable with an integral thermocouple circuit measures strain, vibration, pressure, throughout a wide temperature range. This cable reduces bulky and complex circuitry by eliminating separate thermocouples for each transducer.
particles in a clean room. It categorizes and
records the particles according to size and
functions simultaneously in three separate areas.
The counter uses a transducer head to transform
light signals into electric signals.

B67-1007
COMPUTER PROGRAM SIMULATES DESIGN, TEST,
AND ANALYSIS PHASES OF SENSITIVITY
EXPERIMENTS
ALEXANDER, A. N. / N. AM. AVIATION/ DATE- APR. 1967
M-PS-1946
Modular program with a small main program and
several specialized subroutines provides a general
purpose computer program to simulate the design,
test and analysis phases of sensitivity
experiments. This program allows a wide range of
design-response function combinations and the
addition, deletion, or modification of
subroutines.

B67-10080
INSTRUMENT CONTINUOUSLY MEASURES DENSITY
OF FLOWING FLUIDS
JACOBS, D. R. / MACINE, J. MILLER, C. Y. / NBS/
DATE- APR. 1967
LEWIS-309
Electromechanical densitometer continuously
measures the densities of either single-phase or
two-phase flowing cryogenic fluids. Measurement is
made on artificial flow. The instrument operation
is on the principle that the mass of any vibrating
system is a primary factor in determining the
dynamic characteristics of the system.

B67-10084
CIRCUIT INCREASES CAPABILITY OF HYSTERESIS
SYNCHRONOUS MOTOR
MARKOWITZ, I. N. / RCA/ DATE- APR. 1967
MSC-834
Frequency and phase detector circuit enables a
hysteresis synchronous motor to drive a load of
given torque value at a precise speed determined
by a stable reference. This technique permits
driving larger torque loads with smaller motors
and lower power drain.

B67-10085
TRIPLE MODULAR REDUNDANCY /TRM/ COMPUTER
OPERATION IMPROVED
BALL, M. HARDIE, P. H. / IBM/ DATE- APR. 1967
MSC-831
Switching off a failed element plus one of the
good elements in the TRM computer operation keeps
the reliability curve from crossing the simplex
curve. This method increases reliability and
prevents system failure.

B67-10086
AUTOMATIC CHANNEL SWITCING DEVICE
BALL, M. CLAUSCH, G. N. / IBM/ DATE- APR. 1967
M-PS-832
MSC-834
Automatic channel switching device operates with
all three modular redundant channels when
there are no errors. When a failure occurs,
channel and module switching isolate the failure
to a specific channel. Since only one must
operate correctly, reliability is increased.

B67-10087
TRANSLATOR PROGRAM CONVERTS COMPUTER
PRINTOUT INTO BRAILLE LANGUAGE
POWELL, R. A. / BEING CO./ DATE- APR. 1967
M-PS-2061
Computer program converts print image tape files
into six dot Braille cells, enabling a blind
computer programmer to monitor and evaluate data
generated by his own programs. The Braille
output is printed 8 lines per inch.

B67-10090
SYSTEM AUTOMATICALLY SUPPLIES PRESSURE
ANALYTICAL SAMPLES OF HIGH-PRESSURE CASES
LANGDON, H. N. / IIT RES. INST./ DATE- APR. 1967
M-PS-1814
High-pressure-reducing and flow-stabilization
system delivers analytical gas samples from a gas
supply. The system employs parallel capillary
restrictors for pressure reduction and downstream
throttling valves for flow control. It is used
in conjunction with a sampling valve and minimizes
alterations of the sampled gas.

B67-10091
SYSTEM MAINTAINS CONSTANT PENETRATION
DURING FUSION WELDING
COOK, G. / REID ENG./ M. CAMPBELL, R. M. DATE- APR. 1967
M-PS-957
Servo system senses variations in fusion welding
process, and adjusts the control parameters to
compensate for them. The system assumes a
correlation between uniform weld penetration and
temperature gradients near the molten puddle. It
senses weld properties and makes adjustments to
travel speed and weld current.

B67-10092
RESEARCH A NEW MANAGEMENT TRAINING CONCEPT
DENAULT, E. F. VACCARE, R. J. DATE- APR. 1967
G-SC-574
Goddard Research Engineering Management
Exercise provides experience in R&D project
decision making from a management rather than
technological view. The participant directs a
hypothetical project presented in the management
simulation technique. He uses old or new methods
without concern for rewards or penalties existing
in real life.

B67-10093
STEEL GAGE CIRCUIT PROVIDES FATIGUE
TESTING MACHINE WITH ACCURATE CYCLE COUNT
PARK, R. / RESEARCH HOUSE AERONAUTICAL LAB./ DATE- APR. 1967
M-PS-714
Fatigue tester determines the number of cycles to
fatigue failure of brittle specimens. A strain
gage on the loading arm records the loading
applied to the component. As the component
starts to break, the load is reduced and the
strain gage stops the cycle counter.

B67-10097
HEATER CONTROL CIRCUIT PROVIDES BOTH FAST
AND PROPORTIONAL CONTROL
HABLOCK, R. W. / IBM/ DATE- APR. 1967
M-PS-905
Proportional control circuit supplies a heater
with full current, from a pulsating dc source, to
a present temperature and then switches to
proportional control for fine temperature
regulation. Two resistors and a diode are added
to the existing circuit. The circuit can be
adapted to control other functions.

B67-10099
SYSTEM ENABLES MORE COMPLETE CALIBRATIONS
OF DYNAMIC-PRESSURE TRANSDUCERS
TURNER, D. P. / IIT RES. INST./ DATE- APR. 1967
M-PS-2063
Absolute pressure calibration system using a
Michelson interferometer calibrates phase
characteristics and pressure sensitivities of the
transducers that monitor acoustic or aerodynamic
pressure fields. The interferometer uses a
helium-neon laser light source and interchangeable
acoustic signal generators to produce acoustic
waves.

B67-10101
DOUBLE EMITTER SUPPRESSED CARRIER MODULATOR
USING COMMERCIALLY AVAILABLE COMPONENTS
HAIST, C. F. Filed Co./ DATE- APR. 1967
M-PS-2494
Double emitter suppressed carrier modulator
develops a signal-to-carrier minimum output ratio
of 40 db and signal input of 2.5 volts. The circuit
uses a commercially available double
emitter chopper transistor. It eliminates tuning
potentiometers and reduces sideband harmonics.

B67-10103
POLYHEDRAL MANIPULATOR AP-168
TUTT, G. E. / N. AM. AVIATION/ DATE- APR. 1967
MSC-1231
Linear Systems Design Evaluation Program,
AP-168 combines the many different analysis techniques used to evaluate and manipulate polynomials. The single program is in a pseudo instruction abstraction. It allows the user to enter polynomials of the laplace operators and to manipulate them freely.

B67-10104 PARASTRICT UP-CONVERTER INCREASES FLEXIBILITY OF MASER
SUNY, R. H. DATE- APR. 1967
EJC-67-98

Parastreic up-converter translates a broad band of signals to the fixed tuned input frequency of a maser. This modified maser can operate in the 1700-2300 kc range, eliminating the need to duplicate equipment. It may be applied in communications and radio astronomy.

B67-10106 RF INDUCER HAS HIGH Q, IS STABLE AT HIGHER TEMPERATURES
WILEY, R. H. DATE- MAY 1967
JPL-1019

Encapsulated RF inductor with an insulated coil has a high Q and remains stable for long periods of time at high temperatures. The coil is wound on a core and both are encapsulated in an epoxy resin. Two terminals are soldered to the coil.

B67-10108 COMPUTER PROGRAM REDUCES CALCULATION TIME OF NORMAL RESPONSE FUNCTIONS
ALEXANDER, R. J. ROYTHAM, J. N.
/NA. AVIATION/ DATE- MAY 1967
NFC-1977

FORTRAN 2 computer program rapidly calculates parameters of maximum likelihood estimate form sensitivity experiment data populations. The program uses the Newton-Raphson iterative procedure to calculate the mean and standard deviation of portions of the cumulative normal response function.

B67-10111 FIXTURE TESTS BELLOWS RELIABILITY THROUGH REPETITIVE PRESSURE/TEMPERATURE CYCLING
LEVISON, C. /SPEEY GYROSCOPE CO./ DATE- MAY 1967
MSC-1176

Fixture explores the reliability of bellows used in precision in inertial systems. The fixture establishes the ability of the bellows to withstand repetitive over-strain pressure cycling at elevated temperatures. It is applicable in quality control and reliability programs.

B67-10115 LIQUID HYDROGEN DENSITOMETER UTILIZES OPEN-ENDED MICROWAVE CAVITY
SPEATA, N. WEBBER, C. DATE- APR. 1967 REAS
SEE ALSO NASA-TN-D-3680
LEWIS-390

Open-ended microwave cavity directly measures the density of flowing liquid, gaseous, or two-phase hydrogen. Its operation is based on derived relations between the cavity resonant frequency and the dielectric constant and density of hydrogen.

B67-10116 DETECTION OF ENTRAPPED MOISTURE IN HONEYCOMB SANDWICH STRUCTURES
HALLBARK, W. P. /NA. AVIATION/ DATE- MAY 1967
MSC-1103

Thermal neutron moisture detection system detects entrapped moisture in intercellular areas of bonded honeycomb sandwich structures. A radium/beryllium fast neutron source bombards a specimen. The emitted thermal neutrons from the target nucleus are detected and counted by a boron trifluoride thermal neutron detector.

B67-10119 TV SYNCHRONIZATION SYSTEM FEATURES STABILITY AND NOISE IMMUNITY
LEANDER, P. P. DATE- MAY 1967
JPL-915

Horizontal jitter in the video presentation in television systems is prevented by using an additional sync level. This circuitry uses simultaneous signals at both sync and porch frequencies, providing a sync identification from which a coincidence circuit can generate pulses having the required stability and noise immunity.

B67-10119 PERSONAL COMMUNICATION SYSTEM COMBINES HIGH PERFORMANCE WITH MINIORIZATION
ATLAS, A. H. /NA. AVIATION/ DATE- MAY 1967
MSC-720 MSC-732

Personal communication system provides miniaturized components that incorporate high level signal characteristics plus noise rejection in both microphone and earphone circuitry. The microphone is designed to overcome such spacecraft flight problems as noise, ambient noise level, and RF interference.

B67-10125 EDGE-TYPE CONNECTORS EVALUATED BY ELECTRICAL NOISE MEASUREMENT
SHEPHERD, S. L./BOEING CO./ DATE- MAY 1967
NFC-2243

Electrical noise measurement system measures noise generated by edge-type connectors and circuit cards when they are subjected to sinusoidal vibration. It provides a signal across the contact area and monitors the signal change during vibration. Noise measured can be expressed as a varying change in total contact resistance.

B67-10127 CALIBRATING ULTRASONIC TEST EQUIPMENT FOR CHECKING METAL STRIP STOCK
PETERSON, R. H./AEROSTART-GM. CORP./ DATE- JUN. 1967
MSC-10009

Calibration technique detects minute laminar-type discontinuities in thin metal strip stock. Patterns of plastic tape are preselected to include minutely calculated discontinuities and the tape is applied to the strip stock to intercept the incident sonic beam.

B67-10130 MODIFIED UNIVIBRATOR COMPENSATES FOR OUTPUT TIMING ERRORS
STRAUS, H. G. DATE- MAY 1967
ABP-95

One-stage, delay compensation amplifier, added to conventional univibrator circuitry time-synchronizes the trailing edge of the output pulse with the origin of the input pulse. The trailing edge is independent of the amplitude of the input pulse.

B67-10135 INTEGRATOR CAN EASILY BE SET AND RESET WITH AN ELECTRONIC SWITCH
DEGO, G. J. DATE- MAY 1967
MSC-10002

Electronic switch sets and resets integrator circuit to some initial condition using a grounded capacitor. This circuit also uses four equal resistors and an operational amplifier.

B67-10136 COMPUTER PROGRAM CALCULATES MONOTONIC MAXIMUM LIKELIHOOD ESTIMATES USING METHOD OF REVERSALS
ALEXANDER, R. J. ALEXANDER, N. J./NA. AVIATION/ DATE- MAY 1967
NFC-1516

FORTRAN 2 computer program calculates maximum estimates of a monotonic non-decreasing response function. The program uses the method of reversals algorithm which applies to the analysis of univariate or multivariate sensitivity experiments.

B67-10137 VARIABLE RELUCTANCE SWITCH AVOIDS CONTACT CORROSION AND CONTACT BOUNCE
WATSON, P. C./MIT/ DATE- MAY 1967
MSC-1178

Variable reluctance switch avoids contact corrosion and bounce in a hostile environment. It
consists of a wire-wound magnetic core and moveable bridge piece that alters the core flux pattern to produce an electrical output useful for switching control media.

B67-10139
RECORDING AND TIME EXPANSION TECHNIQUE FOR HIGH-SPEED, SINGLE-SHOT TRANSIENT VIDEO SIGNAL
HC MAYNE, R. J. SANDE, R. C. DATE- MAY 1967
ARC-10003
High-speed, single-shot, transient voltage is recorded on a video tape recorder, which, when played back, converts the single signal to a repetitive signal. This drives a sampled data translator which lengthens the original transient production time, suitign it to an x-y plotter or computer tape recorder use.

B67-10140
CLAMP PROVIDES EFFICIENT CONNECTION FOR HIGH-DENSITY CURRENTS
M-FS-2417
Electrical connector clamp /bus bar/ gives high contact-surface efficiency for providing a high current to thin wall stainless steel tubing containing hydrogen gas. It uses lead solder to provide the electrical equivalent of a fusion bond without degrading the grain structure, permitting disassembly and reuse of the components.

B67-10142
THIN FILM PROCESS FORMS EFFECTIVE ELECTRICAL CONTACTS ON SEMICONDUCTOR CRYSTALS
POMBROH, N. P. ROBERTS, J. S. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1967
M-FS-2343
Process makes microscopic, low-resistance electrical contacts on hexagonal n-type silicon carbide crystals used for microelectronic devices. A vacuum deposition of aluminum is etched to expose the bare silicon carbide where the electrical contacts are made. Sputtering alternating layers of tantalum and gold forms the alloy film.

B67-10143
DESIGN CONCEPTS USING RING LASERS FOR FREQUENCY STABILIZATION
NOCKE, R. /HONEYWELL INC./ DATE- MAY 1967
M-FS-2468
Laser frequency stabilization methods are based on a frequency discriminant which generates an unambiguous deviation signal used for automatic stabilization. Closed-loop control stabilizes cavity length at a null point. Some systems have a stabilizing laserdiode or plexo-electric dither and others use a Doppler gain tube.

B67-10144
PROCESSES FACILITATES PHOTO-RESIST MASK ALIGNMENT ON SIL CRYSTALS
POMBROH, N. P. ROBERTS, J. S. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1967
M-FS-2394
Growth of silicon dioxide on a silicon carbide crystal ensures proper orientation of photoresist masks on the crystals used for semiconductor devices. The crystal is heated in a water vapor-saturated gas to delineate p-n junctions that intersect the crystal surface.

B67-10145
TEST INSTRUMENTATION EVALUATES ELECTROSTATIC HAZARDS IN FLUID SYSTEMS
MC COLLINS, L. H. HENRY, R. KEES, D. /ECING CO./ DATE- MAY 1967
M-FS-2277
B±1 fuel surface potential is measured with a probe to determine the degree of hazard originating from static electricity buildup in the hydraulic fluid. The probe is mounted in contact with the fluid surface and connected to an electrostatic voltmeter.

B67-10146
HYDROGEN MASER AS A HIGHLY STABLE FREQUENCY REFERENCE
VANTER, J. YESSOT, R. /VARINI ASSOC./ DATE- MAY 1967
M-FS-2473
Hydrogen maser is stable short-term and long-term frequency reference for precision tracking systems. Its resettability is expressed as the rms drift from the mean.

B67-10150
MULTIPLEXING CONTROL DEVICE HANDLES MAPPING OF WIDE VARIATIONS IN SAMPLING RATES
SPW- INNOVATION NOT GIVEN /WESTINGHOUSE ELEC. CORP./ DATE- JUN. 1967
M-FS-1971
MSS telecommunication system concept provides the ability to change according to needs indicated by the data without any change to the lunar experiement equipment. The system will include a magnetic core memory as the data multiplexing control device.

B67-10151
ELECTRONIC FREQUENCY DISCRIMINATOR
BEEH, W. J. /MOTOROLA, INC./ DATE- JUN. 1967
M-FS-2436
Digital comparator permits discrimination at accuracy of reference frequency. The comparison circuit is a shift register element.

B67-10152
METHODS FOR IMPROVING APPARENT RESOLUTION OF TELEVISION
WILSON, R. H. DATE- MAY 1967
ERC-65
Technique using short term temporal integration characteristics of the observer visual system improves the apparent resolution of television video presentations. The raster is displaced slightly on each frame so the eye can integrate the information in each raster grain. This phase shift increases a switching time delay.

B67-10153
STUDY OF TITRIDE IRON CRYSTAL RODS EXHIBITS NEW MAGNETOSTATIC ECHO MODE
KEDZIE, R. W. /SPERRY RAND RES. CENTER/ DATE- JUN. 1967
ERC-37
Echo mode in YIG rods has different behavior in magnetic fields. This mode, discovered at 6.5 gigahertz, experiences a linear variation. The time delay exhibited is a linear function of the applied magnetic field and the input pulse frequency.

B67-10154
SUBRATURE DEFLECTION CIRCUIT OPERATES INTEGRATED SWEEP CIRCUITS IN TV CAMERA
SCHAFF, F. L. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1967
MNC-1263
Small magnetic sweep deflection circuits operate a hand-held linear television camera. They convert timing signals from the synchronizer into waveforms that provide a raster on the vidicon target. Raster size remains constant and linear during wide voltage and temperature fluctuations.

B67-10156
VOLTAGE REGULATOR/AMPLIFIER IS SELF-REGULATED
MSC-1240
Signal modulated, self-regulating voltage regulator/amplifier controls the output b-plus voltage in modulated regulator systems. It uses self-oscillation with feedback to a control circuit with a discontinuous amplitude action feedback loop.

B67-10157
DESIGN CONCEPT FOR IMPROVED PHOTO-SCAN TUBE
MALLING, L. B. DATE- JUN. 1967
JPL-818
Conceptual photo-scan tube avoids complexity of internal lens scanning and beam-current adjustment.
by optical scan readout. It differs from a conventional image orthicon in its use of an external oscilloscope tube.

B67-10160 A POWER-SPECTRAL-DENSITY COMPUTER PROGRAM CHAPMAN, C. P. DATE- JUN. 1967 NPO-10 126

Computer program simplifies and clarifies random noise vibration test results. It also varies PSD test specifications, sets up automatic equalization equipment, and calculates an exact acceleration level for the random noise prior to the test.

B67-10161 SENSING DISKS FOR SLUG-TYPE CALORIMETERS HAVE HIGHER TEMPERATURE STABILITY SPO- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DATE- JUN. 1967 N-P-1867

Graphite sensing disk for slug-type radiation calorimeters exhibits better performance at high temperatures than copper and nickel disks. The graphite is heat-soaked to stabilize its emittance and the thermocouple is protected from the graphite so repeated temperature cycling does not change its sensitivity.

B67-10162 CLOSED CIRCUIT TV SYSTEMS MONITORS WELDING OPERATIONS GILMAN, H. /F. AM. AVIATION/ DATE- JUN. 1967 HSC-11002

TV camera system that has a special vidicon tube with a gradient density filter is used in remote monitoring of TIG welding of stainless steel. The welding operations involve complex assembly welding tools and skates in areas of limited accessibility.

B67-10165 HYBRID SOLID STATE SWITCH REPLACES ROTOR-DRIVEN POWER SWITCH BOOTH, F. A. SCHLOSS, A. I. DATE- JUN. 1967 JPL-931

Hybrid solid state switch replaces existing rotor-driven power switches used on spacecraft. It uses a transistor circuit to limit the open circuit voltage and allow small relay contacts to handle high transient currents at reasonable cycle life.

B67-10166 EFFICIENT MILLIMETER WAVE /400 GHE/ DIODE FOR HARMONIC POWER GENERATION SPO- INNOVATOR NOT GIVEN /ADVAN. TECHNOL. CORP./ DATE- JUN. 1967 NQ-61

Epitaxial gallium arsenide diode junction forced in a crossed waveguide structure operates as a variable reactance harmonic generator. This varactor diode can generate power efficiently in the millimeter wavelength range.

Data is input to magnetic tape on a single format card that specifies the system, location, and component, the test point identification number, the operators initial, the date, a data code, and the data itself. This method is efficient for large volume data storage and retrieval, and permits output variations without continuous program modifications.

Structural Analysis and Matrix Interpretive System eliminates high-speed digital computer restrictions of lack of generalization and lack of flexibility. Programming concepts of the system are standardization, modularity, and programming for intermediate-size problems.

B67-10175 NUMERICAL DATA FRAME READOUT SYSTEM USED IN TESTING TELEMETRY SYSTEMS COPPE, C. E. GRETHER, J. E. DATE- JUN. 1967 GBSC-551

Digital telemetry systems are treated by a display that offers direct readout as high data rates. The rates appear in numerical format and are adaptable to photographic recording techniques. The system can show bit drops at a memory output or locate a malfunction in a system.

Terminal burn-in or baking step time in the processing of planar silicon devices is extended to reduce their inversion tendencies. The collector-base junction of the device is also cyclically biased during the burn-in.

B67-10179 A THEORETICAL MODEL FOR DETERMINING TURBINE FLOWMETER SENSITIVITY SMITH, R. L. /F. AM. AVIATION/ DATE- JUN. 1967 N-P-1772

Analytical model of turbine-type flowmeter guidelines in the selection of valid extrapolation of available calibration data. An expression for flowmeter performance is developed to include the effects of fluid friction, bearing drag, and magnetic drag upon helical rotor design.

B67-10180 STUDY INDICATES FLUID DIGITAL COMPUTATION SYSTEMS ARE FEASIBLE SPO- INNOVATOR NOT GIVEN /GE/ DATE- JUN. 1967 N-P-520

Digital computation systems using fluid amplifiers are proven practical. The response speed is adequate for space applications and they are reliable in adverse environments. The systems may be feasible for satellite attitude controls and guidance computers for manned orbital stations.

B67-10190 SWITCHING-TYPE REGULATOR CIRCUIT HAS INCREASED EFFICIENCY CLAPP, M. /SANDERS ASSOCIATES, INC./ DATE- JUN. 1967 HSC-1063

Switching series regulator circuit uses an inductive network to feed most of the current applied to the control circuit to the load. This circuit eliminates resistive losses and the need for heat sinks.

Calorimeter measures the exhaust energy from a shot of a pulsed plasma gun accelerator. It has a fast response time and requires only one measurement to determine the total energy. It uses a long ribbon of copper foil wound around a glass frase to form a resonant cavity.

B67-10194 TECHNIQUE FOR STRIP CHART RECORDER TIME NOTATION SPO- INNOVATOR NOT GIVEN /SOAPRO CORP./ DATE- JUN. 1967 GBSC-473

Single recorder channel helps determine the time an event is recorded on the readout of a strip chart recorder. It presents hours, tens of minutes, and minutes by a unique method of time
increment identification. This facilitates recording timing marks.

B67-10199 ELECTRODE AMPLIFIER OPERATES OVER DYNAMIC RANGE OF FIVE ORDERS OF MAGNITUDE KATE, N. /MARSHALL LAB./ DATE- JULY 1967 ARC-75 Special purpose electrometer amplifier is capable of operation over a dynamic range of five orders of magnitude. This is achieved by using a servo controlled attenuator in the feedback path for the amplifier.

B67-10201 ELECTRONIC CIRCUITRY USED TO AUTOMATE PAPER CHROMATOGRAPHY STEFFENSEN, G. H. DATE- JUNE 1967 JNL-840 Electronic circuit is used in a paper chromatograph instrument that has excellent sensitivity and furnishes a printed record of each test. The circuit measures and records changes in conductivity in a strip of chromatographic paper as different solutions are placed on it.

B67-10203 AUTOMATED MICROSTRING IS HIGHLY ACCURATE AND RELIABLE STUART, J. L. DATE- JUNE 1967 BPO-142 Syringe meters small volumes of fluid used in chemical analysis. The standard body and plunger are adapted to fit with a motor driven micrometer, making a reliable and convenient device.

B67-10204 A CONCEPTUAL, PARALLEL OPERATING DATA COMPRESSION PROCESSOR ANDERSON, T. O. DATE- JUNE 1967 BPO-10068 Data compressor processor concept envisions a simplified system for telemetry communications. It is simultaneously a zero-order processor and a floating aperture, a variable aperture, and a binary integer aperture with a decoded buffer fullness counter.

B67-10205 QUARTZ CRYSTALS DETECT GAS CONTAMINANTS STEPHENS, J. B. DATE- JUNE 1967 BPO-10144 Piezoelectric quartz crystals detect condensable gas contaminants backstreaming into a vacuum chamber when a pump is evacuating the chamber. One crystal acts as a thermometer, the other detects mass change. They are energized by electronic equipment which records frequency changes.

B67-10206 PLOTTER DESIGN SIMPLIFIES DETERMINATION OF IMAGE SENSOR TRANSFER CHARACTERISTIC BAKER, L. E. DATE- JUNE 1967 BPO-10164 Transfer characteristic of vidicons and other image sensors are measured by light from a calibrated electroluminescent panel as a function of the current output of the image sensor. The plot of current output versus the calibrated light output is the transfer characteristic.

B67-10213 FM CARRIER DEVIATION MEASURED BY DIFFERENTIAL PROBABILITY METHOD DUGGAN, A. P., JR. HADDOCK, J. /BOEING CO./ DATE- JUNE 1967 JPL-216 Differential probability FM system measures FM deviation of a carrier modulated by a complex signal. The peak-to-peak amplitude is measured and related to the frequency shift of the carrier signal. The deviation is described in terms of a probability as well as a peak value.

B67-10215 RUN NUMBERING SYSTEM USE WITH DATA RECORDERS PEASE, L. L. /BOEING CO./ M-PS-2557 Run numbering identification system provides a permanent identification on the recorder traces of data runs. It automatically enters, by pulse coding, the number of the current data run on the recorder trace. The system uses a keyboard, registers, counters, amplifiers, and a pulse generator.

B67-10220 LOW SPEED, LONG TERM TRACKING ELECTRIC DRIVE SYSTEM HAS ZERO BACKLASH RICHTER, H. L. STOLLER, F. W. DATE- JULY 1967 BPO-10173 Electric drive system provides low speed, long term tracking of targets that move at a sidereal rate. It utilizes eddy-current energized actuators that are free from radio frequency interference generation and a solid state feedback amplifier with provisions for antibacklash biasing.

B67-10221 AMPLIFIER PROVIDES DUAL OUTPUTS FROM A SINGLE SOURCE WITH COMPLETE ISOLATION DIPPEL, C. R. /WESTINGHOUSE ASTRONUC. LAB./ NEFF, G. A. /NEFF INST. CORP./ DATE- JULY 1967 NDC-10056 Amplifier provides two amplified outputs from a single input signal with complete transformer isolation. It uses modulation techniques to obtain the separated output.

B67-10226 LABORATORY PULSE MODULATOR USES MINORITY CARRIER STORAGE DIODES SPORE- INNOVATOR NOT GIVEN /Sylvania Electron. Systems/ DATE- JULY 1967 M-PS-2442 Pulse modulator is capable of continuously variable pulse width over a 10 to 1 range of 1.0 microsecond to 0.1 microsecond and operates over a wide range of pulse repetition rates. Pulse width diversity is obtained by operating step-recovery diodes in the reverse conduction mode.

B67-10229 GLOW DISCHARGE DENSITY SENSOR PROBE LIFE IS EXTENDED MABUGH, R. A. /BOEING CO./ DATE- JULY 1967 M-PS-1707 Excitation of the glow discharge probes with a high peak-to-peak voltage square wave reduces instability of density sensors. This results in good probe life plus output stability over a wide range.

B67-10230 FUSED DIODE PROVIDES VISUAL INDICATION OF FUSE CONDITION JENKINS, K. E. DATE- JULY 1967 ESS-67-16 Fused diode combines a semiconductor diode and a circuit protective fuse within a common transparent cartridge. It provides visual indication of fuse condition which precludes the necessity of making resistance checks with an ohmmeter.

B67-10231 IMPROVED ATMOSPHERIC PARTICLE ANALYZER SPORE- INNOVATOR NOT GIVEN /BLOCK ENG./ DATE- JULY 1967 ESS-33 nephelometer measures aerosol particles in wide concentration and size distribution ranges. It measures the light scattered from the aerosol particles at a controlled sampling rate to ensure laminar flow through the sample tube, and thereby eliminates the need for sheath air.

B67-10234 AN IMPROVED NUCLEAR MAGNETIC RESONANCE SPECTROMETER KILBANK, E. D. HANAWALT, S. L. DATE- JULY 1967 JPL-762 Cylindrical sample container provides a high
degree of nuclear stabilization to a nuclear magnetic resonance/spectrometer. It is placed coaxially about the nmr insert and contains reference sample that gives a signal suitable for locking the field and frequency of an nmr spectrometer with a simple audio modulation system.

B67-10239
A PHOTOCARDIOGRAM SIMULATOR
KREPER, J. H. DATE- JUL. 1967
KSC-67-94
Simulator calibrates and checks out photocardiograms used in physiological monitoring of astronauts in flight and during flight simulation. It is also used to check out telemetry systems and instrumentation systems for photocardiograms monitoring in hospitals and medical care centers, and in training personnel to use such systems.

B67-10242
WEB BELT LOAD MEASURING INSTRUMENT HAS EXCELLENT STABILITY
WALKER, R. R. /W. AM. AVIATION/ DATE- JUL. 1967
MSC-923
Web belt system measures belt or strap load. It is partially disassembled and installed on an existing belt without cutting or re-threading the belt. A strain gauge, installed on one of the support beams, eliminates errors due to uneven loading.

B67-10246
IMPROVED TELEVISION SIGNAL PROCESSING SYSTEM
WONG, N. Y. DATE- JUL. 1967 BRO- SEE ALSO
B67-10005
MSC-1045
Digital system processes spacecraft television pictures by converting images sensed on a photostorage vidicon to pulses which can be transmitted by telemetry. This system can be applied in the processing of medical X ray photographs and in electron microscopy.

B67-10248
RECTILINEAR DISPLAY GIVES ACCELERATION LOAD FACTOR AND VELOCITY INFORMATION
MSC-1045
Spacecraft entry monitoring system /EMS/ gives a rectilinear display of acceleration load factor and velocity information. This allows an astronaut to respond with manual spacecraft attitude corrective maneuver commands.

B67-10249
COMPUTER PROGRAM SAMPLES DIGITAL DATA FOR CTV DISPLAY
DAY, D. J. WICKES, W. R. /W. AM. AVIATION/ DATE- JUL. 1967
MSC-992
High volume, multichannel data reduction computer program permits selection of the rates at which digital data is sampled. The program, written in POLEN & S source language, also permits accessibility to the original mass of data.

B67-10250
EXPERIMENTAL COHERENT FRACTIONAL FREQUENCY MIXEXCIER AT S-BAND
MOSSBURN, S. A. /SMITH ELECTRONICS CO./ DATE- JUL. 1967
M-PS-2927
Experimental circuit produces an efficient fractional frequency multiplier that will operate on a 5.6 kw, 2,101.6 MHz input signal to achieve an output-to-input frequency ratio of 240/221. Step-recovery diodes used in all frequency-changing stages result in a coherent offset frequency.

B67-10251
AN EFFICIENT, TEMPERATURE-COMPENSATED SUBCONDUCTOR OSCILLATOR
LAWRENCE, E. H. RIAD, B. C. /HUGHES AIRCRAFT CO./ DATE- AUG. 1967
JPL-SC-991
Telemetry subcarrier oscillator has temperature stability, consumes a minimum of power, and has a high input impedance. Its output frequency is a linear function of the magnitude of an input signal. A circuit using an input buffer with a field effect transistor serves as the temperature-compensating element.

B67-10253
SOLID STATE PHASE DETECTOR REPLACES BULKY TRANSFORMER CIRCUIT
NOBERLY, C. L. /MOTOROLA/ DATE- JUL. 1967
MSC-11007
Miniature solid state phase detector using MOSFET is used in a phase lock loop with a sun-bit detector in an integrated data-link circuit. This replaces bulky transformer circuits. It uses an inverter amplifier, a modulator switch, and a buffer amplifier.

B67-10254
A CALIBRATION BEAMS FOR SPECTRUM ANALYZERS
LARSON, B. S. DATE- JUL. 1967
MSC-10987
Spectrum analyzer calibration system is rapid and provides an accurate family of adjustable markers at any point in the spectrum. Pulse width controls determine the number of markers. The unit operates with a repetition rate from 300 cps to 40 kc at a center frequency from 10 kc to 2 Mc.

B67-10255
ABSOLUTE FREQUENCY STABILIZATION OF LASER OSCILLATOR AGAINST LASER AMPLIFIER
SIEGFRIED, A. R. /SYLVANIA ELECTRONICS SYSTEMS/ DATE- JUL. 1967
MSC-10987
Long-term absolute frequency stabilization of a laser oscillator is obtained when the lasers oscillation frequency is referenced to the exact center of an atomic transition. A laser amplifier acts as a discriminator to indicate when the laser frequency deviates from the center of its atomic transition.

B67-10257
FAST-RESPONSE FREQUENCY-TO-ANALOG CONVERTER
RAGHUNATHAN, R. S. /W. AM. AVIATION/ DATE- JUL. 1967
MSC-709
Frequency-to-analog converter has a fast response time and a low ripple. The circuit uses a frequency-to-pulse converter which provides two pulse trains, both at the same frequency as that of the input signal, but with a 10 microsecond difference between the trains.

B67-10258
MULTICHANNEL PULSE HEIGHT ANALYZERS IS INEXPENSIVE, FEATURES LOW POWER REQUIREMENTS
BRAHMS, J. C. SARKADI, A. A. /NEW HAMPSHIRE UNIV./ DATE- AUG. 1967
BGH-10050
Multichannel pulse height analyzers performs balloon and rocket investigations of solar neutrons with energies greater than 10 MeV. The lightweight unit can operate in a temperature range of minus 30 degrees to plus 70 degrees C and withstand storage temperatures from minus 50 degrees to plus 90 degrees C.

B67-10259
A PIEZOELECTRIC PRESSURE PROBE
FRIEND, W. H. MORPH, C. L. SHAFFIELD, T. /MC GILL UNIV./ DATE- JUL. 1967
LMT-393
Piezo-electric pressure type probe measures the impact velocity or pressure of a moving debris cloud. It measures pressures up to 200,000 psi and peak pressures may be recorded with a total pulse duration between 5 and 65 msec.

B67-10260
TESTER AUTOMATICALLY CHECKS INSULATION OF INDIVIDUAL CONDUCTORS IN MULTIPLE-STRAND CABLES
SHAW, J. VUCKOVICH, M. /WESTINGHOUSE AERONAUT. 46
IMPACTS OF OVER 15,000 G
NFC-10775
High impact pressure regulator used with a high impact gas scannograph withstands impacts of over 15,000 g. By the passage of fluid through the first and second chambers of the regulator, the pressure of the scannograph is regulated from a specific input valve to the desired output pressure valve.

B67-10275
PRIMARY CELL USES NEITHER LIQUID NOR FUSED ELECTROLYTES
GUTMANN, F. EMMAN, A. M. ERBAUM, A. /DATE-AUG. 1967 READ-SEE ALSO B66-10682
NFC-10001
Dry, solid state primary battery cell establishes an electrode reaction by a charge transfer mechanism without liquid phase ionization of electrolyte compounds. The charge transfer complex is sufficiently conductive to permit the passage of useful current.

B67-10276
SYSTEM PRECISELY CONTROLS OSCILLATION OF VIBRATING MASS
HANCOCK, D. J. /BUNKER-RABO CORP./ DATE- AUG. 1967
N-PS-1875
System precisely controls the sinusoidal amplitude of a vibrating mechanical mass. Using two sets of coils, the system regulates the drive signal amplitude at the precise level to maintain the mechanical mass when it reaches the desired vibration amplitude.

B67-10277
IN FIDUCIAL SCANNER MONITORS MANY TEST POINTS
PORTIER, R. J. /BOSING CO./ DATE- AUG. 1967
N-PS-1937
Infrared /IR/ scanners are used in test systems that involve many signal paths from transducers to a central evaluation point. The scanner, an IR-sensitive vidicon, looks at the indicator panels of each subsystem of the equipment being tested and picks up the level of radiation from each IR source mounted thereon.

B67-10284
VIBRATOR ELAPSED TIME IS AUTOMATICALLY CONTROLLED
EBRONICK, E. A. /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-2573
Circuit determines elapsed operating time for vibrators when three vibrators are located in one room and are powered by two amplifiers through either of two control systems. It operates the control system elapsed time clocks only when voltage is applied to the vibrator armatures.

B67-10289
WIDE-BAND, HIGH EFFICIENCY OPTICAL MODULATOR
REQUIRES LESS THAN 10 WATTS DRIVE POWER
N-PS-12733
Wideband optical modulation system operates with less than 10-watts drive power. It consists of an optical modulator and transistorized driver that combines small cross-section potassium diiodeer phosphor crystals with laser beam-condensing optics. Optical modulation systems may serve importantly in future space communication systems.

B67-10294
SENSITIVE BRIDGE CIRCUIT MEASURES CONDUCTANCE OF LOW-CONDUCTIVITY ELECTROLYTE SOLUTIONS
SCHMIDT, E. /DATE- AUG. 1967
N-PS-1937
Compact bridge circuit measures sensitive and accurate conductance of low-conductivity electrolyte solutions. The bridge utilizes a phase sensitive detector to obtain a linear deflection of the null indicator relative to the...
Measured conductance. 

B67-10299
ELECTRONIC DUMMY FOR ACOUSTICAL TESTING
RMA- SEI ALSO N66-25565
MSC-206 N66-1164 N66-1165 N66-1166
Electronic Dummy /ED/ used for acoustical testing represents the average male torso from the Xiphoid process upward and includes an acoustic replica of the human head. This head simulates natural flesh, and has an artificial voice and artificial ears that measure sound pressures at the eardrums or the entrance to the ear canal.

B67-10300
CIRCUIT PROVIDES OVERCURRENT PROTECTION TO PUSH-PULL AMPLIFIER
SKORRA, D. J. /HUGHIESS/ DATE- AUG. 1967
MSC-12033
Circuit in push-pull amplifier limits the current flowing to a predetermined level and provides that overcurrent in one half of the amplifier turns off the other half.

B67-10303
PROCESS CONTROLS INTRODUCTION OF SELECTIVE IMPURITIES INTO SEMICONDUCTOR WAFERS
BARTHOLOMEY, W. C. TOPPER, A. R. /RCA/ DATE- AUG. 1967
GSPC-523
Modified three step process controls the concentration of lithium dopant within a silicon wafer. Individually controlled on a p-type wafer, the concentration of the p-type silicon containing the dopant is removed, prior to redistributing the remaining portion of the dopant into the bulk of the wafer.

B67-10311
TRANSISTOR BIASED AMPLIFIER MINIMIZES DIODE DISCRIMINATOR THRESHOLD ATTENUATION
LABSEP, R. H. DATE- AUG. 1967
ARG-163
Transistor biased amplifier has a biased diode discriminator driven by a high impedance signal source, rather than a voltage source with several hundred ohms output impedance. This high impedance input arrangement makes the incremental impedance of the threshold diode negligible relative to the input impedance.

B67-10313
PRECISION CAPACITORS HAVE IMPROVED TEMPERATURE AND OPERATIONAL STABILITY
BROOKSHIER, W. W. LEWIS, R. W. DATE- AUG. 1967
ARG-169
Vacuum dielectric capacitor is fabricated from materials with very low temperature coefficients of expansion. This precision capacitor in the 1000-2000 picofarad range has a near-zero temperature coefficient of capacitance, eliminates ion chamber action caused by air ionization in the dielectric, and minimizes electromagnetic field charging effects.

B67-10314
SiC/Si DIODE TRIGGER CIRCUIT PROVIDES AUTOMATIC RANGE SWITCHING FOR LOG AMPLIFIER
SPON- INNOVATORS NOT GIVEN /SICOM/ DATE- AUG. 1967
M-FS-1579
SiC/Si diode pair provides automatic range change to extend the operating range of a logarithmic amplifier-conversion circuit and assures stability at or near the range switch-over point. The diode provides hysteresis for a trigger circuit that actuates a relay at the desired range extension point.

B67-10317
IMPROVED HEAD-CONTROLLED TV SYSTEM PRODUCES HIGH-QUALITY BRIGHT IMAGE
COHEN, B. LINDBERG, J. RINGESS, D. POTTS, C. DATE- SEP. 1967
ARG-128
Manipulator operator uses an improved resolution tv camera/monitor positioning system to view the remote handling and processing of reactive, flammable, explosive, or contaminated materials. The pan and tilt motions of the camera and monitor are slaved to follow the corresponding motions of the operators head.

B67-10318
ELECTRONIC TEST INSTRUMENT GENERATES EXTREMELY SMALL CURRENT SIGNALS
BRICKNER, W. K. DATE- SEP. 1967
ARG-176
Generator produces dynamic test signals in the range from 0.001 to 10 to the minus 12th power amperes. It involves an extension of the technique of applying a triangular voltage waveform to a small capacitor to obtain a square-wave output current. The effects of stray capacitance are minimized by appropriate shielding.

B67-10333
BEAR Joint Quality Tested ELECTROMAGNETICALLY
GRAVES, D. B. /R. NAV. AVIATION/ DATE- SEP. 1967
N-FS-12795
Nondestructive electromagnetic method detects the extent of gold/nickel braze alloy flow in an engine injector sleeve-to-post joint. Voltage is induced in an inductor coil, along with a magnetically permeable material. Altering the quantity of braze alloy present can then be measured.

B67-10334
FIELD EFFECT TRANSISTORS IMPROVE BUFFER AMPLIFIER
SPON- INNOVATORS NOT GIVEN /DYNATRONICS/ DATE- OCT. 1967
N-FS-916
Unity gain buffer amplifier with a Field Effect Transistor /FET/ differential input stage responds much faster than bipolar transistor when operated at low current levels. The circuit uses a dual FET in a unity gain buffer amplifier having extremely high input impedance, low bias current requirements, and wide bandwidth.

B67-10335
METHOD OF IMPROVING CONTACT BONDS IN SILICON INTEGRATED CIRCUITS
LITTLE, W. J. /WESTINGHOUSE ELECT. CORP./ SCHUSTER, R. A. DATE- SEP. 1967
N-FS-1753
Fabrication method produces stable and reliable metallic systems for interconnections, contact pads, and bonded wires in silicon planar integrated circuits. The method is based on substrate isolation of the interconnection metal from the contact pad and bonded wire.

B67-10336
DEVICE ENABLES CALIBRATION OF MICROPHONES AT HIGH SOUND PRESSURE LEVELS
GIBLER, A. /WESTINGHOUSE ELECT. CORP./ DATE- SEP. 1967
N-FS-11980
Coupling device accurately calibrates microphones at high sound pressure intensities. The system which uses a liquid as the coupling medium can operate in an automatic mode by using a standard microphone as a control sensor. Feedback from the standard microphone controls the calibration signal level.

B67-10338
ACCURACY OF LASER MEASUREMENTS IMPROVED BY PULSE AUTO CROSS CORRELATOR ELECTRONIC SYSTEM
CAMPARIELLA, S. J. /BELPAR/ DATE- SEP. 1967
MSC-10633
Pulse autocorrelator electronic system discriminates between the dispersion effect of a disturbed laser signal and background noise by detecting multipath arrivals of Gaussian-shaped signal pulses. The autocorrelation function is time-dependent and can be determined by integrating the product of a received pulse and its delayed replicas.

48
VIBRATION ANALYSIS UTILIZING MOSSBAUER EFFECT
Roughton, W. A. DATE- SEP. 1967 REAR- SEE ALSO NASA-SP-1-132 M-P2-11974
Measuring instrument analyzes mechanical vibrations in transducers at amplitudes in the range of a few to 100 angstroms. This instrument utilizes the Mossbauer effect, the phenomenon of recoil-free emission and resonant absorption of nuclear gamma rays in solids.

NOCT. 10343 LIMIT CIRCUIT PREVENTS OVERDRIVING OF OPERATIONAL AMPLIFIER
OPENHAN, P. L. /AEROJET-GEN. CORP./ DATE- SEP. 1967 NUC-10052
Cutoff-type high gain amplifier coupled by a diode prevents overdriving of operational amplifier. An amplified feedback signal offsets the excess input signal that tends to cause the amplifier to exceed its preset limit. The output is, therefore, held to the set clamp level.

B67-10347 CURRENT PULSE AMPLIFIER TRANSMITS DETECTOR SIGNALS WITH MINIMUM DISTORTION AND ATTENUATION
BUSH, W. E. /WESTINGHOUSE ASTRONUCL. LAB./ DATE- SEP. 1967 NUC-10055
Amplifier translates the square pulses generated by a boron-trifluoride neutron sensitive detector located adjacent to a nuclear reactor to slower, long exponential decay pulses. These pulses are transmitted over long coaxial cables with minimum distortion and loss of frequency.

B67-10356 REPAIRABLE, HIGH-DENSITY MICROELECTRONIC MODULE PROVIDES EFFECTIVE HEAT SINK
CARLSON, K. J. /BOEING CO./ DATE- OCT. 1967 M-P2-13075
Repairable modular system is used for packaging microelectronic flat packs and miniature discrete components. This three-dimensional compartmented structure incorporates etched phosphor bronze sheets and windows with etched wire conductors. It provides an effective heat sink for electric power dissipation in the absence of convective cooling means.

B67-10357 DIGITAL-TO-ANALOG CONVERTER OPERATES FROM LOW LEVEL INPUTS
WINKLESTEIN, R. A. DATE- OCT. 1967 JPL-907
Circuit controls a voltage controlled oscillator from computer output binary data representing a location adjacent to a nuclear reactor to slower, long exponential decay pulses. These pulses are transmitted over long coaxial cables with minimum distortion and loss of frequency.

B67-10359 TEST DEVICE PREVENTS WELD JOINT DAMAGE BY ELIMINATING AXIAL PIN FORCES ON UNPOTTED MODULES
CREEB, R. E. /GEN. DYN./ DATE- OCT. 1967 LEWIS-10201
Test device makes electrical connection to pins on unpotted electronic modules without introducing any displacing forces of the pins, thus preventing weld joint damage. The pins are spaced in a centering header, but are free to slide in and out except for restraint from welded wire joints.

B67-10361 POCKET-SIZE MANUAL TAPE READER DEVICE AIDS COMPUTER TAPE CHECKING
ORLE, F. L. /BOEING CO./ DATE- OCT. 1967 KSC-10056
Pocket-size plastic manual tape reader device aids in reading, interpreting, and correcting binary and octal coded punched tapes. The coded information is more easily read if the color of the back plate contrasts sharply with that of the tape.

B67-10362 NOVEL RF PROBE ELIMINATES NEED FOR CALIBRATION IN PLASMA ACCELERATORS
MILLER, D. B. /GE/ DATE- OCT. 1967 LEWIS-10127
Novel RF antenna probe in plasma accelerators continuously maps the RF field both within and beyond the accelerator. It eliminates the need for installing probes in the accelerator walls. The moving RF probe can be used to map the RF electrical field under various accelerator conditions.

B67-10363 SYSTEM AUTOMATICALLY PROVIDES DYNAMIC LAUNCH DECISION CRITERIA
DOIG, J. E. /BOEING CO./ DATE- OCT. 1967 M-P2-13063
Saturn 5 dynamic Launch Decision Criteria model provides instantaneous criteria, derived from the parasitic behavior of a complex system such as a space launch vehicle plus its payload, for the decision making of launch management personnel.

B67-10367 TRANSDUCER MEASURES EMBEDMENT STRESSES IN ELECTRONIC MODULES
SMITH, M. H. /DOUGLAS AIRCRAFT CO./ DATE- OCT. 1967 M-P2-13046
Strain gage load transducer measures axial embedment stresses in resins used for encapsulation of welded electronic modules. It simulates the geometry of an actual electronic component and can be modified in size, shape, and operating temperature.

B67-10368 SIGNAL GENERATOR CONVERTS DIRECT CURRENT TO MULTIPHASE SUPPLIES
KAYSER, U. /ALLIS-CHALMERS ENG. CO./ DATE- OCT. 1967 KSC-11043
Multiphase wave generator uses multivibrators in a feedback control mode that produces output signal pairs that are impressed on the primary windings of inverter transformers sequentially with a 120 degree phase shift from each other.

B67-10369 MULTIPLE METER MONITORING CIRCUITS SERVED BY SINGLE ALARM
HANDY, L. /PHENIX AIRCRAFT ENGINEERING CORP./ DATE- OCT. 1967 M-P2-10966
Circuitry for multiple meter relay circuits provides complete isolation for each circuit served by a single alarm and permits alarm reset after an out-of-tolerance event in one relay circuit so that the remaining relay circuits continue to be alarm protected.

B67-10370 MECHANICAL PROPERTIES OF WIRE INSULATION AUTOMATICALLY DETERMINED
DAYW, P. S. GILL, W. L. DATE- OCT. 1967 B67-10983
Three separate mechanisms test the insulation on electrical wire specimens for mechanical resistance to flexure, abrasion or wear, and vibration. The test mechanisms performs the evaluation tests on insulated wire specimens in a chamber which can be controlled to simulate space or spacecraft cabin environments.

B67-10374 CIRCUIT AUTOMATICALLY CALIBRATES FLOWMETER AGAINST LIQUID-LEVEL GAGE REFERENCE
FIELD, E. J. /W. N. AVIATION/ DATE- OCT. 1967 M-P2-2144
Turbin-type flowmeter uses the flow of liquid from a tank with reed-type liquid level switches as a calibration reference. A circuit to generate a reliable gate signal consists of an input and switch identification stage, monostable
and bistable multivibrators, and a signal inverter and pulse output stage.

B67-10378
FLOWMEETER DETERMINES MIX RATIO FOR VISCUOS ADHESIVES
ABLEBI, C. B. /DOUGLAS AIRCRAFT CO./ DATE- OCT. 1967
M-PS-1208
Flowmeter determines mix ratio for continuous flow mixing machine used to produce an adhesive from a high viscosity resin and aliphatic amine hardener pumped through separate lines to a mixer blender. The flowmeter uses strain gages in the two flow paths and monitors their outputs with appropriate instrumentation.

B67-10382
USB OF COLOR-CODED SLEEVE SHUTTERS
ACCELERATOR OSCILLOGRAPH CHANNEL SELECTION
BOUCHIS, T. /BOEING CO./ BOWDEN, F. W. DATE- OCT. 1967
KSC-10092
Sleeve-type shutters mechanically adjacent individual galvanometer light beams onto or away from selected channels on oscillograph papers. In complex test setups, the sleeve-type shutters are color coded to separately identify each oscillograph channel. This technique could be used on any equipment using tubular galvanometer light sources.

B67-10384
CRACK GROWTH MEASURED ON FLAT AND CURVED SURFACES AT CRYOGENIC TEMPERATURES
ORANGE, T. W. /SULLIVAN, T. L. DATE- OCT. 1967
LEWIS-369
Multiple element continuity gage measures plane stress crack growth plus surface crack growth under plane strain conditions. The gage measures flat and curved surfaces and operates at cryogenic temperatures.

B67-10386
CONTINUOUS WAVE DETECTOR HAS WIDE FREQUENCY RANGE
M-PS-1049
Portable battery-operated detector indicates the presence of steady state signals exceeding a predetermined value over a wide frequency range by the closure of output relay contacts. It was designed to monitor electronic equipment used in the Saturn 2 program.

B67-10397
LAMP ENABLES MEASUREMENT OF OXYGEN CONCENTRATION IN PRESENCE OF WATER VAPOR
BRASCO, F. J. /PERKIN-ELMER CORP./ BORGERHARD, J. R. PAIS, W. S. DATE- OCT. 1967
M-PS-10043
Open-electrode ultraviolet source lamp radiates sufficient energy at 1800 angstroms and 1870 angstroms for use in a double-beam, dual-wavelength oxygen sensor. The lamp is filled with xenon at a pressure of 100 cm of Hg.

B67-10399
ROUBED SWITCH RESPONDS TO MINUTE PRESSURE DIFFERENTIALS
FRIEND, L. C. /BENDIX CORP./ SHORE, R. D. DATE- OCT. 1967
M-PS-12704
Pressure responsive switching device exhibits high sensitivity but is extremely rugged and resistant to large amplitude shock and velocity loading. This snap-action, single pole-double throw switch operates over a wide temperature range.

B67-10390
HIGH POWER DC/DC AND DC/AC ELECTRICAL POWER CONVERSION TECHNIQUES DEVELOPED
BRENNAN, G. WHITE, W. T. DATE- OCT. 1967
M-PS-13227
Small magnetic amplifiers pass square waves through transformers and provide regulation by varying the pulse width on the secondary of the output power transformers. This pulse duration modulation is provided by a control rectifier technique or a phase-shift technique.

B67-10396
MULTIPLEXER USES INSULATED GATE-FIELD EFFECT TRANSISTORS
GUSKIN, S. S. /BOEING CO./ DATE- OCT. 1967
M-PS-13096
Small lightweight multiplexer incorporates high-speed insulated gate field effect transistors for all digital logic functions, including the internally generated 3.6-kHz clock. It consists of 30 primary channels, each of which is sampled 120 times per second.

B67-10399
POTASSIUM PLASMA CELL FACILITATES THERMONIC ENERGY CONVERSION PROCESS
RICHARDS, M. K. DATE- OCT. 1967 BLAIR- SEE ALSO
ANL-6802
ARG-0010
Thermonuclear energy converter converts nuclear generated heat directly into high frequency and direct current output. It consists of a potassium plasma cell, a tantalum emitter, and a silver plated copper collector. This conversion process eliminates the steam interface usually required between the atomic heat source and the electrical conversion system.

B67-10402
AUTOMATIC TELEMETRY CHECKOUT SYSTEM
GEORGE, W. V. /BOEING CO./ DATE- NOV. 1967
M-PS-12580
Telemetry checkout station is designed to automatically perform measurements on the vehicle telemetry. Its features include real-time digitizing and computer controlled station setup, data processing, and self-check. The station can handle a wide variety of automatic tests by changing its computer programs.

B67-10404
CONTROL APPARATUS FOR SPECTRAL ENERGY SOURCE
GORDON, W. A. DATE- NOV. 1967
LEWIS-391
Automatic light-controlling system for dc arc emission spectrographs controls the vaporization rate of the sample and stabilizes the dc arc. The output energy is regulated such that advantage can be taken of the highly sensitive dc arc source without sacrificing the desired precision.

B67-10410
CURRENT STEERING COMPARATOR OFFERS VERSATILITY
RUBATTILI, L. J. DATE- OCT. 1967
JPL-812
Novel current steering comparator is capable of stepping to all possible locations from any location by appropriate control logic, and is easily tailored to specific user requirements.

B67-10412
TORQUE METER AIDS STUDY OF HYSTERESIS MOTOR RINGS
COLE, K. /METALS RESEARCH ASSOCIATES/ DATE- NOV. 1967
M-PS-12219
Torque meter, simulating hysteresis motor operation, allows rotor ring performance characteristics to be analyzed. The meter determines hysteretic motor torque and actual stresses of the ring due to its mechanical situation and rotation, aids in the study of asymmetries or defects in motor rings, and measures rotational hysteresis.

B67-10416
DIELECTRIC PRISMS WOULD IMPROVE PERFORMANCE OF QUASI-OPTICAL MICROWAVE COMPONENTS
CARMICHAEL, J. W. DATE- OCT. 1967
ERF-10011
Properties of the Brewster angle and internal reflection in a dielectric prism are proposed as the basis of a new type of element for use in oversize waveguide in quasi-optical microwave components. Waveguide loss is reduced and precision broadband attenuators, phase shifters,
and directional couplers can be constructed on the basis of the properties.

B67-10422
INFRARED RADIOMETER
BIRD, A. N. /SOUTHERN RES. INST./ DATE- NOV. 1967

INFRARED RADIOMETER

Radioimeter may be used either with an f/16 telescope to measure thermal radiation from the dark moon or with a short-range optical system to measure thermal radiation from laboratory samples.

B67-10424
TEMPERATURE-SENSED CRYOGENIC BLEED MAINTAINS LIQUID STATE IN TRANSFER LINE
LINDGREN, A. R. /AL. AN. AVIATION/ DATE- OCT. 1967

INFRARED RADIOMETER

Inverted tee, installed at a high point in a cryogenic transfer line, is equipped with an insulated bleed line that passes a fixed amount of cryogenic fluid at atmospheric pressure. A sensing device actuates a west valve in the tee stack whenever gaseous nitrogen is present.

B67-10425
ALUMINUM HEAT SINK ENABLES POWER TRANSISTORS TO BE MOUNTED INTEGRIALLY WITH PRINTED CIRCUIT BOARD
JACOBZI, C. /BOEING CO./ SEWELL, E. /NA. AVIATION/ DATE- NOV. 1967

INFRARED RADIOMETER

Hard coated aluminum circuit boards demonstrate the feasibility of obtaining an electrical power circuit of high packaging density with very high thermal conductivity and mechanical strengths.

B67-10426
CONCEPTUAL NONORTHOGONAL GYRO CONFIGURATION FOR GUIDANCE AND NAVIGATION
GILMORE, J. F. /MIT/ DATE- NOV. 1967

INFRARED RADIOMETER

Nonorthogonal sensor configuration using six single-degree-of-freedom inertial references, gyroscopes and a complete data processing and self-contained failure detection-and-isolation system provides redundant capabilities to guidance and navigation systems. This system has been formulated in a strap-down configuration to attain maximum redundancy.

B67-10433
ALGORITHMIC MONTE CARLO PROCEDURE REDUCES STATISTICAL ANALYSIS TIME AND COST FACTORS
AFRICANO, R. C. /NA. AVIATION/ LGGSCSC, T. S. DATE- NOV. 1967

INFRARED RADIOMETER

Algebraic Monte Carlo procedure statistically analyzes performance parameters in large, complex systems. The individual effects of input variables can be isolated and individual input statistics can be changed without having to repeat the entire analysis.

B67-10434
INTERFERENCE EFFECTS ELIMINATED IN RANDOM ORIENTED SPACE STATION ANTENNA SYSTEM
REllLE, R. B. /LOCKHEED-CALIF. CO./ DATE- NOV. 1967

INFRARED RADIOMETER

System eliminates destructive interference effects among multiple omnidirectional or semi-omnidirectional antennas on a large spacecraft that is either spin-stabilized or randomly oriented relative to the ground station with which communication is necessary.

B67-10436
BATTERY CHARGE REGULATOR IS COULOMETER CONTROLLED
PULIKOVIC, J. DATE- NOV. 1967

INFRARED RADIOMETER

Coulometer controlled battery charge regulator controls nickel/cadmium type primary cells used in space applications. The use of the coulometer as an amper hour measuring device permits all available current to go to the battery until full charge state is reached, at which time the charge rate is automatically reduced.

B67-10444
ELLIPSOIDAL-MIRROR REFLECTOMETER ACCURATELY MEASURES INFRARED REFLECTANCE OF MATERIALS
DURN, S. J. /NASA. BUR. OF STDs./ EICHMUND, J. C. DATE- NOV. 1967

INFRARED RADIOMETER

Reflectometer accurately measures the reflectance of specimens in the infrared beyond 2.5 microns and under geometric conditions approximating normal irradiation and hemispherical viewing. It includes an ellipsoidal mirror, a specially coated averaging sphere associated with a detector for minimizing spatial and angular sensitivity, and an incident flux chopper.

B67-10446
FOIL RADIOMETER ACCESSORY IMPROVES MEASUREMENTS
PAULKOVICE, J. DATE- NOV. 1967

INFRARED RADIOMETER

The responsiveness of a foil radiometer is increased and its time constant is simultaneously decreased by isolating the foil in a controlled environment. Using an optical system, it is coupled to the media to be measured, and the resulting concentration of energy permits the thermocouple junction temperature to respond quickly.

B67-10448
DIGITAL VOLTAGE-CONTROLLED OSCILLATOR

INFRARED RADIOMETER

Digital voltage-controlled oscillator generates a variable frequency signal controlled linearly about a center frequency with high stability and is phase controlled by an applied voltage. Integrations ahead of the digital circuitry provides linear operation with control voltage having appreciable noise components.

B67-10458
DESIGN FOR HIGH-TEMPERATURE /1600 DEG F/ LIQUID METAL PRESSURE TRANSDUCER
ENGDAHL, R. E. /CONSOLIDATED CONTROLS CORP./
DAYS- NOV. 1967
LWIS-10144
Thermionic diode sensor is used as a pressure transducer in advanced space power systems using liquid metals as working and heat transfer media at temperatures up to 1000 deg F. The sensor converts the motion of a pressure actuated refractory alloy capsule into a suitable electrical output.

B67-10459
STABLE AC PHASE AND AMPLITUDE COMPARATOR
BROCK, W. /MARTIN CO./ DATE- NOV. 1967
N-PS-13086.
Stable ac phase and amplitude comparator detects excessive vehicle maneuvering or vibration. It has phase demodulation, low-pass filter, and multiple threshold-setting capability designed specifically for low drifts over a wide range of temperatures.

B67-10460
RANGE RECORDING TECHNIQUE ENABLES FOUR-WAY POLARIZATION MEASUREMENTS
SWINDALL, P. R. /CONSOLIDATED COFFELS CORP./ DATE- NOV. 1967
N-PS-12447.
Manually tracked antenna is the most critical part of range recording system which has signal strength recording responses from dc to 20 kHz. The system records all polarizations simultaneously.

B67-10461
PROTECTED, HIGH-TEMPERATURE CONNECTING CABLE
ENGDAHL, R. E. /CONSOLIDATED COFFELS CORP./ DATE- NOV. 1967
LWIS-10179.
Ceramic insulated, swaged stainless steel, sheathed, protective atmosphere cable admits electrical leads into an 1800 deg F air-environment test chamber. The cable has some bending capability and provides for nine niobium alloy conductors. An arsenic purge during the TIG weld closure protects internal wires from oxidation and embrittlement.

B67-10467
AUTOMATIC TESTING DEVICE FACILITATES NOISE CHECKS AND ELECTRONIC CALIBRATIONS
HARROLD, J. L. /WESTINGHOUSE CORP./ DATE- NOV. 1967
LWIS-10173.
Automatic Digital Noise Checker determines the noise content of the many analog inputs of a data acquisition system and whether the Electronic Calibrations /EC/ on some data channels are operating properly.

B67-10468
SERIES TRANSISTORS ISOLATE AMPLIFIER FROM FLICKER VOLTAGE
DARBY, W. /GEN. DYN. CORP./ DATE- NOV. 1967
MSC-11023.
Circuit enables high sawtooth currents to be passed through a deflection coil and isolate the coil driving amplifier from the flicker voltage. It incorporates a switch consisting of transistors in series with the driving amplifier and deflection coil. The switch disconnects the deflection coil from the amplifier during the retrace time.

B67-10469
MINIATURE TELEVISION CAMERA
DETTERVILLE, B. J. /TELEDYNE SYSTEMS CO./ DATE- NOV. 1967
N-PS-11967.
Ultraminiature television camera with a total volume of 20.25 cubic inches, requires 28 vac power, operates on UHF and accommodates standard 8-mm optics. It uses microelectronic assembly packaging techniques and contains a magnetically deflected and electrostatically focused vidicon, automatic gain control circuit, power supply, and transmitter.

B67-10470
TECHNIQUE ELIMINATES HIGH VOLTAGE ARcing AT ELECTRODE-INSULATOR CONTACT AREA
REEDLE, C. DATE- NOV. 1967
LWIS-10133.
Coating the electrode-insulator contact area with silver epoxy conductive paint and forcing the electrode and insulator tightly together into a permanent connection, eliminates electrical arcing in high-voltage electrodes supplying electrical power to vacuum facilities.

B67-10471
TRANSIENT SENSOR DEVELOPMENT
CASE, J. /FRED. ELK. CORP./ DATE- NOV. 1967
N-PS-13370 N-PS-13371.
Pulse width/amplitude- and noise-sensors are updated to integrated circuit design concepts, and rise time/amplitude sensor design is reduced to an operational prototype to make all the sensors compatible for one system operation. Therefore, transients interfering with the design operation of receivers could be individually isolated and identified.

B67-10475
BLOOD PRESSURE REPROGRAMMING ADAPTER ASSISTS SIGNAL RECORDING
VICK, R. A. DATE- DEC. 1967
MSC-265.
Blood pressure reprogramming adapter separates the two components of a blood pressure signal, a dc pressure signal and an ac Korotkoff sounds signal, so that the Korotkoff sounds are recorded on one channel as received while the dc pressure signal is converted to FM and recorded on a second channel.

B67-10481
CONVERTER PROVIDES CONSTANT ELECTRICAL POWER AT VARIOUS OUTPUT VOLTAGES
FAULKOVICH, J. DATE- DEC. 1967
GSFC-1009.
Power converter, using an inverted flyback technique, transfers electrical energy at a constant rate from a solar cell source to a number of individual batteries, which are to be charged one at a time. The converter inverts the polarity of the solar cell source and provides the correct charging voltage.

B67-10482
SURFACE-CRACK DETECTION BY MICROWAVE METHODS
FEINSTEIN, L. /BRUDY, R. DATE- DEC. 1967
ARC-10009.
Microwave surface-crack detection system examines metallic surfaces with a noncontacting probe. The change in the microwave signal reflected from the surface under investigation is an indication of the existence of surface flaws. This technique can detect flaws and scratches as small as 100 microinches.

B67-10487
LONG TIME CONSTANT TIMER REQUIRES NO RECOVERY TIME
SOMERLOCK, C. R. DATE- DEC. 1967
GSFC-10091.
Ticking circuit delivers relatively long pulses, yet requires no recovery time after turnover. It can be retriggered before it has timed out and turned off.

B67-10496
DIGITAL SERVO READOUT SYSTEM INCREASES RECORDING ACCURACY OF SERVO-BALANCE SCAlES
FOPPELL, L. C. /WESTINGHOUSE ASTRONUC./ LAB./ DATE- DEC. 1967
N-PS-10125.
Digital servo readout system increases recording accuracy of servo-balance weighing scales. Reliability is also increased due to the reduction of the number of components.

B67-10497
HIGH TEMPERATURE THERMOCOUPLE DESIGN PROVIDES GAS COOLING WITHOUT INCREASING OVERALL SIZE OF UNIT
SELLER, G. J. /WESTINGHOUSE ASTRONUC./ LAB./ DATE- DEC. 1967
N-PS-10515.
High temperature thermocouple uses a thermoelement...
of noncircular cross section with insulation of circular cross section to provide space for the flow of coolant gas down the probe.

B67-10499

VANADIUM DIAPHRAGM ELECTRODE SERVES AS HYDROGEN DIFFUSER IN LITHIUM HYDROXIDE CELL

CROUTHMEL, C. R.; HEINRICH, R. R.; JOHNSON, C. R.

DATE- DEC. 1967 BEAN- SEE ALSO B67-10189

Lithium hydride cell uses vanadium diaphragm electrode as a hydrogen diffuser. Vanadium is high in hydrogen gas solubility and permeability, is least sensitive to adverse surface effects, maintains good mechanical strength in hydrogen atmospheres, and appears to be compatible with all alkali-halide electrolytes and lithium metals.

B67-10503

COMPOSITE SOLAR CELL MATRIX IS RELIABLE, LIGHTWEIGHT AND FLEXIBLE

YASUI, H. K.

DATE- DEC. 1967

NFC-10821

Conducting strips mechanically and electrically connect individual solar cells into a linear array of cells, called a solar submodule, and then connect in series two or more submodules to form a solar cell matrix. Tiny perforations in the strip make it easy to solder them directly to the individual solar cells.

B67-10505

THIN FILM THERMAL DECTECTOR

BABBATIAH, J.

DATE- DEC. 1967

JFL-943

Abnormally large variation of capacitance with temperature is obtained in thin film capacitors when a fixed ionic space charge is present in sufficient density in a dielectric film. This effect is the basis for a new kind of thin film thermal detector, whose performance at room temperature equals or exceeds that of comparable devices at much lower temperatures.

B67-10506

PERFORMANCE OF TUBE-TYPE FLOWMETERS IN LIQUID HYDROGEN

DATE- DEC. 1967 BEAN- SEE ALSO NASA-TN-D-3770

LEWIS-10137

Tests using commercially available flowmeters provide information on the constancy in water of the calibration factor /pulses per unit volume/, on the maximum deviation of the factor from its mean value, and on the probability of predicting the calibration factor of a meter in liquid hydrogen at full scale.

B67-10507

TEST AND INSPECTION FOR PROCESS CONTROL OF MONOLITHIC CIRCUITS

SPANGSBERG, R. /WESTINGHOUSE ELEC. CORP./ DATE- DEC. 1967

M-FS-13084

Report details the test and inspection procedures for the mass production of high reliability integrated circuits. It covers configuration control, basic fundamentals of quality control, control charts, wafer process evaluation, general process evaluation, evaluation score system, and diffusion evaluation.

B67-10513

IMPROVED CIRCUIT FOR MEASURING CAPACITIVE AND INDUCTIVE REACTANCES

DALING, I. MC CARTY, V. /KLIA. UNIV. REG. INST./ DATE- DEC. 1967

M-FS-13083

Amplifier circuit measures very small changes of capacitive or inductive reactance, such as produced by a variable capacitance or variable inductance displacement transducer. The circuit employs reactance-sensing oscillators in which field effect transistors serve as the active elements.

B67-10514

APPARATUS MAKES KLYSTRON OPERATING FREQUENCY ADJUSTABLE FROM REMOTE POINT

CLARK, R. C.

DATE- DEC. 1967

KFC-09331

Apparatus makes possible proper frequency adjustment in a receiver using a push klystron for a traveling-wave master. It incorporates a tunable overcoupled cavity with iris of appropriate size to accomplish frequency spread over the desired range and to maintain the Q of the klystron circuit at the optimum value.

B67-10515

VIDEO SYNCHRONIZATION PROCESSOR OVERCOMES POOR SIGNAL-TO-NOISE RATIO

WEBB, D. L.

DATE- DEC. 1967

KFC-10082

Video synchronization processor overcomes poor signal-to-noise ratio which occurs during adverse signal conditions caused by flame attenuation, antenna pattern nulls, and near-horizon tracking. The system maintains sync lock far below the point where excessive noise would render the video useless.

B67-10517

CORE AND COLUMN SOLAR ENERGY CONCENTRATOR

LANGLY-210

Solar energy concentrator consists of a reflective membrane cone and a stepped parabolic column located along the optical axis of the cone. The membrane cone can be folded for packaging and is supported by an expandable ring at the rim of the cone when erected. The stepped parabolic column can be telescoped for packaging.

B67-10519

CIRCUIT MEASURES HYSTERESIS LOOP AREAS AT 30 Hz

HOFFMAN, C. /BIDWEST APPLIED SCI. CORP./ D. SPILG.

DATE- OCT. 1967

M-FS-13069

Analog circuit measures hysteresis loop areas as a function of time during fatigue testing of specimens subjected to sinusoidal tension-compression stresses at a frequency of Hz. When the sinusoidal stress signal is multiplied by the strain signal, the dc signal is proportional to hysteresis loop area.

B67-10538

FLAME SPRAYED DIELECTRIC COATINGS IMPROVE HEAT DISSIPATION ELECTRONIC PACKAGING

MACKAT, T. L. /DOUGLAS AIRCRAFT CO./ MULLER, A. M. VANARAM, J. B.

DATE- DEC. 1967

N-PS-13569

Heat sinks in electronic packaging can be flame sprayed with dielectric coatings of alumina or beryllia and finished off with an organic sealer to provide high heat and electrical resistivity.

B67-10536

EUTECTIC FUSE PROVIDES CURRENT AND THERMAL PROTECTION UNDER HIGH VIBRATION

ZEROKROS, N. /N. A. AVIATION/ DATE- DEC. 1967

M-FS-13664

Eutectic fuses provide current and thermal protection to an electronic system and maintain this protection under high vibration environments. The fuses are embedded within heat shrinkable sleeving which provides positive closing action under the conditions of high current or temperature.

B67-10538

DOUBBLE COPPER SHEATH MULTICONDUCTOR INSTRUMENTATION CABLE IS DURABLE AND HUGE INSTALLED IN HIGH THERMAL OR NUCLEAR RADIATION AREA

MC CRAW, A. W., JR. /AEROSPACE GEN. CORP./ DATE- DEC. 1967

NUC-10007

Multiconductor instrumentation cable in which the conducting wires are routed through two concentric copper tube sheaths, employing a compressed insulator between the conductors and between the inner and outer sheaths, is durable and easily installed in high thermal or nuclear radiation area. The double sheath is a barrier against moisture, abrasion, and vibration.
B67-10540
AUTOMATIC TRANSDUCER SWITCHING PROVIDES
ACCURATE WIDE RANGE MEASUREMENT OF PRESSURE
DIFFERENTIAL
YODER, S. K. /ABBOT-GEN. CORP./ DATE- DEC. 1967
8-PS-10001
Automatic pressure transducer switching network sequentially selects any one of a number of limited-range transducers as gas pressure rises or falls, extending the range of measurement and lessening the chances of damage due to high pressure.

B67-10544
ANALOG BUFFER ISOLATES HIGH IMPEDANCE SOURCE FROM LOW IMPEDANCE LOAD
DENBY, W. A. /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1967
8-PS-13061
Analog buffer amplifier isolates a high impedance source from a low impedance load through an impedance ratio of approximately 200 million to one. Isolation is accomplished with little alteration to temperature stability, linearity, and gain parameters.

B67-10545
INSTRUMENTATION MONITORS TRANSPORTED MATERIAL THROUGH VARIETY OF PARAMETERS
HARBER, R. G. /AM. AVIATION/ DATE- DEC. 1967
8-PS-12938
Transport instrumentation system used in transporting sensitive or delicate equipment measures the environmental parameters to which the equipment is exposed and records them constantly in time reference. The system provides a complete historical record plus the capability of taking corrective action where indicated by real time readout.

B67-10546
DEVELOPMENT OF LOW TEMPERATURE ELECTRICAL MEASUREMENTS
LEWIS-10326
Self-contained low temperature battery system consisting of a magnesium anode, potassium thiocyanate-ammonia electrolyte and a cathode composed of a mixture of sulfur, carbon, and mercuric sulfate operates for at least seventy-two hours within a discharge temperature range of plus 20 degrees C to minus 90 degrees C.

B67-10548
GM/LOCAL-TIME CONVERSION CHART
CEWELING, C. J. DATE- DEC. 1967
GSPC-10521
GM/local-time conversion is made by a longitude pocket instrument that automatically indicates desired information by simply manipulating the movable portion of the instrument in accordance with a set of simple instructions imprinted on the reverse side of the instrument.

B67-10550
HIGH-TEMPERATURE /1100 DEGREES F/ CAPACITORS OPERATE WITHOUT SUPPLEMENT COOLING
STAPLETON, R. E. /WESTINGHOUSE ELEC./ DATE- DEC. 1967
LEWIS-10324
Multilayered capacitor with one-all thick pyrolytic boron nitride and wrap around sputtered electrodes achieves parallel electrical interconnections in a stacked configuration of 3 to 9 wafers. These capacitors are compact, lightweight, and suitable for operation in high temperatures without supplemental cooling.

B67-10552
LIGHT-CONTROLLED RESISTORS PROVIDE QUADRATURE SIGNAL REJECTION FOR HIGH-GAIN SERVO SYSTEMS
MC CAULEY, D. B. /PELICO/ DATE- DEC. 1967
NSD-380
Servo amplifier feedback system, in which the phase sensitive detection, low pass filtering, and multiplication functions required for quadrature rejection, are preforged by light-controlled photoresisters, eliminates complex circuitry. System increases gain, improves signal-to-noise ratio, and eliminates the necessity for compensation.

B67-10553
SIMPLE FIRST ORDER DATA COMPRESSION PROCESSOR CONCEPT
ANDERSON, T. O. DATE- DEC. 1967
8-PS-10338
Data-compression processing systems based on an analog-to-digital converter (ADC), includes a qualitative comparator for comparison of the ADC output with a ramp generator, which is connected as a bidirectional binary counter with selective inputs. A bidirectional ramp counter selects the proper ramp through a ramp generator selection network.

B67-10554
CALIBRATION TECHNIQUE FOR ELECTROMAGNETIC FLOWMETERS
LEWIS-10328
Thermal calorimetric method is used to calibrate electromagnetic flowmeters for liquid alkali metals. The electromagnetic flowmeter is placed in the liquid metal flow system in series with a thermal calorimeter. Therefore, the calculated flow rate through the calorimeter can be compared directly with the respective electromagnetic flowmeter reading.

B67-10557
IMPROVED CAVITY-TYPE ABSOLUTE TOTAL-RADIATION RADIOMETER
JPL-807
Conical cavity-type absolute radiometer measures the intensity of radiant energy to an accuracy of one to two percent in a vacuum of ten to the minus fifth torr or lower. There is a uniform response over the ultraviolet, visible, and infrared range, and it requires no calibration or comparison with a radiation standard.

B67-10558
SOLID STATE SINGLE-ENDED SWITCHING DC-TO-DC CONVERTER
HANKE1, R. A. /AUBURN UNIV./ DATE- DEC. 1967
8-PS-13098
Solid state, single-ended switching dc-to-dc converter electrically isolated a dc supply from the prime dc power service.

B67-10559
SOLID STATE ZERO-BIAS BILATERAL SWITCH
HOPFED, J. M. / RCA/ DATE- DEC. 1967
GSPC-332
Circuit switches a plus or minus 2.5 volt peak, dc to 300 kHz input to an operational amplifier. Featured in a bilateral transistor which draws a saturation current of equal amplitude and opposite polarity to the saturation current of the bilateral transistor, cancelling the dc bias effect at the output.

B67-10560
FLAT PACK INTERCONNECTION STRUCTURE
SIMPLIFIES MODULAR ELECTRONIC ASSEMBLIES
FATZER, L. DATE- DEC. 1967
JPL-818
Flat pack interconnection structure composed of stick modules simplifies modular electronic assemblies by allowing a single axis mother board. Two of the wiring planes are located in the stick module, which is the lower level of assembly, with the third wiring plane in the mother board.

B67-10561
TRANSISTOR H PARAMETER CONVERSION SLIDE RULE
GRAFTON, B. E. DATE- DEC. 1967
JPL-649
Slide rule enables the ready conversion of transistor h parameters from one form to another.
and reduces calculation time by a factor of 5 to 10. The scales are selected to cover all ranges
of each parameter that will normally exist for any
transistor, and answers are given in the correct
order of magnitude, making powers-of-ten
calculations unnecessary.

B67-10562
IMPROVED DIGITAL TV ENCODING AND DECODING
SYSTEM
DUTTERNANN, A. R. /PHILCO-FORD CORP./ DATE- DEC.
1967
MSC-11147
Analog-to-digital coder and digital-to-analog
decoder system handles wideband TV signals. The
system incorporates solid state plug-in modular
units and is operated in a VSD /Variable Slope
Delta Modulation/ mode or in the conventional
one-bit DM /Delta Modulation/ mode.

B67-10565
LOGIC CIRCUIT DETECTS BOTH PRESENT AND
MISSING NEGATIVE PULSES IN SUPERIMPOSED
WAVEFORMS
RICE, R. E. /DOUGLAS AIRCRAFT/ DATE- DEC. 1967
H-FS-12518
Pulse divide and determination network provides a
logical determination of pulse presence within a
data train. The network uses digital logic
circuitry to divide positive and negative pulses,
to shape the separated pulses, and to determine,
by means of coincidence logic, if negative pulses
are missing from the pulse train.

B67-10569
MOSFET IMPROVES PERFORMANCE OF POWER SUPPLY
REGULATOR
LOCKBROS, D. C. DATE- DEC. 1967
GSC-10022
Circuit with Metal Oxide Semiconductor Field
Effect Transistor /MOSFET/ as the voltage
reference, provides a high degree of power supply
voltage regulation and temperature compensation.

B67-10571
ANALOG VOICING DETECTOR RESPONDS TO PITCH
ABEL, E. S. WATKINS, R. E. /PHILCO-FORD CORP./
DATE- DEC. 1967
GSC-10085
Modified electronic voice encoder /Vocoder/ includes an independent analog mode of operation in
addition to the conventional digital mode. The
Vocoder is a bandwidth compression equipment that
permits voice transmission over channels, having
only a fraction of the bandwidth required for
conventional telephone-quality speech
transmission.

B67-10572
TELEPRINTER USBS THERMAL PRINTING TECHNIQUE
PERKINS, R. D. PERKINS, J. E. TAYLOR, J. W.
THOMAS, D. G. PERKINS, R. E. /NATIONAL CASE REGISTER
CO./ DATE- DEC. 1967
MSC-11327
Alphanumeric/facsimile printer receives serial
digital data in the form of a specified number of
bits per group and prints it on thermally
sensitive paper. A solid state shift-register
memorizes the incoming serial digital data.

B67-10576
NONDESTRUCTIVE TESTING TECHNIQUES USED IN
ANALYSIS OF HONEYCOMB STRUCTURE BOND
STRENGTH
SHOHAN, D. C. MARTIN, G. MOORE, J. F. THOMAS,
G. VARMENY, R. S. /W. A. AVIATION/ DATE- DEC.
1967
H-FS-1214 H-FS-1221
DOT /Driver-Displacement Oriented
Transducer/, applicable to both lap shear type
application and honeycomb sandwich structures,
measures the displacement of the honeycomb
composite face sheet. It incorporates an
electromagnetic driver and a displacement
measuring system into a single unit to provide
noncontact bond strength measurements.

B67-10578
IMPROVED FREQUENCY DIVIDER DEPLOYS

TRANSISTOR AVALANCHE EFFECT
JOHNS, C. E. DATE- DEC. 1967
NPO-10008
New frequency divider circuit can be synchronized
over a wider input control frequency range, has
greater phase stability, and is less sensitive to
temperature changes than conventional synchronized
oscillators. The new circuit uses the avalanche
breakdown mode of operation of transistors.

B67-10576
MULTIPLE TELEVISION TRANSMISSION SYSTEM
REED, W. E. DATE- DEC. 1967
MSC-11555
Time-multiplexing systems enable several cameras
to share a single commercial television
transmission channel. This system is useful in
industries for visually monitoring several
operating areas or instrument panels from a remote
location.

B67-10585
COMPUTER MEMORY ACCESS TECHNIQUE
TATTARELLI, L. J. DATE- DEC. 1967
NPO-10201
Computer memory access commutator and steering
gate configuration produces bipolar current pulses
while still employing only the diodes and magnetic
amplifiers of the classic commutator, thereby
appreciably reducing the complexity of the memory
assembly.

B67-10587
LASER COMMUNICATION SYSTEM IS INSENSITIVE TO
ATMOSPHERICALLY INDUCED NOISE
PACKARD, J. H. /AIRCRAFT ARMATURES/ DATE- DEC.
1967
GSC-10296
Angle modulated transmitted reference heterodyne
laser communication system is insensitive to
atmospherically induced amplitude noise
fluctuations and phase distortions.

B67-10595
CONCEPTUAL SERVO TECHNIQUE FOR CONTROLLING
TAPE DRIVERS
SHEFFER, R. /KINELOGIC CORP./ CASH TAYLOR, R.
DATE- DEC. 1967
H-FS-12955
Electronic speed control design maintains magnetic
tape in close synchronism at the airborne
and ground stationed devices. Use of the servo
system during the record and reproduce modes
results in the minimum amount of frequency
distortion and flutter.

B67-10598
CARDIOTACHOMETER WITH LINEAR BEAT-TO-BEAT
FREQUENCY RESPONSE
DEBOO, G. S. FORD, J. M. SMITH, D. B. DATES-
DEC. 1967
ARC-10033
Cardiotachometer detects and displays the human
heart rate during physiological studies. It
provides linear response to the heart rate,
records heart rate during rest and under heavy
stress, provides a beat-to-beat indication of
cardiac changes in heart rate, and is relatively free of
interfering signals from activities other than the
heart rate.

B67-10603
MULTIPLE CURRENT SOURCE OFFERS LOW POWER
LOSSES AND HIGH RELIABILITY
SPARK- INNOVATOR NOT GIVEN /STANFORD RES. INST./
DATE- DEC. 1967
langs-66
Pulse current source uses low loss, high
reliability, LC circuits to provide the necessary
high impedance for magnetic memory cores,
frequently used in digital computational
equipment. Square-loop reactors replace the
semiconductor switches previously used.

B67-10606
PREDICTION OF RADIATION DAMAGE EFFECTS IN
TRANSISTORS
SPARK- INNOVATOR NOT GIVEN /MAC/ DATE- DEC. 1967
GSC-10021
Quantitative relationships between radiation dosage to transistors and resultant damage are established. Calculation of these dose levels is based on high energy particle population data and analysis of the embrittlement effect provided by the enclosures surrounding a given transistor.

B67-10614
STUDY OF THERMAL EFFECTS ON NICKEL-CADMIUM BATTERIES
FOLEY, R. T. /AM. UNIV./ WEBSTER, W. B. DATE- DEC. 1967 HEAN- SEE ALSO B67-10615
GSFC-10003
Isothermal continuous flow calorimeter is designed to test a nickel-cadmium battery under numerous orbital conditions. This sensitive calorimeter collects cell data such as oxygen pressure and rate of heat generation, and calculates changes in enthapy.

B67-10615
IMPROVED CALORIMETER PROVIDES ACCURATE THERMAL MEASUREMENTS OF SPACE BATTERIES
FOLEY, R. T. /AM. UNIV./ WEBSTER, W. B. DATE- DEC. 1967
GSFC-10003A
Isothermal continuous flow calorimeter measures the thermal characteristics of space batteries undergoing typical orbital cycles. This is 28 times as sensitive as calorimeters previously used.

B67-10616
VAPOR DEPOSITION PROCESS PROVIDES NEW METHOD FOR FABRICATING HIGH TEMPERATURE THERMOCOUPLES
BERLY, G. A. /WESTINGHOUSE ASTRONUC. LAB./ ZAKUSKA, G. J. DATE- DEC. 1967
NRC-10152
Fabrication techniques for high temperature thermocouples had all components so that differential thermal expansion and contraction do not result in mechanical slippage and localized stress concentrations. Installation space is reduced or larger thermoelements and thicker insulation can be used to improve temperature measurement accuracy.

B67-10620
BALLPOINT PROBE GIVES OPTIMUM RESULTS IN ULTRASONIC TESTING
ELTON, B. E. /EFACO/ DATE- DEC. 1967
N-PS-13590
Ballpoint-type ultrasonic probe assembly focuses its beam precisely on the bond lines of a composite thin face sheet structure when testing for bond integrity. It can scan in any direction, and eliminate external couplant spray.

B67-10624
TEMPERATURE-STABILIZED, TRIGGERABLE MICHELECTRONIC ASTABLE MULTIVIBRATOR STARTS RELIABLY
STEERING, W. J. /WESTINGHOUSE ELECT. CORP./ DATE- DEC. 1967
MSC-1173
Multiple chip custom block, MIC construction is used to fabricate an ultracompact, low-power astable multivibrator. The design provides a multivibrator that free runs, eliminating lockup, is triggerable, pulling into synchronization with an external signal source, and permits design flexibility for controlling the frequency variations with temperature.

B67-10629
ELECTRONIC SKewing CIRCUIT MOnitors exact POSITION oF OBJECT UNDERWATER
ROLER, R. /WESTINGHOUSE ASTRONUC. LAB./ TAYLORSON, R. DATE- DEC. 1967
W-10146
Linear Variable Differential Transformer /LVDS/ electronic skewing circuit guides a long cylindrical capsule underwater into a large tube so that it does not contact the tube wall. This device detects movement of the capsule from a reference point and provides a continuous signal that is monitored on an oscilloscope.
level by deflection rate change.

B67-10652
DEVELOPMENT OF DETONATION REACTION ENGINE
R-PS-14020
Section engine operates on the principle of a controlled condensed detonation. In this engine the gas products that are expelled from the engine to produce thrust are generated by the condensed detonation reaction. The engine is constructed of two basic sections consisting of a detonation wave generator section and a condensed detonation reaction section.

B67-10656
LOW COST SCR LAMP DRIVER INDICATES CONTENTS
OF DIGITAL COMPUTER REGISTERS
CLIFF, E. A. DATES- DEC. 1967
GSFC-10221
Silicon Controlled Rectifier SCR/ lamp driver is adapted for use in integrated circuit digital computers where it indicates the contents of the various registers. The threshold voltage at which visual indication begins is very sharply defined and can be adjusted to suit particular system requirements.

B67-10657
REFLECTOMETER FOR RECEIVER INPUT SYSTEM
STEHLBROD, C. T. DATES- JAN. 1968
NPO-10843
Reflectometer, built into a microwave input system, measures the amount of devices in the waveguide system of tracking receivers. Match measurements can be made on a routine calibration basis. It was installed in the X-band receiving system in the feed cone of the 210-ft antenna.

B67-10658
DAMAGES IN ROLLING ELEMENT BEARINGS MAY BE DETECTED EARLY
WELCHBODD, B. DATES- DEC. 1967
EQ-10031
Early detection method locates damage or small defects in rolling element bearings of critical machine components. This detection method operates on the principle that an impact is generated each time a defect in an otherwise smooth surface is in intimate moving contact with another smooth surface.

B67-10661
AIR SAMPLER COLLECTS AND PROTECTS MINUTE PARTICLES
WOOD, R. C. /LITTON SYSTEMS/ DATES- DEC. 1967
EQ-10037
Air ejector impactor sampler collects and protects samples of particles greater than 0.1 micron in diameter. In operation, it causes impaction of particle-laden air onto several collection surfaces within a collection cylinder. When not operating, the collector cylinder is maintained in a retracted state within a protective envelope.

B67-10662
PHASE PLANE DISPLAYS DETECT INCipient FAILURE IN SERVO SYSTEM TESTING
AFFENITO, F. J. /DUNLAP AND ASSOCIATES/ NOBL, J. G. DATES- DEC. 1967
EQ-10018
Computer based data conditioning and display technique detects incipient failure in servo system testing, for use in prelaunch checkout of complex nonlinear servomechanisms. These phase planes display enable identification of on-line, unusual or abnormal servo responses which can be displayed compactly in the time domain on a cathode ray tube.

B67-10668
UNIQUE FREQUENCY-SHIFT-KEYED DEMODULATION SYSTEM
STALOFF, C. /BAC/ TELTELBRAU, S. DATES- JAN. 1968
GSFC-217
Frequency-Shift-Keyed PSK demodulator provides a frequency discriminator whose outputs are separate and applied to two identical decoding channels, one decoding binary ones and the other decoding binary zeros. This demodulator rejects data applied to it at any frequency higher than 10 Kc.

B67-10669
ULTRAMINIATURE MANOMETER-TIPPED CARDIAC CATHETER
ARC-10054
Miniature diaphragm-type capacitance transducer capable of being mounted on the end of a cardiac catheter has been developed for measurement of intravascular pressures. The transducer can be inserted in small ducts, arteries and veins, without disturbing the flow characteristics. It is very useful for making measurements in babies.

B67-10672
THERMIONIC DIODE SWITCHING HAS HIGH TEMPERATURE APPLICATION
LUZEBEKE, S. S. SHIMADA, K. DATES- JAN. 1968
NFO-10404
Thermionic converter switch permits chopping in the immediate vicinity of a low-voltage, high current power source, eliminating line losses due to temperature limitations of semiconductor devices.

B67-10674
AREAS OF IRREGULAR, DISCONTINUOUS PATTERNS RAPIDLY AND ACCURATELY MEASURED
URFORD, J. A. WEITFIELD, C. W. DATES- JAN. 1968
GSFC-10184
Simple, rapid method measures the surface area of a pattern such as comprised by the conductors on a printed circuit board. A negative or positive film of the circuit layout is placed over a uniformly illuminated transilluminant surface and the proportion of light transmitted to silicon solar cells is determined.

B67-10675
BROADBAND CHOKE SUPPRESSES SPURIOUS CURRENTS IN ANTENNA STRUCTURE
MSC-10013
Quarter-wavelength chokes are mounted on the coaxial line of an antenna structure to prevent induced spurious currents from affecting the antenna radiation frequency pattern. The choke-absorbent combination approximately doubled the usable frequency range for the antenna studied.

B67-10676
SCAN RATE CONVERTER FOR TAPE RECORDING AND PLAYBACK OF TV PICTURES
BOLT, R. J. DATES- JAN. 1968
NPO-10166
Magnetic tape recording and playback equipment converts television pictures, both black and white and color, form one scan rate to another. The equipment indexes color picture frames for retrieval electronically and can be used as a document storage and retrieval medium that is compatible with hard-copy printout machines.

B69-10001
DC PIN-TO-PIN TESTING OF INTEGRATED CIRCUITS
THOMAS, E. F. DATES- JAN. 1968
GSFC-10284
External pin-to-pin nondestructive testing procedure measures the electrical characteristics of each element in an integrated circuit. The procedure involves choosing specific pairs of pins and applying appropriate test voltages to them.

B69-10002
GAGE MONITORS QUALITY OF CROSS-WEB RESISTANCE WELDS
STEEL, J. VELJCH, A. DATES- JAN. 1968
GSFC-90549
Gage nondestructively monitors the quality of cross-wire resistance welds during the welding
operation. The gage gives a dial indication of the relative embedment of the cross wires during the actual welding operation. A direct relationship exists between the depth of embedment and both weld strength and consistency.

B68-10003
LINEAR ANALOG DC VOLTAGE-TO-PULSE WIDTH CONVERTER
CROCKETT, W. E. DATE- JAN. 1968
GSFC-556
Circuit converts a dc analog input signal to pulse widths that are proportional to the input signal voltage. The circuit would be particularly useful as an analog-to-digital converter where low power, ruggedness, reliability, and good linearity are prime requirements.

B68-10007
SENSEL SENSOR AVERAGES TEMPERATURE OF NONUNIFORM PROFILE
DITTRICH, R. T. DATE- JAN. 1968
LEWIS-10362
Instrument that measures an average temperature across a nonuniform temperature profile under steady-state conditions has been developed. The principle of operation is an application of the expansion of a solid material caused by a change in temperature.

B68-10008
IMPROVED PHASE LOCKED LOOP RECEIVER
DALKY, T. J. /GEN. DYN./ELECTRON/ DATE- JAN. 1968
GSFC-09561
Improved phase locked loop receiver tracks and demodulates a signal whose signal-to-noise ratio may be low and whose information sidebands are close in frequency. This receiver recovers the carrier from input signals and applies it to a demodulator which recovers the sidebands.

B68-10012
ONE-SHOT PULSE SHAPE CIRCUIT
RADYX, R. G. /HUGHES HERCULES CO./ DATE- JAN. 1968
XGS-11379
Pulse shaper circuit exhibits low power dissipation, self setting, and easy triggering. It is basically a magnetic one-shot multivibrator consisting of two blocking oscillators and an inhibit circuit.

B68-10015
INPUT GATE CIRCUIT CONVERTED FOR USE AS LINEAR AMPLIFIER
HAPEE, T. P. /HIN/ DATE- JAN. 1968
M-P5-14265
Commercially available integrated circuit that is marketed as a digital computer input gate circuit was converted to a linear amplifier in a microphonic circuit that has high input impedance, low output impedance, low cost, and is small enough to fit on a standard printed circuit card.

B68-10016
SMALL, LOW POWER ANALOG-TO-DIGITAL CONVERTER
M-P5-13954
A small, low-power, high-speed, 8-bit analog-to-digital converter using silicon chip integrated circuits is suitable for use in airborne telemeter data systems. The successive approximation method of analog-to-digital conversion is used to generate the digital output.

B68-10017
REGULATED DC-TO-DC CONVERTER FEATURES LOW POWER DRAIN
THORNBALL, J. DATE- JAN. 1968
GSFC-03429
A regulated dc-to-dc converter requires negligible standby power for the operation of critical electronic equipment. The main operating circuitry consume power intermittently according to load conditions, rather than constantly.

B68-10018
DIGITAL DATA AVERAGER IMPROVES CONVENTIONAL MEASUREMENT SYSTEM PERFORMANCE
MSC-12078
Multipurpose digital averager provides measurement improvement in noisy signal environments. It provides increased measurement accuracy and resolution to basic instrumentation devices by an arithmetical process in real time. It is used with standard conventional measurement equipment and digital data printers.

B68-10019
CIRCUIT DETECTS VOLTAGE DECREASE IN COMPUTER POWER SUPPLY
HORCH, W. H. DATE- FEB. 1968
MSC-67-120
High-speed response monitoring circuit detects voltage decrease or dropout in any single phase or all three phases simultaneously of a 3-phase 60 Hz computer power supply. It uses lamps to indicate voltage conditions and provides a digital pulse output for a chronological record of voltage irregularities.

B68-10027
ANALYSIS OF FLUTTER IN TAPE TRANSPORT SYSTEMS
DATIS, R. C. SIMPSON, R. S. /ALABAMA UNIV./ DATE- JAN. 1968
H-PS-11970
Effect of flutter on digital data is recorded by magnetic tape recorders used with instrumentation systems. Major effect for both FM and direct recording techniques is shown to be a perturbation of the signal time base.

B68-10028
ELECTROIC APERTURE CONTROL DEVIRED FOR SOLID STATE IMAGING SYSTEM
M-P5-12828
Electronic means of performing the equivalent of automatic aperture control has been devised for the new class of television cameras that incorporates a solid state imaging device in the form of phototransistor mosaic sensors.

B68-10030
FLARE ANGLES MEASURED WITH BALL GAGE
CLISCHNOW, D. WALL, W. A. DATE- MAY 1968
M-P5-14690
Precision tungsten carbide balls measure the internal angle of flared joints. Measurements from small and large balls in the flare throat to an external reference point are made. The difference in distances and diameters determine the average slope of the flare between the points of ball contact.

B68-10051
THIN FILM HEAT TRANSFER GAGE IS STABLE AT HIGHER TEMPERATURES
LOYD, J. E. PICKARD, B. F. /ASTRO-SPACE LABS./ DATE- MAR. 1968 R-PS-92 Also B66-10160
R-P5-12396
Thin film convective heat transfer gage functions effectively for prolonged periods at temperatures up to 1000 degrees F. An initial resistance shift does not inhibit the performance or accuracy of the gages, as the original resistance-temperature relationship remains unchanged.

B68-10054
AMPLITUDE AND FREQUENCY READOUT OVERLAY
FITCH, A. E. DATE- MAR. 1968
GSFC-10183
Amplitude and frequency readout overlay simplifies the interpretation of oscillograph traces for full scale deflections of one inch. The overlay increases accuracy in data interpretation and saves time in analyzing oscillograph records.

B68-10056
LUMINESCENT SCREEN COMPOSITION FOR
CATHODE RAY TUBES

ERC-19
NPO-10118
DECODER

ElectroniC circuit provides automatic level control for liquid nitrogen traps.

B68-10058
SIMPLIFIED, HIGH-SPEED BINARY DATA DECODERS
ANDERSON, T. O. DATE- FEB. 1968
NPO-10111

Simplified, high-speed decoder of encoded binary data received over a noisy channel is provided in a versatile apparatus that can accommodate more than one particular set of codes. The apparatus is applicable to satellite, lunar, and planetary data transmission.

B68-10059
THERMAL SHORT IMPROVES SENSITIVITY OF CHROMOGENICALLY COOLED MASHER
CLAUSS, R. C. DATE- MAR. 1968
NPO-09775

Exit-line, quarter-wave thermal short cools the center conductor of the signal-input coaxial transmission line to a cryogenically cooled traveling wave maser. It reduces both the thermal noise contribution of the coaxial line and the heat leak through the center conductor to the maser at 4.4 degrees K.

B68-10061
ELECTRONIC CIRCUIT PROVIDES AUTOMATIC LEVEL CONTROL FOR LIQUID NITROGEN TRAPS
TURVY, R. B. DATE- MAR. 1968
KRC-10127

Electronic circuit, based on the principle of increased transistor resistance corresponding to decreases in temperature provides an automatic level control for liquid nitrogen cold traps. The electronically controlled apparatus is practically service-free, requiring only occasional reliability checks.

B68-10063
PLASTIC PREFORMS FACILITATE FABRICATION OF WELDED CORDWOOD ELECTRONIC MODULES
STUMWAN, J. C. DATE- MAR. 1968
LEWIS-50339

Molded plastic preforms facilitate the fabrication of small lots of welded cordwood circuits. The preforms retain the components during welding and electrical checkout and facilitate encapsulation of the welded module when used with a conventional potting shell.

B68-10065
MULTICHANNEL IMPLANTABLE TELEMETRY SYSTEM
FISHER, T. B. DATE- MAR. 1968 READ- SEE ALSO B64-10057, AND B64-10059
ARC-10083

Multichannel telemetry system is used for chronic implantation in animals to monitor a variety of physiological parameters. A hermetically sealed unit, the system uses a time-sharing multiplexer scheme to compare between various sensor inputs and enables the number of channels to be increased or decreased.

B68-10067
SELF-CORRECTING, SYNCHRONIZING RING COUNTER USING INTEGRATED CIRCUIT DEVICES
MAASBERG, W. A. /IBM/ DATE- MAY 1968
N-FS-13901

Three band gate circuits are used to add error detection and reset logic circuitry for initiating and retaining the correct binary state in the flip-flop circuits of a ring counter. As the input signals are counted, the position of the specified state moves in ordered sequence around circuit loop.

B68-10068
DIVERSITY RF RECEIVING SYSTEM WITH IMPROVED PHASE-LOCK CHARACTERISTICS
DE LOR, V. J. LANDSHEER, C. B. /IBM/ DATE- MAR. 1968
IGS-01222

Improved diversity receiving system automatically utilizes the combined output from its two independent receiving channels /with cross-polarized receiving antennas/ to increase the reliability of maintaining the requisite phase lock for optimum signal reception. It is adapted for use with AM, FM, or narrow band FM signals.

B68-10069
PRINCIPLES OF OPTICAL-DATA PROCESSING TECHNIQUES
SHURLAN, A. R. DATE- MAR. 1968
GSPC-10271

Document presents optical-data processing information on a level which will convey the basic principles involved to those having a general technical background. Mathematical discussions are included but are not required for a basic understanding.

B68-10070
DEVELOPMENT OF BLIALIC TEST FIXTURE ENCLSudes CHROMOGENIC APPLICATION
N-FS-14185 M-FS-14189

Test fixture has the capacity of producing biaxial stress fields in test specimens to the point of failure. It determines biaxial stress by dividing the applied load by the net cross section. With modification it can evaluate materials, design concepts, and production hardware at cryogenic temperatures.

B68-10073
NEW MICROELECTRONIC POWER AMPLIFIER
NEW, T. G. /WESTINGHOUSE ELEC. CORP./ DATE- MAR. 1968
N-FS-13621

Integrated push-pull power amplifier fabricated on a chip of silicon has interdigitated power transistors and is hermetically encapsulated in a beryllia flat package. It provides current output greater than the nominal 10 amperes from an input current drive of 1 ampere.

B68-10074
IMPROVED DC VOLTAGE MULTIPLIER
SAVELLLE, C. R. /SPACO/ DATE- MAR. 1968
N-FS-14042

Circuit multiplies a dc input voltage in the millivolt range to yield a larger dc output voltage bearing a fixed ratio to the input voltage. The supply voltage need not be precisely regulated, the potentiometer need not be linear, and the gain of servo amplifier is not critical.

B68-10079
MAGNETIC TAPE TRANSPORT CONTROLLED BY BOXING TRANSDUCER HEADS
CROYER, J. SALCEDO, G. SPERRY, J. D. /AMPEX CORP./ DATE- MAR. 1968
GSPC-483

Magnetic tape transport includes a common drive for both the tape drive capstans and the rotating record/reproduce heads. Speed of the drive may be varied within a preselected range, but, once selected, remains constant so head and capstan are driven in synchronization and at constant speed.

B68-10083
TWIN SOLUTION CALORIMETER DETERMINES HEATS OF FORMATION OF ALLOYS AT HIGH TEMPERATURES
DARBY, J. B., JR. KLEE, E. KLEPPA, O. J. /CHICAGO UNIV./ DATE- APR. 1968
ARC-10114

Calvert-type, twin liquid metal solution calorimeter determines the heats of formation of transition metal alloys at high temperatures. The twin differential calorimeter measures the small heat effects generated over extended periods of time, has maximum operating temperature of 1073 degrees K and an automatic data recording system.
GYRATOR-TYPE CIRCUITS REPLACE UNGROUNDED

DEBRO, G. J. DATE- MAR. 1968

Gyrator circuits using only transistors, capacitors, and resistors which can replace both grounded and ungrounded inductors have been developed to permit compact microcircuitization of circuits by integration of all the components.

METHOD OF DISJOINING ADHESIVELY BONDED

SACARAMORE, P. J. /ECA/ DATE- MAY 1968

NORTHWESTERN

Embedment of resistive heating elements in a circuitry by integration of the adhesive bond between the module, and metal heat sink and the potting material without damaging the components. Electrical power applied to the elements causes breakdown of bonding material.

SUPERCONDUCTING SWITCH PERMITS MEASUREMENT

GOVIND, R. H. BOBENRE, E. P. DATE- APR. 1968

ARG-90260

Superconducting, on-off switch measures small, thermoelectrically generated voltages produced by thermocouples in a liquid helium bath. Placed in a shunt configuration between the thermocouple and the measuring device, the measuring device senses the sum of the voltage to be measured and the spurious thermoelectric voltages.

NEW CAMERA TUBE IMPROVES ULTRASONIC

SHALL VOLTAGES AT CRYOGENIC

EPPICIIENCE, H. C. COLLINS, W. J. JACOBS, J. M.

INSTRUCTION SYSTEM

NOWESTERN UNIT./ DATE- APR. 1968

ARG-90237

Electron multiplier, incorporated into the camera tube of an ultrasonic imaging system, improves resolution, effectively shields low level circuits, and provides a high level signal input to the television camera. It is effective for inspection of metallic materials for bonds, voids, and homogeneity.

MONITOR SENSES AMOUNT OF CONTAMINATION

SHEEHY, R. N. DATE- MAR. 1968

SPACOF-10212

Monitoring device detects and indicates directly the amount of contamination deposited on a surface. It uses an optical system in conjunction with a suitable collimated light source and associated electronics. Change in its output signal is proportional to the optical absorption characteristics of the sample plate surface.

AUTOMATIC CONTOUR WELDER INCORPORATES

SPEED CONTROL SYSTEM

WILL, R. A. DATE- MAR. 1968

S-P-14574

Speed control system maintains the welding torch of an automatic welder at a substantially constant speed. The system is particularly useful when welding contoured or unusually shaped surfaces, which cause the distance from the work surface to the weld carriage to vary in a random manner.

ACCUOMULATOR FOR SHAFT ENCODER

CARROLL, C. C. CHILD, J. A. ROBINSON, R. J.

NORTHWESTERN UNIV./ DATE- MAR. 1968

M-P-13599

Digital accumulator relies almost entirely on integrated circuitry to process the data derived from the outputs of gyro shaft encoder. After the read command is given, the output register collects and stores the data that are on the set output terminals of the up-down counters.

ALTERNATING CURRENT ELECTROMAGNETIC SERVO

BOGUE, R. K. DATE- MAY 1968

XRF-03838

Electromagnetic device accurately indicates the responses of various sensors in high performance flight research aircraft to conditions encountered in flight. The device responds to sensor inputs to move a slideable armature along an indicator scale by the force of currents induced in the armature winding.

PORTEABLE PULSE CODE MODULATION /PCM/

BRADANIN, P. A. KLUTS, J. T. /N. AM. AVITATION/

DATE- MAR. 1968

MSC-11269

Small, programmable, high speed PCM subsystem, supports the variety of signals inherent in sophisticated equipment. A signal generated by a transducer is first conditioned to the proper signal range, then sampled by an external multiplexer or by the subsystems directly and then converted and transmitted to a receiving station.

PROJECTION TRANSPARENCIES FROM PRINTED

GUNNERS, L. S. NICKERSON, T. B. /BOEING CO./

DATE- APR. 1968

N-P-16608

Method for preparing project transparencies, or view graphs, permits the use of almost any expendable printed material, pictures, charts, or text, in unlimited color or black and white. The method can be accomplished by either of two techniques, with a slight difference in materials.

FLIGHT-BACK MOUNTING WOULD INCREASE

MICROCIRCUIT PACKAGING DENSITY

GOLANIO, S. DATE- APR. 1968

MSC-12055

Piggy-back method of packaging integrated circuits will increase packaging density and design flexibility. It will also eliminate interconnection leads between the die and associated inductances, and thus increase the attainable frequency response of the circuit.

HIGH EFFICIENCY, HIGH FREQUENCY MAGNETIC

SCHAEFF, F. L. /WESTINGHOUSE ELEC. CORP./ DATE-

APR. 1968

MSC-11597

Electromagnetic deflection yoke stores energy during the scan and releases it in the flyback or retrace. The operation of the device involves a method of switching to a voltage high enough to dissipate the flyback pulse during the retrace time and then operating during the scan time at a much lower voltage.

BILATERAL, ZERO-IMPEDANCE STATIC

SCHOMUTH, C. L. /WESTINGHOUSE ELEC. CORP./

DATE- APR. 1968

LEWIS-10129

Static semiconductor switching circuit eliminates the undesirable features of electromechanical relays and conventional semiconductor switching circuits. There is no net zero voltage drop at the terminals and thus a zero impedance for bilateral currents there.

CIRCUIT ENHANCES VERTICAL RESOLUTION IN

RABY SCANNING SYSTEMS

ALSOYSEY, W. H. GREENWOOD, J. R. BOLLY, G. M.

DATE- APR. 1968

MSC-12123

Circuit enhances vertical resolution in electron beam, raster scanning systems exhibiting aperture distortion in the vertical direction. A sensitized area /image/ produces a video output.
when the scan beam nears it, which causes vertical elongation in the reconstructed images of all sensitized areas on the surface.

COMPENSATION CIRCUIT IMPROVES OPERATION OF INDUCTIVE COUPLING TRANSFORMERS

IEEE-10128
RELIABLE, SELF-CALIBRATING VIBRATION TRANSDUCER
MC KINNEY, R. L. /DATE- APR. 1968
LANGLEY-89

Transducer system measures the uniaxial vibration amplitudes /deflections/ and frequency of a body subjected to mechanical vibration. The basic system is self-calibrating and provides an output which unambiguously indicates the direction as well as the magnitude of the uniaxial deflections.

B68-10129

PHASE-LOCK LOOP FREQUENCY CONTROL AND THE DROPOUT PROBLEM

ATTWOOD, S. ELINE, A. J. /HOTROLA/ /DATE- APR. 1968

- Circuitry eliminates undesirable modulation effects in rotary transformers which transfer electrical energy to and from angular rate transducers on a gyroscope. It cancels the error by feeding back compensation signals through a tertiary winding on the rotor of the output rotary transformer.

B68-10130

IMPROVED COMPENSATION CIRCUIT FOR DIRECT-COUPLED AMPLIFIERS

BREUER, D. R. /WSN SPACE TECHNCL. LABS./ /DATE- APR. 1968

- Drift- and offset-control circuit compensates the inherent temperature drift and offset of a closed-loop feedback amplifier. It overcomes the disadvantages of conventional chopping circuits used to minimize drift in low-level, direct-coupled amplifiers.

B68-10133

RELIABLE, SELF-CALIBRATING VIBRATION TRANSDUCER

MC KINNEY, R. L. /DATE- APR. 1968

- Transducer system measures the uniaxial vibration amplitudes /deflections/ and frequency of a body subjected to mechanical vibration. The basic system is self-calibrating and provides an output which unambiguously indicates the direction as well as the magnitude of the uniaxial deflections.

B68-10134

STEREO PHOTOMACROGRAPHY SYSTEM

LINDSEY, R. F. /DATE- APR. 1968
LANGLEY-10176

- Stereo photomacrography system provides sharply focused and correctly exposed stereo pairs of photographs through a stereomicroscope. The system uses components of the old system but incorporates a sharp focusing system and includes an improved photometer.

B68-10140

IMPROVED COMPENSATION CIRCUIT FOR INDUCTIVE COUPLING TRANSFORMERS

SPGW- INVENTOR M. G. GIVEN /SHERET GYROSCOPE CO./ /DATE- APR. 1968

- Circuitry eliminates undesirable modulation effects in rotary transformers which transfer electrical energy to and from angular rate transducers on a gyroscope. It cancels the error by feeding back compensation signals through a tertiary winding on the rotor of the output rotary transformer.

B68-10130

SOLAR HIGH-PRESSURE GAS FACILITES CALIBRATION OF TURBINE FLOWMEETERS FOR LIQUID HYDROGEN

HRAUSO, L. E. MANN, A. J. /DATE- MAY 1968

- Nitrogen gas at a pressure of 60 atmospheres and ambient temperature facilitates the calibration of turbine flowmeters used for monitoring the flow of liquid hydrogen in cryogenic systems. Full-scale calibration factors can be obtained to an accuracy of 0.4 percent.

B68-10147

DEFLECTION CIRCUIT MONITORS FORCE ON OBJECT UNDER WATER

SELLER, G. J. /WESTINGHOUSE ASTRONUCL. LAB./ /DATE- MAY 1968

- Capsule containing samples for radiation testing is guided under a reactor to an exact position within a nuclear reactor. A Linear Variable Differential Transformer /LVDT/ flopplate deflection circuit monitors the force on the capsule as it is positioned within the reactor.

B68-10148

SILICON SOLAR CELL MONITORS HIGH TEMPERATURE PIPING SYSTEM REMOTELY INSPECTS, MEASURES, AND RECORDS INTERNAL IRREGULARITIES IN PIPING

- Silicon solar cell, attached to each viewpoint, monitors that incandescent emission from the hot interior of a furnace without interfering with the test assembly or optical pyrometry during the test. This technique can provide continuous indication of hot spots and provide warning of excessive temperatures in cooler regions.

B68-10149

SYSTEM REMOTELY INSPECTS, MEASURES, AND RECORDS INTERNAL IRREGULARITIES IN PIPING

- Video electromechanical probe visually inspects and measures internal offset and peaking of welds in relatively large piping. Irregularity dimensions are recorded on peripheral equipment consisting of video tape and X-Y plotter. The probe is used for inspecting of vacuum-jacketed liquid lines that cannot be inspected externally.

61
Prototype precision bolometer calibration bridge is manually balanced device for indicating dc bias and balance with either dc or ac power. An external galvanometer is used with the bridge for null indication, and the circuitry monitors voltage and current simultaneously without adapters in testing 100 and 200 ohm thin film bolometers.

Thermal resistances of solder-boss/putting compound combinations

Sodium niobate, formed by high vacuum, flash, and reactive evaporations, has a high dielectric constant and is used as a thin file dielectric in microelectronic capacitors. High purity films are formed from relatively inexpensive, pure starting materials. Crystalline sodium niobate films can be formed on amorphous or crystalline materials.

Multichannel system employing a radiisotope radiation source, strontium-90, radiation detector, and a silicon surface barrier detector, measures the local density of liquid hydrogen at various levels in a storage tank. The instrument contains electronic equipment for collecting the density information, and a data handling system for processing this information.
Respiration-rate transducers in the form of pneumotachometers measure respiration rates of pilots operating high performance research aircraft. In each low pressure or high pressure oxygen system a sensor is placed in series with the pilots oxygen supply line to detect gas flow accompanying respiration.

B68-10202
FAST-RESPONSE CUP ANEMOMETER FEATURES
COSINE GENERATING PAST-RESPONSE CUP
868-10202
ABG-90193
ELECTROCARDIOGRAPH TRANSMITTED BY RP AND TELEPHONE LINKS FROM THE EMERGENCY SCENE, TO THE HOSPITAL ANGEBRA, J. DATE- JUL. 1968
B68-10224
LIGHTWEIGHT HEATER GENERATES HIGH TEMPERATURES FROM LOW CURRENT HANSEN, E. L. DATE- JUL. 1968
SRN-10004
Double spiral molybdenum heater element uses low current, needs no insulation, and requires support only at the ends which are also the power input points. Because there is no insulation or internal support necessary, the heater is lightweight. Its temperature potential will vary with its size and environment.

B68-10225
MULTILAYER PLATED WIRE SHOWS PROMISE AS MEMORY DEVICE
KAMINS, D. /MIT/ DATE- JUN. 1968
MSC-11587
Multilayer plated wire memory system surpasses planar thin film memories because of its high speed, simplicity, and high output. The device consists of 5 si al Mo-Cu wire plated with a Fe-6Fe alloy about 1 micron thick crossed orthogonally by word lines.

B68-10207
FACSIMILE VIDEO ENHANCEMENT DEVICE
VERMILLION, C.-H. DATE- JUN. 1968
GSPC-10185
Video modulation unit enhances facsimile transmission using an amplitude-modulated 2400-Hz carrier. The unit demodulates the signal and then remodulates it, using the same carrier. By using the unit controls, modulation can be set to levels that compensate for picture in-transit degradation.

B68-10210
ACTIVE RC NETWORKS OF LOW SENSITIVITY FOR INTEGRATED CIRCUIT TRANSFER FUNCTION SYNTHESIS
ARC-10186
Active RC network is capable of extremely high Q performance with exceptional stability and has independently adjustable zeros and poles. The circuit consists of two integrators and two summers that are interconnected to produce a complete second-order numerator and a second-order denominator.

B68-10213
TECHNIQUE INCREASES STORAGE CAPACITY IN CAMERA TUBE TARGET
BOLL, K. F. DE VRIES, H. N. /WESTINGHOUSE ELECTRIC. CORP./ DATE- JUN. 1968
MSC-11599
Technique increases the signal current, where direct beam readout is used, in Secondary Electron Conduction /SEC/ camera tubes. Increasing the storage capacity and therefore the dynamic range of the SEC target permits satisfactory operation at reduced frame rates.

B68-10226
ZINC-OXYGEN PRIMARY CELL YIELDS HIGH ENERGY DENSITY
GAPF, C. B. DATE- JUN. 1968
8-PS-14631
Zinc-oxygen primary cell yields high energy density for battery used as an auxiliary power source in space vehicle systems. Maximum reliability and minimum battery weight is achieved by using a stacking configuration of 23 series-connected modules with 6 parallel-connected cells per module.

B68-10222
NEW ELECTRICAL PLETHYSMOGRAPH MONITORS CARDIAC OUTPUT KUDICKE, W. B. PATTERSON, R. P. WITSOE, D. A. /MINNESOTA UNIV./ DATE- JUN. 1968
MSC-11447
Four-electrode impedance plethysmograph measures ventricular stroke volume of cardiac output of humans. The instrument is automatic, operates with only one recording channel, and minimizes patient discomfort.

B68-10233
ELECTROCARDIOGRAPH TRANSMITTED BY RP AND TELEPHONE LINKS TO EMERGENCY SITUATIONS CARPENTER, L. E. LEWIS, C. E. JR. RC DONALD, E. T. DATE- JUL. 1968
FRC-10031
Electrocardiograph of an injured human subject is transmitted by RP and telephone links from the ambulance at the emergency scene, to the hospital emergency facilities. This system eliminates delay in the diagnosis of required therapy, thereby enhancing emergency and rescue operations.

B68-10237
ASTRONAUT SPACE SUIT COMMUNICATION ANTENNA LINDSEY, J. P., III NASON, G. H. DATE- JUL. 1968
Astronaut space suit communication antenna consists of a spring steel monopole in a blade-type configuration. This antenna is mounted in a copper cup filled with a penetrating compound that is recessed in the center to facilitate bending the blade flat for stowing when not in use.

**B68-10241**

**PARALLEL-TO-SERIAL BIPHASE-DATA CONVERTER**

**THULOVE, E. D. / M. AM. AVIATION/ DATE- JUL. 1968**

Data converter produces a serial biphase output signal from parallel input data. Alternate bits are loaded into a shift register in complement form so that the bits appear at the end of the shift register in a true-complement form sequence.

**B68-10262**

**WELDER ANALYZER**

**MILLER, L. L. / GEN. MOTORS CORP./ DATE- JUL. 1968**

Welding analyzer circuit evaluates and certifies resistance welding machines. The analyzer measures peak current, peak voltage, peak power, total energy, and first-pulse energy. It is used as an energy monitor while welding is being performed, or as a precision shunt load for a pure electrical evaluation of the weld machine.

**B68-10244**

**IMPROVED TRAVELING WAVE NASER AMPLIFIER**

**CLARK, B. C. DATE- JUL. 1968**

**W-360548**

Traveling Wave Naser /SW/ that operates at S-band frequencies is characterized by a greatly improved gain-bandwidth product with relatively low equivalent-noise temperature. Tests indicate that its performance exceeds that of any other type of S-band amplifier.

**B68-10264**

**MINIATURE PRESSURE TRANSDUCER FOR STRESSED MEMBER APPLICATION**

**WALKER, R. E. WICKHAM, C. G. / M. AM. AVIATION/ DATE- JUL. 1968**

**MSC-11660**

Miniature pressure transducer responds to static or dynamic pressures acting against a structural surface without introducing errors caused by stress on the structural surface. This is accomplished by a thin stainless steel pressure sensing diaphragm with an attached foil strain gage.

**B68-10254**

**HARMONIC DISTORTION ANALYZER SPEEDS SETUP OF MAGNETIC TAPE RECORDERS**

**TIMARL, D. P. DATE- JUL. 1968**

**GCSP-10190**

Harmonic distortion analyzer effects rapid and accurate setup and calibration of magnetic tape instrumentation recorders. The analyzer is portable, requires no warmup period and need not be calibrated for normal usage. Average setup time with this analyzer is approximately 30 seconds per track.

**B68-10258**

**ACQUISITION OF PSUEDONOISE SIGNALS BY SEQUENTIAL ESTIMATION**

**WAD, R. R. / LORD AEROSPACE MISSILES AND SPACE CO./ DATE- JUL. 1968**

**M-PS-10696**

Rapid acquisition by Sequential Estimation /VASE/ system is used in the receivers of tracking and communications systems to bring identical locally generated pseudonoise digital modulation signal into time synchronization with the incoming pseudonoise signal. This acquisition system is particularly suited for medium input signal-to-noise ratios.

**B68-10262**

**SILICON STRAIN SENSORS ENABLE PRESSURE MEASUREMENT AT CHOCORIC TEMPERATURES**

**BOWAH, R. BURH, J. MC LELLAN, W. / ELECTRO-OPTICAL SYSTEM/ DATE- JUL. 1968**

**M-PS-14703**

Miniature pressure transducers with diffused, heavily doped silicon strain-gage sensor elements, operates over a wide temperature range. Small thermal mass combined with close coupling between a metallic diaphragm and sensor elements minimizes sensitivity to temperature transients.

**B68-10263**

**IMPROVED FUEL-CELL-TYPE HYDROGEN SENSOR**

**BODEK, F. P. BUTOWSKI, M. D. / GR/ DATE- JUL. 1968**

**M-PS-14656**

Modified hydrogen sensor replaces oxygen cathode with a cathode consisting of a sealed paste of gold hydroxide and a pure gold current collector. The net reaction which occurs during cell operation is the reduction of the gold hydroxide to gold and water, with a half-cell potential of 1.4 volts.

**B68-10264**

**CONCEPTUAL DEAD WEIGHT DEVICE TO PROVIDE PRESSURE CALIBRATION**

**KARCHER, G. OLSON, G. / CHRYSLER CORP./ DATE- JUL. 1968**

**M-PS-14672**

Dead weight testing device uses a common force plane piston manometer to set accurate gage pressure in pounds per square inch. An additional piston adapts the device for absolute pressure calibration.

**B68-10267**

**MOEBIUS RESISTORS ARE NONINDUCTIVE AND NONREACTIVE**

**DAVIS, R. L. DATE- JUL. 1968**

**SAN-10020**

Moebius strip made of insulated resistive materials with electrical leads attached directly opposite one another provides a noninductive, nonreactive resistor which is simple, inexpensive, and flexible in usage, and can be made to almost any desired size and shape.

**B68-10268**

**VIBRATION TESTING AND DYNAMIC STUDIES OF RELAYS**

**SPO- INNOVATOR NOT GIVEN / OKLAHOMA STATE UNIV./ DATE- JUL. 1968**

**M-PS-14542**

Study has been undertaken to determine the separation criteria for a preloaded, idealized set of contacts when they are subjected to a steady-state sinusoidal excitation and when the elasticity of one contact is nonlinear. The study consists of two phases, theoretical and experimental.

**B68-10269**

**LOW ENERGY GERMET CAN BE USED TO TEST SENSITIVE CIRCUITS, OTHER RECEPTS**

**PLATT, L. W. DATE- JUL. 1968**

**SAN-10013**

Hazardous circuit element is of sufficiently low energy output that it may be used to test extremely sensitive circuits safely, reliably, and accurately. A polyurethane-foam-lined aluminum case provided protection for the unit assembly.

**B68-10272**

**NOISE FIGURE MEASUREMENT CONCEPT FOR ACOUSTIC AMPLIFIERS**

**JOHNSON, V. R. YEAGER, J. E. / MICROE ELECTRON./ DATE- JUL. 1968**

**GCSP-10664**

Optimum length buffer crystals are used with an amplification section for measuring the noise figure of acoustic amplifiers. Measuring the time required to saturate with noise a signal, which is reflected back and forth in the circuit, gives a direct measurement of the amplifiers noise figure.

**B68-10273**

**RECHARGE UNIT PROVIDES FOR OPTIMUM RECHARGING OF BATTERY CELLS**
Percent recharge unit permits each cell of a rechargeable battery to be charged to a preset capacity of the cell. The unit automatically monitors and controls a rechargeable battery subjected to charge-discharge cycling tests.

Experiments determine the effect of alloying additives on the ignition of uranium. Data on oxidation rates, ignition temperatures, and burning curves are provided in the report.

Low-inductance, high-capacitance Marx pulse generator provides for minimization of internal inductance and suppression of external electromagnetic radiation. The spark gaps of the generator are enclosed in a pressurized nitrogen atmosphere which allows the charging voltage to be varied by changing the nitrogen pressure.

Deep space frequency modulation system permits transmission of data where the signal deviation is greater than 1/2 the predetection bandwidth. It provides satisfactory performance at great distances or in the presence of other turbulence to be observed throughout all the transition stages.

Universal probe, which contains a unique frequency discriminator, measures the static and dynamic levels of cryogenic liquids in a hydrogen bubble chamber. The probe allows boiling conditions or other turbulence to be observed throughout all the transition stages.

Universal probe, which contains a unique frequency discriminator, measures the static and dynamic levels of cryogenic liquids in a hydrogen bubble chamber. The probe allows boiling conditions or other turbulence to be observed throughout all the transition stages.

High-capacitance Marx pulse generator provides for minimization of internal inductance and suppression of external electromagnetic radiation. The spark gaps of the generator are enclosed in a pressurized nitrogen atmosphere which allows the charging voltage to be varied by changing the nitrogen pressure.

Deep space frequency modulation system permits transmission of data where the signal deviation is greater than 1/2 the predetection bandwidth. It provides satisfactory performance at great distances or with low signal levels.

Measurement technique involves frequency modulated discriminator which produces an error signal as two signals, one of known and one of unknown frequency. The signals are electronically switched to a discriminator input, allowing independent measuring of dynamic linearity in a frequency modulated subcarrier oscillator.

Universal probe, which contains a unique frequency discriminator, measures the static and dynamic levels of cryogenic liquids in a hydrogen bubble chamber. The probe allows boiling conditions or other turbulence to be observed throughout all the transition stages.

High-speed klystron cathode pulse generators require low voltage to generate high-voltage pulses. Broadband video transformers are wound in two configurations — 1/2 transmission line, multilayer toroids and 1/2 loop coupling toroids. The circuit adapts to generate high-speed, high-voltage, high-stability power pulses at megawatt levels.

High-speed klystron cathode pulse generators require low voltage to generate high-voltage pulses. Broadband video transformers are wound in two configurations — 1/2 transmission line, multilayer toroids and 1/2 loop coupling toroids. The circuit adapts to generate high-speed, high-voltage, high-stability power pulses at megawatt levels.

Research is conducted to develop a concept for a space communication system, which combines range acquisition system and time measurement system for tracking high-velocity aircraft and spacecraft. The range acquisition system uses a pseudonoise code to determine range and the time measurement system reduces uncontrolled phase variations in the despread signal.
ANALYSIS AND DESIGN OF A CLASS-D AMPLIFIER SYSTEM

System, containing cycle timer, and an image dissector photomultiplier. An electronic scanning transmitter and receiver follows rapid movements or accelerations of the target.

COLOR-TELEVISED MEDICAL MICROSCOPY

System, containing cycle timer, measures the energy dissipated at the contacts of a relay operating in an electric circuit. The system measures as well as records the energy for a large number of repetitive operations.

ANALYTIC DESIGN AND ASSEMBLY OF A CLASS-D AMPLIFIER

Analysis of a basic class-D amplifier circuit configuration shows its adaptability to a variety of applications. The feedback, input and output configuration and the frequency spectrum of the pulse-width-modulated signal are analyzed.

COLOR-TELEVISED MEDICAL MICROSCOPY

Color television microscopy used at laboratory range specifications, reproduces a slide image with sufficient fidelity for medical laboratory and instructional use. The system is used for instant pathological reporting between operating room and remotely located pathologist viewing a biopsy through this medium.

GIMBAL ANGLE SENSOR

Detector flake located parallel to a slotted mask mechanical differential, motions the rotation of a gimballed reaction wheel mounting. As the gimballed moves light passes through the mask and striking a section of the detector, the electrical output of which has been calibrated in terms of degrees of rotation.

OPTOMETRIC SYSTEM FACILITATES COLOMERIC AND FLUORESCENT MEASUREMENTS

Compact, unitary optometric systems uses a single device for colorimetric, fluorometric and spectral absorption measurements. The basic element of the unitary systems is a test cell containing filter elements with uniquely fabricated lenses.

METHOD OF REDUCING TIME BASE ERROR IN DIGITAL MAGNETIC RECORDERS

Apparatus reduces Time Base Error /TBE/ in the playback of digital data from magnetic recording equipment. The apparatus uses a magnet which employs a servo position control of the tape by which the playback data clock is phase locked with a fixed frequency reference signal.

ULTRASONIC TEMPERATURE MEASURING DEVICE

Pulse echo ultrasonic system automatically determines the temperature in the core of a nuclear rocket engine by measuring the transit time of an acoustic pulse in a wire sensor. The measurement is based on the fact that the speed of sound in the sensor material is a function of temperature.
infrared energy generated in the weld as the weld is made and compares this with various minimum and maximum limits of infrared energy values previously correlated with acceptable weld-strength tolerances.

B68-10336
FULLY AUTOMATIC TELEMETRY DATA PROCESSOR
Cox, F. B./BECKMAN INSTR. CO./ KEPFERT, F. A.
LEE, R. C./ DATE- SEP 1968 REAR- SEE ALSO NASA-TW-D-3961
GSFC-10576
Satellite Telemetry Automatic Reduction System
/STARS 2/, a fully automatic computer-controlled telemetry data processor, maximizes data recovery, reduces turnaround time, increases flexibility, and improves operational efficiency. The system incorporates a CDC 3200 computer as its central element.

B68-10337
TEMPERATURE B68-10336
LIQUID LEVEL SENSOR
Gilles, J. D./ /N. A. ROCKETEY CORP./ DATE- SEP. 1968
Lewis-10297
Silicon chip thermal sensor coupled into a solid state power source controls temperature or pressure in combustion research. The silicon chip sensing element is embedded in a ceramic support for insulation, and connected to a high resistance bridge which operates the solid state power amplifiers.

B68-10341
SUPERCONDUCTIVE FILM MAKES CONVENIENT LIQUID HELIUM LEVEL SENSOR
Beckes, H. H./ DATE- SEP. 1968
Langley-10026
Sensor consisting of superconductive film mounted on a dipstick measures the level of liquid helium in a Dewar flange. The sensor is made by depositing a thin film of niobium metal to a thickness of 2000 angstroms on a quartz substrate, which is then mounted on a graduated dipstick.

B68-10342
INDUCTION ADHESION PROVIDES QUANTITATIVE MEASURE OF SURFACE CLEANLINESS
San-10026
Indium tipped probe measures hydrophobic and hydrophilic contaminants on rough and smooth surfaces. The force needed to pull the indium tip, which adheres to a clean surface, away from the surface provides a quantitative measure of cleanliness.

B68-10350
FLUIDIC-THERMOCHEMICAL DISPLAY DEVICE
Grassmann, R. J/ILLINOIS, N. H./ DATE- SEP. 1968
B68-10026
Plugg decoder and display device has low-power requirements for temperature control of thermochromic materials. An electro-to-fluid converter translates incoming electrical signals into pneumatic signals of sufficient power to operate the fluidic logic elements.

B68-10357
CLOSED CIRCUIT TV SYSTEM AUTOMATICALLY GUIDES WELDING ARC
B68-10006
Closed circuit television /CCTV/ system automatically guides a welding torch to position the welding arc accurately along weld seams. Digital counting and logic techniques incorporated in the control circuitry, ensure performance reliability.

B68-10362
BLENDBING OF ELECTRICAL WIRES IN VACUUM ENVIRONMENTS
Scherer, J. L. /Svenson, F. C./ /N. A. ROCKETEY CORP./ DATE- OCT. 1968
B68-10016
10289
Electric conductors used in vacuum environments have smaller cross sections. This report provides data on the correct size wire for a required current load in free-air, low-pressure oxygen, and vacuum environments.

B68-10364
NONDESTRUCTIVE TEST DETERMINES OVERLOAD DESTRUCTION CHARACTERISTICS OF CURRENT LIMITER FUSES
Svenson, F. C./ /ELECTRA-MIDLAND CORP./ DATE- OCT. 1968
GSFC-10574
Nondestructive test determines the time required for current limiters to blow/open the circuit, when subjected to a given overload. The test method is based on an empirical relationship between the voltage rise across a current limiter for a fixed time interval and the time to blow.

B68-10365
AUTOMATIC PATIENT RESPIRATION FAILURE DETECTION SYSTEM WITH WIRELESS TRANSMISSION
Dime, J. /POPE, J. H./ DATE- OCT. 1968
ARC-10174
Automatic respiration failure detection system detects respiratory failure in patients with a surgically implanted tracheostomy tube, and actuates an audible and/or visual alarm. The system incorporates an automatic radio transmitter so that the patient is mecabused by wires yet can be monitored from a remote location.

B68-10367
DETECTION OF EFFECT OF DEPOSITS ON OPTICAL WINDOWS OF PROPELLER MEASUREMENTS
Cipollone, E./ DATE- OCT. 1968
Lewis-10366
Temperatures measurements in an enclosed test chamber are more accurate when the reflectivity of the inner coated surface is compared to the outer clean surface of an optical window. Temperature readings are corrected by calculating the reflectivity of the deposits with their effect on the temperature measurement.

B68-10370
COOLED MINIATURE PRESSURE TRANSDUCERS EFFECTIVE AT HIGH TEMPERATURES
Amehout, E. C./ DATE- OCT. 1968
Lewis-10401
Miniature pressure transducers in compact water-cooled mounts are placed in hotter and more confined environments than previously possible. It quantitatively measures high frequency pressure fluctuations resulting from rotating stall in an axial flow engine compressor.

B68-10379
AUTOMATIC SYSTEM NONDESTRUCTIVELY MONITORS AND RECORDS FATIGUE CRACK GROWTH
Hoppe, F. /Inman, B. S./ /FAIRCHILD HILLER CORP./ DATE- OCT. 1968
Langley-10026
Ultrasonic reflection system automatically and nondestructively detects and records the propagation of fatigue cracks in test specimens undergoing fatigue cycling. A reflector plate obtains a reference signal and monitors the location of the tip of a propagating fatigue crack.

B68-10382
SYSTEM MEASURES RESPONSE TIME OF MULTIPLIER TUBES
Lund, N./ DATE- OCT. 1968
Lewis-10437
Calibration system enables precise determination of rise time of photosensitive detectors. To perform a calibration, the time-voltage curve of the excitation voltage for a light source is compared with the time-voltage curve of the voltage output from a photosensitive detector which is responding to the light.

B68-10384
IMPROVED LIMITER FOR TURN-ON CURRENT TRANSIENT
Halleck, F. C./ DATE- OCT. 1968
GSFC-10413
Circuit limits the turn-on current transient to a
specified amplitude and provides a low-impedance path between supply voltage and load after a
prescribed time interval. The circuit offers a wide range of flexibility in adjusting peak
current and automatic control of the initial peak

B68-10386
LOW-COST, FAST-RESPONSE DRIVE CIRCUIT FOR
ELECTROMAGNETIC TORSION MOTORS
ZELLES, J. B. DATE- OCT. 1968

LEWIS-10143
Fast-response coil drive circuit, for
electromagnetic torque motors, reduces the
inductive coil time constant with a minimum of
circuit sophistication. The low-cost regulator
servoamplifier is used with a compatible
preamplifier stage which provides the servo-loop function of summing, adjustable gain and
compensation.

B68-10388
METHOD FOR REDUCING SNAP IN MAGNETIC
AMPLIFIERS
FISCHER, R. L. E. WORD, J. L. DATE- OCT. 1968

LEWIS-10388
Method of reducing snap in magnetic amplifiers
uses a degenerative feedback circuit consisting of
a resistor and a separate winding on a magnetic
core. The feedback circuit extends amplifier range by allowing it to be used at lower values of
output current.

B68-10389
METHOD FOR MAKING SMALL POINTED
THERMOCOUPLES
STOTT, C. H. DATE- OCT. 1968

SAN-10014
Contacts wire worked to a needle point and
covered with a copper coating produces a small,
concentric, fast-reaction thermocouple that has
the fast response time necessary to measure rapid
temperature changes accurately and only slightly
alters the environment being measured.

B68-10397
CHARTS DESIGNATE PROBABLE FUTURE
OCEANOGRAPHIC RESEARCH NEEDS
SPON- INNOVATORS NOT GIVEN /MCDOWELL DOUGLAS CO./
DATE- OCT. 1968

K-20020
Charts outline the questions and problems of
oceanographic research in the future. NASA uses
the charts to estimate the probable requirements for instrumentation carried by satellites engaged
in cooperative programs with other agencies
concerned with identification, analysis, and
solution of many of these problems.

B68-10399
AUTOMATIC SOLAR LAMP INTENSITY CONTROL
SYSTEM
LEVYEST, H. MANDELL, H. DATE- NOV. 1968

IEE-10017
System that substitutes solar cells directly in
the path of the radiation incident on the test
volume and uses a 5c bridge-null system was
developed. The solar cell is affixed to a heat
shield mounted on each of three arms for each solar
lamp. Control of the radiation from the solar
lamps is automatic.

B68-10400
LITHIUM-TELLURIUM BI METALIC CELL HAS
INCREASED VOLTAGE
CHIUKS, R. J. ROGERS, G. L. SHIMOTAKE, H. DATE-
NOV. 1968

ARG-10141
Lithium-tellurium secondary cell with a fused
lithium halide electrolyte, tested in the
temperature range 467 degrees to 500 degrees C,
showed improvement over the sodium bismuth cell.
The voltage of this bimetallic cell was increased by
using the more electropositive anode material,
lithium, and the more electronegative cathode
material, tellurium.

B68-10402
SYSTEMS FOR MEASURING SPATIAL DISTRIBUTION OF
JECTED DROPLETS, A CONCEPT
ATTAZAR, R. A. /N. A. ROCKWELL CORP./ DATE-
NOV. 1968

B68-10185
System measures the spatial distribution of
high-velocity droplets ejected from a or spray gun. The system employs an electrically resistive grid as the sensing screen, electrical leads, and a signal scanner such as a cathode ray
tube.

B68-10404
DESIGN CONCEPT FOR MONORAIL ELECTRICAL
CONNECTOR
BOLINGER, R. E. DOUGLAS AIRCRAFT CO./ DATE- NOV.
1968

M-FS-14037
Connector plug automatically minimizes arcing
during mating and demating. This plug uses a
high-resistivity outer sheath as an extension to
the regular pin contact. It is used in atmospheres containing explosive gases, and
reduces erosion at the contact surfaces where
arcing and demating are performed frequently.

B68-10411
INVERTED GROUNDING TECHNIQUE FOR ELECTRON
BEAM HEATING
JIBERG, R. J. DATE- DEC. 1968

LEWIS-10543
In the production of high temperature by electron
bombardment the cathode is held at ground
potential while the hot anode is raised to a high
potential. An annealing chamber using the
inverted grounding is constructed around a
commercially available stainless steel cross.

B68-10412
AUTOMATIC CALIBRATION SYSTEM FOR PRESSURE
TRANSUDERS
SPON- INNOVATORS NOT GIVEN /G. T. SCHJELDAHL CO./
DATE- DEC. 1968

M-FS-2017
Fifty-channel automatic pressure transducer
calibration system increases quantity and accuracy
for test evaluation calibration. The pressure
transducers are installed in an environmental
test chamber and manifolded to connect them to a
pressure balance which is uniform.

B68-10413
UV DETECTOR MONITORS ORGANIC CONTAMINATION
OF OPTICAL SURFACES
CERNER, G. S.KENNEDY, B. W. DATE- DEC. 1968

M-FS-20246
Silicon carbide, insensitive to visible light, is
used in photodetectors. System contamination can
be monitored during the normal operation without
interference to the operator, and without
shielding from ambient light.

B68-10415
NEW BIMETALLIC RFM CELL SHOWS PROMISE IN
DIRECT ENERGY CONVERSION
HEDSON, J. C. SHIMOTAKE, H. DATE- NOV. 1968

ARG-10183
Concentration cell, based upon a thermally
regenerative cell principle, produces electrical
energy from any large heat source. This
experimental bimetallic RFM cell uses a
sodium-bismuth alloy cathode and a pure liquid
sodium anode. The cell exhibits reliability,
corrosion resistance, and high current density
performance.

B68-10420
HIGH RESOLUTION GE/LZ SPECTROMETER
REDUCES RATE-DEPENDENT DISTORTIONS AT HIGH
COUNTING RATES
SHERMAN, R. LARSEN, R. W. MANN, H. M. SUDNICK,
S. J. SHEERAN, I. S. SPATIGS, M. G. DATE- NOV.
1968

ARG-10144
Modified spectrometer system with a low-noise
preamplifier reduces rate-dependent distortions at
high counting rates, 25,000 counts per second.
Pole-zero cancellation minimizes pulse

WATER SUPPLY
ALLEN, C. F. NILLEMAN, J. S. /CARY CORP/ DATE-
DEC. 1968 READING SEE ALSO NAG-CR-41573
NAG-11827

Electrolytic water sterilizer controls microbial
contamination in manned spacecraft. Individual
sterilizer cells are self-contained and require no
external power or control. The sterilizer
generates silver ions which do not impart an
unpleasant taste to water.

B68-10558
COMBINATION PEECE FOR AIRFLOW MEASUREMENTS
JULIAN, T. J. GLANE, I. K. KLAUSE, L. N.
DATE- DEC. 1968
LEWIS-10281

Pree combines a high-recovery shielded
thermocouple for sensing total temperature, a
total pressure sensing tube, and a flow direction
sensing wedge having a 60 degree included angle.

B68-10559
ACCELERATION INSENSITIVE FLUID EXPANSION
COMPRESSOR
HUGHES, L. F. /MIT/ DATE- OCT. 1968
NRC-10512

Device compensate for temperature and
acceleration effects on a fluid-floated mass in a
sealed container of a high performance angular or
acceleration sensing instrument. It is used in
precision instruments for regulation of gasses or
liquids in a moving body.

B68-10562
RELIABLE METHOD FOR TESTING GROSS LEAKS IN
SEMICONDUCTOR COMPONENT PACKAGES
ALTSHUGER, T. L. DATE- DEC. 1968

70
ERC-10150

Simple, reliable, inexpensive method for gross-leak testing has been devised, based upon the conventional fine-leak technique. The sensitivity ranges from the detection of very large leaks down to leaks of 10 to the minus seven cc helium per sec.

B68-10563

PRESSURE-SENSITIVE BONDED JUNCTION TRANSDUCERS

IANNIUI, A. RIMMER, W. DATE- OCT. 1968

Miniature transducers involve the use of appropriate commercial epoxy resins. Design protects the sensitive semiconductor surface from abrasives and excludes an air space in the device capsule.

B68-10565

LOCATING **SNAKE PATHS** IN ELECTRICAL CIRCUITY

DANBACK, T. M. /BOEING CO./ DATE- DEC. 1968

Use of a matrix system wherein circuit pin connections are assigned arbitrary designators and these used in formation of the matrix is illustrated. The matrix is a format that shows the current paths.

B68-10566

WELDING SKATE WITH COMPUTERIZED CONTROLS

WALL, W. A., JR. DATE- NOV. 1968

New welding skate concept for automatic TIG welding of contoured or double-contoured parts combines lightweight welding apparatus with electrical circuitry which computes the desired torch angle and positions a torch and cold-wire guide angle manipulator.

B68-10572

DESIGN OF DISSIPATIVE LINEAR PHASE FILTERS

PHARES, R. L. /SFLC, INC./ DATE- DEC. 1968

Set of design curves eliminates work involved in designing linear phase filters by being normalized in such a way as to apply to low, band, and high-pass filters of any bandwidth. Similar curves for any number of poles are plotted by solving a system of simultaneous equations.

B69-10012

MICROWAVE INTERFEROMETER CONTROLS CUTTING DEPTH OF PLASTICS

Microwave interferometer system controls the cutting of plastic materials to a prescribed depth. The interferometer is mounted on a carriage with a spindle and cutting tool. A cross slide, mounted on the carriage, allows the interferometer and cutter to move toward or away from the plastic workplace.

B69-10013

DEVICE FOR DUTY TUNING IN A STRIPLINE VARACTOR HARMONIC MULTIPLIER

STREIT, K. F. /SYLVANIA ELECTRON. SYSTEMS/ DATE- FEB. 1969

Stripline varactor harmonic multiplier uses a device for positioning the varactor diode with respect to the stripline circuit to obtain series resonance. The device also reduces detuning effects due to thermal expansion, over a wide temperature range.

B69-10014

ISOLATED, MULTIPLE-OUTPUT VOLTAGE DC-TO-DC CONVERTER

SGSN- INNOVATOR NOT GIVE /HUBBELL UNIV./ DATE- FEB. 1969 /SEE ALSO NASA-DE-61737

Isolated, multiple output voltage dc-to-dc converter provides power for television transmitter used in space vehicles. The isolation is accomplished by using a single-end switching transformer circuit. The converter is completely solid state.

B69-10015

MILLIVOLT SIGNAL LIMITER

HANSEN, I. G. PETRUS, V. S. DATE- FEB. 1969

Low-voltage limiter circuit suppresses the output of platinum probes at temperatures beyond their operating range. The limiter circuit comprises an operational amplifier with a dual feedback loop. The signal limiter is useful in low-voltage instrumentation circuits normally operable or set for cryogenic temperatures.

B69-10027

MOSSBAUER-EFFECT DATA-COLLECTION SYSTEM

ASCHEEBENNE, K. A. VONDEBRO, R. H. DATE- FEB. 1969

A Data collection system which uses a small, general-purpose digital computer provides data acquisition from, and minor control of, four Mossbauer-effect experiments. This system is economical with no loss of versatility to the experimenter and is useful in handling large volumes of data from research experiments.

B69-10032

SIMPLE SWITCH ACTUATED BY FORCE APPLIED OVER WIDE SOLID ANGLE

NELSON, B./HUGIES AIRCRAFT CO./ DATE- FEB. 1969

XRF-05808

Electric switch can be actuated/ closed/ by a force applied from any direction within a hemispheric envelope. The switch is comprised of a flexible, electrically conductive reed holding a conductive contact disc, mounted concentrically within a conductive tube.

B69-10037

USE OF BOTH LINEAR AND LOGARITHMIC TRANSFER FUNCTIONS TO INCREASE DYNAMIC RANGE OF VISUAL CHANNEL

FEESETO, E. T. /SCA/ DATE- FEB. 1969

GSFC-10675

Using both linear and logarithmic transfer functions in the visual channels of a dual channel radiometer increases the dynamic range to better than 1 to 10,000 foot-lamberts.

B69-10045

THICK TRANSDUCERS USED FOR GENERATING SHORT-DURATION STRESS PULSES IN THIN SPECIMENS

PETRUS, W. G. ROSEN, M. DATE- FEB. 1969

ARG-10232

By generating short stress pulses with thick transducers, the pulse-echo method for determining sound velocities and acoustic attenuation can be applied to this specimen. The stress pulses enter a specimen where one pulse is reflected several times before a succeeding pulse enters the specimen.

B69-10050

FLOW ANGLE SENSOR AND READOUT SYSTEM

HANSEN, J. G. PETRUS, V. S. DATE- FEB. 1969

LEWIS-90298

Sensor determines fluid flow angles by means of a simple vane that positions itself in the direction of the flow. The vane rotates a small light-reflecting disc as it moves while the readout system uses two cyclically polarized light beams.

B69-10056

FRANGIBLE ELECTROCHEMICAL CELL AND SEALING TECHNIQUE

HUFFST, G. HAYNE, J. SHERFFY, J. DATE- MAR. 1969

XES-10010

Electrochemical cell assembly, which includes a positive electrode plate between two negative electrode plates, is both flexible and compact, and frangible under severe shock conditions. Leak-tight integrity of the housing is maintained by polymer-to-polymer fusion bonds through holes in the expanded metal electrode terminals.

71
Microelectronic oscillator uses a bipolar transistor to circumvent the problems of developing suitable inductors for lower frequencies. The oscillator is fabricated by hybrid thin-film techniques or by monolithic construction. Discrete microcircuit components may also be employed.

B69-10064
MICROELECTRONIC OSCILLATOR
KLEINBERG, L. L. DATE- MAR. 1969 BEAN- SEE ALSO
GSPC-10375
Dipolar transistor operated in a grounded base configuration is used as the inductor in a microelectronic oscillator. This configuration is employed using thin-film hybrid technology and is also applicable to monolithic technology.

B69-10070
ANALYSIS OF MAGNETICALLY-COERCE COUPLED PROCESSES IN PULSE-MODULATION SYSTEMS
VEILLETTE, L. J. DATE- MAR. 1969
GSP-10241
Investigation established analytic expressions for the design of pulse modulators with modulating signal control of the resonant level of film in a nonlinear magnetic core. Expressions derived are applicable to both pulse-width and pulse-rate modulator designs.

B69-10073
ELECTRONIC VISUALIZATION OF GAS BEARING BEHAVIOR
EVANS, E. C. KLASSEN, H. A. WONG, R. Y. DATE- MAR. 1969
LEWIS-10711
Visualization technique produces a visual simulation of gas bearing operation by electronically combining the outputs from the clearance probes used to monitor bearing component motion. Computerized recordings of the probe output are processed and displayed on an oscilloscope screen and recorded with a high-speed motion picture camera.

B69-10090
PERFORMANCE OF LOW-PRESSURE THERMIONIC CONVERTERS IN EVALUATED
RICHARDS, R. E. DATE- APR. 1969 BEAN- SEE ALSO
ANG-7377
ARG-10276
Experiments, evaluating the performance of low-pressure thermionic converters, were conducted with cesium, potassium, and rubidium metal vapors. The results of the investigation are useful in the selection of favorable conditions for the design of thermionic reactor fuel elements, including HP output for special applications.

B69-10093
STRUCTURAL ANALYSIS AND THEORY OF INTERPRETIVE SYSTEM /SAMS/ /SPOR- INVENTOR NOT GIVEN /PHILCO CORP./ DATE- APR. 1969 BEAN- SEE ALSO B67-10171
PO-10839
SAMS digital computer program simplifies automated structural analysis and eliminates reprogramming for problem changes. Program objectives are achieved by standardizing, by providing a modular program, and by programming for intermediate-size problems.

B69-10094
ON-LINE COMPUTER SYSTEM FOR USE WITH LOW-ENERGY NUCLEAR PHYSICS EXPERIMENTS IS REPORTED
GEMBELL, D. S. DATE- MAY 1969 BEAN- SEE ALSO
ANG-6933
ARG-10257
Computer program handles data from low-energy nuclear physics experiments, including the WD-160 pulse-height analyzer and the PHILICO computing system. The program allows experimenters to choose from about 50 different basic data-handling functions and to prescribe the order in which these functions will be performed.

B69-10095
SIMPLE DEMODULATOR FOR TELEMETRY PHASE-SHIFT KEYED SUBCARRIERS
COWILLON, L. A. DATE- MAY 1969
NPQ-11000
Circuit, suitable for operation at high signal-to-noise ratio environments, recovers pulse-code modulated data from digital telemetry systems which use phase-shift keyed subcarrier techniques. This demodulator is easily constructed from microcircuit elements and may be applied where low-cost, relatively high-level signal systems are used.

B69-10096
SILICON CARBIDE DIODE FOR INCREASED LIGHT OUTPUT
GRITZMANS, L. M. NORMANS, A. I. /TTCO LABS./ DATE- JUN. 1969
NPQ-20063
Transition metals improve the overall light output and the output in particular regions of the electroluminescent of a silicon carbide semiconductor device. These metals /impurities/ introduce levels that can be pumped electrically and affect the efficiency of the recombination process involved in emission of radiation.

B69-10097
MOUNTING METHOD IMPROVES ELECTRICAL AND VIBRATIONAL CHARACTERISTICS OF SCREEN ELECTRODES
MELSON, R. E. /WESTINGHOUSE ELECTRIC CORP./ DATE- JUN. 1969
NPQ-20169
Electrical characteristics of the mesh or screen electrodes used in electron tubes are improved by decreasing the shunt capacitance of the tube while retaining the close spacing needed for the required resolution. Vibrational characteristics are enhanced by raising the natural resonant frequency.

B69-10101
IMPROVED PHASE-SHIFT-KEYED DETECTOR
CHANDLER, J. /SHERRY RAND CORP./ DATE- MAY 1969
NPQ-20064
Improved phase-shift-keyed detector contains an active filter circuit which uses an operational amplifier and resistor-capacitor network. The detector is used in the Saturn space vehicle and Apollo telescope mount command systems to translate raw analog signals from the command receiver into digital information for the command decoder.

B69-10113
SURFACE TEMPERATURE MAPPING WITH INFRARED PHOTOGRAPHIC PYROMETRY
POLLACK, P. G. DATE- JUN. 1969
LEWIS-10763
Infrared photographic pyrometry method measures and maps the temperature distribution on a heated surface with accuracy and precision. This method involves the collection, detection and measurement of a narrow bandwidth of emitted infrared radiation. Standard commercially-available equipment is used, together with systematic procedures.

B69-10114
OPTICALLY INDUCED FREE CARRIER LIGHT MODULATOR
GRUBER, C. L. RICHARDS, W. E. DATE- APR. 1969
GSPC-10216
Signal carrier laser beam is optically modulated by a second laser beam of different frequency acting on a free carrier source to which the signal carrier laser is directed. The second laser beam affects the transmission characteristics of the free carrier source to light from the signal carrier laser, thus modulating it.
Tunnel diode circuit, capable of timing the zero crossing point of bipolar pulses, provides effective design for a fast crossing detector. It combines a nonlinear load line with the diode to detect the zero crossing of a wide range of input waveshapes.

B69-10117

REMOTE-LY-ACTUATED BIOMEDICAL SWITCH

LEE, R. D. DATE- APR. 1969

Remotely-actuated biomedical switching circuit using transistors consumes no power in the off position and can be actuated by a single-frequency telemetry pulse to control implanted instrumentation. Silicon controlled rectifiers permit the circuit design which imposes zero drain on supply batteries when not in use.

B69-10120

BOOTSTRAP UNLOADER

PFIFNER, H. J. /HUGHES AIRCRAFT CO./ DATE- MAY 1969

KNO-09768

Circuit can sample a number of transducers in sequence without drawing from them. This bootstrap unloader uses a differential amplifier with one input connected to a circuit which is the equivalent of the circuit to be unloaded, and the other input delivering the proper unloading currents.

B69-10121

CIRCUITRY SELECTIVELY LIMITS DATA

STORAGE IN GENERAL PURPOSE COMPUTER

SLIGHTER, D. K. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1969

GSPC-10605

Circuitry limits storage in the memory of a stored program general purpose digital computer by permitting storage or writing to certain, specified areas of memory. The limit register used in the computer is easily set under program control, and the memory block size and position is readily changed to suit each specific program.

B69-10125

ROSEBAUER VIBRATION CALIBRATION SYSTEMS

EVALUATED

K-PS-20014

Rosebaeur effect vibration calibrator measures the velocity of high frequency, low amplitude vibration at various velocity and frequency ranges. It contains a highly precise calibrations standard unit and a vibration measuring system and may be applied to ultrasound testing and calibrating presoelectric shakers and vibration transducers.

B69-10126

INTEGRATED CIRCUIT WITH MULTIPLE COLLECTOR CURRENT SOURCE

HELDSTROM, R. J. LIN, S. C. /WESTINGHOUSE ELEC. CORP./ DATE- MAY 1969

K-PS-20177

Integrated circuit with multiple collector current source achieves the equivalent of a large number of resistors in a small area. Functional equivalents of a transistor reduce the size requirement for low power integrated circuits, providing an efficient alternative to the conventional diffused resistor process in integrated circuit fabrication.

B69-10129

CONCEPT FOR A MULTIFUNCTIONAL OSCILLOSCOPE PROBE

STEINER, E. J. /ROCKETDYNE CORP./ DATE- MAY 1969

MSC-10724

Multifunctional oscilloscope probe incorporates required electronic components so that any one of three desired functions/demodulation, or low capacitance can be switched into the oscilloscope. The probe obviates the need for the three separate oscilloscope probes previously used in checking electronic equipment.

B69-10130

TUNABLE BANDPASS FILTER WITH VARIABLE SELECTIVITY

KERNIS, W. J. SHAPIRO, C. V. DATE- MAY 1969

REAN- SEE ALSO B68-10210

ARC-10191

Basic active RC networks constructed from stages that realize second-order transfer functions using two integrators offer excellent stability. Modifications of the basic network produce a highly stable bandpass filter having separate controls that independently adjust center frequency, Q, and center frequency gain.

B69-10131

HIGH-ENERGY, HIGH-POWER, LONG-LIFE BATTERY

ABERS, S. G. /HONEYWELL/LIVINGSTON ELECTRON. LAB./ DATE- MAY 1969

LEWIS-10724

High-energy-density primary battery achieves energy densities of up to 130 watt hrs./lb. The electrochemical couple consists of a lithium anode, a copper-fluoride cathode, and uses methyl formate/lithium hexafluoroarsenate for the electrolyte. Once activated, battery life is approximately 30 hours.

B69-10133

ONE HUNDRED MHz VOLTAGE-CONTROLLED OSCILLATOR ELECTRICAL POTENTIAL

SPARE, A. F., JR. DATE- MAY 1969

NF-11004

Voltage controlled oscillator (VCXO) generates a center frequency of 100 MHz with low phase noise. VCXOs at this and lower frequencies are applied to phase-lock-loop detection systems used in tracking receivers and telemetry systems.

B69-10135

ION TRANSPORT MECHANISM IN FOSSIL FUEL CELL ELECTRODES

JOHansson, I. LINDBORG, I. /ALLAMENNA SVENSKA ELEKTR. ARTSBEKLAGET/ DATE- MAY 1969

BL-10343

Results of experiments on hydrogen-oxygen fuel cells show that higher current densities are obtained with cell anodes having a 100 micron thick active layer of porous nickel containing silver electrocatalyst. Increase in current density is attributed to a convective mass transport mechanism.

B69-10140

FULL WAVE DC-TO-DC CONVERTER USING ENERGY STORAGE TRANSFORMERS

MOORE, E. T. WILSON, T. G. /WILMORE ELECTRON. CORP./ DATE- MAY 1969

LEWIS-10375

Full wave dc-to-dc converter, for an ion thruster, uses energy storage transformers to provide a method of dc-to-dc conversion and regulation. The converter has a high degree of physical simplicity, is lightweight and has high efficiency.

B69-10143

SCHMIT TRIGGER MULTIVIBRATOR

THURBER, R. P. DATE- MAY 1969

MSC-10955
Schmitt trigger multivibrator circuit, capable of
stable, repetitive or bistable operation. It
incorporates an input circuit in conjunction with
a Schmitt trigger circuit. The circuits form two
output signal levels, useful in switching
circuit applications, initiates oscillations, and
forms highly unsymmetrical wave forms.

B69-10149
CALIBRATION OF A RESISTANCE THERMOMETER
DOWN TO 0.04 DEGREES K
CULBERT, R. V. /SUNGAITL, Z. DATE- MAY 1969
ARG-10316
Method for calibrating germanium-resistance
thermometers in cryostats between 0.4 degrees K
and 4 degrees K involves extrapolating the
specific heat of a single metal to low
temperatures. This method is used when a
magnetic thermometer is not available.

B69-10151
POSITIVE AND NEGATIVE OUTPUT CIRCUITS
LEWIS-10715
Trigger circuit has a fixed positive output in the
on state and a fixed negative output in the off
state. The amplitude of the positive and
negative pulses may be independently chosen.

B69-10152
SURFACE IRREGULARITIES DETECTED BY FLARE
TELESCOPIC INSTRUMENT
ZOKES, H. R. /ETIHIO PHYS./ DATE- MAY 1969
M-P-20157
Portables fiber optics sensing device which detects
surface irregularities in a specific tube flare, is
taken, scanned and run out with only one setup.
Capabilities of the instrument can be expanded to
include surface inspection of various kinds of
tube flares.

B69-10153
PCB DETECTION WITH CORRECTION FOR
INTERSYMBOL INTERFERENCE
THOMAS, A. H. /NEW YORK UNIV./ DATE- MAY 1969
GSPC-10155
For pulse code modulation bits, received signals
are filtered by integrate and dump filter from
which samples are directed to end of PCB bit.
Threshold decision circuit determines level of
sample voltage. Effects of interference of known
past bit can be corrected by raising or lowering
threshold voltage value.

B69-10154
TECHNICAL REPORT ON GALVANIC CELLS WITH
FUSED-SALT ELECTROLYTES
CABRÉ, J. J. /COUGHARRELL, C. E. FISCHER, A. E.
FOSTER, H. S. /BESSON, J. C. JOHNSON, C. E.
BEN-SER ALSO ANL-7316
ARG-10297
Technical report is presented on sodium and
lithium cells using fused salt electrolytes. It
includes a discussion of the thermally
regenerative galvanic cell and the secondary
bi-metallic cell for storage of electricity.

B69-10155
VACUUM GAGE SYSTEM FOR RADIATION ENVIRONMENT
SUMMERS, R. L. DATE- MAY 1969
LEWIS-10730
Hot-cathode ionization gages used to measure
high-vacuum pressures are subject to error when
ionizing radiation is present. Because this
radiation creates additional ions, a second ion
gage is mounted near the pressure-measuring gage
to detect and measure the radiation induced error.

B69-10156
EXPERIMENTAL PRECISION OF PERFORMACE
BY SUPERCONDUCTING CABLES
BROoks, J. S. /FISCHER, J. H. DATE- JUN. 1969
ARG-10245
Broken superconductor method of short sample
testing makes possible the prediction of the
performance of well cooled, stabilized,
superconducting cable coils. It yields a
field-versus-current curve for a short sample of
cable. Plots are drawn for the superconductor
and copper currents at various magnetic field
strengths.

B69-10162
MAGNETOHYDRODYNAMIC GENERATORS USING
TWO-PHASE LIQUID-METAL FLOWS
PETRICK, R. DATE- JUN. 1969
ARG-10168
Two-phase flow generator cycle of a
magnetohydrodynamic /MHD/ generator uses a
working fluid which is compressible and treated as
an expanding gas. The two-phase mixture passes
from the heat source through the MHD generator,
where the expansion process takes place and the
electrical energy is extracted.

B69-10173
GAGE PROVIDES AUDIBLE SIGNAL TO FACILITATE
CHECKOUT OF CONNECTOR PINS
MORTON, R. J. /BOEING CO./ DATE- JUN. 1969
KSC-10135
Commercial push gage has been modified to enable
rapid, accurate testing of paddle pins in
distributors, bullet pins and patch boards. The
purpose of the gage is to ensure that the pins
will not break electrical contact when they are
subjected to a minus, preset pressure.

B69-10186
SPECTRAL ION SOURCE
JALL, L. G. /SDS DATA SYSTEMS/ DATE- JUN. 1969
IEEE-6898
Radial focusing of electrons in ion source
produces greater ion densities, resulting in
higher resolution and focus capability for a given
source volume. Electron beam is focused near
exit aperture by spherical fields. High density
ions allow focusing ion beam to high density at
echo, allowing high current through small
aperture.

B69-10191
LINEAR-LOG COUNTING-RATE METER USES
TRANSCONDUCTANCE CHARACTERISTICS OF A
SILICON PLANAR TRANSISTOR
EICHBLOZ, J. J. DATE- JUL. 1969 BRAN- SEE ALSO
ANL-6968
ARG-10158
Counting rate meter compresses a wide range of
data values, or decades of current. Silicon
planar transistor, operating in the zero
 collector-base voltage mode, is used as a feedback
element in an operational amplifier to obtain the
log response.

B69-10212
SINGLE-COMPONENT SCRATCH-GAGE FORCE TRANSDUCER
SCOTT, C. H. DATE- JUL. 1969
LANY-10496
Single-component scratch-gage transducer
incorporates a unique motion magnification scheme
to increase the magnitude of the load measuring
scratch approximately 15 times over that of
conventional models. It is small, load carrying
and high in natural frequency.

B69-10213
MAGNETICALLY COUPLED EMISISON REGULATOR
SPORE- INNOVATOR NOT GIVEN /CONSULTANTS AND
DESIGNERS/ DATE- JUL. 1969
GSPC-10056
Magnetic coupling between input and power handling
circuits isolates high voltage. A feedback
regulator samples the ion source bias current and
provides deviation signals to a magnetic amplifier
pulse modulator. The pulse modulator controls the
dc to ac power inverter which in turn, controls the
emission current.

B69-10215
TECHNIQUE FOR TUNING ANTENNA SYSTEMS
REED, E. /BOEING CO./ DATE- AUR. 1969
KSC-10060
Sweep and marker generators tune and match antenna
system in its operational environment. Sweep
generator simulates transmissions over entire
frequency range of the antenna receiving system. Marker generator identifies frequency points along the wave form displayed on oscilloscope.

B69-10216
COMPENSATION OF PULSE-REBALANCED INERTIAL INSTRUMENTS
LUND, C. E. DATE- JUL. 1969
MSC-12000
Study explains the basic concept of pulse-rebalanced inertial instruments in terms of an idealized model which performs the processes of integration, prediction and quantization. An analytical model of an actual pulse-rebalanced instrument was derived in a form comparable to the idealized system.

B69-10217
LOW-COST VOLTAGE-LEVEL DETECTOR
STUDMAN, J. C. DATE- JUN. 1969
LEWIS-10858
Integrated circuit senses when the voltage level has exceeded or is below a given reference level. The circuit, consisting of a differential amplifier, an SCR, and a pair of zener diodes, is useful for overload detection and monitoring power supplies.

B69-10218
PROTECTIVE CLOTHING FOR WORKERS WITH 5 KW AND 20 KW SHORT-ARC LAMPS
ARGOO, R. J. DATE- JUL. 1969
FDO-1155
Two suits of protective clothing reduce hazards to personnel working near short-arc lamps. One suit is worn during assembly or servicing of inoperative 5- and 20-kw lamps. The other suit is worn during adjustment or focusing of operating 5-kw lamps.

B69-10220
LINEAR VOLTAGE-TO-FREQUENCY CONVERTER
LORENSON, D. C. DATE- JUL. 1969
GSFC-10264
Voltage-to-frequency converter, with ultra-high input impedance and linear response, is used in analog to digital data conversion systems. Voltage-to-current converter, using MOSFET devices and a multivibrator, has ultra-linear voltage-to-frequency characteristics. It replaces voltage sensitive magnetic-core oscillators.

B69-10221
MULTIPLE-MASK CHEMICAL ETCHING
CANNON, D. L. /LOCKHEED ELECTRON CO./ DATE- AUG. 1969
MSC-13114
Multiple masking techniques use lateral etching to reduce the total area of the high etch-rate oxide exposed to the chemical etchant. One method uses a short-term etch to remove the top layer from the silicon oxide surface, another acts before the top layer is grown.

B69-10224
TWO DEVICES FOR ANALYSIS OF MYSTAGMUS
GUNDEY, P. J. /NAVAL AEROSPACE MED. INST./ TOEBPS, G. /NAVAL AEROSPACE MED. CENTER/ DATE- JUL. 1969
HC-10227
Electromechanical Slope Computer /ESC/ and Electronic Swatation Device /ESD/ facilitate rapid analysis of mystagmus records. The ESC reads out the slope and time of each mystagmus wave form. The ESD provides much faster analysis than the ESC. It provides an immediate analog display and digital display of analyzed mystagmus.

B69-10225
HIGH-SPEED BUFFER WITH A LOW-IMPEDANCE OUTPUT
AMBOY, G. D. DATE- JUL. 1969
MSC-12259
Technique using photodiode effect of semiconductor in high-Q superconductive cavity gives initial improvement of 2-4 db in signal-to-noise enhancement of conventional RF communication systems. Wide band signal plus noise can be transmitted through a narrow-band cavity due to parametric perturbation of the cavity frequency or phase.

B69-10228
COBALT IMPROVES NICKEL HYDROXIDE ELECTRODES FOR BATTERIES
LENNER, S. R. /GULTON IND./ SEIGER, H. N. DATE- JUL. 1969
LEW-10760
Positive nickel hydroxide electrodes containing 20 mole percent of cobalt hydroxide are more efficient than when impregnated to the same degree by weight with nickel hydroxide alone. Charge-acceptance and oxygen-evolution tests indicate cobalt electrodes are more efficient than plain positive nickel hydroxide electrodes at all rates of charge.

B69-10230
HIGHLY LINEAR, SENSITIVE ANALOG-TO-DIGITAL CONVERTER
COX, J. /GULTON IND./ FINLEY, W. R. DATE- JUL. 1969
MSC-13110
Analog-to-digital converter converts 10 volt full scale input signal into 13 bit digital output. Advantages include high sensitivity, linearity, low quantizing error, high resistance to mechanical shock and vibration loads, and temporary data storage capabilities.

B69-10233
SEGMENTED SIGE-PTE COUPLES
EGGERS, P. E. /BATTLELE RESEARCH INST./ MUELLER, J. DATE- JUL. 1969
GSFC-10746
New design of segmented couples incorporates an intermediate junction contacted by pressure, and eliminates transition layers that bond materials differing in thermal expansion. Development of a reproducible and reliable intermediate junction between PbTe and SiO2 will be applicable to direct conversion of energy.

B69-10244
CONCEPTUAL TECHNIQUES FOR REDUCING PARASITIC CURRENT GAIN OF LATERAL PNP TRANSISTORS
GALLAGHER, R. C. /WESTINGHOUSE BELL TELEPHONE LABS/ SCOTT, J. R. DATE- JUL. 1969
MSC-13199
Two techniques have been conceptually proposed as possible means of reducing parasitic beta in lateral p-n-p transistors. One method uses a degenerate substrate and high concentration P plus guard-ring diffusion, another places the base contact at the center of an annular ring structure.

B69-10246
NOVEL TERMINAL STRIPS FOR TRANSFORMERS
WILL, E. R. DATE- JUL. 1969
NPO-10842
Spacing tinned terminal leads between two tapes of woven glass fiber that are sandwich-bonded with pliable epoxy adhesive alleviates problems of taped leads pulling away from the transformer and shorting due to crossover of wires. Individual leads may or may not be enclosed in glass-fiber sleeves.

B69-10247
SIMPLIFIED SYSTEM DISPLAYS COMPLEX CURVES CORRESPONDING TO INPUT DATA
HERBONS, M. L. /MIT/ DATE- AUG. 1969
HC-10073
Cathode ray oscilloscope displays curves or contours of complex shapes corresponding to sets of x, y coordinates. It requires few storage facilities and produces a rapid display of complex curves with a fewer number of commands than previous systems.

B69-10251
LOW-LOSS *** BAND PARASITIC PHONES
CRIBB, R. E. DATE- JUL. 1969  
KSC-09348  
Low insertion-loss C band parasitic probe couples RF energy from a transmitting medium to a receiving medium with a minimum of interference in order to minimize power requirements.

B69-10253  
RADIATION TOLERANT SILICON NITRIDE INSULATED GATE FIELD EFFECT TRANSISTORS  
NEUMAN, P. A. DATE- JUL. 1969  
GSFC-10581  
Metal-Insulated-Semiconductor Field Effect Transistor (MISFET) device uses a silicon nitride passivation layer over a thin silicon oxide layer to enhance the radiation tolerance. It is useful in electronic systems exposed to space radiation environment or the effects of nuclear weapons.

B69-10259  
REDUCING QUANTIZER DEADBAND WITH A **RANGE SWITCHING** DIGITAL FILTER  
CARROLL, C. C. /AUBURN UNIV./ DATE- AUG. 1969  
M-PS-20419  
Range switching digital filter with three predetermined quantization levels decreases quantization deadband. Mathematical program forms the transfer function of the filter.

B69-10269  
MULTI-CONE FEED FOR CASSEGRAINIAN ANTENNA  
STELZRIED, C. T. DATE- AUG. 1969  
NPO-10539  
Multiple-cone feed horn system for a Cassegrainian antenna using a rotatable hyperboloid in conjunction with a multiple cone system is possible by moving hyperboloid relative to fixed multiple feeds and paraboloid. The hyperboloid can be adjusted so that, for each feed, it is in the best possible position.

B69-10270  
PRECISE GIMBALLING MECHANISM  
FERRERA, J. B. JOHNSON, G. B. PERKINS, G. S. DATE- AUG. 1969  
NPO-11057  
Prototype support mechanisms allow precise and repeatable gimbaling of engines with a minimum of lost motion and backlash. It also minimizes the use of gears and reduces lubrication requirements for long time space operations of several years duration.

B69-10271  
IMPROVED METHOD OF FABRICATING PLANAR GALIUM ARSENIDE DIODES  
ROY, Y. S. YEH, T. H. DATE- AUG. 1969  
TRW-04235  
Improved method fabricates electroluminescent planar P-W gallium arsenide diodes. Gallium is masked with silicon monoxide to allow N-type impurities to be diffused into unmasked portions of GaAs to form P-N junctions.

B69-10272  
NONDESTRUCTIVE EVALUATION OF PRINTED WIRING BOARDS BY MICROWAVE RESISTANCE MEASUREMENTS  
STIEFEL, R. DATE- AUG. 1969  
SAM-10034  
Application of the microk measuring circuit to data of printed through-hole resistances, when combined with appropriate probes, provides data that can be related to the quality of copper plating on printed wiring boards. Acceptance limits can be established and continuing inspection performed, with plating defects causing abnormal readings.

B69-10274  
RESONANT MICROWAVE DIELECTRIC SURFACE  
STEPH, H. /LOCKHEED ELECTRONICS CO./ SAKELLAROPOULOS, P. G. DATE- DEC. 1969  
GSFC-10568  
Dielectric surface has high stopband filter characteristics with a low stopband-to-passband frequency ratio. It utilizes two stagger-tuned, resonant artificial dielectric surfaces and is virtually polarization insensitive.

B69-10281  
PIEZOELECTRIC LOCK MECHANISM RESISTS LOCKPICKING  
STOETZER, O. M. DATE- AUG. 1969  
SAM-10037  
Electrically coded piezoelectric lock mechanisms are strong, have few moving parts, are restateable, and are relatively unaffected by high magnetic fields. Codes are extremely difficult to circumvent.

B69-10289  
SWEEP FREQUENCY DETECTOR  
CLAUD, R. C. DATE- AUG. 1969  
NPO-10669  
Sweep detector or passive spectrum analyzer provides a positive monitoring of the bandwidth of the input amplifier of a tracking receiver. Used with an oscilloscope, it provides a visual display of a microwave amplifier bandwidth.

B69-10299  
HIGH-POWER MICROWAVE POWER DIVIDER CONCEPT  
KOLLY, B. /CALIF. INST. OF TECHNOL./ DATE- AUG. 1969  
NPO-11031  
Variable power divider keeps microwave transmitter at full power. This preserves the bandwidth and modulation characteristics and proportions any amount of the full power from the normal antenna into a dissipative load.

B69-10297  
MAXIMUM RMS ERROR COMPARISON OF SEVERAL REDUNDANCY TECHNIQUES  
BERJUZ, N. W. /BOEING CO./ DATE- AUG. 1969  
M-FS-15075  
Paper presents mathematical comparison of several techniques with the limiting slope technique for data reduction and reconstruction. Limiting slope method results in maximum possible RMS error versus data compression ratio advantage of 2-to-1 over step and fan methods and 3-to-1 over the two point projection method.

B69-10306  
EVALUATION OF MAGNETIC MATERIALS FOR STATIC INVERTERS AND CONVERTERS  
FROST, R. E. /WESTINGHOUSE ELECTRIC CORP./ DATE- AUG. 1969  
SAM-10343  
Program studies materials for use in static inverters and converters. It gives suitable data on the behavior of commonly used materials when excited with square wave power.

B69-10307  
REMOTE CONTROL THERMAL ACTUATOR  
ENGLO, D. R. HARRIGILLA, W. T. DATE- AUG. 1969  
SAM-10873  
Thermal actuator makes precise changes in the position of one object with respect to another. Expansion of metal tubes located in the actuator changes the position of the mounting block. Capacitance probe measures the change in position of the block relative to the fixed target plate.

B69-10308  
SURVEY OF MAN-MADE ELECTRICAL NOISE AFFECTING RADIO BROADCASTING  
DISCHIANI, W. I. /BROADCAST OF AM./ DATE- AUG. 1969  
SAM-10290  
Survey, consisting of limited noise measurements, was made to augment and verify existing data at VHF and UHF and to obtain basic data at UHF. Exact frequencies were determined by the absence of intentionally generated signals around three selected frequencies.

B69-10312  
NEW PASSIVE TELEMETRY SYSTEM  
VISSCHER, J. /FAIRCILD HILLER CORP./ DATE- AUG. 1969  
SAM-10214  
Passive telemetry system enables the monitoring of vital biological functions from living organisms, without external connections or power sources.
The FM system, using a phase locked loop technique, keeps the information frequency and powering frequencies separate.

**B69-10313**

**CIRCUIT COUNTS PULSES AND INDICATES TIME OF OCCURRENCE OF SLOW PULSES**

BAUGH, W. E. /COMPUTER CONTROL CO./ TIMS, J. D.

DATE- AUG. 1969

NPO-06234

Counter includes one section which counts the first several pulses, and a second section which counts pulses from a clock between the beginning of a sampling interval and the receipt of the first pulse by the circuit. The number of clock pulses indicates receipt time of the first pulse.

**B69-10314**

**SELF-SHIELDING PRINTED CIRCUIT BOARDS FOR HIGH FREQUENCY AMPLIFIERS AND TRANSMITTERS**

DAWSON, E. /M/ DATE- Aug. 1969

NQ-10433

Printed circuit boards retaining as much copper as possible provide electromagnetic shielding between stages of the high frequency amplifiers and transmitters. Oscillation is prevented, spurious output signals are reduced, and multiple stages are kept isolated from each other, both thermally and electrically.

**B69-10315**

**SEPARATION SIMULATOR**

KSC-67-15

Separation simulator, consisting of a control panel and an electromechanical simulator unit, simulates electrical separation of space flight vehicle stages. Simulation is accomplished by electrically inserting the simulator between the normal interstage couplings of the vehicle. Actual separation is accomplished by energizing two solenoids.

**B69-10316**

**INTEGRATED SEQUENCE DISPLAY DEVICE**

ROBIN, S. B. /BOEING CO./ DATE- Aug. 1969

KSC-10681

Device integrates a planned test sequence with real-time changes indicated on a visual display which includes a record of both planned and unplanned events related to a time base. Motor driven paper chart can be advanced or reversed to display the time span of interest.

**B69-10318**

**IMPROVED ANODE DESIGN FOR METAL-CITIZEN CELLS**

ABRAHAM, F. C. /MC DONELL DOUGLAS CO./

LEWIS-10671

Method for returning electrolyte to the anode compartment in metal-oxygen second battery cells eliminates the problem of the anode drying out during charge-discharge cycling. Electrolyte forced out of the separator is returned to the anode by a microporous insert and wicking material.

**B69-10322**

**FIELD EFFECT TRANSISTOR /FET/ CIRCUIT FOR VARIABLE GAIN AMPLIFIERS**

SPAIK, G. N. /DATE- SEP. 1969

GSFC-10116

Amplifier circuit using two FETs combines improved input and output impedances with relatively large signal handling capability and an immunity from adverse effects of automatic gain control. Circuit has sources and drains in parallel plus a resistive divider for signal and bias to either of the gate terminals.

**B69-10323**

**SIMPLE, ACCURATE AUTOMATIC FREQUENCY CONTROL CIRCUITS**

BYERS, F. /DATE- DEC. 1969

KSC-10393

Automatic frequency control circuit is designed for use with voltage-controlled variable-frequency oscillators. The output frequency of the circuit is determined by a crystal oscillator.

**B69-10325**

**COMBINATION RANGING SYSTEM AND MAPPING RADIATION**

GOLDBERG, R. N. HORTON, R. L. /DATE- SEP. 1969

NPO-11001

Transmitter, radiating at a right angle to the spacecraft trajectory and intersecting the surface at a shallow angle, yields accurate radar maps of lunar or planetary surfaces. Earth based station receives the signal reflected from the planetary surface. Mapping coordinates and signal strength are produced by earth based transmitter.

**B69-10326**

**AN INTEGRATED CIRCUIT SWITCH**

BART, S. L. /TEXAS INSTRUMENTS INC./ /DATE- SEP. 1969

NPO-11073

Multi-chip integrated circuit switch consists of a GaAs photon-emitting diode in close proximity with Si phototransistor. A high current gain is obtained when the transistor has a high forward common-emitter current gain.

**B69-10327**

**AN IMPROVED METHOD FOR ELECTRICAL CABLE TERMINATIONS**

BAKER, C. [DATE- OCT. 1969

NPO-10694

Method utilizes a standard terminal lug, a braided wire passed through the barrel and overlapping the top of the lug, and a ferrule to clamp the end of the wire. Electrical connectors can be sterilized and visually inspected for reliability.

**B69-10329**

**TECHNIQUE FOR PREDICTING TEMPERATURE DISTRIBUTION IN GASES**

KASCH, A. RAGSDALE, R. /DATE- SEP. 1969

LWIT-10918

Simple algebraic equations enable calculation of the temperature distribution throughout a heat generating, radiation gas. They apply over the entire range of opacities, for any heat flux, for a temperature dependent absorption coefficient, and for a non-uniform distribution of volumetric heat sources.

**B69-10333**

**THE EFFECT OF MISMATCHED COMPONENTS ON MICROWAVE NOISE-TEMPERATURE CALIBRATIONS**

OTISIK, T. Y. /DATE- SEP. 1969

NPO-11163

Analysis of errors on microwave noise-temperature measurements is important due to development of very low-noise antennas receiving systems and in the absolute accuracies to which the noise temperatures of these systems can be calibrated. Scattering parameters describe properties of the microwave network connected between noise source and receiver.

**B69-10336**

**A METHOD FOR REDUCING SAMPLING JITTER IN DIGITAL CONTROL SYSTEMS**

ANDERSON, T. O. BURD W. J. /DATE- SEP. 1969

NPO-11092

Digital phase lock loop system is designed by smoothing the proportional control with a low pass filter. This method does not significantly affect the loop dynamics when the smoothing filter bandwidth is wide compared to loop bandwidth.

**B69-10340**

**HERMAL RECODER**

GSFC-10614

Tape recorder, using metallic tape, has a minimum of moving parts and no belts. It permits long-term bulk storage in extreme environments, and has less weight and bulk than present recording equipment.

**B69-10347**

**TRACKS OF ELECTRICAL CONDUIT OR PIPES**

77
Simplified solid-state circuit provides a closely regulated dc voltage from an unregulated dc source. It eliminates the undesirable loading effect of the emitter-base current of a transistor used in an error-sensing circuit of a regulated dc power supply.

B69-10376
HIGH-TEMPERATURE, GAS-FILLED CERAMIC RECTIFIERS, THYATRONS, AND VOLTAGE-REFERENCE TUBES
BAMS, L. A. /CE/ DATE- SEP. 1969
LWIS-90271
Thyratron, capable of being operated as a rectifier and a voltage-reference tube, was constructed and tested for 1000 hours at temperatures to 800 degrees C. With current levels at 15 amps and peak voltages of 2000 volts and frequencies at 6000 cps, tube efficiency was greater than 97 percent.

B69-10378
IMPROVED VHF DIRECTION FINDING SYSTEM
H-FS-20839
Direction finding device operating at very high frequencies requires a loop antenna, mechanical rotation, and large structures. The system is applicable to an unmanned configuration. Direction information is extracted in the form of a direction cosine analog.

B69-10380
ENERGY- STORAGE OF A PRESCRIBED IMPEDANCE
SEATON, A. F. /HUGHES AIRCRAFT CO./ DATE- SEP. 1969
NFO-10383
Reflective antenna of the parabolic type offers complete control of its aperture illumination function. The antennas beam width can be changed easily by excitation of various amounts of the line-source feed. The conical reflector collimates a beam when the field complies with certain geometric constraints.

B69-10381
PHASE MULTIPLYING ELECTRONIC SCANNING ARRAY
SEATON, A. F. /HUGHES AIRCRAFT CO./ DATE- SEP. 1969
NFO-10302
Scanning array was designed with properties of low RF loss and phase control. The array consists of a series of special waveguides, hybrids made up of two variable reactance branch arms for input signals, an edge slot for the difference port, and a sum arm for the unattended signal.

B69-10382
IMPROVED CIRCULARLY POLARIZED PLANAR-ARRAY ANTENNA
SEATON, A. F. /HUGHES AIRCRAFT CO./ DATE- SEP. 1969
NFO-10301
Slots sitting astride the virtual wall in a multimode wave guide can be used for generation of one component of a circularly polarized beam. There is a high degree of efficiency without the use of a slow-wave structure.

B69-10383
WIDE-BAND DOUBLER AND SINE WAVE QUADRATURE GENERATOR
CHOW, R. S. DATE- SEP. 1969
NFO-11133
Phase-locked loop with photosensitive control, which provides both sine and cosine outputs for subcarrier demodulation serves as a telemetry demodulator signal conditioner with a second harmonic signal for synchronization with the locally generated code.
Sensors measure the change in temperature and the flow rate of the coolant, while a multiplier computes the power dissipated in the RF load.

**B69-10385**

**IMPROVED PERCEPTUAL-MOTOR PERFORMANCE MEASUREMENT SYSTEM**

**PARKER, T. Jr. /BIOTECHNOLOGY, INC./ REILLY, F. E.**

**DATE- SEP. 1969**

**HQ-10123**

Battery of tests determines the primary dimensions of perceptual-motor performance. Eighteen basic measures range from simple tests to sophisticated electronic devices. Improved system has one unit for the subject containing test display and response elements, and one for the experimenter where test setups, programming, and scoring are accomplished.

**B69-10386**

**REAL-TIME OPERATING SYSTEM/360**

**HOPFEN, R. L. /IBM CORP./ KOPP, R. S. MUELLER, N. R. FOLLAN, W. S. VAN SANT, B. W. WELDNER, P. W.**

**DATE- SEP. 1969**

**MSC-12148**

RTOS has a cost savings advantage for real-time applications, such as those with card inputs requiring a flexible data routing facility, display systems simplified by a device independent interface language, and complex applications needing added storage protection and data queuing.

**B69-10390**

**A THIRTY-SIX ELEMENT ARRAY ANTENNA SYSTEM**

**GRIFF, R. R. /AUBURN UNIV./ DATE- SEP. 1969**

**UP-2-20435**

Thirty-six element square array, with mutual coupling between crossed slots for array elements. The system does not require the movement of the antenna or the presence of an operator.

**B69-10392**

**AN ELECTRONIC CIRCUIT FOR SENSING MALFUNCTIONS IN TEST INSTRUMENTATION**

**MILLER, W. S. Jr. /BOEING CO./ DATE- DEC. 1969**

**ESC-10209**

Monitoring device differentiates between malfunctions occurring in the system undergoing test and malfunctions within the test instrumentation itself. Electronic circuits in the monitor use transistors to compute silicon controlled rectifiers by removing the drive voltage, display circuits are then used to monitor multiple discrete lines.

**B69-10401**

**IMPROVED FERRUS SHIELDING FOR FLAT CABLES**

**BRECHER, R. J. /DOUGLAS AIRCRAFT CO./ DATE- SEP. 1969**

**UP-5F-14524**

To improve shielding of flat multicore cables, a thin, seamless ferrous shield around all cores optimizes low frequency magnetic shielding. Such shielding is covered with an ultrathin seamless coat of highly conductive nonferrous material.

**B69-10402**

**NONDESTRUCTIVE TESTING OF WELDS ON THIN-WALLED TUBING**

**KAGLER, D. J. /AM. ROCKWELL CORP./ ROSKONY, G. J.**

**DATE- SEP. 1969**

**UP-5F-18144**

Special ultrasonic search unit, or transducer assembly, reliably inspects the quality of melt-through welds of fusion welded tubing couplers for hydraulic lines. This instrumentation can also be used to detect faulty brazed bonds in thin-walled, small diameter joints and wall thickness of thin-walled metal tubing.

**B69-10407**

**A POSITIVE PAPER TRAVELING-WAVE TUBE**

**GRENCHER, H. W. /WATKINS-JOHNSON CO./ ROBERTS, L. A.**

**DATE- SEP. 1969**

**LANGLEY-10253**

Synchronization can be maintained between the RF beam current and the circuit electromagnetic waves over substantially the entire length of a traveling-wave tube by increasing the pitch of the last portion of the helical wave structure. There is no loss of linearity or beam conversion efficiency.

**B69-10410**

**FLOYD MULTIPURPOSE TIMER FOR LABORATORIES**

**EISLER, R. J. ELZIN, P. D.**

**DATE- SEP. 1969**

**ARG-10417**

Multipurpose digital delay timer simultaneously controls both a buffer pump and a fraction-collector. Timing and control may be in 30-second increments for up to 15 hours. Use of glassware and scintillation vials make it economical.

**B69-10416**

**PUNCH-MAGNET DELAY ELIMINATED BY MODIFICATION OF CIRCUIT**

**COR, C. R.**

**DATE- SEP. 1969**

**ARG-10333**

Reduction of retardation by diode-resistor networks of the current-delay time of a punch magnet by connection of a Tenser diode in series with the damping network increases the reliability of data on paper tape.

**B69-10418**

**RADIOGRAPHIC THRESHOLD DETECTION LEVELS OF ALUMINUM WELD DEFECTS**

**TISON, B. L. /UC. DYNARCS/ DATE- SEP. 1969**

**UP-2-20487**

Test program is used in the design and fabrication of special graduated aluminum penetrometers. The program evaluates the threshold detection capabilities of a fixed radiographic technique in detecting surface and subsurface cracks in one-quarter inch aluminum welds. The radiographic films were evaluated and the threshold detection capabilities defined.

**B69-10419**

**SERRAL CALIBRATION TARGET**

**MULLER, J. G. /SANTA BARBARA RES. CENTER/ DATE- SEP. 1969**

**N7S-11464**

Blackbody source calibrates the response of a medium resolution infrared radiometer used on a meteorological satellite. This approach controls the temperature of a thermal calibrating device over a wide range without the need for controlling a liquid nitrogen input to the device. The availability of liquid nitrogen achieves the required thermal control.

**B69-10427**

**A COMPACT ROTARY VANE ATTENUATOR**

**NIXON, D. L. CROSS, T. Y. STELHURD, C. T.**

**DATE- SEP. 1969**

**HP-10562**

Rotary vane attenuator, when used as a front end attenuator, introduces an insertion loss that is proportional to the angle of rotation. New technique allows the construction of a shortened compact unit suitable for most installations.

**B69-10429**

**ACCURATE NINE-DECade TEMPERATURE-COMPENSATED LOGARITHMIC AMPLIFIER**

**ROGHS, J. F. MC DOWELL, W. P. PAUL, V. R.**

**DATE- SEP. 1969**

**ARG-10480**

Transistor-driven temperature-stable amplifier with logarithmic operating characteristics permits presentation of the entire range of the reactor without range switching. This circuit is capable of monitoring ion chamber currents over spans of 8 or 9 decades and is used in nuclear reactor instrumentation. Application is found in materials under ultrahigh vacuum.

**B69-10436**

**LEADS INTEGRAL WITH THE INTERNAL INTERCONNECTION THAT PENETRATE THE MOLDED WALL OF A PACKAGE**

**WATER, J. /TIT FEDERAL LABS./ DATE- SEP. 1969**

**LANGLEY-10228**

Locality of external ribbon leads makes
possible connections to a sealed or encapsulated microassembly, the leads are integral with the internal connections on a single part that can be fabricated economically by fine-detail electroplating.

**B69-10438**

LEAKAGE MEASURING METHOD

CLAUSEN, H. J. /DOUGLAS AIRCRAFT CO./ DATE- SEP. 1969

M-PS-14722

Technique measures leakages of high pressure test specimens occurring on the input rather than the output side of a test specimen. Technique involves paralleling-off the pressure supply line and duplicating and measuring the leakage flowing into a specimen rather than attempting to measure the leakage flowing out of it.

**B69-10439**

SIMPLE QUASI-EXPOENTIAL SLOPE GENERATOR

ANDERSON, T. O. BURD, W. J. DATE- SEP. 1969

BPO-11130

Circuitry for digitally generating an exponentially decaying wave function permits discrete values to be mapped from the exponential waveform for comparison with a binary number of specified accuracy. This exponential-decay generator employs a single binary counter to count the sequence of exponential decay.

**B69-10440**

TEMPERATURE-CONTROLLED RESISTOR

FENNING, T. G. DATE- SEP. 1969

BPO-10713

Electrical resistance of a carbon-pile resistor is controlled by the compression or relaxation of a pile of carbon discs by a thermally actuated bimetallic spring. The concept is advantageous in that it is direct-acting, can cover a wide range of controllable characteristics, and can handle considerable power directly.

**B69-10441**

IMPROVED METHOD OF DICING INTEGRATED CIRCUIT WAFERS INTO CHIPS

LITAWY, J. SCALFUNCIO, A. J. DATE- SEP. 1969

ERC-10138

Method employing a pressure chamber is used for dicing semiconductor single-crystal wafers, containing integrated circuits, into small chips along pre-scribed lines. Uniform bending of the scribed wafer over the convex surface of a perforated hemisphere, breaks it cleanly into individual chips without damaging the circuits.

**B69-10443**

THE QUANTASYN, AN IMPROVED QUANTUM DETECTOR

ERC-10148

Quantasyon provides absolute measurement of radiation flux in the range 1000 A to 4500 A and into the vacuum ultraviolet. This radiation detector combines the high quantum efficiency and inherent linearity of the silicon solar cell with the constant quantum response of the fluorescent organic compound luminou.

**B69-10445**

CURRENT-SWITCHING TECHNIQUE FOR ANALOG PULSE CIRCUITS

LABURN, R. W. DATE- SEP. 1969

AI-10870

Circuit technique uses a signal diode as a series current-pass element. Technique is applied to the design of a biased amplifier circuit and a nanosecond-pulse stretcher circuit.

**B69-10452**

AUTOMATIC TUNING OF HYDROGEN MASERS

LEVINE, R. /EMELLEY-PACKER/ YESSOT, R. DATE- NOV. 1969

GSFC-10127

Varying the density of the atoms in the cavity changes the Q of the atom. When the cavity is mistuned, the density variation causes a frequency variation proportional to the degree of cavity mistuning.

**B69-10853**

MODULAR PACKAGING TECHNIQUE FOR COMBINING INTEGRATED CIRCUITS AND DISCRETE COMPONENTS

LACCHI, J. F. /ELECTRO-OPTICAL SYSTEMS, INC./ DATE- SEP. 1969

GSFC-10369

Technique for packaging electronic modules interconnects integrated circuits and discrete components by means of beryllium-copper strips in a molded diallylphthalate tray. Simple girder-like construction provides ease of assembly, high rigidity, excellent vibration resistance, and good heat dissipation characteristics.

**B69-10860**

OPTIMIZING SOLAR-CELL GRID GEOMETRY

CROSSLEY, A. P. DATE- OCT. 1969

EQ-10417

Trade-off analysis and mathematical expressions calculate optimum grid geometry in terms of various cell parameters. Determination of the grid geometry provides proper balance between grid resistance and cell output to optimize the energy conversion process.

**B69-10861**

SYNCHRONOUS CHARGE-CONSTRAINED ELECTROQUASISTATIC GENERATOR

MELCHEZ, J. R. DATE- SEP. 1969

EQ-10231

Electroquasistatic generator depends on electroquasistatic interactions to provide synchronous operation. The generator employs a moving insulating belt, with an ac electric potential source to establish positively and negatively charged regions on the belt. The field effect of the charges on the belt creates an ac output voltage.

**B69-10865**

TECHNIQUE FOR DICOATING SUBMICRON PARTICLES IN THE ELECTRON MICROSCOPE

MILLER, E. L. /MC DONELL DOUGLAS/ PHILLIPS, A. DATE- SEP. 1969

EQ-10643

Series of electron micrographs at successively lower magnifications can localize the substrate area sufficiently for a particle to be picked up by the beam of the electron microscope. This approach could be modified to apply to xerographic studies, particularly of oxidation products stripped from fractures.

**B69-10870**

PREPARATION OF SUPERCONDUCTING THIN FILMS OF TRANSITION- METAL INTERSTITIAL COMPOUNDS

CAVANAR, J. R. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1969

HQ-10485

Spattering technique forms transition-metal interstitial compounds into superconducting thin films having transition temperatures similar to those of the bulk materials. Since the magnetic-field and current-carrying properties of the films exceed those of the bulk materials, they may have applications other than in tunneling devices.

**B69-10872**

ELECTRONIC ANALOG EQUALIZATION FOR VIBRATIONAL TESTING

TUGBOOZ, R. F. DATE- DEC. 1969

NRC-10548

Method of real time equalization involving use of an analog computer achieves effective qualification testing by realistically simulating the effects of the vibrational forces which will actually be experienced in powered flight.

**B69-10874**

BREAKAWAY ELECTRICAL CONNECTOR

KAZZIEZ, L. DATE- SEP. 1969

NPO-11140

One-shot, breakaway multiwire cable connector is fabricated by bending a number of interconnecting wires, each of which, differ from increments in length, is welded to neighboring pin and cable terminations. This design
eliminates frictional binding and provides highly reliable cable interconnections until the connector is disengaged.

B69-10476  MAGNETIC FIELD MAPPER
MASON, R. N. /ZENGHER, P. J. /DATE- SEP. 1969
LEWIS-10782
Magnetic field mapper locates imperfections in cadmium sulfide solar cells by detecting and displaying the variations of the normal component of the magnetic field resulting from current density variations. It can also inspect for nonuniformities in other electrically conductive materials.

B69-10477  DEVICE FOR OBTAINING SEPARATION OF OXYGEN
GLECKERT, A. J. /GEN. A. TRANSPORTATION/
LEWIS-10783
LANGLEY-11007
Permeation membrane of a magnesium-nickel alloy of silver has the ability to permeate oxygen at high temperatures for an extended period of operation without failure. The measured rates of oxygen permeation in a tubular configuration of this alloy are higher than any previous rates published.

B69-10479  LITERAL READOUT OF IDENTIFICATION SIGNALS IN MORSE CODE
WEISNER, C. R. /JE. /DATE- OCT. 1969
LANGLEY-10222
Instrument, designed for mounting in aircraft instrument panels, decodes identification signals received in Morse from VOR or ILS transmitters as they are received and displays the literal equivalent. Without elaboration it cannot decode numbers.

B69-10480  AN UNCONVENTIONALLY MAGNETICALLY-COUPLING MULTIVIBRATOR
MOWRE, R. Z. /DUKE UNIV./ YU, Y. /DATE- SEP. 1969
HQ-10226
Multivibrator circuit provides a low-frequency sine wave output without using a low-frequency power transformer or filter components. This circuit, utilizing two transistors and a magnetic core, represents a reduction in complexity, size, and weight over similar units.

B69-10481  IMPROVED PULSE SHAPE DISCRIMINATOR FOR FAST NEUTRON-GAMMA RAY DETECTION SYSTEM
LOCKWOOD, J. A. /NAMESHIRE UNIV./ /DATE- SEP. 1969
HQ-10151
Discriminator in nuclear particle detection system distinguishes nuclear particle type and energy among many different nuclear particles. Discriminator incorporates passive, linear circuit elements so that it will operate over a wide dynamic range.

B69-10488  ADJUSTABLE THERMAL *TERM*
HSC-15556
Tree mounts 10 thermocouples on extensible arms to provide a reliable heat profile of conditions within heat treating devices, such as ovens and autoclaves, and within environmental test chambers.

B69-10487  PHASE-LOCKED-LOOP PHASE MODULATOR WITH HIGH MODULATION INDEX, LOW DISTORTION
BAHATTIN HAN, L. G. /CRC/ /DATE- OCT. 1969
NISC-12247
Phase-locked-loop phase modulator has the capability of generating a 6.8 MHz carrier at modulation indexes as high as 2, with a distortion of the modulated signal of less than 5 percent. These characteristics are obtained without the use of multipliers.

B69-10490  PROTECTS CIRCUIT FROM VOLTAGE AND CURRENT OVERLOADS
CASEY, L. O. /DATE- OCT. 1969
ISC-11196
Low-melting resistor connected in series with the load protects the circuit against current overloads. It protects test subjects and patients being monitored by electronic instrumentation from inadvertent overloads of current, and sensitive electronic equipment against high-voltage damage.

B69-10498  EPITAXIAL CRYSTALLINE GROWTH UPON COLD SUBSTRATES
LEBODUSKA, R. L. /PHYSICS TECHNOL. LAB., INC./ /DATE- OCT. 1969
NISC-12247
By sputtering a material with a high-energy ion-beam bombardment, the molecules of the target can be dislodged and ejected for subsequent deposition on a cold substrate of the desired crystallographic type and orientation.

B69-10497  STEREO TV ENHANCEMENT STUDY
SRO- INNOVATOR NOT GIVEN /KOLLMAN INSTRUMENT CORP./ /DATE- SEP. 1969
NPS-14805
Setting up an artificial situation using photographs of laser-type terrain on a dual TV-type projection system determines the effectiveness of stereo TV presentations in allowing an operator to remotely control an extra-terrestrial vehicle.

B69-10498  FOLDED STICK MODULE
FATZIN, L. /DATE- OCT. 1969
NPP-10584
Integrated circuit modules can be compactly assembled into short-run complex electronic assemblies by mounting them on a Stick module. This module provides a method of high-density packaging for industrial operations that require the fabrication of compact circuitry configurations.

B69-10502  ROTARY ANTENNA ATTENUATOR
DICKINSON, E. W. /HARDY, J. C. /DATE- OCT. 1969
NPP-10548
Radio frequency attenuator, having negligible insertion loss at minimum attenuation, can be used for making precise antenna gain measurements. It is small in size compared to a rotary-vane attenuator.

B69-10503  SIMPLIFIED, RELIABLE CIRCUIT SORTS BINARY NUMBERS IN ORDER OF MAGNITUDE
ANDERSON, R. O. /DATE- OCT. 1969
NPP-10112
Circuit includes a single-word input/output register and a multword serial memory which are circulated in synchronism. It puts out data at a rate compatible with relatively slow-speed electromechanical devices.

B69-10507  RADIOMETRIC TEMPERATURE REFERENCE
MORRIS, L. G. /DATE- OCT. 1969
NPP-13276
Radiometric Temperature Reference uses a thermistor as both a heating and sensing element to maintain its resistance at a preselected level to continuously control the power supplying it. The fixed infrared radiation level must be simple, rugged, and capable of high temperature operation.

B69-10502  CONSTANT-FREQUENCY, VARIABLE-DUTY-CYCLE MULTIVIBRATOR
JOHNSON, J. E. /MICHIGAN UNIV./ /DATE- OCT. 1969
JGS-10033

Circuit provides a pulse source of constant frequency with a duty cycle that is adjustable by an external input signal. It could serve as a switching node voltage regulator or as a switching source for control systems.

B69-10513
IMPROVED SYSTEM FOR DOCUMENTING MEASUREMENT DATA
PETRSON, R. H. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969
M-FS-10269

New documentation method reduces each system record to the basic system data card, one system recorder card, and a form-fill-in type system diagram. All recorder data cards are of identical format, requiring only one line of keypunch data input to prepare recorder listing cards for a system.

B69-10516
DATE OF HEAT EXTRACTION CONTROLLER FOR ENVIRONMENTAL CONTROL
ANNIS, J. F. /WEBB ASSOCIATES/ TROUTMAN, J. M. WEBB, F. DATE- SEP. 1969
HQ-10918

Automatic control device measures a physiological parameter related to heat production and conditions to control the heat removal capacity of a watercooled environmental control suit.

B69-10523
AN INTERFEROMETER TRACKING RADAR SYSTEM
HODEZICK, R. F. DATE- OCT. 1969
MSC-10536

Fine tuning acquisition and tracking interferometer radar system uses a first antenna array of at least three receiving antennas. Array includes a reference antenna, a coarse tuning antenna, and a fine tuning antenna aligned on a receiving axis. Short range rendezvous system provides increased position accuracy.

B69-10526
COVER PROTECTS CRITICAL ELECTRICAL CONNECTORS AGAINST DAMAGE DURING HANDLING
CARPOT, A. E. /N. AM. ROCKWELL CORP./ DATE- OCT. 1969
MSC-15662

Split-half cover eliminates the surface marring and dirt penetration problems previously encountered during handling and cable assembly. Metal retaining ring slips over the two plastic halves to hold them in place.

B69-10533
GAS METAL ARC /GMA/ WELD TORCH PROPIETY CONTROL
HODGES, N. B. /N. AM. ROCKWELL CORP./ DATE- NOV. 1969
M-FS-16327

Adjustable transducer probe, which is attached to a welding torch and maintains a preset torch-to-work distance, accurately follows irregular surfaces, is less sensitive to heat and static interference, and has more positive response because of electro-mechanical control.

B69-10537
IMPROVED CAMERA FOR BETTER X-RAY POWDER PHOTOGRAPHS
PARRISH, W. /N. AM. PHILIPS CO./ VAJDA, I. R. DATE- NOV. 1969
HQ-10428

Camera obtains powder-type photographs of single crystals or polycrystalline powder specimens. X-ray diffraction photographs of a powder specimen are characterized by improved resolution and greater intensity. A reasonably good powder pattern of small samples can be produced for identification purposes.

B69-10538
DESIGN FOR A RAPID AUTOMATIC SYNC ACQUISITION SYSTEM
ANDERSON, G. C. GALLO, A. J. DATE- OCT. 1969
NPO-10214

System provides rapid command sync acquisition between widely separated transmitter-receivers.

It is based on a rapid, automatic range-adjustive approach rather than the time-consuming cycle slipping or stepping techniques of conventional phase-locked loops.

B69-10539
CIRCUIT BOARD HOLE COORDINATE LOCATOR CONCEPT
SUNBELT, L. W. /BOEING CO./ DATE- NOV. 1969
M-FS-14237

Fixed light source registers the x and y coordinates of holes in a fixed opaque template. A first surface parabolic mirror and a set of phototubes are used to detect the passage of light through the individual holes.

B69-10546
SYNCHRONIZING REDUNDANT POWER OSCILLATORS
JENSEN, K. J. /HONEYWELL, INC./ DATE- NOV. 1969
XGS-03577

Outputs of oscillators are synchronized by summing the power transformer phase voltages, the summed voltages are applied to the frequency determining inductors of the individual voltage-controlled power oscillators. The best frequency is eliminated when synchronization is achieved.

B69-10548
HIGH VOLTAGE PULSE GENERATOR
PIPPEN, D. L. DATE- OCT. 1969
MSC-12179

Generator has an improved circuit for generating a controllable, high voltage spark having a constant known energy output. It can be used for testing the flash and ignition characteristics of nonmetallic materials in a controlled gas environment.

B69-10550
MULTICANAL SPECTROSCOPY GUIDE
BOWE, R. R. /CORNELL AERONAUTICAL LAB., INC./ DATE- NOV. 1969
HQ-10481

System makes use of diverging duct walls for conducting the light from entrance slits to the conductors by means of multiple reflectors. This system simultaneously records, photoelectrically, the intensities of several closely spaced narrow wavelengths in the ultraviolet and infrared areas of the spectrum.

B69-10553
USE OF MEDICAL AND DENTAL X-RAY EQUIPMENT FOR NONDESTRUCTIVE TESTING
SPOON- INNOVATOR NOT GIVEN /TRAWNK SPACECRAFT CORP./ DATE- OCT. 1969
MSC-13839

Industrial X-ray equipment is used for nondestructive testing to detect defects in metal joints, electrical terminal blocks, sealed assemblies, and other hardware. Medical and dental X-ray equipment is also used for hardware troubleshooting.

B69-10557
ESTIMATION OF SIGNAL-TO-NOISE RATIOS
XRE-05254

Statistical method estimates signal-to-noise ratio in an observed random voltage, such as the output of a telemetry receiver. Signals from a distant transmitting source, overlaid by noise signals, are monitored continuously.

B69-10568
ELECTROOPTICAL SCANNING OF FILM
BILLINGSLEY, P. C. VOLKOF, J. J. DATE- OCT. 1969
NPO-11106

Scan-in scan-out flying spot scanning system recognizes three different levels of transmissivity within a frame. It selectively acts on these levels either to intensify the illumination or to extend the duration of the illuminating spot to each picture element. Thus it improves the ratio of signal to tube noise in the cameras output.
B69-10569
AUTOMATIC FREQUENCY CONTROL OF VOLTAGE-CONTROLLED OSCILLATORS
KOLBLY, E. B. DATE- OCT. 1969
WPO-11184

Optical-capacitive coupling is used for isolation of control voltages, such as the high-voltage level of a klystron control electrode that is not referenced to ground, to serve as error voltages referenced to system ground so that the magnitude and sense of correction may be transferred.

B69-10570
AUTOMATED PLOTTING OF EQUIPOTENTIALS
HUMER, E. B. JR. DATE- NOV. 1969
WPO-11134

By substitution of resistance paper for normal plotting paper, an x-y plotter can be used to draw automatically the equipotential lines between components represented in planar form on the paper. This technique is used for high voltage electronic components of complex configuration for the prediction of stress in the intervening insulation.

B69-10576
LOAD CURRENT SENSOR FOR A PULSE WIDTH MODULATOR POWER REGULATOR
HEON, B. J. /HONEYWELL, INC./ DATE- DEC. 1969
SFS-10656

Circuit, using a pulse transformer, enables a sensor to operate for a short portion of the duty cycle. Current drawn from the load is minimized and high impedance is reflected to the load.

B69-10584
CIRCUIT-WAVE ATMOSPHERIC LOSS PREDICTION METHOD
STHELLE, C. T. DATE- NOV. 1969
WPO-11054

Relationship between atmospheric attenuation and the ground temperature and humidity provides a reference from which changes in temperature and humidity will produce a corresponding atmospheric loss figure. Computer programs computes atmospheric loss due to water content, given the measured short and ground temperature and humidity.

B69-10585
BALLON BATTERIES, CHARGED AND HEATED BY SOLAR ENERGY
SPX- INNOVATOR NOT GIVEN /HELPAR, INC./ DATE- NOV. 1969
GSC-10769

Shielded heat-cf-fusion material envelope collects and stores solar heat to maintain temperature during the light cycle at 30,000 feet. Spiral-wound fluoroplastic film structure has low density to avoid damage to aircraft in case of impact.

B69-10597
AUTOMATIC STAR-HORIZON ANGLE MEASUREMENT SYSTEM
KOSBER, K. KOSO, D. A. BARDELLA, P. C. DATE- NOV. 1969
MSC-11585

Automatic star horizontal angle measuring aid for general navigational use incorporates an Apollo type sextant. The eyepiece of the sextant is replaced with two light detectors and appropriate circuitry. The device automatically determines the angle between a navigational star and a unique point on the earths horizon as seen on a spacecraft.

B69-10601
CRYOGENIC PRESSURE TRANSDUCER
HENDRICK, J. B. DATE- NOV. 1969
M-FS-14909

Cryogenic pressure transducer utilizes a diaphragm which is electron beam welded to a fitting. This assembly is then heiligard welded to the main body of the transducer. The transducer requires no damping oil and thus is capable of operating at both cryogenic and high temperatures.

B69-10603
FLEXIBLE HIGH-VOLTAGE SUPPLY FOR EXPERIMENTAL ELECTRON MICROSCOPE
ARG-10462

Scanning microscope uses a field-emission tip for the electron source, an electron gun that simultaneously accelerates and focuses electrons from the source, and one auxiliary lens to produce a final probe size at the specimen on the order of angstroms.

B69-10607
SPRAYED SHIELDING OF PLASTIC-ENCAPSULATED ELECTRONIC MODULES
ULLOM, A. N. /DOUGLAS AIRCRAFT CO./ DATE- NOV. 1969
M-FS-13570

Metallic coating directly sprayed on electronic modules provides simple and reliable lightweight protection against radio frequency interference. A plasma arc may be used. Alumina and copper are the most effective metals.

B69-10612
LIVE-TIMER METHOD OF AUTOMATIC DEAD-TIME CORRECTION FOR PRECISION COUNTING
FORGES, K. G. RUDNICK, S. J. DATE- OCT. 1969
ARG-10478

Automatic correction for dead time losses in nuclear counting experiments is implemented by a simple live timer arrangement in which each counting interval is extended for compensation for the dead time during that interval. This method eliminates repetitive manual calculations, source of error, and dependence upon paralysis shifts.

B69-10613
ANALYSIS OF SECONDARY CELLS WITH LITHIUM ANODES AND IMMOBILIZED FUSED-SALT ELECTROLYTES
ARG-10452

Secondary cells with liquid lithium anodes, liquid bromide or tellurium cathodes, and fused lithium halide electrolytes immobilized as rigid pastes operate between 380 and 485 degrees. Applications include power sources in space, military vehicle propulsion and special commercial vehicle propulsion.

B69-10614
HIGHLY STABLE HIGH-RATE DISCRIMINATOR FOR NUCLEAR COUNTING
ARG-10483

Pulse amplitude discriminator is specially designed for nuclear counting applications. At very high rates, the threshold is stable. The output-pulse width and the dead time change negligibly. The unit incorporates a provision for automatic dead-time correction.

B69-10618
IBM-1620 MONITOR 11-D DISK-Storage SUBROUTINES
KELLCY, E. F. DATE- OCT. 1969
ARG-10376

Set of subroutines provides the FORTRAN user with protected, permanent, disk storage of data on an IBM 1620 monitor 11-D system. The program consists of a set of four subroutines and a utility program. It allows block data to be transferred directly between assigned core locations and disk storage.

B69-10621
MANGANESE-56 COINCIDENCE-COUNTING FACILITY
PRECISELY MEASURES NEUTRON-SOURCE STRENGTH
ARG-90261

Precise measurement of neutron-source strength is provided by a manganese 56 coincidence-counting facility using the manganese-bath technique. This facility combines nuclear instrumentation with coincidence-counting techniques to handle a wide variety of radioisotope-counting
requirements.

B69-10630
STORAGE OF ELECTRIC AND MAGNETIC ENERGY
IN PASSIVE NONRECIPROCAL NETWORKS
SCHUY, W. E. DATE- NOV. 1969
AMC-10360
Examination of the relation of stored electric and magnetic energy within a system to the terminal behavior of nonreciprocal passive networks shows both similarities and important differences between wholly reciprocal systems and systems containing nonreciprocal elements.

B69-10631
SELF-DISCHARGE IN BIMETALLIC CELLS
CONTAINING ALKALI METAL
FOSTER, R. S. HESSON, J. C. SHIROM, H. DATE-
NOV. 1969
AMC-10367
Theoretical analysis of thermally regenerative bimetallic cells with alkali metal anodes shows a relation between the current drawn and the rate of discharge under open-circuit conditions. The self-discharge rate of the cell is due to the disintegration and ionization of alkali metal atoms in the fused-salt electrolyte

B69-10639
DATA PROCESSING METHOD FOR A WEAK, MOVING
TELEMETRY SIGNAL
KENDALL, W. B. LAY, G. S. HDOR, D. L. PANSO,
F. L. DATE- NOV. 1969
AMC-10503
Method of processing data from a spacecraft, where the carrier has a low signal-to-noise ratio and wide unpredictable frequency shifts, consists of analog recording of the noisy signal along with a high-frequency tone that is used as a clock to trigger a digitizer.

B69-10640
PULSE-HEIGHT ANALYZER WITH DIGITAL READOUT
GOLDSWORTHY, W. W. /LAURENCE RADIATION LAB./
DATE- NOV. 1969
AMC-10504
Feedback-controlled pulse-amplitude integrator and amplifier is used as an analog-to-digital converter that converts event-liberated charges, emanating from a nuclear-particle detector, directly to numbers rather than to analog-dependent voltages.

B69-10652
NEW TYPE PRESSURE TRANSDUCER FOR SEVERE
THERMAL ENVIRONMENTS
SPON- INOVIATOR NOT GIVEN /BATTLE RES. INST./
DATE- NOV. 1969
N-PS-20208
Pressure transducer used in a rocket motor chamber to measure the amplitudes and frequencies of dynamic pressures exceeding 2000 psi occurring during unstable combustion. The transducer utilizes a transpiration-cooled porous beryllium plug and pressure transmitting column.

B69-10653
WIND TOWER INFLUENCE STUDY
HATHORN, J. W. /BOEING CO./ DATE- DEC. 1969
N-PS-20239
Set of correction factors is applied to measured mean wind speed and direction so that close approximations of the mean speed and direction of the free stream wind can be obtained from a wind tower. A wind director sensor is employed to determine which sensor is windward of the tower and to engage it for monitoring the wind.

B69-10655
VERSATILE TELEMONITORING SYSTEM
PERGUS, W. H. DATE- NOV. 1969
AMC-10339
Small scale versatile multichannel telemonitoring system can be installed economically with considerable expansion capabilities. The system contains a data transmission, control transmitter, control receiver, display of readout units, a sync generator, and some remote control features.

B69-10665
DESIGN OF PRINTED CIRCUIT COILS
HIGINS, W. T. /MIT/ DATE- DEC. 1969
N-PS-10431
Spiral-like coil is printed with several extra turns which increase the realizable coil inductance. Included are shorting connections which not only short the extra turns, but also short out several turns of the main body. Coil tuning is accomplished by removing the shorts until the desired inductance is obtained.

B69-10666
MONOPOLAR MASS SPECTROMETER WITH IMPROVED
SENSITIVITY AND REDUCED BACKGROUND
HEDBERG, B. F. /GCA CORP./ DATE- DEC. 1969
N-PS-10476
Monopolar mass spectrometer is increased by nearly an order of magnitude when a weak external magnetic field is applied so that the ion beam is deflected towards the rod. This magnetic field eliminates background noise at the low end of the mass scale.

B69-10670
DEVICE FOR REFLUXING ELECTRODEPOSITED SOLID
ON TERMINALS
JOHNSON, W. C. /W. R. ROCKWELL CORP./ DATE-
DEC. 1969
N-PS-13821
Terminals are refluxed in a hot strata and solidified in a cooler strata, without physical contact with each other, any fixturing, or the container. Terminals are passed through the upper portion of a reflow flask containing hot peanut oil, and then through the lower portion containing oil at ambient temperatures.

B69-10671
CONTROL JET PLACEMENT OF SPACECRAFT
CRAWFORD, E. S. /MIT/ DATE- DEC. 1969
N-PS-13365
For efficient operation and configuration design of multijet spacecraft control systems methods of linear programming are used to select combinations of individual jet-burn times which produce the desired impulse. Minimum-fuel and fuel-time solutions are found.

B69-10673
DISCRIMINATION OF FISH OIL AND MINERAL
OIL SLICKS ON SEA WATER
MAC DONALL, J. /BARBINGER RES., LTD./ DATE-
DEC. 1969
N-PS-10412
Fish oil and mineral oil slicks on sea water can be discriminated by their different spreading characteristics and by their reflectivities and color variations over a range of wavelengths. Reflectivities of oil and oil films are determined using a dual beam reflectance apparatus.

B69-10676
TECHNIQUE FOR IMPROVING SOLID STATE
MOSAIC IMAGES
SAKOA, J. H. /WESTINGHOUSE ELECTRIC CORP./
DATE- DEC. 1969
N-PS-20532
Method identifies and corrects mosaic image faults in solid state visual displays and opto-electronic presentation systems. Composite video signals containing faults due to defective sensing elements are corrected by a memory unit that contains the stored fault pattern and supplies the appropriate fault word to the blanking circuit.

B69-10677
MEASUREMENT TECHNIQUE FOR THE DETERMINATION
OF ANTENNA DIRECTIVITY
LEFROY, E. /SPERRY RAND CORP./ DATE- DEC. 1969
N-PS-12799
Measurement of great circle patterns requires a system with discrete rotation in elevation. This technique eliminates a set of slip-rings and rotary joints and permits the use of larger models since only continuous azimuth rotation is required.
Handbook provides general guidance to the
etchant
chloroplatinic acid greatly reduces contact
resistance between metallic surfaces. Etching
results in a monolayer plating of platinum on the
wafer surface, preventing oxide growth.

B69-10689

Reducing contact resistance at semiconductor
to metal or aluminum to metal interfaces
KELLE, R. E. / RCA/ DATE- DEC. 1969
ERC-10254
Etchant containing chloroplatinous or
chloroplatinic acid greatly reduces contact
resistance between metallic surfaces. Etching
results in a monolayer plating of platinum on the
wafer surface, preventing oxide growth.

B69-10690

Miniature backward-diode pressure sensors
Features stability and low power consumption
GARFINKEL, A. RINDNER, W. DATE- DEC. 1969
ERC-10229
Backward-diode pressure transducer retains the
advantages of a tunneling mechanism, requires no
shunting resistors, operates at a low voltage
level, and consumes little power.

B69-10691

Conditioning of pulses from aerosol-particle
detectors
BOWIE, J. E., MARTIN, C. T. DATE- DEC. 1969
ERC-10250
Pulse-conditioner translates pulses generated by
aerosol-particle detectors to a form acceptable by
commercially available pulse height analyzers
designed for nuclear-energy spectroscopy.

B69-10695

Pcm synchronization by word stuffing
PUTMAN, S. DATE- DEC. 1969
WFO-10688
When a transmitted word, consisting of a number of
pulses, is detected and removed from the data
stream, the space left by the removal is
eliminated by a memory buffer. This eliminates
the need for a clock synchronizer thereby removing
instability problems.

B69-10697

A sterilizable high-impact antenna
WOO, K. H. DATE- DEC. 1969
NFO-10231
Rectangular cup antenna withstands indirect
impacts up to 10,000g and direct impacts up to 250
ft/sec of impact velocity and provides radiation of
selected polarization and beam shape. It has
high radiating efficiency, and relatively broad
bandwidth.

B69-10699

Pulsed high-voltage DC RF sputtering
PRZYBIESEWSKI, J. S., JR. SHALTERS, R. K. DATE- DEC. 1969
LEWIS-10920
Sputtering technique uses pulsed high voltage
direct current to the object to be plated and a
radio frequency sputtered film source. Resultant
film has excellent adhesion, and objects can be
plated uniformly on all sides.

B69-10713

Vacuum gage calibration system for 10 to the
minus 5th power to 10 torr
HOLANDA, R. DATE- DEC. 1969
LCB-17032
Calibration system consists of a gas source, a
source pressure gage, source volume, transfer
volume and test chamber, plus appropriate piping,
valves and vacuum source. It has been modified
to cover a broad range as possible while still
providing accuracy and convenience.

B69-10722

Deposition monitor and control
SALISBURY, S. S. DATE- DEC. 1969
NFO-10706
Two quartz crystal oscillators monitor and control
the thickness and the rate of thin film
deposition. The output of both oscillators, one
exposed to mass and heat and the other exposed
only to heat, were mixed and the difference
frequency was used as the indication of film
thickness.

B69-10725

Pocket-sized toroid-modulated Fm transmitter
COUVILLON, L. A. DATE- DEC. 1969
GSPC-10569
Pressure of a button on a crystal-controlled
transmitter causes generation of a tone. The
tone modulates the Fm transmitter which in turn
radiates by way of the enclosed loop antenna,
through the radio-frequency-transparent wall of
the transmitters case to the receiver.

B69-10731

Application of cryoplastic techniques to
the analysis of microporous batteries
EPSTEIN, S. / NAUCHLY ASSOCIATES, INC. / NAUCHLY,
J. WATTS, J. DATE- DEC. 1969
GSPC-10568
By using bi-gram and tri-gram tables, a pattern
can be formed to determine failure modes and
mechanisms. Computer programs provide accurate
predictions of cell failure several thousand
cycles before actual failure.

B69-10732

Coppered substrate cooling improves
reproducibility of vapor deposited
semiconductor composites
CLOUGH, R. / RCA/ EICHER, D. TIETJEN, J. DATE- DEC. 1969
ERC-10161
Improved substrate holder preferentially provides
more uniform substrate cooling and increases the
proportion of vapor flowing over the substrate
during growth. Nitrogen gas is constricted in the
substrate holder to cool the substrate.

B69-10734

A simple electrometer for measuring small
photocurrents
SPON- INNOVATOR NOT GIVEN / BM. MACHINE AND
FOUNDRY CO./ DATE- DEC. 1969
GSPC-10603
Quartz-fiber direct-indicating pocket dosimeter is
a small-current integrating electrometer. By
attaching the photocathode to the quartz fiber
terimal and the photocell collector to the
barrel of the dosimeter and by charging the device
to 150 V, a small-current measuring device can be
achieved.

B69-10736

Photomechanometry
YOUNG, F. L. / TV. AM. ROCKWELL CORP./ DATE- DEC.
1969
NFO-10556
Photomechanometry combines photomicrography with
standard measuring techniques. The negative of a
photograph taken through a microscope at a
predetermined level of magnification is overlayed
on an optical scale of the same magnification.
This technique is successful in measurements to
25 micrometres.

B69-10741

Laterale PNP bipolar transistor with
02 PHYSICAL SCIENCES (ENERGY SOURCES)

AIDING FIELD DIFFUSIONS
CICCIANTI, A. / WESTERN ELECTRIC CORP./ MC
CANN, D. E. DATE- DEC. 1969
MC-13268
Fabrication technique produces field aided lateral
PNP transistors compatible with micropower
switching circuits. The sub-collector diffusion
is performed with phosphorus as the dopant and the
epitaxy is grown using the higher temperature
silicon tetrachloride process.

B-69-10742
AN ELECTRICAL CONNECTOR PIN PROTECTOR
MC WILLIAMS, H. B. /W. AM. ROCKWELL CORP./ MSC-15660
Spring loaded insert protects electrical connector
pins from being bent due to improper rating, or
probing the pins with a screwdriver. This device
modifies existing electrical connectors using only
springs and retaining pins.

B-69-10746
OPTICAL FREQUENCY WAVEGUIDE AND DEMODULATION
TRANSMISSION SYSTEM
CHEN, K. H. /AT&T/ TOWERS, C. H. DATE- DEC. 1969
B-69-10517
Electromagnetically generated, high-dielectric
impedance waveguide forms a waveguide which retains the
electromagnetic energy within the beam, the trapped beam establishes an optical frequency
waveguide appropriate for its own conduction with
minimum diffusion loss.

B-69-10747
BATTERY CHARGE-DISCHARGE CONTROLLER
CICCIANTI, A. D. /BOEING CO./ DATE- DEC. 1969
MSC-11836
ChARGE-discharge controller contains punched-tape
programmer capable of controlling 305 discrete steps in the battery load. The indicating
instrumentation includes meters for ampere-hours,
volts, voltage, current, and internal
temperature and pressure. It also generates
analog signals for recording the displayed data.

B-69-10748
SYSTEM CONVERTS SLOW-SCAN TO STANDARD
FAST-SCAN TV SIGNALS
LIDOMA, P. C. /LOCHHEID ELECTRONICS CORP./ TE
POEL, B. E. DATE- DEC. 1969 EWUN- SEE ALSO B-67-10676
MSC-90534
Signal conversion system converts slow-scan video
signals into standard fast-scan television signals that are required for reproduction of television pictures on American TV sets. This system
performs conversion of 720 pictures produced in
accordance with the standards of one country into
the standards of another country.

B-69-10750
PULSE-CODE-MODULATION BASELINE CORRECTION
FOR LOW SIGNAL-TO-NOISE RATIOS
STEWART, T. J. /TEV SYSTEMS GROUP/ DATE- DEC. 1969
MSC-13268
Time-shared integrate-hold-dump circuits separate the
dc level due to the signal /bit information/
from the dc signal due to the baseline error. The
system detects the baseline error, filters it, and
then algebraically adds enough voltage to a servo
loop to reduce the error to zero.

B-69-10756
SEISMOGRAPHIC RECORDING OF LARGE ROCKET
ENGINE OPERATION
DALINS, D. M. DATE- DEC. 1969
M-PS-20545
Recording equipment for rocket engine vibration is adaptable to determining the structural strength of
building materials. This seismographic system
is portable and is capable of measuring
displacements in the direction of three mutually
perpendicular axes.

B-69-10764
DYNAMIC CALIBRATION OF TURBINE FLOWMETERS
channels that form the rocket casing wall.

**B63-10421**

**MIRROR DEVICE ALIGNS MACHINE SURFACE PERPENDICULAR TO SIGHT LINES**

KISSLER, E. H. / RCA/ DATE- MAY 1964

A sight alignment device is used to align two machines so that an axis of the first machine is parallel to a flat surface on the second. This sighting device depends on the reflection of a light beam from the surface to be aligned.

**B65-10016**

**IONIZATION VACUUM GAGE STARTS QUICKLY, IS UNAFFEC TED BY SPURIOUS CURRENTS**

GAWOOD, R. C. DATE- FEB. 1965

JPL-304

Ionization vacuum gage with a switch-operated starting device and a microammeter begins functioning quickly in a high vacuum. The microammeter is also protected by its circuit design from spurious currents.

**B65-10086**

**WIDE-APERTURE SOLAR ENERGY COLLECTOR IS LIGHT IN WEIGHT**

SPON- INNOVATOR NOT GIVEN / BECKMAN INSTRUMENTS./ DATE- FEB. 1965

JPL-SC-055

By mounting the Fresnel lens in eight steps above three paraboloidal reflector rings of epoxy resin with aluminized surfaces, a light weight, wide-aperture solar energy collector is devised.

**B65-10071**

**SIMPLE OPTICAL SYSTEM USED TO ALIGN SPECTROGRAPH**

EXTON, R. J. DATE - MAR. 1965

LANGLEY-92

Optically fast, portable spectrograph incorporates auxiliary optics in a boresight technique to use the zero order of the grating for visual alignment. This device obtains moderately resolved spectra of a multitude of light sources.

**B65-10061**

**MAGNETIC FIELD TEST COILS ARE TEMPERATURE COMPENSATED**

SPON- INNOVATOR NOT GIVEN / SPECTRA PHYS./ DATE- APR. 1965

GSFC-286

Magnetic field test coils with auxiliary winding wound opposite to main coil winding eliminates changes in field configurations due to temperature changes. The auxiliary coil is made with aluminum wire.

**B65-10062**

**MULTIPLE ELEMENT SOFT X-RAY SOURCE PRODUCES WIDE RANGE OF RADIATION**

CABROD, A. J. / NIPPERT, W. B. DATE- MAR. 1965

GSFC-286

A rotating mount with target elements positioned independently for direct electron bombardment produces soft X-ray radiation with a wide range of characteristics. The device may be used to study solar radiation from a satellite.

**B65-10004**

**MODIFIED CONFOCUS PROJECTOR MAKES EXCELLENT CONTOUR DENSITOMETER**

EXTON, R. J. DATE- MAR. 1965

LANGLEY-92

Thin glass beam splitter, densitometer head, and densitometer electronics are incorporated in a standard confocal projector. The density contour of small areas of photographic film can be read. This instrument can be used as a research tool in process engineering.

**B65-10010**

**ROTATING FILTERS PERMIT WIDE RANGE OF OPTICAL PHOTOMETRY**

EXTON, R. J. SIVITTE, J. H., JR. / STRASS, R. H. DATE- APR. 1965

LANGLEY-33

Gear-driven dual filter disks of graduated density vary linearly with respect to rotation, allowing a wide range of photographic photometry. This technique is applicable in metallurgy, glass, plastics and refractory research, and crystallography.

**B65-10122**

**MICROWAVE TECHNIQUE MEASURES PLASMA CHARACTERISTICS**

LEONARD, W. P. DATE- APR. 1965

LANGLEY-134

Plasma electron density and temperature distribution are measured by passing a high frequency millimeter wave through plasma. Variations in density and temperature are determined by measuring insertion loss as the plasma travels between the microwave transmitting and receiving antennas.
B65-10188
REFRACTORY METAL SHIELDING / INSULATION /
INCREASES OPERATING RANGE OF INDUCTION FURNACE
SUNIARA, R. T. DATE- JUN. 1965
LSNW-202
Thermal radiation shield contains escaping heat
from an induction furnace. The shield consists of a
sheet of refractory metal foil and a loosely
packed mat of refractory metal fibers in a
concentric pattern. This shielding technique can
be used for high temperature ovens, high
temperature fluid lines, and chemical reaction
vessels.

B65-10211
LIGHT RAY MODULATION CONTROLS OPTICAL SYSTEM
ALIGNMENT
SPON- INNOVATOR NOT GIVEN / KOLLMAN INSRR. CORP./
DATE- JUL. 1965
GSFC-171
Light ray modulator maintains focus in optical
system subject to severe thermal gradients,
vibration and shock. The modulated signals drive
a servo system that aligns the system optics.

B65-10224
HEATER DECOMPOSES OIL BACKSTREAMING FROM
HIGH-VACUUM PUMPS
SHAPIRO, H. DATE- AUG. 1965
GSFC-356
Heater placed between an oil diffusion pump and a
vacuum chamber prevents backstreaming of oil
molecules into the work area of the chamber. It
breaks the oil molecules into basic constituents
that can be pumped away.

B65-10239
ION PUMP PROVIDES INCREASED VACUUM PUMPING
SPEED
SPON- INNOVATOR NOT GIVEN / GEOPHYS. CORP. OF AM./
DATE- AUG. 1965
N30-13
Multiple-cell ion pumps with increased vacuum
pumping speed are used for producing ultrahigh
vacuum in vacuum tubes and mass spectrometers.
The pump has eight cathode-anode magnetron cells
arranged in a cylinder which increase the surface
area of the cathode.

B65-10240
INSULATION ACCELERATES RATE OF COOLING WITH
CHLORFURIC ACID FLUID
ALLEN, L. D. DATE- AUG. 1965
MSC-161
Thermal insulating material increases the rate of
heat transfer from the interior of a chamber to a
liquid nitrogen-filled metal jacket. A thin film
of the material is bonded to the surface of the
metal wall facing the liquid nitrogen.

B65-10252
DISTANCE OBJECTS DETECTED VISUALLY WITH
OPTICAL FILTERS
SPON- INNOVATOR NOT GIVEN / LANGLEY/ DATE- AUG.
1965
LANGLEY-166
Fluorescent coating aids visual daylight detection
and identification of distant objects. An object
appears as a blinking light when the area is
alternately scanned with transmitting and
obscuring filters. This method can be effective
in search and rescue operations.

B65-10253
OIL-DAMPED MERCURY POOL MAKES PRECISE
OPTICAL ALIGNMENT TOOL
THOMASBAR, M. F. DATE- AUG. 1965
GSFC-353
Mercury pool with a cover layer of high viscosity
oil provides a reference reflector for precise
alignment of optical instruments. The cover
layer effectively damps any ripples in the mercury
from support structure vibrations.

B65-10272
INFRARED SHIELD FACILITATES OPTICAL PYROMETER
MEASUREMENTS
EICHENBRUNNER, F. P. ILLG, W. DATE- SEP. 1965
LANGLEY-133
Water-cooled shield facilitates optical pyrometer
high temperature measurements of small sheet metal
specimens subjected to tensile stress in fatigue
tests. The shield excludes direct or reflected
radiation from one face of the specimen and
permits viewing of the infrared radiation only.

B65-10280
ELECTRON BOMBARDMENT IMPROVES VACUUM CHAMBER
EFFICIENCY
PFEITZENHOLTZ, J. SWIKER, M. A. WATSON, J.
DATE- SEP. 1965
LENWN-160
Bombardment of vacuum chamber walls by an electron
gun within the chamber achieves greater efficiency
with less cost. The ultimate vacuum reached
using the gun is greater than the system design
level.

B65-10283
ELECTRON-BEAM DEFLECTION CONTROLLED BY DIGITAL
SIGNALS
CHERRY, J. R. DATE- SEP. 1965
GSFC-385
Electron-beam deflection in electronic image
converters is controlled by a tapped magnetic
deflection yoke and a series of current
generators. The generators supply equal current
to each tap through digitally controlled switches,
thereby increasing the inherent accuracy of the
system.

B65-10291
SPIRALED CHANNELS IMPROVE HEAT TRANSFER BETWEEN
FLUIDS
EIGA, W. WIEBI, R. R. DATE- OCT. 1965
JFL-694
Spiral flow channels increase heat transfer
between two fluids in a countercurrent heat
exchanger of given volume. The heat exchanger is
constructed by connecting a spiraled
bellows-shaped ducting between two concentric
cylindrical tubes.

B65-10292
INTERFEROMETER CONSTRUCTION ASSURES PARALLELISM OF CRITICAL COMPONENTS
CRESSEY, P. DATE- OCT. 1965
JFL-704
Interferometer with rigidly mounted components
assures parallelism of critical components. The
interferometer is constructed for effective
operation even if the total instrument is
subjected to mechanical stress.

B65-10295
UNIQUE CONSTRUCTION MAKES INTERFERENCE
SENSITIVE TO MECHANICAL STRESSES
BEER, R. DATE- OCT. 1965
JFL-725
Michelson-type interferometer with a cat-eye
reflector operates effectively even in the
presence of random mechanical stresses. A
cubical beamsplitter in infrared or visible light
permits operation in infrared or visible light.

B65-10296
COAXIAL CAPACITOR USED TO DETERMINE FLUID
DENSITY
ATKISSON, E. A. DATE- OCT. 1965
JGW-232
Sensing device measures directly the density of
compressible fluid existing simultaneously in both
liquid and gaseous phases. The device is
comprised of a capacitor connected as one leg of
a bridge circuit, a power source, and an indicator
calibrated to indicate density as a direct
measurement.

B65-10297
SUPERCONDUCTOR SHIELDS TEST CHAMBER FROM
AMBIENT MAGNETIC FIELDS
MILDREDHARST, A. F. DATE- OCT. 1965
JFL-627
Shielding a test chamber for magnetic components
enables it to maintain a constant, low magnetic
field. The chamber is shielded from ambient
magnetic fields by a lead foil cylinder maintained
in a superconducting state by liquid helium.
CLOSED FLUID SYSTEM WITHOUT MOVING PARTS CONTROLS TEMPERATURE
STEIGEL, J. A. / DATE- NOV. 1965
LEWIS-222
Closed fluid system maintains a constant temperature in an insulated region without the use of any moving parts. Within the system, the energy for the thermodynamic cycling of two-phase heat transfer fluid and a hydraulic fluid is entirely supplied by the heat generated in the thermally insulated region.

VACUUM CHAMBER PROVIDES IMPROVED INSULATION AND SUPPORT FOR CRYOSTAT
SPON- INNOVATOR NOT GIVEN / N. AM. AVIATION/ DATE- DEC. 1965
B66-10060
- Taut wires in an evacuated cylinder minimize heat transfer through the walls and junctions of a liquid-helium-filled cryostat by suspending the cryostat.

MODIFIED PROCEDURE SPEEPS CAMERA COPY LAYOUT
SMITH, L. F. / DATE- DEC. 1965
GSPC-028
Projecting a grid pattern on a steel layout board facilitates the alignment of camera copy for photo-offset reproduction. Small flat bar magnets fasten the copy to the board.

OPTICAL OUTPUT ENHANCES FLOWMETER ACCURACY
WOLFE, J. C. / DATE- DEC. 1965
B66-10087
M-PS-482
Magnetic flowmeter with a direct-coupled optical output increases accuracy and operates independently of other system inputs. The design includes simple external adjustment and signal amplitude control.

COPPER FOIL PROVIDES UNIFORM HEAT SINK PATH
PHILLIPS, I., J. / DATE- JAN. 1966
B66-10096
K-PS-262
Thermal path prevents voids and discontinuities which make heat sinks in electronic equipment inefficient. The thermal path combines the high thermal conductivity of copper with the resiliency of silicone rubber.

AUTOMATIC FLUID SEPARATOR SUPPLIES OWN DRIVING POWER
DUCKER, J. S. / DATE- JAN. 1966
B66-10100
Woo-085
Centrifugal separator suspended in the fuel tank of a space vehicle selects and vents gas vapor at zero gravity. Escaping vapor is used to drive an expansion turbine that is magnetically coupled to the separator.
Specimen holder for X-ray diffraction analysis prevents the specimen to the incident X rays in a curve. This permits the use of an X-ray beam having a larger divergence angle, the beam intensity is increased, and the statistical accuracy of analysis is improved.

**B66-10079**

**HIGH-PRESSURE, LOW TEMPERATURE ELECTRICAL CONNECTOR MAKES NO-LEAK SEAL**

Weekley, J. F. /N. AM. AVIATION/ DATE- MAR. 1966

MSC-276

Flow control of cryogenic liquids is achieved through use of an electrical feed-through connector with a molten-glass-type valve. To prevent gas leakage, the connector is designed and structured so that extremely high pressure and low temperatures contribute to its sealing properties.

**B66-10086**

**SCREEN OF CYLINDRICAL LENSES PRODUCES STEREOSCOPIC TELEVISION PICTURES**

Kohn, C. L. /SPACO, INC./ DATE- MAR. 1966

N-FS-273

Steroscopic television pictures are produced by placing a colorless, transparent screen of adjacent parallel cylindrical lenses before a raster from two synchronized TV cameras. Alternate frames from alternate cameras are displayed. The viewers' sensory perception fuses the two images into one three-dimensional picture.

**B66-10095**

**ULTRAVIOLET PHOTOGRAPHIC PYROMETER USED IN ROCKET EXHAUST ANALYSIS**

Levin, B. R. /N. AM. AVIATION/ DATE- MAR. 1966

N-FS-499

Ultraviolet photographic pyrometer investigates the role of carbon as a thermal radiator and determines the geometry, location, and progress of afterburning phenomena in the exhaust plume of rocket engines using liquid oxygen/JP-4 as propellant.

**B66-10096**

**INEXPENSIVE INFRARED SOURCE IMPROVED FROM FLASHLIGHT**

Sprow- Innovator Not Given /FAIRCCHILD HILLER CORP./ DATE- MAR. 1966

N-FS-498

Inexpensive hand-held source of infrared energy is provided by a flashlight bulb coated with a paint which filters out the visible light emitted by the bulb and transmits only infrared radiation. This device can be used for checking infrared sensors and for experimental purposes.

**B66-10098**

**NEW ENERGY STORAGE CONCEPT USES TAPES**

Gubbis, A. Kapellas, R. B. /Monsanto Res. CORP./ DATE- MAR. 1966

Lewis-239

Energy storage system uses movable permeable tapes with cathode and electrolyte material that is drawn across an anode to produce electric power. The system features long shelf life, high efficiency, and flexible operation.

**B66-10108**

**PLASTIC SCINTILLATOR CONVERTS STANDARD PHOTOMULTIPLIER TO ULTRAVIOLET RANGE**

Sprow- Innovator Not Given /GEOPHYS. CORP. OF AM./ DATE- MAR. 1966

ECC-10

Commerically available plastic scintillators are attached to the glass windows of standard photomultiplier tubes for detection of ultraviolet radiation.

**B66-10114**

**HIGHLY SENSITIVE SOLIDS MASS SPECTROMETER USES INERT-GAS ION SOURCE**

Sprow- Innovator Not Given /GEOPHYS. CORP. OF AM./ DATE- MAR. 1966

ECC-11

Mass spectrometer provides a recorded analysis of solid material surfaces and bulk. A beam of high-energy inert-gas ions bombards the surface atoms of a sample and converts a percentage into an ionized vapor. The mass spectrum analyzer separates the vapor ionic constituents by mass-to-charge ratio.

**B66-10121**

**COMPOUND IMPROVES THERMAL INTERFACE BETWEEN THERMOCOUPLE AND SENSED SURFACE**

Fallin, I. M. /WESTINGHOUSE ASTRONUC. LAB./ DATE- MAR. 1966

EUC-0028

Thermocouples and brittle materials are joined without welding by an epoxy resin cement mixer with a conducting material. This mixture does not form thermal barriers at cryogenic temperatures.

**B66-10122**

**FIBRUM THIN FILMS ARE SUPERCONDUCTIVE IN STRONG MAGNETIC FIELDS AT LOW TEMPERATURES**

Clough, F. J. /NATL. RES. CORP./ MEN, P. DATE- MAR. 1966

JPL-SC-174

Niobium film superconductor carries high currents in strong magnetic fields. The thin niobium film is formed on an inert substrate through evaporation in a vacuum environment. Control of temperature and vacuum results in rejection of gaseous impurities so that the film is of very high purity.

**B66-10143**

**SEXTANT MEASURES SPACECRAFT ALTITUDE WITHOUT GRAVITATIONAL REFERENCE**

Sprow- Innovator Not Given /GEONAUTICS, INC./ DATE- APR. 1966

MSC-200

Horizon-sensing sextant measures the altitude of an orbiting spacecraft without gravitational reference by optically measuring the dip angle to the horizon along a line of sight in each of two planes. The sextant scans over a relatively limited field of view.

**B66-10153**

**ARGON PEBBLE GAS COOLED BY CHILL BOX**

Firing, L. W. /N. AM. AVIATION/ DATE- APR. 1966

N-FS-568

Cooling argon purge gas by routing it through a shop-fabricated chill box reduces charring of tungsten inert gas torch head components. The argon gas is in a cooled state as it enters the torch and prevents buildup of char caused by the high concentrations of heat in the weld area during welding operations.

**B66-10156**

**CIRCULAR, EXPLOSION-PROOF LAMP PROVIDES UNIFORM ILLUMINATION**

Sprow- Innovator Not Given /N. AM. AVIATION/ DATE- APR. 1966

MSC-382

Circular explosion-proof fluorescent lamp is fitted around a TV camera lens to provide shadowless illumination with a low radiant heat flux. The lamp is mounted in a transparent acrylic housing sealed with clear silicone rubber.

**B66-10157**

**CRYOGENIC LIQUID TRANSFER SYSTEM REDUCES RESIDUAL BOILOFF**

Skaggs, D. E. DATE- APR. 1966

Lewis-274

System for transferring cryogenic liquids to a dewar prevents boiloff of residual liquid by venting the boiloff to the atmosphere during the transfer tube cooling period. The system is most useful with liquids having very small heat of vaporization.

**B66-10173**

**OFFSET LENSES AND VERSATILITY TO PHOTOTYPESetting MACHINE**

Jakes, A. E. /DOCUMENTATION, INC./ DATE- APR. 1966

Eo-9

Offset lenses facilitate the composition of inputs of other than straight baseline characters on the Photon phototypesetting machine. A number of lenses in the turret are mounted in an offset
pattern that causes characters projected through them to fail the photographic paper in the magazine above and below the baseline.

B66-10178

**FATIGUE CRACKS DETECTED AND MEASURSED WITHOUT TEST INTERRUPTION**
FRECHER, J. C. KLIMA, S. J. LESCO, D. J. DATE-
MAY 1966

**LEWIS-266**

Ultrasonic flaw detector records cracks in materials undergoing fatigue tests, without interfering with test progress. The detector contains modified transducers clamped to the specimen, and an oscillograph readout.

B66-10181

**ALUMINIUM DOING IMPROVES SILICON SOLAR CELLS**
SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE-
MAY 1966

**LEWIS-206**

Aluminium doped silicon solar cells with resistivities in the 10- to 20-ohm centimeter range have broad spectral response, high efficiency and long lifetimes in nuclear radiation environments. Production advantages include low material rejection and increased production yields, and close tolerance control.

B66-10182

**INSULATION FOR CRYOGENIC TANKS HAS REDUCED THICKNESS AND WEIGHT**
DUNN, R. D. MIDDLETON, R. L. SCHELL, J. T.
STURCT, J. R. DATE- MAY 1966

**LEWIS-206**

Dual seal insulation, consisting of an inner layer of scaled-cell teflon honeycomb core and an outer helium purge channel of fiberglass reinforced phenolic honeycomb core, is used as a thin, lightweight insulation for external surfaces of cryogenic-propellant tanks.

B66-10186

**RADIATION USED TO TEMPERATURE COMPENSATES SEMICONDUCTOR STRAIN GAGES**
GREEN, C. DATE- MAY 1966

**LANGLEY-207**

Exposure to high energy electron radiation reduces the temperature coefficients of resistance and gage factor of a range of resistivities of n- and p-type semiconductor silicon strain gages. After irradiation, the gages are heated to a high temperature for a 24-hour period to stabilize their temperature coefficients.

B66-10187

**RUBBER-COATED BELLOWS IMPROVES VIBRATION DAMPING IN VACUUM LINES**
ENGLEND, D. E. SMITH, R. J. DATE- MAY 1966

**LEWIS-273**

Compact-vibration damping systems, consisting of rubber-coated metal bellows with a sliding o-ring connector, are used in vacuum lines. The device presents a metallic surface to the vacuum system and combines flexibility with the necessary stiffness. It protects against physical damage, reduces fatigue failure, and provides easy mating of nonparallel lines.

B66-10199

**MOUNT ENABLES PRECISION ADJUSTMENT OF OPTICAL-INSTRUMENTATION MIRROR**
SPON- INNOVATOR NOT GIVEN /ALTM/ DATE-
MAY 1966

**MSC-194**

Mirror mount assembly allows the plane of a mirror to be adjusted through small angles about two orthogonal axes. The assembly, which has a mirror mount with two independently adjustable flexure links, allows independent precise adjustment of the mirror mount with respect to each axis.

B66-10231

**SOLAR CELL SUBMODULE DESIGN FACILITATES ASSEMBLY OF LARGE AREAS**
YASUI, R. K. DATE- MAY 1966

**JPL-728**

Solar cell submodules with bus bars that leave tabs along one end of the submodule and wires with raised portions along the other end and are assembled by interlocking the tabs and wires of adjacent submodules. This structural design is lightweight and reliable and requires no metallic substructure.

B66-10257

**FREEZE PROVIDES HEAT TRANSFER FOR SOLID CO2 CALIBRATION STANDARD**
SPON- INNOVATOR NOT GIVEN /LEWIS AND NORTHROP CO./ DATE- JUN. 1966

**MSP-646**

Acetone and Freon as liquid heat transfer media bring a dry ice bath to, and keep it at, the temperature required when using solid carbon dioxide as a calibration standard. Although acetone gives better results, Freon TP is preferred since acetone reacts violently in the presence of liquid oxygen.

B66-10263

**OPTICAL DEVICE ENABLES SMALL DETECTOR TO SEE LARGE FIELD OF VIEW**
ABEOT, J. E./NAM SPACE TECHNOL. LAB./ DATE-
JUN. 1966

**W00-253**

Optical device images the sun on a mask that transmits it or prevents its transmission to a photodetector behind the mask depending on image position on the mask. The device uses a pinhole as the image former to provide a large field of view and diffraction-resolution limited.

B66-10268

**HIGH-SPEED FUSION USES INFRARED RADIATION FOR CONTROLLED BRAZING**
MCLLLES, P. W. /AUGUST-GEN. CORP./ DATE-
JUN. 1966

**H0-0047**

Furnace produces controlled heat for brazing and heat treating metals over a wide range of temperatures by using a near-infrared heat source positioned at one focus of an elliptical reflector mounted below a cylindrical quartz chamber. This furnace maintains a pure atmosphere, has rapid heatup and cooldown, and permits visual observation.

B66-10289

**ULTRASONIC HAND TOOL ALLOWS CONVENIENT SCANNING OF SPOT WELDS**
MITCHELL, D. K. /BOEING CO./ DATE- JUL. 1966

**MPS-539**

Small, portable, electrically powered hand tool, coupled with auxiliary ultrasonic equipment, allows convenient scanning of spot welds for discontinuities.

B66-10290

**MODIFIED McLEOD GAGE RECORDS AUTOMATICALLY**
PATHE, P. A. DATE- JUL. 1966

**LEWIS-290**

Modified McLeod gage records pressure measurements automatically. The measurements can be programmed in advance by means of an automatic timer.

B66-10307

**COMMERCIAL FILM PRODUCES POSITIVE X-RAY PHOTO IN TEN SECONDS**
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUL. 1966

**MPS-521**

Type 52 Polaroid Land Film Packet provides a rapid, inexpensive method of producing positive X-ray photographs of various objects.

B66-10316

**LEGIBILITY OF ELECTROLUMINESCENT INSTRUMENT PANEL INVESTIGATED**

**MSC-494**

Legibility studies of several EL/electroluminescent displays correlate reading time and accuracy with number size, stroke/width ratio, indicia size, pointer width, contrast, ambient illumination, and color background and and
contrast. Human factor criteria established on non-EL displays may not apply to EL displays.

B66-10340
INTEGRAL DEVICES HELP MAINTAIN CONSTANT
HEATING FORCES DURING THERMAL PRESSURE TESTING
F. D. FISCHER
DATE - JUL. 1966

Portable adapter assembly prevents damage to tubing and injury to personnel when pressurizing a system or during high pressure tests. The assembly is capable of withstanding high pressure. It is securely attached to the tubing stub end and may be removed without brazing, cutting or cleaning the tube.

B66-10507
CIRCUIT PROVIDES ACCURATE FOUR-QUADRANT
MULTIPLICATION

Solid state circuit provides four-quadrant multiplication at frequencies ranging from 1 to 100 hertz using pulse-width and height multiplication techniques. The circuit consumes little power and has an accuracy of approximately one percent.

B66-10380
INSULATION EFFECTIVE FOR
CRYOGENIC TRANSFER LINES

Solid state circuit provides four-quadrant multiplication at frequencies ranging from 1 to 100 hertz using pulse-width and height multiplication techniques. The circuit consumes little power and has an accuracy of approximately one percent.

B66-10694
GAS PRESSURE FEEDS FILM INTO CAMERA AT HIGH
SPEED

Corporate interest is not given /LEWIS/ DATE - NOV. 1966

A bright light beam blown a loop of unexposed film as a wave across a vacuum plate to feed film smoothly into a camera so that 2 successive lengths can be exposed within 50 milliseconds. This technique can be readily applied to multiple aperture cameras as well as to various types of films.

B66-10499
CRYOGENIC COOLING REDUCES HIGH VOLTAGE ARCING
BETWEEN ELECTRODES OPERATING IN A VACUUM

DATE - OCT. 1966

Cooling to a temperature of approximately liquid nitrogen or lower, reduces arcing, or high voltage breakdown, between two closely spaced electrodes operating in a vacuum. This cooling technique can be applied to electrodes having other than hemispherical shapes.

B66-10509
PANELS ILLUMINATED BY EDGE-LIGHTED LENS

DATE - NOV. 1966

Electroluminescent lamps used to edge-light a specially ground lens provide nonglare, reduced eye strain panel illumination. There is no noticeable fall off in brightness along the lens edge. Light intensity diminishes toward the lens center. A slight halo, observed along the lens edge, has no detrimental effect.

B66-10511
EXPERIMENTAL INVESTIGATION OF ELEPHANT DC
ARC HEATING OF NITROGEN

DATE - DEC. 1966

Four types of arc heaters, each with the capability of providing arc power levels in excess of 1 megawatt in nitrogen, were tested over a range of power levels and nitrogen flow rates to determine their value as heaters for hypersonic tunnels. The data derived should be useful in the design of high energy heaters for various industrial processes.

B66-10532
LIGHT-INTENSITY MODULATOR WITHSTANDS HIGH
HEAT FLUXES

DATE - NOV. 1966

Mechanical scabulars and controls the intensity of luminous radiation in light beams associated with high-intensity heat flux. This scabular incorporates two fluid-cooled, externally grooved, contracting metal cylinders which when rotated about their longitudinal axes present a circular aperture of varying size depending on the degree of rotation.
CAPABLE OF SUSTAINED OPERATION

GRIDSHAN, W. A.; MULLER, K. /TEXTRON ELECTRONICS/

DATE- NOV. 1966

ARC-61

Water cooled, high intensity radiation source rated at 125 kw, with an efficiency of 31 to 34 percent is used in the evaluation of ablative materials under simulated conditions of high velocity entry into planetary atmospheres. The source operates repeatedly at maximum power for periods of 10 to 20 minutes.

B66-10558

CALCULATION OF INFRARED SPECTRAL TRANSMITTANCES OF INHOMOGENEOUS GASES

HUFFAKER, R. R. / DATE- DEC. 1966

R-FS-1598

Calculation of spectral transmittance for a particular inhomogeneous gas path is made by combining known data on gases at constant temperature, pressure, and concentration. The spectral transmittances of the inhomogeneous gaseous gases is needed to calculate the heat radiated from the exhaust plume to the rocket base of a multiple engine rocket.

B66-10560

LASER MEASURING SYSTEM ACCURATELY LOCATES POINT COORDINATED ON PHOTOGRAPH

DOERZ, J. H.; LINDENMEYER, C. W.; VONDERHEIDE, R. R. / DATE- DEC. 1966

N-FS-74

Laser activated ultraprecision ranging apparatus interfaced with a computer determines point coordinates on a photograph. A helium-neon gas CW laser provides collimated light for a null balancing optical system. This system has no mechanical connection between the ranging apparatus and the photograph.

B66-10565

MIXED CONDITIONS TEMPERATURE OF LIQUIFIED GAS STREAMS

TALMOR, E. / /M. AVIATION/ DATE- DEC. 1966

M-FS-1784

Room temperature gaseous hydrogen mixed with liquid hydrogen in a venturi produces a two-phase liquid hydrogen stream at a stable temperature. This technique is useful in laboratory testing where presently, temperature control is maintained by a calibrated heat leak that results in considerable expenditure of cryogenic refrigerants.

B66-10583

NEON ISOTOPES CANCEL ERRORS IN GAS LASER

M-FS-1876

Neon isotope cancel frequency pushing errors arising from unequal gain in the two contrarotating beams of a helium-neon filled discharge tube used in a ring laser.

B66-10596

OPTICAL AUTOMATIC GAIN CHANNEL

MRUS, G.; ZUKOWSKY, W. / BERRIN-ELMER CORP. /

DATE- DEC. 1966

N-FS-1550

Automatic Gain Control /AGC/ channel automatically compensates for gain changes in the azimuth error channel due to time varying optical sight degrading effects. This system is useful in remote television monitors, automatic navigation systems, and surveying and mapping instrumentation.

B66-10602

EXPOSURE VALVE /B/ SYSTEM EXPANDED TO INCLUDE FILTERS AND TRANSMITTANCE

LINDSEY, W. F. / DATE- DEC. 1966

LANGLY-190

Application of the exposure valve system requires that the system be expanded to high brightness level and expanded to include filter factors. A minimum of four photographic factors are involved in the evaluation of an exposure which, when determined from tables of 1-stop interval, could introduce noticeable error.

B66-10615

FEED-THRU FLANGE IS USEFUL IN VACUUM

APPLICATIONS TO CRYOGENIC TEMPERATURES

MAGER, S. F. / DATE- DEC. 1966

JPL-846

Feed-thru flange seals inner and outer walls of high vacuum test chambers. It is used in vacuum applications at both cryogenic and higher than cryogenic temperatures. A damaged flange can still be used for partial vacuum, noncryogenic applications in conjunction with an appropriate rubber seal.

B66-10630

TECHNIQUE FOR MEASURING ABSORPTION AND EMISSIVITY BY USING CYCLIC INCIDENT RADIATION

LEWIS-281

Cyclic radiation technique has been developed for determining absorptance and emittance of metal surfaces. Using this technique both absorptance and emittance can be determined from one set of data, and variable and controlled temperature levels are possible.

B66-10638

TWIN SIREN SYSTEM PRODUCES FAST SCAN IN INFRARED DETECTOR

VANZETTI, R. / /M. AVIATION/ DATE- DEC. 1966

M-FS-1596

Two rotating wheels in orthogonal relationship with helicoidal reflecting surfaces mounted on their outer rims achieve a linear speed without normal tire loss in their return motion. The pitch of the helicoidal surfaces equals the displacement that the mirrors must traverse.

B66-10652

ROCKET ENGINE VIBRATION ACCURATELY MEASURED BY PHOTOGRAPHY

CRAIG, K. A. / /M. AVIATION/ DATE- DEC. 1966

M-FS-1910

High speed instrumentation camera focused on a partially masked light bulb which is securely mounted to the test fixture permits measurement of engine performance parameters when usual electronic vibration instrumentation is unavailable. Vibration is recorded as a light trace deviating from the light rays photographed in the static hardware condition.

B66-10654

CRYOGENIC FLUID SAMPLING DEVICE PERMITS TESTING UNDER HAZARDOUS CONDITIONS

MITCHELL, J. A. / /M. AVIATION/ DATE- DEC. 1966

M-FS-1927

Remotely controlled sampling device obtains timed sample of flowing cryogenic liquid propellants in remote or hazardous testing conditions. The device consists of a calibrated container, a dewar, a solenoid valve, a pressure gage, and a manual bleed valve.

B66-10657

SIMPLE TECHNIQUE DETERMINES AC PROPERTIES OF HARD SUPERCONDUCTIVE MATERIALS

HARPER, C. M. / HARRIOT/ DATE- DEC. 1966

M-FS-1818

Critical current density of neodymium-titanium alloy samples is analyzed from magnetization curves to determine the ac properties of hard superconductive materials. A complete family of magnetization curves is obtained, each curve representing performance at a different temperature.

B66-10660

PROCESS PRODUCES ACCURATE REGISTRY BETWEEN CIRCUIT BOARD PRINTS

SPAND- INNOVATOR NOT GIVEN /BENDIX CORP./ DATE- DEC. 1966

LANGLY-286

Tapes and quick-score circles of contrasting colors aid in obtaining precise registry between the two circuits of two-sided printed circuit boards. The tapes and circles are mounted on opposite sides of transparent plastic film to
Define the conductive path and feed-through hole locations.

B66-10682
PETRARCH CELLS UTILIZE HALOGEN-ORGANIC CHARGE TRANSFER COMPLEXES
GUTMAN, F. /HARRAN, A. M. /REBAUM, A. /DATE- DEC. 1966
JPL-926
Electrochemical cells with solid state components employ charge transfer complexes or donor-acceptor complexes, in which the donor component is an organic compound and the acceptor component is a halogen. A minor proportion of graphite added to these compositions helps reduce the resistivity.

B66-10693
LASER DOPPLER FLOWMETER MEASURES GAS VELOCITY
FUERMAN, R. /BROW EDGE CORP./ BUDDEREE, R. E. /DATE- DEC. 1966
MFS-1786
Utilizing the large magnitudes of Doppler shifts obtainable from a CW gas laser, local velocity vectors are measured by using the visible light from the laser. This technique is applicable for the measurement of velocity of any moving surface.

B66-10700
PROBLEM OF OSCILLATING CORE IN SUPERSONIC FLOW IS SOLVED BY SMALL PERTURBATION TECHNIQUES
PAO, T. K. /MT/ /DATE- DEC. 1966
MFS-860
Small perturbation technique solves the problem of an oscillating core in supersonic flow. The logic of the program is straightforward, as reflected in the actual instructions for solving the problem.

B67-10008
POLAROID FILM HELPS LOCATE OBJECTS IN INACCESSIBLE AREAS QUICKLY
MSC-950
Polaroid film is used with conventional portable X-ray equipment to locate and shoot items or objects in difficult areas. Polaroid film development time is about 20 seconds.

B67-10021
POLARIZER PROVIDES TRANSIENT RESPONSE IN HANGGROUN D RANGE
JOHNSTON, A. R. /DATE- FEB. 1967
JPL-990
Conventional polarimeter with a Semarant compensator improves transient response and eliminates manual manipulation. A sampled photocell amplifier output is fed to a low pass filter, resulting in a signal representing the optical state existing at the instant of sampling. With this technique, an unknown transient-induced retardation can be measured.

B67-10024
PLASMA JET ELECTRODE HAS LONGER OPERATING LIFE
GRACEY, C. M. /AEROJET GEN. CORP./ /DATE- FEB. 1967
N0-0098
Water-cooled, silver-infiltrated tungsten electrode has twice the operating lifetime of the pure tungsten electrode used in plasma jet generators. This electrode reduces the erosion rate, ensures excellent heat transfer, and reduces thermal stresses.

B67-10036
NEWDON ACTIVATION ANALYSIS TRACES COPPER ARTIFACTS TO GEOGRAPHICAL POINT OF ORIGIN
ARG-119
Impurities remaining in the metallic copper are identified and quantified by spectrographic and neutron activation analysis. Determination of the type of ore used for the copper artifact places the geographic point of origin of the artifact.

B67-10037
CORRELATION ESTABLISHED BETWEEN HEAT TRANSFER AND ULTRASONIC TRANSMISSION PROPERTIES OF COPPER BRAZED BONDS
DI NERI, R. A. /DATE- MAR. 1967
ERL-7074
Measuring and correlating the thermal conductivity and ultrasonic transmission of seven hot-brazed-bonded copper plates established a relationship between heat transfer and ultrasonic transmission properties of the bonds. This relationship permits the prediction of heat transfer characteristics from ultrasonic transmission tests.

B67-10054
METHOD ACCURATELY MEASURES MEAN PARTICLE DIAMETERS OF MONODISPERSE POLYSTYRENE LATEXES
KSchRITZIKH, J. H. /DATE- MAR. 1967
ARG-207
Photomicrographic method determines mean particle diameters of monodisperse polystyrene latexes. Many diameters are measured simultaneously by measuring row lengths of particles in a triangular array at a glass-oil interface. The method provides size standards for electronic particle counters and prevents distortions, softening, and flattening.

B67-10057
MECHANISMS OF SUPERCONDUCTIVITY INVESTIGATED BY NUCLEAR RADIATION
MFS-694
Investigation focused on the behavior of superconducting magnet and its constituent materials during and after exposure to nuclear radiation. The results will indicate the feasibility of their use in diverse applications and various environments.

B67-10068
STUDY MADE OF INTERACTION BETWEEN SOUND FIELDS AND STRUCTURAL VIBRATIONS
LITON, E. S. /SMITH, F. W., JR. /COMM. BROWN, JR. /BOLT, BERANEK, AND NEWMAN/ /DATE- APR. 1967
HQ-26
Study analyzes structural vibrations and the interactions between them and sound fields. It outlines a conceptual framework to analyze the vibrations of systems and their interactions, incorporating the results of earlier studies and establishing a unified basis for continuing research.

B67-10071
ELECTRONIC FILTER DISCRIMINATES BETWEEN TRUE AND FALSE REFLECTIONS
MERCHANT, J. /HONEYWELL INC./ /DATE- APR. 1967
BG-55
Electronic filtering system discriminates between true corneal and false reflections, solving the problem of spurious reflections of the CRT light in newly designed ocularimeter.

B67-10072
AN IMPROVED SOFT X-RAY PHOTOIONIZATION DETECTOR
STOKES, A. K. /YOUNG, R. E. /DATE- APR. 1967
DS-240
Photoionization detector with an alumina shell, a beryllium foil window, and a xenon gas fill measures small incident photon fluxes from soft X-rays. It has high spectral selectivity and quantum efficiencies, and a long shelf life. It eliminates electrical leakage and recontamination, and will hold a high vacuum.

B67-10075
STUDY MADE OF FAR INFRARED SPECTRA OF SILICATE MINERALS
SCHAFER, M. R. /INNOVATOR NOT GIVEN/ /DATE- APR. 1967
NFS-1611
94
Study of mineral in the far infrared region of the spectrum examines the problems and feasibility of remote sensing of the composition of the moon or tenuous atmosphere planets. Most of the work described utilized reflection techniques.

B67-10082
FATIGUE ZONES IN METALS IDENTIFIED BY POLARIZED LIGHT PHOTOGRAPHY
VEST, T. B. /BOEING CO./ DATE- APR. 1967
W00-266
Polarized light technique clearly defines the fatigue zones in metal for measuring and photographing. White light is passed through a vertical polarizing filter and then is reflected onto the surface of the fracture specimens.

B67-10088
EXPERIMENTAL SCALING STUDY OF FLUID AMPLIFIER ELEMENTS
ABLEE, J. GEEBEE, T. TAP?, C. /CASE INST. OF TECH./ DATE- APR. 1967
N-FS-1862
Study examines scaling parameters of three fluid amplifier elements - a bistable device, a boundary layer control device, and a vortex device. Variations in performance due to size, fluid, and other conditions are studied. Even with restricted examples the large number of variables impedes the establishment of these scaling laws.

B67-10109
SPECIAL PURPOSE REFLECTOMETER USES MODIFIED ULLBRICH SPHERE GORES?, N. D./ DATE- MAY 1967
M-1135
Modified Ullbrich sphere measures stray radiation caused by irregularities in the reflective surface of an optical test specimen. The test specimen is positioned between a light source and exit port and all diffusely scattered radiation is measured by a photomultiplier tube in the sphere.

B67-10110
STAR/HORIZON SIMULACR USED TO TEST SPACE GUIDANCE SYSTEM SCHMIDT, W. C. /MIT/ DATE- MAY 1967
M-847
Star/horizon simulator is usually used for alignment and optical plus photodetector tests of the sextant for the Apollo guidance and navigation system optical unit assembly. The unit is basically a refractive collimator with a two inch objective lens system and a twenty-four inch focal length.

B67-10120
M-647
Active vehicle optical alignment aid and a passive vehicle three-dimensional alignment target ensure proper orientation and alignment plus control of the closure range and rate between two bodies, one is controlled motion and one at rest.

B67-10126
HIGH-ENERGY-RATE MAGNETOHYDRAULIC METAL FORGING SYSTEM SPK- INSUFFICIENT DATE GIVEN /ADVAN. KINET./ DATE- MAY 1967
R-2162
In the magnetohydraulic metal forging system, a sonic shock wave is generated in a liquid medium by a coil energized by an electrical discharge. These wave transfer energy from a metal diaphragm, actuated by a pulsed magnetic field, to a metal workpiece. In the development a study was made of the pressure pulse phenomenon in a liquid medium.

B67-10128
IMPROVED CYROGENIC REFRIGERATION SYSTEM SIGEL, W. H. DATE- MAY 1967
JPL-731
Two-position shuttle valve simplifies valving arrangement and crank-shaft configuration in gas-balancing and Stirling-cycle refrigeration systems used to produce temperatures below 173 degrees K. It connects the displacer and regenerator alternately to the supply line or the return line of the compressor, and establishes constant pressure on the drive pistons.

B67-10131
NEUTRON DIFFRACTOMETER ALLOWS BOTH MAGNETIC AND CRYSTALLOGRAPHIC ANALYSES ANGEL, A. DATE- JUN. 1967 BEAN- SEE ALSO ARL-6920
ARG-191
Automatic double-crystal neutron diffractometer performs both crystal and magnetic structural analyses. This shielded installation has a goniometric turntable and electronic controls, and auxiliary equipment including a goniometer, diffraction electromagnet, two cryogenic dewars, and two diffraction furnaces.

B67-10134
CRYOGENIC SEAL REMAINS LEAKTIGHT DURING THERMAL DISPLACEMENT FIELDS, T. H. MARTIN, K. B. PEWIT, E. G. DATE- MAY 1967
ARG-96
Cryogenic seals protect the surfaces of a plastic member in a low-pressure system subjected to extreme temperature changes. The outer seal is an aluminum expansion ring bonded to the lens outer surface and the inner seal consists of a reman-filled aluminum O-ring bonded to the inner surface.

B67-10164
SOLAR X-RAY SPECTRUM REPRODUCED IN VACUUM STEELE, C. A. KIRCHNER, L. P. /MIT RES. INST./ DATE- JUN. 1967
NMSC-228 MSC-1168
Desired low energy X rays are produced by modifying commercial ion tubes and combining them with standard power supplies and control circuitry. These X rays have less deviation from the solar X-ray spectrum in energy and intensity.

B67-10216
ELECTRON BEAM WELDER USES OWN WELDS BODEN, W. A. /GEN. ENGR./CORVAIR DIV./ DATE- JUN. 1967
LWIS-10111
Beam of an electron beam welder X rays its own welds, enabling rapid weld quality checks to be made without removing the work from the vacuum chamber. A tungsten target produces X rays when hit by the beam. They are directed at the weld specimen and recorded on polaroid film.

B67-10218
X-RAY SOURCE USES INTERCHANGEABLE TARGET ANODES TO VARY X-RAY WAVELENGTH SHIELDS, R. A. DATE- JUL. 1967
NPO-10036
Compact laboratory X ray tube generates X rays of various wavelengths by using interchangeable target anodes. The wavelength of the X rays depends on the metal from which the anode is made.

B67-10247
WATER COOLED ANODE INCREASES LIFE OF HIGH TEMPERATURE ARC LAMP RHINE, H. N. DATE- NOV. 1967
NPO-10186
Water cooling system increases the life of the anode of a high temperature compact arc lamp. A shaped water passage is provided through the tip or hottest point of the anode so that water will flow through it at a relatively high velocity.

B67-10264
INEXPENSIVE CYROGENIC INSULATION REPLACES VACUUM JACKETED LINE RUSCHE, C. E. /WESTINGHOUSE ASTRONAUTICAL LAB./ DATE- JUL. 1967
NDC-10661
Commercially available aluminum Mylar, cork and fiber glass form a multilayered sealed system and provide rugged and economical field installed insulation for cryogenic/liquid nitrogen or
oxygene/ pipe lines in an exposed environment.

B67-10288
LASEB SYSTEM GENERATES SINGLE-FREQUENCY LIGHT
TANG, R. /SILLANIA ELECTRON. SYSTEMS/ DATE- AUG. 1967
M-PS-2556
Program eliminates major sources of noise in the laser output, with minimum sacrifice of total laser output power. Results include the design and development of a laser system which features high power single-frequency output in the S-20 photocathode response region.

B67-10295
IMPROVED ULTRASONIC TV IMAGES ACHIEVED BY USE OF LAND-F&AE ORIENTATION TECHNIQUE
BERGER, E. DATE- AUG. 1967 READ- SEE ALSO ANL-7042 ARG-203

Leak-wave sample orientation technique minimizes the interference from standing waves in continuous wave ultrasonic television imaging techniques used with thin metallic samples. The sample under investigation is oriented such that the wave incident upon it is not normal, but slightly angled.

B67-10296
THERMAL NEUTRON IMAGE INTENSIFIER TUBE PROVIDES HIGHLY VISIBLE RADIOGRAPHIC PATTERN

Vacuum-type neutron image intensifier tube improves image detection in thermal neutron radiographic inspection. This system converts images to an electron image, and with electron acceleration and demagnification between the input target and output screen, produces a bright image viewed through a closed circuit television system.

B67-10297
FRESNEL DIFFRACTION PLATES ARE SIMPLE AND INEXPENSIVE
HOFFER, R. E. DATE- AUG. 1967 M-PS-12731

Fresnel plate demonstrates diffraction phenomena simply and inexpensively. A large number of identical diffracting apertures are made in random orientation on photographic film. When a small source of light is viewed through the plate, the diffraction pattern typical of the diffracting aperture is readily seen.

B67-10316
RADIATION COUNTING TECHNIQUE ALLOWS DENSITY MEASUREMENT IN HIGH-PRESSURE/ HIGH-TEMPERATURE ENVIRONMENT

Radioactive tracers induced by neutron irradiation provide a gamma ray flux proportional to the density of a metal, allowing density measurement of these metals in extreme high-temperature and high-pressure environments. This concept is applicable to most metals, as well as other substances.

B67-10326
PORTABLE SPECTROMETER MONITORS INERT GAS SHIELD IN WELDING PROCESS
GROE, E. L. /IVY RES. INST./ DATE- SEP. 1967 M-PS-12144

Portable spectrometer using photosensitive readouts monitors the amount of oxygen and hydrogen in the inert gas shield of a tungsten-inert gas welding process. A fiber optic bundle transmits the light from the welding arc to the spectrometer.

B67-10337
LOW-ENERGY GAMMA RAY INSPECTION OF BRAZED ALUMINUM JOINTS
BROWN, J. A. /N. AM. AVIATION/ DATE- SEP. 1967 MSC-1189

Americium 241 serves as a suitable radioisotope /gamma ray source/ and exposure probe for radiographic inspection of brazed aluminum joints in areas of limited accessibility. The powdered isotope is contained in a sealed capsule mounted at the end of a spring-loaded pushrod in the probe assembly.

B67-10342
SIMPLIFIED TECHNIQUE DEMONSTRATES MAGNETIC DOMAIN SWITCHING
HAPOV- INNOVATIONS NOT GIVEN /SPERRY RAND CORP./ DATE- OCT. 1967 M-PS-13153

Light from a conventional photographic light source is polarized and projected through thin samples of gadolinium iron garnet and then observed with a conventional polarizing microscope. A distinctive change in color from red to yellow is observed as the magnetic domains are switched.

B67-10352
PRACTICAL NEW METHOD OF MEASURING THERMAL-NEUTRON FLUENCE
STUBOLD, J. R. /SILLANIA GEN. CORP./ WARMAN, E. DATE- OCT. 1967 M-PS-10856

Thermoluminescence dosimeter technique measures thermal-neutron fluence by encapsulating lithium fluoride phosphor powder and exposing it to a neutron environment. The capsule is heated in a dosimeter reader, which results in light emission proportional to the neutron fluence.

B67-10371
MEASURING COPLANARITY OF SURFACES
WEBB, E. M. /KOLLMAN INST. CORP./ DATE- OCT. 1967 M-PS-12044

Interferometric technique is used to measure the coplanarity and flatness of lapped surfaces on which a high-precision mirror is to be mounted. The measurement of minute height variations of several small discrete surfaces is accomplished simultaneously.

B67-10372
ELECTRON BEAM PARALLEL X-RAY GENERATOR
PATE, P. /AM. SCI. AND ENG./ DATE- OCT. 1967 M-PS-11022

Broad X ray source produces a highly collimated beam of low energy X rays - a beam with 2 to 5 arc minutes of divergence at energies between 1 and 6 keV in less than 5 feet. The X ray beam is generated by electron bombardment of a target from a large area electron gun.

B67-10388
MODIFIED BLACKBODY DEVICE EMITS HIGH-DENSITY RADIATION
SCHMUCKER, P. E. /N. AM. AVIATION/ DATE- OCT. 1967 M-PS-12744

Modified device provides a versatile, precisely controllable source of blackbody radiation to calibrate radiometers used for spectrometric analysis of large rocket engine plumes.

B67-10391
METHOD PREVENTS SECONDARY RADIATION IN RADIOGRAPHIC INSPECTION
STUCKER, A. A. /N. AM. AVIATION/ DATE- OCT. 1967 M-PS-13383

Thin-walled neoprene containers prevent secondary radiation, scatter, and undercut during radiographic inspection. The containers are filled with a mixture of barium sulfate, red lead, and petroleum jelly that achieves the required absorption rate.

B67-10394
EXPERIMENTS TO INVESTIGATE PARTICULATE MATERIALS IN REDUCED GRAVITY FIELDS
HODGINS, M. /ARMS D. LITTLE/ NEM, H. P. DATE- OCT. 1967 M-PS-13308

96
Study investigates agglomeration and macroscopic behavior in reduced gravity fields of particulate materials and predicts agglomeration and macroscopic properties of particulate materials. Experiments evaluate the basis for a particle behavior theory and measure bulk properties of particulate materials in reduced gravity.

Polaroid Land camera with an illuminated 7-power magnifier adapted to the lens, photographs weld flaws. The flaws are located by inspection with a 10-power magnifier adapted to the lens, photographs weld flaws. The flaws are located by inspection with a 10-power magnifying glass and then photographed with this device, thus providing immediate pictorial data for use in remedial procedures.

Standard print-out proofing paper, preprinted with an identifying code, serves as convenient densitometer. Exposure to light darkens the paper and gives a measure of the density of the resultant photographic image or the total amount of exposure sustained by the paper.
GLANCING-INCIDENCE TELESCOPE FOR PAR ULTRAVIOLET AND SOFT X-RAYS
NEUFF, W. M. UNDERWOOD, J. H. DATE- DEC. 1967
GSPC-10532
Glancing-incidence telescope makes observations of distant celestial radiant bodies at wavelengths in the spectral region between 3 and 500 angstroms. The device can be used as a fore-optics system for a laboratory extreme ultraviolet spectrometer, or for the collection or imaging of thermal neutrons.

NOISE STUDY OF SINGLE STAGE COMPRESSOR
ROTOR-STATOR INTERACTION
COPELAND, A. C. CROSS-WBR. J. L. DATE- DEC. 1967
LANGLEY-137
Study made of noise radiation from rotor-stator interaction in axial-flow compressors. The collected data were reduced to the form of radiation patterns and frequency spectra. These data show how the radiation patterns are affected by the relative number of rotor blades and stator vanes.

PLASTIC SHOE FACILITATES ULTRASONIC INSPECTION OF THIN WALL METAL TUBING
LAMBERSTER, D. J. ANGUS-GEN. CORP./PETERS, R. M. DATE- DEC. 1967
NUC-10010
Plastic shoe aids inspection of thin walled stainless steel welded tubing to locate voids or other material defects in critical component equipment. Incorporated in available ultrasonic inspection equipment, it couples the transducer to the tube at desired incident angles.

MECHANIZED X-RAY INSPECTION SYSTEM FOR LARGE TANKS
OCCHIPIETI, G. C. BOEING CO./ DATE- DEC. 1967
MPS-12867 R-PS-12868 R-PS-13065 R-PS-13815
Mechanized x-ray equipment provides nondestructive inspection of structural weldments at various positions on very large tanks. It mechanizes the placement of thefills, automates the identification process, adheres to safety requirements, and eliminates all the usual time-consuming manual operations in industrial radiography.

NEUTRON DETECTOR SIMULTANEOUSLY MEASURES FLUENCE AND FIELDS
DVORAK, R. F. DYE, N. C. DATE- DEC. 1967 REAN- SEE ALSO ANL-7085
ARM-10071
Neutron detector acts as both an area monitoring instrument and a criticality dosimeter by simultaneously measuring dose equivalent and fluence. The fluence is determined by activation of six foils one inch below the surface of the moderator. Dose equivalent is determined from activation of three interlocked foils at the center of the moderator.

ANALYTICAL DRAFTING CURVES PROVIDE EXACT EQUATIONS FOR PLOTTED DATA
STENBERT, R. B. DATE- DEC. 1967
LANGLEY-285
Analytical drafting curves provide explicit mathematical expressions for any numerical data that appears in the form of graphical plots. The curves each have a reference coordinate axis system indicated on the curve as well as the mathematical equation from which the curve was generated.

NEW TECHNIQUE FOR DETERMINATION OF CROSS POWER SPECTRAL DENSITY WITH DAMPED OSCILLATORS
MPS-14022
New cross-power spectral density computation technique has been developed, as well as a technique for discrimination between periodic and random signals. This development is applicable to analysis of any stationary random process, and can be used in the aerospace and transportation fields.

LAB WAVE INCREASE SENSITIVITY IN NONDESTRUCTIVE TESTING
DI NOVI, B. DATE- DEC. 1967 REAN- SEE ALSO ANL-6630 ANL-6329
ARG-10009
Lab waves improve sensitivity and resolution in the detection of small defects in thin plates and small diameter, thin-walled tubing. This improvement over shear waves applies to both longitudinal and transverse flaws in the specimen.

GINBALED-MIRROR SCANNING SYSTEM CAPABLE OF SPINAL PATTERN
HAERTSCH, G. C. WILSON, R. W. DATE- DEC. 1967
GSPC-10170
Gimbaled-mirror infrared radiation scanner, with a lightweight torque motor direct coupled to each axis, is capable of scanning in a highly efficient spiral pattern. The scanner is lightweight and can be remotely positioned in previously inaccessible areas because the radiometer head and the gimbaled-mirror scanner can be separated.

HANDBOOK OF CRYOGENIC DATA IN GRAPHIC FORM
LOBB, R. B. CO/ DATE- DEC. 1967
KSC-10009
Handbook of Cryogenic Data is written in graphic form and concentrates extensive data on common materials of construction and properties of fluids frequently encountered in designing cryogenic systems. All data are presented in the British system of units.

POLYSTYRENE CRYOSTAT FACILITATES TESTING TENSILE SPECIMENS SUBMERGED IN LIQUID NITROGEN
SHEER, R. P. WESTINGHOUSE ASTRONUC. LAB./SAXELA, R. J. DATE- DEC. 1967
NUC-10521
Lightweight cryostat made of expanded polystyrene reduces eccentricity in a tensile system being tested under liquid nitrogen. The cryostat is attached directly to the tensile system by a special seal, reducing misalignment effects due to cryostat weight, and facilitates viewing and loading of the specimen.

TEST SYSTEM ACCURATELY DETERMINES TENSILE PROPERTIES OF IRRADIATED METALS AT CRYOGENIC TEMPERATURES
LYSTINE, P. J. WESTINGHOUSE ASTRONUC. LAB./ SAXELA, R. J. VANDERGRIFT, R. F. DATE- DEC. 1967
NUC-10523
Modified testing system determines tensile properties of irradiated brittle-type metals at cryogenic temperatures. The system includes a lightweight cryostat, split-screw grips, a universal joint, and a special temperature control system.

ENVIRONMENTAL CONTROL SYSTEM FOR CRYOGENIC TESTING OF TENSILE SPECIMENS
VANDERGRIFT, R. F. WESTINGHOUSE ASTRONUC. LAB./ TAYLOR, G. O. DATE- DEC. 1967
NUC-10523
Environmental control system uses a special coil to permit the tensile testing of specimens which may be subjected to temperatures anywhere between liquid nitrogen and room temperature. The test specimen zone is surrounded by the coil which permits the selective flooding of the specimen with warm or cold gas.
Adaptive control circuit prevents amplifier saturation.

Adaptive control circuit prevents saturation of push-pull output amplifiers used in low-power, low-torque suspension system. The adaptive control circuit senses how near the output amplifiers are to saturation and sets the B voltage in such a way as to keep them just clear of saturation.

Nonreciprocal gain control is used in a ring laser where the two counter-circulating beams may have differing intensities because of the residual Faraday rotation and other secondary nonreciprocal effects.
Infrared spectroradiometer measures high-resolution spectral absorption, emission, temperature, and concentration of chemical species in radially symmetric zones of the exhaust plumes of large rocket engines undergoing static firing tests. Measurements are made along predetermined lines of sight through the plume.

Baffle configuration provides a more efficient shield against interfering sources of illumination outside the desired field of view of optical imaging systems. It consists of a semi-ellipsoidal revolution about the minor axis with black specular reflecting surface and an aperture defined by the locus of the foci of the generating ellipse.

Superconducting cable for a cryogenic electromagnet with improved mechanical and thermal properties consists of a rectangular cross-sectioned combination of superconductor and normal conductor. The conductor cable has superconductors embedded in a metallic coating with high electrical and mechanical conductivity at liquid helium temperatures.

Study of thermodynamic phenomena occurring during transfer of cryogenic liquids from dewar to receiver tank reveals that the basic cause of liquid implosion is evaporation rate of droplets entering the tank in the early transfer phase. Analysis of the thermodynamics involved and implosion prevention techniques are included.

Protective enclosure for a camera, located on the exhaust stream of a rocket engine, permits continuous recording of evaporation processes of materials used in nozzle throat structures. The system uses a standard camera in a water-cooled, pressurized enclosure having a unique, inert gas-swept viewing duct.

Thermal insulation technique permits low and high power electronic chips to operate in the same package without thermal cross-coupling. An alumina glass shield thermally isolates the low power chip from the high power chip while Kovar substrate acts as a heat sink to remove heat from the high power chip.

An optical integrating sphere with a faceted reflective lining on the inside surface will provide light randomization/mixing of diffusely and specularly reflected light, with relatively few reflections. The improved sphere has a sufficiently high reflectivity for both visible and infrared radiation.

Combination of photographic and drafting techniques has been developed to simplify the preparation of three dimensional and dimetric engineering drawings. Conventional photographs can be converted to line drawings by making copy negatives on high contrast film.

Antechamber facilitates the use of a furnace in which materials are heat treated in a high vacuum or a gas atmosphere. It has a high vacuum pumping system, a means for backfilling with a selected gas, an access door, glove ports, and a motor driven platform.

This X square statistic is a useful measure of the discrepancy between the actual distribution of a set of data points and the theoretical distribution of a random variable of which the data points supposedly are values. Thus the X square statistic is frequently used in goodness of fit tests.

Adequate importance function and sampling scheme facilitates the application of the Monte Carlo method to problems involving the deep penetration of radiation.

Tool aids in graphic determination of input values for any first order lag system of known gain and time constant where the corresponding output function is displayed graphically and can be described by a first order differential equation. This tool permits a rapid reconstruction of input points.

Tool aids in graphic determination of input values for any first order lag system of known gain and time constant where the corresponding output function is displayed graphically and can be described by a first order differential equation. This tool permits a rapid reconstruction of input points.

Adequate importance function and sampling scheme facilitates the application of the Monte Carlo method to problems involving the deep penetration of radiation.

Adequate importance function and sampling scheme facilites the application of the Monte Carlo method to problems involving the deep penetration of radiation.

Tool aids in graphic determination of input values for any first order lag system of known gain and time constant where the corresponding output function is displayed graphically and can be described by a first order differential equation. This tool permits a rapid reconstruction of input points.
MSC-11560
Study of dynamic behavior of the liquid-vapor interface of an inviscid fluid in an accelerating cylindrical container includes an analytical-numerical method for determining large amplitude motion. The method is based on the expansion of the velocity potential in a series of harmonic functions with time dependent coefficients.

B68-10174
LOW SCATTER LIGHTWEIGHT FISSION SPECTROMETER
CONSTRUCTED FOR BIOLOGICAL RESEARCH
FRIGERIO, R. A. DATE–JUN. 1968
ARC-10039
Low scatter, lightweight fission spectrometer provides a simple, reliable method for determining absolute neutron fluxes in a fixed neutron. It minimizes neutron scatter and energy degradation effects, and has a counting volume large enough to intercept the most energetic fission fragments, yet small enough to be discriminating.

B68-10178
CONCEPT TO COMFORT-CONDITION SUBJECTS
WEARING RESTRICTIVE CLOTHING
TUCKER, E. M. DATE–JUN. 1968
MSC-10964
Neat exchanger maintains a desirable thermal balance in a subject wearing restrictive clothing. A grid of high thermal conductance fibers, in contact with the skin, transfers heat to or from the skin surface by means of a system of ducts carrying the transfer fluid which is maintained at a controlled temperature.

B68-10179
APPLICATION OF A TRUNCATED NORMAL FAILURE DISTRIBUTION IN RELIABILITY TESTING
GROVES, C., JR. /M. AM. ROCKWELL CORP./ DATE–JUN. 1968
N–FS–14328
Statistical truncated normal distribution function is applied as a time-to-failure distribution function in equipment reliability estimations. Age-dependent characteristics of the truncated function provide a basis for formulating a system of high-reliability testing that effectively merges statistical, engineering, and cost considerations.

B68-10181
STUDY OF CONVECTIVE MAGNETOHYDRODYNAMIC CHANNELED FLOW
SINGH, R. M. DATE–JUN. 1968 REAR–SFF ALSO
ANL-6937
ARG-1012
Study involves the effects of the interactions of an electric, magnetic, velocity, and temperature fields to aid in the design of a magnetohydrodynamic device. It concerns a theoretical analysis of the convective flow of an electrically conducting gas in a channel composed of conducting walls.

B68-10186
MAGNETIC FORGING STUDIES
M–FS–14217
Investigation of the tensile strength dependency on the characteristic time over which a pressure pulse is applied to a metal workpiece shows that the mechanical properties of these materials are functions of the rate at which the material is undergoing strain. These results and techniques are used in magnetostatic metal forming.

B68-10190
PROCEDURE DEVELOPED FOR REPORTING FAST-NEUTRON EXPOSURE
ROSSIN, A. F. DATE–JUN. 1968 REAR–SFF ALSO
ANL-6826
ARG-10035
Procedure for reporting fast-neutron exposure involves determination of the spectrum shape and absolute magnitude, selection of an energy weighting for the neutrons, and definition of a unit for reporting exposure. Using this method, comparisons of irradiation data from different reactors will be free from errors resulting from differences between the spectra.

B68-10228
THEORY OF A REFINED EARTH MODEL
KINSB, H. G. L. DATE–JUN. 1968
S–FS–14679
Revised equations are derived relating the variations of the earth’s gravity and radius as functions of longitude and latitude. They particularly relate the oblateness coefficients of the old harmonics and the difference of the polar radii respectively, ellipticities and polar gravity accelerations in the Northern and Southern Hemispheres.

B68-10238
DESIGN TECHNIQUES – STOCHASTIC CONTROLLERS
VINOALL, W. S. /KIT/ DATE–JUL. 1968
MSC-11554
Analytic techniques aid in the design of nearly optimal linear time-varying sampled-data stochastic controllers. The techniques also aid in the simplification and automation of program design for control computers.

B68-10240
PROPERTIES OF OPTICS AT HIGH TEMPERATURE AND THEIR MEASUREMENT, A STUDY
GATES, D. N. DATE–JUL. 1968
N–FS–14696
Bibliography lists the sources containing emissivity and absorptivity data on materials at extremely high temperatures. The experimental techniques, equipment and efforts of the experimenters to characterize the materials used and methods to evaluate the errors are given in the sources in this bibliography.

B68-10243
PORTABLE, HIGH INTENSITY ISOPEUTIC NEUTRON SOURCE PROVIDES INCREASED EXPERIMENTAL ACCURACY
ARG-90250
Small portable, high intensity isotopic neutron source combines twelve curium-berkelium beams. This high intensity of neutrons, with a flux which slowly decreases at a known rate, provides for increased experimental accuracy.

B68-10245
IMPROVED RELAY OPTICAL ELEMENT FOR SPECTROMETER USING CRYOGENICALLY COOLED DETECTOR
PFAHRE, R. E. /LOHREY MISSILES AND SPACE CO./ DATE–JUL. 1968
MSC-11890
By coating half of one element in the relay optical system of a spectroradiometer with a very high emissivity paint, the effect of the reflected radiation from the back of the filter wheel is eliminated optically. This causes the detector to view a constant level of radiation, regardless of how the reflectivity of the back of the filter wheel changes.

B68-10252
NEW METHOD FOR CRITICAL FAILURE PREDICTION OF COMPLEX SYSTEMS
S–FS–14133
Rigorous analytical technique, called criticality determination methodology, or CD technique, determines the probability that a given complex system will successfully achieve stated objectives. The CD technique identifies critical elements of the system by a failure mode and effects analysis.

B68-10255
ELECTRO-OPTIC MODULATOR FOR INFRARED LASER USING GALLIUM ARSENIDE CRYSTAL
WALSH, T. E. /NASA/ DATE–JUL. 1968
Fluorescent particles enable visualization of the flow patterns of gases at slow velocities. Through a transparent section in the gas line, a camera views the visible light emitted by the particles carried by the gas stream. Fine definition of the particle tracks are obtained at slow camera shutter speeds.

Technique Developed for Measuring Transmittance of Optical Birefringent Networks

Gallium arsenide electro-optic modulator used for infrared lasers has a nica quarter-wave plate and two calcite polarizers to amplitude or phase modulate an infrared laser light source in the wavelength range from 1 to 3 microns. The large single crystal has uniformly high resistivities, is strain free and, and comparable in quality to good optical glass.

Study of Radiation Effects on Mammalian Cells

Gallium arsenide electro-optic modulator used for infrared lasers has a nica quarter-wave plate and two calcite polarizers to amplitude or phase modulate an infrared laser light source in the wavelength range from 1 to 3 microns. The large single crystal has uniformly high resistivities, is strain free and, and comparable in quality to good optical glass.

Study of Radiation Sensitivities of 73 Radioactive Elements Using Fast Unmoderated Neutrons Includes Experiments for Irradiation, Cooling and Counting Conditions. The gamma ray emission spectra is used to identify the unknown material.

Improved Gas Ring Laser

Gallium arsenide electro-optic modulator used for infrared lasers has a nica quarter-wave plate and two calcite polarizers to amplitude or phase modulate an infrared laser light source in the wavelength range from 1 to 3 microns. The large single crystal has uniformly high resistivities, is strain free and, and comparable in quality to good optical glass.

The large single crystal has uniformly high resistivities, is strain free and, and comparable in quality to good optical glass.
pulsed command, and a binary encoder.

B68-10339

DYNAMICS OF MOVING BUBBLES IN SINGLE AND BINARY COMPONENT SYSTEMS

CLARK, J. A. /MICHIGAN UNIV./ DATE- SEP. 1968

M-PS-14865

Dynamical analysis of a single bubble moving in a quiescent liquid is analyzed for single and binary component systems. The transport of energy and/or mass at the dynamic-phase equilibrium governs the dynamics of the bubble at its interface.

B68-10345

INDEPENDENT DOUBLY TRUNCATED GAMMA VARIABLES

LAVENDER, B. /MCDONNELL DOUGLAS CORP./ DATE- SEP. 1968

M-PS-20414

Density and distribution functions of the sum of independent variables, each having a truncated gamma density function, were derived for use in the measurement of complex physical phenomena.

B68-10346

CONTROLLABILITY OF DISTRIBUTED-PARAMETER SYSTEMS

HEROZ, C. J. /CALIF. UNIV./ DATE- SEP. 1968

M-PS-14929

Controllability of distributed-parameter control systems is mathematically studied. A general theory for control systems includes those that cannot be described by ordinary differential equations.

B68-10347

IMPROVEMENT IN RECORDING AND READING HOLOGRAMS

HALLOCK, J. N. DATE- SEP. 1968

ERC-10151

Three-beam technique superimposes a number of patterns in the same plane of a hologram and then uniquely identifies each pattern by a suitable readout process. The developed readout process does not require any movement of parts.

B68-10348

STUDY OF OPTIMUM DISCRETE ESTIMATORS IN MEASUREMENT ANALYSIS

HUNING, J. C. DATE- SEP. 1968

ERC-10175

Study of statistical techniques for obtaining estimates of true data parameters uses discrete measured quantities containing random error. These techniques develop estimation procedures as an iterative algorithm for digital computation in real-time.

B68-10349

LASER-DOPPLER GAS VELOCITY INSTRUMENT

HOOPER, S. /BAYSHORE CO./ DATE- SEP. 1968

REVIEW-SEE ALSO B66-10693

M-PS-20039

Three-D instrument using a laser light source measures both turbulence and mean velocity of subsonic and supersonic gas flows. The instrument is based on the measurement of the Doppler frequency shift of light waves scattered by moving particles in the gas stream.

B68-10363

IMPROVED RADIOGRAPHIC IMAGE AMPLIFIER PANEL

BROWN, B. L. DATE- OCT. 1968

M-PS-16522

Layered image amplifier for radiographic/E ray and gamma ray applications combines very high radiation sensitivity with fast image build-up and erase capabilities by adding a layer of material that is both photoconductive and light-emitting to basic image amplifier and cascading this assembly with a modified Phene panel.

B68-10396

EVALUATION OF SUPERCONDUCTING MAGNETS, A STUDY

DI SALVO, F. /AVCO EVERETT RES. LAB./ DATE- OCT. 1966

B68-10406

STUDY ANALYTICALLY DEVELOPS AND EXPERIMENTALLY VERIFIES THE STEADY STATE BEHAVIOR CHARACTERISTICS OF COOLANT SUPERCONDUCTORS. ZERO-DIMENSIONAL, ONE-DIMENSIONAL, AND THREE-DIMENSIONAL ANALYSES WERE PERFORMED.

B68-10406

FIBER GLASS PREVENTS CRACKING OF POLYURETHANE FOAM INSULATION ON CRYOGENIC VESSELS

FORGE, D. A. /MCDONNELL DOUGLAS CORP./ DATE- NOV. 1968

M-PS-20058

Fiber glass material, placed between polyurethane foam and the outer surfaces of cryogenic vessels, retains its resilience at cryogenic temperatures and provides an expansion layer between the metal surfaces and the polyurethane foam, preventing cracking of the latter.

B68-10418

MINIATURIZED KING FURNACE PERTS

ABSORPTION SPECTROSCOPY OF SMALL SABLES

ERCOLI, R. DATE- NOV. 1968

ARG-10177

Miniature King-type furnace, consisting of an inductively heated, small diameter tantalum tube supported in a radiation shield eliminates the disadvantages of the conventional furnace in obtaining absorption spectra of metal vapors.

B68-10426

CREW AND FERGUS DOSEMETERS SHOW PRECISION FOR 50-5000 RAD RANGE

FRIEGER, R. A. /RAYTHEON, P. S. DATE- NOV. 1968

ARG-10173

Ammonium thiocyanate, added to the usual ferrous sulfate dosimeter solution, yielded a very stable, precise and temperature-independent system eight times as sensitive as the classical Frick's system in the 50 to 5000 rad range. The cemic dosimeters, promising for use in mixed radiation fields, respond nearly independently of LET.

B68-10504

SOLVING NONLINEAR HEAT TRANSFER CONSTANT AREA FIN PROBLEMS

SPER- INNOVATOR NOT Given /MARSHALL/ DATE- NOV. 1968

M-PS-14851

Tables and graphs were compiled for solving nonlinear heat transfer constant area fin problems. The differential equation describing one-dimensional steady-state temperature distribution and heat flow under three modes of heat transfer with heat generation was investigated.

B68-10506

DUAL PURPOSE CHAMBER-COOlNG SYSTEM

PARK, B. E. DATE- NOV. 1968

NRC-10607

Inexpensive, portable system was designed for cooling small environmental test chambers with a temperature-controlled gas stream evaporated from a cryogenic liquid. The system reduces the temperature of a chamber to any desired point in a fraction of the time required by previous systems.

B68-10508

COOLANTS WITH SELECTIVE OPTICAL FILTERING

CHARACTERISTICS FOR RUBY LASER APPLICATIONS

M-PS-20188

Coolant-filtering medium developed consists of a solution of copper sulfate in a 4-1 volumetric mixture of ethanol and methanol. This solution should be a useful addition to ruby laser systems, particularly in large pulse or Q switching applications.
aluminum plate with a contact surface equal in dimensions and configuration to those of the electronic installation. The method controls thermal output to simulate actual electronic component thermal output.

B68-10517
HEAT TRANSFER COEFFICIENTS FOR LIQUID HYDROGEN TURBOPUMPS
M-PS-10845
Empirical equations were derived to establish the appropriate heat transfer coefficients as functions of the temperature drops and heat transfer rates for a wide range of convective and boiling conditions at different locations in a liquid hydrogen turbopump.

B68-10519
HIGH CONDUCTANCE VAPOR THERMAL SWITCH
HUMAN, W. L. DATE- SEP. 1968
GSPC-10109
High conductance vapor thermal switch was produced to maintain heat dissipating component temperatures within acceptable limits. The switch is a self-actuating, automatic device that regulates the rate of heat flow to control.

B68-10521
TELESCOPE DOME CONTROL SYSTEM AUTOMATICALLY TRACKS SUN
CASSON, K. D. DATE- NOV. 1968
KSC-10666
Automatic control system is designed to rotate a dome so that a telescope, or other instrument, within the dome will continuously view the sun as the earth rotates.

B68-10533
A MASS FLOW PROBE FOR MEASUREMENT IN A SUPERSONIC STREAM
GLAVE, C. R. KEARSE, L. M. DATE- DEC. 1968
LEWIS-10665
Probe consists essentially of a tube with a supersonic inlet pointed into the gas stream. The mass flow rate through the tube is determined at a flow measuring station.

B68-10566
IMAGING SLITLESS SPECTROMETER FOR X-RAY ASTRONOMY
GURNEY, R. SHEPHERD, T. / ARN. SCI. AND ENG. / DATE- NOV. 1968
M-PS-14309
Imaging slitless spectrometer, a combination of an x ray transmission/ or reflection/ grating and image-forming x ray telescope, is capable of obtaining simultaneous spatial and spectral information about celestial x ray sources.

B68-10568
ONE-DIMENSIONAL COULOMB-DAMPED WAVE MOTION IN PRISMATIC BARS
TOLAND, D. B. / DATE- DEC. 1968
M-PS-14815
Study analyzes wave motions in prismatic bars with Coulomb damping, using Laplace transform as an aid in solving the partial differential equations. The results are detailed.

B68-10556
ELECTRON BEAM RECISTALIZATION OF AMORPHOUS SEMICONDUCTOR MATERIALS
SIMPSON, J. C. JR. DATE- DEC. 1968
LEWIS-10443
Nucleation and growth of crystalline films of silicon, germanium, and cadmium sulfide on substrates of plastic and glass were investigated. Amorphous films of germanium, silicon, and cadmium sulfide on amorphous substrates of glass and plastic were converted to the crystalline condition by electron bombardment.

B68-10560
SHORTENED PROCEDURE FOR OBTAINING REPRODUCIBLE COPIES OF 35 MM COLOR SLIDES
LEVINE, F. / BOEING CO. / DATE- DEC. 1968
KSC-09957
Technique to reduce the steps required to obtain reproducible copies of 35 mm color slides has been developed. A 35 mm slide is projected directly onto a xerox plate, eliminating the necessity to produce a film positive of the slide.

B68-10564
REFLECTIVELY PULSED, WAVELENGTH-SELECTIVE CARBON DIOXIDE LASER
HANST, P. L. DATE- NOV. 1968
M-PS-10178
Carbon dioxide laser as a simple portable unit generates coherent light pulses at selected infrared wavelengths. The improved laser was designed for the detection of air pollutants but can be applied to optical communications.

B68-10569
ACCURATE DIGITAL TECHNIQUE SIMULATES FLIGHT CONTROL SYSTEM
HAYES, R. / BOEING CO. / DATE- NOV. 1968
M-PS-14788
Fast, accurate technique for simulating the Saturn Flight Control System was devised. The technique is simple to implement and can be readily substituted for slower or less accurate techniques. This technique can be applied to a large class of problems that require a rapid accurate calculation of the response of linear differential equations to a continuous input.

B68-10570
IMPROVED TECHNIQUE FOR DIGITAL SIMULATION OF BENDING AND SLOSH PHENOMENA
STAFFORD, R. / BOEING CO. / DATE- NOV. 1968
N-PS-14788
Mathematical model representation of bending and slosh phenomena in the Saturn vehicle results in linear second order differential equations. Improved technique was developed to provide a real-time digital solution of the equations. The technique may also be applied to nonlinear digital simulations, resulting in savings of digital computer time.

B68-10571
CORRECTION FOR LOSSES IN OPTICAL BIREFRINGENT NETWORKS. A CONCEPT
ARMAN, E. O. / SYLVANIA ELECTRIC PROD. / DATE- NOV. 1968
M-PS-12060 AND B68-10275
Technique determines the effects of losses upon the performance of a birefringent network and shows how the desired amplitude transmission of the network may be corrected /or predistorted/, prior to synthesizing the birefringent network, to prevent the effects of crystal losses.

B68-10574
TRAINING MANUAL ON OPTICAL ALIGNMENT INSTRUMENTS
SPOER- INNOVATOR NOT GIVEN / MARSHALL / DATE- DEC. 1968
N-PS-20292
Training Manual E045/5 provides a basic course of instruction in the use of optical instruments for precise dimensional control and alignment of structural elements and assemblies, such as associated with space vehicles, aircraft, ships, and buildings.

B69-10001
SHORTENED PROCESSING TIRE TECHNIQUE FOR COLOR INDUSTRIAL RADIOGRAPHY
LAFRANCE, N. F. DATE- JAN. 1969
ARG-10235
Improved processing method reduces time required to generate a color radiograph. Prior to, or after exposure to penetrating radiation, the emulsion side of the film is flashed to a colored light which produces the hue changes in the processed radiograph. Agitation of the film during processing assures uniformity of results.

B69-10002
ISOHERMAL DROE CALORIMETER PROVIDES MEASUREMENTS FOR ALPHA ACTIVE, PYROPHORIC MATERIALS
SAYLOR, H. DATE- JAN. 1969
ARG-10186
Isothermal drop calorimeter measures the heat content of intensely alpha active and pyrophoric materials in inert atmospheres. It consists of a furnace, calorimeter, and aluminum isothermal jacket contained within an inert-atmosphere glove box, which permits the use of unencapsulated materials without exposing personnel to alpha contamination.

B69-10003
DAUGHTER GROWTH IN FRESHLY SEPARATED
BA-226, AC-227 AND U-232
BASIL, L. J. MACHL, E. S. MILSTEAD, J.
STEWART, D. C. DATE- JAN. 1969 REAN- SEE ALSO
ANL-7205
ARG-10226
Report provides computer-calculated curves and tables for the daughter buildup of Ra-226, Ac-227 and B-232 chains. Data are presented as a function of time beginning with pure samples of each parent. The information may be of interest to those using decay chains as isotopic alpha sources or neutron sources.

B69-10005
GE-DIODE DETECTOR COMBINED WITH
CRYSTAL-DIFFRACTION SPECTROMETER FIXTURES
HIGH-RESOLUTION GAMMA RAY SPECTROSCOPY
NAMESO, A. I. SMIEH, R. K. DATE- JAN. 1969
ARG-10190
Crystal-diffraction spectrometer, combined with a lithium-drifted Ge-diode detector, performs high-resolution gamma spectroscopy on the complicated neutron-capture gamma ray spectra. The system is most useful in the 1-3 MeV energy range and improves the signal to background ratio.

B69-10011
NONDISPERSE X-RAY EMISSION MEASUREMENTS FOR
GEOCHEMICAL EXPLORATION
ADLER, I. LAMOTHE, E. S. SCHMACHECK, E. TROMBA, J. L. /LAB. FOR THEORET. STUDIES/ SCHMACHECK, E. /BELAR, INC./ DATE- JAN. 1969
GSP-10568
Non-dispersive X ray emission technique uses lightweight, and rugged X ray fluorescence units. The X ray pulse-height spectra is excited by radioactive isotopic sources. The technique is applicable for quantitative and qualitative analyses on complex chemical systems, and satisfies the goals for a lunar geochemical exploration device.

B69-10017
VARIABLE-BASED METHOD OF SOLVING
DIFFERENTIAL EQUATIONS
VAN WYK, R. /NA. ROCKWELL CORP./ DATE- FEB. 1969
NFO-10515
Multistep predictor-corrector method for numerical solution of ordinary differential equations retains high local accuracy and convergence properties. In addition, the method was developed in a form conducive to the generation of effective criteria for the selection of subsequent step sizes in step-by-step solution of differential equations.

B69-10020
METHOD OF MAKING CONICAL FIBER OPTICAL
COMPONENTS
BAILEY, J. M. CAPPELLA, D. P. /OPTICS
TECHNOL./ DATE- FEB. 1969
XMP-09745
Improved method for producing fused-fiber optical components is described. These components have a frustrum-conical shape and provide high-quality light transmission with high resolution capabilities. Fiber optical components can be used in precision optical systems, such as in certain camera applications.

B69-10024
BEAM PROFILES MEASURED WITH
THEROLUMINESCENCE DOSEMETERS
LUCS, E. MACOMITZ, S. M. WHEELER, R. W. DATE- FEB. 1969 REAN- SEE ALSO ANL-7196
ARG-10229
Beam profilerometer, using theroluminescent dosimeters, gives a quantitative and qualitative representation of the focus of an external proton beam of a synchrotron. The total number of particles in the beam, particle distribution, and the shape of the beam are determined.

B69-10028
GAGE MEASURES TOTAL RADIATION, INCLUDING
VACUUM UV, FROM IONIZED HIGH-TEMPERATURE
GASES
WOOD, A. D. /LOCKHEED MISSILES AND SPACE CO./ DATE- JUL. 1963
XMP-09602
Transient-heat transfer gage measures the total radiation intensity from vacuum ultraviolet and ionized high temperature gases. The gage includes a sensitive piezoelectric crystal that is completely isolated from any ionized flow and vacuum ultraviolet irradiation.

B69-10042
INSTABILITIES ENCOUNTERED DURING HEAT
TRANSFER TO A SUPERCRITICAL FLUID
BASINS, C. DATE- FEB. 1969 REAN- SEE ALSO
ANL-7053
ARG-10260
Investigation was made of the unstable behavior of a heat-transfer loop operating at a supercritical pressure. Natural convection operation of the loop, with observations on acoustic and slow oscillatory behavior, was emphasized during testing. The basic cause of both types of behavior appeared to originate in the heated boundary layer.

B69-10043
PROPAGATION OF DENSITY DISTURBANCES IN
AIR-WATER FLOW
BASINS, C. DATE- FEB. 1969 REAN- SEE ALSO
ANL-7053
ARG-10260
Study investigated the behavior of density waves propagating vertically in an atmospheric pressure air-water system using a technique based on the correlation between density change and electric resistivity. This information is of interest to industries working with heat transfer systems and fluid power and control systems.

B69-10047
ANALYSIS OF TRANSIENT THERMAL STRESS IN
HEAT-GENERATING PLATES AND HOLLOW CYLINDERS
CAUSED BY SUDDEN ENVIRONMENTAL TEMPERATURE
CHANGES
ROOGBERG, G. S. SCHULCH, E. D. F. VALENT, R. A. DATE- FEB. 1969 REAN- SEE ALSO ANL-7294
ARG-10274
Analysis and solution are presented for transient thermal stresses in a free heat-generating flat plate and a free, hollow-generating cylinder as a result of sudden environmental temperature changes. The technique used and graphical results obtained are of interest to the heat transfer industry.

B69-10057
DEWPPOINT TEMPERATURE INVERSIONS ANALYZED
BEANB, W. C. /SOUTHERN ILLINOIS UNIV./ BOSSB, R. A. MOSES, R. DATE- MAR. 1969
ARG-10316
Depletion temperature inversion, with regard to other simultaneous meteorological conditions, was examined to establish the influence of meteorological variables on the variation of dewpoint temperature with height. This report covers instrumentation and available data, all the climatological features of dewpoint inversions, and specific special cases.

B69-10060
OPTICALLY EXCITING A MAGNETIC MEMORY - A
FEASIBILITY STUDY
HURSHE, F. L. BROS, J. E. /GEORGIA INST. OF
TECH./ DATE- MAR. 1969
IF-SI-19858
Rare earth iron garnets were used in experiments to determine the feasibility of optically pumping a magnetic material to effect the switching process. It was found that these garnets are limited by an absorption edge, only terbium

02 PHYSICAL SCIENCES (ENERGY SOURCES)
and dysprosium offer a possibility of pumping at energies below the conduction band edge.

B69-10075
SELECTIVE VIGNETTING OF TYPE 1 X-RAY TELESCOPES
RANGS, J. DATE- MAR. 1969
GSFC-10262
Selective vignetting technique optimizes the performance of a Type 1 x-ray telescope. The average quality of the telescope system is improved by matching the detector to the optimum focal surface and by vignetting rays which formerly contributed to the flare in cosmic images.

B69-10077
ROCKET SONDE MEASUREMENTS OF OZONE IN THE UPPER ATMOSPHERE
EILLENBAH, R. DATE- MAR. 1969
GSFC-10508
Rocket sonde measurement of ozone content in the mesosphere and stratosphere is accomplished by an in situ determination of the ozone mixing ratios as a function of altitude from approximately 65 km to 20 km. A chemiluminescent detector is used as an ozone sensor.

B69-10078
STUDY OF LATTICE DEFECT VIBRATION
ELLIOTT, R. J. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7257
ARG-10221
Report on the vibrations of defects in crystals relates low defects, well localized in a crystal but interacting strongly with the other atoms, change the properties of a perfect crystal. The methods used to solve defect problems relate the properties of an imperfect lattice to the properties of a perfect lattice.

B69-10080
THE RESPONSE OF NONENERGETIC GAMMA RAYS IN FINITE MEDIA ARE INVESTIGATED
SMOK, W. J. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7114
ARG-10295
In a study of the transport of radiation in matter, the response parameters of nonenergetic gamma rays incident on various materials with finite geometries were calculated on a CDC 3600 computer. The report includes results for gamma rays normal to cylindrical germanium and silicon detectors.

B69-10082
AN ULTRASONIC METHOD FOR STUDYING ELASTIC MODULI AS A FUNCTION OF TEMPERATURE
PETHESON, R. G. DATE- MAR. 1969 REAN- SEE ALSO
ANL-7126
ARG-10167
Ultrasonic method is used to determine the elastic moduli of materials used in components of high-temperature nuclear reactors. An ultrasonic, pulse-echo technique determines the velocity of sound waves propagating in a heated region of rod-shaped specimens. From these velocities, the elastic moduli are calculated.

B69-10089
NUMERICAL INTEGRATION OF ORDINARY DIFFERENTIAL EQUATIONS OF VARIOUS ORDERS
GEAR, C. W. /ILLINOIS UNIV./ DATE- APR. 1969
REAN- SEE ALSO ANL-7126
ARG-10267
Report describes techniques for the numerical integration of differential equations of various orders. Modified multistep predictor-corrector methods for general initial-value problems are discussed and new methods are introduced.

B69-10091
LIQUID-METAL HEAT TRANSFER IN A COCURRENT-FLOW, DOUBLE-PIPE HEAT EXCHANGER IS INVESTIGATED
HERREBR, R. L. DATE- APR. 1969 REAN- SEE ALSO
ANL-7056
ARG-10261
Analysis of liquid-metal heat transfer in cocurrent-flow, double-pipe heat exchangers shows that heat-transfer coefficients depend upon the operating conditions of the heat exchanger and that use of the customary design equation to predict heat-exchanger performance leads to significant errors.

B69-10099
ACTIVE FREQUENCY CONTROL SYSTEM FOR ARGON FM LASER
SPOR- INNOVATOR NOT GIVEN /SYLVANIA BLEC.
PRODUCTS/ DATE- JUN. 1969
N-PS-14988
Frequency control system positions mirrors at either end of the laser cavity so the mirror separation is independent of thermal and acoustical fluctuations. A small portion of the laser output is split and directed upon a photodetector /photodiode/.

B69-10102
FAST FRAMING CAMERAS PROVIDE HIGH-SPEED MULTI-CHANNEL DATA RECORDING
DE VOLP, A. DATE- APR. 1969
ARG-10252
Fast-framing cameras record data obtained by a multichannel hodoscope which monitors reactor physics experiments. The cameras provide high rates of data acquisition at low equipment cost.

B69-10107
OCCULTING-FILTER METHOD FOR OBTAINING FLASHING-LIGHT VISIBILITY DATA
HARD, A. C. ZAPF, K. /EIT/ DATE- APR. 1969
MSC-13097
Oculting-filter technique allows several types of flashing-light visibility data necessary for rendezvous and docking maneuvers, to be obtained for studying the perception of flashes at the visual threshold. The indications are that the method can be used to compare sources of radically different spectral composition.

B69-10112
PREDICTION OF FRICTION COEFFICIENTS FOR GASES
TAYLOR, S. F. DATE- MAY 1969 REAN- SEE ALSO
NASA-TB-3-267
LEWIS-10774
Empirical relations are used for correlating laminar and turbulent friction coefficients for gases, with large variations in the physical properties, flowing through smooth tubes. These relations have been used to correlate friction coefficients for hydrogen, helium, nitrogen, carbon dioxide and air.

B69-10122
FLOURESCENT PHOTOGRAPHY OF SPRAY DROPLETS USING A LASER LIGHT SOURCE
GREENHUG, J. /WISCONSIN UNIV./ BIBYASH, M.
DATE- MAY 1969
LEWIS-10777
Monochromatic laser emission transformed by a fluoroscopic process into droplet emission over a wavelength band provides high light intensities for obtaining adequate time resolution to stop droplet action in photographic spray studies. Experiments showed that the Q switched laser-optical harmonics generator combination produced sharp, well-exposed droplet images.

B69-10142
IMPROVED COMBUSTION CHAMBER OPTICAL PROBE
WALKER, J. /TV AEROSPACE CORP./ DATE- MAY 1969
MSC-10953
Optical inspection probe permits remote inspection of combustion chambers through 360 degrees, and is fully controllable in terms of elevation, focus, and sweep. It eliminates the hazards of physically entering combustion chamber interiors and threats of rocket engines for inspection.

B69-10165
LASER MICROPROBE FACILITY USED IN THE ELEMENTAL ANALYSIS OF SMALL FEATURE OF A SAMPLE
BALDWIN, J. M. /IDAHO NUCL. CORP./ DATE- JUN. 1969
REAN- SEE ALSO CS-1121
ARG-10359

106
Laser microprobe facility is effective in the elemental analysis of small areas of heterogeneous samples. The instrument uses the focused beam of a pulsed laser to evaporate a small volume of material from a relatively massive sample.

**02 PHYSICAL SCIENCES (ENERGY SOURCES)**

**B69-10166**

**ION-RETARDING LENS IMPROVES THE ABUNDANCE SENSITIVITY OF TANDEM MASS SPECTROMETERS**

KAISER, K. A. STEVENS, C. M. DATE: JUN. 1969

BEAN- SEE ALSO ANL-7393

B69-10365

Ion-retarding lens which increases the abundance sensitivity of tandem magnetic-analyzer mass spectrometers measures isotopes of low abundance in mass positions adjacent to isotopes of high abundance. The lens increases the abundance sensitivity for isotopes lying farther from high abundance isotopes than the energy cutoff of the lens.

**B69-10167**

**PRIMARY RADICAL YIELDS IN PULSE IRRADIATED ALKALINE AQUEOUS SOLUTION**

FIELDEN, E. M. HART, E. J. DATE: JUN. 1969

ARG-10322

Primary radical yields of hydrated electrons, H atoms, and OH radicals are determined by measuring hydrated electron formation following a 4 microsecond pulse of X rays. The pH dependence of free radical yields beyond pH 12 is determined by observation of the hydrated electrons.

**B69-10172**

**DETECTION OF MOLECULAR INFRARED SPECTRA**

SWANSON, L. W. /FIELD EMISSION CORP./ DATE: JUN. 1969

NC-10377

Total Energy Distribution/TED/measurements of field emitted electrons detect molecular infrared spectra of adsorbed molecules. Tunneling electron gives up energy to excite various modes of adsorbed molecule. These electrons, when energy-analyzed, show up on the collector and exhibit the spectra of various modes excited by tunneling electrons.

**B69-10198**

**PLASMA-HEATING BY INDUCTION**

HARRINGTON, K. HUMPHREYS CORP./ THORPE, N. L.

DATE- JUL. 1969

LEWS-10528

Induction-heated plasma torch operates with an input of 1 MW of direct current of which 71 percent is transferred to the plasma and the remainder is consumed by electrical losses in the system. Continuous operation of the torch should be possible for as long as 5,000 hours.

**B69-10199**

**A PROTOTYPE HIGH POWER PORTABLE LAMP**

SAMIS, J. A. /KICHTOOL, INC./ DATE: JUN. 1969

F-PS-25229

Portable lighting system serves the combined work and photographic needs of manned spacecraft efforts. This system enables the lamp to be momentarily brightened while the camera shutter is opened. The brightness is adequate for black and white or color photography and yet the increased heat load is nil.

**B69-10193**

**RECTANGULAR-BORE, HIGH-GAIN LASER PLASMA TUBE**

MOLOO, E. A. / PENNSYLVANIA STATE UNIV./ DATE: JUN. 1969

B-P-10234

Rectangular-bore tube improves population inversion obtained from upper and terminal laser states, resulting in a significant increase in unsaturated gain factor. Radial field produces efficient pumping of upper laser state. Narrow tube dimensions cause increase in electrical flow of neon in metastable states to tube walls.

**B69-10194**

**STUDIES OF CYCLES FOR LIQUID- METAL MAGNETOHYDRODYNAMIC GENERATION OF POWER**

LEE, K. PETRICK, M. DATE: JUN. 1969 BEAM- SEE ALSO ANL-6954

B69-10250

Studies of liquid-metal magnetohydrodynamic power cycles indicate that the overall efficiency of a binary cycle, employing a liquid-metal topping cycle and a bottoming steam cycle, may reach 60 percent. Details of analyses and data on cycles are presented, and the commercial potential of the binary cycle is discussed.

**B69-10201**

**ULTRA-HIGH-FLOW HEAT EXCHANGER**

TREES, D. /BN. AN. ROCKWELL CORP./ DATE: JUN. 1969

MT-PS-18135

Spherical depressions on the wall of the inner tube increase the heat flux in a concentric tube heat exchanger. Regularly spaced patterns of precisely formed depressions on the inner wall alleviate the film-binding phenomenon without significantly degrading the flow characteristics.

**B69-10204**

**SOME NUMERICAL METHODS FOR INTEGRATING SYSTEMS OF FIRST-ORDER ORDINARY DIFFERENTIAL EQUATIONS**

CLARK, W. W. DATE: JUN. 1969 BEAM- SEE ALSO

ARG-7428

B69-10328

Report on numerical methods of integration includes the extrapolation methods of Bulirsch-Stoer and Neville. A comparison is made with the Runge-Kutta and Adams-Moulton methods, and circumstances are discussed under which the extrapolation method may be preferred.

**B69-10210**

**IMPROVED LIQUID-LEVEL SENSOR FOR CRYOGENICS**

HYMAN, L. G. SHEPPARD, J. F. SPITKA, M. DATE: JUN. 1969

ARG-10162

Liquid-level indicator, consisting of a diode heated by a resistor, allows simultaneous use of two or three of the liquids nitrogen, hydrogen, and helium. Operation depends on strong temperature-dependence of the forward resistance of a germanium diode and the difference between liquid and vapor in heat-transfer properties.

**B69-10211**

**ANALYSES OF SILICON DIOXIDE, MAGNESIUM OXIDE, LEAD FLUORIDE, BISMUTH AS LOW-PASS VELOCITY FILTERS FOR NEUTRONS**

HOLLAND, P. DATE: JUN. 1969

ARG-10220

Transmission measurement of neutrons by filter materials for low energy neutrons is important for the study of structure and dynamics of condensed matter. Since only thermal neutrons are useful for such experiments, filter materials that transmit thermal neutrons while attenuating fast neutrons and gamma rays are of considerable interest.

**B69-10214**

**MULTICHANNEL ANALYZERS AT HIGH RATES OF INPUT**

BUDICK, S. J. STRAUS, M. G. DATE: JUN. 1969

ARG-10355

Multichannel analyzer, used with a gating system incorporating pole-zero compensation, pile-up rejection, and baseline-restoration, achieves good resolution at high rates of input. It improves resolution, reduces tailing and rate-contributed continuuim, and eliminates spectral shift.

**B69-10226**

**CAMERA MOUNT FOR CLOSE-UP STEREO PHOTOGRAPHS**

CLAUDE, P. H. DATE: JUN. 1969

LANGLEY-10682

Camera mount, adaptable to any camera, facilitates obtaining close-up stereo pairs of photographs. The basic mount can be used with an standard camera, or with a stereo camera. The design of the camera adapter can be varied to meet mounting requirements of the particular camera used.

107
Liquid Laser Cavities

Bjorcklund, S. /Lockheed Electron./ Filippescu, N. /GEO. Washington Uniy./ Kellerman, G. L. SC
Avot, N. /Date- Jul. 1969
GSFC-10592

Liquid laser cavities have plenum chambers at the ends of the capillary cell which are terminated in transparent optical flats. By use of these cavities, several new europium chelates and a terbium chelate can provide laser action in solution at room temperature.

Dual-Mode Operation of a Neutron Source, A Concept

Givens, W. W. /Michl, W. R., Jr. /Shell Oil Corp./ /Date- Jul. 1968
BQ-1016

Pulsed neutron source operates in conjunction with a photomultiplier tube coupled to a gamma ray scintillation crystal. This allows measurements of gamma radiation from both inelastic scattering and thermal neutron capture in a single experiment.

Tungsten Thermal Neutron Dosimeter

Ball, L. L. /Richardson, P. J. /Scheib, D. W.
Date- Aug. 1969
Lewis-10860

Tungsten-185 activity, which is produced by neutron activation of tungsten-184, determines thermal neutron flux. Radiochemical separation methods and counting techniques for irradiated tungsten provide accurate determination of the radiation exposure.

Channel-Wall Limitations in the Magnetohydrodynamic Induction Generator

Jackson, W. D. /mit/ Pierson, E. S. /Date- Jul. 1969
NSR- See also ANL-7148
ABG-10128

Discussion of magnetohydrodynamic induction generator examines the machine in detail and materials problems influencing its design. The higher upper-temperature limit of the MSD system promises to be more efficient than present turbine systems for generating electricity.

Concentrations of the Naturally Occurring Holtsman, R. B. /Date- Jul. 1969
ABG-10345

Study reveals naturally occurring radionuclides are ubiquitous and constitute a substantial fraction of the natural radiation dose to humans and various biota. Measurements may be useful in ecological and other biological problems such as tracing food chains of animals and study of the metabolism of these elements.

Multilayer Infrared Beamsplitter Film System

Bastien, R. C. /Perkin-Elmer Corp./ Heinrich, P. L.
Date- Aug. 1969
XGS-11036

Multilayer infrared beamsplitter film system on a potassium bromide crystal substrate is operational over a wavelength range of 2.5 to 25 microns with nearly equal broadband reflectance and transmission. It is useful in optical coating, vacuum deposition, radiometry, interferometry, and spectroscopy.

A Concept for Magazine Ekmat Processor

Park, C. H. /Boeing Co./ /Date- Aug. 1969
KSC-0676

Concept utilizes existing film magazines to process photographic film as the film is exposed. A standard magazine can be converted to a Bimat processor by adding three stainless steel rollers. All chemicals required for processing and fixing the negative are contained in the Bimat film.

Pneumatic Analog-to-Pulse Frequency Converter

Dustin, R. O. /Date- Aug. 1969
Lewis-10345

Pneumatic analog-to-pulse frequency converter circuit has output pulse frequency proportional to the pressure level of the input signal. Converter circuit drives a pneumatic stepping motor and is part of a pneumatic control system for nuclear powered spacecraft.

Automatic Bird Watcher

Fisler, J. J. /Frigerio, N. A. /Date- Aug. 1969
ARG-10362

Radioactive-nuclide system automatically monitors animals in the field, using radioactive tracers affixed to the animals, Geiger-Muller tube radiation detectors, and event-recorders. Four animals can be monitored simultaneously within a 32-m circle, with each animal as far as 1 m from its associated detector.

Improved First Order Interpolator

Andrews, C. A. /IBM Corp./ /Date- Aug. 1969
KSC-11085

Data compression method enables first order interpolator to operate at higher speeds. Method requires same number of additions and subtractions but fewer multiplications than the conventional method.

SemiAutomatic Inspection of Microfilm Records

Kletz, E. L. /RCA Service Co./ /Date- Aug. 1969
MeTs-20240

Semiautomatic machine inspects microfilm for deficiencies. Advantages of microfilm inspector are uniformity of inspection method, increased speed of inspection, and improved quality through elimination of scratches and finger marks.

Multipurpose Biocular Scanning Apparatus

Camelekin, P. R. /Parker, G. L. /Date- Aug. 1969
NFO-11002

Optical glimballing apparatus directs narrow fields of view throughout solid angle approaching 4 pi steradians. Image rotation produced by scanning can be eliminated or altered by gear trains directly linked to the scanning drive assembly. It provides the basis for a biocular scanning capability.

A Method for Predicting Interfacial Freezing of a Liquid Flowing over a Cold Surface

Saying, J. M. /Siegel, R. /Date- Aug. 1969
Lewis-10813

Instantaneous thickness of a frozen layer is a function of specific heat, heat of fusion, temperatures, the frozen layer thickness at equilibrium, the thermal conductivity, and heat transfer coefficient. The equation can be evaluated on a desk calculator.

Laser Action from a Terbium Beta-Ketochelate at Room Temperature

Bjorklund, S. /Lockheed Electronics Co./ Filippescu, N. /GEO. Washington Uniy./ Hurnt, C. J. /Kellerman, G. M. Avoy, N. /Date- Sep. 1969
GSFC-10592

Laser activity is achieved in a solution of terbium tris at room temperature in a liquid solvent of acetonitrile or p-dioxone. After precipitation, the microcrystals of hydrated tris chelate are filtered, washed in distilled water, and dried. They show no signs of deterioration after storage.

Restricted-Flow Junction between Liquids

Vango, S. P. /Date- Sep. 1969
NFO-16682

108
Allowing a liquid to seep through a long crack in glass provides means for restricting its flow for long periods without attention. The length of the crack prevents the plugging to which capillaries are susceptible.

B69-10336

PREFFERRED-ORIENTATION ANALYSIS OF POLYCRYSTALLINE MATERIALS

B69-10336

B69-10344

AN IMPROVED ATOMIC HYDROGEN FREQUENCY AND TIME STANDARD

RC GUNNAL, T. E. PETERS, H. E. DATE- SEP. 1969

USE OF A LARGE BULB, LONG-MULTIPOLE MAGNET, AUTOMATIC TUNER AND ALUMINUM CAVITY PROVIDES AN IMPROVED HYDROGEN MASER WHICH IS ACCURATE OVER LONG PERIODS OF TIME AND SUITABLE FOR TRACKING STATION ENVIRONMENTS.

B69-10356

IMPROVED VACUUM DEPOSITION APPARATUS

KESSENBACH, H. DATE- SEP. 1969

IMPROVED APPARATUS ENABLES VACUUM DEPOSITION OF THICK METAL FILMS ON THE INSIDE SURFACE OF A CYLINDER. THE EVAPORANT IS DEPOSITED TO A UNIFORM THICKNESS AND DISTRIBUTION ON THE INSIDE SURFACE OF THE SUBSTRATE WITHOUT IMPERFECTIONS THAT WOULD OTHERWISE RESULT FROM DROPLET FORMATION.

B69-10371

PREDICTION OF THERMAL RADIATION FROM A ROCKET'S EXHAUST PLUME

LUNDIG, C. B. /GENERAL DYNAMICS CORP./ DATE- SEP. 1969

DATA FROM ABSORPTION COEFFICIENTS AND FINE-STRUCTURE PARAMETERS MEASURED FOR WATER VAPOR HAVE BEEN INTEGRATED IN AN ANALYTIC PROGRAM USEFUL IN EVALUATING HEATING BY RADIATION FROM THE EXHAUST PLUME OF A LARGE ROCKET.

B69-10387

DIELECTRIC MATERIALS FOR USE IN THIN-FILM CAPACITORS

INVESTIGATION REPORT PRESENTS DETAILS OF DIELECTRIC PROPERTIES OF VARIOUS MATERIALS MEASURED AT 300 DEGREES K FOR THERMALLY EVAPORATED OXIDES FROM 300 TO 6000 A IN THICKNESS. IT IS RELEVANT TO THE DESIGN OF INTEGRATED CIRCUITRY.

B69-10405

IMPROVED METHOD OF OPTICAL DESIGN

HOWELL, R. J. /SPATIVI BAND CORP./ DATE- SEP. 1969

OPTICAL SYSTEM DESIGNED BY THIRD ORDER ABBERRATION THEORY IS SIGNIFICANTLY IMPROVED BY PLACING IT INTO A RAY DERIVATION DESIGN PROGRAM COPIED OF TWO DISTINCT COMPUTER PROGRAMS. TESTS WERE CONDUCTED ON TELESCOPE SYSTEMS, AN ULTRAVIOLET RELAY LENS, AND A FOUR-LENS CORRECTOR SYSTEM.

B69-10411

HYDROGEN FLASH LAMPS STUDIED

BENSON, M. J. BEERMAN, I. B. STEINMAGEN, G. J. DATE- SEP. 1969

PARAMETERS OF GAS PRESSURE, TYPE OF GAS, TUBE VOLUME, AND ELECTRODE GAP ARE TESTED ON THE INTENSITY AND SHAPE OF A RADIATION PULSE FROM A HYDROGEN-FILLED LAMP.

B69-10415

NUMERICAL INVERSION OF FINITE TOEPLITZ MATRICES AND VECTOR TOEPLITZ MATRICES

RAEISSI, E. H. DATE- SEP. 1969

NUMERICAL TECHNIQUE INCREASES THE EFFICIENCY OF THE NUMERICAL METHODS INVOLVING TOEPLITZ MATRICES BY REDUCING THE NUMBER OF MULTIPLICATIONS REQUIRED BY AN N-ORDER TOEPLITZ MATRIX FROM N-CUBED TO N-SQUARED MULTIPLICATIONS. SOME EFFICIENT ALGORITHMS ARE GIVEN.

B69-10421

CONCEPT FOR IMPROVED VACUUM MEASURING DEVICE

SLIFER, D. R. /ELECTRO-OPTICAL SYSTEMS, INC./ DATE- SEP. 1969

TO MEASURE VACUUM PRESSURES IN THE RANGE OF 5 TIMES 10 TO THE MINUS 7 TO 5 TIMES 10 TO THE MINUS 16, A SEMICONDUCTOR RESISTOR COMPOSED OF SINTERED ZINC OXIDE IS USED. THROUGH THE EFFECT OF SURFACE ABSORBED GASES ON THE RESISTANCE OF THE SEMICONDUCTOR MATERIAL, VERY LOW PRESSURES ARE MEASURED.

B69-10428

BOOT-CURING AND GENERAL ROOT-POWERING METHODS FOR FINDING THE ZEROS OF POLYNOMIALS

RAEISSI, E. H. DATE- SEP. 1969

MATHEMATICAL ANALYSIS TECHNIQUE GENERALIZES A ROOT SQUARING AND ROOT CUBING METHOD INTO A GENERAL ROOT POWERING METHOD. THE INTRODUCTION OF PARTITIONED POLYNOMIALS INTO THIS GENERAL ROOT POWERING METHOD SIMPLIFIES THE CODING OF THE POLYNOMIAL TRANSFORMATIONS INTO INPUT DATA SUITABLE FOR PROCESSING BY COMPUTER. THE METHOD INCLUDES ANALYTIC FUNCTIONS.

B69-10429

WALL-THICKNESS CHANGES PREDICTED IN HOLLOW-DRAWN TUBING

FISK, J. H. RUBA, T. /NORTHWESTERN UNIV./ DATE- SEP. 1969

HOLLOW-TUBE DRAWING OR TUBE SINKING THEORY IS BASED ON THE CONCEPT OF CONTINUOUS DISTRIBUTION OF DISLOCATIONS. MATERIAL COMPOSITION, PARAMETER INFLUENCE, AND DIE-ANGLE ARE DETERMINING FACTORS IN DERIVATION OF THE THEORETICAL MODEL.

B69-10431

ENERGY- STORAGE OF A PRESCRIBED IMPEDANCE

SMITH, W. B. DATE- SEP. 1969

GENERAL MATHEMATICAL EXPRESSION FOUND FOR ENERGY STORAGE SHOWS THAT FOR LINEAR, PASSIVE NETWORKS THERE IS A MINIMUM POSSIBLE ENERGY STORAGE CORRESPONDING TO A PRESCRIBED IMPEDANCE. THE ELECTROMAGNETIC ENERGY STORAGE IS DETERMINED AT DIFFERENT EXCITATION FREQUENCIES THROUGH ANALYSIS OF THE NETWORKS TERMINAL AND REACTANCE CHARACTERISTICS.

B69-10444

OCULOMETERS FOR REMOTE TRACKING OF EYE MOVEMENT

RASON, K. A. /HYDROTELL, INC./ MERCURY, J. DATE- MARCH 1969

Prototype oculometer which tracks lateral eye position and measures the direction of the eyes optical axis, pupil size, and blink occurrence performs measurements on the subject on a
real-time basis from a remote location.

B69-10446

METHOD FOR PREDICTING PUMP CAVITATION PERFORMANCE

MOORE, R. EUGGER, R. DATE- SEP. 1969

LEWIS-10916

Method requires the availability of two sets of appropriate data for each pump to be analyzed. At least one set of the data must provide measurable thermodynamic effects of cavitation.

B69-10447

CROSSED-BEAM TECHNIQUE FOR MEASURING HORIZONTAL WINDS

HARTBY, W. B. /AERO-ASTRODYNAMICS Lab./ DATE- SEP. 1969

R-FS-20160

Three ground-based single-beam detectors determine wind vectors present within a given volume. Winds approximately constant near a selected height, blowing into or out of a 90 degree arc can be calculated with reasonably small error.

B69-10462

METHOD FOR DETERMINING PROPERTIES OF MICROWAVE STABILITIES OF A MAGNETIZED PLASMA

CALLEN, J. B. /MIT/ MC CUNE, J. E. DATE- DEC. 1969

 strengths of a magnetized plasma

B69-10466

PROBED ACcouSTO-OPTIC FILTER

HARRIS, S. E. /STANFORD UNIV./ DATE- SEP. 1969

R-FS-20460

Narrow band optical filter is electronically tunable over a large wavelength region. The filter utilizes collinear acousto-optic diffraction in an optically anisotropic media.

B69-10467

DAMPING OF THERMOELASTIC STRUCTURES

GILLIS, W. R. DATE- SEP. 1969

R-FS-20002

Report ascertains the effects of thermoelastic damping on the propagation of longitudinal waves in cylindrical rod. Results of results of wave propagation in unbounded elastic solids and in elastic cylinders precede consideration of thermal modification of elastic properties.

B69-10469

PIEZOELECTRIC LINEAR ACTUATOR

LEHNER, S. /ASTROSYSTEMS INTERNATIONAL INC./ DATE- OCT. 1969

M-SC-13194

It actuator exerts linear force that is controllable and reproducible to micron-inch tolerance. It is constructed for extremely accurate control of a valve but can also be used as a variable venturi meter, micropositioner, microthruster, and in fluidics and reaction-control systems.

B69-10504

REPORT ON A CRYOGENIC CYTROSCOPE

NARDING, J. T. DATE- OCT. 1969

M-PC-11200

Report summarizes the principal problems encountered in sphere fabrication, magnetic field lossless in superconductors, configurations for supporting field, damping oscillations, refrigeration, techniques for accelerating the sphere, read-out, and testing the stability of the gyro.

B69-10508

METHOD OF DIRECTING A LASER BEAN WITH VERY HIGH ACCURACY

ALLEN, L. S. SHIENATE, M. S. WESTPHAL, J. A. DATE- OCT. 1969

NPG-11087

System will collimate and direct an argon laser beam with high angular tracking accuracy at objects on the moon's surface. It can be adapted to missile and satellite tracking.

B69-10510

ION MASS SPECTROMETER FOR SPECIAL USES

ABBASON, E. H. /TRW, INC./ FREEDRICKS, R. W. DATE- OCT. 1969

R-10416

Prototype of curved-electrode, Paul-type, quadrupole, electron-mass filter has the mass-resolution and transmission-factor properties expected from both theoretical considerations and results of experiments using linear quadrupole features.

B69-10520

A NEW METHOD FOR THE DETERMINATION OF PARTICULATE CONTAMINATION LEVELS FOR SURFACE CLEANLINESS OF FLUID SYSTEMS

SPON- INNOVATOR NOT GIVEN /HARTYS INTERN. CORP./ DATE- NOV. 1969

M-SC-10267

Levels of contamination in fluid systems can be determined by a definition of a particle by a mathematical model, a method for calculating the tolerance limits of contamination, and an estimation of the probability that the contamination on the surface will migrate with the fluid in the system.

B69-10528

DESIGN AND SPARING TECHNIQUES TO MET SPECIFIED PERFORMANCE LIFE

HOLSTAD, A. J., JR. /GE/ DATE- OCT. 1969

R-10200

Specified performance life technique starts with the general description of what is wanted, defines in block diagrams the operational needs, and then defines the functional systems required. The technique is similar to a truncated reliability model, but the calculation is simplified by use of a Poisson distribution approach to failure probability.

B69-10529

A NEW METHOD FOR PRODUCING OPTICAL MIRRORS

NABIL, D. A. /PERKIN-ELMER CORP./ VRABEL, J. DATE- OCT. 1969

R-10227

Pure siliccon improves optical mirrors for use in telescopes and high resolution optical systems. Pure silicon is used in both mirror and substrate in environments where large thermal changes occur. It has applicability in astronomical devices.

B69-10541

CRYOGENIC FLUID FLOW INSTABILITIES IN HEAT EXCHANGERS

SHEPP, R. B. /GE/ STAUB, F. W. DATE- OCT. 1969

M-PC-20438

Analytical and experimental investigation determines the nature of oscillations and instabilities that occur in the flow of two-phase cryogenic fluids at both subcritical and supercritical pressures in heat exchangers. Test results with varying system parameters suggest certain design approaches with regard to heat exchanger geometry.

B69-10554

MINIATURIZED HIGH-RESOLUTION MASS/CHARGE SPECTROGRAPH /DESIGN STUDY/

TAYLOR, E. L. /ELECTRO-OPTICAL SYSTEMS/ DATE- OCT. 1969

M-SC-13270

Use of a double-focusing mass/charge spectrograph weighing less than 25 pounds is feasible for solar wind experiments. Instrument has a parallel-plate energy filter between the ion source and the double focusing units which stabilizes the problems of designing an ion source of small energy spread.

B69-10556

MODIFIED CRYOGENIC STORAGE TANK SUBSYSTEM

BURNS, W. J. /BOIXING CO./ ROBERTS, B. H. DATE- OCT. 1969

110
External spray distribution header is put into a liquid hydrogen vaporizer. When connected to the cryogenic material, it equalizes cooling around the circumference of the inlet header.

KSC-10380

A THEORETICAL STUDY OF RADAR BACKSCATTER FROM DISTRIBUTED TARGETS WITH EMPHASIS ON POLARIZATION DEPENDENCE

HOUTEN, J. P. /LOCKHEED MISSILE AND SPACE CO./

DATE- NOV. 1969

Mathematical framework for the electromagnetic scattering from random extended targets, such as terrain and sea surface, encompasses both power scattering and signal depolarization. It incorporates specular treatment of electromagnetic scattering as well as the electrical properties represented by surface impedance and polarization dependence.

B69-10562

MOLECULAR RADIATION - ITS APPLICATION IN PHYSICAL MEASUREMENTS AND ANALYSES

SPCR- INNOVATOR NOT GIVEN /MARRS ALL SPACE FLIGHT CENTER/

DATE- OCT. 1969

Specialists Conference held at Marshall Space Flight Center reviewed work in molecular radiation to evaluate research possibilities in this field. Topics included spectral-line studies in the laboratory, application to practical heat transfer calculations of radiative transfer models, and use of measured radiation properties of gases.

B69-10563

WATER-GLYCOL SYSTEM VOLUME CALCULATION

LILLEY, B. /N. AM. ROCKWELL CORP./ SCHAEDLE, G. C.

DATE- OCT. 1969

Two methods calculate the volume of a thermodynamic system. Integral method uses an iterative solution to determine volume based on constants of liquid mass and gas mass. Differential method approximates volume by its initial values plus first-order differential changes in volume as functions of temperature and pressure.

B69-10577

FREQUENCY DOMAIN ANALYSIS AND SYNTHESIS OF LUMPED PARAMETER SYSTEMS USING NONLINEAR LEAST SQUARES TECHNIQUES

HAYS, C. E. /BOEING CO./

DATE- DEC. 1969

Lumped parametric system models are simplified and computationally advantageous in the frequency domain of linear systems. Nonlinear least squares computer program finds the least square best estimate for any number of parameters in an arbitrarily complicated model.

B69-10591

A POLAR GRAPHIC METHOD FOR DETERMINING THE ATTITUDE OF ROCKET VEHICLES

MILLER, C. F., JR. /AM. DOE./

DATE- OCT. 1969

Graphic method of determining rocket attitudes by plotting data obtained by fluxgate magnetometers and solar aspect sensors utilizes polar coordinates. Polar graph paper is used to represent either the horizon system of altitude and azimuth or the celestial system of declination and right ascensions.

B69-10598

AIRBORNE STEINHELM LINE DISCRIMINATOR

GABRIEL, R. C. /PERKIN-ELMER CORP./ MARELE, D. A.

DATE- NOV. 1969

Airborne Steinhelm Line Discriminator enables prospecting for fluorescent materials, hydrography with fluorescent dyes, and plant studies based on fluorescence of chlorophyll. Optical unit design is the coincidence of Steinhelm lines in the solar spectrum occurring at the characteristic wavelengths of some fluorescent materials.

B69-10604

EXPERIMENTAL DESIGN FOR RESEARCH ON SHOCK-TURBULENCE INTERACTION

BADCLIFFE, S. M. /WLY Labs./

DATE- NOV. 1969

Report investigates the production of acoustic waves in the interaction of a supersonic shock and a turbulence environment. The few stages of the investigation are apparatus design, development of instrumentation, preliminary experiment, turbulence generator selection, and main experiments.
B69-10663
FINE-LINE SENSITIVITY FOR HOLOGRAPHIC INTERFEROMETERS
REBLINGER, L. O. /TRW SYSTEMS GROUP/ DATE- NOV. 1969

Improvement in sensitivity of holography, the technique of lensless interferometry, is obtained by enhancing the higher-order structure in the interferograms. By using the light diffracted into higher orders than the first, phase sensitivity is increased over the first order sensitivity by a factor equal to the order number used.

B69-10678
ELECTRON INTERACTION IN MATTER
DANCE, W. E. /ATT RES. CENTERS/ DATE- DEC. 1969

Data on the scattering of 1-Mev electrons in aluminum for the case of non-normal incidence, electron-bremsstrahlung cross-sections in thin targets, and the production of bremsstrahlung by electron interaction in thick targets, are presented both in tabular and graphic form. These results may interest physicists and radiologists.

B69-10673
LONG RANGE HOLOGRAPHIC CONTOUR MAPPING CONCEPT
BROOKS, R. B. /TW SYSTEMS GROUP/ DATE- DEC. 1969

Plan for generating a two dimensional contour map of a distant object with range contour intervals of a few millimeters to a few inches is accomplished by using a laser light source which has a periodically varying coherence function to form a hologram of the object.

B69-10670
HANDGUIDE HIGHLIGHTING THE FUNDAMENTALS OF NUCLEAR AND ATOMIC PHYSICS
BAILEY, D. F. /WESTINGHOUSE ASTROPHYSL. LAB./ DATE- DEC. 1969

Indoctrination document presents nuclear, reactor, and atomic physics in an easy, straightforward manner. The entire subject of nuclear physics, including atomic structure, ionization, isotopes, radioactivity, and reactor dynamics is discussed.

B69-10707
TECHNIQUE FOR PREDICTING THE THERMAL EXPANSION COEFFICIENTS OF CHROMIUM-NICKEL ALLOYS
CLARK, A. P. /INSTR. FOR BASIC STANDARDS, NBS/ DATE- DEC. 1969

Series of measurements on the thermal expansion coefficients of several aerospace alloys and standard materials establish relationships between related alloys that would aid in predicting their thermal expansion reliability. Thermal expansion data are also necessary for the reduction of electrical resistivity measurements of those same materials.

B69-10672
NATURAL GAS FLOW THROUGH CRITICAL NOZZLES
JOHNSON, R. C. /DATE- NOV. 1969

Empirical method for calculating the flow rate and upstream volume flow rate through critical flow nozzles is determined. Method requires knowledge of the composition of natural gas, and of the upstream pressure and temperature.

B69-10714
FLOW DIRECTION MEASUREMENT WITH FIXED PROBES
DUDEKINSKI, T. J. /KRAUSZ, L. N. DATE- DEC. 1969

Fixed-position probes for determination of flow direction in one and two planes are tested over a wide range of Reynolds numbers and Mach numbers. The work is limited to tests of a single probe design for two dimensional flow and a single design for three dimensional flow.

B69-10716
CHROMATOGRAPHIC DETECTION AND ANALYSIS OF TRACES OF HYDROCARBONS
FICKET, E. W. /BENDIX CORP./ DATE- DEC. 1969

Special analytical column having in series two separate absorption sections charged with beads of porous polymer and a sample of gas detects traces of hydrocarbons. New method requires only 15 minutes for execution.

B69-10773
GAMMA RADIATION CHARACTERISTICS OF PLUTONIUM DIOXIDE FUEL
GINGO, J. P. DATE- DEC. 1969

Investigation of plutonium dioxide as an isotopic fuel for Radioisotope Thermoelectric Generators yielded the isotopic composition of production-grade plutonium dioxide fuel, sources of gamma radiation produced by plutonium isotopes, and the gamma flux at the surface.

B69-10767
PULSE-HEIGHT DEFECTS DUE TO ELECTRON INTERACTION IN DEAD LAYERS OF GE/LI/GAMMA-RAY DETECTORS
LARDNER, W. M. STRAUSS, H. E. DATE- DEC. 1969

Magnetohydrodynamic generator uses a slug or piston of liquid potassium as the working fluid. An expanding vapor of the metal is allowed to recirculate the liquid-metal-piston through a magnetic field and the expansion energy is converted directly into electrical energy.

B69-10771
LIQUID-METAL-PISTON AND GENERATOR
FALK, J. P. /ASSOCIATED UNIVERSITIES, INC./ DATE- DEC. 1969

Magnetohydrodynamic generator uses a slug or piston of liquid potassium as the working fluid. An expanding vapor of the metal is allowed to recirculate the liquid-metal-piston through a magnetic field and the expansion energy is converted directly into electrical energy.

B69-10772
NATURAL GAS FLOW THROUGH CRITICAL NOZZLES
JOHNSON, R. C. /DATE- NOV. 1969

Empirical method for calculating the flow rate and upstream volume flow rate through critical flow nozzles is determined. Method requires knowledge of the composition of natural gas, and of the upstream pressure and temperature.

B69-10714
FLOW DIRECTION MEASUREMENT WITH FIXED PROBES
DUDEKINSKI, T. J. /KRAUSZ, L. N. DATE- DEC. 1969

Fixed-position probes for determination of flow direction in one and two planes are tested over a wide range of Reynolds numbers and Mach numbers. The work is limited to tests of a single probe design for two dimensional flow and a single design for three dimensional flow.

B69-10716
CHROMATOGRAPHIC DETECTION AND ANALYSIS OF TRACES OF HYDROCARBONS
FICKET, E. W. /BENDIX CORP./ DATE- DEC. 1969

Special analytical column having in series two separate absorption sections charged with beads of porous polymer and a sample of gas detects traces of hydrocarbons. New method requires only 15 minutes for execution.

B69-10773
GAMMA RADIATION CHARACTERISTICS OF PLUTONIUM DIOXIDE FUEL
GINGO, J. P. DATE- DEC. 1969

Investigation of plutonium dioxide as an isotopic fuel for Radioisotope Thermoelectric Generators yielded the isotopic composition of production-grade plutonium dioxide fuel, sources of gamma radiation produced by plutonium isotopes, and the gamma flux at the surface.

B69-10767
PULSE-HEIGHT DEFECTS DUE TO ELECTRON INTERACTION IN DEAD LAYERS OF GE/LI/GAMMA-RAY DETECTORS
LARDNER, W. M. STRAUSS, H. E. DATE- DEC. 1969

Magnetohydrodynamic generator uses a slug or piston of liquid potassium as the working fluid. An expanding vapor of the metal is allowed to recirculate the liquid-metal-piston through a magnetic field and the expansion energy is converted directly into electrical energy.

B69-10771
LIQUID-METAL-PISTON AND GENERATOR
FALK, J. P. /ASSOCIATED UNIVERSITIES, INC./ DATE- DEC. 1969

Magnetohydrodynamic generator uses a slug or piston of liquid potassium as the working fluid. An expanding vapor of the metal is allowed to recirculate the liquid-metal-piston through a magnetic field and the expansion energy is converted directly into electrical energy.

B69-10772
SURFACE-RENEWED FIBER PENETRATION MODELS FOR HEAT-TRANSFER BETWEEN WALLS AND FLUIDIZED BEDS
PAULER, R. D. DATE- DEC. 1969

Two surface-renewed film penetration models describe transient heat-transfer between a wall and a fluidized bed. Methods are presented for estimation of mean residence times of particles at the transporting surface, their age densities and the average transport coefficients.

B69-10779
NUMERICAL SOLUTIONS OF DIFFERENTIAL EQUATIONS
WEISS, J. R. /VANDERBILT UNIV./ DATE- DEC. 1969

Various numerical methods for solving differential equations were analyzed and refined in an effort to develop a method which was adaptable to a large class of problems. The prime capabilities of the method included accuracy, numerical stability, and economic use of computer time. In multistep processes the correcting was changed at each step.

B69-10781
AERODYNAMIC FORCES OF FLUTTERING CYLINDRICAL AND/OR PLANE STRUCTURES
FAYES, J. E. /RESEARCH RES. ENTER, F. E. PORTER PLATE, INC./ DATE- DEC. 1969

Complexity of the phenomena of panel flutter instability has resulted in the necessity of developing separate design criteria for a variety of flow conditions and panel configurations. Vehicle panel configurations with low aspect ratios are of interest in low supersonic flow, where boundary layer effects are important.
TRAJECTORY OPTIMIZATION

Regularized equations for a particular optimal trajectory are compared with unregularized techniques. The regularized equations yield a significant reduction in computer time.

REPRESENTATION

Regularized equations for a particular optimal trajectory are compared with unregularized equations with respect to computational characteristics, using perturbation type numerical optimization. In the case of the three dimensional, low thrust, Earth-Jupiter rendezvous, the regularized equations yield a significant reduction in computer time.

VARIABLES

Regularized equations for a particular optimal trajectory are compared with unregularized equations with respect to computational characteristics, using perturbation type numerical optimization. In the case of the three dimensional, low thrust, Earth-Jupiter rendezvous, the regularized equations yield a significant reduction in computer time.

Preliminary design calculations for a proposed fine guidance experiment telescope containing a four-sided pyramidal reflector indicate that 0.01 arc sec pointing, at 0.03 arc sec sensing resolution, could be achieved by viewing a +10.0 magnitude star where the total collected light energy would be applied for fine error detection.

ESTIMATING RELIABILITY BY APPLICATION OF MATRIX REPRESENTATION

Technique based upon matrix representation and matrix collapsing calculates the probability of successfully completing anned missions and of returning the spacecraft safely to earth. This technique provides analytic expressions for each subsystem, making it possible to relate changes in subsystem reliability directly to mission success and crew safety.

TRAJECTORY OPTIMIZATION USING REGULARIZED VARIABLES

Regularized equations for a particular optimal trajectory are compared with unregularized equations with respect to computational characteristics, using perturbation type numerical optimization. In the case of the three dimensional, low thrust, Earth-Jupiter rendezvous, the regularized equations yield a significant reduction in computer time.

DETERMINATION OF PERMISSIBLE APPLIED LOAD STRESS IN STRUCTURAL ELEMENTS

Graphic method is used to select allowable stresses in thermally loaded structures. Equations are used for determining the mode of failure for specific materials in order to plot a range of stress curves. Linear assumption and iterative calculations are eliminated resulting in comparatively high accuracy.

03 MATERIALS (CHEMISTRY)

REFERENCE BLACK BODY IS COMPACT, CONVENIENT TO USE

To replace the classical hollow sphere, a compact reference black body has been constructed from stacked razor blades. Treated with a deposit of black oxide on the surfaces or notches between the upper edges of the blades, the device is useful over a wide range of incident angles.

THERMALLY CONDUCTIVE METAL WOOL-SILICONE RUBBER MOLDING CAN BE USED AS SHOCK AND VIBRATION DAMPER

Bronze wool pads, impregnated with silicon rubber, meet the requirement for a thermally conductive, shock and vibration absorbing material. They serve as spacers in equipment mounting and are resistant to high temperatures.

FILTER FOR HIGH-PRESSURE GASES HAS EASY TAKE-OUT, ASSEMBLY

MAC GLASBAER, W. P. DATE- FEB. 1964 JPL-373
A small metal filter body, for use in tubing supplying sterilization gases, has an inlet port that can be unscrewed. Inside, the high pressure filter is supported on both sides and sealed by an o ring. Design facilitates assembly and disassembly of parts.

CRYOSTATIC FILTER METHOD PRODUCES SUPER-PURE HELIUM AND HELIUM ISOTOPES

Hill, T. D. DATE- MAR. 1964 JPL-376
Helium is purified when cooled in a low pressure environment until it becomes superfluid. The liquid helium is then filtered through iron oxide particles. Heating, cooling and filtering processes continue until the purified liquid helium is heated to a gas.

FRESNEL CUP REFLECTOR DIRECTS MAXIMUM ENERGY FROM LIGHT SOURCE

Lavoie, E. G. YOUNGBERG, C. L. DATE- MAY 1964 JPL-520
To minimize shielding and overheating, a composite Fresnel cup reflector design directs the maximum energy from a light source. It consists of a uniformly ellipsoidal end surface and an extension comprising a series of confocal ellipsoidal and conicosectric spherical surfaces.

OIL-SHEARED MODELS AID WIND TUNNEL MEASUREMENTS

KATCOFF, S. LOVING, D. K. DATE- APR. 1964 JPL-379
For visualizing flow characteristics in wind tunnel tests, model surfaces are coated with a common petroleum-base oil. These fluoresce readily under ultraviolet light and the flow patterns are readily visualized.

QUICK-HARDENING PROBLEMS ARE ELIMINATED WITH SPRAY GUN MODIFICATION WHICH MIXES RESIN AND ACCELERATOR LIQUIDS DURING APPLICATION

JOHNSON, G. W. DATE- May 1964 JPL-380 SEE ALSO U.S. PATENT NO. 2,930,532 LANGLEY-4
A modified spray gun, with separate containers for resin and additive components, solves the problems of quick hardening and nozzle clogging. At application, separate atomizers spray the liquids in front of the nozzle face where they blend.

GALLIUM USEFUL BEARING LUBRICANT IN HIGH-VACUUM ENVIRONMENT

BUCHEY, D. B. DATE- May 1964 JPL-381 SEE ALSO U.S. PATENT NO. 3,072,574 LEWIS-12
Solid gallium is used as a lubricant on bearings made of compatible materials. Such lubricants perform well in a high vacuuum and under low temperature.

APPARATUS FACILITATES HIGH-TEMPERATURE TENSILE TESTING IN VACUUM

Sikora, F. F. DATE- JULY 1964 LEWIS-52
An apparatus for heating refractory materials to high temperatures during tensile testing includes a water-cooled, stainless steel vacuum chamber. This contains a resistance heater consisting of a slit tube of tantalum or tungsten to enclose the tensile test rod.

NEW COBALT ALLOYS HAVE HIGH-TEMPERATURE STRENGTH AND LONG LIFE IN VACUUM ENVIRONMENTS

Cobalt refractory metal alloys combine
In order to eliminate the hazard caused by residual air trapped between the concentric shells of a cryostat, these annular spaces are pressurized with helium gas. This system is more economical than the use of powdered insulation maintained at low vacuums.

**B63-10378**

**LIQUID-LEVEL METER HAS NO MOVING PARTS**

ESCOE, W. T. /BENDIX CORP./ DATE- JUN. 1964

M-FS-3

An electro-optical system, without moving parts, reliably indicates liquid levels at cryogenic temperatures. Glass prisms, which act as liquid level probes inside the tank, extend from optically aligned photoelectric assemblies mounted on the outside.

**B63-10389**

**LIGHTWEIGHT MAGNESIUM-LITHIUM ALLOYS SHOW PROMISE**

ADAMS, W. T. CATALDO, C. F. DATE- JUN. 1964

M-FS-17

Evaluation tests show that magnesium-lithium alloys are lighter and more ductile than other magnesium alloys. They are being used for packaging, housings, containers, where light weight is more important than strength.

**B63-10424**

**VARIABLE LIGHT SOURCE WITH A MILLION-TO-ONE INTENSITY RATIO**

S KiN, W. B. SNOB, W. B. /SPACE TECHNOL. LAB./ DATE- MAY 1964

JPL-WC-008

A wide range, variable intensity light source of constant color characteristics has been developed for testing and calibrating photomultiplier tubes. A light attenuator first diffuses light from a constant source, then permits variable attenuation through a series of chambers and adjustable apertures.

**B63-10429**

**WELDED PRESSURE TRANSDUCER MADE AS SMALL AS 1/8-INCH IN DIAMETER**

COON, G. W. DATE- BAR. 1964 HEAN- SEE ALSO D. S. PATENT NO. 3,627,769

ARC-11

A special spot welding technique is used to make miniature capacitance transducers for placing in a wind tunnel model. Rugged and relatively low in cost, they have a flat response up to one-third of the resonant frequency.

**B63-10453**

**POLYBENZEN DISULFIDE MIXTURES MAKE EFFECTIVE HIGH-VACUUM LUBRICANTS**

SPON- INNOVATOR NOT GIVEN /MIDWEST RES. INST./ DATE- NOV. 1964 HEAN- SEE ALSO B63-10337, B63-10562, AND B64-10116

M-FS-58

Five different mixtures of polybenzene disulfide are found to be effective bearing lubricants when tested at very low pressures and high temperatures.

**B63-10476**

**CEMENTS IODIDE CRYSTALS FUSED TO VACUUM TUBE FACELATES**

PLACE, H. G. /ELECTRO-MECHANICAL RES./ DATE- MAY 1964 GSFC-67

A cesium iodide crystal is fused to the lithium chloride faceplate of a phonocarotograph image tube. The conventional silver chloride solder is then used to attach the faceplate to the metal support.

**B63-10479**

**IMPLOVES POLYBENZEN DISULFIDE-SILVER MOTORS**

BRUSHES HAVE EXTENDED LIFESPANS

HOCTOR, J. C. KING, H. N. DATE- MAY 1964

M-FS-64

Motor brushes of proper quantities of polybenzene disulfide and copper or silver are manufactured by sintering techniques. Graphite molds are used. These brushes operate satisfactorily for long periods in normal atmosphere or in a high-vacuum environment.

**B63-10564**

**REFRACTORY CERAMIC HAS WIDE USAGE, LOW FABRICATION COST**

SPON- INNOVATOR NOT GIVEN /MARS/ DATE- APR. 1964

M-FS-67

Particulate, fused amorphous silica is formed into complex shapes by casting in plaster molds. High temperature firing is not required. This ceramic is resistant to thermal shock and exhibits good strength properties.

**B63-10528**

**VARIABLE-TRANSPARENCY WALL REGULATES TEMPERATURE OF STRUCTURES**

OSULLIVAN, W. J., JR. DATE- JUN. 1964

LANGLEY-25

An effective temperature regulating wall consists of one layer of an organic film which, being relatively opaque to thermal radiation in the solid state and transparent to it in the molten state and placed between two transparent layers. A mirror coating is applied to back layer.

**B63-10546**

**TEST DEVICE PREVENTS MOLECULAR BOUNCE-BACK**

HARDGROVE, W. F. SHAPIRO, H. DATE- JULY 1964

GSFC-62

A test device, which consists of six pyramidal reflectors joined together, acts as a baffle to impede the free path of the molecule to the test item by interposing a slanted surface which imparts an angular vector to the molecule and bounces it back to the chamber wall.

**B63-10557**

**RAPID HELIUM-AIR ANALYSER CAN MEASURE OTHER BINARY GAS MIXTURES**

BELF, L. T. WOOD, G. M. YEAGER, P. R. DATE- FEB. 1964

LANGLEY-16

Instrument comprised of an ionization pressure gage and a diaphragm pressure gage consisting of strain gages to make a four-arm bridge, and a ratiometer is constructed for analyzing gas mixtures. The ratio of the outputs of the two gages is proportional to the mixture composition.

**B63-10562**

**GATE VALUE WITH CERAMIC-COATED BASE OPERATES AT HIGH TEMPERATURES**

BRASS, A. DATE- JUL. 1964

ARC-23

A copper base insert coated with a layer of aluminum oxide ceramic prevents frictional binding between the gate and base surfaces of a gate valve which are subject to rapid sliding action and high temperatures.

**B63-10612**

**METALS PLATED ON FLUOROCARBON POLYMERS**

FORD, H. KRASINSKY, J. B. VANGO, S. P. DATE- OCT. 1964

JPL-546

Electroplating lead on fluorocarbon polymer parts is accomplished by etching the parts to be plated with sodium, followed by successive depositions of silver and lead from ultrasonically agitated plating solutions. Metals other than lead may be electroplated on the silvered parts.

**B64-10068**

**MECHANICAL PROPERTIES OF PLASTICS PREDETERMINED BY EMPIRICAL METHOD**

LONE, J. J. PARKER, J. A. DATE- JUL. 1964

ARC-28

To predetermine the mechanical properties of rigid plastics as a function of plasticizer content and composition, a set of equations has been derived.

**B64-10081**

**DURABLE CERAMIC HAS WIDE USAGE, LOW FABRICATION COST**

SPON- INNOVATOR NOT GIVEN /MARS/ DATE- APR. 1964

M-FS-67

Particulate, fused amorphous silica is formed into complex shapes by casting in plaster molds. High temperature firing is not required. This ceramic is resistant to thermal shock and exhibits good strength properties.

**B64-10528**

**VARIABLE-TRANSPARENCY WALL REGULATES TEMPERATURE OF STRUCTURES**

OSULLIVAN, W. J., JR. DATE- JUN. 1964

LANGLEY-25

An effective temperature regulating wall consists of one layer of an organic film which, being relatively opaque to thermal radiation in the solid state and transparent to it in the molten state and placed between two transparent layers. A mirror coating is applied to back layer.

**B64-10546**

**TEST DEVICE PREVENTS MOLECULAR BOUNCE-BACK**

HARDGROVE, W. F. SHAPIRO, H. DATE- JULY 1964

GSFC-62

A test device, which consists of six pyramidal reflectors joined together, acts as a baffle to impede the free path of the molecule to the test item by interposing a slanted surface which imparts an angular vector to the molecule and bounces it back to the chamber wall.

**B64-10557**

**B64-10068**

**MECHANICAL PROPERTIES OF PLASTICS PREDETERMINED BY EMPIRICAL METHOD**

LONE, J. J. PARKER, J. A. DATE- JUL. 1964

ARC-28

To predetermine the mechanical properties of rigid plastics as a function of plasticizer content and composition, a set of equations has been derived.
ELASTOMERS BONDED TO METAL SURFACES SEAL
LEAD OXIDE CERAMIC MAKES EXCELLENT B64-10113
M-FS-160
To protect rocket metal surfaces from engine exhaust heat, a refractory thermal insulation mixture, which adheres to smooth metals, has been developed. Insulation protection over a wide temperature range can be controlled by thickness of the applied mixture.

B64-10113 ELASTOMERS BONDED TO METAL SURFACES SEAL ELECTROCHEMICAL CELLS SHEFFIT, J. M. DATE- AUG. 1964 G5C-168
A leakproof seal secondary cell containing alkaline electrolytes was developed by bonding an alkali-resistant elastomer, such as neoprene, to metal contact surfaces. Test results of several different elastomers strongly indicate the feasibility of this sealing method.

B64-10116 LEAD OXIDE CERAMIC MAKES EXCELLENT HIGH-TEMPERATURE LUBRICANT JOHNSON, R. E. SILEY, R. E. DATE- AUG. 1964 LW15-164
A dry lubricant coating in ceramic form consisting of 95 percent lead monoxide and 5 percent silicon dioxide withstood a temperature of 1200 deg F, with a bearing operating at various atmospheric pressures. From this testing, there was no galling or metal transfer of the bearing.

B64-10130 NOVEL SHOCK ABSORBING FRUSTRES VARYING YIELD STRENGTHS GIESE, D. J. DATE- JUL. 1964 MSC-63A
A shock absorbing webbing of partially drawn synthetic strands is arranged in sections of varying density related to the varying mass of the human body. This is contoured to protect the body at points of contact, when subjected to large acceleration or deceleration forces.

B64-10142 STRONGST CLEANING TECHNIQUE ASSURES RELIABLE EPOXY BOND SPON- INNOVATOR NOT GIVEN /HCA/ DATE- JUN. 1964 G5C-161
For reliable aluminum bonding to withstand stress, the mating surfaces are carefully cleaned, etched, rinsed and dried. An epoxy and hardener designed for metal-to-metal bonding is then used for a rigid assembly.

B64-10151 PLASTIC FILMS FOR REFLECTING SURFACES REPRODUCED FROM MASTERS SPON- INNOVATOR NOT GIVEN /MINNEAPOLIS HONEYWELL/ DATE- OCT. 1964 G5C-166
Accurate reproduction in plastic of the surface of the optical master to which a reflective finish may be applied is done by using backing from any suitable material to which cured plastic will adhere tightly. Plastic used for reflectors should be of the thermosetting or catalytically hardened type.

B64-10166 FILLER DEVICE FOR HANDLING HOT CORROSIVE MATERIALS SPON- INNOVATOR NOT GIVEN /PRATT AND WHITNEY AIRCRAFT/ DATE- OCT. 1964 MSC-85
A bellows-type bag with its own heating element is developed for safe handling and injection of hot corrosive liquids into modules.

B64-10206 SOLDER FLUX LEAVES CORROSION-RESISTANT COATING ON METAL BACMAN, A. J. DATE- OCT. 1964 JPL-611
A soldering flux consisting of perfluoro-octanoic acid hydrazine provides a corrosion resistant film on metal surface, particularly copper. It is ineffective for soldering aluminum.

B64-10270 PRESSURE HOLDING OF POWDERED MATERIALS IMPROVED BY RUBBER MOLD INSERT SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS CORP./ DATE- NOV. 1964 W00-100
Pressure holding tungsten microspheres is accomplished by applying hydraulic pressure to a silicone rubber mold insert with several barrel shaped chambers which is placed in a steel die cavity. This technique eliminates castings containing shear fractures.

B64-10282 FIRE-RESISTANT SCREEN MADE BY SIMPLIFIED METHOD SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- DEC. 1964 W00-104
Strong fine-mesh screens are fabricated by a method involving uniform distribution of fine ferromagnetic particles on a nonmagnetic substrate. Such screens are commonly used for grids in electron tubes and ion devices.

B64-10319 GAS DIFFUSION CELL REMOVES CARBON DIOXIDE FROM OCCUPIED AIRRIGHT ENCLOSURES SPON- INNOVATOR NOT GIVEN /IOWA UNIV./ DATE- DEC. 1964 MSC-118
Sail, lightweight permeable cell package separates and removes carbon dioxide from respiratory gas mixtures. The cell is regenerative while chemically inert in the presence of carbon dioxide so that only adsorption takes place.

B65-10004 SCREENING TECHNIQUE MAKES RELIABLE BOND AT ROOM TEMPERATURE SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965 H-227
Stainless-steel screen used to lay room temperature curing epoxy adhesive permits reliable bonding of electronic circuits boards. This technique would be useful with thin-walled structures that warp during conventional bonding operations.

B65-10015 IMPROVED CONDUCTIVE PASTE SECURES BIOMEDICAL ELECTRODES SPON- INNOVATOR NOT GIVEN /BAYLOB/ DATE- JAN. 1965 SEE ALSO B64-10025 MSC-107
Nontoxic paste consisting of a dispersion of graphite or silver granules in a mixture of polyvinylpyrrolidone and dilute glycerol secures biomedical electrodes to human skin. Silver paste has a high electrical conductivity and forms a bond between metal and moist or dry skin.

B65-10016 ADHESIVE FOR VACUUM ENVIRONMENTS RESISTS SHOCK AND VIBRATION SPON- INNOVATOR NOT GIVEN /WESTINGHOUSE ELECTRIC CORP./ DATE- FEB. 1965 MSC-56
A mixture of a polynalde, an epoxy resin, and fine silica or glass microballoons provides an adhesive which is flexible, resistant to shock and vibration, and has improved heat-transfer characteristics.

B65-10024 FLUID PRESSURE USED TO TEST TURBOPUMP BEARINGS SPON- INNOVATOR NOT GIVEN /AMERICAN GEN. CORP./ DATE- FEB. 1965 N0-0001

115
Testing of turbopump bearings operating in an intense radiation field is accomplished by the use of a fluid bearing tester providing radial and axial loading.

B65-10032
WIDE WINDING INCREASES LIFETIME OF OXIDE-COATED CATHODES
KERSLAKE, W. VARGO, D. DATE- FEB. 1965 REAR-
SEE ALSO AIAA PAPER-64-683
LEVEL-154
Refractory-metal heater base wound with a thin refractory metal wire increases the longevity of oxide-coated cathodes. The wire-wound unit is impregnated with the required thickness of metal oxide. This cathode is useful in magnetohydrodynamic systems and in electron tubes.

B65-10034
CAGE MEASURES ELECTRICAL CONNECTOR PIN RETENTION FORCE
SPOR- INNOVATOR NOT GIVEN /BCA/ DATE- FEB. 1965
JEL-SC-071
The retention force of a female connector pin is measured by observing the action of a calibrated spring in a cage consisting of housing, a plunger terminating in a male subminiature connector pin, and the tension spring.

B65-10043
NOUGT PIECE ADAPTER FOR PIPESTES PROTECTS MOUTH FROM HARMFUL LIQUIDS
Mc SHAIN, D. G. DATE- FEB. 1965
LANGLEY-47
To prevent the laboratory technicians south from contacting harmful liquids, a device with a hermetically sealed elastic bellows is attached to a standard pipette.

B65-10048
FLEXIBLE CURTAIN SHIELDS EQUIPMENT FROM INVERSE HEAT FLUXES
SPOR- INNOVATOR NOT GIVEN /ARROWHEAD PROD./ DATE- FEB. 1965
N-PS-48
Flexible, high strength curtain made of fiber glass silicone elastomer laminate provides thermal shielding for equipment.

B65-10065
SPHERICAL MODEL PROVIDES VISUAL AID FOR CURVIC CRYSTAL STUDY
BAULISI, E. J. SPIEGEL, A. L. DATE- MAR. 1965
LEVEL-108
Transparent sphere of polymethylmethacrylate with major zones and poles of cubic crystals is used to make crystallographic visualizations and to interpret the X-ray diffraction of single cubic crystals.

B65-10083
BIXITAXUM COMPOUND IMPROVES NICKEL-CADMIUM CELL
SPOR- INNOVATOR NOT GIVEN /GZ/ DATE- MAR. 1965
GSFC-295
Nickel electrodes impregnated with an additive solution of didymium hydrate and nitric acid mixed with nickel nitrate increases ampere-hour capacity of cells and does not affect the voltage characteristics.

B65-10088
FIBER GLASS PAPER CHED DURING FILAMENT WINDING ELIMINATES OVER, SAVES TIME
CARRUT, R. J. DATE- APR. 1965
N-PS-14
Resistance wire layer is introduced during winding of the fiber glass filament with simultaneous heating. Emission of heat from the wire layer cures second fiber glass layer.

B65-10092
LIGHTWEIGHT ALUMINUM CASTING ALLOY IS USEFUL AT CRYOGENIC TEMPERATURES
SPOR- INNOVATOR NOT GIVEN /A-464-4 M LAB./ DATE- APR. 1965
N-PS-267
N-45, a lightweight, high purity aluminum alloy has superior tensile properties for use at cryogenic temperatures.

B65-10095
CARBON-ARC ROB HOLDER HAS LONG LIFE, REDUCES ARC SPLATTER
SPOR- INNOVATOR NOT GIVEN /BCA/ DATE- APR. 1965
NEC-144
Carbon-arc rod holder with front end of beryllium oxide, a high electrical resistor and good thermal conductor, prevents nonuniform burning of the positive carbon rod and corrosion of the rod holder.

B65-10106
MINIATURE BEARINGS LUBRICATED BY SONIC DISPERSION METHOD
SPOR- INNOVATOR NOT GIVEN /LITTON IND./ DATE- APR. 1965
N-PS-202
Evenly distributing a monomolecular film over the balls and tracks of miniature precision ball bearings by sonic dispersion results in precise lubrication which prevents lubricant bleed out to adjacent components. Varying the lubricant to solvent ratio of the mixture causes varying lubricant coating thicknesses.

B65-10107
CRACK DETECTION METHOD IS SAFE IN PRESENCE OF LIQUID GIBER
SPOR- INNOVATOR NOT GIVEN /BOOING CO./ DATE- APR. 1965
N-PS-236
Visual flaw detection method for metals utilizes color precipitate. This method can be used safely in the presence of liquid oxygen.

B65-10117
DOUBLE GLOVES REDUCE CORROSION OF DRY BOX ATMOSPHERE
HERSLE, T. P. QUANTZ, R. B. HEINRITZ, G. DATE- APR. 1965
LEVEL-211
Pair of enclosed low permeability hand gloves between which an inert gas circulates reduces dry box contamination. This innovation is applicable to dry boxes using radioactive and alkali metal compounds, subicron powders, and liquid metals.

B65-10136
VAPOR PRESSURE MEASURED WITH INFLATABLE PLASTIC BAG
SPOR- INNOVATOR NOT GIVEN /COPHYS. CORP. OF AM./ DATE- MAY 1965
GSFC-281
Deflated plastic bag in a vacuum chamber measures initial lcb vapor pressures of materials. The bag captures the test sample vapors and visual observation of the vapor-inflated bag under increasing external pressures yields pertinent data.

B65-10140
GALVANIC CORROSION REDUCED IN ALUMINUM FABRICATIONS
SPOR- INNOVATOR NOT GIVEN /MARSHALL/ DATE- MAY 1965
N-PS-272
Titanium alloy fasteners dipped at zinc chromate primer are installed while wet in protective coated aluminum panels to reduce galvanic corrosion. Moisture tight seals at fastener points are also provided.

B65-10156
INORGANIC PAINT IS DURABLE, FIREPROOF, EASY TO APPLY
SCHUTT, J. B. DATE- JUN. 1965
GSFC-366
Enorganic paint with a water-potassium silicate base is impervious to water. It is also fireproof and adheres to various surfaces exposed to wide temperature fluctuations.

B65-10162
ELECTROLESS NICKEL RESIST USED IN ALKALI ETCHING OF ALUMINUM
SPOR- INNOVATOR NOT GIVEN /SCHJELDAHL /N.Y./ CO./ DATE- JUN. 1965
Electroless nickel resist is unaffected by caustic soda applied as a milling or etching agent on aluminum.

B65-10164

INCREASED IMPROVES PROPERTIES OF AN AROMATIC POLYESTER

Below, V. L., JR. DATE- JUN. 1965

LANGLY-115

Aromatic polyester, PEN-2.6, is improved through cross-linking effected by radiation. Polymer retains properties of high tensile strength and toughness and stability at high temperatures.

B65-10167

REFRACTORY OXIDES EVALUATED FOR HIGH-TEMPERATURE USE

SPON- INVENTOR NOT GIVEN /LANGLY/ DATE- JUN. 1965

LANGLY-121

Partially calcia-stabilized zirconia used for insulation and heat-storage in high temperature /3000 deg to 4000 deg F/ cyclically operated pebble bed air heater.

B65-10172

ALUMINUM ALLOYS PROTECTED AGAINST STRESS-CORROSION CRACKING

SPON- INVENTOR NOT GIVEN /ALCOA RES. LABS./ DATE- JUN. 1965

B6PS-235

Topcoat of epoxy-polyamide paint is effective protection for aluminum alloys against stress corrosion cracking. The paint can be used on unplated surfaces.

B65-10173

PEEL RESISTANCE OF ADHESIVE BONDS ACCURATELY MEASURED

SPON- INVENTOR NOT GIVEN /BCA/ DATE- JUN. 1965

GSFC-320

Strength of adhesive bond between layers of laminated material is tested by peel force to the facing with a tensile testing machine. Testing jig has stainless steel rollers which constrain material to move horizontally while maintaining free end of facing at constant 90 deg angle.

B65-10175

TANTALUM CATHODE IMPROVES ELECTRON-BEAM EVAPORATION OF TANTALUM

SPON- INVENTOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE- JUN. 1965

JPL-WCO-021

Tantalum cathode is used in assembly for electron beam evaporation of tantalum onto a substrate. The cathode and anode are made of pure tantalum rather than tungsten to prevent contamination of the tantalum film deposited on the substrate.

B65-10179

REUSABLE NEOPRENE JACKET PROTECTS PARTS FOR CHEMICAL MILLING

SPON- INVENTOR NOT GIVEN /RAY AEROSPACE CO./ DATE- JUN. 1965

WCO-074

Reusable neoprene jacket is used to prepare metal part or panel for chemical milling. Jacket covers back and upper rim of part and is sealed before the milling solution is applied to surface to be milled. This reduces amount of masking material required for milling identical parts and increases production.

B65-10189

TESTING DEVICE SUBJECTS ELASTIC MATERIALS TO BIAXIAL DEFORMATIONS

BECKER, G. M. DATE- JUN. 1965

JPL-616

Testing device stretches elastic materials biaxially over large deformation ranges and varies strain ratios in two perpendicular directions. The device is used in conjunction with a tensile testing machine, which holds the specimen and permits control over the direction and magnitude of the stresses applied.

B65-10190

IR-TRANSMISSION GLASSES FORMED FROM OXIDES OF BISMUTH AND TELLURIUM

ULBRICH, D. R. DATE- JUN. 1965

MPS-279

Bismuth trioxide-tellurium dioxide glasses have improved infrared transmission characteristics.

B65-10214

EMERGENCY SOLAR STILL DESALTS SEAWATER

SPON- INVENTOR NOT GIVEN /SENFAR/ DATE- JUL. 1965

RSC-135

Solar energy apparatus distills seawater into fresh water. The inflatable buoyant still produces two pints of drinking water a day.

B65-10217

THIN TRANSPARENT FILMS FORMED FROM POWDERED GLASS

SPON- INVENTOR NOT GIVEN /HOFMAN ELECTRON./ DATE- JUL. 1965

GSFC-352

Glass film less than five mils thick is formed from powdered glass dispersed in an organic liquid, deposited on a substrate, and fused into place. The thin films can be cut and shaped for contact lenses, optical filters and insulating layers.

B65-10220

THERMALLY NICKEL BONDED BY SOLID-STATE DIFFUSION METHOD

BALES, T. T. DATING, R. C., JR. DATE- AUG. 1965

LANGLY-116

Solid-state diffusion bonding in an inert-gas atmosphere forms high-strength joints between butting or overlapping surfaces of thoriated nickel. This method eliminates inert-phase agglomeration.

B65-10250

COATING METHOD ENABLES LOW-TEMPERATURE BRAZING OF STAINLESS STEEL

SEARAH, F. D. /WESTINGHOUSE ELECTRIC CO./ DATE- AUG. 1965

MG-0030

Gold coated stainless steel tubes containing insulated electrical conductors are brazed at a low temperature to a copper coated stainless steel sealing block with a gold-copper eutectic. This produces an effective seal without using flux or damaging the electrical conductors.

B65-10251

BORON CARBIDE WHISHERS PRODUCED BY VAPOR DEPOSITION

SPON- INVENTOR NOT GIVEN /GE/ DATE- SEP. 1965

NIO-26

Boron carbide whiskers have an excellent combination of properties for use as a reinforcement material. They are produced by vaporizing boron carbide powder and condensing the vapors on a substrate. Certain catalysts promote the growth rate and size of the whiskers.

B65-10270

CERAMIC MATERIALS PURIFIED BY EXPERIMENTAL METHOD

SPON- INVENTOR NOT GIVEN /JIT RES. INST./ DATE- SEP. 1965

LEWIS-225

Crystalline ceramic materials are purified for use as high-temperature electrical insulators. Any impurities migrate to the cathode when a dc voltage is applied across the material while it is heated in an inert gas atmosphere.

B65-10288

ORGANIC REACTANTS RAPIDLY PRODUCE PLASTIC FOAM

록, G. F. DATE- SEP. 1965 /NRC/ SEE ALSO

B65-10090

LANGLY-37

Adding trichlorofluoromethane to polyether resin accelerates the reaction between the resin and toluene disocyanate. This accelerated reaction instantaneously produces a plastic foam of low density and uniform porosity needed to provide buoyancy for flotation recovery of instrument
package dropped into the sea from spacecraft.

B65-10294
ADHESIVE PROTECTIVE COATINGS PLATED ON MAGNESIUM-LITHIUM ALLOY
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- OCT. - 1965
REAN- SEE ALSO B65-10389
M-PS-385
Zinc is plated on a magnesium-lithium alloy by using a modification of the standard zinc-plate immersion bath. Further protection is given the alloy by applying a light plating of copper on the zinc plating. Other metals are plated on the copper by using conventional plating baths.

B65-10302
BURNISHING TECHNIQUE IMPROVES LUBRICATION OF THREADED FASTENERS
GRUPPER, J. L. /LOCKHEED MISSILES AND SPACE CO./ DATE- OCT. 1965
LEWIS-217
Burring a solid zincmide coating into the thread surfaces of fasteners eliminates the need for binders and vehicles which ensure coverage and retention of the lubricant during fastening. The coating may be applied by any convenient method.

B65-10303
NICKEL SOLUTION PREPARED FOR PRECISION ELECTROFORMING
SPON- INNOVATOR NOT GIVEN /ELECTRO-OPTICAL SYSTEMS/ DATE- OCT. 1965
Woo-070
Lightweight, precision optical reflectors are made by electroforming nickel onto masters. Steps for the plating bath preparation, process control testing, and bath composition adjustments are prescribed to avoid internal stresses and maintain dimensional accuracy of the electrodeposited metal.

B65-10316
REMOVABLE WELL IN REACTION FLASK FACILITATES CARBON DIOXIDE COLLECTION
SPON- INNOVATOR NOT GIVEN /AMES/ DATE- OCT. 1965
ARE-47
Removable plastic well with a flange that seats on the rim of an Erlenmeyer screwcap flask aids quantitative collection of carbon dioxide liberated in the flask. The well can be removed without danger of cross-contamination. It can collect other gases using appropriate absorbents.

B65-10321
PLATED NICKEL WIRE MESH MAKES SUPERIOR CATALYST BED
STILL, R. /BELL AEROSYSTEMS CO./ DATE- OCT. 1965
MSC-216
Perforated nickel mesh screen catalyst bed produced gas evolution in hydrogen peroxide throttle chambers used for attitude control of space vehicles. The nickel wire mesh disks in the catalyst bed are plated in pyrene form with a silver-gold coating.

B65-10335
MAGNETIC FLUID EASILY CONTROLLED IN ZERO GRAVITY ENVIRONMENT
PAPELL, S. S. DATE- NOV. 1965
LEWIS-126
Colloid composed of finely ground iron oxide in a fluid such as heptane, is controlled and directed magnetically in a zero gravity environment. It will not separate on standing for long periods or after exposure to magnetic or centrifugal forces. Because of its low density and low viscosity, it is easily pumped.

B65-10336
ANODIZATION PROCESS PRODUCES OPAQUE, REFLECTIVE COATINGS ON ALUMINUM
SPON- INNOVATOR NOT GIVEN /LOCKHEED MISSILES AND SPACE CO./ DATE- NOV. 1965
R-PS-185
Opaque, reflective coatings are produced on aluminum articles by an anodizing process wherein the anodizing bath contains an aqueous dispersion of finely divided insoluble inorganic compounds. These particles appear as uniformly distributed occlusions in the anodic deposit on the aluminum.

B65-10337
SPECIAL COATINGS CONTROL TEMPERATURE OF STRUCTURES
FULK, R. E. /BALL BROTHERS RES. CORP./ DATE- NOV. 1965
GSFC-844
Special coatings in the form of paints that exhibit controlled ratios of sunlight absorbivity to gray-body emissivity control the temperature of structures in space flight. These finishes exhibit good resistance to ultraviolet radiation and do not discolor.

B65-10341
LIGHTWEIGHT HINGED BELLOWS RESTRAINT HAS HIGH LOAD CAPACITY
TODD, E. E. /BALL BROTHERS RES. CORP./ DATE- NOV. 1965
Woo-151
High angular stresses in fluid-handling ducts are accommodated by a lightweight hinged bellows restraint. This device transmits angular stress to points close to the axis center and spreads it over a rigid configuration.

B65-10344
SOLUBLE UNDERCOATING FACILITATES REMOVAL OF FOAMED-IN-PLACE INSULATION
DUNGAN, A. C. HILL, C. L., JR. DATE- NOV. 1965
LEWIS-193
Foamed-in-place insulation can be removed and reused by coating the surface with a soluble peel coat before applying the foam mixture. Removal of the insulation is effected by slitting it and pouring a solvent in the slit to dissolve the peel coat. The insulation can then be stripped off intact.

B65-10354
PIGMENTED COATING RESISTS THERMAL SHOCK
HARADA, Y. /IIT RES. INST./ DATE- NOV. 1965
JPL-SC-083
Coating pigment composed of zinc oxide and potassium silicate resists the effects of thermal shock and long exposure to direct sunlight.

B65-10357
AIR-CURED CERAMIC COATING INSULATES AGAINST HIGH HEAT FLUXES
KOZIKOWSKY, V. P. DATE- NOV. 1965
R-PS-150
Reflective insulating ceramic coating protects supporting structures in area adjacent to rocket engines from the intense heat fluxes in the rocket exhaust plumes.

B65-10364
POROUS GLASS MAKES EFFECTIVE SUBSTRATE FOR OZONE-SENSING REAGENTS
SPON- INNOVATOR NOT GIVEN /PARABETRICS/ DATE- DEC. 1965
GSFC-308
Porous-glass substrate is used for absorption of a dye used in measuring the concentration of atmospheric ozone at high altitudes. This measurement is based on the chemiluminescence produced in the reaction between ozone and the dye, rhodamine B. The porous glass provides a large interstitial surface area which promotes this reaction.

B65-10366
UNIQUE GEAR DESIGN PROVIDES SELF-LUBRICATION
WINANSKI, F. J. /SPACE TECHNOL. LAB./ DATE- DEC. 1965
JPL-SC-079
Composite gear configuration provides a reliable automatic means for replenishing gear mechanism lubricants that dissipate in the harsh environment of space. The center or hub section of the gear consists of a porous, oil impregnated material, and the outer or toothed section has radially drilled passages to cause the oil to gradually flow to the gear teeth surface.

B65-10372
WIRE BUNDLE FORMED INTO GEARS WITH MINUTE INTERSTICES
TODD, R. E. /ELECTRO-OPTICAL SYSTEMS/ DATE- DEC.
1965
W00-089
Defoaming the ends of a bundle of closely packed parallel wires to restrict the interstices to substantially uniform and intimate dimensions produces grids or filters for ion engines. Porous metal structures made by this process are also used as fuel cell electrodes, diffusion membranes, and catalysts.

B65-10374
PLASTIC PLUG STAINLESS-STEEL FIBERS MAKE RESILIENT, INHERENTLY STABLE MATERIAL
SKIRBA, J. R. /THOMPSON RAMO WOOLBRIDGE/ DATE- DEC. 1965
W00-246
Plastic material combined with stainless-steel fibers and molded under heat and pressure into a desired configuration is both soft enough to deform under a load and resilient enough to return to its original shape when the load is removed.

B65-10384
PROBE SAMPLES COMPONENTS OF ROCKET ENGINE EXHAUST SCHUMACHER, P. E. /N. AM. AVIATION/ DATE- DEC. 1965
W-FS-485
Water-cooled, castellated probe samples the exhaust plume of rocket engines to recover particles for examination. The probe withstands the stresses of a rocket exhaust plume environment for a sufficient period to obtain a useful sample of the exhaust components.

B65-10390
TEST STRIPS DETECT DIFFERENT CO2 CONCENTRATIONS IN CLOSED COMPARTMENTS SPON- INNOVATOR NOT GIVEN /HELPER/ DATE- DEC. 1965
MSC-210
Four different test strips, using crystal violet for one pair of strips and basic fuchsin as a dye for the second pair, give unambiguous colorimetric indications of four different concentrations of carbon dioxide in the atmosphere of a closed compartment. Tetraethylene pentamine is used as a dye decoloring agent.

B65-10397
NEW BRAZING ALLOY ELIMINATES METAL-STRESS CRACKING BUSCHLER, E., JR. /N. AM. AVIATION/ ROEDER, E. B. DATE- DEC. 1965
W00-249
Silver 15 zinc brazing alloy avoids the liquid-metal stress cracking of base metals when applied to 304, 316, and 410 stainless steels and certain other alloys.

B65-10398
NICKEL-METAL COATING PROTECTS THREADS FASTENERS IN CORROSIVE ENVIRONMENT CHARLES, J. VEEDE, L. VEEDE, L DATE- DEC. 1965
MSC-253
Threaded fasteners used in corrosive environments are plated with electoless nickel and electroplated, over the nickel, with tin. This provides a corrosion-resistant coating for the fasteners.

B66-10005
FLUORIDE COATINGS MAKE EFFECTIVE LUBRICANTS IN MOLTEN SODIUM ENVIRONMENT SPON- INNOVATOR NOT GIVEN /LEWIS/ DATE- JAN. 1966
BEAN- SEE ALSO NASA-TH-1-2348 LEWIS-229
Coating bearing surfaces with calcium fluoride-barium fluoride film provides effective lubrication against sliding friction in molten sodium and other severe environments at high and low temperatures.

B66-10009
COILED SHEET METAL STRIP OPENS INTO TUBULAR CONFIGURATION PARK, J. J. DATE- JAN. 1966 BEAN- SEE ALSO B64-10011
GSFC-425
Copper alloy is converted into a spring material that can be rolled into a compact coil which will spontaneously open to form a tube in the long direction of the strip. The copper alloy is passed through a furnace at a prescribed temperature while restraining the strip in the desired tubular configuration.

B66-10024
ALUMINIZED FIBER GLASS INSULATION CONFORMS TO CURVED SURFACES SPON- INNOVATOR NOT GIVEN /N. E. AVIATION/ DATE- JAN. 1966
M-FS-477
Layers of fiber glass with outer reflective films of vacuum-deposited aluminum or other reflective metal, provide thermal insulation which conforms to curved surfaces. This insulation has good potential for cryogenic systems.

B66-10027
FLEXIBLE PROTECTIVE COATINGS MADE FROM SILICON-NITROGEN MATERIALS SPON- INNOVATOR NOT GIVEN /SOUTHERN RESEARCH/ DATE- JAN. 1966
M-FS-528
Flexible protective coatings formed from either of two polymers exhibit high temperatures for long periods. One polymer is a byproduct in hexaphenylcyclotrisilazane preparation, the other is obtained by heating bis/methylene/diphenylsilane.

B66-10029
EPOXY BLANKET PROTECTS MILLED PART DURING EXPLOSIVE FORMING SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JAN. 1966
M-FS-307
Epoxy blanket protects chemically milled or machined sections of large, complex structural parts during explosive forming. The blanket uniformly covers all exposed surfaces and fills any voids to support and protect the entire part.

B66-10033
M-FS-562
Porous tungsten plugs provide even airflow for frictionless bearings used in air bearing supported gyro. The plugs have their outer cylindrical surface sealed by an electron beam process to ensure unidirectional airflow through their exit ends.

B66-10037
PROCESS REDUCES SPORE DIAMETERS TO PRODUCE SUPERIOR FILTERS TODD, H. R. /ELECTRO-OPTICAL SYSTEMS/ DATE- FEB. 1966
W00-093
Porous metal structure with very small pore diameters is produced by heating the structure in oxygen for an oxidized surface layer, cooling it, and heating it in hydrogen to decoxidize the oxidized portion. Such structures are superior catalytic beds and filters.

B66-10043
POLYMER FILM EXHIBITS THERMAL AND RADIATION STABILITY BELL, A. L., JR. DATE- FEB. 1966
LANGLEY-100
Aromatic/heterocyclic polymers /pyroxene/ have the ability to absorb large quantities of photolytic, thermal and radiolytic energies while retaining their useful properties. They are prepared from the room temperature reaction of tetranitrides and tetraacids.

B66-10044
PROTECTIVE COATING WITHSTANDS HIGH TEMPERATURE IN OXIDIZING ATMOSPHERE HELLOR, C. H. /FENWAL, INC./ DATE- FEB. 1966
M-PS-529
Protective coating containing a plasma arc sprayed mixture of hafnium oxide and zirconium diboride will withstand high temperatures in an oxygen rich atmosphere. Used on a homogenous tungsten thermocouple, it does not flake or crack on subsequent cooling and reheating, and does not degrade the thermocouple response time.

B66-10053
SPRAY-ON TECHNIQUE SIMPLIFYING FABRICATION OF COMPLEX THERMAL INSULATION BLANKET
BOND, W. E. G. BAYARD, R. /NASA/ DATE- FEB. 1966 M-P-5-497
Spray-on process constructs molds used in forming sections of thermal insulation blankets. The process simplifies the fabrication of blankets by eliminating much of the equipment formerly required and decreasing the time involved.

B66-10070
REFLECTIVE INSULATOR LAYERS SEPARATED BY BONDED SILICA BEADS
ZUVE, N. T., JR. /GRUHMAN AIRCRAFT CORP./ DATE- FEB. 1966 M-PS-215
Nonconductive silica beads are bonded to metallic reflecting insulation sheets prior to fabrication of multilayer reflectors. This eliminates the need for separate nonconductive sheets and simplifies the fabrication process.

B66-10081
POLYTRIFLUOROETHYLENE LUBRICATES BALL BEARINGS IN VACUUM ENVIRONMENT
SPON- INNOVATORS NOT GIVEN /GOODYEAR/ DATE- MAR. 1966 M-P-3-379
Polytetrafluoroethylene /PTFE/ balls are interspersed among steel ball bearings to provide a dry lubricant in a high vacuum environment. The steel balls are lubricated by the film worn off the PTFE balls.

B66-10083
CRYOSTAT MODIFIED TO AID ROTATING BEAM FATIGUE TEST
DUBRAV, T. F. /NASA/ DATE- MAR. 1966 M-P-4-35
Modified stainless steel Dewar side rotating beam fatigue test in a cryogenic environment. The Dewar is modified to receive extended specimens supporting members through specially designed rotary seals. The test set can be fully enclosed and pressurized with an inert gas to make the test explosion-proof.

B66-10087
SOLID-FILM LUBRICANT IS EFFECTIVE AT HIGH TEMPERATURES IN VACUUM
SLIGHT, R. Z. DATE- MAR. 1966 M-P-4-53 AND B63- LEWIS-228
Calcium fluoride with a suitable inorganic binder forms a stable solid-film lubricant when fused to the surface to be lubricated. It is effective in environments at elevated temperatures and gas pressures ranging from atmospheric to high vacuum. It is not stable in reducing atmospheres.

B66-10090
RADIONUCLIDE TRACER SYSTEM DETECTS OIL CONTAMINANTS IN FLUID LINES
BROOKE, D. E. /NASA/ DATE- MAR. 1966 M-P-5-52
Radioactive tracer system continuously detects and monitors lubricating oil contamination in high pressure fluid lines.

B66-10108
VAPOR CONDENSATION PROCESS PRODUCES SLURRY OF MAGNESIUM PARTICLES IN LIQUID HYDROCARBONS
POOK, G. W. WALKER, T. J. WITKES, W. E. DATE- MAR. 1966 LEWIS-263
Vapor condensation apparatus produces a physically stable, homogeneous slurry of finely divided magnesium and liquid hydrocarbons. The magnesium is vaporized and the resultant vapor is cooled rapidly with a liquid hydrocarbon spray, which also serves as the dispersing medium for the condensed magnesium particles.

B66-10110
ETCHING PROCESS BILLS PE 14-8 NO ALLOY STEEL TO PRECISE TOLERANCES
CHEPMA, B. L. /NASA/ DATE- MAY 1966 M-PS-270
Chemical milling process, which combines an aqua regia etchant with a sulfonate wetting agent, produces finishes on PE 14-8 molybdenum alloy steel to precise tolerances. This process permits precision removal of excess metal from the steel in annealed and/or aged conditions.

B66-10111
STORAGE-STABLE FOAMABLE POLYURETHANES IS ACTIVATED BY HEAT
SPON- INNOVATORS NOT GIVEN /GOODYEAR/ DATE- MAY 1966 LANGLEY-187
Polyurethane foamable mixture remains inert in storage unit activated to produce a rapid foaming reaction. The storage-stable foamable composition is spread as a paste on the surface of an expandable structure and, when heated, yields a rigid open-cell polyurethane foam that is self-bondable to the substrate.

B66-10120
OXYGEN-HYDROGEN TORCH IS A SMALL-SCALE STEAM GENERATOR
RAKE\\, C. E. /HEROJET-GEN. CORP./ DATE- MAY 1966 M-14-875
LOX insensitive solvent is blended into a mixture of commercially available surfactants to clean metal surfaces which are to be investigated by the dye-penetrant method. The surfactant mixture is applied before and after application of the dye.

B66-10131
SURFACTANT FOR DIE-PENETRANT INSPECTION IS INSENSITIVE TO LIQUID OXYGEN
SPON- INNOVATORS NOT GIVEN /NASA/ DATE- MAY 1966 M-PS-260
Bismuth alloy potting seals feedthrough electrical connector for instrumentation within a pressurized vessel filled with cryogenic liquids. The seal combines the transformation of high-bismuth content alloys with the thermal contraction of an external aluminum tube.

B66-10138
BISMUTH ALLOY POTTING SEALS ALUMINUM CONNECTOR IN CRYOGENIC APPLICATION
FLOWER, J. F. /DOUGLAS AIRCRAFT CO./ DATE- APR. 1966 NC-260
Bismuth alloy potting seals feedthrough electrical connector for instrumentation within a pressurized vessel filled with cryogenic liquids. The seal combines the transformation of high-bismuth content alloys with the thermal contraction of an external aluminum tube.

B66-10139
HOT-WIRE DETECTOR FOR CHEMICALLY ACTIVE MATERIALS USED IN GAS CHROMATOGRAPHY
SPON- INNOVATORS NOT GIVEN /NASA/ DATE- APR. 1966 M-PS-269
Hot-filament detector analyzes chemically active materials used in gas chromatography. The detector reacts chemically with the effluent vapors in the gas chromatographic apparatus to
change the electrical resistance of the filament as a function of the filament composition. Due to the changes produced by chemical action on the filament, the system is often calibrated.

**GALLIUM ALLOY FILMS INVESTIGATED FOR USE AS BOUNDARY LUBRICANTS**

**SPONSOR: INNOVATOR NOT GIVEN / LEWIS**  
**DATE:** APR. 1966  
**W-00041**

Corrosion of a large number of metal samples that have been exposed to controlled environment is accurately and rapidly measured. Wire samples of the metal are embedded in clear plastic and sectioned for microexamination. Unexposed wire can be included in the matrix as a reference.

**GALLIUM ALLOY FILMS INVESTIGATED FOR USE AS BOUNDARY LUBRICANTS**

**SPONSOR: INNOVATOR NOT GIVEN / LEWIS**  
**DATE:** APR. 1966  
**W-00041**

Gallium alloyed with other low melting point metals has excellent lubricant properties of fluidity and low vapor pressure for high temperature or vacuum environments. The addition of other soft metals reduces the corrosivity and formation of undesirable alloys normally found with gallium.

**DISPENSER LEAK-TESTS AND STERILIZES RUBBER GLOVES**

**SPONSOR: INNOVATOR NOT GIVEN / M. B. AVIATION**  
**DATE:** APR. 1966  
**MSC-285**

Portable vacuum-operated apparatus leak-tests and sterilizes rubber gloves. The gloves are fitted to the hands directly from the apparatus without external handling.

**IMPROVED ADHESIVE FOR CYROGENIC APPLICATIONS CURES AT ROOM TEMPERATURE**

**SPONSOR: KLEINER, H. J. SCHMITZ, M. B. / TELECOMING CORP.**  
**DATE:** MAY 1966  
**W-00-132**

Adhesive cured at room temperature provides an effective adhesive bond over the range from room temperature down to the temperature of liquid hydrogen. The adhesive consists of one part of 200-mesh powdered nylon filler to two parts of an epoxy-polyamine resin.

**FILZARANE POLYMERS SHOW PROMISE FOR HIGH-TEMPERATURE APPLICATION**

**SPONSOR: INNOVATOR NOT GIVEN / MARSHALL**  
**DATE:** JUN. 1966  
**M-FS-466**

Several silazane intermediate compounds and polymers have been prepared which are potentially useful as high temperature coatings and elastomers. These silazane polymers exhibit stability in a temperature range of 300 to 400 degrees C.

**FIBERS OF WEILY DEVELOPED REFRACTORY CERAMICS PRODUCED BY IMPROVED PROCESS**

**SPONSOR: INNOVATOR NOT GIVEN / HUGHES AIRCRAFT CO.**  
**DATE:** MAY 1966  
**W-00-169**

Rods of refractory ceramic material and glasses having relatively high fusion temperatures and tensile strengths are converted to fiber by subjected these rods to alternate fusion and gas-jet bursts. The refractory, high tensile strength fibers produced are combined with suitable binder to produce heat-resistant fabrics and rigid structures.

**WHITE PRIMER PERMITS A CORROSION-RESISTANT COATING OF KERNEX WIRE**

**SPONSOR: ALBERS, R. H. JENSEN, D. P. SCHNARF, P. / SHEWIN WILLIAMS CO.**  
**DATE:** MAY 1966  
**M-FS-300**

White primer for coating 2219 aluminum alloy supplies a base for a top coating of enamel. A formulation of pigments and vehicle results in a primer with high corrosion resistance and minimum film thickness.

**SUBSTITUTED SILANE-DIOL POLYMERS HAVE IMPROVED THERMAL STABILITY**

**SPONSOR: B. D. CUNY, J. E. DATE:** JUN. 1966  
**M-FS-669**

Organosilicon polymers were synthesized to produce improved physical and chemical properties, including high thermal stability. Of the polymers produced, poly/(4) prime-bis(p-xylo-hydrogen/4-methylphenyl)diethylene, formed from bis/bis[methylene)methylene-diethylene and P.
### Materials (Chemistry)

**B66-10273**

**Boron-Doped Copper Withstands Brazing Temperatures**

SCHINDT, A. R. /N. A. Aviation/ DATE- JULY 1966

Boron-doped copper is used for the brazing of heat transfer components that are brazed in a hydrogen atmosphere. This copper has high strength and ductility at elevated temperatures and does not exhibit massive intergranular failure.

**B66-10281**

**Vapor Diffusion Electrode Improves Fuel Cell Operation**

SMITH, J. O. /MONSANO Res. Corp./ DATE- JUN. 1966

Lewis-187 vapor diffusion type fuel cell electrode presents a nonwetting barrier to the liquid feedstocks so they may contact the electrolyte only in the vapor state. Thus, it effects feedstock mixing with the electrolyte/catalyst interface but prevents feedstock decomposition and catalyst poisoning from liquid mingling.

**B66-10288**

**Improved Thermal Insulation Materials Made of Foamed Refractory Oxides**

Foamed refractory oxides provide lightweight, reflective thermal insulation materials. The materials have a low bulk density and high thermal shock resistance.

**B66-10296**

**Apparatus Enables Accurate Determination of Alkali Oxides in Alkali Metals**

Evacuated apparatus determines the alkali oxide content of an alkali metal by separating the metal from the oxide by amalgamation with mercury. The apparatus prevents oxygen and moisture from inadvertently entering the system during the sampling and analytical procedure.

**B66-10298**

**Ultrasonic Cleaning Restores Depth-Type Filters**

SPON- INNOVATOR NOT GIVEN /LITTLE /ARTHUR D. INC./ DATE- JULY 1966

Cleaning process uses a nonionic surfactant and ultrasonic agitation to restore depth-type fibrous filters to maximum effectiveness.

**B66-10299**

**Electrolytic Etching Process Provides Effective Bonding Surface on Stainless Steel**

SPON- INNOVATOR NOT GIVEN /RCA/ DATE- JULY 1966

GSFC-464

Electrolytic etching process prepares surfaces of a stainless steel shell for reliable, high strength adhesive bonding to dielectric materials. The process uses a 25 percent aqueous solution of phosphoric acid.

**B66-10305**

**Simple, Nondestructive Test Identifies Metals**

DOODS, B. J. /N. A. Aviation/ DATE- JULY 1966

MUC-529

Simplified nondestructive test for identifying metals measures the characteristic potential difference produced by galvanic interaction between a reference electrode and the test metal. A drop of water is used as an electrolyte.

**B66-10312**

**Chemical Milling Solution Produces Smooth Surface Finish on Aluminum**

LHERWEN, H. C. /N. A. Aviation/ DATE- JULY 1966

GSFC-495

Elementary sulfur mixed into a solution of caustic soda and salts produces an etchant which will chemically mill end-grain surfaces on aluminum plate. This composition results in the least amount of thickness variation and pitting.

**B66-10313**

**Sea Dye Marker Provides Visibility for 20 Hours**

DS LAAT, P. /N. A. Aviation/ DATE- JULY 1966

MSC-714

Sea dye marker block releases a visible slick which lasts at least twelve hours. The dye marker uses a fluorescent dye in a heat cured binder which, when immersed in seawater, releases the dye at a controlled rate.

**B66-10322**

**Valve Seat Pores Sealed With Thermosetting Monomer**

GLORCE, A. B. /N. A. Aviation/ DATE- JULY 1966

MPS-900

Hard anodic coating provides a smooth wear resistant valve seating surface on a cast aluminum alloy valve body. Vacuum impregnation with a thermosetting monomer, diallyl phthalate, seals the pores on the coating to prevent galvanic corrosion.

**B66-10327**

**Inflatable Holding Fixture Permits X-Ray to Be Taken of Inner Weld Areas**

MPS-856

Inflatable rubber gland positions and holds X-ray film in positive contact with inner weld areas of manifolds to assemble for verifying the weld quality. The gland is constructed to conform to the inside diameter of the manifold torus.

**B66-10335**

**Semiautomatic Device Tests Components in Different Environments**

HENDRICKSON, D. R. /GE/ N. A. Aviation/ DATE- JUN. 1966

MPS-952

Semiautomatic device tests components in different environments when severe shock from an explosion or earthquake occurs. The valve uses a pendulum to support the valve closure plug in the open position. When jarred, the valve body is moved relative to the pendulum and the plug support is displaced, allowing the plug to seat and be held by spring pressure.

**B66-10336**

**Concealed Hinge Permits Flush Mounting of Doors and Hatches**

BOLLEN, E. V. /N. A. Aviation/ DATE- JULY 1966

MSC-523

Hinge assembly permits flush mounting of doors and hatches of considerable thickness so that the axis of instant rotation, produced by the hinge, lies outside the panel surface and beyond the perimeter adjacent to the hinge. In operation, motion of the assembly is initially parallel, changing to angular after clearing the panel perimeter.

**B66-10337**

**Semiautomatic Device Tests Components With Biaxial Leads**

MILLER, T. C. /N. A. Aviation/ DATE- AUG. 1966

MPS-652

Semiautomatic device with a four-terminal network tests quantities of components having biaxial leads. The four-terminal network permits the testing of components in different environments. This device is easily modified for completely automatic operation.

**B66-10340**

**Device Removes Hydrogen Gas From Enclosed Spaces**

CARSON, W. N. /RI/ DATE- JULY 1966

GSFC-495

Inflatable rubber gland positions and holds X-ray film in positive contact with inner weld areas of manifolds to assemble for verifying the weld quality. The gland is constructed to conform to the inside diameter of the manifold torus.
Hydrogen-oxidant galvanic cell removes small amounts of hydrogen gas continually released from equipment, such as vented silver-zinc batteries, in enclosed compartments where air venting is not feasible. These cells are used in satellite compartments.

B66-10358  ELECTROCHEMICAL MILLING REMOVES BURRS AND SOLDER FROM TUNGSTEN RODS  BURCHARD, J. O. / W. M. AVIATION/ DATE- AUG. 1966  M-PS-714  Electrochemically removing burrs and solder from the cut ends of stainless steel capillary tubing. An electrolyte consisting primarily of a solution of sulfuric and phosphoric acids is used.

B66-10380  SUBMICRON HOLES IN THIN FILMS INCREASE SAMPLING RANGE OF MASS SPECTROMETERS  WILLIAMS, R. B. / CONSOLIDATED SYSTEMS/ DATE- AUG. 1966  JPL-SC-927  Gold film is vapor deposited onto a glass slide containing submicron latex spheres which are removed, leaving submicron holes in the film. These thin-film apertures allow accurate mass spectrometer sampling of gas mixtures at pressures on the order of 100 torr.

B66-10387  SELF-SUPPORTED ALUMINUM THIN FILMS PRODUCED BY VACUUM DEPOSITION PROCESS  NEPP, J. E. / M. W. TINKER, R. W. / DATE- SEP. 1966  AEC-58  Self-supported aluminum thin film is produced by vacuum depositing the film on a polyvinyl formal resin film and then removing the resin by radiant heating in the vacuum. The aluminum film can be used as soon as the resin is eliminated.

B66-10395  COMPOSITE GASKETS ARE COMPATIBLE WITH LIQUID OXYGEN, RESIST COMPRESSION SET  GODFREY, W. B. / WHITTAKER CORP./ DATE- SEP. 1966  M-FS-455  Gaskets fabricated by laminating fluorocarbon polymers with fiber glass cloth have a low compression set. Their flexibility is not subject to drastic changes at the temperature of liquid oxygen with which they are used. The fabrication process is controlled so that the films are not impregnated with the polymer.

B66-10398  THIN-FILM FERRITES VAPOR DEPOSITED BY ONE-STEP PROCESS IN VACUUM  BACHMANN, J. / HELPER/ DATE- SEP. 1966  M-SC-259  Thin-film ferrites are formed by vapor deposition of a mixture of powdered ferrites and powdered boron oxide at controlled temperatures in a vacuum chamber. These films are used in memory devices for computers and as thin-film inductors in communications and telemetry systems.

B66-10400  SYSTEM FOR ETCHING THICK ALUMINUM LAYERS MINIMIZES BRIDGING AND UNDERCUTTING  SPORD- INNOVATOR NOT GIVEN / MENDIX CORP./ DATE- SEP. 1966  M-PS-1366  Four step photolithographic process for etching thick aluminum layers for semiconductor device contacts produces uniform contact surfaces, eliminates bridging, minimizes undercutting, and may be used on various materials of any thickness.

B66-10421  COPPER WIRE PLATED WITH NICKEL AND SILVER RESISTS CORROSION  SPORD- INNOVATOR NOT GIVEN / W. M. AVIATION/ DATE- SEP. 1966  M-PS-765  Copper wire for electrical harnesses, when plated with both nickel and silver, resists galvanic corrosion and high temperatures while maintaining electrical properties and solderability.

B66-10445  WELDABLE ALUMINUM ALLOY HAS IMPROVED MECHANICAL PROPERTIES  WESTERLOUND, R. W. / ALCOA RES. LABS./ DATE- OCT. 1966  M-FS-295  Weldable aluminum alloy has good resistance to stress-corrosion cracking, shows unchanged strength and formability after storage at room temperature, and can be pre-aged, stretched, and aged. Since toxic fumes of cadmium oxide are evolved when the new alloy is welded, adequate ventilation must be provided.

B66-10448  THERMAL STRESS-RELIEF TREATMENTS FOR 2219 ALUMINUM ALLOY ARE EVALUATED  SPORD- INNOVATOR NOT GIVEN / BOEING CO./ DATE- OCT. 1966  M-FS-1213  Evaluation of three thermal stress relief treatments for 2219 aluminum alloy in terms of their effect on residual stress, mechanical properties, and stress corrosion resistance. The treatments are post aging and stress relieving fullscale and subscale parts forced in the aged T81 condition, and aging subscale parts forced in the aged T41 condition.

B66-10451  REUSABLE CHELATING RESINS CONCENTRATE METAL IONS FROM HIGHLY DILUTE SOLUTIONS  BAHM, A. J. / W. M. TINKER, R. W. / DATE- OCT. 1966  JPL-758  Column chromatographic method uses new metal chelating resins for recovering heavy-metal ions from highly dilute solutions. The absorbed heavy-metal cations may be removed from the chelating resin by acid or base washes. The resins are reusable after the washes are completed.

B66-10453  THERMOPLASTIC RUBBERLIKE MATERIAL PRODUCED AT LOW COST  HENDEL, F. J. / DATE- OCT. 1966  JPL-793  Thermoplastic rubberlike material is prepared by blending a copolymer of ethylene and vinyl acetate with asphalt and a petroleum distillate. This low cost material is easily molded or extruded and is compatible with a variety of fillers.

B66-10454  GAGE OF 6.5 PSE CENT SI-PE SHEET IS CHEMICALLY REDUCED  GOLDMAR, A. / H. D. / WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1966  M-SC-577  Chemical milling process aids the production of 6.5 percent silicon-iron soft magnetic alloy sheets to very thin gages. Following conventional rolling to safe gage limits, the material is chemically reduced to the desired gage.

B66-10458  HEAT TREATMENT STABILIZES WELDED ALUMINUM JOINTS AND TOOL STRUCTURES
Heat treatment processes, applied after welding but before machining, impart a normal stability to welded aluminum jigs and tool structures. Thus welding will be realized in these tools if rigidity equal to that of a comparable steel tool is required.

Experiments show that xenon and fluorine combine readily at 400 deg C to form xenon tetrafluoride, which is colorless, crystalline, chemically stable and solid at room temperature. This process can be used for the separation of xenon from mixtures with other noble gases.

Electroless nickel plating provides a hard surface coating on a high strength, corrosion resistant substrate. nickel plating is used for the separation of xenon from mixtures with other noble gases.

B66-10483
ADHESIVE FOR POLYESTER FILMS CURES AT ROOM TEMPERATURE, NO INITIAL CURE

Quick room-temperature-cure adhesive bonds polyester-insulated flat electrical cables to metal surfaces and various other substrates. The bond strength of the adhesive may be considerably increased by first applying a commercially available polyside primer to the polyester film.

Cold trap concentrates oxygen and argon to determine trace amounts as low as 0.1 ppm in helium by gas chromatography.

B66-10519
BRAZE ALLOY HOLDS BONDING STRENGTH OVER WIDE TEMPERATURE RANGE

Silicon-iron alloys containing cobalt and iron have the highest Curie point of all known magnetically soft materials. Their high permeability, low hysteresis loss, good saturation induction, and square loop characteristics recommend them for use in power transformers and rotating machinery.

B66-10538
TUNGSTEN INSULATED SUSCEPTOR CUP FOR HIGH TEMPERATURE INDUCTION FURNACE ELIMINATES CONTAMINATION

Tungsten-rhenium alloys with a substantially more dilute rhenium content have ductilities and other mechanical properties which compare favorably with the tungsten-rhenium alloys having much higher concentrations of the costly rhenium.

B66-10540
SILVER-BASE TERNARY ALLOY PROVES SUPERIOR FOR SLIP RING LEAD WIRES

Tungsten-rhenium alloys with a substantially more dilute rhenium content have ductilities and other mechanical properties which compare favorably with the tungsten-rhenium alloys having much higher concentrations of the costly rhenium.

B66-10551
NEW TUNGSTEN ALLOY HAS HIGH STRENGTH AT ELEVATED TEMPERATURES

Tungsten-hafnium-carbon alloy has tensile strengths of 88,200 psi at 3000 deg F and 62,500 psi at 3500 deg F. Possible industrial applications for this alloy would include electrical components such as switches and spark plugs, die materials for die casting steels, and heating elements.

B66-10558
TANTALUM ALLOYS RESIST CREEP DEFORMATION AT ELEVATED TEMPERATURES

Dispersion-strengthened tantalum-base alloys possess high strength and good resistance to creep deformation at elevated temperatures in high vacuum environments. They also have ease of fabrication, good weldability, and corrosion resistance to molten alkali metals.

B66-10572
TUNGSTEN FIBER-REINFORCED COPPER COMPOSITES FORM HIGH STRENGTH ELECTRICAL CONDUCTORS

Tungsten-fiber-reinforced copper composites have tensile strength, yield strength, and modulus of elasticity proportional to fiber content. The composites form high strength electrical conductors.

B66-10578
SPRAYABLE BIREFRINGENT COATING ENABLES
STRAIN MEASUREMENTS ON LARGE SURFACES
HUNDRY, F. T. /NC GEF, M. E. /LOCKHEED AIRCRAFT
CORP.  /  DATE-DEC. 1966
M-FS-1904
Highly refracting coating for strain measurements on large surfaces contains constituents that can be premixed and sprayed as a single component with conventional paint spray equipment. Elevated temperatures are not required for spraying or curing of the coating material which has long pot life.

B66-10586
GAS CHROMATOGRAPHIC COLUMN ENABLES ANALYSIS OF PROPELLANT HYDRAZINES
WILL, E. A., JR.  /  N. AR. AVIATION/  DATE- DEC. 1966
MSC-1161
Stainless steel column is used in gas chromatographic analysis of propellant-grade hydrazine. The column has also been found effective for the separation of other amines and alcohols and nitrites.

B66-10594
USE OF STEEL AND TANTALUM APPARATUS FOR BOLTED CD-BS-IN ALLOYS
BENNETT, G. A. /  AND URSITI, L. JR.  /  NST, N. L
NIKOLSON, R. A.  /  DATE- DEC. 1966
ARG-199  ARU-200
Steel and tantalum apparatus contains various ternary alloys of cadmium, zinc, and magnesium used in pyrochemical processes for the recovery of uranium-base reactor fuels. These materials exhibit good corrosion resistance at the high temperatures necessary for fuel separation in liquid metal-molten salt solvents.

B66-10609
FILM COATING PERMITS LOW-FORCE SCRIBING
WILLING, R.  /  N. AR. AVIATION/  DATE- DEC. 1966
MSc-990
Film coating requires low scribing force, is relatively unaffected by aging, and gives off a soft, fine scribe residue containing a proven lubricant.

B66-10616
HEAT-TREATMENT OF METAL PARTS FACILITATED BY SAND IMMERSION
BISCHER, G. C.  /  KELLEY, R. C. /BOEING CO./  DATE- DEC. 1966
M-FS-1031
Embedding metal parts of complex shape in sand contained in a steel box prevents straining and warping during heat treatment. The sand not only provides a simple, inexpensive support for the parts but also ensures more uniform distribution of heat to the parts.

B66-10631
SILVER-PALLADIUM BRAKE ALLOY RECOVERED FROM MASKING MATERIALS
M-FS-1085
Method for recovering powdered silver-palladium brake alloy from an acrylic spray binder and rubber masking adhesive used in spray brazing is devised. The process involves agitation and dissolution of masking materials and recovery of suspended precious metal particles on a filter.

B66-10639
PROCESS FOR PREPARING DISPERSIONS OF ALKALI METALS
LANGER, H. F.  /  BREDAKE, A.  /  DATE- DEC. 1966
JPL-734
Finely divided particles of alkali metals are produced by coining alkali metals with certain aromatic compounds in selected solvents to form low-temperature soluble complexes from which the pure alkali metals precipitate quantitatively when the solutions are warmed. All operations must be carried out in an inert gas atmosphere.

B66-10643
CONVECTION CHAMBER STRUTS CAN BE EFFECTIVELY TRANSPIRATION COOLED

PALMER, G. H.  /  N. AR. AVIATION/  DATE- DEC. 1966
M-FS-1630
Vapor-deposited sintering technique increases the feasible temperature range of transpiration-cooled structural members in combustion chambers. This technique produces a porous mass of refractory metal wires around a combustion chamber structural member. This mass acts as a transpiration-cooled surface for a thick-walled tube.

B66-10646
PROCESS PRODUCES CHLORINATED AROMATIC ISOCTANATE IN HIGH YIELD
TIESCHERLING, F.  /  WERTHEAKER CORP.  /  DATE- DEC. 1966
M-FS-1658
Tetrachloroteraphthaloyl chloride reacts with sodium azide in an atmosphere of nitrogen to form a high yield of tetrachloro-p-phenylene disiocyanate. The chlorinated disioocyanate should have application as an intermediate in the preparation of polyurethane foams. The high halogen content would impart added flame resistance to these foams.

B66-10651
INTERGRAINULAR METAL PHASE INCREASES THERMAL SHOCK RESISTANCE OF CERAMIC COATING
CARPENTER, R. W.  /  N. AR. AVIATION/  DATE- DEC. 1966
M-FS-1862  M-FS-1865
Dispersed copper phase increases the thermal shock resistance of plasma-arc-sprayed coating of zirconia used as a heat barrier on a metal substrate. A small amount of copper is deposited on the granules of the zirconia powder before arc-spraying the resultant powder composite onto the substrate.

B66-10666
WIRE MATERIAL REDUCES COMPRESSOR BLADE WEARATION
JOHNSON, R. L.  /  DATE- DEC. 1966
LEWIS-357
Wire material (inconel) having high friction and low wear characteristics, reduces vibratory stress and prevents compressor blade failure.

B66-10673
COLD SOLID PROPPELLANT MOTOR HAS STOP-RESTART CAPABILITY
HENDEL, F. J.  /  DATE- DEC. 1966
JPL-856
Solid propellant rocket is kept and fired at low temperatures in launch vehicles or spacecraft. The motor is capable of developing a specific impulse comparable to that of liquid propellant motors, is started, stopped, and restarted, and is stored in space without solar radiation causing hot spots on the motor casing.

B66-10681
THEM PLASTIC SHEET ELIMINATES NEED FOR EXPENSIVE PLATING
SCHPEL, R. L.  /  N. AR. AVIATION/  DATE- DEC. 1966
M-FS-1966
Gasket of a commercially available plastic material is interposed between the mating surfaces in axial joints where a hard and a soft metal are in intimate contact under stress conditions. This eliminates the fretting problem and is quicker and less expensive than the plating process.

B66-10684
IMPROVED METHOD OF EDGE COATING FLAT REBON WIRE
SPER- INNOVACO NOT GIVEN /SCHUEDELH /T. G.  /  DATE- DEC. 1966
M-FS-902
Method to coat the edges of flat ribbon wire is devised by using enamel with modified flow properties due to addition of 2 to 4 percent silicon. Coating material proceeds several edge coatings to minimize oxidation and additional conventional coats are applied after edge coating to build up thickness.

B66-10701
TRACE LEVELS OF METALLIC CORROSION IN WATER
DETERMINED BY EMISSION SPECTROGRAPHY
SHELL, E. R. /A. M. AVIATION/ DATE- DEC. 1966
MSC-1193
Emission spectrographic method determines trace
amounts of inorganic impurities in potable water.
The capability of this innovation should arouse
considerable interest among plant biologists,
chemists working in organic synthesis, and
pathologists.

B66-10705
GLASS FORMULATION HAS HIGH COEFFICIENT OF
THERMAL EXPANSION
DAVIES, R. E. SEIBEL, J. /WESTINGHOUSE ASTRONUCLE.
Lab./ DATE- DEC. 1966 REAR- SEE ALSO B66-10704
NU-0084
Glass formulation has a high coefficient of
thermal expansion. The glass makes a good
hermetic seal for the end of a stainless steel or
copper tube such as a sheath of an instrumentation
cable.

B66-10710
RADIIOTEC METHOD ENABLES DETERMINATION OF
SURFACE AREAS RAPIDLY AND ACCURATELY
ROGERS, J. ROLL, J. A. STERN, G. T. SUNDAY, J. /WESTINGHOUSE ASTRONUCLE.
Lab./ DATE- DEC. 1966
NU-0088
Radioactive krypton adsorption technique is used
to determine the surface area of more than one
sample of material simultaneously.

B67-10003
NEW ELECTROLYTE MAY INCREASE LIFE OF
POLAROGRAPHIC OXYGEN SENSORS
ABREIGHT, C. T. /GARRETT CORP./ DATE- JAN. 1967
MSC-1049
Electrolyte increases life on oxygen sensors in a
polarograph used for measuring the partial
pressure of oxygen in a gas mixture. It consists of
a solution of lithium chloride, dimethyl
acetamide and water.

B67-10007
COMPOSITES OF POROUS METAL AND SOLID
LUBRICANTS INCREASE BEARING LIFE
SLINN, R. E. DATE- JAN. 1967
LEWIS-397
Self-lubricating composites of porous nickel and
nickel-chromium alloy impregnated with a barium
fluoride-calcium fluoride eutectic, and a thin
film of solid lubricant increase wear life of load
bearing surfaces.

B67-10012
CRYSTAL MICROBALANCE MEASURES CONDENSABLE
MOLECULAR FLUIDS
STEPHENS, J. B. DATE- JAN. 1967
JFL-695
Quartz crystal quantitatively measures molecular
fluxes emanating from and condensing on spacecraft
surfaces. Vibrating in a thickness shear mode,
the crystal is frequency sensitive to changes in
mass on its surface and can measure a fractional
monolayer of a condensate.

B67-10014
ABRADED CATHODIC-PLATED CABLE CONNECTORS
REPAIRED BY CONVERSION COATING
SIMS, J. R. /BOEING CO./ DATE- JAN. 1967
N-PF-1246
Conversion coating procedure repairs scratched and
abraded cathodic-plated aluminum cable connectors
while they are in assembly.

B67-10016
DISPERSION OF BORAX IN PLASTIC IS EXCELLENT
FIRE-RETARDANT WAVE INSULATOR
EVANS, R. HUGHES, J. SCHMITZ, F. DATE- JAN. 1967
NBS-5
A mix of borax powder and a chlorinated anhydrous
polyester resin yields a plastic composition that
is fire-retardant, yields chlorine of toxic gases
when heated, and exhibits high thermal insulating
properties. This composition can be used as a
coating or can be converted into laminated or cast
shapes.

B67-10026
BERILLIUM FLUORIDE FILM PROTECTS BERILLIUM
AGAINST CORROSION
ODONNELL, P. E. O'DONNELL, P. M. DATE- FEB. 1967
LEWIS-363
Film of beryllium fluoride protects beryllium
against corrosion and stress corrosion cracking in
water containing chloride ion concentrations. The
film is formed by exposing the beryllium to
fluorine gas at 535 degrees C or higher and makes
beryllium suitable for space applications.

B67-10032
FLUID-BED FLUORIDE VOLATILITY PROCESS
RECOOKS URANIUM FROM SPENT URANIUM ALLOY
FUELS
BRUSH, J. J. CHILDEGAS, A. A. VANDERBERG, E.
BOLLMAN, J. T. JONES, A. A. RIVCA, J. E.
LETTUS, J. W. POTTS, G. L. RAMASWAMI, D.
STEIN, H. TURNER, F. S. DATES- MAR. 1967
REAR- SEE ALSO ANL-6579, ANL-6829, ANL-6830,
ANL-6973, ANL-6992, ANL-7004
ARG-232
Fluid-bed fluoride volatility process recovers
uranium from uranium fuels containing either
siccorsium or aluminous. The uranium is recovered
as uranium hexafluoride. The process requires
few operations in simple, compact equipment, and
eliminates aqueous radioactive wastes.

B67-10033
NEUTRALIZED BATH CATIONS ARE NEW CLASS
OF MOLITE SALT MIXTURES
ANGELL, C. A. DATE- MAR. 1967
ARG-211
Electrical conductance and activation energy
measurements on mixtures of calcium and potassium
nitrates show the hydrated form to be a new class
of molten salt salt. The theoretical glass transition
temperature of the hydrate varied in a manner
opposite to that of the anhydrous system.

B67-10034
TWO TECHNIQUES ENABLE SAMPLING OF FILTERED
AND UNFILTERED MOLY METALS
BURLIS, L. JR. PIERCE, B. D. TOBIAS, K. E.
WISCH, C. G. DATE- MAR. 1967 REAR- SEE ALSO
ANL-7088
ARG-150
Filtered samples of molybdenum are obtained by
filtering through a plug of porous material fitted
in the end of a nasal tube, and unfiltered
samples are obtained by using a capillary-tube
extension rod with a perforated bucket. With
these methods there are no sampling errors or loss
of liquid.

B67-10048
IRRADIATED GASES TRANSFERRED WITHOUT
CONTAMINATION OR DELAY
BOW, J. L. KENN, W. DATE- MAR. 1967
LEWIS-278
Vacuum chamber apparatus opens sealed canisters of
irradiated gases and transfers the contents
without contaminating the surrounding area, and
without diluting or polluting the contained gases.
The apparatus consists of the chamber, a valved
piping manifold, and a special drill and sealed
drilling access.

B67-10049
CRYOGENIC FATIGUE DATA DEVELOPED FOR INCONEL
718
SCHMITZ, E. B. /W. M. AVIATION/ DATE- MAR. 1967
N-FR-702
Data were obtained on the cryogenic fatigue
properties of Inconel 718 bar using axial loading
and rotating beam fatigue tests. Results also
disclosed the fatigue properties of Inconel 718
sheet materials.

B67-10050
ZIRCONIUM ALLOYS WITH SMALL AMOUNTS OF IRON
AND COPPER OR NICKEL SHOW IMPROVED CORROSION
RESISTANCE IN SUPERHEATED STEAM
GREENBERG, S. YOUNGERB, G. A. DATE- MAR. 1967
ARG-226
Heat treating various compositions of zirconium

126
alloys improve their corrosion resistance to superheated-steam at temperatures higher than 500 degrees C. This increases their potential as fuel cladding for superheated-steam nuclear-fueled reactors as well as in autoclaves operating at modest pressures.

B67-10051
STUDY MADE OF CORROSION RESISTANCE OF STAINLESS STEEL AND NICKEL ALLOYS IN NUCLEAR REACTOR SUPERHEATERS
Experiments performed under conditions found in nuclear reactor superheaters determine the corrosion rate of stainless steel and nickel alloys used in them. Electropolishing was the primary surface treatment before the corrosion test. Corrosion is determined by weight loss of specimens after desalting.

B67-10058
ADDITION OF SOLID OXIDIZER INCREASES LIQUID FUEL SPECIFIC IMPULSE
HANDEL, P. J. DATE= APR. 1967 JFP-861
Adding soluble solid oxidizers to hydrazine and similar fuels makes them useful in low temperature bipropellant systems. These oxidizers improve the low specific impulse, high freezing point, low boiling point, and low density of the fuels.

B67-10062
RECOMMENDED VALUES OF THE THERMOPHYSICAL PROPERTIES OF EIGHT ALLOYS, THEIR MAJOR CONSTITUENTS AND OXIDES
TOULOUKIAN, Y. S. /Purdue Univ./ DATE= MAR. 1967 NU-0095
Reference work provides in tabular and graphical form the thermophysical properties of basic alloys, their constituents and oxides. This is useful for personnel who deal with extreme temperature environments.

B67-10069
CONTROLLED FERRITE CONTENT IMPROVES WELDABILITY OF CORROSION-RESISTANT STEEL
Corrosion-resistant steel that adds restrictions on chemical composition to ensure sufficient ferrite content decreases the tendency of CRS to develop cracks during welding. The equations restricting composition are based on the Scheffler constitution diagram.

B67-10070
RADIAL FURNACE SHOWS PROMISE FOR GROWING STRAIGHT BORON CARBIDE WHISKERS
FEINGOLD, E. /GE/ DATE= APR. 1967 HG-50
Radial furnace, with a long graphite vaporization tube, maintains a uniform thermal gradient, favoring the growth of straight boron carbide whiskers. This concept seems to offer potential for both the quality and yield of whiskers.

B67-10078
PURIFICATION TRAIN PRODUCES ULTRAPURE HYDROGEN GAS
WALBRE, R. J. /N. Am. Aviation/ DATE= APR. 1967 M-FS-1913
Three-stage purification train produces ultrapure hydrogen gas at 1000 psi from K-bottles of high-purity hydrogen. The continuous process incorporates deoxygenation and dehydration units and a molecular sieve.

B67-10079
ARYLENESILAZIDE COPOLYMERS
BREED, L. W. ELLIOTT, R. L. /Midwest Res. Inst./ DATE= APR. 1967 M-FS-1812
Arylenesilazane copolymers with regularly ordered structures were discovered during efforts to develop organosilicon polymers. Arylenesilazane and siloxane monomers were both synthesized in these experiments.

B67-10083
EFFECTS OF HELIUM AND NITROGEN AS PRESSURANTS IN NITROGEN TETROXIDE TRANSFER
BIEZAK, F. SIEKIN, D. J. /N. Am. Aviation/ DATE= APR. 1967 M-SC-924 MSC-925
Study investigates effects of helium and nitrogen as pressurants in nitrogen tetroxide transfer from one vessel to another at a higher elevation. Results may contribute to creation of new environmental systems and improved oxygen solubility in water to promote fisk life.

B67-10089
MATERIALS DATA HANDBOOKS PREPARED FOR ALUMINUM ALLOYS 2014, 2219, AND 5456, AND STAINLESS STEEL ALLOY 301
Materials data handbooks summarize all presently known properties of commercially available structural aluminum alloys 2014, 2219, and 5456 and structural stainless steel alloy 301. The information includes physical and mechanical property data and design data presented in tables, illustrations, and text.

B67-10095
IMPROVED CHLORATE CANDLE PROVIDES CONCENTRATED OXYGEN SOURCE
HAUG, R. D. MIDDLE, D. A. TARKAR, G. F. /GARRETT Corp./ DATE= MAR. 1967 M-SC-1137
Improved chlorate candle is used as a solid, portable source of oxygen in emergency situations. It contains sodium chlorate, iron, barium peroxide, and glass mixed in powdered form. The oxygen evolves from the decomposition of the sodium chlorate when an ignition pellet is electrically initiated.

B67-10100
SYNTHESIS OF VARIOUS HIGHLY HALOGENATED MONOMERS AND POLYMERS
Halogenated polyurethane and polycarbonate are synthesized and found to be LOX compatible but dependent upon the type nitrogen bonding.

B67-10102
SIMPLIFIED METHOD INTRODUCES DRIFT FIELDS INTO CELLS
GOTTESMAN, B. RAPPAPORT, F. WISOCKI, J. J. /ECA/ DATE= APR. 1967 GSFC-577
Drift fields are simply introduced into solar cells at low temperatures in short periods. This is done after their rectifying junctions and output contacts are applied.

B67-10112
THERMODYNAMIC PROPERTIES RELATED TO EXPANSION OF TWO-COMPONENT GAS
BIEZAK, F. /N. Am. Aviation/ DATE= APR. 1967 M-SC-1133
Theoretical equations were derived from basic thermodynamic equations to relate the thermodynamic properties of two-component gas mixture to the expansion of the gas during tank ullage blowdown.

B67-10113
NONWOVEN GLASS FIBER MAT REINFORCES POLYURETHANE ADHESIVE
ROSELAND, L. W. /DOUGLAS Aircraft Co./ DATE= MAY 1967 M-FS-2309
Nonwoven glass fiber mat reinforces the adhesive properties of a polyurethane adhesive that fastens hardware to exterior surfaces of aluminum tanks. The mat is embedded in the secured adhesive. It ensures good control of the bond line and increases the peel strength.

B67-10121
PORTABLE FIXTURE FACILITATES PRESSURE
TESTING OF INSTRUMENTATION FITTINGS

OLSON, G. A. /BOEING Co./ DATE- MAY 1967
M-FS-2032

A portable fixture facilitates pressure testing to detect possible leaks in instrumentation fittings mounted on tank bulkheads. It uses a vacuum cup which seals a pressure regulator adapter around one side of the fitting to be pressure tested. Leakage is detected with a gas sniffer.

B67-10122

EVALUATION OF HIGH TEMPERATURE STRANDED WOOD WIRE

DONELLY, J. H., MOORE, H. J., JR. DATE- MAY 1967
REAN- SEE ALSO NASA-TM-X-53522
M-FS-2478

Tests are performed on wire and insulation materials to determine selection for electronic space assemblies. Flexibility, conductivity, and general workability are tested. Knowledge of the advantages and limitations of these materials should prevent overspecification.

B67-10124

SILVER PLATING ENHANCES RELIABLE DIFFUSION BONDING OF DISSIMILAR METALS

SPON- INNOVATOR INC. /BOEING Co./ DATE- MAY 1967
M-FS-1975

Dissimilar metals are reliably joined by diffusion bonding when the surfaces are electroplated with silver. The process involves cleaning and etching, anodization, silver striking, and silver plating with a conventional plating bath. It minimizes the formation of detrimental intermetallic phases and provides greater tolerance of processing parameters.

B67-10132

STATIC ELECTRICITY OF POLYMERS REDUCED BY TREATMENT WITH IODINE

REMBAUM, R. H. LANDEL, R. F., REMBAUM, A. DATE- MAY 1967
N50-10062

Treating organic polymers with iodine improves the electrical conductivity. Diffusion enables products of desired properties to be custom formulated. This eliminates a buildup of static electricity and the need for fillers or bound metal salts.

B67-10133

XENON FLUORIDE SOLUTIONS EFFECTIVE AS FLUORESCENT AGENTS

HARRIS, R. H. QUARTERMAN, L. A. SHEFT, I. DATE- MAY 1967
AR-217

Solutions of xenon fluorides in anhydrous hydrogen fluoride have few disruptive effects and leave a residue consisting of gaseous xenon, which can be recovered and refluorinated. This mild agent can be used with materials which normally must be fluorinated with fluorine alone at high temperatures.

B67-10138

STATUS OF ULTRACHEMICAL ANALYSIS FOR SEMICONDUCTORS

DUTT, E. Y. HALL, L. C. /VANDEBIIT Univ./ DATE- MAY 1967
M-FS-2254

Status of ultrachemical analyses of materials for semiconductors was studied. This study covered atomic absorption spectroscopy, emission spectroscopy and activation analyses. It makes recommendations to improve sensitivity, reliability and versatility for ultrachemical analysis.

B67-10141

STUDY OF HYDROGEN EMbrittLING OF ULTRAHIGH-STRENGTH STEELS

ELSEA, S. T. FLETCHER, K. E. GROVENELL, T. P. /BATTELLE Inst./ DATE- MAY 1967
M-FS-2455

Hydrogen-stress cracking in high-strength steels is influenced by hydrogen content of the material and its hydrogen absorption tendency.

03 MATERIALS (CHEMISTRY)

B67-10147

DEHYDRATING OF TITANIUM TO MINIMIZE STRESS CORROSION

CAPPETTE, S. W. /GEN. Dynamics/ CONV. DATE- MAY 1967
LEWIS-382

Stress corrosion of titanium and its alloys at elevated temperatures is minimized by replacing trichloroethylene with methanol or methyl ethyl ketone as a degreasing agent. Wearing cotton gloves reduces stress corrosion from perspiration before the metal components are processed.

B67-10148

CRACKS IN GLASS ELECTRICAL CONNECTOR HEADERS REMOVED BY DRY BLASTING WITH FINE ABRASIVE

HARRIS, R. W. /GEN. Dynamics/ CONV. DATE- MAY 1967
LEWIS-381

Cracking that causes pressure leakage in glass connector heads can be alleviated by manipulating the pin bridgewire connectors. This initiates the surface and semicircular cracks. Dry blasting the header surface with a fine abrasive then removes the cracks.

B67-10149

COATING PROTECTS MAGNESIUM-LITHIUM ALLOYS AGAINST CORROSION

SPON- INNOVATOR INC. /MACH. and Foundry Co./ DATE- MAY 1967
REAN- SEE ALSO NASA-DE-50-68
M-FS-2446

Coating protects newly developed magnesium-lithium alloys against corrosion. The procedure includes heating the ingots in a salt bath and rolling them to the desired sheet thickness. The black coating, which is tough though thin and ductile, is derived mainly from chromium.

B67-10159

HEAT TREATMENT STUDY OF ALUMINUM CASTING ALLOY

DATE- N-45
LOVOT, C. Y. DATE- JUN. 1967 REAN- SEE ALSO
M-FS-2397

Study determines the heat treatment cycle of aluminum casting alloy N-45 which will increase the strength levels of the alloy while maintaining optimum stress corrosion resistance. Evidence indicates that present production castings are overaged too severely to take full advantage of the strength of the alloy.

B67-10163

EFFECTS OF HEAT INPUT RATES ON T-1 and T-1A STEEL WELDS

DATE- N-45
M-FS-2475

Technology of T-1 and T-1A steels is emphasized in investigation of their weld-fabrication. Welding heat input rate, production weldment circumstances, and standards of welding control are considered.

B67-10168

ISOSTATIC COMPRESSION PROCESS CONVEYS POLYMERICS INTO STRUCTURAL MATERIAL

DATE- N-45
M-FS-2475

Isostatic compression process compacts certain powdered aromatic polymers into homogeneous materials that can be machined to form useful components, such as bearings. It provides for complete removal of air in the interstitial spaces surrounding the granules of the powdered polymer before the powder is subjected to isostatic compression.

128
B67-10182  
**STRESS CALCULATOR SPEEDILY CONVERTS STRAIN DATA**  
COMBETZ, D. W. /BOEING CO./  
DATE- JUN. 1967  
E-FS-2021  
Stress calculator permits speedy conversion of strain data directly into maximum and minimum stresses and also determines stress direction. The calculator has a moveable slide with logarithmic and linear scales, and an information and grid board. Its size is flexible for easy manipulation.

B67-10184  
**NEW CLASS OF COMPOUNDS HAVE VERY LOW VAPOR PRESSURES**  
ANGELL, C. A. GRUEN, D. M.  
DATE- JUN. 1967  
ARG-113  
Magnesium hexahydrate tetrachlorometallates are 50-volume-percent water, have a high melting point and possess a low vapor pressure. These new compounds are relatively noncorrosive, thermally stable, and water soluble but not hygroscopic. They may have potential applications as cooling fluids.

B67-10185  
**XENON FLUORIDES SHOW POTENTIAL AS FLOODING AGENTS**  
CHERCICK, C. L. SHIH, T. C. YANG, K. C.  
DATE- JUN. 1967  
ARG-113  
Xenon fluorides permit the controlled addition of fluorene across an olefinic double bond. They provide a series of fluorinating agents that permit ready separation from the product at a high purity. The reactions may be carried out in the vapor phase.

B67-10186  
**ALPHA PARTICLE BACKSCATTERING MEASUREMENTS**  
PATHESON, J. H.  
DATE- JUN. 1967  
ARS-116  
Alpha particle backscattering performs a chemical analysis of surfaces. The apparatus uses a curium source and a semiconductor detector to determine the energy spectrum of the particles. This in turn determines the chemical composition of the surface after calibration to known samples.

B67-10187  
**OXIDE FILM ON METAL SUBSTRATE REDUCED TO FORM METAL-OXIDE-METAL LAYER STRUCTURE**  
YOUNGDELM, C. A.  
DATE- JUN. 1967  
ARG-48  
Electrically conductive layer of zirconium on a zirconium-oxide film residing on a zirconium substrate is formed by reducing the oxide in a sodium-calcium solution. The reduced metal remains on the oxide surface as an adherent layer and seems to form a barrier that inhibits further reaction.

B67-10189  
**IRON SERVES AS DIFFUSION BARRIER IN THERMALLY REGENERATIVE GALVANIC CELL**  
CROUTHAMEL, C. E.  
DATE- JUN. 1967  
ARG-29  
Pure iron or iron-coated diaphragms provide a hydrogen diffusion electrode for a thermally regenerative galvanic cell. It allows the gas to diffuse through its interatomic spaces and resists the corrosive action of the cell environment.

B67-10191  
**SOLUBILITY DATA ARE COMPILLED FOR METALS IN LIQUID ZINC**  
DILLON, I. G. JOHNSON, I.  
DATE- JUN. 1967  
SEE ALSO  
ARG-7083  
ARG-169  
Available data is compiled on the solubilities of various metals in liquid zinc. The temperature dependence of the solubility data is expressed using the empirical straight line relationship existing between the logarithm of the solubility and the reciprocal of the absolute temperature.

B67-10194  
**SEPARATION TECHNIQUE PROVIDES RAPID QUANTITATIVE DETERMINATION OF CESIUM-137 IN IRRADIATED NUCLEAR FUEL**  
ELLENBURG, E. J. MC COWN, J. J.  
WESTINGHOUSE ASTRONUCI. LAB.  
DATE- JUN. 1967  
NRC-10047  
Potassium cobalt ferrocyanide is used to determine cesium-137 activity in irradiated fuel samples. It preferentially removes cesium from an acid solution of the fuel material. The residue is filtered and analyzed with a gamma spectrometer.

B67-10197  
**NEW CLASS OF THERMOSETTING PLASTICS HAS IMPROVED STRENGTH, THERMAL AND CHEMICAL STABILITY**  
BURKS, R. A. DUBROW, R. LUBWITZ, R. S.  
DATE- JUN. 1967  
ARS-298  
A new class of thermosetting plastics has high hydrocarbons content, high stiffness, thermal stability, humidity resistance, and workability in the precured state. It is designated cyclized polydienes urethane, and is applicable as matrices to prepare chemically stable ablative materials for rocket nose cones of nozzles.

B67-10201  
**STUDY MADE OF RAYNO NYCEL TECHNOLOGY**  
LEE, W. B.  
MARQUARD CORP./  
DATE- JUN. 1967  
E-FS-2054  
Rayno nickel study indicates that its improved storage life is due to gaseous hydrogen and that the mechanism of its ignitions is catalytic and due to chemisorbed hydrogen atoms. It shows that reacted Rayno nickel powder can be reactivated and can introduce multiple ignitions in a hydrogen gas stress.

B67-10205  
**POROUS MANDRELS PROVIDE UNIFORM DEFORMATION IN HYDROSTATIC PRESSURE SYSTEMS**  
GRIPSHOVER, P. J. BANES, R. D.  
DATE- JUN. 1967  
B67-10225  
Porous copper mandrels prevent uneven deformation of beryllium machining blanks. The beryllium powder is arranged around these mandrels and hot isostatically pressed to form the blanks. The mandrels are then removed by leaching.

B67-10208  
**PHOTONIC FILLER MINIMIZES INTERNAL STRESSES IN EPOXY RESINS**  
LEWIS, 1.  
DATE- JUN. 1967  
ARS-298  
Photosensitive filler is added to curable epoxy resins to minimize stresses from internal shrinkage during curing or polymerization. Cinnamic acid resins and cinnamal ketones may be added in the amount of 1 to 3 percent by weight of the resin mixture.

B67-10227  
**SUBSTITUTING GOLD FOR SILVER IMPROVES ELECETRICAL CONNECTIONS**  
LOITZ, J. R. PICKARD, E. F.  
ASTRO-SHACE LABS./  
DATE- JUN. 1967  
E-FS-2390  
In attaching external leads to thin film sensors of platinum ribbon, liquid gold is applied to each end of the ribbon and the leads are soldered to the cured gold. The cured and soldered liquid gold shows no tendency to migrate and retains initial resistance characteristics when exposed to elevated temperatures.
Metal on the base metal. The resulting bond is a true metal-to-metal bond.

B67-10236
URANIUM ISOTOPES QUANTITATIVELY DETERMINED USING MODIFIED METHOD OF ATOMIC ABSORPTION SPECTROPHOTOMETRY LEE, G. H. DATE: JUL. 1967

 Hollow-cathode discharge tubes determine the quantities of uranium isotopes in a sample by using atomic absorption spectrophotometry. Dissociation of the uranium atoms allows a large number of ground state atoms to be produced, absorbing the incident radiation that is different for the two major isotopes.

B67-10243
ANALYTICAL TECHNIQUE CHARACTERIZES ALL TRACER CONTAMINANTS IN WATER POSTRE, J. W., LEVY, I., WELSON, K. H. /N. A. AVIATION/ DATE: JUL. 1967

 Properly programmed combination of advanced chemical and physical analytical techniques characterize critically all trace contaminants in both the potable and waste water from the Apollo Command Module. This methodology can also be applied to the investigation of the source of water pollution.

B67-10265
ALUMINUM-TITANIUM HYDROXY-BORON CARBIDE COMPOSITE PROVIDES LIGHTWEIGHT NEUTRON SHIELD MATERIAL POTTERYER, A. M. /WESTINGHOUSE ASTROGEC. LAB./ DATE: AUG. 1967

 Inexpensive lightweight neutron shield material has high strength and ductility and withstands high internal heat-generating rates without excessive thermal stress. This composite material combines structural and thermal properties of aluminum, neutron moderating properties of titanium hydride, and neutron absorbing characteristics of boron carbide.

B67-10266
SIMPLIFIED METHOD MEASURES CHANGES IN TEMPER Yield STRENGTH USING LEAST NUMBER OF SPECIMENS DIXON, C. E. /AEROJET-GEN. CORP./ DATE: AUG. 1967

 Simplified method determines yield strength due to heat treat, irradiation or mechanical treatment. Each specimen in a group of specimens is tested for yield stress point, subjected to heat treat or irradiation, and retested for new yield stress point which is a measure of change in material.

B67-10262
MATERIALS DATA HANDBOOK, INCONEL ALLOY 718 SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES. INST./ DATE: AUG. 1967

 Materials data handbook on Inconel alloy 718 includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures, and other pertinent engineering information required for the design and fabrication of components and equipment utilizing this alloy.

B67-10266
LIQUID CRYSTALS DETECT VOIDS IN FIBER GLASS LAMINATES MOLLER, W. T. /GEN. DYN./CONVAIR/ DATE: AUG. 1967

 Liquid crystal solution nondestructively detects voids or poor bond lines in fiber glass laminates. A thin coating of the solution is applied by spray or brush to the test article surface, and when heated indicates the exact location of defects in color.

B67-10290
TRACE HYDRAZINES IN AQUEOUS SOLUTIONS ACCURATELY DETERMINED BY GAS CHROMATOGRAPHY LEWIS, E. A., JR. /N. A. AVIATION/ DATE: AUG. 1967

 Trace amounts of hydrazines in aqueous solutions can be determined by using polyethyleneimine/PEI/ in conjunction with the gas chromatographic column. The PEI specifically retains water without altering the separability or elution order of the hydrazine and associated constituents.

B67-10295
LIQUID OXYGEN OUTFLOCK CLEANED BY FALLING FILM METHOD PAUL, H. I. /BOEING CO./ DATE: AUG. 1967

 Principle of a vertical falling film is used to clean contaminated large diameter and length liquid oxygen/LOX/ cylindrical ducting. The cleaning cycle is performed by flowing trichloroethylene in a falling film down a vertically mounted duct for approximately one hour.

B67-10301
MATERIALS DATA HANDBOOK, ALUMINUM ALLOY 7075 SESSLER, J. WEISS, V. /SYRACUSE UNIV. RES. INST./ DATE: AUG. 1967

 Materials data handbook on aluminum alloy 7075 includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures, and other pertinent engineering information required for the design and fabrication of components and equipment utilizing this alloy.

B67-10302
IMPROVED COMPRESSION MOLDING PROCESS WEISS, W. C. DATE: JUL. 1967

 Improved compression molding process produces plastic molding compounds that are strong, homogeneous, free of residual stresses, and have improved ablative characteristics. The conventional method is modified by applying a vacuum to the mold during the molding cycle, using a volatile sink, and exercising precise control of the mold closure limits.

B67-10312
NEW ELECTRON MICROSCOPE EMPLOYS NEW VIDEO DISPLAY TECHNIQUE BROOKSHIRE, W. K. GILBOY, J. DATE: AUG. 1967

 Video display system for a scanning electron microscope provides slow scanning rates, a self-generated color gradient technique, and allows leisurely viewing of several hours. It also enables the viewing of areas where selected energy regions have relatively few electrons, and the changing of specimen position and magnification without adjustments.

B67-10315
TRITIATED ALUMINA SERVES AS REAGENT FOR SELF-LABELING ANALYSIS EIBEBECH, E. H. KLEIN, P. D. DATE: SEP. 1967

 Tritiated alumina, prepared by exchange of the surface hydroxyl groups with tritiated water, is a suitable reagent for exchange-labeling of specific compounds in low concentrations prior to chromatographic analysis. In a chromatographic column, it detects and measures submicrogram quantities of material.

B67-10320
EVAPORANT PEND DEVICE FACILITATES FLASH DEPOSITION PROCESS IN VACUUM SEEBRAN, W. A. STERN, R. J. DATE: SEP. 1967

 Mechanism using a helix sequentially feeds prescribed amounts of metal charges into an evaporator boat used for flash vapor deposition of the evaporants onto a substrate in a vacuum chamber. The helix is advanced by external manual controls extending through sealed feed-through devices into the chamber wall.
CHEMICAL MILLING SOLUTION REVEALS STRESS IN TITANIUM ALLOY
BRASKI, R. M. DATE- SEP. 1967
LANGLER-10077
Solution of hydrogen fluoride, hydrogen peroxide, and water reveals hot stress corrosion cracks in various titanium alloys. After the surface is rinsed in water, dried, and swabbed with the solution, it can be observed by the naked eye or at low magnification.

B67-10326
THERMODYNAMIC PROPERTIES OF SOLID PALLADIUM-SILVER ALLOYS AND OTHER ALLOYS ARE INVESTIGATED BY TORSION-EFFUSION TECHNIQUE
B67-10340
B67-10344
LINDSAY, K. M. DATE- SEP. 1967 BEAM- SEE ALSO
AH-6657
Vapor pressure data obtained by the torsion-effusion method provides the thermodynamic properties of several transition-metal alloy systems. The vapor pressure of silver over solid silver and over palladium-silver alloys was measured and the results were more accurate than those found previously by other techniques.

B67-10340
HIGH-STRENGTH TUNGSTEN ALLOY WITH IMPROVED DUCTILITY
LEWIS-10257
Alloy combines superior strength at elevated temperatures with improved ductility at lower temperatures relative to unalloyed tungsten. Composed of tungsten, rhenium, hafnium, and carbon, the alloy is prepared by consumable electrode vacuum arc-melting and can be fabricated into rod, plate, and sheet.

B67-10346
THERMODYNAMIC PROPERTIES OF SATURATED LIQUID PARAHYDROGEN CHARTED FOR IMPORTANT TEMPERATURE RANGE
SC CARY, R. D. /NATL. BUR. OF STD./ ECDER, R. M. DATE- SEP. 1967
NOC-10016
Six entropy diagrams for parahydrogen in or near the saturated liquid state cover the temperature range from 29.16 degrees to 42.48 degrees R with pressures to 100 psia and mixtures of the liquid and vapor phases to 0.003 quality. The diagrams are presented in color, are 19 by 30 inches in size, and are suitable for wall mounting.

B67-10349
EXCELLENT SPRING PROPERTIES DEVELOPED IN TWO NICHEL ALLOYS FOR USE AT CYCLOGIC TEMPERATURES
DESSAU, F. E. /AEROJET-GEN. CORP./ REEN, I. M. DATE- GEN. 1967
NOC-10086
Cold working and aging prepares nickel alloys for coiling into springs with properties acceptable in a cryogenic environment.

B67-10350
SOFT METAL PLATING ENABLES HARD METAL SEAL TO OPERATE SUCCESSFULLY IN LOW TEMPERATURE
HISATENSTEIN, D. J. /AEROJET-GEN. CORP./ DATE- SEPT. 1967
NOC-10082
Soft metal plating of hard metal lip seal enables successful operation of seal in a cryogenic fluid line under high pressure. The seal is coated with a thin film of 24 carat gold on the lip area to provide antifouling and seal properties.

B67-10351
METAL FLAME SPRAY COATING PROTECTS ELECTRICAL CABLES IN EXTREME ENVIRONMENT
B67-10351
NOC-10077
Metal flame spray coating prevents exit measurement error in sheathed instrumentations cables which are externally attached to cylinders which were cooled on the inside, but exposed to gamma radiation on the outside. The coating provides a thermally conductive path for radiation induced high temperatures within the cables.

B67-10354
CUT-THROUGH TESTER ACCURATELY MEASURES INSULATION FAILURE RATES
BAKER, R. N. /DOUGLAS AIRCRAFT/ DATE- OCT. 1967
M-FS-12506
Cut-through tests electronically measures the rate of failure of various wire and cable insulating materials both as to time and the amount of applied pressure. The force/length/acting on the penetrator can be applied through a near infinite range.

B67-10365
MAGNESIUM-LITHIUM ALLOYS DEVELOPED FOR LOW TEMPERATURE USE
M-FS-1547
Three new magnesium-lithium alloys have been developed for application at cryogenic temperatures. These lightweight alloys have approximately doubled the tensile and yield strengths at room temperature of previously described magnesium-lithium alloys.

B67-10366
STUDY MADE OF DIELECTRIC PROPERTIES OF PROMISING MATERIALS FOR CYCLOGIC EAPACITORS
MATHES, K. M. /NATL. MACHINERY AND MACHINERY CORP./ DATE- OCT. 1967
M-FS-13620
Experimental investigations were conducted to determine dielectric properties of promising materials for cryogenic capacitors to be used in energy storage and pulse applications. The three classes of materials investigated were inorganic bonded ferroelectric materials, amodic coatings on metal foils, and polar low temperature liquids.

B67-10374
HANDBOOK DESCRIBE EDDY CURRENT TECHNIQUES USED IN NONDESTRUCTIVE TESTING OF METAL PARTS AND COMPONENTS
SPENCER- INNOVATOR NOT GIVEN /GEN. DIS./ CONVAIR/ DATE- OCT. 1967
M-FS-13172
Handbooks describe eddy current techniques used in nondestructive testing of metal parts and components.

B67-10375
ANALYSIS OF STABILITY-CRITICAL ORTHOTROPIC CYLINDERS SUBJECTED TO AXIAL COMPRESSION
FINLEY, R. L. /BOEING CORP./ LEE, L. S. /YANG, P. B. DATE- OCT. 1967
M-FS-12869
Analytical procedure for determining critical buckling loads of orthotropic cylinders subjected to axial compression loading has been defined. Three modes of instability have been considered - general instability, local instability caused by panel and interframe buckling, and local instability caused by yielding and crippling in areas of stress concentration.

B67-10381
MACHINING HEAVY PLASTIC SECTIONS
STALGO, D. M. /N. AM. AVIATION/ DATE- OCT. 1967
M-FS-12720
Machining technique produces consistently satisfactory plane-parallel optical surfaces for pressure windows, made of plexiglas, required to support a photographic study of liquid rocket combustion processes. The surfaces are machined and polished to the required tolerances and show no degradation from stress relaxation over periods as long as 6 months.

B67-10383
POLARIZED LIGHT REVEALS STRESS IN MACHINED LAMINATED PLASTICS
FRANKOWSKI, J. /GEN. DIS./ CONVAIR/ DATE- OCT. 1967

131
Polarized light applied to drilled laminated plastic components exposes to the human eye the locked-in stresses that will result in fractures and delaminations when the soldering procedure takes place. The technique detects stresses early in the production cycle before appreciable man-hours are invested in an item destined for rejection.

Study of the relation between microstructure and mechanical properties of aluminum-silicon alloys determines the cause of the variations in properties resulting from differences in solidification rate. It was found that variations in strength are a consequence of variations in ductility and that ductility is inversely proportional to dendrite cell size.

Isotopic tracer experiments and scale-impingement experiments show fluorine to be the migrating species through the nickel fluoride scale formed during the fluorination of nickel. This is in contrast to nickel oxide scales, where nickel is the migrating species.

Scribable opaque coating for transparent plastic film tape is not affected by aging, vacuum, and moderate temperature extremes. It consists of titanium dioxide, a water-compatible acrylic polymer emulsion, and a detergent. The coating mixture is readily dispersed in water before it is dried.

Technique measures interlayer adhesion in spacecraft data storage tape to avoid blocking. An unwind force is exerted on the spool, and the displacement before breakaway of the weighted outer layer is used to calculate the peel-off force necessary. This technique also can have terrestrial applications.

Sodium peroxide permits rapid oxidation of manganese for easy spectroscopic determination. A solution is prepared by dissolving 200 mg of sodium peroxide in distilled water and diluting to 100 ml.

Polymer adhesive laminates polyamide-film flat conductive cable. It is obtained by reacting an appropriate diisocyanate with a diamine. The adhesive has also been used in the lamination of copper to copper for the preparation of multilayer circuit boards.
only a slight corrosive effect on the alloy.

B67-10451
STUDY MADE OF PROCEDURES FOR EXTERNALLY LOADING AND CORROSION TESTING SPECIMENS
Study was initiated to determine methods or test specimens for evaluating stresses corrosion cracking characteristics of common structural materials. It was found that the methods of externally loading and corrosion testing were reliable in yielding reproducible results for stress corrosion evaluation.

B67-10454
WARPAGE ELIMINATED IN COPPER-CLAD MICROWAVE CIRCUIT LAMINATES
BOONE, W. L., JR. /IBM/ DATE- NOV. 1967 K-FS-13892
Cryogenic treatment of laminated copper-clad microwave circuit boards eliminates stresses that cause warpage when a circuit is etched on one side of the board. After etching, the stresses may be eliminated to reduce warpage.

B67-10455
A METHOD OF DETERMINING CORROSION GAS FLOW
Zirconium oxide coating enhances the determination of hot gas flow patterns on liquid rocket injector face and baffle surfaces to indicate modifications that will increase performance and improve combustion stability. The coating withstands combustion temperatures and due to the coarse surface and coloring of the coating, shows the hot gas patterns.

B67-10463
ACID SPRAY TECHNIQUE MILLS ALUMINUM ALLOY MATERIALS WITHOUT IMMERSE
Acid spray machining technique chemically mills aluminum alloy panels without immersing them in an etchant. The spray does not require artificial heating to initiate the etching process.

B67-10484
METALLOGRAPHIC SAMPLES MOUNTED WITH BONC-TEMPERATURE, CURABLE, POLYESTER CASTING RESINS
Study of epoxies and polyester resins determines which type of resin would satisfy the desirable prerequisites of a metallographic mount. Investigated were Polylite 8063, Polylite 8173, PE-169, and PE-228. The results were compared to the standard thermosetting mounting material, Bakelite, and found to be favorable.

B67-10491
MATERIAL FATIGUE DATA OBTAINED BY CARD-PROGRAMMED HYDRAULIC LOADING SYSTEM
DAVIS, W. T. DATE- DEC. 1967 LAGLE-10042
Fatigue tests using load distributions from actual loading histories encountered in flight are programmed on punched electronic accounting machine cards. With this hydraulic loading system, airplane designers can apply up to 55 load levels to a test specimen.

B67-10501
WEIGHT IV RADIATION BY 242 EFFECTIVELY PRODUCE CURIE
ANDERSON, E. W. MILLSTAD, J. STEWART, D. C. DATE- DEC. 1967 REAN- SEE ALSO ANL-6932 ANL-6933 ARG-10030
Computer study was made on the production of multicycle amounts of highly alpha-active curie 242 from americium 241 irradiation. The information available includes curie 242 yields, curie composition, irradiation data, and production techniques and safeguards.

B67-10502
REACTION OF STEAM WITH POLYBENZENUM IS STUDIED
KILPATRICK, H. LOTT, S. DATE- DEC. 1967 REAN- SEE ALSO ANL-6257 ARG-695
Comprehensive report studies the reaction of flowing steam with refractory metals in particular polybenzenum, in the temperature range of 1100 degrees C. The reaction products are hydrogen gas and polybenzen oxide vapor.

B67-10527
QUANTUM MECHANICAL CALCULATIONS OF REACTIVE SCATTERING CROSS SECTIONS IN DIMERIC ENCOUNTERS
PAGE, J. C., JR. /GEORGIA INST. OF TECH./ DATE- DEC. 1967 K-FS-13954
Study applies the nonequilibrium collision theory of reaction rates to the estimation of rate constants for simple reactions. The complications in the quantum mechanical description of chemical reactions and the care needed in approximating the exact wave function for the collision are shown.

B67-10532
COUPPE AND NICKEL ADHERENTLY ELECTROPLATED ON TITANIUM ALLOY
BROWN, B. N. /BOEING CO./ DATE- DEC. 1967 K-FS-13952
Anodic treatment of titanium alloy enables electroplating of tightly adherent coatings of copper and nickel on the alloy. The alloy is treated in a solution of hydrofluoric and acetic acids, followed by the electroplating process.

B67-10533
STUDY OF STRESS CORROSION IN ALUMINUM ALLOYS
BRUNNER, S. B. /STCO LABS./ DATE- DEC. 1967 K-FS-13906
Mechanism of the stress corrosion cracking of high-strength aluminum alloys was investigated using electrochemical, mechanical, and electron microscopic techniques. The feasibility of detecting stress corrosion damage in fabricated aluminum alloy parts by nondestructive testing was investigated using ultrasonic surface waves and eddy currents.

B67-10551
GAS PRESSURE IN SEALED ELECTROCHEMICAL CELLS MEASURED EXTERNALLY
SHEFFIT, J. E. DATE- DEC. 1967 GSFC-10049
Piezoresistive transducer measures gas pressure inside sealed secondary electrochemical cells without breaking the seal. This method is based on the observed fact that the force exerted by the cell faces on the clamp tightening them against the transducer is a function of the gas pressure inside the cell.

B67-10570
RADIANT HEAT SOURCE, VACUUM BAG, PROVIDE PORTABLE BONDING OVEN
NICHOLS, A. H. /W. AM. AVIATION/ DATE- DEC. 1967 MSC-11342
Portable bonding oven is formed to any desired size or configuration to attach doublers and brackets to the surfaces of large structures. A radiant heat source is used in combination with a heat resistant transport vacuum bag and a black heat absorbing cloth.

B67-10573
SPECTROPHOTOMETRIC TECHNIQUE QUANTITATIVELY DETERMINES NICKEL IMPURITY IN NICKEL CHLORIDE-WATER SOLUTIONS
GARRARD, G. G. /W. AM. AVIATION/ DATE- DEC. 1967 MSC-11496
Spectrophotometric method, using a ratio-recording ultraviolet-absorption spectrophotometer, permits analysis of NaF in ethylene glycol-water solutions with high accuracy. It reduces analysis time, requires smaller samples, and is able to detect extremely small concentrations of mercaptobenzothiazole.

**B67-10577**

**PURE XENO FLUORIDE PREPARED FOR THERMAL PROPERTIES STUDIES**

**MART, J. G., CSOBINSKI, D. A., SCHEIBER, P. D.**

**DATE- Dec. 1967**

**ARC-10006**

Preparation of a xenon hexafluoride and sodium fluoride salt yields a sample of the highest possible purity for use in thermal measurements. The desired hexafluoride can easily be freed from the common contaminants, xenon tetra-fluoride, xenon difluoride, and xenon oxide tetrfluoride, because none of these compounds reacts with sodium fluoride.

**B67-10578**

**STUDY OF CORROSION OF 1100 ALUMINUM**

**DRALEY, J. E., LUCS, R. B., MORI, S.**

**DATE- Dec. 1967**

**ARC-10045**

Corrosion of 1100 aluminum in oxygen-saturated water at 70 degrees C under experimental conditions was studied, emphasizing effects of exposure interruption, the number of specimens, and the refreshment rate. A logarithmic equation was derived to express the corrosion rate.

**B67-10579**

**MAGNESIUM-ZINC REDUCTION IS EFFECTIVE IN PREPARATION OF METALS**

**KNOTTON, J. B., STEUERBERG, R. E.**

**DATE- Dec. 1967**

**ARC-10050**

Uranium, thorium, and plutonium are effectively prepared by magnesium-zinc reduction, using uranium oxides, thorium dioxide, and plutonium dioxide as starting materials. This technique is also useful in performing reductions of metals such as zirconium and titanium.

**B67-10580**

**SIMPLE COLOREMETRIC METHOD DETERMINES URANIUM IN TISSUE**

**Bennett, G. A.**

**DATE- Dec. 1967**

**ARG-10050**

Study of the corrosion resistance of several stainless steels to zinc vapor revealed that some stainless steels could be employed for use in zinc processing equipment housings or vapor lines.

**B67-10582**

**STUDY MADE OF RESISTANCE OF STAINLESS STEELS TO ZINC-VAPOR CORROSION**

**Bennett, G. A., BURRIS, L. J., NELSON, P. A.**

**DATE- Dec. 1967**

**ARG-10050**

Series of mathematical relationships predicts compact densities of spherical shapes in a cylinder as a function of particle dimension, and compact density of angular shapes as a function of particle shape and absolute size.

**B67-10592**

**MATHEMATICAL RELATION PREDICTS ACHIEVABLE DENSITIES OF COMPACTED PARTICLES**

**AYER, J. E., SCIFET, P. E.**

**DATE- Dec. 1967**

**ARG-10062**

Device measures the coefficient of static friction of magnetic tape over a range of temperatures and relative humidities. It uses a strain gage to measure the force of friction between a reference surface and the tape drawn at a constant velocity of approximately 0.0001 inch per second relative to the reference surface.

**B67-10589**

**EXPLOSIVE-TRAIN INITIATED THROUGH SOLID BULKHEAD BY PRESSURE CARTRIDGE**

**WINDSHEK, J. C., /W. A. AVIATION**

**DATE- Dec. 1967**

**BSC-11395**

Explosive-train initiated pressure cartridge transmits a shock wave igniting a main charge of explosive through a solid bulkhead without destroying or damaging the seal or the bulkhead. The main charge could be an explosive, a pyrotechnic, or a propellant.

**B67-10592**

**MATHEMATICAL RELATION PREDICTS ACHIEVABLE DENSITIES OF COMPACTED PARTICLES**

**AYER, J. E., SCIFET, P. E.**

**DATE- Dec. 1967**

**ARG-10062**

Device measures the coefficient of static friction of magnetic tape over a range of temperatures and relative humidities. It uses a strain gage to measure the force of friction between a reference surface and the tape drawn at a constant velocity of approximately 0.0001 inch per second relative to the reference surface.

**B67-10589**

**EXPLOSIVE-TRAIN INITIATED THROUGH SOLID BULKHEAD BY PRESSURE CARTRIDGE**

**WINDSHEK, J. C., /W. A. AVIATION**

**DATE- Dec. 1967**

**BSC-11395**

Explosive-train initiated pressure cartridge transmits a shock wave igniting a main charge of explosive through a solid bulkhead without destroying or damaging the seal or the bulkhead. The main charge could be an explosive, a pyrotechnic, or a propellant.

**B67-10592**

**MATHEMATICAL RELATION PREDICTS ACHIEVABLE DENSITIES OF COMPACTED PARTICLES**

**AYER, J. E., SCIFET, P. E.**

**DATE- Dec. 1967**

**ARG-10062**

Series of mathematical relationships predicts compact densities of spherical shapes in a cylinder as a function of particle dimension, and compact density of angular shapes as a function of particle shape and absolute size.

**B67-10592**

**MATHEMATICAL RELATION PREDICTS ACHIEVABLE DENSITIES OF COMPACTED PARTICLES**

**AYER, J. E., SCIFET, P. E.**

**DATE- Dec. 1967**

**ARG-10062**

Series of mathematical relationships predicts compact densities of spherical shapes in a cylinder as a function of particle dimension, and compact density of angular shapes as a function of particle shape and absolute size.

**B67-10592**

**MATHEMATICAL RELATION PREDICTS ACHIEVABLE DENSITIES OF COMPACTED PARTICLES**

**AYER, J. E., SCIFET, P. E.**

**ARG-10062**

Series of mathematical relationships predicts compact densities of spherical shapes in a cylinder as a function of particle dimension, and compact density of angular shapes as a function of particle shape and absolute size.
DYNAMIC CAPTIVE PLASTIC SEAL
DEYER, R. O. /N. A. AVIATION/ DATE- DEC. 1967
N-FS-12930
Piezoplastic material held captive between valve sealing surfaces of 16 to 125 ram microcircumferences provides zero leakage at a high-pressure line at high cryogenic temperatures, when the plastic material is subjected to sufficient stress. This sealing technique makes unnecessary the use of superfinished valve sealing surfaces.

A CERAMIC COMPOSITE THERMAL INSULATION
SPONSOR-INVENTOR NOT GIVEN /MARSHALL/ DATE- DEC. 1967
REAR-SEE ALSO NASA-TR-X-53646
B67-10608
Ceramic composite thermal insulation comprised of alumina-silica fibers, pigmented potassium titanate, and asbestos fibers, bonded with a colloidal silica sol has improved insulating capabilities to both radiant and convective heat. Gelation of the colloidal silica sol prevents binder migration.

THORIATED TUNGSTEN TUBE PROVIDES IMPROVED HIGH TEMPERATURE THERMOCOUPLE SHEATH
SZELBERG, G. A. /WESTINGHOUSE AEROSOLS. LAB./ DATE- DEC. 1967
NNUC-10185
Thermocouple tubing of thoriated tungsten with a very fine grain structure produces a small-diameter sheath capable of operating up to 5000 degrees F. in a hydrogen and graphite environment. This tubing remains ductile and resists both grain growth and carbiding even after prolonged exposure to temperature.

PHOTOVOLTAIC EFFECT IN ORGANIC POLYMER-IODINE COMPLEX
HERNANDEZ, A. G. /BURLINGTON/ DATE- DEC. 1967
REAR-SEE ALSO B66-10682 AND B67-10132
NPO-10373
Certain charge transfer complexes formed from organic polymers and iodine generate appreciable voltages at relatively low impedances upon exposure to light. These films show promise in applications requiring chemically and electrically stable films as detectors of optical radiation and as energy converters in photovoltaic cells.

CONELATION OF DETECTION SENSITIVITIES IN THERMAL-NEUTRON ACTIVATION
WAGNER, M. A. /CREE./ DATE- DEC. 1967
REAR-SEE ALSO ANL-6953
ABO-10068
Detection sensitivities of the chemical elements following thermal-neutron activation have been compiled from the available experimental cross sections and nuclear properties and presented in a concise and usable form. The report also includes the equations and nuclear parameters used in the calculations.

EDDY CURRENT PROBE MEASURES SIZE OF CRACKS IN NONMETALLIC MATERIALS
MUESSER, C. W. /BOEING CO./ DATE- JAN. 1968
N-FS-14059
Nondestructive method uses powdered iron and eddy current probe to measure the depth/width ratio of cracks in electrically nonconductive materials. The eddy current probe determines the mass of metal in the crack after it has been filled with the powdered iron.

SYNTHESIS OF PURE AROMATIC GLYCIDYL ESTERS FOR USE AS ADHESIVES
SPONSOR-INVENTOR NOT GIVEN /BORDEN CERN. CO./ DATE- JAN. 1968
N-FS-12765
SPONSOR-INVENTOR NOT GIVEN
Laboratory study was conducted to synthesize pure glycidyl esters of aromatic acids and to convert the resultant glycidyl esters to polymers for use as adhesives over a range of temperatures down to minus 423 degrees F.

B67-10659
BUCKLING STRENGTH OF FILAMENT-WOUND CYLINDERS UNDER AXIAL COMPRESSION IS INVESTIGATED
SPONSOR-INVENTOR NOT GIVEN /NASA WASHINGTON/ DATE- DEC. 1967
BEAR-SEE ALSO NASA-CH-266
EQ-10032
Analytical study was made of the effects of axial compression on buckling strength of filament-wound cylinders having diameter-to-wall thickness ratios of 167 to 543. Analytical predictions for buckling loads were obtained by using linear anisotropic shell theory.

B67-10660
STUDY MADE OF MECHANICS OF DEFORMATION AND FRACTURE OF FIBERS COMPOSITES
ROSENBURG, W. /GE/ DATE- DEC. 1967
EQ-10035
Report summarizes the findings of studies made of the influence of both fiber and matrix characteristics upon the mechanics of deformation and fracture of fibrous composites. The major portion of the report is devoted to a study of the mechanics of tensile failure of a fibrous composite.

B68-10020
DISTILLATION DEVICE SUPPLIES CESIUM VAPOR AT CONSTANT PRESSURE
BASILUS, A. S. /BCA/ DATE- FEB. 1968
EQ-06124
Distillation apparatus in the form of a U tube supplies small amounts of pure cesium vapor at constant pressure to a thermionic converter. The upstream leg of the U tube is connected to a vacuum pump to withdraw noncondensable impurities, the bottom portion serves as a reservoir for the liquid cesium.

B68-10023
HASTELLLOY X PROPERTIES, DATA, AND METALLURGICAL CHARACTERISTICS
GLASSER, L. F., JR. /AMEROP-GEN. CORP./ DATE- FEB. 1968
NUC-10302
Literature survey and testing program were initiated to obtain pertinent information for Hastelloy X, a nickel-base alloy, through the temperature range of minus 223 to 1200 degrees F. A report has been prepared which includes the tensile properties, mechanical properties, and the manufacturing and fabrication processes.

B68-10029
HEAT TREATMENT PROCEDURE TO INCREASE DUCTILITY OF DEGRADCD NICKEL ALLOY
PEACO, R. /N. A. AVIATION/ DATE- FEB. 1968
N-FS-12421
Tests demonstrate the room temperature ductility of degraded type 41 can be increased to acceptable values by solution heat treatment at a temperature of 2050 degrees to 2150 degrees F for 1 to 2 hours/ and cooling through a controlled temperature range followed by normal aging in air /16 hours at 1400 degrees F/.

B68-10031
PANELIZED HIGH PERFORMANCE MULTILAYER INSULATION
DURLEY, R. A. /SHERVE/ DATE- FEB. 1968
EQ-06223
Multilayer insulation coverings with low conductivity foam spacers are interleaved with quarter mil aluminized polymer film radiation shields to cover flight type liquid hydrogen tankage of space vehicles with a removable, structurally compatible, lightweight, high performance cryogenic insulation capable of surviving extended space mission environments.

B68-10032
SURVEY MADE OF REFRACTORY METALS
ALST, G. A. DATE- FEB. 1968
LEWIS-10380
Survey reviews the structural applications of...
Continous Detonation Reaction Engine

N-PS-14019

Reaction engine operates on the principles of a controlled condensed detonation rather than on the principles of gas expansion. The detonation results in reaction products that are expelled at a much higher velocity.

B68-10043

Cure of Epoxy Resins Determined by Simple Tests

N-PS-13131 N-PS-13132

Rapid visual and simple quantitative tests indicate the degree of cure of particular epoxy resin binders in prepreg stock. It is possible that these tests may be extended to a number of different epoxy formulations.

B68-10046

Survey of Fracture Toughness Test Methods

AND ASTR-NASA-STP-410

Lewis-10379

Comprehensive survey presents current methods of fracture toughness testing that are based on linear elastic fracture mechanisms. General principles of the basic two dimensional crack stress field model are discussed in relation to real three dimensional specimens. Methods of test instrumentation and procedure are described.

B68-10048

Sting Test for Physical Stability of Cryogenic Tank Insulation

Rossello, D. /DOUGLAS AIRCRAFT CO./ DATE- MAR. 1968

N-PS-12567

Qualitative test determines the ability of insulation liners used on liquid hydrogen tanks to withstand stresses produced by the thermal shocks imparted to the insulation during tank filling and drainage. Test specimens are bonded to metal plates with a low thermal expansion coefficient and are immersed in liquid hydrogen.

B68-10049

Method of Maintaining Activity of Hydrogen-Sensing Platinum Electrode

Baran, J. M., III /BECKMAN INSTR./ DATE- MAR. 1968

N-PS-1822

Three-electrode hydrogen sensor containing a platinum electrode maintained in a highly catalytic state, operates with a minimal response time and axial sensitivity to the hydrogen gas being sensed. Electronic control and readout circuitry reacts the working electrode of the sensor to a state of axially catalytic activity.

B68-10062

Pyrotechnic Device Provides One-Shot Heat Source

Haller, R. C. Lalli, V. R. /TRW EQUIPMENT LABS./ DATE- MAR. 1968

Lewis-10131

Pyrotechnic heater provides a one-shot heat source capable of creating a predetermined temperature around sealed packages. It is composed of a blend of an active chemical cleavage and another compound which reacts exothermically when ignited and produces fixed quantities of heat.

B68-10066

Static Structural Analysis of Shell-Type Structures

MSE-11555

Shell analysis manual provides methods for determining static deflections and internal load and stress distributions in shells under various loading conditions, and methods of analyzing static instability of shell structures. Also included are methods for determining the lightest shell wall for various constructions.

B68-10085

Reinforced Thermal-Shock Resistant Ceramics

Chump, D. W. /THOMPSON BROS WOOLSEY/ DATE- MAY 1968

Lewis-10376

Composite material made by dispersing short tungsten-thermus fibers randomly throughout zirconium oxide, is highly resistant to oxidizing environments at temperatures above 2000 degrees F. This reinforced ceramic is also thermal stress resistant.

B68-10092

Molding a High-Density Liner

Habary, W. M. Heiser, W. C. King, C. E. DATE- MAR. 1968

Langley-10051

Molding press is used to form phenolic resin impregnated glass fiber cloth into a high-density, cylindrical-ring laminate. The press applies clamping pressure and heat to a mold containing the glass fiber cloth laminate, which has hydrostatic pressure applied to it by means of a specially designed pressure plug.

B68-10094

High Strength Nickel-Bull Alloy With Improved Oxidation Resistance Up to 2200 Degrees F

Pesch, J. C. Waters, W. J. DATE- APR. 1968

Lewis-10115

Modifying the chemistry of the NASA T-8 alloy and utilizing vacuum melting techniques provides a high strength, workable nickel base superalloy with improved oxidation resistance for use up to 2200 degrees F.

B68-10095

Cobalt-Tungsten, Ferromagnetic

High-Temperature Alloy

Read-See Also NASA-TH-D-4338

Lewis-10378

Cobalt-base alloy which combines high temperature strength and magnetic properties has a composition in weight percent of 7-1/2 percent tungsten, 2-1/2 iron, 1 titanium, 1/2 zirconium, 1/2 carbon, and the balance cobalt. It may be used as construction material for electric motors and generators operating at high temperatures.

B68-10101

Reaction Rates of Graphite With Ozone Measured by Etch Decoration

Bennis, G. R. Monette, G. L. DATE- APR. 1968

ABG-10086

Etch-decoration technique of detecting vacancies in graphite has been used to determine the reaction rates of graphite with ozone in the directions parallel and perpendicular to the layer planes. It consists essentially of peeling single atomic layers off graphite crystals without affecting the remainder of the crystal.

B68-10102

Analytical Techniques for Determining Boron in Graphite

Bennis, G. R. Monette, G. L. DATE- APR. 1968

ABG-10087

Two analytical techniques, a gold nucleation and an etch-decoration technique have been developed for determining the presence and mobility of boron in graphite.

B68-10103

Glassy Materials Investigated For Nuclear
LYNCH, R. E. D. DATE- APR. 1968 SEE ALSO ANL-7062
B66-10075
Studies determine the feasibility of preparing fuel-bearing glasses and glasses bearing neutron-absorbing materials for use as crystalline fuel and control rods for reactors. Properties investigated were devitrification resistance, urania solubility, and density.

B68-10104
DECOMPOSITION VESSEL
BERNAS, B. INL. ACAD. OF SCI./ DATE- MAR. 1968
GSFC-10343
Stainless steel crucible-shaped vessel permits rapid decomposition of silicates and other refractory compounds by acids at relatively low temperatures. The vessel is lined with tetrafluoroethylene fluorocarbon resin and sealed by a sheet of the same material retained in a stainless steel screw cap.

B66-10105
BLAST DEFLECTOR TRAPS SMOKE AND DEBRIS FROM EXPLOSIVE TRAINS
WILKOWSKI, J. C. N. AM. AVIATION/ DATE- MAR. 1968
NSC-11241
Blast deflector protects interior areas and personnel from the smoke and debris of explosive trains. It contains open-cell foam to absorb the pressure loads generated by explosive charges and controls the smoke and debris.

B66-10106
TUNGSTEN-RHENIUM ALLOY THERMOCOUPLES EFFECTIVE FOR HIGH-TEMPERATURE MEASUREMENT
BROOKS, E. J. KRAMER, W. C. DATE- APR. 1968
REAU- SEE ALSO ANL-6961
ARG-10059
Tungsten-rhenium alloy thermocouples, specifically, insulated, sheathed 86/ W plus 26 Re and W plus 5 Be/W plus 26 Re thermocouples, are effective for temperature measurement in excess of 2920 degrees C. These thermocouples have a high thermoelectric output and excellent relationship to temperatures up to 2760 degrees C.

B66-10107
BATTERY PROVIDES CONTROLLED GAS LEAKS
KATZ, S. E. KING, H. J. HUGHES AIRCRAFT CO./ DATE- APR. 1968
NPO-10929
Modified palladium leak device provides a controlled release of gas through very small quantities of gas at low or medium pressures. It has no moving parts, requires less than 5 watts to operate, and is capable of releasing the gas either continuously or in pulses at adjustable flow rates.

B68-10142
LAMINATED SHEET COMPOSITE REINFORCED WITH MODULAR FILAMENT SHEET
REEC, D. V. DATE- MAY 1968
NPS-14575
Aluminum and magnesium composite sheet laminates reinforced with low density, high strength modular filament sheets are produced by diffusion bonding and explosive bonding. Both processes are accomplished in normal atmosphere and require no special tooling or cleaning other than wire brushing the metal surfaces just prior to laminating.

B68-10153
STUDY OF CRACK INITIATION PHENOMENA ASSOCIATED WITH STRESS CORROSION OF ALUMINUM ALLOYS
WILKINSON, W. S. ALUMINUM CO. OF AM./ DATE- MAY 1968
NPS-14283
Study of stress corrosion cracks in aluminum alloys reveals that crack initiation is greatly influenced by boundary orientation and directionality of the structure. In all crack susceptible materials, intergranular corrosion and stress corrosion cracking started and progressed in boundaries oriented perpendicularly to the stressing direction.

B68-10167
EVALUATION OF IGNITION MECHANISMS IN SELECTED NONMETALLIC MATERIALS
GERSTEIN, M. B. LAIB, R. ROSS, W. ORDN. SCI./ DATE- MAY 1968
MSC-11645
MSC-11646
Test program evaluates thermal and electric ignition mechanisms in selected nonmetallic materials found in spacecraft with concentrated oxygen atmospheres. The phenomena evaluated were spontaneous ignition, ignition of flammable vapor by a spark, and ignition by an arc where the arc produces the combustible vapor and the ignition source.

B68-10172
STUDY REVEALS EFFECT OF ALUMINUM ON SATURATION MOMENT OF Fe-Ni ALLOYS
ASG-90295
Study of saturation magnetization, important in the investigation of the electronic structure of alloys, reveals the effect of aluminum on the saturation moments of iron-nickel alloys. The saturation magnetizations were extrapolated to the absolute zero of temperature for calculating average atomic moments.

B68-10177
SABRE FINE IS FIRE-RETARDANT IN OXYGEN ATMOSPHERE
MSC-11604
Saturn was tested for flammability as a wrapping of TFE-insulated electrical wire bundles in oxygen gas at pressures of 7.5 psia and 14.7 psia. It was found to be fire retardant or self-extinguishing in most instances.

B68-10184
STRESS-CORROSION CHARACTERISTICS OF ALUMINUM CASTING ALLOY 6-45
LOVOT, C. W. DATE- JUN. 1968
REAU- SEE ALSO ANL-6960
B65-10052 AND B67-10159
M-PS-14817
Evaluation of the stress-corrosion characteristics of aluminum alloy 6-45 shows that the most favorable artificial aging cycle for this alloy, with regard to optimum strength and stress-corrosion resistance, appears to be 400 degrees F for 12 hours.

B68-10185
EVALUATION OF NONDESTRUCTIVE METHODS OF TESTING FOR NONMETALLIC MATERIALS
KILPATRICK, M. LOTT, S. K. DATE- JUN. 1968
ARG-10051
Study reveals the kinetics of niobium and tantalum with steam at elevated temperatures to determine the suitability of high melting metals for fabrication of equipment for temperature steam environments. Niobium obeyed linear kinetics from 1050 degrees to 1500 degrees C but tantalum followed a parabolic rate law.

B68-10191
EVALUATION OF METHODS FOR NONDESTRUCTIVE TESTING OF BRAZED JOINTS
KAMRO, A. DATE- JUN. 1968 REAU- SEE ALSO ANL-692A
B68-10179
Evaluation of nondestructive methods of testing brazed joints reveals that ultrasonic testing is effective in the detection of nonbonds in diffusion bonded samples. Radiography provides excellent resolution of void or inclusion defects, and the neutron radiographic technique shows particular advantage for brazing materials containing cadmium.

B68-10192
WELDING OF COMMERCIAL BASE PLATES IS INVESTIGATED
Investigation of alloys containing rare earth elements and hydrogen revealed that the combination of metallic elements with hydrogen is not capable of producing weld porosity in these alloys, rather they tend to increase the amount of porosity only in the presence of arc contamination by water vapor.

B66-10194

SUSCEPTIBILITY OF IRRADIATED STEELS TO HYDROGEN EMBRITTLEMENT

KROOK, A. D. DATE- JUN. 1968 REAR- SEE ALSO ANL-7266

Investigation determined whether irradiated pressure-vessel steels 4340 and 212-B are susceptible to hydrogen embrittlement and to catastrophic failure. Hydrogen-charging conditions which completely embrittled 4340 steel had negligible effect on 212-B steel in tensile and delayed-failure tests.

B66-10195

ELEMENTARY REVIEW OF ELECTRON MICROPROBE TECHNIQUES AND CORRECTION REQUIREMENTS

HART, E. H. DATE- JUN. 1968 REAR- SEE ALSO ANL-7078

Report presents requirements for correction of measured data on the physical composition of a specimen, obtained by electron microprobe analysis. A condensed review of electron microprobe techniques is presented, including background material for obtaining X-ray intensity data corrections and absorption, atomic number, and fluorescence corrections.

B66-10196

FUNDAMENTAL ELECTRODE KINETICS

ELDER, J. P. DATE- JUN. 1968 REAR- SEE ALSO ANL-7072

Report presents the fundamentals of electrode kinetics and the methods used in evaluating the characteristic parameters of rapid-charge transfer processes at electrode-electrolyte interfaces. The concept of electrode kinetics is outlined, followed by the principles underlying the experimental techniques for the investigation of electrode kinetics.

B66-10197

STUDY OF MECHANICAL PROPERTIES OF URANIUM COMPOUNDS

BEALS, R. J. DATE- JUN. 1968 REAR- SEE ALSO ANL-7070

Study determines the mechanical properties, including brittleness and ductility of several uranium compounds. These include uranium dioxide, uranium sulfide, and uranium phosphide.

B66-10198

CRYSTAL STRUCTURE ANALYSIS OF INTERMETALLIC COMPOUNDS

Study concerns crystal structures and lattice parameters for a number of new intermetallic compounds. Crystal structure data have been collected on equiatomic compounds, formed between an element of the Sc, Ti, V, or Cr group and an element of the Co or Bi group. The data, obtained by conventional methods, are presented in an easily usable tabular form.

B66-10199

STUDIES IN ZIRCONIUM OXIDATION

DRAKE, J. E. DATE- JUN. 1968 REAR- SEE ALSO ANL-7252

Study provides insight into the oxidation mechanisms of zirconium by combining electrical measurements with oxidation data. The measurement of electrical potential across growing oxide scale on zirconium and the determination of conventional weight-change oxidation data were carried out at 550, 700, and 800 degrees C.

B66-10200

RESISTIVITY MEASUREMENTS OF NEUTRON-IRRADIATED PURE METALS AND AL-ZN ALLOYS

KORKE, J. A. DATE- JUN. 1968 REAR- SEE ALSO ANL-7185

Report presents resistivity measurements and their interpretation for neutron-irradiated pure metals and Al-Zn alloys. The influence of temperature, the role of point defects, and the aging behavior on resistivity are considered. The experimental procedures and results are discussed in detail.

B66-10201

TECHNOLOGICAL SURVEY OF TELLURIUM AND ITS COMPOUNDS

STREIBLER, W. J. DATE- JUN. 1968

Review includes data on the chemical and physical properties of tellurium, its oxides, and fluorides, pertinent to the process problem of handling fission product tellurium in fluoride form. The technology of tellurium handling in aqueous processing of nuclear fuels is also reviewed.

B66-10204

MANGANESE-ALUMINA-CERAMIC GLASS ELIMINATES RIGID CONTROLS NECESSARY IN BONDING METALS TO CERAMICS

HOILAB, R. L. DATE- JUN. 1968

Matrix of manganese-alumina silicate glass simplifies the processes of metallizing alumina ceramics. Because the manganese in the glass is preoxidized to the 2 plus state by firing in nitrogen, the ceramic can be metallized in dry hydrogen. Lengthening the firing time permits a lower metallizing temperature.
Calibration apparatus determines the operating temperature range/sensitivity of liquid crystals. The calibrator maintains a precisely controlled test surface temperature. It permits measurement of plus or minus 0.5 degrees F and a sensitivity of plus or minus 0.15 degrees F.

M-86-10251
WELD MICROSTRUCTURE IN INCONEL 718 MINIMIZED BY BORON ELEMENTS
MORRISON, T. J. /SOUTHERN CALIFORNIA INSTITUTE OF TECHNOLOGY/. /DATE- JUL. 1968 SEE ALSO REA-867-10049

M-86-10185
Manganese, silicon, and magnesium markedly reduce the tendency of Inconel 718 to weld microfissuring. By combining a manganese, 0.20 percent by content, with silicon, greater than 0.25 percent content, or by adding 20 ppm of magnesium, the weld microfissuring decreased in the standard alloy.

M-86-10253
HIGH TEMPERATURE ALLOY

LEWIS-10377
Molybdenum is substituted for tungsten on an atomic basis in a cobalt-based alloy, S-1, thus enabling the alloy to be formed into various mill products, such as tubing and steels. The alloy is weldable, has good high temperature strength and is not subject to embrittlement produced by aging.

M-86-10256
GRAPHITE CLOTH FACILITATES VACUUM EVAPORATION OF SILICON MONOXIDE
CABRECHES, M. B. /GEORGIA INST. OF TECH./ /DATE- JUL. 1968

M-86-10764
Woven graphite cloth facilitates the vacuum deposition of thin films of silicon monoxide on substrate surfaces. The cloth serves both as a container and electric heating element for the silicon monoxide. It minimizes and prevents the silicon monoxide particle ejection, provides uniform heat distribution, and cools rapidly by radiation.

M-86-10271
PREPARATION OF SILVER-ACTIVATED ZINC SULFIDE THIN FILMS
FIELD, C. S. / STORAGE ELECTRONICS/ /DATE- AUG. 1968

M-86-10687
Silver improves luminescence and reduces contamination of zinc sulfide phosphors. The silver is added after the zinc sulfide phosphors are deposited in thin films by vapor evaporation, but before calcining, by immersion in a solution of silver salt.

M-86-10278
VISCOITY AND DENSITY OF METHANOL/WATER MIXTURES AT LOW TEMPERATURES
AUSTIN, J. C. /SHERWOOD SHD./ /KANSAS UNIV./ /DATE- AUG. 1968

M-86-10991
Viscosity and density are measured at low temperatures for three methanol/water mixtures. Viscosity is determined by a modified falling cylinder method or a calibrated viscometer. Density is determined by the volume of each mixture contained in a calibrated glass cell placed in a constant-temperature bath.

M-86-10278
CHARACTERISTICS OF FLUIDIZED-PACKED BEDS
GAGE, J. D. /GEORGIA Inst. of Technology/. /DATE- AUG. 1968 REA-867-10049

M-86-10687
Study of fluidized-packed bed includes investigation of heat transfer, solids-gas mixing, and elutriation characteristics. Fluidized-packed bed is a system involving the fluidization of small particles in the voids of a packed bed of larger nonfluidized particles.

M-86-10279
A 100 ANGSTROM NIOBIUM WIRE
CLINE, A. E. /ROE, R. M. WULFF, J. /REU/. LEWIS-10128

M-86-10281
STUDY OF BEHAVIOR OF STEEL AT INTERFACES
KLEIN, D. R. /AMERICAN RIVET COMPANY/. /DATE- AUG. 1968

M-86-10055
Behavior of steels and steel acetates on various types of interfaces indicates that the function of a steel depends upon a surface orientation and surface energy of the interface.

M-86-10285
PRE-WELD HEAT TREATMENT IMPROVES WELDS IN STEEL 41
FRAGER, R. /AMERICAN RIVET COMPANY/. /DATE- AUG. 1968

M-86-13152
Cooling of Steel 41 prior to welding reduces the incidence of cracking during post-weld heat treatment. The microstructure formed during the slow cooling rate favors elevated temperature ductility. Some vestiges of this microstructure are apparently retained during welding and thus enhance strain-age crack resistance in air.

M-86-10302
EFFECTS OF SURFACE PREPARATION ON QUALITY OF ALUMINUM ALLOY WELDMENTS
KLEIN, D. /SHERWOOD S HD./ /DURABLE/ /DATE- AUG. 1968

M-86-13152
Study of surface preparations and surface contamination effects on the welding of 2014 aluminum involves several methods of surface analysis to identify surface properties conducive to weld defects. These methods are radioactive evaporation, spectral reflectance mass spectroscopy, gas chromatography and spark emission spectroscopy.

M-86-10334
MICROPROBE INVESTIGATION OF BRITTLE SEGSOLGAS IN ALUMINUM EIG AND TIG WELDS
LABBEER, P. A. MILLER, H. L. /MCDONNELL DOUGLAS CORP./ /DATE- SEP. 1968

M-86-14720
Quantitative microprobe analysis of segregated particles in aluminum EIG/Metal Isert Gas/ and TIG/Tungsten Inert Gas/welds indicated that there were about ten different kinds of particles, corresponding to ten different intermetallic compounds. Differences between EIG and TIG welds related to the individual cooling rates of these welds.

M-86-10340
APPLICATION OF THE SOLID LUBRICANT
MOLYBDENUM DISULFIDE BY SPUFFERING
PESTILENCE, J. /JOHNS HENRY/ /DATE- SEP. 1968

M-86-10544
Molybdenum disulfide lubricant film is deposited on two substrates, nickel and nickel-chromium alloys, by means of physical direct-current sputtering. The sputtering system uses a three-electrode /tube/ geometry - a thermionic cathode, an anode, and the target, all enclosed in a vacuum chamber.

M-86-10344
NICKEL BASE ALLOY WITH IMPROVED STRESS RUPTURE PROPERTIES
COLLINS, M. E. /QUIGG, R. J. /REU/. /DATE- SEP. 1968

M-86-10263
Nickel base superalloy with improved stress
rupture properties is used for jet aircraft turbine blades. This alloy is capable of maintaining its strength and its creep, oxidation, and thermal fatigue resistance at high temperature.

**B68-10351**

**THERMAL CONDUCTIVITY AND DIELECTRIC CONSTANT OF SILICATE MATERIALS**

**SINNO, I. WECHSLER, A. E. /ARTHUR D. LITTLE, INC./ DATE- SEP. 1968**

M-PS-14856

Report on the thermal conductivity and dielectric constant of nonmetallic materials evaluates the mechanism of heat transfer in evacuated silicate powders and establishes the complex dielectric constant of those materials. Experimental measurements and results are related to postulated lunar surface materials.

**B68-10355**

**EXPERIMENTS WITH CERAMIC COATINGS**

**LYNN, S. E. ROLLINS, C. T. /A. M. ROCKWELL CORP./ DATE- SEP. 1968**

M-PS-18150

Report describes the procedures and techniques used in the application of a ceramic coating and the evaluation of test parts through observation of the cracks that occur in this coating due to loading.

**B68-10358**

**FIRE RETARDANT FOAMS DEVELOPED TO SUPPRESS FUEL FIRES**

**FISCHER, R. GILKER, W. J. PARKER, J. A. /TPCCTIBELLO, S. R. DATE- SEP. 1968**

ARC-10098

Heat insulating polyurethane foam retards and suppresses fuel fires. Uniformly dispersed in the foam is a halogenated polymer capable of spilling off hydrogens halide upon heating and charring of the polyurethane.

**B68-10360**

**FIBER-GRADED MATERIALS FOR AEROSPACE APPLICATION**

**BARTLEY, J. H. HARTLEY, B. H. /BOEING CO./ DATE- SEP. 1968**

M-PS-16086

Evaluation of fiber glass reinforced plastic materials concludes that fiber glass construction is lighter than aluminum alloy construction. Low thermal conductivity and strength make the fiber glass material useful in cryogenic tank supports.

**B68-10365**

**CONSOLIDATION AND FABRICATION TECHNIQUES**

**FOR VANADIUM-20 % TITANIUM /Y-20/**

**BART, W. B. KABASK, P. J. KRAMER, W. C. /BARTFIELD, R. M. MC GOWAN, R. D. DATE- OCT. 1968**

REAN- SEE ALSO ANL-7127 AND ANL-6928

ARC-10148

Tests of the mechanical properties, fuel compatibility, sodium corrosion and irradiation behavior were made for vanadium and vanadium alloy. Improved methods for consolidation and fabrication of bar, rod, sheet, and high-quality, thin-wall tubing of vanadium-20 without titanium are reported.

**B68-10369**

**TUNGSTEN FIBER-REINFORCED NICKEL SUPERALLOY**

LEWIS-10424

Tungsten fiber-reinforced nickel superalloy combines the strength of refractory metals with the oxidation resistance of superalloys. Knowledge of the relationships between fabrication technique, matrix compositions and fiber sizes, and minimized fiber-matrix reaction. Potential application includes high temperature turbine components.

**B68-10373**

**PRODUCT IDENTIFICATION TECHNIQUES USED AS TRAINING AIDS FOR ANALYTICAL CHEMISTS**

**GRILLO, J. F. DATE- OCT. 1968**

SAN-10025

Laboratory staff assistants are trained to use data and observations of routine product analyses performed by experienced analytical chemists when analyzing compounds for potential toxic hazards. Commercial products are used as examples in teaching the analytical approach to unknowns.

**B68-10378**

**NONDESTRUCTIVE METHOD FOR MEASURING RESIDUAL STRESSES IN METALS, A CONCEPT**

**SCHRÖDEL, C. D./ BOEING CO./ DATE- OCT. 1968**

KSC-10227

Nondestructive direct measurement of residual surface stresses in metals can be made because metal under stress has a different electrochemical solution potential than in the unstressed condition. The method uses two matched electrolytic cells to cancel extraneous effects on the actual solution potential of the metal specimen.

**B68-10380**

**MAGNETIC PARTICLE DESTRUCTION ON METAL SUBSTRATES**

**ENGELSON, R. C. LURIA, W. L. WALKER, W. J. /DRAF AND WHITNEY AIRCRAFT CORP./ DATE- OCT. 1968**

LEWIS-10325

High-excitation coatings of iron, calcium, and zirconium titanates thermally sprayed on stainless steel, columbium-1 percent zirconium, and beryllium substrates promote and control radiative heat transfer from the metal substrates. Adherence, compatibility and emissivity stability at elevated temperature and high vacuum were evaluated.

**B68-10385**

**ELECTROMOTIVE SERIES ESTABLISHED FOR METALS USED IN AEROSPACE TECHNOLOGY**

**KUSTER, C. L. /A. M. ROCKWELL CORP./ DATE- OCT. 1968**

M-PS-18127

Electromotive series has been established for approximately 130 commonly used aerospace metals. For most metals an initial potential and a service related potential was obtained.

**B68-10390**

**IMPROVED PROCESS FOR EPITAXIAL DEPOSITION OF SILICON ON REDIFFUSED SUBSTRATES**

**CLARKS, M. G. SALSON, J. L. WORD, J. C. /WESTINGHOUSE ELEC. CORP./ DATE- OCT. 1968**

M-PS-14910

Process for fabricating integrated circuits uniformly deposits silicon epitaxially on prediffused substrates without affecting the sublayer diffusion pattern. Two silicon deposits from different sources, and deposited at different temperatures, protect the sublayer pattern from the silicon tetrachloride reaction.

**B68-10391**

**TRAINING MANUALS FOR NONDESTRUCTIVE TESTING USING MAGNETIC PARTICLES**

**SPOK. INNOVATOR NOT GIVEN /GEN. DTR. / CONVAIR/ DATE- OCT. 1968**

M-PS-20187

Training manuals containing the fundamentals of nondestructive testing using magnetic particle as detection media are used by metal parts inspectors and quality assurance specialists. Magnetic particle testing involves magnetization of the test specimen, application of the magnetic field.
Contamination Control Handbook provides technical information on avoiding contamination of physical, chemical or biological systems or products. The book includes control methods for product design, gases and liquids, airbornes and surface contamination, radiation, packaging, handling, storage and personnel.

B68-10394
NONDESTRUCTIVE TESTING OF BEADED ROCKET ENGINE COMPONENTS
ADAMS, C. J. MAGMAIER, D. J. METES, J. A. /m.
AM. ROCKWELL CORP./ DATE- OCT. 1968
R-PS-18191
Report details study made of nondestructive radiographic, ultrasonic, thermographic, and laser test methods used to inspect and evaluate the quality of the various brazed joints in liquid-propellant rocket engine components and assemblies. Descriptions of some of the unique equipment and methods developed are included.

B68-10408
THE THERMODYNAMIC PROPERTIES OF THE WUSTITE PHASE ARE STUDIED
ACKERHAN, F. J. SANDFORD, R. W., Jr. DATE- DEC. 1968 REN- SEE ALSO ANL-7250
ARG-10200
Study of the precise location of the wustite phase boundaries and the dependence of the partial pressure of oxygen on the temperature and composition of the solid phase was made. From the pressure of oxygen, the temperature and the composition thermodynamic quantities can be determined.

B68-10409
THE PREPARATION, IDENTIFICATION AND PROPERSITIES OF CHLOROPHYLL DERIVATIVES
KATZ, J. J. PENNINGTON, F. C. STRAIN, R. H.
SVEC, W. A. DATE- DEC. 1968
ARG-10201
In the investigation of 10-hydroxy chlorophylls a and b novel techniques included modification of chromatography and the use of fully-deuterated compounds isolated from fully-deuterated autotrophic algae to determine the molecular structure of the chlorophylls.

B68-10414
TITANIUM-NITROGEN REACTION INVESTIGATED FOR APPLICATION TO GATING SYSTEMS
ARMZGER, J. B. COLEMAN, L. F. KILE, R. L.
PIERCE, R. L. DATE- NOV. 1968 REN- SEE ALSO ANL-7167
ARG-10208
Titanium is one of several gating materials available for removing nitrogen from inert gases. The reaction rate of titanium-metal sponge and nitrogen in argon-nitrogen mixtures was studied at 900 degrees C. The rate was found to depend upon the partial pressure of nitrogen in the gas phase. Mathematical relationships simulate titanium systems.

B68-10419
CHEMISTRY LABORATORY SAFETY MANUAL
AVAILABLE
ELSBOCK, R. G. DATE- NOV. 1968
SAN-10030
Chemistry laboratory safety manual outlines safe practices for handling hazardous chemicals and chemistry laboratory equipment. Included are discussions of chemical hazards relating to fire, health, explosion, safety equipment and procedures for certain laboratory techniques and manipulations involving glassware, vacuum equipment, acids, bases, and volatile solvents.

B68-10425
NITRIC ACID-ORGANIC MIXTURES SURVEYED FOR USE IN SEPARATION BY ANION EXCHANGE METHODS
BLUM, C. A. A. FARRIS, D. F. STEWART, D. C.
DATE- NOV. 1968 REN- SEE ALSO ANL-6999
ARG-10065
Column elution-spectrographic analysis technique compares certain solvents directly to the methanol system, using inert rare earths instead of actinides. Distribution ratios for americium between 90 percent solvent, 10 percent 5 nitric acid and Dowex 1 nitrate form resin for a large group of organics miscible in water was determined.

B68-10433
AN ECONOMICAL METHOD FOR THE CONTINUOUS PRODUCTION OF IODINE-123
BLUE, J. W. SMITH, T. E. SODD, V. J. DATE- DEC. 1968
ARG-10518
Simple and inexpensive method produces iodine 123, in a conventional cyclotron. Tellurium 122, a stable isotope available in enrichments exceeding 95 percent, is held on a porous metal plate by a flowing stream of helium and bombarded with either alpha particles or helium 3.

B68-10454
HYDROGEN PEROXIDE ETCHING PROVES USEFUL FOR GERMANIUM
DAYAL, Y. /IIIT RES. INST./ FAMPRIESE, R.
PRIMA, V. DATE- DEC. 1968
ARG-10170
Influence of process variations in the etching of germanium with hydrogen peroxide has been studied, along with damage effects due to radiation. The work advances the knowledge of the etching process for germanium.

B68-10455
GRAIN-BOUNDARY MIGRATION IN KCL BICRYSTALS
GIBSON, C. F. DATE- DEC. 1968 REN- SEE ALSO ANL-7232
ARG-10181
Boundary migration in melt-grown bicrystals of KCl containing pure twist boundaries was investigated. The experiments involve the use of bicrystal specimens in the shape of right-triangular prisms with the boundary parallel to one side.

B68-10520
AMBIENT TEMPERATURE CATALYST FOR HYDROGEN IGNITION
ROBERTS, R. W. /m. AM. ROCKWELL CORP./ DATE- NOV. 1968
LEWIS-10551
Low cost, ambient temperature catalyst for reacting hydrogen gas with air in a catalytic cell near the point of evolution at a controlled rate is announced.

B68-10522
METHOD FOR REMOVING SURFACE-DAMAGED LAYERS FROM NICKEL ALLOYS
FAVELEY, R. W. /m. AM. ROCKWELL CORP./ DATE- NOV. 1968
FARIS, R. /m. DATE- DEC. 1968
I-FS-18151
Electrical discharge machining /EDM/ damaged layer can be effectively removed from Rene 41, Inconel 625, Inconel 718, and Moen K-500 by abrasive-grit blasting or electropolishing /at room temperature/ at a current density of 5A/inches squared in a water solution of phosphoric and sulfuric acids.

B68-10523
EVALUATION OF A FLUOROCARBON PLASTIC USED IN CYTHERINIC VALVE SEALS
CZERKIAK, R. E. LIBR, J. N. MOWERS, B. M. /m.
AM. ROCKWELL CORP./ DATE- NOV. 1968
R-PS-18189
Effects of strain rate, temperature, crystallinity, and surface finish /smoothness/ on the tensile strength of a commercial chlorotrifluoroethylene plastic /CTFE/ used for lipseals in very fast-acting liquid oxygen valves.

B68-10524
DISPENSING GRADUATE FOR BUTADIENE

141
LEWIS-10444 03 MATERIALS (CHEMISTRY)

LEWIS-10535

BABRETT, T. 868-10526

TODD, B. A. 68-10527

GRAIN GROWTH INHIBITOR MATERIALS

ALLOYS

A RAPID STRESS-CORROSION TEST

SHELL

1968

1968

B68-10526 PRECISE DOPING OF METALS BY SMALL GAS FLOWS

B68-10527 GRAIN GROWTH INHIBITOR FOR FERROUS TUNGSTEN MATERIALS

TODD, B. A. /ELECTRO-OPT. SYSTEMS/ DATE- NOV. 1968

LEWIS-10535

Boron, either uncombined or combined with nitrogen or carbon added to tungsten powder prior to processing, effectively inhibits grain growth. The tungsten material is stable up to 1800 degrees C.

B68-10528 METHOD FOR CONTROLLING DENSITY AND POROSITY OF SINTERED POWDERED METALS

TODD, B. A. /ELECTRO-OPT. SYSTEMS/ DATE- NOV. 1968

LEWIS-10535

Improved, relatively low-cost method has been developed to produce porous metals with predetermined pore size, pore spacing, and density, utilizing powder-metal processes. The method uses angular not spherical tungsten powder.

B68-10532 MASS LOADING EFFECTS ON VIBRATED RING AND SHELL STRUCTURES

LEE, S. Y. /R. M. ROCKWELL CORP./ DATE- NOV. 1968

M-PS-1497

Efficient methods for predicting the effects of attached masses on the vibration characteristics of ring and shell structures have been developed and substantiated with experimental data.

B68-10536 A RAPID STRESS-CORROSION TEST FOR ALUMINUM ALLOYS

HARDIN, W. J. /KAISER ALUMINUM AND CHEM. CORP./ DATE- DEC. 1968

M-PS-20785

Stressed alloy specimens are immersed in a salt-dichromate solution at 60 degrees C. Because of the minimal general corrosion of these alloys in this solution, stress corrosion failures are detected by low-power microscopic examination.

B68-10552 SIMULATED HAILSTORM FABRICATION AND USE IN TESTING WEATHERABILITY OF STRUCTURES

STOLLER, W. W. DATE- DEC. 1968

NPO-10763

Equipment fabricates and uses simulated hailstones to test the weatherability of exposed structures. The equipment projects the hailstones at velocities experienced in hailstorms.

B68-10553 STRUCTURAL THERMAL-CONTROL COATINGS

STOLLER, W. W. DATE- DEC. 1968

NPO-10785

Specifications have been formulated for application of thermal-control paints on large radar antenna structures exposed to solar radiation. The paint minimizes thermally induced mechanical deflections and glare of incident solar radiation.

B68-10557 SEPARATOR FOR ALKALINE BATTERIES

EHT, R. W. PFLEGER, H. L. /BORDEN CO./ DATE- DEC. 1968

GSFC-10173

Separator compositions have been tested as components of three-plate silver-zinc oxide cells in a standard cycling test. Six materials meet imposed requirements, giving cycling performance superior to celropsane.

B68-10561 WELD JOINT STRENGTH AND MECHANICAL PROPERTIES IN 2219-T81 ALUMINUM ALLOY

LEWIS-10479

Plate and sheet were welded using automatic TIG /Tungsten Inert Gas/ weld techniques and manual repair weld techniques. Yield strength of 2219-T61 sheet and plate decreases significantly when welded.

B68-10568 STRESS-CORROSION-INDUCED PROPERTY CHANGES IN ALUMINUM ALLOYS

BAKERST, B. P. CLOPFELTER, W. N. DATE- 1968

M-PS-20709

Measurements of electrical conductivity, ultrasonic surface wave attenuation, and internal friction loss were made on aluminum alloys 7079-76, 2219-T3, and 219-781 as a function of the onset of stress corrosion.

B68-10004 STUDY OF ACTINIDE CHEMISTRY IN SATURATED POTASSIUM FLUORIDE SOLUTION

COHEN, D. THALMIRE, C. E. DATE- JAN. 1969

ARG-10200

Study concerning the chemistry of actinides in saturated KF solution included work with neptunium, uranium, and americium. Solubilities, adsorption spectra, oxidation-reduction reactions, and solid compounds which can be produced in KF solution were examined. The information is used for preparation of various materials from salts of the actinides.

B68-10006 LEVITATION-MELTING TECHNIQUE FOR METALS AND ALLOYS

DOWNEY, J. W. DATE- JAN. 1969

ARG-10210

Experimentation resulted in an improved levitation-melting technique for metals and alloys which quickly produces a completely homogeneous melt. Also developed were two levitation coils that permit a wide variety of metals to be levitated in the molten state and a halogen quenching method which minimizes contamination and segregation.

B69-10010 SUPERCONDUCTIVITY IN ZIRCONIUM-RHODIUM ALLOYS

ZEGLER, S. T. DATE- JAN. 1969

ARG-10223

Metallographic studies and transition temperature measurements were made with isothermally annealed and water-quenched zirconium-rhodium alloys. The results clarify both the solid-state phase relations at the Zr-rich end of the Zr-Rh alloy system and the influence upon the superconducting transition temperature of structure and composition.

B69-10025 EVALUATION OF LUBRICANTS FOR BALL BEARINGS AT HIGH TEMPERATURES

JONSEN, W. L. SLINN, W. E. DATE- FEB. 1969

LEWIS-10578

Calcium fluoride-barium fluoride coating on ball bearing cages or as fillers in porous bearing cages lubricate bearings successfully for operations in air at temperatures of 1200 to 1500 degrees F.

B69-10026 TWO SYSTEMS DEVELOPED FOR PURIFYING INERT ATMOSPHERES

142
purification of transplutonium elements and plutonium, and separation of the transplutonium elements.

B69-10055

Thermal expansion properties of aerospace materials

GREEN, E. F. /& AM. ROCKWELL CORP. / DATE- MAR. 1969

M-F-18335

Thermal expansion properties of materials used in aerospace systems are compiled into a single handbook. The data, derived from experimental measurements supplemented by information from literature sources, are presented in charts and tables arranged in two sections, covering cryogenic and elevated temperatures.

B69-10058

Sifting characteristics and properties of PUS and PUP are determined

KRUGER, G. L. & ROSE, J. B. DATE- MAR. 1969

M-F-10228

Report on the preparation of plutonium monosulfide and plutonium monophosphide includes a description of the sifting characteristics and properties of these high-temperature compounds. Data on weight loss, microstructure, density, melting point, thermal expansion, microhardness, Seebeck coefficient, and thermal diffusion are included.

B69-10061

Insertion device for pressure testing

HOWLAND, B. T. & MAUER, A. L. /AM. ROCKWELL CORP. / DATE- MAR. 1969

M-F-15185

Test device which introduces either pressure or vacuum into a test pipe or tube, is insertable into the tested item where it secures itself into position and requires no external support. The unit has an operating range from zero to 25,000 psig and to any vacuum level that available equipment can reach.

B69-10065

Materials data handbook, aluminum alloy 6061

SESSLER, J. W. & WEISS, V. /Syracuse Univ. Res. INST. / DATE- MAR. 1969

M-F-20381

Comprehensive compilation of technical data on aluminum alloy 6061 is presented in handbook form. The text includes data on the properties of the alloy at cryogenic, ambient, and elevated temperatures and other pertinent information required for the design and fabrication of components and equipment utilizing this alloy.

B69-10066

Fractography can be used to analyze failure

BROW, J. L. DATE- MAR. 1969

M-F-20254

Fractographic principles used for analyzing failure in metals are applied to the analysis of the microstructure and fracture of polytetrafluoroethylene. This material is used as seals in cryogenic systems.

B69-10067

Diffusion of trace gases for leak detection - a study

BROWN, J. L. DATE- MAR. 1969

M-F-20254

Study reveals quantitative measurements of the diffusion of trace gases /Freon and helium/ injected into systems by different methods. Results show that uniform mixing does not always occur, thus evaluation of the system under test and establishment of the method of trace gas injection are mandatory.

B69-10068

Tensile and fatigue properties of Inconel 718 at cryogenic temperatures

M-F-18192
Tests to determine the tensile and fatigue properties of Inconel 718 at cryogenic temperatures show that the alloy increases in strength at low temperatures, with very little change in toughness. The effect of surface finish and grain size on the fatigue properties was also determined.

B69-10072 REFRACOTORY-METAL COMPOUND IMPREGNATION OF POLYTETRAFLUOROCARBONYL LETHLEK, D. P. DATE- MAR. 1969 LEWIS-10732 Process impregnates polytetrafluoroethylene (PTFE) with thorium or polyethylene compounds. The refractory metals impregnated PTFE combines chemical inertness with electrical conductivity. They are useful for electrochemical cells, chemical processing equipment, catalysts, electrostatic charge removal, RF gaskets, and cable shielding.

B69-10074 ADHESIVE FOR CRITICAL TEMPERATURE APPLICATIONS DOYLE, R. M. /MC DONOUGH DOUGLAS CORP./ DATE- MAY 1969 LEWIS-10264 Adhesive, which bonds a metal liner to a filament wound composite structure used for cryogenic pressure vessels, prevents the metal liner from buckling under depressurization. The adhesive consists of adducts of urethane and epoxy resins.

B69-10079 PREPARATION OF THORIUM MAGNESIUM-ZINC REDUCTION HAMHAR, A. V. KNIGHTON, J. D. STEUENBERG, R. K. DATE- MAR. 1969 REAAS- SEE ALSO ANL-7058 ARG-10245 Magnesium-zinc reduction of thorium dioxide is used for the preparation of thorium metal. Potential economic advantages of this technique include use of relatively inexpensive reagents for the metal and flux phases, and production of metal of acceptable quality in good yield.

B69-10081 SPECTROGRAPHIC ANALYSIS OF BISMUTH-YIN HETERTACT ALLOYS BY SPARK-IGNITED, LOW-VOLTAGE AC-ARC EXCITATION BUDD, R. A. RUPA, S. J. DATE- APR. 1969 REAAS- SEE ALSO ANL-7331 ARG-10288 Spectrographic method determines individual stainless steel components in solten bismuth-x/2 w/o tin eutectic to determine the solubility of Type 304 stainless steels. It utilizes the high sensitivity and precision of the spark-ignited, low-voltage ac-arc excitation of samples rendered homogeneous by dissolution.

B69-10088 IMPROVED pH BUFFERING AGENT FOR SODIUM HYPOCHLORITE NASH, J. B. WEDLER, L. N. /W. A. ROCKWELL CORP./ DATE- MAR. 1969 MSC-15443 Sodium citrate/citric acid was found to be an effective buffer for pH control when used with sodium hypochlorite. The mixture does not corrode aluminum. The buffer appears to form a type of conversion coating that may provide corrosion-resistant properties to aluminum in other applications.

B69-10092 DIRECT MEASUREMENT OF CARBON-14 IN CARBON DIOXIDE BY LIQUID SCINTILLATION COUNTING MORROCCO, D. L. DATE- APR. 1969 ARG-10237 Liquid scintillation counting technique is applied to the direct measurement of carbon-14 in carbon dioxide. This method has high counting efficiency and eliminates many of the basic problems encountered with previous techniques. The technique can be used to achieve a percent substitution reaction and is of interest as an analytical technique.

B69-10096 CORROSION PROTECTION OF ALUMINUM ALLOYS IN CONTACT WITH OTHER METALS KNUTZER, C. A. /W. A. ROCKWELL CORP./ DATE- APR. 1969 N-PS-15256 Study establishes the quality of chemical and galvanized protection afforded by anodized and zinc-plated coatings applied to test panels of various aluminum alloys. The test panels, placed in firm contact with panels of titanium alloys, were subjected to salt spray tests and visually examined for corrosion effect.

B69-10108 HANDBOOKS FOR NONDESTRUCTIVE TESTING USING ULTRASONICS SPOR- INNOVATOR NOT GIVEN /GEN. Durs./CONVAIR/ DATE- APR. 1969 REAAS- SEE ALSO NASA-CR-61209, NASA-CR-61210, NASA-CR-62111, AND NASA-CR-61220 B-PS-20409 Four handbooks have been prepared for use in teaching metal parts inspectors and quality assurance technicians the fundamentals of nondestructive testing using ultrasonic detection methods. The handbooks may be used in the shop or laboratory, or as study texts in technical schools and in the home.

B69-1011B NEW RAPID-CURING, STABLE POLYIMIDE POLYMERS WITH HIGH-THERMAL STABILITY BURNS, E. A. JOHNSON, J. P. KENDRICK, W. B. LORING, R. A. THORPE, R. S. WILSON, R. B. TEM,/ INC./ DATE- MAY 1969 LEWIS-10576 Additive-type polymerization reaction forms thermally stable polyimide polymers, thereby eliminating the volatile matter attendant with the condensation reaction. It is based on the utilization of reactive allylic rings positioned on the ends of polyimide prepolymer having relatively low molecular weights.

B69-10123 PRODUCTION OF METALS AND COMPOUNDS BY RADIATION CHEMISTRY MARX, S. J. PHILLIPS, W. N. DATE- MAY 1969 LEWIS-10237 Preparation of metals and compounds by radiation induced chemical reactions involves irradiation of metal salt solutions with high energy electrons. This technique offers a method for the preparation of high purity metals with minimum contamination from the container material or the cover gas.

B69-10136 PREPARATION OF HIGH PURITY COPPER FLUORIDE BY PLOEGERATING COPPER HYDROXYFLUORIDE KING, E. B. monkey, J. R. /BALLENC NORTHWEST/ DATE- MAY 1969 LEWIS-10794 Copper fluoride containing no more than 50 ppm of any contaminating element was prepared by the fluorination of copper hydroxyfluoride. The impurity content was obtained by spark source mass spectrometry. High purity copper fluoride is needed as a cationic material for high energy density batteries.

B69-10138 LIQUID GALIUM ROTARY ELECTRIC CONTACT PRZYBYSZEWSKI, J. S. DATE- MAY 1969 LEWIS-10628 Due to its low vapor pressure, gallium, when substituted for mercury in a liquid slip ring system, transmits substantial amounts of electrical current to rotating components in an ultrahigh vacuum. It features low electrical loss, little or no wear, and long maintenance-free life.

B69-10147 TORSION SYSTEM FOR CRIMP TESTING WITH MULTIPLE STRESS REVERSALS LILIENTHAL, P. A. /ILLINOIS UNIV./ DATE- MAY
effect of interparticle forces on feasibility of gaseous fluidization of particles below 50 microns in diameter. Interparticle forces are determined by inclined-plane method. Study indicated that fluidizability is related to the interparticle adhesive force.

B69-10196
IDENTIFICATION AND EVALUATION OF LINEAR DAMPING MODELS IN BRAKING VIBRATIONS
BORS, R. L.; ROSENBERG, G. S.; WAHRSCHEK, M. W.;
JUL. DATE- JUL. 1969 REAN- SEE ALSO ARL-7292
ARG-10275
Sensitive method, identifying effective damping mechanisms, involves comparing experimentally determined ratio of first to second mode magnification factors related to common point on beam. Cluster size has little effect on frequencies of elements, magnification factor decreases with cluster size, and viscous and stress damping are dominant damping mechanisms.

B69-10198
RECENT DEVELOPMENT IN ORGANIC SCINTILLATORS
MOORE, D. L.; WISE, N. O. DATE- JUL. 1969
ARG-10344 ARG-10346
Discussion on recent developments of organic scintillators and uses studies of organic compounds that form glass-like masses which scintillate and are stable at room temperature, correlations between molecular structure of organic scintillators and self-quenching, recently developed fast scintillators, and applications of liquid-scintillation counters.

B69-10200
HIGH TEMPERATURE COATINGS FOR GAS BEARINGS
MURRAY, S. F. /ARCH. TECHNOL/ DATE- JUL. 1969
ARG-10206
Report gives measurements of absolute thermoelectric powers of dilute gold-platinum alloys and influence of quenched-in lattice vacancies on their thermoelectric powers. It investigates phonon-drag component of thermoelectric power as a function of platinum concentration, and change in phonon-drag thermoelectric power by lattice vacancies.

B69-10206
MEASUREMENTS OF THERMOELECTRIC POWER IN ANNEALED AND QUENCHED GOLD-PLATINUM ALLOYS
DAARES, C. V. HUEBERER, R. F. DATE- JUL. 1969
ARG-10206
Report gives measurements of absolute thermoelectric powers of dilute gold-platinum alloys and influence of quenched-in lattice vacancies on their thermoelectric powers. It investigates phonon-drag component of thermoelectric power as a function of platinum concentration, and change in phonon-drag thermoelectric power by lattice vacancies.

B69-10235
TECHNIQUE FOR ABRASIVE CUTTING OF THICK-FILM CONDUCTORS FOR HYBRID CIRCUITS
NUSBETH, J. B.; PALERMO, J. S. /MIT/ DATE- AUG. 1969
M-13-242
Abrasive jet technique, producing prototype conductor networks for thick-film hybrid microcircuits, does not require screening and fixing procedures. Pantograph engraver is used to perform abrasive cutting of the conductor network.

B69-10237
DIFFUSION BOND METHOD OF JOINING STEEL AND A TYP-BRONZE COMPOSITE
LANACONI, P. F. DATE- JUL. 1969
M-13-242
Diffusion bonding method does not affect the mechanical properties of steel nor the strength of Teflon. It alleviates problems of adhesive outgassing, radiation damage, and delamination.

B69-10240
THERMOPHYSICAL PROPERTIES OF SODIUM
GOLDEN, G. H.; TOKAR, J. V. DATE- AUG. 1969
ARG-10240
Report studies elucidation and description of
Assessment is given of physical and thermodynamic properties of sodium. POSTAN subroutine computes enthalpy and entropy of sodium in given state, and composition, molecular weight, volume, and compressibility factor of corresponding vapor. Tabular results for saturated liquid and vapor are presented for a 500-2500 degree F range.

B69-10241
ZOE FURIFICATION OF POTASSIUM CHLORIDE
SUSMAN, S. DATE- AUG. 1969
ABC-10377
Procedure for removal of sodium and bromine from KC1 involves zone refining in dilute-halogen atmosphere. Distribution of Na and Br at concentrations of parts per million is followed by neutron-activation analyses.

B69-10250
A NEW SOLID LUBRICANT
FUSAKO, R. L. SLIBNEY, R. E. DATE- AUG. 1969
LEWIS-10817
Friction and wear studies on burnished films of the compound graphite fluoride have demonstrated its potential as a solid lubricant material. It is effective in moist air, dry air, or in dry argon at temperatures up to approximately 400 degrees C.

B69-10252
STUDY OF HIGH TEMPERATURE BEARING MATERIALS
FRANK, R. G. /GR/ DATE- AUG. 1969
LEWIS-10829
Experimental investigation identifies materials suitable for use in potassium lubricated turbo-generator journal bearing and shaft applications at high temperatures. Attention is given to nonrefractory metals and alloys, refractory metals and alloys, Fe-Ni-Co bonded carbides, refractory compounds, and refractory metal bonded carbides.

B69-10254
CONTINUOUS ANALYSIS OF NITROGEN DIOXIDE
IN GAS STREAMS OF PLANTS
ABC-10356
Analyzer and sampling system continuously monitors nitrogen dioxide concentrations in the feed and tail gas streams of a facility recovering nitric acid. The system, using a direct colorimetric approach, makes use of readily available equipment and is flexible and reliable in operation.

B69-10256
INDUCTION PROBE DETERMINES LEVELS OF LIQUID METALS
ABC-10946
Nital-inductance probe accurately measures liquid levels in a variety of liquid metals at elevated temperatures. It can be used in pyrochemical processes for the recovery of spent reactor fuel.

B69-10257
METHOD FOR COPPER STAINING OF GERMANIUM CRYSTALS
RIVER, B. J. DATE- JUL. 1969
ABC-10403
Proper conditions for copper staining of germanium crystals include a low solution temperature of 3 degrees C, illumination of the sample by infrared light, and careful positioning of the light source relative to the sample so as to minimize absorption of the infrared light.

B69-10262
THERMAL RADIATION SHIELDS FOR PIPING IN VACUUM ENVIRONMENTS
SPAGNUOLO, A. C. DATE- AUG. 1969
LEWIS-10899
System of thermal radiation shielding reduces radiant heat transfer in vacuum installations containing piping which carries volatile fluids. Method employs successive layers of spacers and rolled metal shields which are easily installed or removed, expedites efficient removal of entrapped gases, and adapts easily to small pipings.

B69-10265
TECHNIQUE FOR ANCHORING FASTENERS TO HONEYCOMB PANELS
BROWN, W. J. SPAGNUOLO, A. C. STONEBAKER, J. C. DATE- AUG. 1969
LEWIS-10888
Two-piece fastener bushing provides mounting surface for components on a three-inch thick honeycomb structure. Specially constructed starter drill and sheet metal drill permit drilling without misalignment. Tapered knife-edge cutting tool removes honeycomb core material without tearing the adjacent material.

B69-10266
IMPROVED HIGH-TEMPERATURE SILICIDE COATINGS
LEWIS-10817
Special technique for applying silicide coatings to refractory metal alloys improves their high-temperature protective capability. Refractory metal powders mixed with a baked-out organic binder and sintered in a vacuum produce a porous alloy layer on the surface. Exposing the layer to hot silicon converts it to a silicide.

B69-10283
AUTOMATED MEASUREMENT OF THERMAL CONDUCTIVITY
HALL, D. W. /LOCKHEED MISSILES AND SPACE CO./ DATE- AUG. 1969
M-P-20654
Testing technique permits accurate measurement of temperature-dependent thermal conductivity, by virtue of the small temperature differential required across a specimen. The permissible seam影像 temperature ranges from cryogenic to 10 degrees F for the insulation under test.

B69-10287
TECHNIQUE FOR ASSESSING POTENTIAL FIRE HAZARDS
LAMBERT, H. M. /GR/ DATE- AUG. 1969
HQ-10279
Combustion hazard modeling technique limits the fire evaluation to a description of only thermal energy exchanges which are involved in the burning process, and the calculation of temperatures, temperature changes, and weight losses as a result of these energy changes.

B69-10292
APPARATUS AUTOMATICALLY MEASURES SOLUBLE RESIDUE CONTENT OF VOLATILE SOLVENTS
OSWALT, F. W. /SPM/ DATE- AUG. 1969
SAN-10032
Solvent Purity Meter /SPM/ automatically measures the soluble residue in volatile solvents used in cleaning or extraction of oils, greases, and other nonvolatile materials. The SP8 gives instantaneous and continuous readout of soluble contaminant residues in concentrations as low as one part per million of solution.

B69-10293
HIGH STRENGTH, SUPERPLASTIC SUPERALLOY
ASHBROOK, R. L. PIECH, J. C. WATERS, W. J. DATE- AUG. 1965
LEWIS-10805
High strength superplastic superalloys are produced by extruding a pre-alloyed powder. The cast nickel base superalloy was remelted and converted to pre-alloyed powder by inert gas atomization. The superalloy shows high tensile strength and superplasticity and finds use in hot working and casting.

B69-10299
HEPARIN INSULATED WITH CROSSLINKING AGENT
KENDALL, A. DATE- AUG. 1969
WIB-10034
New plastic compositions, involving the synthesis of a polymeric system containing heparin insulatated with crosslinking agents, show
appreciable promise in human body implant technology.

B69-10309
METALLIC DIFFUSION MEASURED BY A MODIFIED
KNUDSEN TECHNIQUE
FRAT, B. J. / BIT/ DATE- SEP. 1969
HQ-10145
Diffusion coefficient of a metal in high
temperature systems is determined. From the
measurement of the weight loss from a Knudsen
cell, the vapor pressure of the encapsulating species
may be calculated. If the only way this species
can enter the Knudsen cell is by diffusion
through a foil, the weight loss is diffusion flux.

B69-10330
SIMPLE TEST INDICATES DEGREE OF CURE OF
POLYURETHANE COATINGS
URIBE, J. E. / C. / ROCKWELL CORP// WALLAUCH,
J. R. DATE- SEP. 1969
MSC-15487
Qualitative test involves immersing a coated cable
in methyl-2-pyrrolidone and removing it in one to
three minutes. Evidence of any cracking, peeling,
or other defects that shows under
20-power magnification indicates that the coating
has not been completely cured.

B69-10339
DEVELOPMENT AND TEST OF FLEXIBLE FILM
COUNTER STEMS FOR USE AS A SAMPLING
TECHNIQUE
AUDIBILITY, C. / MCDONNELL DOUGLAS ASTRONAUTICS
CO./ DATE- SEP. 1969
MFS-20448
Fils consisting of a gelatin base serves as a
flexible, water soluble microbiological assay
coupon for clean room use. It is nontoxic to
microorganisms and capable of remaining unchanged
during periods of storage.

B69-10352
IMPROVED HIGH-TEMPERATURE-STRENGTH
NICKEL-BASE SUPERALLOY
URIBE, J. E. / C. / WALLAUCH, J. R. DATE- SEP. 1969
LINIS-10874
Nickel-base superalloy has a strength of 20,000
psi at 2,200 degrees F, approximately double the
strength of the strongest available cast
nickel-base alloys. It is not subject to the
formation of embrittling phases upon long time
exposure at intermediate temperatures.

B69-10357
SPIRAL-FLOW APPARATUS FOR MEASURING
PERMEATION OF SOLIDS BY GASES
MIDDLETON, R. W. / C. / ROCKWELL CORP./ WALLAUCH,
W. B. DATE- SEP. 1969
MFS-16517
Test assembly measures the rate of permeation of
a solid by a gas. Test gas is forced
under pressure, into a cylindrical plug containing the
solid to be tested. Gas chromatograph detects
the presence of the test gas.

B69-10360
IMPROVED GYRO-FLOATATION /DAMPING/ FLUIDS
JACOBS, S. S. / C. / AND T CHEMICALS, INC./ DATE-
SEP. 1969
MSC-12317
Synthesis of a metal-stabilized halophosphazene
compound with a density of 3 q/cu at 137 Degrees
F serves as an improved stabilizer fluid for
floated gyro. Gyro sensitivity can be increased
with a fluid of higher density which could support a
heavier float.

B69-10366
INSTRUMENTATION FOR NONDESTRUCTIVE TESTING
OF COMPOSITE HONEYCOMB MATERIALS
MARTIN, C. B. / C. / ARNIT ROCKWELL CORP./ MOOGEE, J. F.
DATE- SEP. 1969
MFS-20405
Progress develops instrumentation for
nondestructive testing of adhesive bond strength
in honeycomb materials and air coupled inspection
methods suitable for large tankage.

B69-10372
EFFECTS OF HYDROGEN ON METALS
CATALDO, C. E. DATE- SEP. 1969
MFS-20364
Several rules to guide choice of materials, and
methods of welding, electroplating, and heat
processes provide a method for minimizing
failures in storage tanks and related hardware.
Failures are caused by high-pressure hydrogen
effects, the formation of hydrides in titanium,
and hydrogen absorption through various metals
processing techniques.

B69-10377
SEPARATION OF THE RARE EARTHS BY
ANION-EXCHANGE IN THE PRESENCE OF LACTIC
ACID
FABIS, J. P. DATE- SEP. 1969
ARG-10436
Investigation of adsorption of rare earths and a
few other elements to an anion-exchange resin from
mixed solvents containing lactic acid shows that
the lanthanides are absorbed more strongly than
from the alpha-hydroxyisobutyric acid system, but
with less separation between adjacent members of
the series.

B69-10397
MAGNETIC FORMING OF RESISTIVE MATERIALS
ROBBINS, R. W. / ADVANCED KINETICS INC./ DATE-
SEP. 1969
MFS-20417
Necessary theoretical foundation is given for the
the treatment of magnetic stresses applied to
cylindrical boundaries and swaging of metallic
tubing. Emphasis is placed on the use of
high-resistivity materials such as stainless steel
and Hastelloy.

B69-10406
QUICK-SET TEMPORARY BONDING CLAMPS
Baker, C. D. DATE- SEP. 1969
NPO-10695 WGO-10696
Method of bonding materials to a flat surface
eliminates the use of bolts to hold the pieces
together. Two adhesives are used, the primary or
permanent bonding material and a quick setting
adhesive. No permanent aftereffects are left on
the surfaces to which the materials are bonded.

B69-10412
DIRECT IN-VIAL COLLECTION FOR
LIQUID-SCINTILLATION ASSAY OF CARBON-14
AND RADIUM
KUEHNER, R. G. / KISTELSKI, W. E. DATE- SEP. 1969
REAC- SEE ALSO ABT-7778
ARG-10424
Dislocation of biological materials combines the
simplity of oxygen-flask combustion with the
reproducibility and purity of the final product,
and the convenience of direct in-vial collection of
the sample by the sealed-tube method. It assures
quantitative and reproducible recoveries.

B69-10413
INSTRUMENTATION FOR POTENTIOSTATIC CORROSION
STUDIES WITH DISTILLED WATER
LOSS, R. E. / RUFFAUD, C. A. DATE- SEP. 1969
ARG-10409
Corrosion is studied potentiostatically in the
environment of distilled water with an
instrument that measures the potential of the
corroding specimen immediately after interruption
of the polarizing current. No current is
flowing. The process permits compensation for
Ir drops when potentiostatic control is used in high
resistance systems.

B69-10414
POSSIBLE CORRELATION BETWEEN WORK-HARDENING
AND FATIGUE-FAILURE
KETTUNEN, P. O. ROCKS, G. F. DATE- SEP. 1969
ARG-10371
Conceptual theory proposes that cyclic hardening
due to non-uniform strain and stress amplitudes
during testing, especially during the initial
application of stress to a specimen, may correlate
positively with the ultimate strength of the
specimen under test.
B69-10417
DEVELOPMENT OF STRUCTURAL TEST ARTICLES FROM MAGNESIUM-LITHIUM AND BERYLLIUM.
ALARIO, R. /FAIRCHILD HILLER/ DATE- NOV. 1969
M-PS-1459

Study on the fabrication and testing of a magnesium-lithium box beam show the formability and machinability characteristics of that alloy to be excellent. Results of forming tests for shrink and stretch flanges show values for both flange heights that may be used in future beryllium design.

B69-10423
COORDINATION CHEMISTRY IN FUSED-SALT SOLUTIONS
GREEN, D. M. DATE- SEP. 1969
ARG-10469

Spectrophotometric work on structural determinations with fused-salt solutions is reviewed. Constraints placed on the method, as well as interpretation of the spectra, are discussed with parallels drawn to aqueous spectrophotometric curves of the same materials.

B69-10425
COMPARATIVE CHROMATOGRAPHY OF CHLOROPHIL PIGMENTS
GRANDOLFO, F. SHERNA, J. STRAIN, E. H. DATE-
SEP. 1969
ARG-10415

Methods for isolation of low concentration pigments of the cocklebar species are described. The methods entail two step chromatography so that the different sorption properties of the various pigments in varying column parameters can be utilized. Columnar and thin layer methods are compared. Many conditions influence separability of the chloroplasts.

B69-10430
PRODUCTION OF SOLVATED ELECTRONS
THOMAS, J. E. DATE- SEP. 1969
ARG-10416

Current research, both theoretical and experimental, relating to the production and kinetics of interactions of solvated electrons is reviewed. Particular attention is focused on solvated electrons generated by ionizing radiation in water, alcohols, and organic salts.

B69-10451
IMPROVED INORGIC ION EXCHANGE MEMBRANES
ARRANCE, J. C. /RC DOWELL DOUGLAS CORP./
BRINGER, C. KELKENS, A. B. DATE- SEP. 1969
LEWIS-10737

New method makes solid ion exchange membrane electrodes for use in hydrocarbon-oxygen and hydrogen-oxygen fuel cells. The membrane is a sintered composite of srichlon, phosphoric acid, and sucinate.

B69-10457
ABRASION AND FRACTURE TESTING IN A HIGH-PRESSURE HYDROGEN ENVIRONMENT
SHERIDAN, G. V. /ROCKETDYNE/ WALKER, E. J. DATE-
SEP. 1969
M-PS-18080 M-PS-18088

Two devices are necessary for abrasion and fracture testing of materials evaluated for storage of hydrogen at high pressure for long periods. The first device abrades tensile specimens. The second device tests for fracture toughness of metals. Both devices permit testing in both yield and failure modes in high pressure hydrogen.

B69-10464
NONDESTRUCTIVE DETERMINATION OF COHESIVE STRENGTH OF ADHESIVE-BONDED COMPOSITES
THOMPSON, D. O. /AM. ROCKWELL CORP./ DATE-
OCT. 1969
M-PS-20397

Systematic plan determines vibration responses and modes of composite specimens, correlates vibrational responses of composite specimens varying in strength of cohesive bond, determines effects of thickness variation of the face sheet over the frequency range, optimizes the characteristics of the excitation transducer, and measures bond strength.

B69-10466
IMPROVED RETORT FOR CLEANING METAL POWDERS WITH HYDROGEN
ABE, K. DATE- SEP. 1969
LEWIS-10718

Improved cleaning retort produces uniform temperature distribution in the heated zone and minimizes hydrogen channeling through the powder bed. Retort can be used for nonmetallic powders, sintering in reducing atmosphere, and for cleaning powders in reduction atmospheres other than hydrogen.

B69-10468
BASAL-PLANE METALLOGRAPHY OF DEFORMED PYROLYTIC CARBON
ADAMS, J. P. FISCHBACH, D. B. DATE- SEP. 1969
NFO-11916

Cleavage technique is recommended over the normal polishing technique in preparing pyrolytic carbon for metallographic examination of basal-plane surfaces. After careful removal of torn basal-plane fragments and other cleavage debris with cellulo-ose tape, the true structure is clearly revealed.

B69-10501
LOWEST MEMBRANE BATTERY SEPARATOR
MOLCKIN, J. A. DATE- OCT. 1969
NFO-11911

Ionic transport characteristics of ionenes, insoluble membranes from soluble polyelectrolyte compositions, are studied for possible application in a battery separator. Effectiveness of the thin film of separator membrane essentially determines battery lifetime.

B69-10511
THERMALLY CONDUCTING ELECTRON TRANSFER POLYMERS
BYRD, R. N. /RC DOWELL DOUGLAS CORP./ JENKINS,
E. K. LISTER, J. L. DATE- OCT. 1969
GSC-10703

New polymeric material exhibits excellent physical shock protection, high electrical resistance, and thermal conductivity. It is especially useful for electronic circuitry, such as subminiaturization of components and modular construction of circuits.

B69-10522
MEASUREMENT OF GAS FLOW AT EXTREMELY LOW PRESSURES
BUTTERLY, J. G. /RC DOWELL DOUGLAS CORP./ DATE-
OCT. 1969
MSC-13261

Method accurately measures the flow of gases produced by evaporation or sublimation at pressures approaching total vacuum. Measurement of heat rejection in terms of flow of steam is taken with water as the liquid undergoing change in phase.

B69-10530
A METHOD FOR OBSERVING GAS EVOLUTION DURING PLASTIC LAMINATE CURE
NICHOLS, J. E. /AM. ROCKWELL CORP./ DATE-
OCT. 1969
MSC-15592

Polyester, phenolic, and other resins which develop volatiles during laminating or molding cure are studied using optimus cure cycles. The specimen is placed on a plate and sealed in a plastic bag, then heated and observed for gas evolution using a binocular microscope. A cover plate is added to maintain an autoclave.

B69-10531
TESTING THE FLAMMABILITY OF MATERIALS EXPOSED TO ARC E
HARRITY, J. J. /AM. ROCKWELL CORP./ KUZISZK,
A. L. DATE- OCT. 1969
MSC-15225

Apparatus tests flammability and ignition characteristics of materials in close proximity to incandescent metal fragments or spalls ejected.
from intermetallic short circuit areas in air or oxygen rich atmospheres. It simulates a situation where an exposed live wire makes contact with a grounded member in areas containing organic matter.

B69-10536
IMPROVED METHOD OF PRODUCING OXIDE-DISPERSION-STRENGTHENED ALLOYS
GRANT, R. J. /ETF/ SCHILLING, W. F. DATE- OCT. 1969
EQ-10461
Dispersion strengthened alloys having the required properties are produced by a process in which the refractory particles are less than 100 to 500 A thick. These are fine enough to ensure the strength characteristics without appreciable degradation of other characteristics. The alloy consists of a matrix metal and a dispersoid metal.

B69-10540
IMPROVED PRIMER FOR BONDING POLYURETHANE ADESEIVES TO METALS
CONSTANZA, J. J. /M. AM. ROCKWELL CORP./ DATE- OCT. 1969
R-PS-90591
Primer ensures effective bonding integrity of polyurethane adhesives on metal surfaces at temperatures ranging from minus 423 degrees to plus 120 degrees F. It provides greater metal surface protection and bond strengths over thin temperature range than could be attained with other adhesive systems.

B69-10543
BURST DIAPHRAGM LEAK DETECTOR
FASCOLLA, J. A. /ROCKWELL/ DATE- OCT. 1969
R-PS-14500
New method replaces flowmeter approach with readily available burst diaphragm leak detector assembly mounted to all main ports. This allows simultaneous leak detection of all flange seals under operating conditions.

B69-10552
TECHNIQUE FOR ULTRASONIC CLEANING WITH VOLATILE SOLVENTS ELIMINATES NEED FOR HOODS OR CONDENSERS
FISHER, E. /M. AM. ROCKWELL CORP./ DATE- OCT. 1969
RSC-15611
Technique ultrasonically cleans small quantities of small mechanical parts in organic solvents without the need for vapor removal equipment. Parts are placed in a thin plastic bag with the solvent and then suspended in a cleaning tank containing the water-detergent solution.

B69-10559
DEVELOPMENT OF IMPROVED POTTING AND CONFORMAL COATING COMPOUNDS
WEBSTER, J. A. /BENGAMOTO RES. CORP./ DATE- OCT. 1969
R-PS-20219
R-PS-20223
Improved organic potting and conformal coating materials protect fragile electronic components and circuitry from mechanical shock and vibration, moisture, and corrosion. These materials meet specifications covering resistance to cycling, radiation, flammability, and sterilizing agents for certain space applications.

B69-10564
A NEW METHOD FOR FABRICATION OF FLEXIBLE VACUUM JUICE JACKETS
SHEFFER, C. R. /GOODYEAR AEROSPACE CORP./ DATE- NOV. 1969
R-PS-1264
Polyurethane-coated synthetic fabric is fitted with a filament-glass mat exterior which gives it a high degree of springback capability. Material is capable of maintaining its springback capability in a temperature range from ambient to cryogenic.

B69-10572
A COMPARISON OF TWO METHODS OF MEASURING PARTICLE SIZE OF AL2O3 PRODUCED BY A SMALL ROCKET FUELS
DOBROWSKI, R. A. STRAND, L. D. DATE- NOV. 1969
BPO-11198
The size of aluminum oxide particles produced by small rocket motors in determined by means of grain collection and spectrophotometry. The size of the particulate determines its effect due to particle lag, particulate radiant heat transfer, acoustic attenuation, and impingement and rocket plume structure and properties.

B69-10580
SILPHENYLENE ELASTOMERS HAVE HIGH THERMAL STABILITY AND TENSILE STRENGTH
SPOR- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DATE- OCT. 1965
R-PS-20250
Two polymeric silphenylene ethers, when cured by reactions with ethyl silicates and metal salts at room temperature, form elastomers having excellent thermal stability and tensile properties. The highest tensile strength obtained in a reinforced elastomer was 2800 psi.

B69-10591
A METHOD FOR PRECISION ANODIZE STRIPPING
PEETERS, R. L. /M. AM. ROCKWELL CORP./ DATE- OCT. 1969
MSC-15040
Felt templates saturated with etch solution removed a modified finish from aluminum without damage to the surface. The solution is a combination of nitric acid, chromic acid, and hydrofluoric acid.

B69-10592
EFFECTS OF STERILIZATION ON THE ENERGY-DISSIPATING PROPERTIES OF Balsa WOOD
SORKIN, A. B. DATE- DEC. 1969
BPO-11207
Technical report on the effects of sterilization on the energy-dissipating properties of balsa wood is given. Sterilization by ethylene oxide plus heat enhances the average specific energy of balsa while plastic impregnation followed by irradiation-induced polymerization does not.

B69-10595
A METHOD FOR USING SURFACE TENSION TO DETERMINE THE SIZE OF HOLES IN HARDWARE
HUNIS, W. J. /M. AM. ROCKWELL CORP./ DATE- NOV. 1969
RSC-15174
To check the size of small holes in injectors, flow control orifices, filters, and similar hardware, a surface tension technique is used. The liquid surface tension causes it to act as a membrane when pressure is applied. This bubble pressure is a function of hole diameter and surface tension.

B69-10596
AUTOMATIC SAMPLE ROTATOR FOR METALLLOGRAPHIC POLISHING
ADAMS, J. M. BERNETT, C. C. DATE- NOV. 1969
BPO-11015
Simple, inexpensive device can be attached to most metallographic sample polishing tables. It provides a suitable surface finish for microscopic examination or photography of surface details of the samples.

B69-10599
LIQUID OXYGEN-COMPATIBLE INSULATION SYSTEM
JOHNS, J. S. /M. AM. ROCKWELL CORP./ DATE- NOV. 1969
R-PS-16113
To provide insulation for tees, elbows, sumps, and valves that are used to pass or store fluids at cryogenic temperatures, individual parts are insulated in an environmentally controlled facility. It is desirable to ensure such insulation be liquid oxygen compatible and be easily removable and reinstallable.

B69-10602
PROGRAMMED SCHEDULE HOLD S FOR IMPROVING LAUNCH VEHICLE HOLDS
GALLO, Y. H. /Boeing Co./ HAYES, J. D.
DATE- NOV. 1965
Baseline definition and system optimization are used for the analysis of programed holds developed through prelaunch system analysis. Identification of design specifications for ground support equipment and maintenance concepts, and design specifications are used to describe the functional utilization of the overall flow process.

Baseline definition and system optimization are used for the analysis of programed holds developed through prelaunch system analysis. Identification of design specifications for ground support equipment and maintenance concepts, and design specifications are used to describe the functional utilization of the overall flow process.

Baseline definition and system optimization are used for the analysis of programed holds developed through prelaunch system analysis. Identification of design specifications for ground support equipment and maintenance concepts, and design specifications are used to describe the functional utilization of the overall flow process.

Baseline definition and system optimization are used for the analysis of programed holds developed through prelaunch system analysis. Identification of design specifications for ground support equipment and maintenance concepts, and design specifications are used to describe the functional utilization of the overall flow process.

Baseline definition and system optimization are used for the analysis of programed holds developed through prelaunch system analysis. Identification of design specifications for ground support equipment and maintenance concepts, and design specifications are used to describe the functional utilization of the overall flow process.
Thermodynamic and transport properties include viscosity, heat capacity, thermal conductivity, and Prandtl number. Properties are calculated from 300 to 2500 degrees K and for pressures of three and ten atmospheres.

Tensile tests on welded plates of three grades of steel indicate an appreciable decrease of tensile strength and ductility of notched specimens and a decrease in ductility of unnotched specimens. Surface cracking, evident in unnotched specimens, is conducive to breakdawn in tensile strength and ductility.

Electro-deposits obtained have greater physical strength than deposits from the Brenner bath. This consists cf a spring-loaded piston, and a small vent for displace the piston. The packing becomes a variable reactant, for example, acids are removed by using an alkaline liquid.

To obtain high quality waveforms from a subject engaged in physical activity, an improved electrode assembly has been devised. This consists of a cup containing an electrically conductive paste and a silver electrode. The paste maintains contact between the skin and the plate.
minutes in enclosures containing a controlled volume of either. Thus the monkeys can be properly and safely positioned on test couches and fitted with electrodes or other devices prior to physiological tests.

B66-10049
IMPROVED ELECTRODE PASTE PROVIDES RELIABLE MEASUREMENT OF GALVANIC SKIN RESPONSE
DAR, J. L. DATE- FEB. 1966 REAR- SEE ALSO B66-10025 AND B65-10015
MSC-146
High-conductivity electrode paste is used in obtaining accurate skin resistance or skin potential measurements. The paste is isomotic to perspiration, is nonirritating and nonsensitizing, and has an extended shelf life.

B66-10117
MICROORGANISMS DETECTED BY ENZYME-CATALYZED REACTION
VANGO, S. P. WENTALL, H. H. WELKEY, N. DATE- MAR. 1966
JEL-782
Enzymes detect the presence of microorganisms in soils. The enzyme lysozyme is used to release the enzyme catalase from the microorganisms in a soil sample. The catalase catalyzes the decomposition of added hydrogen peroxide to produce oxygen which is detected manometrically. The partial pressure of the oxygen serves as an index of the sample bacteria content.

B66-10118
INTEGRAL SKIN ELECTRODE FOR ELECTROCARDIOGRAPHY IS EXPENDABLE
SPRON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1966
MSC-299
Inexpensive, expendable skin electrode for use in electrocardiography combines an electrical contact, conductive paste, and a skin-attachment adhesive. Application of the electrode requires only degreasing of the skin area.

B66-10154
PHONOCARDIOGRAPH SYSTEM MONITORS HEART SOUNDS
SPRON- INNOVATOR NOT GIVEN /BECKBAN INST./ INC./ DATE- APR. 1966
MSC-185
Phonocardiograph system monitors the mechanical activity of the heart in extreme environments. It uses a piezoelectric-crystal microphone with an integral preamplifier, and a signal conditioner having special frequency characteristics. The output signals can be recorded on tape, presented audibly, or transmitted telemetrically to a remote station.

B66-10184
SELF-INFLATING LIFESAVING STOOGES IN SMALL PACKAGE
RADOPHONY, N. I. DATE- MAY 1966
MSC-5A
Emergency lifevest is inflated with carbon dioxide from a self-contained cartridge in 10 seconds. When deflated, it fits into a package occupying less than 20 cubic inches and weighing less than one pound.

B66-10252
SEMICONDUCTOR FORMS BIOMEDICAL RADIATION PROBE
BURNS, F. F. FRIEDEICHS, J. B. /SOLID STATE RADIATION, INC./ DATE- JUN. 1966
MSC-320
Semiconductor radiation dosimeter in the form of a slender probe is easily inserted into body tissue. The probe has a signal-to-noise ratio that is acceptable to recording equipment and provides realistic measurements of the spatial and energy distributions of radiant electrons and protons.

B66-10314
PHONOCARDIOGRAPH MICROPHONE IS BURIED AND WATERPROOF
YOUNG, W. J. DATE- JUL. 1966
MSC-212
Microphone used as a phonocardiograph transducer monitors small amplitude audio signals in the presence of large shock loads and high humidity. It contains a lead zirconate-lead titanate piezoelectric plate encapsulated in a flexible polyurethane resin. The resin is contained in a sealed nylon case having a diameter of less than one inch.

B66-10332
BELLOWS JOINT ABSORBS TORSIONAL DEFLECTIONS IN DUCT SYSTEM
DANIELS, C. H. /N. AM. AVIATION/ DATE- JUL. 1966
MSC-882
Long, thin-walled bellows compressed into a short length absorbs the same amount of torsional deflections as the same tube in full length condition and saves in cost, complexity and space. This bellows has lower torsional spring rate to absorb the bulk of the duct assembly torsional deflections, leaving the other bellows free to absorb axial and angular deflections.

B66-10406
PLANT RESPIROMETER ENABLES HIGH RESOLUTION OF OXYGEN CONSUMPTION RATES
POSTER, D. L. /SPACE DEFENSE CORP./ DATE- SEP. 1966
NO-97
Plant respirometer permits high resolution of relatively small changes in the rate of oxygen consumption by plant organisms undergoing oxidative metabolism in a nonphotosynthetic state. The two stage supply and monitoring system operates by a differential pressure transducer and provides a calibrated output by digital or analog signals.

B66-10468
RADON GAS, USEFUL FOR MEDICAL PURPOSES, SAFELY FIXED IN QUARTZ
FIELDS, F. R. STEPN, L. ZIEHN, M. H. DATE- NOV. 1966
ARG-2
Radon gas is enclosed in quartz or glass ampules by subjecting the gas sealed at a low pressure in the ampules to an ionization process. This process is used in preparing fixed radon sources for radiological treatment of malignancies, without the danger of releasing radioactive gases.

B66-10515
APPARATUS ENABLES AUTOMATIC MICROANALYSIS OF BODY FLUIDS
SOUPT, G. A. STUART, J. L. DATE- NOV. 1966
JPL-962
Apparatus will automatically and quantitatively determine body fluid constituents which are amenable to analysis by fluoroscopy or colorimetry. The results of the tests are displayed as percentages of full scale deflection on a strip-chart recorder. The apparatus can also be adapted for microanalysis of various other fluids.

B66-10647
MODIFIED ALGESIMETER PROVIDES ACCURATE DEPTH MEASUREMENTS
TAYLOR, D. P. /N. AM. AVIATION/ DATE- DEC. 1966
MSC-616
Algesimeter which incorporates a standard sensory needle with a sensitive microsphere, measures needle point depth penetration in pain tolerance research. This algesimeter provides an inexpensive, precise instrument with assured validity of recordings in those biomedical areas with a requirement for repeated pain detection or ascertaining pain sensitivity.

B66-10649
SPRAY-ON ELECTRODES ENABLE EKG MONITORING OF PHYSICALLY ACTIVE SUBJECTS
SPRON- INNOVATOR NOT GIVEN /BEC/ DATE- DEC. 1966
MSC-94
Easily applied EKG electrodes monitor the heart signals of human subjects engaged in various physical exercises. The electrodes are forced from an air drying, electrically conductive cement mixture that can be applied to the skin by means of a modified commercially available spray gun.
ADJUSTABLE HINGE PERMITS MOVEMENT OF KNEE IN PLASTER CAST

MALV, w. e. DATE- MAR. 1967
B67-10056

Metal knee hinge with an adjustable sleeve worn on the outside of a leg cast facilitates movement of the knee joint. This helps eliminate stiffness of the knee and eliminates bulkiness and adjustment difficulty.

INTEGRATED MOBILITY MEASUREMENT AND NOTATION SYSTEM

BOEDECK, J. A., JR. /N. AM. AVIATION/ DATE- MAY 1967
B67-10114

System for description of movements and positions facilitates design of space suits with more mobility. This measurement and notation system gives concise and unequivocal descriptions, compatible with engineering analysis, and applicable to specific needs.

ION EXCHANGE DETERMINES IODINE-131 CONCENTRATION IN AQUEOUS SAMPLES

FAHR, W. D. SEDLET, J. DATE- MAY 1967
B67-10122

Inorganic radioiodine in aqueous media is analyzed by separating the radioactive iodine-131 as the iodide ion on a silver chloride column. The activity in the final precipitate may be determined by beta or gamma counting.

PHOTOLUMINESCENSE SHOW PROMISE IN THE TREATMENT OF BRAIN TUMORS

FRIGERIO, N. A. DATE- JUN. 1967
B67-10188

ABE-910

Processes synthesize sulfonated and nonsulfonated acryl phthalocyanines for application in neutron therapy of brain tumors. Tests indicate that the compounds are advantageous over the previously used boric and lithium compounds.

SELF-SEALING CLOSURE ENABLES ACCESS TO SEVERAL FLUID CONTAINERS

WHEELER, S. B. DATE- JUN. 1967
B67-10207

ABO-1023

Self-sealing closure enables small amounts of specific biochemical solutions to be withdrawn from or added to containers in inaccessible or small spaces. It uses a self-sealing septum of a silicone elastomer through which a hypodermic needle can be inserted.

AUTOMATED URINALYSIS TECHNIQUE DETERMINES CONCENTRATION OF CREATINE AND CREATININE BY COLOIDIMETRY

RIGG, J. E. DATE- JUL. 1967
B67-10245

ABO-1013

Continuous urinalysis technique is useful in the study of muscle wastage in primates. Creatinine concentration in urine is determined in an aliquot mixture by a color reaction. Creatine is determined in a second aliquot by converting it to creatinine and measuring the difference in color intensity between the two aliquots.

BLOOD OXYGEN SATURATION DETERMINED BY TRANSMISSION SPECTROPHOTOMETRY OF HEMOLYZED BLOOD SAMPLES

MALIK, W. N. /INST. OF MED. SCIENCES/ DATE- AUG. 1967
B67-10252

MSC-1105

Use of the Lambert-Beer Transmission Law determines blood oxygen saturation of hemolyzed blood samples. This simplified method is based on the difference in optical absorption properties of hemoglobin and oxyhemoglobin.

CTELOLOGY IS ADVANCED BY STUDYING EFFECTS OF DEUTERIUM ENVIRONMENT

B67-10304

Research of deuterium effects on biological systems shows deuteriation is not incompatible with life. With the successful cultivation of deuteriated bacteria, work is now being done on extraction of deuteric-compounds from bacteria.

LIQUID MICRURGY CHAMBER AND MICROSTRING DESIGNS ALLOW MORE EFFICIENT MICRANAPILATIONS

DANIELS, S. W. DATE- AUG. 1967
B67-10305

MSC-599

More efficient micromanipulations on large amoebae achieved by liquid micrurgy chamber and microsyringe. These innovations move the system closer to the specimen, and flatten the specimen for a clear view of the nucleus, also eliminating spherical aberration and evaporation.

HAND-HELD INSTRUMENT SHOULD RELIEVE HERATOMA PRESSURE

RAGEE, L. J. /N. AM. AVIATION/ ROBBIESON, T. L. DATE- SEP. 1967
B67-10332

MSC-599

Portable instrument relieves hematomas beneath fingernails and toenails without surgery. This device simplifies the operative procedure with an instant variable heating tip, adjustable depth settings and interchangeable tip sizes for cannulating small areas and relieving pressurized clots.

IMPROVED SAMPLE CAPSULE FOR DETERMINATION OF OXYGEN IN HEMOLYZED BLOOD

MALIK, W. N. /PRESBYTERIAN MPH. CENTER/ DATE- OCT. 1967
B67-10399

EQ-10055

Sample capsules for determination of oxygen in hemolyzed blood consists of a measured section of polytetrafluoroethylene tubing equipped at each end with a connector and a stopcock valve. This method eliminates errors from air entrainment or from the use of mercury or syringe lubricant.

EFFECT OF PREPARATION PROCEDURES ON INTENSITY OF RADIOAUTOPHOTOMIC LABELING IS STUDIED

B67-10500

ABO-10302

Effects of tissue preparation and extractive procedures on the intensity of radioautographic labeling are presented in terms of mean grain count per cell in cells labeled with tritiated precursors of proteins or nucleic acids. This information would be of interest to medical researchers and cyto]ogists.
B67-10556
CONTINUOUS MICROBIAL CULTURES MAINTAINED
BY ELECTRONICALLY-CONTROLLED DEVICE
RIGGS, W. J., R. WEBB. R. R. DATE- DEC. 1967
ARG-177
Photocell-controlled instrument maintains microbial culture. It uses commercially available chemostat glassware, provides adequate aeration through bubbling of the culture, maintains the population size and density, continuously records growth rates over small increments of time, and contains a simple, sterilizable nutrient control mechanism.

B67-10590
ULTRAVIOLET MICROSCOPY AIDS IN CYTOLOGICAL
AND BIOMEDICAL RESEARCH
SCHULKE, F. SYBEL. DATE- DEC. 1967 REAN-
SURE ALSO ABN-6971
ARG-178
Ultraviolet microscopy is used by cytologists and biochemists to study the morphological and physiological changes in the living cell under varied culture conditions. The yeast cell is used because of its content of ultraviolet absorbing materials and its lack of motility.

B67-10604
STUDY MADE OF RELATIONSHIP BETWEEN GROWTH
AND METABOLISM
SUTHERS. K. DATE- DEC. 1967
ARG-10046
Study shows that the growth of X irradiated sunflower seeds is inversely related to the metabolism of the seeds. The actual magnitudes of the relation between the two differed for various ranges of X ray exposure. The results of the study suggested that the X rays affected the embryo.

B67-10663
REVIEW OF BIOLOGICAL MECHANISMS FOR
APPLICATION TO INSTRUMENT DESIGN
HEALEY, J. /ALLIED RES. ASSOCIATES/ DATE- DEC. 1967
NO-32
Biological sensors are the mechanisms which enable a living organism to monitor its environment. Ways in which the functional mechanism of biosensors can be applied to develop new concepts of instrument enhancement and extend the human senses, and improve the sensitivity of existing instrumentation are described in a review of these mechanisms.

B68-10076
METABOLIC AND TOXICOCLOGICAL EFFECTS OF
WATER-SOLUBLE ZEUXON COMPOUNDS ARE STUDIED
TINKEL, A. J. KATZ, J. J. MILLER. C. E. DATE-
APR. 1968
ARG-90239
Biological properties of water-soluble zexon compounds are the moderate toxicity of these substances, their rapid decomposition in the body, the speed with which the xenon appeared to be reduced to xenon gas, and the very rapid elimination of this gas from the body.

B68-10169
IRRADIATION EFFECTS ON BACTERIAL CELLS
POWELL, E. L. DATE- JUN. 1968
ARG-10064
Study reveals the physicochemical and biochemical mechanisms which alter or modify the effects of high-energy radiation on living cells. An in-depth discussion is presented emphasizing the importance of optimizing bacterial treatment with glycerol.

B68-10206
INFRARED VIEWING PERMITS HUMAN IRIS
RESPONSE STUDIES
SCHNEE, E. B. /N. AM. AVIATION/ DATE- JUN. 1968
BSC-10003
Infrared image converter tube and a filtered light source monitor and measure the eye of a subject during experimental task-work operations to obtain a more natural measurement of unaided visual response. The device permits observation in the near infrared region, with little stimulation to the eye except by normal ambient lighting.

B68-10231
VACUUM PROBE SAMPLER REMOVES MICRON-SIZED
PARTICLES FROM SURFACES
WHITFIELD, W. J. DATE- JUL. 1968
SAN-10003
Vacuum probe sampler removes micron-sized particles from surfaces, without damage to the surface. The probe has a critical orifice to ensure an optimum airflow rate that disturbs the boundary layer of air and raises bacteria from the surface into the probe with the moving air stream.

B68-10320
EXPERIMENTAL STUDY AND EVALUATION OF
RADIOPROTECTIVE DRUGS
SMITH, D. K. THOMSON, J. F. DATE- AUG. 1968
ARG-10196
Experimental study evaluates radioprotective drugs administered before exposure either orally or intravenously. Specifically studied are the sources of radiation, choice of radiation dose, choice of animals, administration of drugs, the toxicity of protective agents and types of protective drug.

B68-10328
FOOD PRODUCTS FOR SPACE APPLICATIONS
COPE, F. S. LARSON, R. W. /WHIRLPOOL CORP./ DATE-
AUG. 1968
MSC-1697. MSC-1698. MSC-1699
Specially-prepared foodstuffs supply an astronaut with a diet containing his basic nutritional requirements in a form that is useful in his environment. Several edible coatings preserve foods and give loose foods form and firmness. These coatings aid in packaging and give the food slip for easy removal from the package.

B68-10366
STRATIFICATION OF CENTRIFUGED AMOEBA NUCLEI
INVESTIGATED BY ELECTRON MICROSCOPE
RILM, R. R. DANTZ, E. W. DATE- OCT. 1968
ARG-10161
Study establishes a relationship between radioresistance and the nuclear stratification characteristics of various amoeba species. Two species of fresh water amoeba are studied with the electron microscope. The report discusses the nature of nucleolar layers and their possible relationship to the differences in radioresensitivity of the two amoeba species.

B68-10428
RATE CONSTANTS MEASURED FOR HYDRATED
ELECTRON REACTIONS WITH PEPTIDES AND
PROTEINS
THOMAS, B. DATE- NOV. 1968
ARG-10195
Effects of ionizing radiation on the amino acids of proteins and the reactivity of the protonated amino group depends upon the pH subscript a of the group. Estimates of the rate constants for reactions involving the amino acid side chains are presented. These rate constants gave an approximate rate constant for three different protein molecules.

B68-10427
COMPOUND EQUATION DEVELOPED FOR POSTNATAL
GROWTH OF BIRDS AND MAMMALS
LARD, A. K. DATE- NOV. 1968
ARG-10192
Compound growth equation was developed in which the rate of this linear growth process in regarded as proportional to the mass already attained at any instant by an underlying Gompertz process. This compound growth model was fitted to the growth data of a variety of birds and mammals of both sexes.

B68-10500
BIOLOGICAL ISOLATION GARMENT
SPRINGER, R. F. DATE- NOV. 1968
MSC-2206
Biological Isolation Garment /BIG/ is a
one-piece loose-fitting garment fabricated from a tightly woven, permeable, 100 percent-cotton fabric. Its headpiece, incorporates an integral oronasal respirator with 0.3-micron-particle filters, and a full-wire cage, with all fabrication seams are sealed on the inside of the garment.

**R66-10554**

**A MICROBIOLOGICAL TECHNIQUE FOR THE CULTURE OF MAMMALIAN CELLS**

Cooper, C. B., Jr. PEDREW, K. H. DATE- DEC. 1968

LANGLEY-10407

Technique obtains micropartitioning in a simple and reproducible manner by forcing a field of tiny ponds or lagoons on the surface of a suitable cultivating vessel. The technique allows free access of the common culture to all parts of the field.

**B69-10022**

**INVESTIGATION OF TEMPERATURE DEPENDENCE OF DEVELOPMENT AND AGING**

SACHER, G. A. DATE- FEB. 1969

ARG-10145

Temperature dependence of maturation and metabolic rates in insects, and the failure of vital processes during development were investigated. The paper presents the general hypothesis that aging in biological systems is a consequence of the production of entropy concomitant with metabolic activity.

**B69-10087**

**CARBON OFFERS ADVANTAGES AS IMPLANT MATERIAL IN HUMAN BODY**

Benson, J. /N. AM. ROCKWELL CORP./ DATE- APR. 1969

M-Ps-18207 M-Ps-18208 M-Ps-18204 M-Ps-18205 M-Ps-18206 M-Ps-18209 M-Ps-18210

Because of such characteristics as high strength and long-term biocompatibility, aerospace carbonaceous materials may be used as surgical implants to correct pathological conditions in the body resulting from disease or injury. Examples of possible medical uses include bone replacement, implantation splints and circulatory bypass implants.

**B69-10088**

**MICROSCOPES AND COMPUTERS COMBINED FOR ANALYSIS OF CHROMOSOMES**

ARG-10256

Scanning machine CHLOE, developed for photographic purposes, is combined with a digital computer to obtain quantitative and statistically significant data on chromosome shapes, distribution, density, and pairing. CHLOE permits data acquisition about a chromosome component to be obtained twice faster than by manual pairing.

**B69-10124**

**IMPROVED MOUSE CAGE PROVIDES VERSATILITY AND EASE IN HANDLING LABORATORY MICE**

Jones, N. D. DATE- MAY 1969

KSC-12259

Mouse cage system provides versatility and ease in handling laboratory mice, cleaning their cages, and collecting uncontaminated metabolic test specimens. The cage, compact and free standing, contains a screened bottom and funnel channel to collect waste. The food is in the cage top and thereby separates the food and waste.

**B69-10160**

**RAPID AND PRECISE ANALYSIS FOR CALCIUM IN BLOOD SERUM**

BOOTZMAN, E. B. ILCEWICZ, F. H. DATE- JUN. 1969

ARG-10246

Differential absorption spectrophotometric technique, using auriside, given a highly precise analysis of calcium in volumes of blood serum as small as 0.01 ml. The method of addition of proper timing allows compensation to be made for fading, variation in type of serum or plasma, and aging of the specimen.
COMBUSTION

S. DATE-JUL. 1969
ARG-10314
Comparative data reveal little difference between kinetic and thermal stabilities of pure preparations of two ordinary enzymes and their fully deuterated counterparts. The effects of temperature on the enzymes proved to be consistent with earlier results.

B69-10208

CORROSION METHOD FOR ASSAY OF BIOLOGICAL MATERIALS LABELED WITH CARBON-14 OR TRITIUM, OR DOUBLE-LABELED
HUBBEN, L. G. KISIELSKI, W. E. DATE-JUL. 1969
BRAH-SEE ALSO NML-7409
ARG-10331
Dry catalytic combustion at high temperatures is used for assaying biological materials labeled carbon-14 and tritium, or double-labeled. A modified oxygen-flask technique is combined with standard vacuum-line techniques and includes convenience of direct in-vial collection of final combustion products, giving quantitative recovery of tritium and carbon-14.

B69-10223

AUTOMATED MICROORGANISM SAMPLE COLLECTION MODULE
GALL, L. S. /IBB/ GRAHAM, R. M. UMBREIT, W. DATE-JUL. 1969
NPO-10421
Modified Gelman Sampler obtains representative sample of microorganism population. Proposed Sample Collection Module is based on direct inoculation of selected solid growth media encased in a cartridge at all times except during inoculation. Cartridge can be handled with no danger of contamination to sample or operator.

B69-10236

INPRINTING OF CONFINING SITES FOR CELL CULTURES ON THERMOPLASTIC SUBSTRATES
CNS, C. D. FLICKNAG, R. M. DATE-AUG. 1969
LANGLY-10495
Prevention of test cell migration beyond the field of observation involves confining cells or cultures in microlagoons made in either a layer of agar with photobacteria provides a means for assaying biological materials labeled carbon-14 and tritium, or double-labeled. A modified oxygen-flask technique is combined with standard vacuum-line techniques and includes convenience of direct in-vial collection of final combustion products, giving quantitative recovery of tritium and carbon-14.

Inoculating preheated trays containing nutrient agar with photobacteria provides a means for mass culture of aerobic microorganisms in order to obtain large quantities of luciferase. To determine optimum harvest time, growth can be monitored by automated light-detection instrumentation.

B69-10304

SAMPLING AND HANDLING OF DESERT SOILS
BLAKE, G. B. CAMERON, R. E. DATE-AUG. 1969
NPO-11171
Report on sampling and handling desert soils includes sections on selection, characterization, and photography of area, site, and soil, sterilization of sampling equipment and containers, and soil sample collection, transport, storage, and dispersal.

B69-10317

MICRODETERMINATION OF UREA IN URINE USING P-DIMETHYLAMINOBENZALDEHYDE /PDAB/
GUER, P. J. DATE-AUG. 1969
NPO-10715
Adaptation of the p-dimethylaminobenzaldehyde method for determining area concentration in urine is an improved microchemical method. Accuracy and precision are satisfactory. This method avoids extra steps of deproteinizing or removing normal urinary chromogens.

B69-10319

MICRORESCUSCITATOR
KSC-10398
Miniature, portable resuscitation system is used during evacuation of patients to medical facilities. A carrying case contains a modified resuscitator head, cylinder of oxygen, two-stage oxygen regulator, low pressure tube, and a mask for mouth and nose.

B69-10475

LIFE DETECTION
MARTIN, W. E. /MCDONALD DOUGLAS CORP./ DATE-OCT. 1969
NFC-10510
Compact automated laboratory unit has 60 independently treatable culture chamber assemblies for metabolic studies of cultured microorganisms on the surface of Mars or other planets.

B69-10493

INHIBITION OF BROWNING IN FOODSTUFFS
NOBESHTAL, R. A. /SCHWARTZ BIORESEARCH, INC./ DATE-SEP. 1969
HQC-10177
Addition of water-soluble sulfur-containing compounds, thioc compounds or potential thio compounds, to a mixture of carbohydrates, and either proteins, peptides, or amino acids can retard or completely eliminate the browning process. Determining factor in dependent upon the concentration of the anti-browning agent in the aqueous media.

B69-10571

DEER SOIL COLLECTION AT THE JPL SOIL SCIENCE LABORATORY
BLAKE, G. B. CAMERON, R. E. DATE-NOV. 1969
NFC-11206
Collection contains desert soils and other geologic materials collected from sites in the United States and foreign countries. Soils are useful for test purposes in research related to extraterrestrial life detection, sampling, harsh environmental studies, and determining suitable areas for training astronauts for lunar exploration.
05 MECHANICAL

B63-10007
HIGH PURITY ELECTROFORMING YIELDS SUPERIOR METAL MODELS
HAFFEL, R. M. HOUSTON, J. P. DATE- JAN. 1964
ARC-6
Ultrasound electroforming has proven successful in making high purity metal models for heat transfer studies. This process provides smooth, pit-free models.

B63-10008
VACUUM FORMING OF THERMOPLASTIC SHEET RESULTS IN LOW-COST INVESTMENT CASTING PATTERNS
CLARKE, A. E. JR. DATE- MAR. 1964
ARC-7
Vacuum forming of a sheet of thermoplastic material around a mandrel conforming to the shape of the finished object provides a pattern for an investment mold. The thickness of the metal part is determined by the thickness of the plastic pattern.

B63-10009
CHAIN FRICTION SYSTEM GIVES POSITIVE, REVERSIBLE DRIVE
DAVIDSEN, J. S. DATE- APR. 1964
ARC-8
By cementing a strip of an elastomer to the smooth metal rim of the pulley and neoprene covered idlers providing suitable tension to the chain around the pulley, a positive reversible drive is accomplished more quietly and with less vibration.

B63-10023
V-SLOTTED SCREW HEAD AND MATCHING DRIVING TOOL FACILITATE INSERTION AND REMOVAL OF SCREW FASTENERS
HANLEY, H. G. DATE- JAN. 1964
BRC-16
A V-sloped design screw and a screwdriver with a V-shaped tang facilitate driving the screw into different locations and achieve axial forces thus avoiding damage to the screw.

B63-10123
ELASTIC ORIFICE AUTOMATICALLY REGULATES GAS FLOWINGS
BAYSCHE, F. LAMB, J. L. DATE- JUN. 1964
JPL-135
Elastic, pressure-sensitive orifice is used to automatically regulate the rate of gas flow into bearings under varying loads. Formed of a molded elastomer, these orifices increase the stability of gas bearings.

B63-10139
METHOD OF WELDING JOINT IN CLOSED VESSEL IMPROVES QUALITY OF SEAL
PRAHAK, R. LEVOS. DATE- MAY 1964
JPL-170
To facilitate welding of closed vessels, a metal backup strip is used at the junction inside the vessel. After welding from the outside, this strip is dissolved by a chemically reactive solvent poured through a filler hole into the vessel.

B63-10141
VENTED PISTON SEAL PREVENTS FLUID LEAKAGE BETWEEN TWO CHAMBERS
MAC GLASBAN, W. F. ROBISON, R. DATE- DEC. 1964
JPL-179
To prevent fluid leakage around piston seals separating two fluids under differential pressure, a venting system has been devised. Two methods may be used for venting seals through internal passages to an external low-pressure area, O-ring or split-ring seals.

B63-10143
COINCIDENT SWITCH CLOSING REDUCES ERROR IN MOTOR-DRIVEN timer
RICH, G. DATE- DEC. 1964
JPL-182
To cut the lag-load in motor-driven timing devices, the timing circuit has been extended to include a second switch. This is actuated in time with the first but driven directly at a speed x times faster than the first.

B63-10170
HIGH-PRESSURE REGULATING SYSTEM PREVENTS PRESSURE SURGES
KELLY, C. F. MAC GLASBAN, W. F. DATE- JUN. 1964
BFAK- SEE ALSO U. S. PATENT NO. 3,105,515
JPL-231
Gas flow is controlled by means of a pressure regulating system which prevents pressure surges. A high-pressure fluid source, a spring-loaded fluid-damped regulator valve, an accumulator, a convetional normally closed command valve, and a control valve are the main components.

B63-10198
DEVICE TRANSFER ROTARY MOTION THROUGH HERMETICALLY SEALED WALL
PARKER, E. R. DATE- APR. 1964
JPL-303
A wobble plate, metal bellows, and two shafts, assembled in a four-section housing, make it possible to transmit rotary motion through a hermetically sealed wall. In operation a rotational torque is developed by the wobble plate.

B63-10200
APPARATUS OF SMALL SIZE CAN BE EXTENDED INTO LONG, RIGID BOOM
MILLER, J. W. DATE- MAY 1964
JPL-305
Three metal sheets, having prenotched edges, are interlocked as they are unrolled from three feed rollers which form a triangle. The apparatus is relatively small, and the sheets can be erected into a rigid triangular boom of considerable length.

B63-10226
SELF SEALING DISCONNECT FOR TUBING FORMS METAL SEAL AFTER BREAKAWAY
GREENAWAY, H. E. DATE- JAN. 1964
JPL-354
Disconnect fittings form a positive metal seal when the fill tube pulls against a metal sleeve when disconnected by force. A specially designed sleeve surrounds the fill tube. O-rings in the shoulder of the sleeve and near the outer end of
05 MECHANICAL

the fill tube seal against leakage.

B63-10228
PACKLESS VALVE WITH ALL-METAL SEAL HANDLES WIDE TEMPERATURE, PRESSURE RANGE
MAC GLASHAN, W. F. DATE- MAR. 1964
JPL-361
A durable line valve utilizes stacked metal disks to seal off an inlet port. No packing or shaft sealing is needed, and the valve operates satisfactorily over a wide temperature and pressure range.

B63-10236
LIGHTWEIGHT UNIVERSAL JOINT TRANSITS BOTH TORQUE AND THRUST
BARFORD, R. E. DATE- JAN. 1964
JPL-375
A lightweight universal joint uses a thin steel flexure plate to transmit torque and a steel rod to transmit thrust. Both the plate and rod are independently mounted and can act individually.

B63-10237
SUPER-COLD TECHNIQUE DUPLICATES MAGNETIC FIELD IN SECOND SUPERCONDUCTOR
HILDEBRANDT, A. R. DATE- NOV. 1964
JPL-376
A superconductor cylinder, charged with a high magnetic field, can be used to create a similar field in a larger cylinder. The uncharged cylinder is precooled, lowered into a helium dewar system, and fitted around the cylinder with the magnetic field. Magnetic flux lines pass through the two cylinders.

B63-10240
SLEEVE AND CUTTER SIMPLIFY DISCONNECTING WELDED JOINT IN TUBING
PERKINS, G. S. DATE- APR. 1964
JPL-394
To test equipment, welded tubing joints may have to be disconnected and re-welded. To eliminate re-welding, a nonstandard welding sleeve permits the tubing to be welded and then disconnected by a specially designed sleeve cutter. Use of this tool assures that only the sleeve is cut.

B63-10261
VEITCH DIAGRAM PLOTTING SIMPLIFIES BOOLEAN FUNCTIONS
SNYDERS, D. K. DATE- APR. 1964
JPL-385
This device for simplifying the plotting of a Veitch diagram consists of several overlays for blocking out the unwanted squares. This method of plotting the various input combinations to a computer is used in conjunction with the Boolean functions.

B63-10247
NEW PACKAGE FOR BELLEVILLE SPRING PERMITS RATE CHANGE, EASY DISASSEMBLY
MAC GLASHAN, W. F. DATE- MAR. 1964
JPL-392
A spring package, with grooves to hold the spring washers at the inner and outer edges, reduces beryllium to a minimum. Three-segment retainers permit easy disassembly so that the spring rate can be changed.

B63-10251
HELICAL TUBE SEPARATES NITROGEN GAS FROM LIQUID NITROGEN
STEPHENS, D. R. DATE- JUN. 1964
JPL-398
To prevent boiloff problem, liquid nitrogen flowing from a storage tank to a container is separated into liquid and gaseous components. This is accomplished by centrifugal and venting action, using a section of perforated helical aluminum tubing.

B63-10269
FRICTIONAL WEDGE SHOCK MOUNT IS INEXPENSIVE, HAS GOOD DAMPING CHARACTERISTICS
THIBAULT, W. F. DATE- MAY 1964
JPL-IT-1001
A wedge-shaped shock mount uses rubber for energy absorption, and the frictional characteristics of ordinary brake material for damping.

B63-10291
SPECIAL PLIERS CONNECT HOSE CONTAINING LIQUID UNDER PRESSURE
BLAYDES, R. A. DATE- MAR. 1964
JPL-IT-1003
To remove staples from thick reports, a rooter, bending hook and post are incorporated into a heavy duty hand tool. This makes possible one-step extraction of long staples.

B63-10304
BREAK-UP OF METAL TUBE MAKES ONE-TIME SHOCK ABSORBER, BARE MEMBERS
HATHAWAY, M. M. DATE- JUN. 1964
JPL-IT-1004
To remove staples from thick reports, a rooter, bending hook and post are incorporated into a heavy duty hand tool. This makes possible one-step extraction of long staples.

B63-10340
CRYOPUMPING OF HYDROGEN IN VACUUM CHAMBERS IS AIDED BY CATALYTIC OXIDATION OF HYDROGEN
CHILDRESS, J. G. DATE- APR. 1964
JPL-IT-1003
A combination gravity and manually powered rapid loader aids extrusion of refractory metals.

B63-10341
DESIGN OF VALVE PERMITS SEALING EVEN IF THE STEM IS MISALIGNED
SCHMIDT, R. W. DATE- JAN. 1964
JPL-IT-1001
A conical-valved valve plug is designed to seal against a recessed spherical valve seat. This insures proper sealing during numerous seating cycles since the valve stem is shalformed or forced out of its proper axis.

B63-10354
RAPID EILLET LOADER AIDS EXTRUSION OF REFRACTORY METALS
BLOOMBERG, A. F. DATE- APR. 1964
JPL-IT-1001
A conical-valved valve plug is designed to seal against a recessed spherical valve seat. This insures proper sealing during numerous seating cycles since the valve stem is shalformed or forced out of its proper axis.

B63-10367
CONNECTOR FOR VACUUM-JACKETED LINES CUTS TUBING SYSTEM COST
CARYERT, H. F. DATE- MAY 1964
JPL-IT-1001
A low-cost fitting, fabricated from standard connectors, is used for disconnecting flow lines in cryogenic systems. Utilizing vacuum-jacketed lines made from two sizes of tubing welded at the ends, the connectors are stronger and setup time is reduced.

B63-10368
COMPOSITE, VACUUM-JACKETED TUBING REPLACES BELLINGS IN CHROMIUM SYSTEMS
CARYERT, H. F. DATE- MAY 1964
JPL-IT-1001
A low-cost fitting, fabricated from standard connectors, is used for disconnecting flow lines in cryogenic systems. Utilizing vacuum-jacketed lines made from two sizes of tubing welded at the ends, the connectors are stronger and setup time is reduced.

For reliability control of high pressure cryogenic
systems, one or more 90 degree elbow expansion devices are substituted for the metal bellows normally used. The device consists of a conducting tube inside a support tube, with the space between the tubes evacuated for insulation.

B63-10376
NOVEL CLAMPS ALIGN LARGE ROCKET CASES, ELIMINATE BACK-UP BARS
FRANKLIN, W. J. DATE- JUN. 1964
M-PS-1
Welding clamps, placed inside and outside a rocket case, allow it in proper alignment during tufted inert gas welding. These metal blocks, connected by a stainless steel band, eliminate the need for backup bars.

B63-10384
VACUUM-TYPE BACKUP BAR SPEEDS WELD REPAIRS
CARMODY, R. J. DATE- AUG. 1964
M-PS-12
A backup bar designed to use both vacuum and air pressure provides a method of sealing the weld root of a faulty section of seam weld. With slight readjustment, the bar can be made sufficiently flexible to fit any cylindrical surface.

B63-10385
FLEXIBLE HONEYCOMB STRUCTURE CAN BE ADJUSTED TO FIT COMPOUND CURVES
CARMODY, R. J. DATE- APR. 1964
M-PS-13
For flexibility in forming a curved surface, a honeycomb configuration using multiple pleats has proved superior to the usual core structures. The partial pleats forced in individual cell walls permit movements to and from the central axis without tearing.

B63-10387
PORTABLE FLOORING PROTECTS FINISHED SURFACES, IS EASILY MOVED
CARMODY, R. J. DATE- MAR. 1964
M-PS-15
To protect surfaces, finished surface and provide support for workers, a portable flooring has been made from rigid plastic foam blocks faced with aluminum strips. Held together by nylon webbing, the flooring can be rolled up for easy carrying.

B63-10420
SIMPLE MECHANISM COMBINES POSITIVE LOCKING AND QUICK-RELEASE FEATURES
CLAYTON, L. B. /HUGHES AIRCRAFT CO./ DATE- FEB. 1964
FGO-4
For secure locking and quick release of two objects, this device uses a spring-loaded slotted bolt, locked in position by two retainer arms. When these retainer arms are freed from contact, the bolt is ejected and the objects released.

B63-10431
HIGH-TEMPERATURE, HIGH-PRESSURE SPHERICAL SEGMENT VALVE PROVIDES QUICK OPENING
GIUVASTEMI, A. BERMELIGHT, R. METZ, K.
HUTTA, R. DATE- APR. 1964
ABC-13
A hollow spherical segment valve with an eccentric permits non-rubbing closure and provides a means for gas-cooling the seal. The design allows quick opening at high temperatures and discharge pressures.

B63-10483
PORTABLE DISPLAY PANELING HAS WIDE USE, EASY TAKE DOWN AND ASSEMBLY
DR WOOL, H. J. DATE- MAR. 1964
ABC-17
Design for a modular display panel is based on a cross-shaped corner connector and wooden lattice bars. The bars are fitted into the arms of the metal connector and a pocket slot holds a modular-size panel.

B63-10442
KINETIC-ENERGY ABSORBER EMPLOYS FRICTIONAL FORCE BETWEEN MACHINING CYLINDERS
CONRAD, Z. W. DATE- MAY 1964
LEWIS-75
A kinetic energy absorbing device uses a series of coaxial, mating cylindrical surfaces. These surfaces have high frictional resistance to relative motion when axial impact forces are applied. The device is designed for safe deceleration of vehicles impacting or landing surfaces.

B63-10469
FINE-PARTICLE FILTER PREVENTS DAMAGE TO VACUUM PUMPS
HARLEM, P., JR. DATE- APR. 1964
LEWIS-105
A filter system for mechanical pumps is designed with a baffle assembly that rotates in a circulating oil bath which traps destructive particles. This prevents severe damage to the pump and is serviceable for long periods before it requires cleaning.

B63-10497
INTEGRAL COOLANT CHANNELS SUPPLY MADE BY BELT-OUT METHOD
ESCHER, W. J. Z. DATE- JUN. 1964
M-PS-91
Belt-out method of constructing strong, pressure-tight fluid coolant channels for chambers is accomplished by cementing pins to the surface and by depositing a belt-out material on the surface followed by two layers of epoxy-resin impregnated glass fibers. The structure is heated to melt out the low-melting alloy.

B63-10520
FLUID-PRESSURE METER CAN BE CALIBRATED WITHOUT REMOVING FROM FLOW LINE
NELSON, D. H. DATE- MAR. 1964
M-PS-98
The construction of a fluid pressure meter with two inlet ports, flexible diaphragms and a pressure-responsive transducer is described. One port can be connected to the line and the other to a source of standard pressures for calibration.

B63-10577
MINIATURE OXIDATION-HYDROGEN CUTTING TORCH CONSTRUCTED FROM HYDROGENIC NEEDLES
SELICHTA, P. DATE- APR. 1964
JPL-545
A miniature cutting torch consisting of a main body member, upon which the hydrogen and oxygen containers are mounted, valves for controlling gas flow, and a hypodermic needle that acts as a mixing tube and flame tip is constructed.

B63-10591
TOOL FACILITATES SEALING OF METAL FILL TUBES
COOLEY, R. H., JR. /UNITED AIRCRAFT CORP./ DATE- JUL. 1964
MSC-24
A hand tool is designed for sealing metal fill tubes containing corrosive or inflammable liquids without the use of heat or open flame. The tool aligns the fill tube into which a tapered sealing pin is dropped and driven below the neck of tube.

B63-10526
BUILT-IN TEMPLATES SPEED UP PROCESS FOR MAKING ACCURATE MODELS
SPON- INNOVATOR NOT GIVEN /LANGLEY/ DATE- FEB. 1964
LNG-23
From accurate scale drawings of a model, photographic negatives of the cross sections are printed on thin sheets of aluminum. These cross-section images are cut out and mounted, and mahogany blocks placed between them. The wood can be worked down using the aluminum as a built-in template.

B63-10530
NEW ANEMOMETER HAS FAST RESPONSE, MEASURES DYNAMIC PRESSURE DIRECTLY
LYNCH, W. W. REED, W. H., III DATE- OCT. 1964
LNG-28
A simple anemometer having a fast response to high frequency wind fluctuations by direct measurement of two drag-force components in orthogonal planes.
Large seamless austenitic stainless steel elbows are fabricated by spin forging/ rotary forming. A specially designed spin forging tool for forming on a hydrospin machine has been built for this purpose.

**B64-10001**

**NEW INFLATABLE LIFE RAFT IS NOT MONTIPABLE**

**BESCHORFF, P. L.**  
**SEW EAK, G. A.**  
**DATE- MAR. 1964**

**BEAN - SEE ALS Nasa-79-d-1083**

**B6C-4A**

A one-seamed lightweight life raft has three underwater ballast buckets as stabilizers. Notippable, it can be compactly packaged and inflated with carbon dioxide.

**B64-10006**

**SPEED-SENSING OFFICE AIDS CRANE OPERATORS**

**SPOK- INNOVATOR NOT GIVEN /WALLOPS/ DATE- OCT. 1964**

**WS-8**

So that crane operators can judge payload moves more accurately, a friction-driven multiflled can device energizes a buzzer and indicator lamp in the crane cab. The signal frequency of this speed sensor has a sensitivity to joint movement of 1/8 inch.

**B64-10011**

**METAL STRIP FORMS 21 FOOT BOOM, ROLLS UP FOR COMPACT STORAGE**

**SPOK- INNOVATOR NOT GIVEN /CANADIAN COMMERC CORP./ DATE- MAY 1964**

**GSFC-151**

An extendible boom, carrying three separate electric conductor tapes, can be rolled into a compact storage drum. The tape is curved in cross section so that the boom automatically forms a tube as it is extended.

**B64-10016**

**GUIDE FOR EXTRUSION DIES ELIMINATES STRAIGHTENING OPERATION**

**GROGER, C. A.**  
**HOOVER, R. J.**  
**DATE- NOV. 1964**

**LEWIS-152**

To prevent distortion of extruded metal, a guidance assembly is aligned with the die. As the metal emerges from the extrusion dies, it passes directly into the receiver and straightening tube system, and the completed extrusion is withdrawn.

**B64-10015**

**COMFORTABLE, LIGHTWEIGHT SAFETY HELMET HOLDS RADIO TRANSMITTER, RECEIVER**

**ATLAS, R. D.**  
**/A. A. AVIATION/ DATE- MAY 1964**

**MCC-53**

For two-way radio communication where safety gear is required, a lightweight helmet with few protrusions has been designed. The electronics components and power supply are mounted between the inner and outer shells, and resilient padding is used for the lining.

**B64-10021**

**PRESSURE TRANSDUCER 3/8-INCH IN SIZE CAN BE FAIRED INTO SURFACE**

**SCHAPP, R. J.**  
**/A. A. AVIATION/ DATE- MAY 1964**

**M0D-065**

To measure fluid pressure with minimum disturbance to fluid flow, a miniature pressure transducer can be lashed and faired into the test surface. Incorporated in the design are piezoresistive elements mounted on a diaphragm, which transforms pressure strains into an electrical signal.

**B64-10026**

**QUICK-ACTING CLUTCH DISMENGAGES IDLE DRIVE MOTOR**

**STARK, K. W.**  
**DATE- AUG. 1964**

**GSFC-143**

Positive-drive, no drag, over-running clutch has been developed to conserve power of idle motor in a low-power system using multiple drive motors. This device is useful where a number of shaft speeds are required with frequent shifting.
GREATER ACCURACY, QUICKER DATA
VINCENT, E. R. DATE- SEPT. 1964
JPL-555
Fast, accurate, multipressure measuring system, which employs a multiple port pressure scanning valve that connects a pressure transducer to many pressures, is described.

B64-10050
MODIFIED GAS BEARING IS ADJUSTABLE TO optimum STIFFNESS RATIO
EVANS, J. L. DATE- AUG. 1964
N-PS-145
Inexpensive and rapid-adjustments of the radial to axial stiffness ratio of a spherical gas bearing are achieved by a series of gas passages in the equatorial plane of the sphere which feed into orifices that can be readily changed in size.

B64-10058
INSULATED WELD TOOLING PERMITS UNIFORM, HIGH-QUALITY WELD
SPOR- INNOVATOR NOT GIVEN / N. AM. AVIATION/ DATE- AUG. 1964
MSC-62
The application of a ceramic material coating to all surfaces contacting parts to be welded permits greater weld strength than the conventional weld tooling method.

B64-10066
ENCEAPULATION PROCESS STERILIZES AND PRESERVES SURGICAL INSTRUMENTS
MONTGOMERY, L. C. NOBELLY, P. A. DATE- JULY 1964
JPL-64
Ethylene oxide is blended with an organic polymer to form a sterile material for encapsulating surgical instruments. The material does not bond to metal and can be easily removed when the instruments are needed.

B64-10069
METAL-BENDING BRAKE FACILITATES LIGHTWEIGHT, CLOSE-TOLERANCE FABRICATION
ERCOLINE, A. L. WILSON, K. B. DATE- OCT. 1964
ABC-25
A lightweight, metal bending brake ensures very accurate bends. Features of the brake that adapt it for making complex reverse bends to close tolerances are a pronounced relief or cutaway of the underside of the bodyplate combined with modification in the leaf design and its suspension.

B64-10084
MOLDED ELASTOMER PROVIDES COMPACT FERRITE-CORE HOLDER, SIMPLIFIES ASSEMBLY
HAYDEN, R. E. DATE- NOV. 1964
JPL-564
A ferrite-core holder, fabricated by casting an elastomer in a simple mold, simplifies the assembly of modular matrix units for computers. Use of the device permits the cores to be multiply threaded and soldered to terminals, without requiring intermediate terminals.

B64-10119
BUCKLE JOINS WEB STRAPS QUICKLY, ADJUSTS EASILY
WILKINSON, J. E. / CHANCE VOUGHT CORP./ DATE- JULY 1964
LANGLEY-21
To join web straps used to hoist heavy loads, a novel buckle permits two straps to be quickly joined and held by the combined forces of strap load tension and friction.

B64-10121
ELECTRONIC ASSEMBLY RACK PANELS SNAP ON AND OFF
BAILEY, J. W. DATE- JUNE 1964
GSF-59
Snap fasteners on each side of an electronic assembly rack blank panel give quick access to the interior. Guide pins extending from the inside surface easily slip into standard screw holes on the frame and provide additional support.

B64-10124
ATTACHMENT CONVERTS MICROSCOPE TO POINT SOURCE AUTOCLILLIMATOR
SELIGTA, P. J. DATE- JULY 1964
JPL-499
A low-power microscope or telescope provides a simple means of autocollimation. This is done by fitting the instrument with a light source to permit alignment from a reflecting surface normal to the optic axis of the instrument.

B64-10130
BEARING TRANSMITS ROTARY AND AXIAL MOTION
DON, W. F. FITZES, E. W. DATE- SEPT. 1964
LANGLEY-27
A low friction, two-component bearing comprised of a pair of ball-bearing races for transmitting rotary motion and an inner series of ball bearing assemblies for transmitting axial motion is described and should be useful in mechanisms such as stress-strain testing machines.

B64-10141
PNEUMATIC POWER IS TRANSMITTED THROUGH AIR BEARING
JOHNSON, H. R. WOBIG, O. A. DATE- JULY 1964
MSC-8
A more efficient method for supplying high pressure air to an air bearing and pneumatic equipment mounted on it has been developed. The system uses a conventional air bearing and an air-supported sphere with a central passage. High pressure air is channeled through it into the pneumatic equipment on the sphere.

B64-10145
FLEXIBLE FASTENER ALLOWS THERMAL EXPANSION
CHRILPLE, W. B. DATE- JUNE 1964
LANGLEY-40
A flexible fastener permits thermal expansion of model skin sections which are rigidly attached to supporting structures in wind tunnel tests. The device uses a modified ball joint contact between the fastener and a skin section.

B64-10164
UPSETTING BUTT EDGE INCREASES WELD-JOINT STRENGTH
VESCO, S. DATE- OCT. 1964
N-PS-175
Mechanical upsetting / a mode of cold forging / of butt edges to be welded is accomplished by the use of hydraulic rams and pressure rollers. The mechanical upsetting increases the thickness of the material in the heat-affected zone and compensates for the lower specific strength per unit thickness common to this area.

B64-10170
BALL BEARING USED IN DESIGN OF RUGGED FLOWMETER
MINKIN, K. L. DATE- JANUARY 1965
LEWS-159
A volumetric flowmeter which has a small magnet imbedded in the outer perimeter of the turbine wheel or in the bearing permits measurement of liquid flow rates in the presence of wide ranges and violent surges.

B64-10178
MACHINE TESTS CRUSH DURABILITY OF SHEET MATERIALS
JONES, L. K. STANFORD, B. B. DATE- NOVEMBER 1964
JPL-604
To test the crease resistance of sheet materials, the mid-section is folded over crease-control blades. One end is clamped to a motor-driven eccentric, the other to a spring, and durability is measured by the cycles required to produce failure.

B64-10185
THREADED HOOK FACILITATES SAFE RECOVERY OF HEAVY LOADS
ARTHUR, J. S. WILLIAMS, D. C. DATE- OCT. 1964
MSC-46
A C-shaped threading hook and shuttle mounted on a spring-loaded driving rod located inside the long-handled pole are developed for recovering
B64-10188
BLADE VALVE ISOLATES COMPARTMENT IN PIPE, OPERATE TO ALLOW GASES Afloat in the sea.
IMUS, R. DATE- NOV. 1964
JPL-585

Two thin blades are incorporated into a valve which, when closed, forms a sealed compartment in the shock-tube portion of a pipeline. When forced open by an actuator, gas flows through the system.

B64-10211
MICROMACHINING PRODUCES OPTICAL APERTURES TO MICRON DIMENSIONS
WALCH, A. J. DATE- OCT. 1964
GSFC-206

Micron dimensioned rectangular optical aperture is formed under a high powered toolmakers microscope by laying two knife edged blocks over the miniature knife-edged hole in the base.

B64-10223
TWO-PART VALVE ACTS AS QUICK COUPLING
MAC GLASHAW, W. F. DATE- NOV. 1964
JPL-678

A two-part valve simplifies the problem of filling large tanks from smaller ones. One part acts as a check valve and remains integral to the recipient system, while the other part is integral to the donor system.

B64-10249
INSTRUMENT ADJUSTMENT KNOB LOCKS TO PREVENT ACCIDENTAL MALADJUSTMENT
SPON- INNOVATOR NOT GIVEN /LEAR SIEGLEY CORP./ DATE- NOV. 1964
MFS-P-37

A device, incorporating a collar with a hexagonal opening which fits snugly over a hexagonal nut used to engage instrument panel components, keeps the adjustment knob locked. A quick release mechanism frees the knob for rotational adjustment.

B64-10272
VISCOUS-PENDULUM DAMPER SUPPRESSS STRUCTURAL VIBRATIONS
BEED, W. II. III DATE- NOV. 1964
LANGLEY-45

The viscous pendulum damper consists of a cylinder containing round trays on which round lead slugs rest. When assembled, the container is filled with a viscous liquid and attached, with axis vertical, to the structure. The device permits varying the damping of structural vibrations.

B64-10277
APPARATUS ALTERS POSITION OF OBJECTS TO FACILITATE DEMAGNETIZATION
BIRARD, G. WATSON, J. B. DATE- NOV. 1964
GSFC-234

An apparatus consisting of pulleys, a drive shaft and an inner compartment, in which components to be demagnetized are mounted, is constructed. Due to the speed ratio of the three frames, every point on a component in the inner compartment is cycled through an optimum locus in the demagnetization field.

B64-10278
SENSITIVE LOW-PRESSURE RELIEF VALVE HAS POSITIVE SEATING AGAINST LEAKAGE
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- NOV. 1964
WOC-051

A pilot-operated relief valve which provides positive seating against leakage in cryogenic systems is described. The principal advantage is that the pilot poppet is unaffected by variations in control pressures in the pilot cavity, and results in a more accurate sensing of inlet pressure conditions.

B64-10298
APPARATUS MEASURES VERY SMALL THRUSTS
SPON- INNOVATOR NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- NOV. 1964

WOC-008

Measurement of very small thrusts of an ion engine are made by mounting the engine on a platform supported by leaf springs which are loaded to have a zero spring constant. Measuring apparatus includes an inductive sensor, servo amplifier, and a counterthrust feedback system.

B64-10306
CONCEIVED GAS SYSTEM OPERATES SEMI-TRAILER BRAKES DURING WINCHING OPERATION
ZEPPER, W. E. DATE- DEC. 1964
JPL-0036

To move van-type semi-trailers into and out of confined spaces, an auxiliary braking system is mounted on a standard dolly converter. Compressed nitrogen is used to actuate the brakes which are used in conjunction with a power winch.

B64-10327
CONNECTOR SEALS FLUID LINES AT CRYOTHERMIST IC TEMPERATURES AND HIGH VACUUMS
KTAILS, W. T. PLATT, P. K. DATE- JAN. 1965
GSFC-253

A connector that will serve as a seal for fluids at cryogenic temperatures and in high vacuums was constructed by installing a metal disk between two sets of mating serrations to form two sealing surfaces. Compression on both sealing surfaces is ensured by spring action of the disk.

B64-10348
SAFETY RESTRAINER PREVENTS WHIPPING OF RUPTURED HIGH-PRESSURE HOSE
THOMPSON, W. E. DATE- DEC. 1964
LEWIS-99

The braid at each end of a standard electric cable pulley is modified to reinforce high pressure, flexible, fluid transfer hoses. This safety device acts as a restraint if the line ruptures.

B64-10406
POLYCHART CONTOUR PLOTTER ENABLES DATA EXTRAPOLATION FROM MULTIPLE PLOTTING CHARTS
SWINDALL, P. M. DATE- JUL. 1964
MFS-P-37

A polychart contour plotter is used to reduce the data from all 19 antenna pattern charts to a one-chart form.

B65-10003
ILLUMINATED DISPLAY PANEL IS EASILY CHANGED
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
MSC-108

Photographic negative placed between two plastic sheets and back-lighted in selected areas prepares illuminated multicolored display panels. The device is inexpensive, easily changed, and quickly fabricated.

B65-10007
THERMOCOMPRESSION BONDING PRODUCES EFFICIENT SURFACE-BARRIER DIODE
SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965
JPL-SC-066

Thermo-compression bonding of a gold wire to a gallium-arsenide wafer produces a quality surface barrier diode with fast recovery times. The properties of this combination may be useful in semiconductor devices.

B65-10008
SHOCK ABSORBER PROTECTS MOTIVE COMPONENTS AGAINST OVERLOADS
SPON- INNOVATOR NOT GIVEN /DOUGLAS AIRCRAFT CO./ DATE- JAN. 1965
WOC-092

Shock absorber with an output shaft, hollow gear, and a pair of springs forming a resilient driving connection between shaft and gear, operates when abnormally high torques are applied. This simple durable frictional device is valuable in rotating mechanisms subject to sudden overloads.

B65-10009
FORMING BLOCKS SPEED PRODUCTION OF STRAIN GAUGE GRIDS
BORN, J. L. GARDNER, D. E. DATE- FEB. 1965
LKB-192
A tool is designed which facilitates the forming of wire grids used in manufacturing strain gage grids. Flattening the grid wire by a cold working process produces a stabilized grid which can be readily handled for storage or shipment.

**B65-10014**

**USE OF TEAR RING PERMITS REPAIR OF SEALED MODULE CIRCUITRY**

**SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965**

**M-PS-210**

Improved packaging technique for modular electronic circuitry utilizes a tear ring which may be removed for repair and reused. The tear ring is put over the container and header to which the electronic circuit assembly has been attached.

**B65-10017**

**EXPLOSIVES ACTUATE NONMAGNETIC INDEXING DEVICE**

**BADER-SCHUER, J. P., JR. DATE- JAN. 1965**

**GSFC-237**

Nonmagnetic explosive-actuated indexing device creates magnetic field that can be tolerated by a sensor.

**B65-10019**

**WIDE-ANGLE SENSOR MEASURES RADIANT HEAT ENERGY IN CORROSIVE ATMOSPHERES**

**SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- JAN. 1965**

**M-PS-226**

Ellipsoidal cavity device measures radiant heat energy over wide incident angles in corrosive atmospheres. The instrument consists of a cavity in copper heat sink sealed with sapphire window to protect thermocouple.

**B65-10020**

**OPTICAL ARRANGEMENT INCREASES USEFUL LIGHT OUTPUT OF SEMICONDUCTOR DIODES**

**SPON- INNOVATOR NOT GIVEN /IBM/ DATE- JAN. 1965**

**JPL-SC-064**

Useful light output of semiconductor diodes increased by incorporating the diode in an integral reflector and lens assembly. This reduces normal reflection losses between the diode and the air.

**B65-10021**

**PICKUP DEVICE READS PRESSURES FROM PORTS IN ROTATING MECHANISMS**

**JANAS, B. DATE- JAN. 1965**

**SEE ALSO B64-10004**

**M-PS-158**

Indexing pickup monitors fluid pressures from ports at various angles on high or low speed rotating mechanism in operation. By a simple axial movement of a takeoff connector, angle changing takes place. This device can be adapted for electric current monitoring.

**B65-10022**

**KNOB LINKAGE PERMITS ONE-HANDED CONTROL OF SEVERAL OPERATIONS**

**CODDING, G. C. LAVENDER, C. E. DATE- JAN. 1965**

**M-SC-30**

Electromechanical device with single knob provides one-hand control of numerous electrical or mechanical functions. The principle of this design may have application to remote-control switching devices.

**B65-10027**

**FLUID-PRESSURE MEASUREMENT APPARATUS USES SHORT-LENGTH MANOMETER TUBES**

**DAVIS, B. I. DATE- MAR. 1965**

**LEWIS-28**

System of short length U-tube manometers with a proportionally divided reference pressure measures high fluid pressures.

**B65-10029**

**SEISMIC TRANSDUCER MEASURES SMALL HORIZONTAL DISPLACEMENTS**

**GREENWOOD, T. L. DATE- MAR. 1965**

**M-PS-81**

Pendular seismic transducer mounted on base plate measures small horizontal displacements of structures subjected to vibration where no fixed reference point is available. Enclosure of transducer in transparent plastic case prevents air currents from disturbing the pendulum balance.

**B65-10031**

**SPRING LOADED BEADED CABLE MAKES EFFICIENT WIRE PULLER**

**SPON- INNOVATOR NOT GIVEN /W. M. AM. AVIATION/ DATE- FEB. 1965**

**W-PS-108**

An efficient wire puller consists of a steel probe with a hole in one end fastened to a steel cable which is stiffened with metal beads compressed by spring loaded ferrules. This device allows cables to be pulled or forced around bends and elbows in pipes or tubes.

**B65-10035**

**OCEANIC TRANSPONDER PLATFORM HAS GOOD STABILITY**

**SPON- INNOVATOR NOT GIVEN /IBM/ DATE- FEB. 1965**

**M-PS-171**

Determination of space vehicle range and orbit is aided by a stable subsurface oceanic transponder. This device consists of a buoy held below the surface by a three-point system of anchors and mooring lines with an above surface antenna.

**B65-10037**

**IMPROVED SOLDER PROTECTS CRYSTAL DURING HIGH ACCELERATION AND IMPACT**

**LE VAY, K. H. DATE- FEB. 1965**

**JPL-463**

A plastic holder, which retains a crystal blank with standard silvered contacts sandwiched between two copper contacts, protects the crystal against vibration during high acceleration and impact.

**B65-10038**

**FASTENER PROVIDES COOLING AND COMPENSATES FOR THERMAL EXPANSION**

**SPON- INNOVATOR NOT GIVEN /AESDENTITY CORP./ DATE- FEB. 1965**

**NU-0003**

A fastener composed of a concentric bellows welded to two plates forming an annular cavity provides cooling and thermal expansion compensation in a high temperature environment.

**B65-10039**

**NONRESONANT SUPPORT FACILITATES VIBRATION TESTING OF STRUCTURES**

**SPON- INNOVATOR NOT GIVEN /BOEING CO./ DATE- FEB. 1965**

**M-PS-228**

An essentially frictionless four-point support system which utilizes bearings and pistons allows for determination of vibration frequencies of large structures. Retardation of vertical or horizontal motion is due to the viscous damping by the hydrostatic pressure of the oil or by adjustment of the gas volume in the accumulator.

**B65-10040**

**VALVE DESIGNED WITH ELASTIC SEAT**

**M-PS-1124**

**MECHANICAL VALVE DESIGN**

**DATE- FEB. 1965**

**JPL-482**

Absolute valve closure is accomplished by a machined valve with an axially annular channel which changes the outlet passage into a thin tubular elastic seat member with a retainer backup ring. The elasticity of the seat provides tight conformity to wall irregularity.

**B65-10082**

**FLUID SUPPORT SYSTEM PROTECTS THERMALY AND DYNAMICALLY LOADED MODELS**

**CROPLER, W. B. DATE- FEB. 1965**

**LANGLEY-39**

The design of an eight legged flexure support system which permits differential thermal expansion of thin skinned models subjected to high temperatures is done by setting the lengthwise axes of the supporting legs approximately normal to the line of absolute motion of the model supported.
B65-10049
SCREW LOCKING CORPS QUICKLY AND EASILY CINCHED
SPOW= INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE= FEB. 1965
NU-0009
A tool consisting of a positioning pin which is
engaged in the screw and depressed until the tool
body contacts the locking cup permits quick and
neat crimping.

B65-10053
SEAL ALLOWS BLIND ASSEMBLY AND THERMAL
EXPANSION OF COMPONENTS
SPOW= INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE= FEB. 1965
NU-0005
The design of a seal consisting of two concentric
cylinders with outer and inner threaded elements
attached to each side of the system interface
withstanding large temperature changes and allows
for blind assembly.

B65-10060
NEW ALLOY BRAZES TITANIUM TO STAINLESS STEEL
SPOW= INNOVATOR NOT GIVEN / N. A. AVIATION/ DATE=
MAR. 1965
MSC-102
Brazing alloy of palladium, silver and silicon is
used in brazing titanium to stainless steel without
embrittling metals at the brazed interfaces.

B65-10063
CERAMIC-FOATED BOAT IS CHEMICALLY ERECT,
PROVIDES GOOD HEAT TRANSFER
SPITZER, C. R. DATE= MAR. 1965
LANGLEY-90
Refractory metal foil sprayed with ceramic coating
serves as evaporating boat for inorganic
materials. The high thermal conductivity of this
boat makes it useful with ohmic heaters.

B65-10064
DEVICE MEASURES CURVED SURFACE FINISH ON
GEAR TEETH
SPOW= INNOVATOR NOT GIVEN /G/ DATE= MAR. 1965
W00-112
Measurement of the curved surface finish on gear
teeth is made by a device used in conjunction
with a conventional profilometer.

B65-10070
SIMPLE SCALE INTERPOLATOR FACILITATES
READING OF GRAPHS
FITZERMAN, D. K., JR. DATE= MAR. 1965
LANGLEY-004
Simple transparent overlay with interpolation
scale facilitates accurate, rapid reading of graph
coordinate points. This device can be used for
enlarging drawings and locating points on
perspective drawings.

B65-10074
NITROGEN DIOXIDE PRODUCED BY SELF-SUSTAINED
PYROLYSIS OF NITROUS OXIDE
SABOL, A. F. DATE= MAR. 1965
LANGLEY-32
Apparatus is developed for achieving continuous
self-sustaining pyrolysis reaction in the
production of nitrogen dioxide from nitrous oxide.
The process becomes self-sustaining because of
the exothermic reaction and the regenerative
heating of the gases in the pyrolysis chamber.

B65-10075
TENSION IS SERVO CONTROLLED IN FILM ADVANCE
SYSTEM
SPOW= INNOVATOR NOT GIVEN /M. OPT. CO./ DATE=
MAR. 1965
LANGLEY-54
Servocontrol device feeds film into a roller
system. Two linear potentiometers connected to
spring-loaded tension rollers furnish servo input
signal. Can be used in any continuous material
transport system.

B65-10077
NEW COUPLING COEFFICIENTS FOR SHAFT
DISALIGNMENT
SPOW= INNOVATOR NOT GIVEN /WESTINGHOUSE ELEC.
CORP./ DATE= MAR. 1965
NU-0013
Coupling of splined shafts with slight
misalignment is accomplished by means of a crown
spline and sleeve arrangement.

B65-10078
FABRICATION METHOD PRODUCES HIGH-GRADE
ALUMINA CRUCIBLES
PAIGN, N. DATE= MAR. 1965
N-P-216
Alumina-binder mixture, which has been dry pressed
in a die using a setting punch, forms crucibles of
various configurations and after firing results in
a ceramic structure for use in diffusion
experiments.

B65-10090
COMPACT ASSEMBLY GENERATES PLASTIC FOAM,
IMPLEMENTS FLUORINATION BAG
DATE= APR. 1965
LANGLEY-96
Device for generating plastic foam consists of an
elastomeric bag and two containers with liquid
resin and a liquid catalyst. When the walls of
the containers are ruptured the liquids come into
contact producing foam which inflates the
elastomeric bag.

B65-10094
CUTTER AND STRIPPER REDUCES COAXIAL CABLE
CONNECTION TIME
THOMPSON, F. R. DATE= APR. 1965
ARC-40
Consisting of three pivoted members, this hand
cutter and stripper positions to cut shielding and
insulation at the right distance and depth.
Coaxial cable is prepared quickly and accurately
for connector attachment.

B65-10098
CONTACT STRESSES CALCULATED FOR MINIATURE SLIP
RINGS
ALBRIGHT, P. G. DOMERST, K. E. BOSTON, J. C.
DATE= APR. 1965
N-75-260
Using mathematical formulations to plot the graphs
of the contact preload versus the Hertzian load,
calculations of unit loading of the preloaded
brushes on slip rings can be made. This optimizes
the design of contact brushes and miniature slip
rings.

B65-10099
SLIT FEEDS REDUCE UNBALANCED TORQUES IN
GAS-LUBRICATED BEARINGS
RATSH, P. F. LADE, J. H. DATE= APR. 1965
REAN-5
506-10123 AND 506-10050
JFL-264
Gas-lubricated journal bearing with narrow radial
slots forming circular gas-feed passages regulates
gas flow in precision instruments, asymmetrical
flow pattern and unbalanced torques are prevented.

B65-10101
JIG AND FIXTURE AID FABRICATION OF TUNGSTEN
RIVETS
CHATTIN, J. H. DATE= APR. 1965
LWINS-105
Jig and fixture that holds several lengths of
tungsten rod produces rivets simply and
inexpensively. The apparatus allows sufficient
tungsten to be exposed for heating and forging
into a rivet head.

B65-10104
LEAF-SPRING SUSPENSION PROVIDES ACCURATE
PARALLEL DISPLACEMENTS
MC GREG, R. A. DATE= APR. 1965
JFL-480
Leaf-spring suspension device with the springs
symmetrically mounted on suspension frames
provides accurate parallel displacements of loads
over short linear distances.

B65-10109
ROCK BIT REQUIRE NO FLUSHING MEDIUM TO
MAINTAIN DRILLING SPEED
SPONSOR: INNOVATION NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- APR. 1965
JPL-WOC-031
Steel drill bit having terraces of teeth interrupted by spiral grooves with teeth permitting the boring of small holes through rock with low power. The cuttings are stored in a chamber behind the cutting head. Could be used as sampling device.

B65-10110 MAGNETS POSITION X-RAY FILM FOR WELD INSPECTION
SIRON: INNOVATION NOT GIVEN /DUGLAS AIRCRAFT CO./ DATE- APR. 1965
WAGNER, R. P. DATE- APR. 1965
W-PS-253
Film-positioning device uses magnets to hold x-ray film for weld inspection in inaccessible structures, such as tanks, where access to interior points is difficult.

B65-10111 PROBE TESTS MICROWELD STRENGTH
SIRON: INNOVATION NOT GIVEN /DUGLAS AIRCRAFT CO./ DATE- APR. 1965
WAGNER, R. P. DATE- APR. 1965
W-PS-253
Probe is developed to test strength of brazed or microwelded joints. It consists of a spring which may be adjusted to the desired test pressure by means of a threaded probe head, and an indicator lamp. Device may be used for electronic equipment testing.

B65-10113 SHOCK MOUNT ISOLATES PRESSURE TRANSDUCERS FROM VIBRATION
SIRON: INNOVATION NOT GIVEN /DUGLAS AIRCRAFT CO./ DATE- APR. 1965
ROGERS, R. S., JR. DATE- APR. 1965
JPL-631
Pressure transducer is isolated from shock and vibration forces by a pressure-compensated shock mount. Silicone elastomer O-rings within the shock mount serve as shock and vibration-damping pads.

B65-10114 AVERAGING PROBE REDUCES STATIC-PRESSURE SENSING ERRORS
SIRON: INNOVATION NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- APR. 1965
LANGLEY-36
Averaging the high and low pressure admitted to a probe through circumferentially spaced orifices provides a probe that accurately senses the free-stream static pressure on an aerodynamic surface. This surface does not have a preferred angle of inclination to the direction of the airstream cross flow.

B65-10115 INERT GAS SPRAYING DEVICE AIDS IN REPAIR OF HAZARDOUS SYSTEMS
SIRON: INNOVATION NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- APR. 1965
TILEHA, S. DATE- APR. 1965
LEWIS-82
Inert gas spraying device aids in safely making mechanical repairs to a cryogenic fluid system without prior emptying of the system. This method can be applied to any natural or bottled gas system and with modifications to gasoline transports.

B65-10116 LOW-COST TOOL MINIMIZES DAMAGE TO O-RINGS DURING INSTALLATION
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- APR. 1965
MSC-190
Tapered cylindrical tool enables O-ring installation over threaded fasteners without seal damage.

B65-10121 HYDRO CONTROL VALVE IS INDEPENDENT OF PRESSURE DROP
SIRON: INNOVATION NOT GIVEN /THIEGEL CHEM. CORP./ DATE- APR. 1965
JPL-WOC-039
Remote control of fluid flow in a low-power system is established by a flow control valve with a flapper and nozzle flow control. Constant rates are maintained despite fluctuating pressure across the valve.

B65-10126 COLLAPSEABLE TRUSS STRUCTURE IS AUTOMATICALLY EXPANDABLE
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- MAY 1965
GSFC-230
Coil springs wound with maximum initial tension in a three-truss, closed loop structure form a collapsible truss structure. The truss automatically expands and provides excellent rigidity and close dimensional tolerance when expanded.

B65-10130 COLLAR POSITIONS STEEL STOCK USED TO FORM COIL ON HANDREX
SIRON: INNOVATION NOT GIVEN /HUGHES AIRCRAFT CO./ DATE- APR. 1965
BLAKE, C. J. DATE- MAY 1965
JPL-198
Guide collar fastened to a mandrel helps form a coil of strip sheet metal stock. The collar maintains the strip stock in its proper position during winding of each turn of the coil.

B65-10131 APPARATUS FACILITATES PRESSURE-TESTING OF METAL TUBING
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- MAY 1965
LEWIS-174
Burst-testing of refractory metal tubing is conducted in an apparatus in which tubular specimens are firmly gripped and test pressures and temperatures are applied. Porosity, flaw, and fatigue-stress rupture are also tested.

B65-10135 COILED SPRING MADES SELF-LOCKING DEVICE FOR THREADED FASTENERS
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- MAY 1965
MSC-149
Coiled spring device provides both easy self-locking and disassembly for screw-threaded fasteners. When the fastener turns in one direction the spring grips one of the fastener threads and releases when the fastener turns in the opposite direction.

B65-10141 INTEGRAL RIBS FORMED IN METAL PANELS BY COLD-PRESS EXTENSION
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- MAY 1965
BRADIE, E. R. SCHERER, R. B. DATE- MAY 1965
M-PS-230
Metal panels with integral ribs are formed by the cold-press extrusion method without material loss. Integral ribs in aluminum-alloy panels are formed by this process.

B65-10144 LIGHTWEIGHT LOAD SUPPORT Serves AS VIBRATION DAMPER
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- MAY 1965
LATHEAN, W. E. DATE- MAY 1965
JPL-661
Glass directional antennas and solar panels can be supported by a thin-walled tubular str. Silicon grease is used as the vibration-damping medium and a coil spring supports static loads.

B65-10147 IMPROVED FLUID CONTROL VALVE EXTENDS DIAPHRAGM LIFE
SIRON: INNOVATION NOT GIVEN /H. AM. AVIATION/ DATE- MAY 1965
MAC GLASHAN, W. P. DATE- MAY 1965
JPL-345
Wear resistance of flexible diaphragms in fluid control valves is increased by incorporating a soft rubber washer at the bottom of the piston, a flexible buffer between the diaphragms and the valve seat, and a fluid feedback arrangement. The stress and wear of components at the valve seat
are minimized.

**B65-10148**

**BIDIRECTIONAL TORQUE FILTER ELIMINATES BACKLASH**

BAKER, R. VEILLETTA, L. WILLIAMS, S. DATE- MAY 1965

CABTILEVEB SPRIBGS

BIDIRECTIONAL TORQUE FILTER ELIMINATES BACKLASH.

**B65-10149**

**CASTILE LEVER SPRINGS MAINTAIN TENSION IN THERMALLY EXPANDED WIRE**

TERSELIC, R. A. DATE- MAY 1965

LEWIS-136

Two deflected cantilever springs strung with wire provide force displacement compensation to maintain tension in the wires as they undergo thermal expansion. This method of maintaining tension in thermally expanded wires is used in electric space heaters and residential heat exchangers.

**B65-10150**

**METAL BELLOWS CUSTOM-FABRICATED FROM TUBING**

DATE- MAY 1965

LEWIS-192

Manual assembly mounted in a lathe chuck is used with a forming wheel to roll-form bellows from standard sheet metal tubing. Spaces and mandrels of various sizes custom-fabricate bellows of any desired dimensions.

**B65-10153**

**TITANIUM TREATMENT IMPROVES BRAZED JOINTS**

SPOR- INNOVATOR NOT GIVEN /EN/ DATE- MAY 1965

MSC-127

Pretreating metal with a thin coating of pure titanium improves the wettability and flow of brazing alloys. This can be used in the manufacturing of aviation and aerospace components where high strength-to-weight ratio must be achieved.

**B65-10158**

**SYSTEM MEASURES UNIDIRECTIONAL FORCES, EXCLUDES EQUIDIRECTION FORCES**

BEHRENS, D. E. HOLLAND, D. E. DATE- MAY 1965

LEWIS-170

System measures unidirectional force without interference from other directional forces. The measuring apparatus is mounted so that it only moves vertically and is constrained from horizontal and rotational movement. This system can be used to accurately measure small forces in one direction, or as an analytic balance.

**B65-10160**

**LOW-COST SEAL COMPENSATES FOR SURFACE IRREGULARITIES**

SPOR- INNOVATOR NOT GIVEN /AEROJET-GEN. CORP./ DATE- JUN. 1965

NO-0016

Sealed assembly consisting of a steel V ring and a perforated tubular fluorocarbon polymer O ring provides a barrier to gaseous and liquid hydrogen under high pressure.

**B65-10163**

**DEVICE DISCONNECTS several COUPLINGS SIMULTANEOUSLY**

FORDEN, A. K. DATE- JUN. 1965

JPL-226

Actuator assembly disconnects electric cable and fluid-line coupling from a rocket. The disconnector incorporates interconnected hydraulic cylinders which effect an equal and simultaneous displacement of pistons upon admission of compressed air through a solenoid control valve.

**B65-10166**

**SEAL PLATE DESIGN ASSURES STRUCTURAL SEPARATION BY MILD EXPLOSIVE**

SPOR- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUN. 1965

MSC-137

Splice plate with mechanical joint is separated by expanding gases of a mild detonating fuse. The gas pressures of the low-yield explosive eliminate component fragmentation and achieve excellent control of the separation line.

**B65-10168**

**LATE ATTACHMENT USED TO MACHINE ELLIPTICAL CONES**

AILEN, J. H., SR. WOIG, G. A. DATE- JUN. 1965

MSC-100

Close-tolerance elliptical cones are fabricated by cutting-tool guide assembly used with conventional tracer cartridge on turret lathe accurately produced in two machine operations.

**B65-10170**

**METAL PARTS HYDROZIZED BY EXPLOSIVE FORCE**

SPOR- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- JUN. 1965

MSC-154

Large metal parts are sized by a charge exploded above a sealed container filled with evacuated die and water. Explosive hydrozizing achieves close dimensional tolerances, eliminates damage to the surface, and allows longer force application and more even pressure distribution.

**B65-10174**

**PRESSURE TRANSDUCER SYSTEM IS FORCE-BALANCED, HAS DIGITAL OUTPUT**

SPOR- INNOVATOR NOT GIVEN /M. A. AVIATION/ DATE- JUN. 1965

MSC-154

Forced-balance pressure transducer and associated circuitry controls pressure testing of space equipment systems under actual operating conditions. The transducer and circuitry automatically converts the sensed pressure to digital form.

**B65-10176**

**DEVICE ENABLES MEASUREMENT OF MOMENTS OF INERTIA ABOUT THREE AXES**

CONN, J. DATE- JUN. 1965

GEC-49

Device measures moments of inertia of an irregularly shaped mass about three mutually perpendicular axes by the standard pendulum and torque methods. A fixture suspends the test mass at one point and can be adjusted to allow oscillation of the mass.

**B65-10177**

**IMPORT-HEAT PATTERN SPEE SHELL-MOLDING OF ALUMINUM PARTS**

SPOR- INNOVATOR NOT GIVEN /ALABAMA UNIV./ DATE- JUN. 1965

MSC-303

Half patterns cast from commercial epoxy resin containing aluminum powder are used for shell-molding of aluminum parts. The half patterns are cast in plastic molds of the original wooden patterns. Ten serviceable sand resin molds are made from each epoxy pattern.

**B65-10180**

**NEW NUT AND SLEEVE IMPROVE FLARED CONNECTIONS**

GARRARD, J. SR. DATE- JUN. 1965

MSC-194

Improved nut and sleeve of standard stainless steel flared tube connection allows forces on the mating surfaces to be uniformly applied. This can be applied to pressurized fluid systems such as refrigeration, air conditioning, and hydraulic systems.

**B65-10181**

**HAND TOOL BENDS COMPONENT LEADS ACCURATELY**

SPOR- INNOVATOR NOT GIVEN /CHRYSLER CORP./ DATE- JUN. 1965

MSC-303

Hand-operated die set bends, without damage, electrical component leads to perfectly match holes in printed circuit board. This tool speeds up printed circuit fabrication and reduces the number of component rejections.

166
B65-10185

DEPLOYED BOSES may be stowed on drum. These systems eliminate torsion in deployed hoses. 

B65-10214

WIRE MESH ISOLATOR PROTECTS SENSITIVE ELECTRONIC COMPONENTS. 

B65-10191

EXTENDIBLE COLUMN CAN BE STOWED ON DRUM. 

B65-10219

FLEXIBLE MAGNETIC PLANNING BOARDS ARE EASILY TRANSPORTED. 

B65-10192

SPHERICAL HOPPER COILS ARE HAND-FORMED WITH FIXTURE. 

B65-10222

INEXPENSIVE CHECK VALVE IS INSTALLED IN STANDARD AN FITTINGS. 

B65-10198

SELF-ALIGNING FIXTURE USED IN LATHE CHUCK JAW REPLACING. 

B65-10227

DIAPHRAGM ELIMINATES LEAKAGE IN CRYOGENIC FLUID DUCT COUPLING. 

B65-10203

ELECTRICAL CABLE CONNECTOR-CLAMP HAS SMOOTH EXTERIOR SURFACE. 

B65-10229

SCOOP ATTACHMENT MAKES HELICOPTER RECOVERIES EASIER AND SAFER. 

B65-10205

BALL AND SOCKET JOINTS PROVIDE ACCURATE BIAXIAL GIMBAL. 

B65-10230

HYDRAULIC DEVICE PROVIDES ACCURATE DISPLACEMENTS TO MICROINCHES. 

B65-10207

FLUID CHECK VALVE HAS FAIL-SAFE FEATURE. 

B65-10231

HANDTOOL FACILITATES EXTRACTION OF CIRCUIT MODULES. 

B65-10210

TIN-BASED GLASS DIES SPEED FORMING OF LARGE METAL SHEETS. 

B65-10235

ANGULAR GLASS TUBING DRAWN FROM ROUND TUBING. 

Dispensing system uses a rotating drum, transfer arm, and stationary drum to deploy, reel in, and store an attached hose. This system eliminates torsion and minimizes strain and wear of flexible hoses, is used for handling flexible cables that have one end permanently attached to an outlet or connector.

Column formed from a series of segments held together by an internal spring or cable can be coiled on a drum or extended into a rigid structure. This storable coil is useful in boring for small samples and supporting electrical and optical sensors.

Column clamp for hand fabricating spiral coils of various lengths from flat strip stock. This tool is used to make the cable and provides for connecting it to a standard electrical connector.

Check valve with a cylindrical flanged tube body is used in standard AN fittings. The valve also has an easily removable spring-loaded piston.

Joint coupling with nickel steel diaphragm of low hydraulic drive device translates microinch deviation measurements into precise corrective displacements. The unit is driven by a servomotor activated by the output of an attitude sensing device.

Check valve ensures unidirectional fluid flow and, in case of failure, vents the downstream fluid to the atmosphere and gives a positive indication of malfunction. This dual valve consists of a master check valve and a fail-safe valve.

Fiberglass tooling dies accelerate forming of large metal sheets. The dies, fabricated to fit over and fasten to the side bands, are lightweight, quickly replaced and have nongalling surfaces.

Easily transportable preprinted magnetic planning boards are made by coating thin sheet steel with clear plastic. Flexible magnetic boards used with paper charts are constructed from close mesh steel screen.

Duct coupling with nickel steel diaphragms of low thermal expansivity is leakproof when used with cryogenic fluids. The diaphragm, located between the two flanges of the coupling, reduces axial shrinkage at the coupling flanges to a minimum.

This provides an accurate biaxial gimbal which will operate in continuous motion without backlash.

Round glass tubing softened in a furnace is drawn over a shaped plug or mandrel to form shapes with other than a circular cross section. Irregularly shaped tubing is formed without limitations on tube length or wall thickness.
B65-10236
BURST DIAPHRAGM PROTECTS VACUUM VESSEL FROM INTERNAL PRESSURE TRANSIENTS
BARTELL, G. M. HOWARD, E. A. DATE- AUG. 1965
JPL-690
Supported dual-mode burst diaphragm protects vacuum vessels from transient internal pressures. It forms the interface between the vacuum in the vessel and an external pressure.

B65-10241
SHOCK ABSORBER OPERATES OVER WIDE RANGE
CREASY, J. P. JONES, J. C. DATE- AUG. 1965
MSC-160
Piston-type hydraulic shock absorber, with a metered damping system, operates over a wide range of kinetic energy loading rates. It is used for absorbing shock and vibration on mounted machinery and heavy earth-moving equipment.

B65-10245
CAPTIVE NUT FASTENER SECURELY JOINS BRITTLE MATERIALS
SACCOCCIO, R. M. WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
ND-0028
Extension tube captive nut with a standard bolt joins assemblies with an inaccessible nut location. This fastener is excellent for joining brittle materials.

B65-10246
TERMOCOUPLE-TO-INSTRUMENTATION CONNECTOR FEATURING QUICK ASSEMBLY
HAWWA, E. WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
ND-0022
Flexible thermocouple leads are connected to flexible instrumentation leads by a crimping and bridging process. This method eliminates the need for expensive transition sections and can be accomplished in about five minutes.

B65-10248
SYSTEM TRANSITS MECHANICAL VIBRATION INTO HAZARDOUS ENVIRONMENT
ABRANOVICH, D. A. WESTINGHOUSE ELEC. CORP./ GAAL, A. S. DATE- AUG. 1965
ND-0025
Vibration transducers are tested in a hazardous environment using a single axis transmission system with an electromagnetic shaker table and vibrating wires which drive identical rocker arms, one in the test cell and the other outside. This system can be modified for a multiaxis configuration.

B65-10251
CONTROL OF COMPONENT DIFFERENTIAL HARDNESS INCREASES BEARING LIFE
ANDERSON, W. J. FARKER, E. J. ZARETSKY, E. V. DATE- AUG. 1965
LEWIS-190
Bearing fatigue life is maximized when the bearing ball or roller hardness is between one and two points greater than that of the bearing race as measured on the Rockwell C scale.

B65-10254
RETRACTABLE OPERATED CLAMPING TOOL HAS POSITIVE GRIP
ADCOCC, S. A. WESTINGHOUSE ELEC. CORP./ SWALD, A. W. DATE- AUG. 1965
ND-0020
Jaw-type clamping tool inserts or removes objects in a hazardous environment. It has a strong, positive gripping force which is remotely operated by means of a wedge-screw mechanism.

B65-10256
HOLLOW PLASTIC HOOPS PROTECT TERMOCOUPLE IN STORAGE AND HANDLING
OSMOND, L. E. WESTINGHOUSE ELEC. CORP./ DATE- AUG. 1965
ND-0023
Thermocouples are shipped and stored in hollow plastic hoops. The hoop is an inexpensive but efficient method of protection.

B65-10262
ROTATING HOLDERS PERMITS ACCURATE GRINDING OF METALLURGICAL MICROSAMPLES
CHARNER, D. L. DATE- SEP. 1965
LEWIS-131
Metallurgical microsamples are held in a fixture which rotates the sample across a rotating grinding wheel. The dual rotation results in a level, flat surface on the sample.

B65-10266
ONE-SHOT VALVE MAY BE REMOTELY ACTUATED
KARL, S. HOWELL AIRCRAFT CO./ DATE- SEP. 1965
W00-125
One-shot valve, with spring-loaded plunger and sealing diaphragm, incorporates an emergency release actuated by a remote sensor. The plunger is released by the electrical melting of a fuse link and pierces the valve seal. The valve lowers fluid pressure in a container without losing the contained fluid.

B65-10285
DIFFERENTIAL PRESSURE GAUGE HAS FAST RESPONSE
WEBB, F. S. ARMOUR ENG. FOUND./ DATE- SEP. 1965
K-FS-358
Differential pressure gauge with semiconductor type strain gage elements measures rapidly changing pressure. Output of the strain gage elements is a dc voltage that is directly proportional to the pressure difference being measured.

B65-10312
AIR BRAKE-DYNAMOMETER ACCURATELY MEASURES TORQUE
SPOON- INNOVATOR NOT GIVEN /LEWIS/DAY- OCT. 1965
LEWIS-163
Air brake-dynamometer assembly combines the principles of the air turbine and the air pump to apply braking torque. The assembly absorbs and measures power outputs of rotating machinery over a wide range of shaft speeds. It can also be used as an air turbine.

B65-10319
BRASS-REMEDY METAL WELDING OR BRAZING WITH TUNGSTEN INERT GAS EQUIPMENT
WISNER, J. P. DATE- OCT. 1965
LEWIS-219
Appropriate brazing metals and temperatures facilitate the welding or brazing of base metals in vacuum and dynamic load conditions by a line-pressure furnace.

B65-10323
VOLUMETRIC SYSTEM CALIBRATES METERS FOR LARGE FLOW RATES
SPRO- INNOVATOR NOT GIVEN /LEWIS/DAY- SEP. 1965
W00-130
Volumetric system calibrates meters used for large fluid flow rates. The system employs trip probes and equipment to time the flow of liquid from a tare vessel into a calibrated vessel. This calibration system is used in the petroleum and chemical industries.

B65-10326
ROUGH SURFACE IMPROVES STABILITY OF AIR-SOUNDING BALLOONS
SCOGGINS, J. E. DATE- NOV. 1965
K-FS-320
Aerodynamic stability of balloons used for measuring the intensity and direction of atmospheric winds at various elevations is improved by incorporating a rough surface on the balloons. The rough-surfaced balloon is useful for collecting wind profiles with other meteorological data.

B65-10327
PRESSURE RESPONSIVE SEAL HANDLES STATIC AND DYNAMIC LOADS
RAVES, J. W. /AM. AVIATION/ DATE- NOV. 1965
GSFC-441
Ported ball valves are sealed under both static and dynamic load conditions by a line-pressure seal.
responsive double-acting seal. The top of the seal engages the ported ball at the outer circumferential edge of the seal upper end, and the bottom of the seal seats on a flat circular land with a continuous wall.

B65-10334
FREQUENCY DIVIDER IS FREE OF SPURIOUS OUTPUTS
MC DERMOND, D. DATE- NOV. 1965
GSFC-368
Frequency divider provides sixteen output states free of spurious pulses from four input circuits. The input is binary coded, and a change of one in the input only changes the number of output states by one.

B65-10338
INERT-GAS WELDING AND BRAZING ENCLOSURE
FABRICATED FROM SHEET PLASTIC
NISBER, J. F. DATE- NOV. 1965
LEWIS-220
Custo-fabricated plastic bag maintains an inert-gas atmosphere for welding and brazing certain metals. The bag fits over part of the workpieces and the welding and brazing tools. It is also used for metal brazing and fusion plating which require an inert-gas atmosphere.

B65-10339
DISK CALCULATOR INDICATES LEGIBLE LETTERING
SIZE FOR SLIDE PROJECTION
BULTHOFF, B. E. DATE- NOV. 1965
GSFC-409
Hand-operated disk calculator indicates the minimum size of letters and numbers in relation to the width and height of a working drawing. The lettering is legible when a slide of the drawing is projected.

B65-10342
ELECTROMAGNETIC HAMMER REMOVES WELD DISTORTIONS FROM ALUMINUM TANKS
SCHWINGBAHER, R. J. DATE- NOV. 1965
N-SF-207
Distortions around weld areas on sheet-aluminum tanks and other structures are removed with a portable electromagnetic hammer. The hammer incorporates a coil that generates a controlled high-energy pulsed magnetic field over localized areas on the metal surface.

B65-10346
IMPROVED POPPET VALVE PROVIDES POSITIVE DAMPERS SEALS
WALLACE, W. D. DATE- NOV. 1965
N-FS-293
Soft-seat poppet valve provides positive closure against fluid without damage to the seating surface on repeated cycling. It incorporates two compressible soft rings and a retaining ring of hard metal. Sealing is effected when the poppet seat is forced into intimate contact with a mating surface on one of the soft rings.

B65-10348
STANDOFF TOOL SPEEDS PLACEMENT OF PRECISION-FIT ELECTRICAL TERMINALS
MOORE, D. J. SKIFSTROM, W. W. /SPACE TECHNOL.
LaRS./ DATE- NOV. 1965
WOO-029
Hand operated tool inserts terminals through compartment walls in electronic equipment. The tool is in the configuration of a modified pair of pliers with jaws consisting of a split chuck and serial.

B65-10351
HYDRAULIC DRIVE SYSTEM PREVENTS BACKLASH
ACORD, J. D. DATE- NOV. 1965
JEL-371
Hydraulic drive system uses a second drive motor operating at reduced torque. This exerts a relative braking action which eliminates the acrnal gear train backlash that is intolerable when driving certain heavy loads.

B65-10356
Fasterer distributes stress evenly from SANDWICH-PANEL-HINGE ITEMS
SHAPING, J. /N. AM. AVIATION/ DATE- NOV. 1965
MSC-236
Items are attached externally to cellular-core sandwich panel by a fastener anchored in the panel by a constant amount of adhesive. The changes caused to the core cells and skin sheets are minimized.

B65-10360
PORTABLE TOOL REMOVES BURRS FROM PIPE AND TUBING
HEADLEY, C. A. /MCDOUGALL AIRCRAFT CORP./ DATE- NOV. 1965
MSC-237
Portable tool cleanly removes burrs that remain on tubing when it is cut. It restores the cut end to its original configuration, and carries away all chips and pieces. This tool is used in places of limited access where a larger tool could not be used.

B65-10367
FLEXIBLE PLASTIC RING ASSEMBLY MAKES DURABLE SHAFT SEAL
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- DEC. 1965
WOO-227
Stacked flexible rings interleaved with solid metal rings of smaller width provide a durable seal ring for rotating shafts used in vacuum or pressure pumps.

B65-10370
BRAZING METHOD PRODUCES SOLID-SOLUTION BOND BETWEEN REFRACTORY METALS
SPON- INNOVATOR NOT GIVEN /AVCO CORP./ DATE- DEC. 1965
LEWIS-212
Brazing two refractory metals by diffusion bonding minimizes distortion and avoids excessive grain growth in the metals. This method requires the selection of an interface metal that forms intermediate low-melting eutectics or solid solutions with the metals to be brazed.

B65-10371
UNIVERSAL HELIXES JOINT RESTRAINT PERMITS ANGULAR AND OFFSET MOVEMENT
KUHN, R. F., JR. /N. AM. AVIATION/ DATE- DEC. 1965
WOO-102
Universal joint-type restraint that employs ball joints permits maximum angular and lateral offset movement in a bellows joint without danger of rupture or pressure drop in the line. It is used in high pressure and high temperature applications in refineries, steam plants, or stationary power plants.

B65-10375
PORTABLE TOOL CLEANS PIPES AND TUBING
HEADLEY, C. A. /MCDOUGALL AIRCRAFT CORP./ DATE- NOV. 1965
MSC-238
Portable tool cleans and polishes the external surfaces of tubes and pipes without contaminating the interior areas with loose particles. The tool is driven by an electric drill and is connected to a vacuum source that removes debris resulting from the cleaning and polishing action.

B65-10378
REINFORCEMENT CORE FACILITATES O-RING INSTALLATION
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- DEC. 1965
WOO-226
Reinforcement core holds O-ring in place within a structure while adjacent parts are being assembled. The core in the O-ring adds circumferential rigidity to the O-ring material. This inner core does not appreciably affect the sectional elasticity or gland-sealing characteristics of the O-ring.
LANGLEY-145

Threaded split ring connector quickly and cleanly separates two structural members by remote control. The connector is retained in an expanded position by spring plates that are deflected and held by an explosive bolt. Ignition of the bolt effects the separation. This conceptual approach lends itself to various configurations and sizes of structures.

B65-10305

BACK MOUNT DEVICE QUICKLY INSERTS OR EXTRACTS CHASSIS UNITS

HAZETINE, L. N. /ZIMMERMAN, P. A. /COLLINS RADIO CO./ DATE- DEC. 1965

Mc-294

Rack mounted chassis units are quickly inserted or extracted by a device which is driven in either direction by turning a simple hand crank. This device is used in aircraft and water craft.

B65-10306

DRILL BIT DESIGN ENSURES CLEAN HOLES IN LAMINATED MATERIALS

TILLOTSON, W. N. /DOUGLAS AIRCRAFT CO./ DATE- DEC. 1965

Mc-208

Drill bit eliminates delamination when drilling laminated material. It cuts or shaves the material as it progresses through it. The bit acts to hold down the material during drilling to prevent tearing or ripping and produces a clean, smooth and defect-free hole. It prevents chipping in stretched plastic windows for high-altitude, high-performance aircraft.

B65-10308

STRAINER FITS INSIDE FLARED-TUBE FITTINGS

PAKER, C. J. DATE- DEC. 1965

LANGLEY-160

Cylindrical wire-mesh strainer which fits inside flare-tube fittings is readily installed and easily replaced. It has a collar that seats on the tapered shoulder of the male fitting.

B65-10311

TUNGSTEN WIRE AND TUBING JOINED BY NICKEL BRAZING

J. A. 1965

B65-10317

PORTABLE TOOLS IMPROVE QUALITY OF TUBING FLARES

SPON- INNOVATOR NOT GIVEN /ASTRO-COMPUTERS LABS./ DATE- DEC. 1965

NS-520

This tungsten wire and tungsten tubing are brazed together using a contacting coil of nickel wire heated to its melting point in an inert-gas atmosphere. This method is also effective for brazing tungsten to tungsten-rhenium parts.

B65-10319

DIE AND TELESCOPING PUNCH FOR CONVOLUTIONS IN TUB DIAPHRAGM

SPON- INNOVATOR NOT GIVEN /HONEYWELL/ DATE- DEC. 1965

JP-13-135

Die and punch set forms convolutions in this dished metal diaphragm without stretching the metal too thin at sharp curvatures. The die corresponds to the metal shape to be formed, and the punch consists of elements that progressively slide against one another under the restraint of a compressed-air cushion to mate with the die.

B65-10329

CENTRIFUGAL SYSTEM SEPARATES LIQUID FROM GAS

HANDLEY, R. E. /UNITED AIRCRAFT CORP./ STROG, E. K. DATE- DEC. 1965

MSC-282

Liquid-to-gas ratio is reduced from maximum efficiency of jet engine fuel by a centrifugal separator. The amount of liquid removed from the fuel is controlled by the separator-screen mesh size and its rotational speed.

B65-10401

PHOTOSENSORS USED TO MAINTAIN WELDING ELECTRODE-TO-JOINT ALIGNMENT

BOWES, J. E. /A. M. AVIATION/ DATE- DEC. 1965

MSC-243

Photoelectrodes maintain electrode-to-joint alignment in automatic precision arc welding. They detect the presence and relative position of a joint to be welded and actuate a servomechanism to guide the welding head accordingly to permit alignment for more than straight line or true circle joints.

B65-10402

LIGHTWEIGHT DOOR STAYS FOR CYLINDRICAL VESSELS

NAGLE, R. C. /A. M. AVIATION/ DATE- DEC. 1965

NS-527

Lightweight, removable, sealed joint access door for a spherical or hemispherical pressure vessel containing cryogenic materials uses a joint overlock design to take the shear and moment loads. Oversize bolt holes are used so that the attaching bolts are in tension only.

B66-10001

FORMING TOOL IMPROVES QUALITY OF TUBING FLARES

SPON- INNOVATOR NOT GIVEN /GEN. DYN. /ASTRONAUTICS/ DATE- JAN. 1966

N-231

Punch and die set improves the quality of tubing flares for use with standard flared-tube fittings in high-pressure systems. It forms a dimensionally true flare in the tubing and forces more tubing material into the high-stress areas to improve the strength and tightness of the tubing connection.

B66-10003

PORTABLE, COMPACT TOOL EASILY REMOVES BRAZED TUBING CONNECTORS

SCHOOP, R. A. /MOWWELL AIRCRAFT CORP./ DATE- JAN. 1966

MSC-263

Portable, compact tool quickly and cleanly removes brazed connectors from system tubes. The tool uses an induction coil to melt the braze and a compression spring to automatically separate the connector. An inert gas is forced-tied about the heated area to prevent oxidation of the tube.

B66-10007

FLOATING DEVICE Aligns BLIND CONNECTIONS

BESSEL, J. E. /A. M. AVIATION/ DATE- JAN. 1966

MSC-266

Panel-mounted connectors overcome the misalignment of blind connectors in electronic rack mounted equipment. The connector is free to move in the vertical direction by the action of a parallelogram mount. This freedom of motion maintains the guide pin hole centerline parallel to the guide pin centerline at all times.

B66-10011

TORQUE WRENCH DESIGNED FOR RESTRICTED AREAS

FAGERBERG, E. B. /LOCKHEED MISSILES AND SPACE CO./ DATE- JAN. 1966

LWIS-246

Wrench with twisting handle grip applies torque to a fastener in a restricted area. The wrench handle may be any length without affecting output torque.

B66-10014

EXPLOSIVE FORCE OF PRIMACORD GRID FORNS LARGE SHEET METAL PARTS

SPON- INNOVATOR NOT GIVEN /A. M. AVIATION/ DATE- JAN. 1966

REIN- SEE ALSO NASA-SP-5017

E-FS-316

Primacord which is woven through fish netting in a grid pattern is used for explosive forcing of large sheet metal parts. The explosive force generated by the primacord detonation is uniformly distributed over the entire surface of the sheet metal workpiece.

B66-10018

COMPACT RETRACTOR PROTECTS CABLE LOOPS

SPON- INNOVATOR NOT GIVEN /A. M. AVIATION/ DATE- JAN. 1966

E-FS-561

Core and swivel retractor mechanism combined with cable stiffeners provides compact, long-wearing protection for cable loops in cabinet-mounted electronic equipment drawers.
O-RING
BUOYANT STOKES LITTER ASSEMBLY
SPON- INNOVATOR NOT GIVEN / N. AM. AVIATION/ DATE-

B66-10019
BORATE STOKES LITTER ASSEMBLY USED FOR SEA RESCUE OPERATIONS
POLLARD, R. A. /SHENIN, G. A. /DATE- JAN. 1966
MSC-131
Standard stokes litter is fastened to inflatable flotation units for sea rescue operations. The assembly keeps an injured person immobilized during transportation to a first aid station.

B66-10020
RING TUBE FITTINGS FORM LEAKPROOF SEAL IN HYDRAULIC SYSTEMS
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10021
O-RING TUBE FITTINGS FORM LEAKPROOF SEAL IN HYDRAULIC SYSTEMS
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10022
RING VALVE RESPONSES TO DIFFERENTIAL PRESSURE CHANGES
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10023
SIMPLE KEY LOCKS TURBINE ROTOR BLADES
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10024
FRICTION DEVICE DAMPS LINEAR MOTION OF ROTATING SHAFT
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10025
SHEET METAL STRIP UNROLLS TO FORM CIRCULAR BOOM
SPON- INNOVATOR NOT GIVEN /HELPAF, INC./ DATE-

B66-10026
RELIABLE CLAMP HOLDS FUEL CELL STACK THROUGH THERMAL CYCLE
GREEN, R. E. /UNIFIED AIRCRAFT CORP./ DATE- FEB. 1966
MSC-313
Reliable clamping device holds a stack of fuel cells during thermal expansion and contraction periods. The clasp has torsion bar action which maintains seal integrity over a wide stress range.

B66-10030
ASSEMBLY JIG ASSURES RELIABLE SOLAR CELL MODULES
OFARRELL, H. O. /TRW SPACE TECHNOL. LABS./ DATE-

B66-10035
IMPROVED MODIFIED POWER TOOL RAPIDLY DRIVES SERIES TURBO DRIVES
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10040
IMPROVED CALIBRATED CLAMP FACILITATES PRESSURE APPLICATION
SPON- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE-

B66-10045
IMPROVED CLAMP HELPS FUEL CELL STACK THROUGH THERMAL CYCLE
GREEN, B. E. VAN DEFREESTER, E. L. /N. AM. AVIATION/ DATE- FEB. 1966

B66-10050
IMPROVED BENCH VISE ADEPTLY GRIPS TUBING SECURELY AND SAFELY
MSC-279
Plastic self-compressing adapter with grooves, attached to the jaws of a bench vise, secures thin-wall tubing vertically or horizontally during cutting and flaring operations without marring or damaging it. Magnets incorporated in both sections of the adapter prevent detachment from the jaws when the vise is opened.

B66-10055
IMPROVED HYDROGEN-ATMOSPHERE INDUCTION FURNACE HAS INCREASED TEMPERATURE RANGE
MSC-299
Improved hydrogen-atmosphere induction furnace operates at temperatures up to 5,350 deg F. The furnace heats up from room temperature to 4,750 deg F in 30 seconds and cools down to room temperature in 2 minutes.

B66-10056
IMPROVED INSTRUMENT QUICKLY TRANSPOSES GROUND REFERENCE TO ITS LEVEL
GREEN, B. E. VAN DEFEESTER, E. L. /N. AM. AVIATION/ DATE- FEB. 1966

B66-10060
IMPROVED TUNED DISS FACILITATES TUNGSTEN FORMING
LEWIS-25A
Tungsten forming in a press brake employs a bottom die assembly with a heating manifold between two water-cooled die sections. The manifold has hydrogen-oxygen burners spaced along its length for even heat during forming.

B66-10065
IMPROVED INSTRUMENT QUICKLY TRANSPOSES GROUND REFERENCE TO ITS LEVEL
GREEN, B. E. VAN DEFEESTER, E. L. /N. AM. AVIATION/ DATE- FEB. 1966

171
Optical alignment of equipment is facilitated by a traverse target with a string suspending a plumb bob to transpose the ground level point to eye level operation. This instrument appreciably decreases the time required from the present method but achieves the same degree of precision.

Tensile-strength testing apparatus employs a capillary bundle through which a noncompressible fluid is extruded and a quick-release valve system. This apparatus applies the test loads at relatively constant very high strain rates with minimal shock and vibration to the tensile specimen and apparatus.

T-handle wrench can be preset to release when a certain torque value is exceeded by means of a spring-loaded roller and groove torque-limiting mechanism contained in the handle of the wrench. The wrench is also equipped with a push button in the handle that permits the operator to lock the handle to the spindle shaft, thus eliminating the torque-limiting function.

Run-in treatment provides a protective coating on wearers from injury. A shock absorber is mounted directly on the handle of the gun. It is held in a fixed position during the cutting operation. Because of their size and location, they pose no problem in repacking the chute and harness after a jump.

Load weighing cell used in conjunction with a hoist ensures defect-free welds. With the adapter, the operator can hold the gun steadily at uniform pressure to ensure defect-free welds.

Shear pin coupling with plugged hollow shaft provides required load capacity for shaft protection and has no groove to induce fatigue failure.

Reversing, thermal, motor-driven device positions magnetometer sensors on each of the four risers between the shroud lines and the harness. Because of their size and location, they pose no problem in repacking the chute and harness after a jump.

Push-pull with chemical additive protects gear surface.

Load weighing cell used in conjunction with a hoist is isolated during lifting and manipulation of the load. A simple mechanism, attached to a cradle hook, provides a screw adjustment for engaging the load cell during weighing of the load and isolating it from lift forces during hoisting of the load.

Mathematical analysis and computations determine optimum magnetic coil configurations for a magnetic brake which controllably accelerates a free falling load to a soft stop. Calculations on conventionally wound coils determine the required parameters for the desired deceleration with minimum electrical energy supplied to the stationary coil.

Threaded pilot allows machining of a port component, or boss, after the reciprocating hole has been threaded. It is used to align cutting surfaces with the boss threads, thus insuring precision alignment.

Shoulder adapter fits on one end of a hand-held spot welding gun. With the adapter, the operator can hold the gun steadily at uniform pressure to ensure defect-free welds.

Deduced hollow shaft makes fatigue-resistant shear pin.

Shear pin coupling provides required load capacity for shaft protection and has no groove to induce fatigue failure.

Reversing, thermal, motor-driven device positions magnetometer sensors.

Nylon shock absorbers reduce the canopy-opening shock of a parachute to a level that protects the wearer from injury. A shock absorber is mounted on each of the four risers between the shroud lines and the harness. Because of their size and location, they pose no problem in repacking the chute and harness after a jump.

Fingertip-operated trigger accurately controls the current supplied to an arc welding gun. The trigger is mounted directly on the handle of the gun.

Tool provides constant purge during tube welding.

Tool provides a constant purge of inert gas during in-place welding of tubular components to prevent contamination and oxidation. It also permits self-jiggings of the tube and sleeve to be welded.

Queueing register uses fluid logic elements.

Pipe cutting tool is useful in limited space.

Mechanism continuously measures static and dynamic cable loads.
PALLEY MECHANISM MEASURES THE TENSILE LOADS ON A CABLE UNDER STATIC AND DYNAMIC CONDITIONS, WITHOUT DISTURBING THE CONTINUITY OF OPERATION OF THE SYSTEM. A SET OF TAKE-OF PULLEYS ARE MOUNTED ON A PIVOTED FRAME THAT IS LINKED TO A STRAIN GAGE WHICH MEASURES THE FRAME DISPLACEMENT AS A FUNCTION OF THE STATIC OR DYNAMIC TENSILE LOAD ON THE CABLE.

SOLDERING TOOL HEATS WORKPIECES AND APPLIES SOLDER IN ONE OPERATION

LEWIS-247 GUDKESE, W. V. DATE- MAY 1966

B66-10115

Fountain-pen type soldering iron heats workpieces and applies solder to joints in densely packed electronics assemblies. The basic soldering tool is used with different-sized orifice tips, eliminating the need for an assortment of conventional soldering guns.

TELESCOPING OF INSTRUMENTATION TUBING ELIMINATES SWAGING

MC CLELLAN, W. L. /N. AM. AVIATION/ DATE- MAY 1966

N-PS-586

Short sections of stainless steel tubing of slide-fit sizes fitted together and silver-soldered at the junctions for small-diameter tubing assemblies with accurately stepped-down dimensions. This method of fabrication eliminates the costly swaging operations formerly used.

B66-10123

HAND DRILL ADAPTER LIMITS HOLES TO DESIRED DEPTH

SPOR- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1966

M-SC-346

Adjustable adapter fastened to the shank of a drill bit limits the depth of bored holes. The adapter may be made in sizes appropriate for bits of different diameters.

B66-10124

ECONOMICAL AND MAINTENANCE-FREE GAS SYSTEM OPERATES RAILROAD SWITCHES

VISSING, G. S. DATE- MAR. 1966

NU-0045

Remote control system that uses bottled nitrogen as a power source operates infrequently used railroad switches. This system is economical and maintenance free.

B66-10125

ALUMINUM OXIDE FILLER PREVENTS OBSTRUCTIONS IN TUBING DURING WELDING

OKELLY, K. P. DATE- MAR. 1966

ESC-223

Granular aluminum oxide is used as filler in serpentine tubing while welding the tubing to a flat surface. The filler eliminates obstructions in the tubes formed by molten weld nuggets and is porous enough to allow gases to escape from the welding area.

B66-10132

EXPANDABLE INSERT SERVES AS SCREW ANCHOR

SPOR- INNOVATOR NOT GIVEN /N. AM. AVIATION/ DATE- MAR. 1966

M-SC-301

Expandable self-locking adapter secures components to panels having one accessible side. Mounting holes in the panels may not be threaded to accommodate screws, therefore, the adapter contains a female thread that will mate a mounting screw.

B66-10135

CHART CASE OPENS TO FORM BRIEFCASE

WELLOG, E. A. /N. AM. AVIATION/ DATE- APR. 1966

ESC-349

Aluminum carrying case protects charts during transit and opens to form a rigid easel for their presentation. Looseleaf clamps hold the charts in place for both carrying and displaying them.

CRYOGENIC TRAP VALVE HAS NO MOVING PARTS

BRAND, L. W. WELLS, G. /N. AM. AVIATION/ DATE- APR. 1966

M-PS-447

Aluminum-body trap valve with an invar stem keeps cryogenic materials in the liquid state while entering the final component of a system. The valve has no moving parts and is self-actuated and self-monitoring.

ROTATING MANDREL SPEEDS ASSEMBLY OF PLASTIC INFLATABLES

LANGELEY-155

Rotating mandrel permits the accurate cutting, forming, and sealing of plastic gores for assembly of an inflatable surface of revolution. The gores remain on the mandrel until the final seam is reached. Tolerances are tightly controlled by the mandrel configuration.

PORTABLE POWER TOOLS MACHINES WELD JOINTS IN FIELD

SPIER, R. A. DATE- APR. 1966

M-PS-258

Portabl machine for cutting precise weld joints required by nonstandard pipe sections used in the field for transfer of cryogenic fluids. This tool is adaptable for various sizes of pipes and has a selection of router bits for different joint configurations.

EXTENDABLE RAST USED IN ONE SHOT SOIL PENETROMETER

HOTZ, G. M. HOWARD, G. A. DATE- APR. 1966

JPL-585

Penetrometer to test soil characteristics has a piercing head with soil instrumentation equipment attached to an expandable mast actuated by compressed air. The penetrometer gives continuous measurements as the mast pushes the piercing head through the soil.

DEEP INDICATOR AND STOP AID INACHENING TO PRECISE TOLERANCES

LAVERY, J. L. /N. AM. AVIATION/ DATE- APR. 1966

M-PS-553

Attachment for machine tools provides a visual indication of the depth of cut and a positive stop to prevent overcutting. This attachment is used with drill presses, vertical milling machines, and jigs bores.

MOUNTING FACILITATES REMOVAL AND INSTALLATION OF FLAME-DETECTOR RODS

CASTIE, T. /N. AM. AVIATION/ DATE- APR. 1966

M-PS-555

Flame-detector-rod holder is easily removed from the wall of a gas-fired furnace for maintenance or replacement of the detector rod without requiring shutdown of the furnace. The holder consists of an externally threaded outer bushing, a sleeve which is held inside the outer bushing with a set screw, and a detector rod assembly which screws into the sleeve.

SPLIT GLASS TUBE ASSURES QUALITY IN ELECTRON BEAM BRAZING

KRESSIN, W. J. /N. AM. AVIATION/ DATE- APR. 1966

M-PS-564

Sealed enclosure of heat-resistant glass tubing and silicone rubber molds provide good visibility for electron beam brazing of metal tubes in an inert gas atmosphere. The glass tubing and rubber molds, which are bonded together, are easily applied to and removed from the brazing area by operation of a clamp.

NYLON HIT REMOVES CORR INSULATION WITHOUT DAMAGE TO SUBSTRATE

B66-10152
CLEANDALL, J. C. /AM. AVIATION/ DATE- APR. 1966
MSC-381
Nylon router bit in an electric hand-held drill removes small quantities of cork insulation from a metal or fiber glass surface without cutting or scratching the surface.

B66-10155
SIMPLE DEVICE FACILITATES INERT-GAS WELDING OF TUBES
CAREYERS, K. V. /AM. AVIATION/ KELLEY, W. B. DATE- APR. 1966
M-FS-550
Metal Y-tube simultaneously directs argon streams over weld areas on both sides of tubes being joined along a line on their outer periphery. The device is advanced along the junction in step with the welding operation.

B66-10167
DUAL REGULATOR CONTROLS TWO GASES FROM A SINGLE SOURCE
JACKSON, R. /CABINET CORP./ DATE- APR. 1966
MSC-227
Dual-pressure regulator uses single reference for parallel control of two gases. The regulator uses an external fluid pressure to modulate the flow of one gas, and the regulated flow of the first gas to modulate the flow of the second.

B66-10168
SAFETY SWITCH PERMITS EMERGENCY BRIDGE CRANE SHUTDOWN
LONG, E. J. B. /AM. AVIATION/ DATE- APR. 1966
M-FS-549
Safety switch on a crane control pendant must be held closed to operate the crane. This provides for immediate power cutoff to the crane in an emergency or a pendant circuit failure.

B66-10169
MODIFIED DRILL PERMITS ONE-STEP DRILLING OPERATION
LIBERTONE, C. /AM. AVIATION/ DATE- APR. 1966
M-FS-559
Drill with modified cutting faces permits one-step drilling operation without chatter upon contact and premature wear. The modification of the drill, which has the same diameter as that of the desired hole, consists of a groove across the bottom of each of the cutting faces of the drill flutes.

B66-10171
MULTISURFACE FIXTURE PERMITS EASY GRINDING OF TOOL BIT ANGLES
JONES, C. R. /AM. AVIATION/ DATE- APR. 1966
M-FS-586
Multisurface fixture with a tool holder permits accurate grinding and finishing of right and left hand single point threading tools. All angles are ground by changing the fixture position to rest at various references angles without removing the tool from the holder.

B66-10172
FLEXIBLE COILED SPLINE SECURELY JOINS RATING CYLINDERS
COPPERNOIL, R. W. /GEN. DET./ASTRONAUTICS/ DATE- APR. 1966
W00-270
Ratios cylindrical members are joined by spline to form an integral structure. The spline is made of tightly coiled, high tensile-strength steel spiral wire that fits a groove between the rating members. It provides a continuous bearing surface for axial thrust between the members.

B66-10174
EPOXY-COATED CONTAINERS EASILY OPENED BY WIRE BAND
MC COY, J. W. /AM. AVIATION/ DATE- APR. 1966
M-FS-592
Epoxy coating reduces punctures, abrasions, and contamination of synthetic cellular containers used for shipping and storing fragile goods and equipment. A wire band is wound around the closure joint, followed by the epoxy coating. The container can then be easily opened by pulling the wire through the epoxy around the joint.

B66-10175
DEVICE LOOP-SPOTS SPHERES TO VERY CLOSE TOLERANCES
AEFFY, H. W. /GE/ DATE- MAY 1966
JPL-SC-119
Device loops precise amounts of metal from high spots on a spherical body to correct minute surface imperfections. The device generates the lapped surface with reference to an existing true surface on the spherical workpiece. Lapping is performed by applying a rotary and oscillatory motion to the workpiece while the lapping tool is held on the workpiece high spot.

B66-10176
LIFTING CLAMP POSITIVELY GRIPS STRUCTURAL SHAPE
REINHARDT, E. C. DATE- MAY 1966
M-FS-593
Welded steel clamps securely grip structural shapes of various sizes for crane operations. The clamp has adjustable clamping jaws and screw-operated internal v-jaws and provides greater safety than hoisting slings presently used. The structural member can be rotated in any manner, angle, or direction without being released by the clamp.

B66-10180
CONTROL SYSTEM MAINTAINS COMPARTMENT AT CONSTANT TEMPERATURE
LINDBERG, J. G. /AM. AVIATION/ DATE- MAY 1966
JPL-SC-145
Gas-filled permeable insulating material maintains an enclosed compartment at a uniform temperature. The material is interposed between the two walls of a double-walled enclosure surrounding the compartment.

B66-10189
PNEUMATIC SHUTOFF AND TIME-DELAY VALVE OPERATES AT CONTROLLED RATE
HORNING, J. L. TOMLINSON, L. E. /AM. AVIATION/ DATE- MAY 1966
M-FS-602
Shutoff and delay valve, which incorporates a metering spool that moves at constant velocity under pneumatic pressure and spring compression, increases fluid-flow area at a uniform rate. Diaphragm areas, control cavity volume, and bleed-orifice size may be varied to give any desired combination of time delay and spool travel time.

B66-10190
BELLOWS DESIGN FEATURES LOW SPRING RATE AND LONG LIFE
LESCIC, H. F. /AM. AVIATION/ DATE- MAY 1966
MSC-521
High pressure bellows has high strength rigid hoops for strength and stability and sheet stock for low spring rate effects. The simplicity of this bellows design facilitates mass production.

B66-10191
TOOL POST MODIFICATION ALLOWS EASY TURRET LATHE CUTTING-TOOL ALIGNMENT
PONTS, L. /AM. AVIATION/ DATE- MAY 1966
M-FS-581
Modified tool holder and tool post permit alignment of turret lathe cutting tools on the center of the spindle. The tool is aligned with the spindle by the holder which is kept in position by a hydraulic lock in feature of the tool post. The tool post is used on horizontal and vertical turret lathes and other engine lathes.

B66-10195
SEGMENTED BALL VALVE IS EASY TO OPEN AND CLOSE
PEHONY, E. SHINAGUI, L. H. /AM. AVIATION/ SPEISGRAN, C. DATE- JUL. 1966
W00-288
Segmented ball valve and flowmeter in the same spherical housing provide a valve that will handle large fluid volume with bulkiness and weight of
BLADE VALVES OR CONVENTIONAL BALL VALVES. THE VALVE IS EASILY OPENED OR CLOSED AND THE FLOWSEWER REMAINS STATIONARY, SO ERRORS ARE ELIMINATED.

B66-10197
INTERMEDIATE ROTATING RING IMPROVES RELIABILITY OF DYNAMIC SHAFT SEAL
MILLS, P. R. /AM. AVIATION/ DATE- MAY 1966
M-FS-575
Intermediate rotating ring improves the reliability of dynamic shaft seals whose rubbing surfaces wear down rapidly at high shaft speeds. The rotating ring is placed between the rotating shaft sealing surfaces and the stationary surface, and driven at one-half the shaft speed.

B66-10201
SELF-CONTAINED CLOTHING SYSTEM PROVIDES PROTECTION AGAINST HAZARDOUS ENVIRONMENTS
CLAYTON, DE. /AM. AVIATION/ DATE- MAY 1966
M-FS-536
Self-contained clothing system protects personnel against hazardous environments. The clothing has an environmental control system and a complete protection envelope consisting of an outer garment, inner garment, underwear, boots, gloves, and helmet.

B66-10202
BODY-FITTED HARNESS PROVIDES SAFE AND EASY COMPONENT HANDLING MILLER, E. O. /AM. AVIATION/ DATE- MAY 1966
M-FS-533
Body-fitted restraint harness enables workers to safely and conveniently handle critical components during their installation or removal. Since the harness supports the components, the worker is able to maneuver through restricted areas with his hands free. It is easily put on, adjusted, and removed, or comfortably worn without interfering with normal activities.

B66-10204
TORQUE WRENCH ALLOWS READINGS FROM INACCESSIBLE LOCATIONS
DE BARRANCO, M. /AM. AVIATION/ DATE- MAY 1966
M-FS-538
Torque wrench with an adjustable drive shaft permits indicator to remain in view when used on sections of equipment with limited access. The shaft is capable of protruding from either side of the wrench head by means of spring loaded balls.

B66-10206
LOW PRESSURE HEATING ELEMENT PROVIDES THERMAL CONTROL DURING WELDING OPERATIONS CROWELL, J. W. /CHRYSLER CORP./ DATE- MAY 1966
M-FS-647
Low power, cylindrical heating element in a swaging anvil assembly heats the material being worked on. The increased ductility of heated material results in crack-free deformation.

B66-10208
TOOL ENABLES PROPER MATING OF ACCELEROMETER AND CABLE CONNECTOR NEEDE, C. H. /AM. AVIATION/ DATE- MAY 1966
M-FS-611
Tool supports accelerometer in axial alignment with an accelerometer cable connector and permits tightening of the accelerometer to the cable connector with a torque wrench. This is done without damaging the components or permitting them to work loose under sustained, high-level vibrations.

B66-10209
SPECIAL TOOL SEALS CONDUCTORS WITH COMBINATION OF PLASTIC SLEEVES YOUNG, S. /AM. AVIATION/ DATE- MAY 1966
M-FS-579
Special tool seals electrical conductors connecting instrumentation within space vehicle cryogenic fuel tanks and oxidizer tanks. An inner sleeve of fluorinated ethylene-propylene and an outer sleeve of tetrafluoroethylene enclose a bundle of conductors and are heated with the tool to form a tight seal of the bundle and each individual wire.

B66-10210
ADJUSTABLE CUTTING GUIDE ALIGNS AND POSITIONS STACKS OF MATERIAL TIMMER, A. D. /AM. AVIATION/ DATE- MAY 1966
M-FS-321
Adjustable guide tool aligns and positions stacks of material for cutting at various angles. The device adapts its shape to stacks of any corner angle, adjusts to any cutting angle, and quickly aligns the stacks for repeated cutting. With this device, an operator need not place his hands under the knife during alignment.

B66-10211
PRESSURE SEAL RING MAY BE EFFECTIVE OVER WIDE TEMPERATURE RANGE SCHROEER, E. P. /AM. AVIATION/ DATE- MAY 1966
M-FS-486
Positive pressure seal rings seal bolted flange joints in pressure vessels containing fluids whose temperatures can vary over a wide range. The seal rings mate with grooves in the flanges and compensate for the excessive thermal expansion or contraction of a gasketed joint.

B66-10212
LIQUID TRAP SEALS THERMOCOUPLE LEADS RUPPEL, E. F. /AM. AVIATION/ DATE- MAY 1966
M-FS-646
Liquid trap seals thermocouple leads coming out of a brazing retort that operates with a controlled atmosphere so that air cannot enter the retort and hydrogen cannot escape. The trap is fastened to a duct welded to the retort. Thermocouple leads are led out through the duct and trap, with the fluid forming a gastight seal between the atmosphere and the retort.

B66-10213
CYLINDRICAL CLAW CLAMP HAS QUICK RELEASE FEATURE GOODWIN, G. D. /CHRYSLER CORP./ DATE- MAY 1966
M-FS-513
Claw clamp grasps cylindrical shapes by pressing its jaws around the object. The clamp is released by retraction of a release pin which extends beyond the clamp handle on both sides for better purchase.

B66-10214
COLLOIDAL SUSPENSION SIMULATES LINEAR DYNAMIC PRESSURE PROFILE MCNABB, R. J. /LOCKEED MISSILES AND SPACE CO./ DATE- JUN. 1966
WOG-266
Missile nose fairings immersed in colloidal suspension prepared with various specific gravities simulate pressure profiles very similar to those encountered during reentry. Stress and deflection conditions similar to those expected during atmospheric reentry are thus attained in the laboratory.

B66-10215
ELECTRON BEAM WELDING OF COPPER-NICKEL FACILITATED BY CIRCULAR MAGNETIC SHIELDS LAND, J. N. /AM. AVIATION/ DATE- MAY 1966
M-FS-569
High permeability, soft magnetic rings are placed on both sides of electron beam weld seams in copper-nickel circular joint. This eliminates deflection of the electron beam caused by magnetic fields present in the weld area.

B66-10216
Valve assembly allows transfer of hazardous or reactive fluids such as liquid fluorine without corrosion of valve face and seat material. The assembly consists of a plug to block bulk flow and a soft-seal outer seat to effect zero-leak stoppage.
05 MECHANICAL

B66-10217
FIBERGLASS CONTAINER SHELLS FORM CONTAMINATION-FREE STORAGE UNITS
KEAR, H. E. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-527
Interchangeable molded fiberglass shells are locked together to form storage units of various depths. These units can hold components weighing 1500 pounds, are easily transportable, and protect contents from contamination.

B66-10218
PRESSURE VESSELS FABRICATED WITH HIGH-STRENGTH WIRE AND ELECTROFORMED NICKEL
ROTH, R. /N. AM. AVIATION/ DATE- JUN. 1966
H-FS-581
Metal pressure vessels of various shapes having high strength-to-weight ratios are fabricated by using known techniques of filament winding and electroforming. This eliminates nonuniform wall thickness and unequal wall strength which resulted from welding formed vessel segments together.

B66-10219
TOOL PERMITS DAMAGE-FREE REMOVAL OF SOLAR CELL
BICKLEY, J. E., JR. /COMPREHENSIVE DESIGNERS/ DATE- MAY 1966
MSC-867
Modified soldering iron extracts a wrap-around solar cell that is attached with solder or adhesive to a substrate without destroying the cell removed or damaging adjacent cells. Heat, vacuum, and compressed air, operated from a special head attached to the soldering iron, loosen, extract, and protect the cell.

B66-10226
A CONCEPTUAL DESIGN FOR SQUEEZE FILM BEARINGS
SPO- INNOVATOR HOT GIDES /BENDIX CORP./ DATE- JUN. 1966
M-FS-573
Squeeze film bearings which require at least one of two adjacent surfaces to oscillate at high frequency and low amplitude have the oscillating /strain-producing/ member on a double gas film. This means of support allows dynamic changing of the gap between the bearing surfaces without the disadvantages produced when the oscillator is affixed to the bearing base itself.

B66-10228
STUDIES REVEAL EFFECTS OF PIPE BENDS ON FLUID FLOW CAVITATION
STONEFELTZ, R. T. DATE- MAY 1966
H-FS-516
Incipient cavitation in liquids flowing in pipes curved in one plane are affected by the pipe bend radii and pipe diameters, but little by pipe bend angles ranging from 60 to 120 degrees. Critical cavitation indices decrease with higher Reynolds number and pressure ratio. Bulk liquid temperature increase lowers the mean critical velocity at which cavitation occurs.

B66-10229
EXPANDABLE RUBBER PLUG SEALS OPENINGS FOR PRESSURE TESTING
DATE- MAY 1966
NU-0048
Plug assembly seals openings in piping systems, vessels, and chambers for low pressure leak testing. The assembly, which consists of a rubber sealing plug and the mechanism for expanding it into a pressure-tight configuration, adequately seals irregular diameters without damage to mating surfaces.

B66-10233
QUICK-CLOSING VALVE IS ACTUATED BY EXPLOSIVE DISCHARGE
RAJESKI, S. J. DATE- JUN. 1966
M-FS-55
Remotely controlled plug-type valve shuts off a high-pressure, high-temperature gas flow in a few milliseconds. The valve is actuated by a commercially available electrically initiated squib of low explosive power. More rapid closure is attainable with squibs containing heavier explosive charges.

B66-10235
KEY-LOCKED GUARD PREVENTS ACCIDENTAL SWITCH ACTUATION
HARTMANN, K. C. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-419
Switch guard, which locks in place on a panel, protects individual switches from accidental activation. The guard consists of a cup to cover the switch lever, a standard screw lock tumbler, and a stud that mates with a threaded adapter in the panel.

B66-10236
AUTOMATIC REEL CONTROLS FILLER WIRE IN WELDING MACHINES
HILLERT, A. V. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-416
Automatic reel on automatic welding equipment takes up slack in the reel-fed filler wire when welding operation is terminated. The reel maintains constant, adjustable tension on the wire during the welding operation and rewinds the wire from the wire feed unit when the welding is completed.

B66-10237
ADJUSTABLE KNIFE CUTS HONEYCOMB MATERIAL TO SPECIFIED DEPTH
BRAWELL, J. A. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-475
Calibrated, adjustable knife cuts aluminum honeycomb or other soft materials to a desired depth. The frame of the device accommodates standard commercial blades. Since the blade is always visible to the operator, the device can be used on any straight or irregular layout line.

B66-10238
INSERT SLEEVE PREVENTS TUBE SOLDERING CONTAMINATION
STEIN, J. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-552
Teflon sleeve insert prevents contamination of internal tube surfaces by solder compound during soldering operations that connect and seal the tube ends. The sleeve insert is pressed into the mating tube ends with a slight interference fit.

B66-10239
HAND TOOL PERMITS SHRINK SIZING OF ASSEMBLED TUBING
HILLERT, A. ODOR, M. /N. AM. AVIATION/ DATE- JUN. 1966
MSC-504
Portable tool sizes tubing ends without disassembling the tubing installation. The shinking tool is charged to the tubing and operated by a ratchet wrench. A gear train forces the tubing end against an appropriate die or mandrel to effect the sizing.

B66-10240
JIG PROTECTS TRANSISTORS FROM HEAT WHILE TINNING LEADS
MSC-515
In tinning transistor leads, an aluminum jig is used to dip the leads into the molten tin. The jigs mass shunts excess heat given off by the molten tin before it reaches and damages the transistor body.

B66-10241
BRAZING PROCESS USING AL-SI FILLER ALLOY RELIABLY BONDS ALUMINUM PARTS
MSC-448
Brazing process employs an aluminum-silicon filler alloy for diffusion bonding of aluminum parts in a vacuum or inert gas atmosphere. This process is carried out at temperatures substantially below those required in conventional methods and produces bonds of greater strength and reliability.

176
Portable sandblaster cleans small areas

MSC-522
Portable sandblasting unit rapidly and effectively cleans localized areas on a metal surface. The unit incorporates a hoppers enclosure, making plates, sand container, and used sand accumulator connected to a vacuum system. The hoppers is equipped with an inspection window and light for observation of the sanding operation.

Lathe chuck key incorporates safety feature

MSC-506
Lathe chuck key with spring loaded plunger cannot inadvertently be left in the chuck when the lathe is started. The plunger automatically ejects the key from the chuck when hand pressure is released.

 Hollow needle used to cut metal honeycomb structures

Gregg, E. A. /N. Am. Aviation/ Date- Jun. 1966
MSC-486
Hollow needle tool cuts metal honeycomb structures without damaging adjacent material. The hollow needle combines an electrostatic discharge and a stream of oxygen at a common point to effect rapid, accurate metal cutting. The tool design can be varied to use the hollow needle principle for cutting a variety of shapes.

Modified soldering iron speeds cutting of synthetic materials

M-FS-725
Modified soldering iron cuts large lots of synthetic materials economically without leaving frayed or jagged edges. The soldering iron is modified by machining an axial slot in its heating element tip and mounting a cutting disk in it. An alternate design has an axially threaded bore in the tip to permit the use of various shapes of cutting blades.

Pressure-welded flange assembly provides leaktight seal at reduced bolt loads

Bartensol, A. J. /GE/ Date- Jun. 1966
M-FS-640
Vibration resistant flange-connector assembly provides a leaktight seal under reduced bolt loads. The assembly consists of ductile metal plates that are pressure welded between dies mounted in recessed flanges.

Electrical upsetting of metal sheet forms weld edge

Scheffy, I. S. /N. Am. Aviation/ Date- Jun. 1966
M-FS-726
Electric gathering of sheet stock edges forms metal sheets in the shape of gore sections with heavier edge areas that can be welded without loss of strength. The edges are gathered by progressive resistance heating and upsetting, and are forced automatically. This process avoids disturbance of the metal's internal structure.

Fluid damping reduces bellows seal fatigue failures

Spork- Innovator Not Given /N. Am. Aviation/ Date- Jun. 1966
M-FS-565
Service life of a bellows-type seal is the presence of mechanical vibration is increased by a system of interconnected bellows with intervening cavities filled with a fluid which dampens the amplitude of periodic deflection of the sealing bellows. Different damping fluids are used according to environmental conditions.

Diffusion bonding makes strong seal at flanged connector

M-FS-637
Copper strip seals high pressure fluid system connector so that it is insensitive to relaxation of the bolt loads. The copper strip is diffusion bonded to the surfaces of the connector flange by application of high pressure and temperature.

Tool separates sleeve-type unions without heat

MSC-497
Tool that uses conventional milling and cutting techniques separates sleeve type tubing unions and tubes without using heat. A selection of holders, associated bits, and cutting wheels permits preparation of varied diameter unions.

Mill profiler machines soft materials accurately

Hauschel, J. A. /N. Am. Aviation/ Date- Jun. 1966
M-FS-692
All profiler mechanisms, belts, slots, and grooves in soft materials, such as styrofoam, phenolic-filled cores, to any desired thickness. A single operator can accurately control cutting depths in contour or straight line work.

Flow king valve is simple, quick-acting

M-FS-752
Two porting rings, one within the other, control gas or liquid flow by using seal buttons at the sliding valve clomers. Multiporting within the ring allows close control of the flow by the slight rotation of the outer porting ring.

Critical parts are stored and shipped in environmentally controlled reusable container

Kummerfeld, K. E. /N. Am. Aviation/ Date- Jun. 1966
M-FS-703
Environmentally controlled, hermetically sealed, reusable metal cabinet with storage drawers is used to ship and store sensitive electronic, pneumatic, or hydraulic parts or medical supplies under extreme weather or handling conditions. This container is compatible with on-site and transportation handling facilities.

Aluminum/steel wire composite plates exhibit high tensile strength

Spork: Innovator Not Given /Harvey Aluminum Co./ Date- Jun. 1966
M-FS-401
Composite plate of fine steel wires imbedded in an aluminum alloy matrix results in a lightweight material with high tensile strength. Plates have been prepared having the strength of titanium with only 85 percent of its density.

Compact actuator converts rotary to linear motion

Ford, A. G. Date- Jun. 1966
JPL-786
Compact motor mounted on a stationary base converts rotary to linear motion. The motor rotates a gear train assembly so that the end of an arm is attached to the assembly moves in a linear path.

Seal surfaces protected during assembly

Richardson, G. L. /Aerojet-General Corp./ Date- Jun. 1966
NU-0067
Protection device for sealed surfaces is placed over the polished surface entrance of trapped bosses and removed when the seal fitting has been
engaged with the boss threads. This technique applies to various seal types used in close fitting, spring loaded, threaded fittings.

**B66-10267**

**RADIAl COOLANT CHANNELS FABRICATED BY SIMPLIFIED METHOD**

FREEHAN, A. /AEGEO-GEN. CORP./ DATE- JUN. 1966

**NU-0070**

Radial coolant channels for distributing a coolant over the inner wall of a circular section are fabricated by cold-rolling indentations on the inside circumference of the base section and covering the indentations with a rolled flange.

**B66-10269**

**DIFFERENTIAL EXPANSION PROVIDES PRESSURE FOR DIFFUSION BONDING OF LARGE DIAMETER RINGS**

SCHMIDT, E. /INNOVATOR NOT GIVEN/BOEING CO./ DATE- JUN. 1966

**B6-588**

External pressure band is used to bond aluminum alloy collars to large diameter, stainless steel flange. The band contracts while cooling and exerts pressure on the joint between the silver plated surfaces of the ring and collar which expand toward the band. This diffusion bonding by differential expansion minimizes aluminum deformation.

**B66-10275**

**PASTERN PROVIDES FOR BOLT MISALIGNMENT AND QUICK RELEASE OF FLANGE**

ENGEL, C. /AEROJET-GEN. CORP./ DATE- JUN. 1966

**G-0074**

Pastern enables two large flanges to be bolted together without close alignment between the bolt and bolt-hole diameters, and provides for a quick release of one of the flanges under emergency conditions. It contains a nut that is retained by a square head in a recess in one side of the removable flange and by a collar and snap ring on the other side of the flange.

**B66-10276**

**REMOTE CONTROLLED SYSTEM COUPLES AND DECOUPLES LARGE DIAMETER PIPES**

GRIFFIN, P. A. /AEROG-GEN. CORP./ DATE- JUN. 1966

**G-0062**

Remote control, six-motor driven, chain-drive system engages and disengages a flange coupling from large-diameter, high pressure fluid lines.

**B66-10277**

**OFFICE FACILITATES CENTERING OF WORKPIECES IN LATHE CHUCK**

FRAZER, L. /N. AM. AVIATION/ DATE- JUN. 1966

**H-FS-645**

Spring loaded device used in conjunction with a standard dial indicator facilitates centering a workpiece in an independent four-jaw lathe chuck.

**B66-10278**

**C-CLIPS WITH MYLAR BACK-UP PROVIDE HIGH-PRESSURE CYROGENIC SEAL**

FORK, G. N. /N. AM. AVIATION/ DATE- JUN. 1966

**G-0053**

Mylar lip type back-up ring installed in combination with three rubber O-rings seal the junctions between a tube stub and an adapter during high pressure gas flow at cryogenic to room temperatures. Mylar seals should not be used with oxygen under pressure or in the liquid state.

**B66-10279**

**MAGNETIC LATCHES PROVIDE POSITIVE OVERPRESSURE CONTROL**

LOT, J. L. /WESTINGHOUSE ASTRONUC. LAB./ DATE- JUN. 1966

**G-0057**

Lowers are used for overpressure safety venting in rooms or chambers where explosion hazards exist. The lowers have individually hinged closures that are held in locked position by commercially available magnets that quickly release them in an overpressure condition.

**B66-10283**

**FIXED VACUUM PLATE CLAMPS STYROFOAM FOR BACING**

BAUSCHL, J. A. /N. AM. AVIATION/ DATE- JUN. 1966

**H-FS-683**

Aluminum plate holds styrofoam securely in place for machining operations. The styrofoam is clamped to rubber or cork pads on the plate surface by vacuums. Foam rubber tape provides the vacuum seal.

**B66-10284**

**EXTENSOMETER AUTOMATICALLY MEASURES ELONGATION IN ELASTOMERS**

HOOPES, C. D. DATE- JUN. 1966

**H-FS-517**

Extensometer, with a calibrated shaft, measures the elongation of elastomers and automatically records this distance on a chart. It is adaptable to almost any tensile testing machine and is fabricated at a relatively low cost.

**B66-10285**

**HIGH PRESSURE TUBE COUPLING REQUIRES NO THREADS OR FLANGES**

STEIN, J. A. /N. AM. AVIATION/ DATE- JUN. 1966

**G-66-500**

High pressure tube coupling connects to any straight, unthreaded, and unflared tubing end without deforming or damaging the tubing. The coupling grips the tube wall tightly between an external compression sleeve and an internal hollow mandrel. It is adaptable to standard screw fittings for test stand attachment.

**B66-10294**

**PNEUMATIC SEPARATOR GIVES QUICK RELEASE TO HEAVY LOADS**

BUCARAN, D. C. DAVIS, E. J. PHILLIPS, J. D. DATE- JULY 1966

**G-66-10**

Pneumatic separator, using applied pressure, quickly releases restraining devices securing heavy loads. With minor modifications this separator can be used as a coupling device.

**B66-10297**

**DIAPHRAGM SPRING GIVES CLUTCH OVER-CENTER TOGGLE EFFECT**

ROSENBERG, H. W. /GE/ DATE- AUG. 1966

**G-29**

Diaphragm spring clutch mechanism is used in testing the relative merits of eddy-current and hydraulic dampers. The dampers are alternately coupled to a single damping boom shaft. The floating clutch mechanism enables the inoperative damper to remain completely isolated from the damping boom shaft during test of the other damper.

**B66-10301**

**TOGGLE PRE-TENSIONS COVERS PRIOR TO LACING**

**G-63**

In securing a bulky object in a storage compartment, a clenching or tightening tool is used to draw two opposing covers halves together at a predetermined tension to permit quick lacing to retain the stored object. This tool is also useful in fabrication industries to draw components together during assembly or treating.

**B66-10302**

**SIMPLE SCALE INTERPOLATOR FACILITATES READING OF GRAPHS**

FARIO, A. HENRY, E. HOOD, D. DATE- JULY 1966

**LEWIS-92**

Set of cards with scale divisions and a scale finder permits accurate reading of the coordinates of points on linear or logarithmic graphs plotted on rectangular grids. The set contains 34 different scales for linear plotting and 28 single cycle scales for log plots.

**B66-10303**

**BYPASS ROD TRANSFERS HEAT DEVELOPED IN THERMIONIC DIODE**

LARKINIS, L. J. /THEMEO ELECTRON ENG. CORP./ DATE- JUN. 1966

**178**
In a thermionic diode, a cesium tube joining the emitter-collector area and the cesium reservoir is fitted with a copper bypass rod held in place by two standoff brackets. The rod transfers heat from the emitter-collector to the reservoir without going through the ceramic seal structure which surrounds the cesium tube and cannot sustain large temperature gradients.

Flexible tube inserted into a 3/4-round strip receptacle inflates to form an airtight material fastener. Inflation is done with a carbon dioxide cartridge and deflation by a manually operated release valve. Device has potential use in space suits, underwater suits, and other protective clothing.

Union assembly provides a fluidtight joint between two lengths of tubing and minimizes introduction of braze contaminants into the tubing. The union contains two brazing preforms separated by a metal ring that serves as a dam for the molten brazing alloy.

Latching mechanism that is securely locked by the movement of the operating handle in one direction is used in limited access areas. This mechanism is operated by a force applied to the handle at small angles.

An adjustable apparatus which simulates partial to zero gravity partially supports the weight of convalescing patients in rehabilitation exercises. This device is an ideal tool for physical therapy.

Compact, cylindrical gas diffuser with radial exhaust slots and internal axial flow channels maintains the necessary pressure for the desired withdrawal rate of cryogenic liquids from tanks. The diffuser minimizes pressure losses which result from condensation of nitrogen gas in the liquid and prevents direct impingement of gas jets on liquid surface to reduce turbulence.

06 MECHANICAL

B66-10345
FRICCTION LOADING DEVICE ENABLES ACCURATE TESTING OF BRITTLE MATERIALS
HUNSENBERG, R. F. /WESTINGHOUSE ASTRONAUTICAL LAB./ DATE- JUL. 1966
RU-0051
Friction loading device gives axial symmetry to test specimen of brittle materials during tensile testing. This axial alignment prevents bending stresses which hinder measurement of tensile strength.

B66-10346
TOOL FORMS RIGHT ANGLES IN COMPONENT LEADS
GLENN, C. G. DATE- JUL. 1966 M-P5-722
Hand tool forms right angles in electronic component leads so they fit the spaced holes of a printed circuit board. This tool firmly holds the leads at points near the component ends to prevent damage and provide accuracy.

B66-10352
BRAZING PROCESS PROVIDES HIGH-STRENGTH BOND BETWEEN ALUMINUM AND STAINLESS STEEL
HUSCHER, R. G., JR. /N. AM. AVIATION/ DATE- AUG. 1966 M-P5-607
Brazing process uses vapor-deposited titanium and an aluminum-zirconium-silicon alloy to prevent formation of brittle intermetallic compounds in stainless steel and aluminum bonding. Joints formed by this process maintain their high strength, corrosion resistance, and hermetic sealing properties.

B66-10358
WELDS CHILLED BY LIQUID COOLANT MANIFOLD
ODOR, H. E. /AvCO/ /N. AM. AVIATION/ DATE- AUG. 1966 M-P5-679 M-P5-680
Liquid coolant chill tool provides uniform cooling to materials adjacent to weld areas as long or contoured butt welds. This tool incorporates a manifold that clamps to the weld joint by vacuum and circulates liquid in direct contact with adjacent material.

B66-10357
SUSPENSION PLATE ELIMINATES UNDESIRED ARCING DURING ELECTRON BEAM WELDING
HANCHET, K. E. /Hill, J. BARROW, J. C. /BATES INTECH. CORP./ DATE- AUG. 1966 M-P5-1126
Suspension grid eliminates undesired arcing during electron beam welding in one of two ways. A grid at ground potential collects secondary emission of ions and electrons produced by the beam as it strikes the workpiece, or a negatively energized grid repels the plasma arc back to the workpiece. This eliminates ground screens used to cover view ports.

B66-10360
ALUMINUM CORE STRUCTURES BRAZED WITHOUT USE OF FLUX
SUP- INNOVATOR NOT GIVEN /ABBOWCA MFG. CORP./ DATE- AUG. 1966 M-P5-659
Aluminum alloy face sheets are brazed to aluminum alloy honeycomb cores without using corrosive flux by means of one or three methods. The completed brazed structure has the high-strength characteristic of heat treated aluminum alloys.

B66-10364
VERSATILE MACHINE MILLS, SAWS LIGHT MATERIALS
HAUSCHL, J. A. /N. AM. AVIATION/ DATE- AUG. 1966 M-P5-627
Versatile milling/sawing machine performs angle cuts, flat and profile milling, machining of grooves and slots, and edge trimming of phenolic panels. The machine is mounted on rails above a table equipped with vacuum capability for holding workpieces.

B66-10365
DIAPHRAGM VALVE FOR CORROSIVE AND HIGH TEMPERATURE FLUID FLOW CONTROL HAS UNIQUE FEATURES
EBBED, B. T. /AVCO/ DATE- AUG. 1966 M-P5-647
Monometallic diaphragm valve is used for corrosive and high temperature fluid flow control. The body, diaphragm, and plug of the valve are welded together to form an integral leakproof unit for containing the fluid as it passes through the valve from inlet to outlet.

B66-10366
HOLLOW SPHERICAL ROTORS FABRICATED BY ELECTROPLATING
AVEL, W. W. /CONW/ DATE- AUG. 1966 JPL-5C-117
Equatorial bands are fabricated to provide a locating fit for the hemispheres of hollow spherical rotors which are then joined by electroplating. Several nonmagnetic materials may be used to form the joint, such as aluminum, copper, iron, gold, platinum, and zinc.

B66-10367
DOT PATTERNS PROVIDE REPRODUCIBLE FLAW AREAS FOR STUDY OF ADHESIVE BONDING
FRANK, L. SCHMIDT, G. /GEN. AM. TRANSPORTATION CORP./ DATE- AUG. 1966 M-P5-862
Photographic production of a small-dot pattern of known geometry on the surface of a substrate for controlled area degradation enables a study of adhesive bond strengths. These dot patterns may also be applied to force-limiting devices which must depend on the adhesive bonding strength between mating surfaces.

B66-10369
AUTOMATIC PROTECTIVE VENT HAS FAIL-SAFE FEATURE
DAZTAM, C. E. /N. AM. AVIATION/ DATE- AUG. 1966 M-FL-218
Delayed vent valve system in a mechanical backing pump in a vacuum system allows the pneumatic foreline valve to seal before the pump vent opens. The system is designed to be fail-safe and operate even though there is loss of electrical power.

B66-10370
PORTABLE LIGHTWEIGHT CELL PROVIDES CONTROLLED ENVIRONMENT
SHELTON, S. TARR, J. /N. AM. AVIATION/ DATE- AUG. 1966 M-SC-648
Inflatable, lightweight cell provides a separate, secondary environment for a space-suited man in case of spacesuit damage or malfunction. The cell has a pressure-sealing zipper and is equipped to maintain a livable atmosphere.

B66-10371
BRAZING RETORT MANIFOLD DESIGN CONCEPT MAY MINIMIZE AIR CONTAMINATION AND ENHANCE UNIFORM GAS FLOW
SUPP, E. P. /N. AM. AVIATION/ DATE- AUG. 1966 M-P5-707
Brazing retort manifold minimizes air contamination, prevents gas entrapment during purging, and provides uniform gas flow into the retort bell. The manifold is easily cleaned and turbulence within the bell is minimized because all manifold construction lies outside the main enclosure.

B66-10375
IMPACT AND PUNCTURE RESISTANT MATERIAL PROTECTS PARTS FROM DAMAGE
Uniform sized, laminated panels protect delicate parts and equipment from damage during storage and transportation. The panels consist of sheets of steel foil bonded between sheets of elastic foam. They are lightweight, impact and puncture resistant, and, when forced into an enclosure, provide a barrier against moisture and thermal shock.
Single rotary valve controls a circular bank of hydraulic leveling cylinders that must maintain large loads within plus or minus three arc minutes of the true vertical. Since the position of the valve spool determines the flow rate of each bank of cylinders and hence cylinder position, different flow rates may be obtained by changing the spool shape.

B66-10403

SPECIAL TOOL KIT AIDS HEAVILY GARMENTED WORKERS

HOLMES, A. E. / HARTIN CO./ DATE- SEP. 1966

Triangular aluminum tool kit, filled with polyurethane is constructed to receive various tools and hold them in a snug but quick-release fit as an aid to heavily gloved workers. The kit is designed to allow mounting within easily accessible reach and to provide protection of the tools during storage.

B66-10405

DESIGN RELIABILITY GOAL DEVELOPED FROM SMALL SAMPLE

BURBOW, D. L. / REICHECK, R. / DATE- SEP. 1966

M-FS-403

Sampling distributions, constructed by Monte Carlo simulation are used in hardware development to establish a design reliability goal, to place a confidence coefficient on reliability estimates, and to determine whether sample stress/strangth data demonstrate a specified reliability at a specified confidence level.

B66-10408

CLOSED LOOP OPERATION ELIMINATES NEED FOR AUXILIARY GAS IN HIGH PRESSURE PUMPING STATION

LAWNT, D. G. / DATE- SEP. 1966

M-FS-893

Closed loop system for a liquid nitrogen high pressure pump feeds back gaseous nitrogen generated by heat leak into the reservoir to maintain the pressure in the storage tank. This system, more efficient system eliminates the need for auxiliary gas to maintain the tank pressure and can be used on relatively high cryogenic pumping systems.

B66-10410

ALIGNMENT TOOL FACILITATES PIN PLACEMENT ON IRREGULAR HORIZONTAL SURFACES

BOYLE, J. V. / DATE- SEP. 1966

LANGLEY-219

Alignmet tool facilitates spotting and cementing plastic pins on the true vertical to irregular concave and convex surfaces. The tool consists of a wood tripod with individually adjustable legs, a wood block with a hole for placing the pins and two spirit levels at a 90 degree angle for easy alignment.

B66-10411

HEAVY DUTY PRECISION LEVELING JACKS EXPEDITE SETUP TIME ON HORIZONTAL BORING MILL

DELLERBAUGH, W. JONES, C. / DATE- SEP. 1966

M-FS-1084

Leveling jack is a precise alignment tool which expedites the setup of components or assemblies up to 2500 pounds on horizontal boring mills. This tool eliminates the necessity of wedges and blocks to shis the components to proper position.

B66-10415

ELECTROPLATING ELIMINATES GAS LEAKAGE IN BRAZED AREAS

KEGG, J. D. / DATE- SEP. 1966

M-FS-923

Electroplating method seals brazed or welded joints against gas leakage under high pressure. Any conventional electroplating process with many different metal anodes can be used, as well as the build up of layers of different metals to any required thickness.

B66-10416

MATCHING FLOW CHARACTERISTICS OF STANDARD
LARGE METAL RING SEAL PREVENTS GAS LEAKAGE AT 5000 PSI

B66-10422
MIDDLEKOOP, J. H. /N. AM. AVIATION/ DATE- SEP. 1966

Weldable metal ring seal prevents gas leakage in hydrogen, helium, or nitrogen storage bottles at pressures up to 5,000 psi. The grooved ring seal contains elastomer O-rings and is installed between the mating faces of the access cover and the storage bottle.

LABYRINTH-TYPE VALVE SEAL INCREASES VALVE LIFE BY DECREASING FLUID VELOCITY

B66-10424
HICKS, J. E. /N. AM. AVIATION/ DATE- SEP. 1966

Labyrinth-type valve seat and a moving piston with V-notch openings reduce the fluid velocity and, thus, the erosion rate of regulator valves.

INTERIOR SERVICING PLATFORM SIMPLIFIES MAINTENANCE OF STORAGE TANKS

B66-10425
RANGES, C. S. /N. AM. AVIATION/ DATE- OCT. 1966

Rapid synchronization of phase-locked oscillators is best achieved by the swept-frequency acquisition technique, wherein the Voltage-Controlled Oscillator (VCO) is linearly swept through the uncertainty band. The theoretically predicted sweep rates of this technique and the observed experimental results differ by less than seven percent.

FLEXIBLE DRIVE ALLOWS BLIND MACHINING AND WELDING IN HARD-TO-REACH AREAS

B66-10428
HARVEY, D. H. /N. AM. AVIATION/ DATE- OCT. 1966

Flexible power and control unit performs welding and machining operations in confined areas. A machine/weld head is connected to the unit by a flexible transmission shaft, and a locking-indexing collar is incorporated onto the head to allow it to be placed and held in position.

ROTATING MAGNETIC POLES USED TO PUMP MERCURY

B66-10434
BEHRBA, W. T. /N. AM. AVIATION/ DATE- OCT. 1966

Rotating magnetic pump with redesigned pump cell is used for pumping mercury. The modified pump has better electrical continuity, more efficient heat removal, and good wetting characteristics in the mercury flow channel.

NEW BACKUP-BAR GROOVE CONFIGURATION IMPROVES MELTING WELD OF 2014-26 ALUMINUM

B66-10443
BLACK, F. J. /N. AM. AVIATION/ DATE- OCT. 1966

Backup chill bar with new grooved dimensions improve welding of 2014-26 aluminum. This groove geometry affords optimum chilline characteristics, reduces shrinkage and the weld head is narrower and consistently free from laps or voids.

SEAL-OFF ASSEMBLY PERMITS RAPID EVACUATION OF AIR FROM CONTAINERS

B66-10446
DENSER, E. R. /RCA/ DATE- OCT. 1966

Seal-off assembly which permits rapid container evacuation using large diameter tubing has a vacuum valve that permits sealing plate transfer from the vacuum valve stem to the container after evacuation. The sealing plate can be reused repeatedly. This device can repump in case of a small leak without exposing the container to the atmosphere.

MYLAR FILM ELIMINATES SILK SCREENING OF EQUIPMENT PANELS

B66-10455
CONGER, D. R. /N. AM. AVIATION/ DATE- OCT. 1966

Equipment panel designs and nomenclature are photographed on clear Mylar film to permit fast and inexpensive panel redesigns and revisions and to eliminate the silk screen process. The film is coated with an adhesive and impressed on the panel. For revisions, the film is easily peeled off and replaced.

LOGIC SYSTEM AIDS IN EVALUATION OF PROJECT READINESS

B66-10457
HAYES, S. J. /N. AM. AVIATION/ DATE- OCT. 1966

Measurement Operational Readiness Requirements (MORR) logic is used for determining the readiness of a complex project to go forward as planned. The system used logic network which assigns qualities to all important criteria in a project and establishes a logical sequence of measurements to determine what the conditions are.

IMPROVED METHOD FACILITATES DEBULKING AND CURING OF PHENOLIC IMMERGENT ASBESTOS

B66-10459
GAMBE, F. J. /N. AM. AVIATION/ DATE- OCT. 1966

Workpieces covered with phenolic impregnated asbestos tape and then wrapped with a specified thickness of nylon yarn under pressure, are debulked and cured in a standard oven. This method of debulking and curing is used in the fabrication of ablative chambers for the Gemini and Apollo attitude control engines.

CHART SYSTEM SIMPLIFIES IDENTIFICATION OF COMPLEX DESIGN ASSEMBLIES

B66-10460
OREIN, R. P. /N. AM. AVIATION/ DATE- OCT. 1966

Chart system simplifies identification of complex design assemblies.
Identification breakdown chart that lists the component parts required for any specific end item is used to identify rapidly and accurately, from numerous drawings, all the component parts of a complex design assembly. Cylindrical and complex configurations are depicted as continuous flat surfaces for ready identification.

B66-10463
MICROMINIATURE THERMOCOUPLE MONITORS OWN INSTALLATION
GABRIEL, A. J. SELLERS, J. P., JR. /N. AM. AVIATION/
DATE- OCT. 1966
H-PS-1111
Micro Miniature thermocouple makes precision gas sidewall temperature readings inside large thrust chambers. It is installed by a technique whereby the sensor monitors its own installation to insure against thermal damage to the thermocouple and ensure minimal disturbance to chamber surfaces.

B66-10464
LARGE SEALS FABRICATED FROM SMALL SEGMENTS
REDUCE PROCUREMENT LEAD TIME
KANBEL, M. B. HAYES, V. D. /N. AM. AVIATION/
DATE- DEC. 1966
N-PS-1117
Large diameter seals are fabricated from narrow strip stock positioned in segments to form a complete ring. This technique could be used to reduce the cost of critical, large diameter seals in the heating and ventilating industry, petrochemical industry, and marine fabrication industry.

B66-10470
INDICATOR SYSTEM PROVIDES COMPLETE DATA OF ENGINE CYLINDER PRESSURE VARIATION
MC. JONES, R. B. MORGAN, R. B. /FICKERGS, INC./
DATE- DEC. 1966
LEWIS-291
Variable reference pressure used together with a balanced pressure pickup /a diaphragm switch/ to switch the electric output of the pressure transducer in a reference pressure line obtains precise engine cylinder pressure data from a high speed internal combustion engine.

B66-10471
COPPER-ACRYLIC ENAMEL SERVES AS LUBRICANT FOR VACUUM TUBE BOX PANEL DRAWING
KANBEL, C. KARASEK, P. R. /BECKMAN/
DATE- NOV. 1966
ARG-56
Acrylic enamel spray containing metallic copper pigment lubricates refractory metal tubing during cold drawing operations so that the tubing surface remains free from scratches and nicks and does not seize in the die. Zirconium alloys, zirconium, tantalum alloys, niobium alloys, vanadium alloys and titanium alloys have been used using this lubricant.

B66-10472
RUBBER AND ALUMINA GASKETS MAINTAIN VACUUM SEAL IN HIGH TEMPERATURE EMF CELL
STIPOFF, J. C. DATE- NOV. 1966
ARG-77
Silicone rubber gasket and an alumina gasket retain a vacuum inside a high temperature EMF cell in which higher and lower density liquid metal electrodes are separated by an intermediate density fused salt electrolyte. This innovation is in use on a sodium bismuth regenerable EMF cell in which the fused salts and metals are at about 500 deg to 800 deg C.

B66-10473
MICROSCOPIC VALVE ACCURATELY CONTROLS SMALL VOLUME FLUID FLOW
GORMAN, A. DATE- NOV. 1966
ARG-66
Hydraulic or pneumatic actuated valve accurately controls small volume flow of liquids or gases by expanding or relaxing an O-ring within an annular flow space. In one application, 2 such valves were used to accurately set small volumes of helium under a pressure of 1000 psi.

B66-10477
CONCEPT OF PLANETARY GEAR SYSTEMS TO CONTROL FLUID MIXTURE RATIO
MC. GIBBON, J. B. /N. AM. AVIATION/
DATE- DEC. 1966
N-PS-1785
Mechanical device senses and corrects for fluid flow departures from the selected flow ratio of two fluids. This system has been considered for control of rocket engine propellant mixture control but could find use wherever control of the flow ratio of any two fluids is desired.

B66-10484
BRACING MECHANISM IS SELF ACTUATING AND UNIDIRECTIONAL
PIZZO, J. /N. AM. AVIATION/
DATE- DEC. 1966
N-PS-1299
Mechanism automatically applies a bracing action on a moving item, in either direction of motion, immediately upon removal of the driving force and with no human operator involvement. This device would be useful wherever free movement is undesirable after an object has been guided into a precise position.

B66-10485
COMBINATION SPACER AND GASKET PROVIDES EFFECTIVE STATIC SEAL
JONES, F. B. /N. AM. AVIATION/
DATE- DEC. 1966
N-PS-1397
Closely machined steel ring having narrow sealing lands on both faces and a thin coating of a commercially available halocarbon polymer combines the functions of a spacer and static seal ring or gasket having a minimum of potential leak paths. The device is effective over a wide range of temperatures down to minus 423 deg F and at pressure up to 180 psig.

B66-10489
PLUG REPLACES WELD FILLER AS SEAL IN COMPLEX CASTING
GORDON, R. L. HARRIS, C. L. /AEROJET-GM/
DATE- OCT. 1966
N-PS-1299
Expansible metal plug is inserted to provide a seal to support the solid core with small blocks, referred to as chapples, during the casting of a complex voulte. Weld-warpage and multiple X ray inspection are eliminated by use of this technique.

B66-10495
PULG VALVE CYCLES AT CONTROLLED FREQUENCY
CHARLTON, K. W. VAN ARNAN, D. E. /BECKMAN/
DATE- NOV. 1966
MS-143
Spool valve accurately controls the cycle of a pneumatically-actuated system over long periods. Regulation of pressure from the external source, positioning of the adjusting plugs, and magnet selection, together afford wide variation in cyclic timing and speed of closure in either direction.

B66-10498
QUICK-RESPONSE SERVO AMPLIFIES SMALL HYDRAULIC PRESSURE DIFFERENCES
WAGLAND, R. E. DATE- NOV. 1966
ARG-99
Hydraulic servo, which quickly diverts fluid to either of two actuators, controls the flow rates and pressures within a hydraulic system so that the output force of the servo system is independent of the velocity of the mechanism which the system actuates. This servo is a dynamic feedback control device.

B66-10513
OPPOSED ARCS PERMIT DEEP WELD PENETRATION WITH ONLY ONE PASS
BRIDGES, L. E. /N. AM. AVIATION/
DATE- NOV. 1966
N-PS-1696
Arc welding technique uses opposed electrodes on either side of the workpiece, operated in right angles, out-of-phase, pulsating direct current. Complete penetration has been obtained with this technique in metals ranging from 0.062 to 1.0 inch thickness.
B66-10514
IN-TANK SHUTOFF VALVE IS PROVIDED WITH
MAXIMUM BLAST PROTECTION
HOLSEN, C. F. /WA. AM. AVIATION/ DATE- NOV. 1966
M-PS-1529
In-tank shutoff valve is installed with the valve
poppet and actuator inside the tank to provide
maximum blast protection during rocket engine test
operation. This valve design is applicable
wherever explosive fuels are used and is currently
being used in J-ox and liquid hydrogens tanks at a
rocket engine test site.

B66-10522
SELF-ACTUATING GRAPPLE AUTOMATICALLY
ENGAGES AND RELEASES LOADS FROM OTHER
CRANES
FROEBELICH, J. A. /KASS, G. A. DATE- NOV. 1966
ARG-01
Two-piece grapple mechanism consisting of a lift
knob secured to the load and a grapple member
connected to the crane or lift automatically
disengages the load from the overhead lifting
device when the load contacts the ground. The
key feature is the sliding collar under the lift
knob which enables the grapple latch to be
stripped off over the lift knob.

B66-10523
HYDRAULIC FLUID SERVES AS MANDREL FOR SMALL
DIAMETER REFRACTORY TUBE DRAWING
MAYFIELD, R. N. DATE- DEC. 1966
ARG-04
Sealing hydraulic fluid within a tube and passing
the tube through a reducing die produces high
quality small diameter refractory metal tubing.
THe encased fluid eliminates the need for mandrel
or ductile core removal and drawing can proceed
without handling operations.

B66-10530
PERFORATIONS IN JET ENGINE SUPERSONIC INLET
INCREASE SHOCK STABILITY
KEPLER, C. E. /UNITED AIRCRAFT CORP./ DATE-
NOV. 1966
WSD-0
Modification of a conventional jet engine internal
compression supersonic inlet results in increased
shock stability and thus, engine instantaneous
response to changes in inlet air properties.
This technique provides a large amount of bleed
near the maximum pressure recovery at the expense
of minor bleed flow during critical operation.

B66-10537
GAGE TESTS TUBE FLARES QUICKLY AND
ACCURATELY
GRIFFIN, F. D. DATE- NOV. 1966
KSC-66-19
Flared tube gage with a test cone that is
precisely made with a tapering surface to
complement the tube flare is capable of
determining the accuracy of a tube flare
efficiently and economically. This device should
improve the speed, efficiency and accuracy of
tube flare inspections.

B66-10545
HOIST IS AUTOMATICALLY STOPPED AT LOW
DECELERATION RATE
GEORGE, K. R. /H. HESS, H. C. /WA. AM. AVIATION/
DATE- DEC. 1966
N-FS-1639
In operating a hoist to transport delicate or
fragile components, an automatic stopping device
is adjusted to impose a predetermined deceleration
rate during stopping.

B66-10546
INTERNAL MACHINING ACCOMPLISHED AT CONSTANT
RADIUS
COLLIIGH, T. E. /WA. AM. AVIATION/ DATE-
DEC. 1966
M-FS-1573
Device machines fluid passages in workpieces at
constant radii through two adjacent surfaces that
are at included angles up to approximately 120
degrees. This technique has been used
extensively in fabricating engine parts where
close control of fluid flow is a requirement.

B66-10550
DAMPER REDUCES EFFECTS OF RESONANCE ON
FORCE TRANSDUCER
POSTA, R. W. /WA. AM. AVIATION/ DATE- NOV. 1966
WSO-321
Vicious-file damper eliminates response lag of
resonance generated noise when inserted into the
thrust measuring system. This technique can be
applied to automated devices when pulsed force or
low order impact is involved, and where signal
noise is produced by stopping or reversal of
mechanical travel or by water hammer.

B66-10562
METALLURGICALLY HARDENED FIXTURE PERMITS
POLISHING OF SOFT METALS ON VIBRATORY
LAPING MACHINE
CALVITRAS, S. DATE- DEC. 1966
ARG-02
Circular fixture which mounts several specimens
within a single turret prevents specimen scoring
during grinding and polishing operations performed
on a vibratory lapping machine. Each specimen is
loaded individually with a weight small enough to
prevent scoring but large enough to promote
polishing.

B66-10567
HEAT EXCHANGER TUBES SUPPORTED IN HIGH
VIBRATION ENVIRONMENT
URQUIDI, R. /WA. AM. AVIATION/ DATE- DEC. 1966
M-FS-1401
Cantilevered structure supports heat exchanger
cores against vibration loading while allowing
freedom for differential thermal growth. The
support channels will accept a variety of coil
angles with the same coil pitch, thus reducing the
number of parts required. This design, with
slight modification, could be used to support
parallel rows of straight piping.

B66-10570
STATIONARY DEVICE PRODUCES HOMOGENEOUS
MIXTURE OF FLUIDS
Baker, D. I. COLLISON, H. P. /WA. AM. AVIATION/
DATE- DEC. 1966
M-FS-525
Stationary device produces a homogeneous mixture
of two or more one-phase or two-phase fluids. The
device contains two concentric flow guides with
helical passageways through which the fluids are
forced into turbulent flow by the system pressure
differential.

B66-10571
DUCTILE MANDREL AND PARTING COMPOUND
FACILITATE TUBE DRAWING
RITZ, W. R., JR., MAYFIELD, R. N., POLAKOREK, W.
H. DATE- DEC. 1966
ARG-03
Refactory tubing is warm drawn over a solid
ductile mandrel with a powder parting compound
packed between mandrel and the tubes inner
surface. This method applies also to the
coextrusion of a billet and a ductile mandrel.

B66-10573
ORTHOPEDIC STRUTTER WITH AVERAGE-SIZED
PERSON CAN PASS THROUGH 10-INCH OPENING
LOTHSCHUETZ, F. X. /MASON-RUST CO./ DATE-
1966
M-FS-011
Modified Robinson stretcher for vertical lifting
and carrying, will pass through an opening 10
inches in diameter, while containing a person of
average height and weight. A subject 6 feet tall
and weighing 200 pounds was lowered and raised out
of an 18 inch diameter opening in a tank to test
the stretcher.

B66-10575
EMERGENCY ESCAPE SYSTEM USES SELF-BRAKING
MECHANISM ON FIXED CABLE
BILLINGS, C. R. /MC DAVIS, R. A. /MC GOODR, J. T.
WILL, P. F. DATE- DEC. 1966
KSC-66-44
Slide-wire system with a twist level slide
device
incorporates automatic descent and braking for the safe and rapid evacuation of personnel from tall structures. This device is used on any tall structure that might require emergency evacuation. It is also used to transfer materials and equipment.

B66-10582
COMPOSITE BULKHEAD FABRICATION DEVELOPMENT
J. R. DATE- DEC. 1966
MSC-1264
Composite bulkhead is produced by a fabrication concept utilizing vacuum and/or autoclave pressure to hold formed welded sandwich elements in place during bonding and aging.

B66-10585
ROTATIONAL FLUID COUPLING ELIMINATES HOSE ENTANGLEMENT
AUBOE, R. B. /TAS/ DATE- DEC. 1966
MSC-312
Rotational fluid coupling mechanism circulates a temperature controlled fluid between a stationary heat exchanger and a coolant plate on a rotating platform. The mechanism consists of two concentric cylinders containing one or more flexible tubes which are controlled and positioned in such a way that it eliminates tubing entanglement.

B66-10587
QUALITY CONTROL CRITERIA FOR ACCEPTANCE TESTING OF CROSS-WISE WELDS
BRATONT, R. D. /AM. AVIATION/ DATE- DEC. 1966
MSC-627
Visual inspection criteria assure the metallurgical integrity of spot welds joining nickel leads and nickel ribbon in a 90 degree cross-wire configuration.

B66-10588
PLASTIC TUBING PROTECTS FLEXIBLE COPPER HOSE
BELLING, R. E. /AM. AVIATION/ DATE- DEC. 1966
MSC-772
Flexible copper purge and coolant hoses is covered with a high-temperature shrinkable plastic for protection against severe vibration during rocket engine tests. Thin type of tubing is being used on all flexible water tubes used in Y-1 engine tests.

B66-10589
POSITIVE DISPLACEMENT CYLINDER MEASURES CORROSIVE LIQUID VOLUMES
BANBDAK, H. A. VENDL, C. J. /AM. AVIATION/ DATE- DEC. 1966
MSC-10-10
Positive displacement cylinder accurately measures volumetric flow rates of corrosive liquids. The cylinder is compatible with corrosive liquids and handles flow rates from zero to 75 gpm at pressures to 900 psig with an accuracy of 0.25 per cent.

B66-10593
FLUID LOGIC CONTROL CIRCUIT OPERATES ROTATOR ACTUATOR MOTOR
SPÓR- INNOVATOR NOT GIVEN /ERDIX CORP./ DATE- DEC. 1966 NOR- SEE ALSO NASA CR-54798
LEWIS-294
Fluid logic control circuit operates a pneumatic rotator actuator motor. It has no moving parts and consists of connected fluid interaction devices. The operation of this circuit demonstrates the ability of fluid interaction devices to operate in a complex combination of series and parallel logic sequence.

B66-10595
TREATMENT INCREASES STRESS-CORROSION RESISTANCE OF ALUMINUM ALLOYS
JACOBS, J. J. /AM. AVIATION/ DATE- DEC. 1966
M-78-1840
Governing during heat treatment of the aluminum alloys immediately followed by moderate plastic deformation, preferably by shock loading achieves near optimum values of both yield strength and resistance to stress corrosion. Similar results may be obtained by substituting a conventional deformation process for the shock loading step.

B66-10597
GRIT BLOWING NOZZLE FABRICATED FROM MILD TOOL STEEL PROVES SATISFACTORY
MC PELLAND, J. E. TUBERTY, B. DATE- DEC. 1966
MSC-1420
Dry blasting with glass beads through a nozzle assembly descales both the outside and inside surfaces of tubes of Inconel 718 used for the distribution of gaseous oxygen. The inside of the nozzle is coated with polyurethane and the deflector with a commercially available liquid urethane rubber.

B66-10601
EQUATIONS PROVIDE TUBULAR INFORMATION ON EFFECTS OF UNIFORM AND VARIABLE LOADS ON TUBE, FLAT, CIRCULAR PLATES
HEAP, J. C. DATE- DEC. 1966
ARG-151 ARG-152
Unit-mass system of derivation of equations determines the deflection, slope, and moments for thin, flat, circular plates subjected to either a uniform or a symmetrical variable load. The derived equations are computed, organized in tabular form, and graphically depicted.

B66-10604
SN Mirror ATTACHMENT HAS ZERO FORCE REACTION
HOLMES, A. E. RILEY, B. N., JR. /BLACK AND DECKER ENG. CO./ DATE- DEC. 1966
MSC-543
Zero reaction tools require no force application by workers in space. The tool accomplishes hole cutting by holding the workplace and through it by forces entirely absorbed within the tool.

B66-10608
FRICTION BRAKE CUSHIONS ACCELERATION AND VIBRATION LOADS
FEASEY, G. F. ZAWADZKI, G. Z. /AM. AVIATION/ DATE- DEC. 1966
MSC-715
Friction brake cushions an object in a vehicle from axially applied vibration and steady-state acceleration forces. The brake incorporates a doubly tapered piston that applies a controlled radial force to friction brake segments bearing against the walls of a cylinder.

B66-10610
SELECTIVE TUBE ROUGHENING INCREASES HEAT TRANSFER CAPABILITY
CARTER, L. W. DATE- DEC. 1966
M-75-599
Selectively roughening inside surfaces of tubes increases the heat transfer capabilities, but minimizes the pressure drop. This technique is used to construct roughened test sections for hydrogen heat transfer studies.

B66-10611
MULTILAYER REFRACTORY NOZZLES PRODUCED BY PLASMA-SPRAY PROCESS
BLOFORD, J. L. /ITT RES. INST./ DATE- DEC. 1966
WOO-318
Multilayer rocket nozzles formed by plasma spraying have good thermal shock resistance and can be rebeated in an oxidizing environment without loss of coating adherence. Suggested application of this process are for the production of refractory components, which can be forced as surfaces of revolution.

B66-10613
NEW WELDABLE HIGH STRENGTH ALUMINUM ALLOY DEVELOPED FOR CRYOGENIC SERVICE
SPÓR- INNOVATOR NOT GIVEN /ALUMINUM CO. OF AM./ DATE- DEC. 1966
MSC-757
Wrought aluminum alloy has improved low temperature notch toughness and weldability. This alloy can be all-fabricated to plate and sheet
without difficulty. Post-weld aging improves weld ductility and strength properties. A typical treatment is 8 hours at 225 deg F plus 16 hours at 300 deg F.  

**B66-10618**  
A DESIGN PROCEDURE FOR THE WEIGHT OPTIMIZATION OF STRAIGHT PINNED RADIATORS  
BURRIAN, R. J.; BARELL, D. W.; PEMBER, J. J.

METHOD FOR PREDICTING FRICTIONAL LOSS IN METAL BELLOWS AND FLEXIBLE HOSE  
CLEVELAND, J. R.; DANIELS, C. R.  
/AIR AVIATION/  
DAtE- DEC. 1966  
B66-10662

Test data obtained concerning the frictional pressure loss to fluids flowing in unsealed bellows and flexible hose. This data should be useful in the design of fluid systems where high
delivery velocities are involved and flexible hose or bellows must be employed.

B66-10663
LATERAL RING METAL ELASTIC WHEEL ABSORS
SHOCK LOADING
GALAN, L. /BENDIX CORP./ DATE- DEC. 1966
M-PS-1312

Lateral ring metal elastic wheel absorbs practically all shock loading when operated over extremely rough terrain and delivers only a negligible shock residue to associated suspension components. The wheel consists of a rigid aluminum assembly to which lateral titanium ring flexible elements with treads are attached.

B66-10665
SPHERICAL PIPE JOINT DELIVERS LOADS EQUALLY
TO MATING FLANGE
PFEUGER, R. /S. O. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-807

Oxidizer inlet duct with a ball joint pipe fitting incorporating two spherical bearing races and balls in contact with centering cage spring transmits an evenly distributed load to the mating flange. This design should find application in piping systems where unequal load distributions exist.

B66-10667
SILAZANE ELASTOMER REMAINS RESILIENT AT
400 DEG C
SPON- INNOVATOR NOT GIVEN /SOUTHERN RES. INST./ DATE- DEC. 1966
M-PS-1144

Smooth, unfoamed elastomer is unaffected by cosmes acids, alkanes, and organic solvents. Its thermal stability, chemical resistance, and physical properties make it of interest for various applications.

B66-10672
RESONANT FREQUENCY CAN BE ADJUSTED ON
VIBRATION MOUNT
HODGES, F. /ETAS AEROW./ DATE- DEC. 1966
JPL-SC-134

Vibration mount allows adjustment of its resonant frequency and is insensitive to wide temperature variation. The concept is essentially a multidirectional, frictionally damped spring with an adjustable cap. The mount provides vibration isolation in both compression and shear and may be applicable to space use.

B66-10674
ELIMINATION OF ROCKET ENGINE ASYMMETRIC
LOADS DURING TESTS AT SEA LEVEL
JOHNSON, J. R. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1730

Secondary injection concept eliminates asymmetric loads and may increase thrust rocket engine loads during sea level tests. The concept uses either a tubular manifold with evenly spaced injection ports or secondary fluid injected at the turbine exhaust inlet to the thrust chamber.

B66-10675
STUDY MADE OF DESTRUCTIVE SECTIONING OF
COMPLEX STRUCTURES FOR EXAMINATION
RILEY, T. DATE- DEC. 1966
LEWIS-341

Advances in destructive sectioning of very small or complex structures are discussed. Examination is made by filling the structure in a vacuum with a low viscosity potting compound and then cutting without danger of spatial disorientation.

B66-10677
STUDY MADE TO CONTROL DEPTH OF POTTING
COMPOUND FOR HONEYCOMB SANDWICH STRUCTURES
CUSHNAR, J. /GEN. DYN./CONVAIR/ DATE- DEC. 1966
LEWIS-370

Study determines optimum fastener insert size and shape, type of embedding cement, fixture, undercut and depth control by fiber glass plug in a honeycomb structure for maximum tensile strength. The best potting compound is 5-1 weight mixture of epoxy resin, curing agent, and milled glass fibers.

B66-10678
IMPROVED ROLLING ELEMENT BEARINGS PROVIDE
LOW TORQUE AND SMALL TEMPERATURE RISE IN
ULTRAHIGH VACUUM ENVIRONMENT
GLENW, R. C. DATE- DEC. 1966
LEWIS-359

Rolling element bearing with stainless steel races and rolling elements and a porous bronze cage successfully operates in ultrahigh vacuum environments at a low torque and with small temperature rise. All components are burnished in polyethylene sulfide.

B66-10683
VALVE EFFECTIVELY CONTROLS AMOUNT OF
CONTAMINANT IN FLOW STREAM
SCHNITZER, T. N. DATE- DEC. 1966
M-PS-1771

Contaminant valve with a coaxial groove rotor uniformly deposits contaminant into a flow stream under full pressure and flow conditions. The valve tests filters and filter elements of hydraulic oil, fuel, or lubricant systems without any detrimental effect on the performance.

B66-10686
ACTUATOR DEVICE SCHEDULES RATE OF VALVE
CLOSURE
SPON- INNOVATOR NOT GIVEN /WHITTAKER CORP./ DATE- DEC. 1966
M-PS-1556

Valve actuator schedules the closure rate of a valve. The actuator is spring loaded to produce a normally open valve and pneumatically powered to close the valve. The closure rate is controlled by means of pneumatic snubber and booster circuitry.

B66-10688
PREPARED STIFFENERS USED TO FABRICATE
STRUCTURAL COMPONENTS FOR PRESSURIZED
TANKS
LEWIS, J. C. SHERBA, E. S. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1796

Process of fabricating stiffened section components of pressurized tanks for aerospace use was developed. A potential use of the fabrication process is in the production of gore and quarter-panel sections of hydrogen and oxygen tanks for space vehicle boosters.

B66-10694
MECHANICAL DEVICE ACCURATELY MEASURES RP
PHASE DIFFERENCES IN VHF OR UHF RANGES
Rupp, L. J. /N. AM. AVIATION/ DATE- DEC. 1966
M-PS-1736

Dual range linear measurement device accurately measures RP phase differences in either VHF or UHF ranges. The device has a capability consisting of a coarse range extending to 30 cm readable to 1 mm and any fine range portion of 2.5 cm readable to .01 mm.

B66-10695
MOTION DRIVE SYSTEM IS ACCURATELY CONTROLLED
IN THE 1-MICRON RANGE
ROCKCRAFT, J. N. DATE- DEC. 1966
JPL-664

Motion drive system has been developed for use with interferometers where accurate control of minuscule distance in the 1-micron range is of prime importance. The drive system is applicable to any device that requires extremely accurate positioning control.

B66-10697
COMBINATION DOUBLE DOOR HIGH-VACUUM VALVE
PROVIDES ACCESS TO VACUUM CHAMBER
TAGES, S. F. DATE- DEC. 1966
JPL-649

Double door provides an extreme high vacuum seal as well as access to a vacuum chamber. The vacuum chamber has insertion of test devices into the vacuum environment. This arrangement is applicable to any vacuum chamber and should be of value in cryopumping or mechanically pumped chambers.
05 MECHANICAL

B66-10698
MECHANICAL FACILITATES COATING OF INNER SURFACES OF METAL CYLINDERS
BILLINGSLEY, J. B. TAFT, A. R. DATE—DEC. 1966
GSFC-515
Cylinder is rotated about shielded hot filament to vapor deposit this coatings of aluminum or other metallic substances on the inner surface of a cylinder while avoiding heat-producing high-density current flow which causes outgassing of the coating surface. This method is acceptable for glass or metal.

B66-10702
TEFLON SHEET PERMITS VALVE AND VALVE OPERATOR TO MOVE AS A SINGLE UNIT IN A CYTOMATIC PIPE LINE
KINDER, S. K. /WESTINGHOUSE ASTRONUTL. LAB./ DATE—DEC. 1966
NU-0077
Free floating support system in cytomatic pipe lines maintains the valve and valve operator in alignment. A Teflon sheet that is placed between the slide support base and the plate permits the valve and valve operator to move freely, as a unit, when the pipe line moves.

B66-10703
SILVER PLATING TECHNIQUE SEALS LEAKS IN THIN WALL TUBING JOINTS
BLANDERMAN, W. H. / N. AM. AVIATION/ DATE—DEC. 1966
NU-0090
Leaks in thin wall tubing joints are sealed by cleaning and silver plating the hot gas side of the joint in the leakage area. The pressure differential across the silver during hydrostatic test and subsequent use forces the ductile silver into the leak area and seals it.

B66-10704
METAL BOOT PERMITS FABRICATION OF HERMETICALLY SEALED SPILICES IN METAL SHEATHED INSTRUMENTATION CABLES
CHAMBERS, G. /WESTINGHOUSE ASTRONUTL. LAB./ DATE—DEC. 1966 READ—SEE ALSO B66-10705
NU-0083
Metal boot splices hard sheathed instrumentation cables with high temperature strain gages and thermocouples. Silver brazing the conductors together, hermetically seals the splice. This boot is a highly reliable sealed splice which is equally effective at cryogenic temperatures, high temperatures, nuclear environments, and combinations of the above.

B66-10707
PNEUMATIC WRENCH RATCHETS OR DISCHARGES NUTS OR BOLTS AS DESIRED
BOUILLUX, J. B. /WESTINGHOUSE ASTRONUTL. LAB./ DATE—DEC. 1966
NU-0085
Pneumatic wrench grips, screws or uncros, and discharges a nut or bolt as desired. The device consists of a standard pneumatic wrench modified with a special hex bolt head socket assembly and a diaphragm air cylinder.

B66-10708
AIR BEARING PROVIDES FRICTION-FREE SUPPORT FOR SHAKER SYSTEM SLIP TABLE
SKOFF, R. W. /WESTINGHOUSE ASTRONUTL. LAB./ DATE—DEC. 1966
NU-0086
Air bearing system supports a shaker system slip table with minimum friction. At each corner of a square of grooves made on the table, a hole is drilled through the table and fitted with air connections. Air pressure is simultaneously fed to the four fittings forming an air bearing.

B66-10711
CARRIAGE SYSTEM REMOTELY MOVES DRAWER OVER EXTENDED DISTANCE
SALLING, G. R. /PARSONS-JURDEN CORP./ DATE—DEC. 1966
NU-0092
In the transferring of material remotely through thick radiation shielding walls, a drawer is mounted on rollers which operate on rails carried on a slide carriage to eliminate the feature of the slide hardware projecting beyond the drawer when the drawer is extended its full distance.

B66-10712
SIMPLE MOTOR DRIVE SYSTEM OPERATES HEAVY HINGED DOOR
PITKIN, R. G. /PARSONS-JURDEN CORP./ DATE—DEC. 1966
NU-0093
Motor drive system remotely operates heavy steel radiation shielding doors. The drive consists of a standard motor reducer unit which is mounted on the door. This reducer drives a sprocket which is linked by chain to a fixed sprocket of the same size on the door jamb.

B66-10713
SWING-OUT RAIL SYSTEM SEPARATES OVERHEAD CRANE RAILS
PITKIN, R. G. /PARSONS-JURDEN CORP./ DATE—DEC. 1966
NU-0094
Swing-out rail system separates and reconnects the overhead traveling crane rails of a building to provide for the passage of a thick concrete radiation shield sliding door through the rails. In the swing-out position, the rail cantilevered from an axial shaft.

B67-10008
MICROAMALIMATION TOOL IS EASILY ADAPTED TO MANY USES
SHLEIGH, P. J. DATE—JAN. 1967
JPL-129
A special micromalimation tool equipped with a plunger mounted in a small tube can be easily adapted to such work operations as cutting, precision clamping, and spot welding of microscopic filaments or other parts. This tool is valuable where extreme steadiness of high magnification is required.

B67-10006
COMPLEX SURFACES PLAYED BY THIN-FILM DEPOSITION IN ONE OPERATION
BUCKLEY, D. N. PRIZNITZKIN, J. S. SHULVINS, T. DATE—JAN. 1967
LEWIS-292
Ion plating deposits thin film on complex surface in one operation. The ionized materials follow electric lines of force to all points on the objects, uniformly plating the surface from all sides simultaneously.

B67-10010
PROCESS SEQUENCE PRODUCES STRONG LIGHTWEIGHT REFLECTORS OF EXCELLENT QUALITY
LEWIS-331
Large compound curved surfaces for collecting and concentrating radiation are fabricated by the use of several common machining and forming processes. Lightweight sectors are assembled into large reflectors. With this concept of fabrication, integrally stiffened reflective sectors up to 25 square feet in area have been produced.

B67-10011
ELASTIC GUIDES REDUCE HYSTERESIS EFFECT IN BELLEVILLE SPRING PACKAGE
RC GLASHAN, W. F. TOTS, L. R. DATE—JAN. 1967
JPL-910
Peripheral support guides that elastically flex with the slight breathing on radial displacement during actuation can greatly reduce the hysteresis present in a Belleville spring package. This technique provides a control device that enhances the precision of pressure regulating valves, pressure switches, and vacuum actuators.

B67-10018
TECHNIQUE CUTS TIME AND COST OF BENDING JACKETED PIPING
GARDNER, J. W. /N. AM. AVIATION/ DATE—FEB. 1967
188-333

188
Technique uses a stiff medium in the annular space between inner and outer pipes of jacketed piping in transfer lines. The process eliminates splicing, welding and makes possible the use of standard pipe-bending tools.

B67-10019

ORBITAL TUBE FLARING SYSTEM PRODUCES TUBING CONNECTORS WITH ZERO LEAKAGE

WILLIAMS, J. B. / DATE- FEB. 1967

An orbital tube flaring system produces tubing connectors with a zero-leak potential needed in high pressure hydraulic and pneumatic systems. The flaring system incorporates a rolling cone and rolling die to closely control flare characteristics.

B67-10023

TESTS SHOW THAT ALUMINUM WELDS ARE IMPROVED BY BRAD REMOVAL

HOOD, W. W. /BOEING CO./ DATE- FEB. 1967

Tests with 2218-T87 aluminum alloy plate indicate improvements in strength, ductility, fatigue properties, and burst pressure result when one or both of the top and bottom weld beads are removed. There is, however, a drop in yield strength. The consistency of test data is considerably improved by weld bead removal.

B67-10039

SIMPLE PUMP MAINTAINS LIQUID HELIUM LEVEL IN CRYOSTAT

BUCBOLD, T. A. /GE/ DATE- MAR. 1967

Reciprocating pump maintains a precise level of liquid helium in a cryostat. The pump contains a niobium solenoid armature that is maintained in a superconductive state by the liquid helium.

B67-10043

HIGH SPEED BLOWDOWN SYSTEM PROVIDES RAPID PRESSURE LOSS

BRITTAN, H. C. /GEN. DYN. /CONVAIR/ DATE- MAR. 1967

Lewis-375

High speed blowdown takes advantage of discretely maintained differential pressures to vent a test chamber from high to ambient pressure with minimum time lag. This technique is advantageous where the use of pyrotechnics is undesirable.

B67-10065

RESISTANCE HEATING RELAYS STRUCTURAL ADHESIVE

GLEXEB, W. N. /BOEING CO./ DATE- MAR. 1967

Lewis-1607

Composite adhesive package bonds components together for testing and enables separation when testing is completed. The composite of adhesive, insulation and a heating element separate easily when an electrical current is applied.

B67-10047

VISCO SEAL DESIGN OFFERS ZERO-LEAKAGE AND WEAR-FREE CHARACTERISTICS

KETTILA, H. N. /MC GRAW, J. M. /GE/ DATE- MAR. 1967

Lewis-SEE ALSO NASA-TM-X-52245

Study provides specific design criteria in sealing applications for continuous duty pumps used in bulk liquid transfer. A basic sealing equation predicts visco seal performance in the turbulent regime.

B67-10048

TECHNIQUE FOR STRIPPING TEFON INSULATED WIRE

BABB, D. D. /HAYES INTERN. CORP./ DATE- MAR. 1967

Lewis-1774

Cryogenic stripping of Teflon insulated wire leaves no residue and produces no physical damage. After the wire is immersed in liquid nitrogen, bent slightly, and returned to room temperature, the Teflon is removed by fingernails or flat-nosed pliers.

B67-10052

LABORATORY ARC FURNACE FEATURES

INTERCHANGEABLE HEARTS

ARNSTEING, J. L. /KEUGER, O. L. DATE- MAR. 1967

ARC-125

Laboratory arc furnace using rapidly interchangeable hearts gains considerable versatility in casting so that buttons or special shaped castings can be produced. It features a sight glass for observation.

B67-10059

VACUUM CHAMBER IS REMOTELY SEALED BY REACTICN METAL

CODOVA, R. S./ACORE, G. R. /AEROJET-GEN. CORP./ DATE- APR. 1967

Nu-0091

Vacuum chamber is remotely sealed by a design using metal seal blades which are inserted into a solenoid reactive metal by pressurizing an expansion bellows. The process increases allowable manipulations by improving working space and safety factors.

B67-10063

FLUIDIC OSCILLATOR USED AS HUMIDITY SENSOR

REPROKIPUS, P. H. DATE- MAR. 1967

Lewis-340

Fluidic oscillator measures the humidity of the hydrogen stream leaving a hydrogen-oxygen fuel. The instrument provides continuous readings with a certain speed of response.

B67-10068

NEGATIVE FEEDBACK SYSTEM REDUCES PUMP OSCILLATIONS

ROHMSCHANDER, W. /ON. AVIATION/ DATE- MAR. 1967

Lewis-1652

External negative feedback system counteracts low frequency oscillations in rocket engine propellant pumps. The system uses a control piston to sense pump discharge fluid on one side and a gas pocket on the other.

B67-10066

HOLDING FIXTURE FACILITATES PIPE THREAD GAGE MEASUREMENTS

CUPPS, R. HILL, J. /ON. AVIATION/ DATE- MAR. 1967

Lewis-2009

Holding fixture that holds the thread gage and three wires in the proper relationship facilitates the measurement of the pitch diameter of the tapered threads of a pipe thread gage. Modified, this device can be used to hold involute spur gears.

B67-10067

ADJUSTABLE, SELF-LOCKING LADDER INCLUDES OPTIONAL WORK PLATFORM

WEBSTER, B. E. /ON. AVIATION/ DATE- APR. 1967

Lewis-1922

Height-adjustable ladder with a self-locking platform at its top makes elevated locations more accessible, increases the quantity and size of tools handled there, and decreases the risk of disturbance or damage to components. The retractable platform adapts the ladder to normal use.

B67-10073

COLDPLATE OF PIN FIN DESIGN MAKES EFFICIENT HEAT EXCHANGER

DVER, W. P. /ON. AVIATION/ DATE- APR. 1967

MC-1053

Flat, hollow coldplate that permits the flow of coolant liquid removed heat from heat-generating electronic equipment. This coldplate solves unusual problems of bulk, weight, and excessive pumping requirements.

B67-10081

RIGID-BODY MOTION EXTRACTED FROM TOTAL MOTION OF A FLEXIBLE BODY

HOWARD, J. C. DATE- APR. 1967

Lewis-345

Control system eliminates or reduces flexibility effects on the manual and automatic control of large flexible vehicles. It extracts rigid-body
and flexible-body motion and adapts well when a flexible-body frequency coincides or nearly coincides with the control mode frequency.

B67-10094
ULTRASONICS PERMITS BRAZING COMPLEX STAINLESS STEEL ASSEMBLY WITHOUT FLUX
BAKER, W. E. /WESTINGHOUSE ASTRONUC. LAB./ DATE- APR. 1967
NU-0115
Ultrasonic vibration of an assembly of stainless steel instrumentation tubes ensures brazing without flux. Vibration with an ultrasonic transducer permits the brazing material to flow down each tube in contact with a seal plug installed in a pressure vessel wall.

B67-10096
UNDERCOAT PREVENTS BLISTERING OF SILVER PLATING AT ELEVATED TEMPERATURES
KROGER, C. A. /N. AM. AVIATION/ DATE- APR. 1967
MFS-2049
Gold undercoat prevents blistering in the silver plating of Inconel 718 sheets from steam at high temperatures. The undercoat is diffused into the surface of the parent metal by baking prior to silver plating.

B67-10098
TOROIDAL RING PREVENTS GAS IGNITION AT VENT STACK OUTLET
MFS-2042
Toroidal ring welded to the vent stack outlet prevents static discharges which ignite combustible gases in a venting system. The ring inhibits the flow of current by removing the cause of turbulence characteristics of a sharply defined vent exit.

B67-10105
TOOL FACILITATES INSTALLATION OF BARRON CLAMPS
PETERS, G. A. WARNING, K. /N. AM. AVIATION/ DATE- APR. 1967
MFS-2039
Adjustable tool facilitates the installation of Barron clamps. It provides sufficient mechanical advantage to force the clamps into place, permitting one man operation. Two handles provide the major leverage, and a pivoting arm with a slot enables snap-out action.

B67-10107
COMPOSITE WELD NOB CONNECTS INDIVIDUAL FILLER WEAKNESSES
GERMALDO, S. /N. AM. AVIATION/ DATE- MAY 1967
MFS-1923
Composite filler wire welded together an assembly made from components of Rene 41 nickel base alloy. Using equal parts of Rene 41 and Inconel, the wire in the filler reduces the cracking and weaknesses of the individual parent metals.

B67-10117
INVESTIGATION OF PRESSURIZED TOROIDAL SHELLS GROW- INNOVATION NOT GIVEN /MARTIN CO./ DATE- MAY 1967
BEAN- SEE ALSO NASA-CE-264
HQ-27
The effect of internal pressure and external load on thin-walled toroidal shells was investigated. The result of the analysis agreed with experimental results on a 5-inch-diameter toroidal shell subjected to both pressurization and axial loading.

B67-10123
LOCK-DISCONNECT MECHANISM GIVES POSITIVE RELEASE TO JOINTED RODS
BEAVER, C. E. /BOEING CO./ DATE- MAY 1967
MFS-2167
Uniballistic system mechanism locks and unlocks through an internal collet device that is controlled by a single reciprocating shaft. The reduction in the number of operational parts results in higher reliability.

B67-10154
ASPIRATOR INCREASES RELIEF VALVE POPPET STROKE
RIDDLE, H. E. /N. AM. AVIATION/ DATE- MAY 1967
HQ-77
Addition of an aspirator to a relief valve increases the valve poppet stroke under dynamic flow conditions. The aspirator allows poppet inlet dynamic forces to overcome relief valve spring force. It reduces the fluid pressure in the skirt cavity by providing a low pressure sense probe.

B67-10158
SINGLE WRENCH SEPARATES NUTS FROM FREE-FLOATING BOLTS
THOMSON, C. /WESTINGHOUSE ASTRONUC. LAB./ DATE- MAY 1967
NUC-10013
Pneumatic impact wrench removes the nuts from freewheel turning bolts when the heads cannot be reached or the shafts anchored. It uses a fixed screwdriver blade that fits a slot cut into the threaded end of the bolt shaft.

B67-10167
HYDROSTATIC FORCE USED TO HANDLE OUTSIDED HEAVY OBJECTS
CRAPHT, G. W. STAREH, A. W. /BELLCOMM. INC./ DATE- JUN. 1967
HQ-90
Specially fitted barge is used to load and transport large, heavy objects to a dock side site. There the barge itself can lift, rotate, and position the objects. Typical functions are economically accomplished by water buoyancy.

B67-10178
SCANNING MEANS FOR CASSEGRAINIAN ANTENNA GIANDOMENICO, A. BUSCE, W. F. T. DATE- JUN. 1967
JPL-946
Mechanical antenna beam switching device detects weak signals over atmospheric and equipment noise sources in microwave antennas. It periodically rotates the paraboloidal dish in a Cassegrainian reflector system.

B67-10177
EFFECT OF WELDING POSITION ON POROSITY FORMATION IN ALUMINUM ALLOY WELDS
HAYFORD, J. WECHS, E. S. /DOUGLAS AIRCRAFT/ DATE- JUN. 1967
MFS-2310
Program investigates the effects of varied welding positions on weld qualities. Progressive changes in bead geometry occur as the weld plane angle is varied from upslope to downslope. The gravitational effect on the weld puddle varies greatly with welding position.

B67-10178
PICTURE FACILITATES HELIUM LEAK TESTING OF PIPE WELDS BOUTY, J. A. /HAYES INTERN. CORP./ DATE- JUN. 1967
MFS-2167
Picture facilitates inspection testing of circumferential pipe welds for vacuum tightness, using helium gas as a leakage tracer in conjunction with a mass spectrometer. It consists of a split rubber torus and a mating clamping ring with a vacuum hose fitting.

B67-10180
WORK PLATFORM IS SUPPORTED BY SELF-LOCKING BLADES
RUTHERFORD, T. /N. AM. AVIATION/ DATE- JUN. 1967
MFS-2297
Work platform has a supporting plate to engage the deck edge of the supporting structure when lowered into place. The plate is attached to blades hinged to the platform, rigidly supporting the platform when latched, and allowing the platform to be moved away when unlatched.

B67-10183
CONTINUOUS INTERNAL CHANNELS FORMED IN ALUMINUM FUSION WELDS
GAULT, J. SABG, W. /N. AM. AVIATION/ DATE- JUN.
1967
M-FS-2399

Process produces continuous internal channel systems on a repetitive basis in 2014-T6 aluminum. Standard machining forms the initial channel, which is filled with tungsten carbide powder. TIG machine fusion welding completes formation of the channel. Checkmill techniques enlarge it to the desired size.

B67-10195

WELD PROCEDURE PRODUCES QUALITY WELDS FOR TRUCK SECTIONS OF HASTELLOY-C

FLEET, P. J. /FLETCHER, C. W. /GLASSIER, L. F., JR. /Aerojet Gen./ DAT- JUN. 1967

Welding program produces quality, multipass welds in heavy tubular sections of Hastelloy-C. It develops semi-automatic tungsten-inert gas procedures, weld wire procurement specifications, material weld properties, welder-operator training, and non-destructive testing inspection techniques and procedures.

B67-10198

GLASS BLED SHOT PEENING REDUCES STRESS CORROSION OF METALS OF TITANIUM ALLOYS

PHILLIPS, M. D. /Aerojet Gen./ DAT- JUN. 1967

Workmanship standards manual defines practices, that adhere to rigid codes and specifications, for fusion welding of component piping, assemblies, and systems. With written and pictorial presentations, it is part of the operating procedure for fusion welding.

B67-10200

WORKMANSHIP STANDARDS FOR FUSION WELDING PHILLIPS, M. D. /Aerojet Gen./ DAT- JUN. 1967

Workmanship standards manual defines practices, that adhere to rigid codes and specifications, for fusion welding of component piping, assemblies, and systems. With written and pictorial presentations, it is part of the operating procedure for fusion welding.

B67-10202

APPARATUS FOR FABRICATION OF AMERICAN-BERYLLIUM METAL SOURCES PREVENTS CAPSULE CONTAMINATION KORS, W. C. /VAC. LOON, J. A. /Aerojet Gen./ DAT- JUN. 1967

Modifed gloved enclosure is used to fill a capsule with a mixture of americium and beryllium, which is sealed into a vacuum, to contain it. It contains a horizontal partition, vortex mixer, mounting press, welder, test vessel, and radiation shielding to prevent contamination.

B67-10210

ENVIRONMENTAL STUDY OF MINIATURE SLIP RINGS RADNIR, J. L. /Lit. Res. Inst./ DAT- JUN. 1967

Investigation studied the long term operation of miniature slip ring assemblies in high vacuum of space and included the influence of ring, brush, and insulator materials on electrical noise and mechanical wear. Results show that soft metal vapor plated and niobium diselenide miniature slip rings are beneficial.

B67-10211

HIGH-STRENGTH BRAZE JOINTS BETWEEN COPPER AND STEEL KORM, R. F. /Aerojet Gen./ DAT- JUN. 1967

High-strength braze joints between copper and steel are produced by plating the taping surface of the copper with a layer of gold. This reduces porosity in the braze area and strengthens the resultant joint.

B67-10212

DESIGN CONCEPT TO DECREASE RELATIVE SPEED OF BALL BEARINGS JESMAN, S. /S. AR. Aviation/ DAT- MAY 1967

Intermediated ring decreases the rolling speed of a ball bearing relative to the rotational speed of the shaft. It has raceways on its inner and outer peripheries and an additional row of balls. The modification permits operation at much higher shaft speeds than usual.

B67-10214

SYSTEM ENABLES DIMENSIONAL INSPECTION OF VESTA LARGE STRUCTURES SIMPSON, R. H. /Boeing Co./ DAT- JUN. 1967

Precise rotary table with an integrated optical tooling bar system enables accurate and rapid measurement of linear and angular dimensions on very large structures of any configuration. The structure is mounted on a turntable, which can be rotated to expose any desired surface.

B67-10219

SOLENOID VALVE DESIGN HAS ONE MOVING PART ANDERSON, J. W. /Aerojet Gen./ JUL. 1967

Solenoid valve structure has only one moving part, a ball and spring assembly. This eliminates wear caused by sliding motion contact between stationary and moving parts or between moving parts.

B67-10225

TEMPERATURE RESISTIVE WAVE WITHSTANDS IMPACT LOADING GRAN, R. B. /Aerojet Gen./ JUL. 1967

Valve regulates the flow of a reactant to a chemical heater used in a space application and withstands extreme impact loading. The valve has an upper and a lower housing, the lower containing an inlet and an outlet port, and upper containing a cavity.

B67-10237

POST-STRESSED CONCRETE FOUNDATION BAY REDUCE MACHINERY VIBRATION FISTEDIS, S. H. /Aerojet Gen./ JUL. 1967

Post-stressing concrete mat foundation reduces excessive vibrations in machinery. The mat is stressed in compression after the machinery is mounted, thus closing any cracks in it, altering the distribution of the soil subgrade reaction on the mat, and changing the mat-subgrade natural frequency.

B67-10238

TRAVELING WIRE ELECTRODE INCREASES PRODUCTIVITY OF ELECTRICAL DISCHARGE MACHINING /EDM/ EQUIPMENT FOTOFFA, J. B. SMITH, S. V. /Aerojet Gen./ JUL. 1967

Traveling wire electrode on electrical discharge machining /EDM/ equipment reduces the time requirements for precision cutting. This device enables cutting with a minimum of lost material and without inducing stress beyond that inherent in the material. The use of wire increases accuracy and enables tighter tolerances to be maintained.

B67-10261

Modified PERT technique processes the input data and arranges it in familiar graphic form in a booklet which is issued at periodic intervals. The tabulated data provides readily available information to management personnel concerned with monitoring the progress of a program.

B67-10263

CABLE CLAMP BOLT FIXTURE FACILITATES ASSEMBLY IN CLOSE QUARTERS DUNNENDALL, G. M. /Boeing Co./ JUL. 1967

KSC-67-80
Cable clamp bolt holding fixture facilitates forming of electrical cable runs in limited equipment space. The fixture engages the threads of the short clamp bolt through the clamp and maintains tension against clamp tendency to open while the operator installs the nut without difficulty.

**B67-10256**
LINE ADAPTER PROVIDES QUICK DISCONNECT UNDER MODERATE SIDE LOADING
N-PS-2159
Line adapter acts as quick and simple disconnect system. It quickly separates upon the application of a side load of 15 pounds withstanding line pressure at 100 psig.

**B67-10271**
PIPE JOINTS REINFORCED IN PLACE WITH FITTED ALUMINUM SLEEVES
CORTES, J., J. SIEGFRIED, J. WOSIG, O. DATE- AUG. 1967
MSC-1109
Installation of an aluminum sleeve, using specially designed tools, reinforces welded ferrule joints in installed small-diameter aluminum tubing. Tubing joints reinforced by this method withstand considerable torsional tensile loads, and vibrational stresses at moderately elevated temperatures.

**B67-10272**
PORTABLE MACHINE WELDING HEAD AUTOMATICALLY CONTROLLED ARC
OLESIASIA, C. E. BOB, M. A. /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-12763
Portable weld tool makes weld repairs out-of-station and on the side opposite the original weld. It provides full automatic control of the arc voltage, current, wire feed, and electrode travel speed in all welding attitudes. The device is readily adaptable to commercially available straight polarity dc weld packs.

**B67-10273**
SPHERICAL JOINT CONNECTS AXIALLY MISALIGNED FLANGES
MC GROFF, J. D. /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-2238
Interconnecting straight tube connects axially misaligned flanges in a duct assembly. It adjusts to accommodate variations in relative location of the flanges by pivoting. Adjustment is by spherical mating faces and a spherical-faced indexing swivel flange for bolting backup.

**B67-10283**
CONCEPT FOR MODIFYING DRAFTING INSTRUMENTS TO RIBBIND DRAWING
REBOE, T. A. /BOEING CO./ DATE- AUG. 1967
KSC-10056
Ball bearing standoffs added to drafting instruments enable the instruments to be moved about, with their surfaces out of contact with the drawing paper. This provides a safeguard against smearing of the lines.

**B67-10285**
STATIC SEAL CONCEPT TO ACCOMMODATE SEAT TOLERANCES
HARDY, F. III /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-1854
Static seal permits compensation for flange separation and flange-groove tolerances without large seal-leg deflections.

**B67-10291**
REMOTELY OPERATED HIGH PRESSURE VALVE PROTECTS TEST PERSONNEL
NOWLAND, R. T. /N. AM. AVIATION/ DATE- AUG. 1967
MSC-11010
High pressure valve used in testing certain spacecraft systems is safely opened and closed by a remotely stationed operator. The valve is self-regulating in that if the incoming pressure drops below a desired value the valve will automatically close, warning the operator that the testing pressure has dropped to an undesired level.

**B67-10292**
WELDING OF AR350 AND AR355 STEEL
DAYS, E. J. PROTE, E. S. /DOUGLAS AIRCRAFT CO./ DATE- AUG. 1967
N-PS-2319
A series of tests was conducted to establish optimum procedures for TIG welding and heat treating of AR350 and AR355 steel sheet in thicknesses ranging from 0.030 inch to 0.125 inch. Statistical analysis of the test data was performed to determine the anticipated minimum strength of the welded joints.

**B67-10293**
SQUARE TUBING REDUCES COST OF TELESCOPING BRIDGE CRANE HOIST
BERNSTEIN, G. GRAAE, J. SCHMIDT, J. DATE- AUG. 1967
ARG-13
Using standard square tubing in a telescoping arrangement reduces the cost of a bridge crane hoist. Because surface tolerances of square tubing need not be as accurate as the tubing used previously and because no spline is necessary, the square tubing is significantly less expensive than splined telescoping tubes.

**B67-10308**
JACKETED CYCLOGIC PIPING IS STRESS RELIEVED
DOWERS, W. M. /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-585
Jacketed design of piping used to transfer cryogenic fluids, relieves severe stresses associated with the temperature gradients that occur during transfer cycles and ambient periods. The inner /transfer/ pipe is preloaded in such a way that stress relief takes place automatically as cycling occurs.

**B67-10321**
APPLICATION OF DISTORTED MODELS IN DEVELOPING SCALED STRUCTURAL MODELS
WHITE, E. W. /WILE LABS./ DATE- SEP. 1967
N-PS-2256
In the design and development of dynamically similar structural models a distorted model of the panel is used. The panel thickness is made larger than that dictated by geometric scaling, and the mass of the panel is decreased by adding mass to the surface of the panel to counteract the additional stiffness obtained by the thickness increase.

**B67-10325**
SEGMENTED, ARC-BOUND CARBON SEAL IS PRESSURE LOADING
BUNCHER, R. E. /N. AM. AVIATION/ DATE- SEP. 1967
N-PS-12777
Conventional segmented carbon seal has a low leakage rate and minimum loading requirements for a high pressure, large diameter fluid impeller shaft with large axial and radial movements. Modifications in the segments allow part of the load to be carried in hoop stress.

**B67-10341**
DEVELOPMENT OF TECHNOLOGY FOR HOT-DRAPE FORMING OF LARGE TUBE SECTIONS
SPON- INNOVATION NOT GIVEN /FAIRCHILD HILLER CORP./ DATE- OCT. 1967
N-PS-12161
Compound-contoured sheet metal structure development is aided by hot-drape forming, a method combining hot-stretch forming, die quenching, and age forming. It permits in-process control of material gage thin-out through a flexible process of heat zone control.

**B67-10353**
ULTRASONIC WRENCH PRODUCES LEAKTIGHT CONNECTIONS
BLAISE, H. T. MARBEH, H. /TECHNEC/ DATE-
ULTRASONIC WRENCH SYSTEM PRODUCES LEAKTIGHT SEALS IN FLARED TUBING CONNECTIONS. IT INDUCES A COMBINED VIBRATION NODE IN THE COUPLED NUT. THE SYSTEM CONSISTS OF A FREQUENCY CONVERTER, A JUNCTION BOX, AND WRENCH ASSEMBLY.

EXTENSION OF SMALL-DIAMETER, THIN-WALL TUNGSTEN TUBING

Tungsten has been fabricated in lengths of up to 10 feet by hot extrusion over a floating mandrel. Extrusion of 0.50-inch-diameter tubing over 0.4-inch-diameter mandrels was accomplished at temperatures ranging from 3000 degrees to 4000 degrees F.

STEEL TEST PANEL HELPS CONTROL ADDITIVES IN PYROPHOSPHATE COPPER PLATING

Self-acting, partial-arc, pivoted-pad bearings in which the bearing-to-journal applied load is approach the torch. The initial individual attitudes of the torch and wire guide are set with respect to the general configuration of the part.

STUDY MADE TO ESTABLISH PARAMETERS AND LIMITATIONS OF EXPLOSIVE WELDING

It is theorized that metal jetting must be present for welding to occur, therefore an explosive weld interface may indicate the relation between the metal jet velocity and shock wave velocity in welding. Parameters for explosive welding in patches of 3 or 4 inches in diameter were established, and found applicable to explosive welding of patches of various sizes.

STANDARD SURFACE GRINDER FOR PRECISION MACHINING OF THIN-WALL TUBING

Low-cost metal tube reducer accepts tubing up to 1 inch outer diameter and can reduce this diameter to less than 1/2 inch with controlled wall thickness. This device can reduce all of the tube without waste. It produces extremely good surface finishes.

WEAR STUDIES MADE OF SLIP RINGS AND GAS BEARING COMPONENTS

Neutron activation analysis techniques were employed for the study of the wear and performance characteristics of slip ring and rotor assemblies and of the problems arising from environmental conditions with special reference to surface contamination. Results showed that the techniques could be successfully applied to measurement of wear parameters.

OS MECHANICAL
Hydraulic system provides smooth control of large tracking and antenna drive systems at very low tracking rates. This configuration modifies a series connection of the drive motors with compensating orifices to offset the effects of drain line loss. Linearization of response eliminating cogging or cyclic operation is thus obtained.

Coaxial cable stripping device assures clean, right angled shoulder for RF cable connector fabrication. This method requires minimal skill and creates a low voltage standing wave ratio and mechanical stability in the interconnecting RF cables.

Method provides precise alignment for metal-forming dies while permitting minimal thermal expansion without die warpage or cavity space restriction. The interfacing dovetail bars and die side facings are arranged so the dies are restrained in one orthogonal angle and permitted to expand thermally in the opposite orthogonal angle.

Heavy-gage bonded honeycomb sandwich is used as a primary load-bearing structural material in large-diastem boosters. Theoretical investigations based on a small deflection theory for prediction of stress fields and buckling loads, and structural testing were made. This structure is a potential weight saver for compression load-critical components.

Safety yoke would protect construction workers from falling.

Pump simulator provides variable pressure-flow characteristics.

Turn-to-header joint for bimetallic construction.

Hand-operated plug insertion valve.

Aluminum and stainless steel tubes joined by simple ring and welding process.

Tool samples subsurface soil free of surface contaminants.

Concept for design of variable stiffness.

Combined accumulator and latch for cartridge powered actuator.

Rock anchors restore broken swamp anchors economically.

Flow liner extends operating life of high-angulation bellows.

Tube-to-header plate crevice and prevent crevice and stringer corrosion.
B67-10525
STUDY MADE OF THIN-WALLED PIPE RESPONSE TO TURBULENT FLUIDS
CLINCKS, H. R. /AEROSPACE INST./ DATE- DEC. 1967
STUDY MADE OF THIN-WALLED PIPE RESPONSE TO TURBULENT FLUIDS
CLINCKS, J. B. /AEROSPACE INST./ DATE- DEC. 1967

B67-10526
DYNAMIC VALVE SEAL IS RELIABLE AT CRYOGENIC TEMPERATURES
ROSELYN, B. F. /AEROSPACE INST./ DATE- DEC. 1967
B67-10527
C-shaped PTFE/polytetrafluoroethylene/ seal ring provides a reliable seal in cryogenic fluids over a fluid pressure range of 0 to 2000 psig. It is interference-fitted internally with a metal expander ring and a metal compressor ring.

B67-10528
ACCUUMULATOR ISOLATOR PREVENTS MALFUNCTIONS OF PULSATION HYDRAULIC SYSTEM
WALSHE, G. D. /BOEING CO./ DATE- DEC. 1967
B67-10529
Special isolator valve prevents malfunction of a closed hydraulic system by converting the initial accumulator-reservoir to a reservoir function only when the system loses oil, or gas, or nitrogen pressure charge, or has a jammed piston. This permits near-normal operation until the defect is corrected.

B67-10530
DEVELOPMENT OF LUNAR DRILL TO TAKE CORE SAMPLES TO 100-FOOT DEPTHS
SPACE INNOVATOR NOT GIVEN /WESTINGHOUSE DIVISION AND SPACE CENTER/ DATE- DEC. 1967
B67-10531
Lunar drill takes lunar surface cores to depths of 100 feet and is being developed to the sample at greater depths. The wireline drill system has be adapted to operate in the lunar environment by providing a sealed dc motor and solid metallic base lubricants.

B67-10532
LEAD PLATED ALUMINUM RING PROVIDES STATIC HIGH PRESSURE SEAL FOR LARGE DIAMETER PRESSURE VESSEL
LOCKE, J. W. /AEROSPACE INST./ DATE- DEC. 1967
B67-10533
Lead plated aluminum ring provides a positive static seal for a large diameter pressure vessel for use in a hazardous environment at cryogenic temperatures with high pressure fluid flow. This design can be used in high and low pressure lines of any diameter for any fluid, with appropriate material modification.

B67-10534
PRECISION TRIMMER AIDS IN PREPARING BIOMICROSCOPIC SPECIMEN BLOCKS FOR ULTRATHIN SECTIONING
TRAHISKIN, T. W. DATE- DEC. 1967
B67-10535
Precision trimmer, which neatly trims biomedical specimen blocks for ultrathin sectioning, eliminates the risk of human error. Four inches in diameter and 3 inches in height, it supports the block and serves as a support for a cutting tool and can be adjusted in three dimensions.

B67-10536
POWER TORQUE WRENCH CONCEPT FOR PRECISION TORQUE APPLICATION
PETRUS, S. A. /AEROSPACE INST./ DATE- DEC. 1967
B67-10537
Precision electromechanical power wrench applies a given amount of torque to a series of fasteners. It uses a commercially available dc permanent magnet torque motor with a current-controllable torque output and torque value indicator designed to the principles of human engineering.

B67-10538
STUDY MADE OF HEAT TRANSFER AND PRESSURE DROP THROUGH TUBES WITH INTERNAL INTERRUPTED FINNS
B67-10539
Argon gas flow through an internal interrupted finned tube was investigated to obtain heat transfer and frictional pressure drop data. The results were plotted against the same data for corresponding louvered plate-finned surfaces.

B67-10540
INSTRUMENT ACCURATELY MEASURES WELD ANGLE AND OFFSET
SONDER, W. G. /AEROSPACE INST./ DATE- DEC. 1967
B67-10541
Butterfly valve with metal seals operates over a temperature range of minus 423 degrees to plus 440 degrees F with hydrogen as a medium and in a radiation environment. Media flow is controlled by an internal butterfly disk which is rotated by an actuation shaft.

B67-10542
FLAT CABLE INSULATION STRIPPING MACHINE
SCHRAPP, J. H. /VIKING IND./ DATE- DEC. 1967
B67-10543
Flat cable insulation stripping machine operates on a principle of variable parameters of abrasive wheel speed, wheel pressure on the flat cable, and flat cable feed speed into the abrasive wheel. Application of connectors is handled efficiently with this flat terminal termination technique.

B67-10544
HIGH ENERGY FORMING FACILITY
CRUIKSHANK, B. /AEROSPACE INST./ DATE- DEC. 1967
B67-10545
Watertight, high-explosive forming facility, 25 feet in diameter and 15 feet deep, withstands repeated explosions of 10 pounds of TNT equivalent. The shell is fabricated of high strength steel and allows various structural elements to deform or move elastically and independently while retaining structural integrity.

B67-10546
FLUOROCARBON SEAL REPLACES METAL PISTON RINGS IN LOW DENSITY GAS ENVIRONMENT
HEATH, W. D. /VICKERS, INC./ DATE- DEC. 1967
B67-10547
Reinforced fluorocarbon cup seal, which provides an integral lip-type seal, replaces the metal piston rings in piston-cylinder configurations used in the compression of low density gases. The
fluorocarbon seal may be used as cryogenic compressor piston seals.

B67-10594
SELF-ALIGNING ROD PREVENTS ECCENTRIC LOADING OF TETRA SPECIMENS VANDERGRIFT, E. F. /WESTINGHOUSE ASTRONUC./ LAB./ DATE- DEC. 1967
NUC-10525 Tensile specimens can be tested in liquid nitrogen without subjecting the cryostat to tilting during assembly of the specimen in the liquid nitrogen-filled cryostat. A universal joint with a semelliptical head and socket reduces misalignment and permits only limited side travel.

B67-10607
HONEYCOMB SEAL BACKING RING INCREASES TURBOPUMP DISK LIFE BROOKS, W. S. /AM. AVIATION/ LABOR., E. W. DATE- DEC. 1967 M-PS-13303 Turbopump disk life increased by thin, relatively rigid metal backing ring installed to the honeycomb seal. The aerodynamic and friction damping provided by this modification eliminates first-stage disk cracking.

B67-10611 ROLAMITE - A NEW MECHANICAL DESIGN CONCEPT WILKES, D. F. DATE- DEC. 1967 SAM-10601 Rolamite, a mechanical suspension system, provides substantial reductions in friction in the realms of extremely low bearing pressures. In addition, rolamite devices are easily microinluminated, are extremely tolerant of production variations and are inherently capable of virtually all functions to construct most electromechanical devices.

B67-10619 FEED-THRU CONDUIT MINIMIZES HEAT PICKUP TAYLOR, S. F. DATE- DEC. 1967 JPE-847 Insulated feed-thru conduit minimizes heat pickup by a cryogenic fluid passing through the walls of a double high-vacuum chamber, and is capable of expansion and contraction with the walls of the chamber. It uses a bellows and rigid cylinder to provide a low-loss feed-thru for the cryogenic liquid.

B67-10622 FIRE EXTINGUISHER CONTROL SYSTEM PROVIDES RELIABLE COLD WEATHER OPERATION GRABUS, J. C. /AM. AVIATION/ DATE- DEC. 1967 M-PS-13031 Fast acting, pneumatically and centrally controlled, fire extinguisher/pipe system is effective in freezing climates. The easy-to-operate system provides a fail-safe function which is activated by an electrical power failure.

B67-10623 FERROMAGNETIC CORE VALVE GIVES RAPID ACTION ON MINIMUM ENERGY HARNIS, A. T. /GEN. DYR./CONWAY/ TINNEN, J. P. DATE- DEC. 1967 LEWIS-10135 Miniature solenoid valve controls propellant flow during tests on a coaxial plasma accelerator. It uses an advanced ferromagnetic core design which meets all the rapid-acting requirements with a minimum of input energy.

B67-10628 TENSILE TESTING GRIPS ARE EASILY ASSEMBLED UNDER LIQUID NITROGEN SHALEA, J. /WESTINGHOUSE ASTRONUC./ VANDERGRIFT, E. F. DATE- DEC. 1967 NUC-10524 Split-screw grips for tensile testing provide uniform load on the specimen shoulders. Holes in the heads enable the screws and specimen to be threaded as an assembly into a grip body, closely controlled guides and seats avoid positive seating, and precision machining of mating surfaces minimizes misalignment effects.

B67-10638 REDDY CURRENT DISK VALVE LARSON, A. T. /GEN. DYN./CONWAY/ TINNEN, J. P. DATE- DEC. 1967 LEWIS-10123 Quick-opening, intermittent flow valve requires a small amount of electrical energy to open and which closed by the restoring action of a rubber stop. This eddy current disk valve opens in less than 100 microseconds and takes only 10 joules of energy.

B67-10639 SOLNED VALVE DESIGN MINIMIZES VIBRATION AND SLIDING WEAR PROBLEM WRENC, R. H. /GEN. DYN./CONWAY/ DATE- DEC. 1967 LEWIS-10134 Quick-opening lightweight solenoid hammer valve requires a low amount of electrical energy to open, and closes by the restoring action of the mechanical springs. This design should be applicable to many quick-opening requirements in fluid systems.

B67-10655 DEVELOPMENT OF HELICAL SEAL FOR HIGH TEMPERATURE /2000 DEGREES F/ APPLICATION BOLTON, C. /AM. AVIATION/ DATE- JAN. 1968 M-PS-1304a Helical seal is used to seal bolted flanges in a high temperature environment. The seal design incorporates a new cross-sectional shape, a metal strip with a slight radius, and the use of preformed asbestos. It provides equal load distribution under compressive loads, allows for minimum loss and recovery values, and increases the temperature range.

B67-10667 SOLNED VALVE DESIGN MINIMIZES VIBRATION AND SLIDING WEAR PROBLEM WRENC, R. H. /AM. AVIATION/ DATE- JAN. 1968 M-PS-14079 Two-way cryogenic solenoid valve resists damage from vibration and metallic interfacial sliding. The new system features a flat-faced armature guided by a flexure disk which eliminates sliding surfaces and is less subject to contamination and wear.

B67-10670 RECONNECT MECHANISM MOORE, E. L. /BOEING CO./ DATE- JAN. 1968 M-PS-12968 Mechanism remotely controls de-safetying of two bodies by unlock and withdrawal of one body from the other and, upon command, extends, locates, remates and relocks the two bodies. The system is designed to transfer fluid from a dispensing body to a receiving body.

B67-10673 CRYOGENIC SEAL CONCEPT FOR STATIC AND DYNAMIC CONDITIONS DE GAETANO, P. A. /AM. AVIATION/ DATE- JAN. 1968 M-PS-12966 Seal rings reduces cryogenic pump seal leakage under static and dynamic conditions. The rings are fitted into annular diaphragms, which are affected by cryogenic pressure and temperature, to move against a mating ring, to increase seal-bearing loads under static conditions.
Study determines the most efficient method for magnetic tapes rehabilitation and storage for reuse. Investigators were the physical changes taking place in the tape during the rehabilitation process, measure of quality of the processed tapes, and the level of quality required to achieve sufficient yield.

B66-10036
TUBE DIMPLING TOOL ASSURES ACCURATE
DI-LANCED JOINTS
BROOKS, C. E. /HEISMAN, R. N. /N. A. AVIATION/ DATE- FEB. 1968
MSC-11464
Portable, hand-held dimpling tool assures brazed joints between tubes of different diameters. Prior to brazing, the tool performs precise dimpling and nipple forming and also provides control and accurate measuring of the height of nipples and depth of dimples so formed.

B66-10037
SWING ARM CARRIER PROTECTS FLEXIBLE LINES
DURING TESTING AND ROTATION
WARD, D. P. /N. A. AVIATION/ DATE- FEB. 1968
MSC-11464
Swing arm carrier provides protection for flexible lines /fluid, electrical, HP/ connected to a test item that must be rotated through 360 degrees during test. It uses five gates riding on pivots to permit rotation of flexible lines through arcs of plus 160 degrees and minus 180 degrees.

B66-10038
CONCEPT TO STANDARDIZE SPACE VEHICLE
FLIGHTBACK EXPERIMENT PROGRAM
MSC-11457
Study investigates the use of spent launch vehicle stages and modules to support earth orbital operations and functions after successful completion of the primary mission. Emphasis is placed primarily on determination of those uses that afford the greatest utility with minimum possibility of degradation to the primary mission.

B66-10039
FUEL TRANSFER SYSTEM PERMITS RAPID COUPLING
WEST, A. W. /LOCKHEED MISSILES AND SPACE CO./ DATE- FEB. 1968
MSC-91326
Docking and fuel transfer system provides an efficient method for transferring fuel from a tanker to another vehicle. With this system, no triggering operation is required prior to docking. The support system can be rigidized by simply locking the rams of shock absorbers, and no separate fuel line coupling action is required.

B66-10040
BRASS-SHRINK PLASTIC TUBING SEALS JOINTS IN GLASS TUBING
DEL DUCA, E. DOWEY, A. DATE- FEB. 1968
MSC-10329
Small units of standard glass apparatus held together by short lengths of transparent heat-shrinkable polyolefin tubing. The tubing is shrunk over glass O-ring type connectors having O-rings but no lubricant.

B66-10041
IMPROVED TORCH INCREASES WELD QUALITY IN REFRACTORY METALS
LESSMAN, G. G. SPECAKE, E. /WESTINGHOUSE ELEC. CORP./ DATE- FEB. 1968
LWIS-324
Specially designed torch welds refractory metals in a vacuum purged, inert gas backfilled welding chamber /weld box/ with practically zero contamination resulting from its use. Included in the torch design is a radiation shield to protect the operators hands when welding at high asperages.

B66-10042
SUSPENDED CHAINS DAMP WIND-INDUCED OSCILLATIONS OF TALL FLEXIBLE STRUCTURES
Date- FEB. 1968
LWIS-324
Specially designed torch welds refractory metals in a vacuum purged, inert gas backfilled welding chamber /weld box/ with practically zero contamination resulting from its use. Included in the torch design is a radiation shield to protect the operators hands when welding at high asperages.
Pipe plug for remote installation in an open-ended shut-off valve at the destination of a transferred gas tank. The plug provides a physical support for a mechanical clamp contacting the pipe flange for gastight sealing. The plug is deployed by extending each section in sequence. The equipment includes a 34-foot rotary table, a variable reluctance displacement transducer, an electronics console, a digital computer, and a 5-foot plotter used for final data display.

Pipe plug for remote installation in a hazardous environment provides a gastight seal by expanding a rubber seal against the inside surface of the pipe opening, with a 34-foot rotary table, a variable reluctance displacement transducer, an electronics console, a digital computer, and a 5-foot plotter used for final data display.

Pipe plug for remote installation in a hazardous environment provides a gastight seal by expanding a rubber seal against the inside surface of the pipe opening, with a 34-foot rotary table, a variable reluctance displacement transducer, an electronics console, a digital computer, and a 5-foot plotter used for final data display.

Flexible ring baffles for damping liquid slosh. Slosh damping, obtained through the use of small, light, and flexible baffles, provides a relatively lightweight system for damping the motions of liquid propellants in launch vehicles, missiles, and other tankage systems.

Flexible ring baffles for damping liquid slosh. Slosh damping, obtained through the use of small, light, and flexible baffles, provides a relatively lightweight system for damping the motions of liquid propellants in launch vehicles, missiles, and other tankage systems.

Flexible ring baffles for damping liquid slosh. Slosh damping, obtained through the use of small, light, and flexible baffles, provides a relatively lightweight system for damping the motions of liquid propellants in launch vehicles, missiles, and other tankage systems.

Flexible ring baffles for damping liquid slosh. Slosh damping, obtained through the use of small, light, and flexible baffles, provides a relatively lightweight system for damping the motions of liquid propellants in launch vehicles, missiles, and other tankage systems.
instrumentation subjected to shock loading to
tolerable limits. The device consists of a
spiral formed plastic member interleaved between
the spring coils in the same helix configuration.

B68-10115

METHOD FOR REINFORCING TUBING JOINTS
KINZLER, J. LEE, W. S. DATE- APR. 1968
MSC-1105

Joint repair technique uses a longitudinally split
aluminum shield over the joint ferrule and
immediately adjacent tubing to seal or reinforce
leaking or weak joints in small tubing. Epoxy
resin coating on inside surfaces of the two shield
covers provides a tightly sealed bond between
shield and tubing.

B68-10117

TOGGLE OPERATED DOUBLE LATCH
BARROUN, R. T. BECKER, D. E. /W. AM. AVIATION/
DATE- APR. 1968
MSC-11377

Double hook latch provides preloading and support
capability up to 60,000 pounds and opens
self-energizingly when restraint linkage is
released. It incorporates a double hook latch
clasp linked together and a flexible cable rigged in tension.

B68-10120

PRESSURE VARIABLE ORIFICE FOR HYDRAULIC
CONTROL VALVE
ANDREW, R. L. /W. AM. AVIATION/ DATE- APR. 1968
MSC-1123

Hydraulic valve absorbs impact energy generated in
docking or joining of two large bodies by
controlling energy release to avoid jarring shock.
The area of exit porting presented to the
hydraulic control fluid is directly proportional to
the pressure acting on the fluid.

B68-10122

MEASURING THERMAL EXPANSION OF MULTIPLE
SPACERS AT HIGH TEMPERATURE
GAAL, F. S. /WESTINGHOUSE ASTRONUC. LAB./ DATE- APR. 1968
MSC-10153

Furnace capable of heating 10 specimens to a
uniform temperature simultaneously, aids in the
measuring of the thermal expansion of each
specimen. The specimens are measured with a
telescope unit consisting of two microtelescopes.
Overall accuracy of the system is estimated to be
plus or minus 2 percent at 2000 degrees C.

B68-10123

IMPROVED ACTIVE VIBRATION ISOLATOR
DIXON, G. V. LEATHERWOOD, J. D. STEPHENS, D. G.
DATE- APR. 1968
LANGLEY-10106

Active vibration isolator simultaneously isolates a
flexible structure or payload from disturbances,
attenuates the response of a flexible structure to
transient disturbances, and maintains the
equilibrium position of the payload within
predetermined limits over a wide range of steady
loads and accelerators.

B68-10125

VACUUM-JACKETED TRANSFER LINE INSTALLATION
TECHNIQUE
BOWES, W. M. /W. AM. ROCKWELL CORP./ DATE- APR. 1968
NPS-14096

Rolling-type spacers in the form of steel balls
retained in appropriate sleeves affixed at
intervals to the exterior of the transfer line
facilitate the installation of a vacuum-jacketed
line. They act as standoffs to position the
transfer line concentrically within the vacuum
jacket line.

B68-10132

IMPROVED MOLDING PROCESS ENSURES PLASTIC
PARTS OF HIGHER TENSILE STRENGTH
HIEB, W. C. DATE- APR. 1968
LANGLEY-10033

Single molding process ensures that plastic parts

/ of a given mechanical design/ produced from
a conventional thermosteaming molding compound will
have a maximum tensile strength. The process can
also be used for other thermosteaming compounds to
produce parts with improved physical properties.

B68-10134

SHALLOW GROOVES IN JOURNAL IMPROVE AIR
BEARING PERFORMANCE
ANDERSON, W. J. CUNNINGHAM, S. E. FLEIXING, D. P.
DATE- APR. 1968
LEWIS-10396

Bearing designs, which shape the surface to create
artificial fluid-film wedges in the absence of any
applied radial load, generate radial restoring
forces to keep journals from whirling. Helical-
or herringbone-grooved journals or rotors show
most promise of stable operation, with no
sacrifice in load capacity.

B68-10161

ROLL DIFFUSION BONDING OF TITANIUM ALLOY
PAVELS
NPS-1400a

Roll diffusion bonding technique is used for
fabricating T-stiffened panel assemblies from
titanium alloy. The single unit fabrication
exhibits excellent strength characteristics under
tensile and compressive loads. This program is
applied to structures in which weight/strength
ratio and integral construction are important
considerations.

B68-10162

ASBESTOS AND INCONEL COMBINED TO FORM
HOT-GAS SEAL
WOOSTER, C. W., JR. /W. AM. AVIATION/ DATE- MAY 1968
NPS-14032

Hot-gas seal prevents warpage tendencies in large
flange joints exposed to high temperatures, such
as those present in large space vehicle engine
exhausts. Two Inconel wire mesh cores are held
in place by an asbestos cloth cover that acts as a
spacer to form the seal.

B68-10165

BEARINGS USE DRY SELF-LUBRICATING CAGE
MATERIALS
ANDERSON, W. J. GLENN, D. C. SCHEIBBE, H. W.
DATE- MAY 1968
LEWIS-10342

Rolling element bearings in spacecraft mechanical
systems use solid lubricant composites of
polytetrafluoroethylene in the bearing cage which
functions as the lubricant reservoir. The cage
spaces the rolling elements equally and provides the
lubricant at the bearing load-carrying
surface.

B68-10168

BALLISTIC BARGE CONCEPT FOR UNDERWATER
STRUCTURES
PAINES, E. DATE- JUN. 1968
KSC-10196

Ballistic barge for underwater structure consists of a
reinforced concrete structure partitioned into
watertight compartments. The barge structure
includes a 3-way venting valve, a compressed air
manifold, a master valve for connecting the
transfer line concentrically within the vacuum
jacket line.

B68-10176

HIGH-TEMPERATURE BEARING-CAGE MATERIALS
ANDERSON, W. J. ZARETSKY, E. V. DATE- JUN. 1968
LEWIS-10403

Evaluation tests conducted at temperatures of 500
and 700 degrees F reveal that S-Monel and AISI
M-1 steel are suitable as high temperature cage
materials for precision bearings. The area of the
wear scar in the cage pocket that developed
during the test was used as the measure of wear.

B68-10180

SQUEEZE-FILM GAS BEARING TECHNOLOGY
REAN- SEE ALSO B66-10226
M-FS-14021
Squeeze-film bearing is studied to develop a low-friction suspension for the output-axis gimbal of a single-degree-of-freedom gyroscope. Included are a review of pertinent literature, the theory of squeeze-film lubrication, and design elements.

B66-10209
MAGNETICALLY CONTROLLED TORQUE WRENCH PREVENTS OVERTORQUING
HENDERSON, J. A. /DATE- JUN. 1968
SAN-10002
Magnetically controlled torque wrench produces the required torque values accurately, and prevents overtorqueing. The force between a magnet and a soft iron bar on the arms of the wrench constitutes a predetermined maxima torque that cannot be exceeded. So long as the magnetic flux remain constant, the torque remains the same.

B66-10211
PROPOSED GAS GENERATION ASSEMBLY WOULD RECOVER DEEPLY SUBMERGED OBJECTS
SPRAGUE, C. W. /DATE- JUN. 1968
SAN-10007
Gas generation system, used for recovery of submerged objects, generates hydrogen gas by the reaction of sodium with sea water. The assembly consists of tanks floated together, equipped with relief valves to equalize pressure as the array ascends and hydrostatic pressure diminishes, and carrying remotely activated vending units.

B66-10219
PACKAGING CRITERIA FOR TRANSPORTATION AND HANDLING SHOCK AND VIBRATION
SPON- INNOVATOR NOT GIVEN /MARRSHALL/ DATE- JUN. 1968
M-FS-13007
Information compiled on the shock and vibration environment encountered by items and equipment during shipment shows the distribution of drop heights for particular packages, distribution systems, and handling operations. Applications of the data to typical package design problems are discussed.

B66-10222
ASSEMBLY, CHECKOUT, AND OPERATION OPTIMIZATION ANALYSIS TECHNIQUE FOR COMPLEX SYSTEMS
SPON- INNOVATOR NOT GIVEN /MARRSHALL/ DATE- JUN. 1968
M-FS-14105 M-FS-14132 M-FS-14137
Computerized simulation model of a launch vehicle/gound support equipment system optimizes assembly, checkout, and operation of the system. The model is used to determine performance parameters in three phases or modes - /1/ systems optimization techniques, /2/ operation analysis methodology, and /3/ system effectiveness analysis technique.

B66-10225
LASER SYSTEM USED FOR DYNAMIC BALANCING OF GYROS
M-FS-12218
System using a pulsed ruby laser balances or trims gyro rotors spinning at speeds of up to 24,000 rpm. It is designed to detect high spots on the spinning rotor and to focus a precisely timed laser beam on these detected spots.

B66-10229
EFFECT OF SURFACE IRREGULARITIES ON BELLows FATIGUE LIFE
M-FS-14480
Report presents test data on the bending fatigue life of notched sheet specimens. The influence of a surface irregularity on the fatigue life of a metal bellows is evaluated, with emphasis on accidental defects in ducting bellows which are impossible to avoid short of completely eliminating human contact.

B66-10235
TUBE SWAGING DEVICE USES EXPLOSIVE FORCE
MC SMIT, D. G. /DATE- JUL. 1968
LANGLSET-10092
Tool joins a sleeve to a tube by explosive swaging, thus providing a leakproof, lightweight, and strong assembly. So now or different material is used in this method and therefore the thermal and galvanic properties are maintained.

B66-10237
DEAL RATE PRESSURE RELIEF VALVE
STEENHOF, J. /GARRETT CORP./ DATE- JUN. 1968
MSC-11626
Pressure relief valve vents at a slow bleed rate at one pressure level and at a higher bleed rate at a higher pressure level. The valve housing contains a sleeve, inlet port, outlet port, an orifice, a ball and seat arrangement, and a bellvellie spring diaphragm.

B66-10239
MANUAL OF INDUSTRIAL DIAMONDS PLUS DRESSING AND GRINDING CRITERIA FOR MACHINING SUPERALLOYS
CARE, W. L. /A. N. ROCKWELL CORP./ DATE- JUL. 1968
M-FS-14582
Manual contains the important and controlling factors for the proper selection and use of diamond stones for cutting and dressing grading wheels. This manual is a compilation of empirical data and incorporates an original compnios treatise on the physical descriptions of the diamond stones, their grading, and their applications.

B66-10247
DYNAMICALLY STABLE CHECK VALVE CONCEPT FOR WIDE FLOW RANGE
ABRILON, J. G. /A. N. ROCKWELL CORP./ DATE- JUL. 1968
M-FS-14579
Poppet-type check valve design accommodates a wide flow range without the usual chatter problems at low flow conditions. This pressure isolation check valve is proposed for the J-2 rocket pneumatic package.

B66-10248
TENSILE TESTING GEPS ENSURE UNIFORM LOADING OF BIMETAL TUBING SPECIMENS
DRISCOL, S. R. HURLP. /ABREJET-GEN. CORP./ DATE- SEP. 1968
LEWIS-10267
Tensile testing grip uniformly distributes stresses to the internal and external tube of bimetal tubing specimens. The grip is comprised of a slotted external tube grip, a slotted internal tube grip, a machine bolt and nut, an internal grip expansion cone, and an external grip compression nut.

B66-10249
HIGH-TEMPERATURE BEARING LUBRICANTS
ANDERSON, W. J. PARKER, R. J. ZARETSKY, E. V. /DATE- SEP. 1968
LEWIS-10408
Synthetic paraffinic oil lubricates ball bearings at temperatures in the 600 degrees F range. The lubricant contains antioxidant and antiwear additives, is thermally stable in the high temperature range, but requires protection from oxygen.

B66-10250
QUICK-ATTACH CLAMP
VOG, A. E. /DATE- JUL. 1968
ZAPL-05241
Clamp of the slideable jaw type can be applied to moving lines such as cables or ropes. The clamp has a trigger-operated jaw that can be attached to a redrop parachute on a moving tow cable. The trigger mechanism maintains the jaws retracted in the housing until they are released for clamping.
INSPECTION CRITERIA ENSURE QUALITY CONTROL OF PARALLEL GAP SOLDERING

Dynamic-reservoir lubricating device supplies controlled amounts of lubricating oil to ball bearings during operation of the bearings. The dynamic reservoir lubricating device includes a rotating reservoir nut, a hollow cylinder filled with lubricating oil, flow restrictions and a ball bearing retainer.

Compact shock-absorbing caster wheel mitigates or absorbs shock by a compressible tire which deforms into a cavity between its inner edge and the wheel hub. A tee-shaped annular ring embedded in the tire distributes loads more uniformly throughout both wheel and tire.

Compact shock-absorbing caster wheel is simple and compact.

Compact shock-absorbing caster wheel mitigates or absorbs shock by a compressible tire which deforms into a cavity between its inner edge and the wheel hub. A tee-shaped annular ring embedded in the tire distributes loads more uniformly throughout both wheel and tire.

Thermal protective visor for entering high temperature areas.

Chamber observer suit visor protects the eyes and ears of the wearer while he is performing rescue operations using a fire.

Small-diameter, thin-wall tungsten and tungsten alloy tubes are produced by double extrusion. Plug-drawing has emerged as an excellent secondary fabrication technique for the reduction of the overall tube dimensions.

Placing the shaft seals, in an oxidizer pump, between the pump bearings, reduces the shaft overhang length and overall turbopump length.

This arrangement of the components in the pump removes the seals from the hot turbine region.

Advances in light-gas gun technology.

Constant-area accelerator used with light-gas guns increases the velocity of accelerating projectiles. A disposable accelerator on the muzzle of the gun uses the energy of a primary projectile, launched by the gun, to achieve high velocities of a light secondary projectile accelerated from rest in the accelerator.

Compact shock-absorbing caster wheel is simple and compact.

Compact shock-absorbing caster wheel mitigates or absorbs shock by a compressible tire which deforms into a cavity between its inner edge and the wheel hub. A tee-shaped annular ring embedded in the tire distributes loads more uniformly throughout both wheel and tire.

Small-diameter, thin-wall tungsten and tungsten alloy tubes are produced by double extrusion. Plug-drawing has emerged as an excellent secondary fabrication technique for the reduction of the overall tube dimensions.

Placing the shaft seals, in an oxidizer pump, between the pump bearings, reduces the shaft overhang length and overall turbopump length.

This arrangement of the components in the pump removes the seals from the hot turbine region.
porous material with an electron beam so that the melted material fills all surface pores.

B68-10332
DUAL WIRE WELD FEED PROPORTIONER
WODGE, R. E. /W. AM. ROCKWELL CORP. / DATE- SEP. 1968
M-FTS-18037
Dual feed mechanisms enables proportioning of two different wire feed wires during automated TIG welding to produce a weld alloy deposit of the desired composition. The wires are fed into the weld simultaneously. The relative feed rates of the wires and the wire diameters determine the weld deposit composition.

B68-10338
TWO-FIUID, IMPINGING-SHEET INJECTOR
RHEELING, R. W. DATE- SEP. 1968
NPO-1058
Two-fluid, impinging-sheet propellant injector reduces the severe erosion found to occur when nojector elements are directly exposed during throttling without the benefits of a cooling flow of the propellant liquids. It greatly improves combustion efficiency by venting the secondary stress of combustion gases generated by backreaction.

B68-10343
X-RAY FILM HOLDER PREVENTS SINGLE CONTINUOUS PICTURE OF TUBING JOINT
DIAMOND, J. W. HUNT, V. MIEGELL, C. /SOCIETY-GEN. CORP. / DATE- SEP. 1968
LEWIS-10382
I X-ray technique produces a clear continuous picture of a welded brazed tubing joint on a single film with one exposure. A stationary X-ray source located in the plane of the joint to be inspected, a means of rotating the tube, and a unique internal film holder and positioning fixture are used.

B68-10352
MACHINING TECHNIQUE PREVENTS UNDERCUTTING IN TENSILE SPECIMENS
BOSCAN, R. E. ROYSTER, D. N. DATE- SEP. 1968
GLOBE-10281
Machining technique prevents undercutting at the tensile section in tensile specimens when machining the four corners of the reduced section. Made with a gradual taper in the test section, the width of the center of the tensile specimen is less than the width at the four corners of the reduced section.

B68-10353
SHOCK AND VIBRATION RESPONSE OF MULTISTAGE STRUCTURE
M-FTS-18972
Study of the shock and vibration response of a multistage structure employed analytically, lumped-mass, continuous-bean, multimode, and matrix-iteration methods. The study was made on the load paths, transmissibility, and attenuation properties along a longitudinal axis of a long, slender structure with increasing degree of complexity.

B68-10359
REMTLY OPERATED GRIPPER PROVIDES VERTICAL CONTROL Rod MOVEMENT
KOFF, E. J. DATE- SEP. 1968
ARG-10160
Remote actuation of a gripper shaft affects vertical engagement between a drive shaft and control rod. A secondary function of the gripper is to provide remote indication of positive connection of the gripping or ungripping operation.

B68-10371
VERSATILE IMPACT HAND TOOL
MOSIL, F. E. ULIN WINCHESTER / DATE- OCT. 1968
M-FTS-18146
Improved cartridge-actuated impact hand tool includes a common power head and four attachments to punch holes, drive forced entry fasteners, hammer, and shear. The attachments are self-contained and easily fitted to the power head assembly.

B68-10372
IMPROVED ELECTROMECHANICAL MASTER-SLAVE MANIPULATOR
FORSTER, G. GOERTZ, R. GREGSON, J.INGEST, D. POSTS, C. DATE- OCT. 1968
ARG-10227
Electric master-slave manipulator uses force multiplication and allows the operator to remotely control the slave arms. Both the master and slave arms execute seven distinct motions by a specially designed force-reflecting servo having a one to one correspondence between the motion at the master and slave.

B68-10385
EFFECTS OF HIGH FREQUENCY CURRENT IN WELDING ALUMINUM ALLOY 6061
FISH, R. E. /W. AM. ROCKWELL CORP. / DATE- OCT. 1968
M-FTS-18337
Uncontrolled high frequency current causes cracking in the heat-affected zone of aluminum alloy 6061 weldments during tungsten inert gas ac welding. Cracking developed when an improperly adjusted superimposed high frequency current was agitating the semisolenoid metal in the areas of grain boundary.

B68-10387
MINIATURE PAINT-SPRAY GUN FOR RECEESD AREAS
WANSSIE, M. A. /W. AM. ROCKWELL CORP. / DATE- OCT. 1968
MCS-13060
Miniature spray gun regulates paints and other liquids to spray at close range, facilitating spraying of remote or recessed areas. Individual valves for regulating air pressure and paint maximizes atomization for low pressure spraying.

B68-10393
DETERMINING GAS LEAKAGE FROM BUBBLE FORMATIONS
DAESTRA, J. E. WILDS, P. E. DATE- OCT. 1968
M-FTS-14041
Gas leakage rates are quantitatively estimated using threaded and flanged fittings by standardizing bubble appearance. Three classes of bubble formations have been proposed.

B68-10395
DESIGN OF FLUID-DUCT BENDS WITH LOW PRESSURE LOSS
CELACH, B. /SOUTHWEST RES. INST. / DATE- OCT. 1968
M-FTS-20176
Duct bends are designed in which pressure losses and velocity profile distortions due to centrifugal force gradients are significantly reduced. The correction is achieved by properly changing the cross sectional area through the bend without affecting the shape of the duct at the upstream and downstream sides.

B68-10398
BATTERY-PACKAGE DESIGN PROVIDES FOR CELL COOLING AND CONSTRAINT
GROSS, S. /BOEING CO. / DATE- OCT. 1968
MCS-18389
Lightweight battery-package provides for even cooling of individual alkaline cells, constraint against cell expansion, and convenient placement of cells. The battery package also provides for venting of the cells and includes instrumentation to measure cell temperature, pressure, and voltage.

B68-10401
COMPACT MONITORING AND CONTROL CONSOLE FOR PRESSURIZED GAS BOTTLES
FUENAR, B. PILCHER, A. /W. AM. ROCKWELL CORP. / DATE- NOV. 1968
M-FTS-14874
Compact monitoring and control console dispenses
gas over a range of pressures from conventional compressed-gas cylinders. It incorporates in a single assembly the necessary equipment for a portable pressurization system that can be used in welding and other operations requiring a controlled gas supply.

B68-10407
AN INVESTIGATION OF PARTICLE MIXING IN A GAS-FLUIDIZED BED
CARLSON, R. E. /GAROB, J. D. /DATE- DEC. 1968
AHE-10483
Mechanisms for particle movement in gas-fluidized beds was studied both from the theoretical and experimental points of view. In a two-dimensional fluidized bed particle trajectories were photographed when a bubble passed through.

B68-10417
HAND-TIGHTENED, HIGH-PRESSURE SEAL
MYERS, W. A. /AM. ROCKWELL CORP. /DATE- DEC. 1968
N-FS-10416
To provide flared tubing and hose connections for high-pressure hand tightened cryogenic service, a 1/4-inch male AN seal was modified by machining to receive a special, double-truncated-cone-shaped Kel-F washer between it and the flared flex hose connector.

B68-10439
HYDRAULIC TESTING OF POROUS ASSEMBLIES
BIGELOR, W. L. /AM. ROCKWELL CORP. /DATE- DEC. 1968
N-FS-10429
Pores of the material were plugged with dust particles suspended in water. This technique provides a permanent high-integrity seal for porous material without affecting its physical properties, yet permitting pressure testing to verify structural adequacy.

B68-10440
LOW FRICTION SERVO VALVE
DUSTIN, R. O. /DATE- NOV. 1968
LWIS-10574
Valve was developed using air bearings which provide frictionless operation. The servo valve is of the flat plate type with rectangular meter openings. Fluid bearings support the metering plate. The overlap is adjustable by means of a variable hinge block support.

B68-10441
LOW COST TECHNIQUES FOR FABRICATING LOBED BEARINGS
SCHUSTER, F. T. /DATE- NOV. 1968
LWIS-10296
New low cost technique utilizes shims to create the lobes in bearing. Conventional methods of manufacture require accurate off-center grinding of the inside diameter of a bearing in a housing at various arc lengths depending on the number of lobes required.

B68-10444
COAXIAL CABLE STRIPPER FOR CONFINED AREAS
BROWN, J. D. /LIPSCOMB, W. G. /BOEING CO. /DATE- NOV. 1968
KSC-10167
Manual coaxial cable stripper quickly and accurately prepares a coaxial cable in a confined area. With this tool, preparation time is greatly reduced, and a completely inexperienced technician can perform the operation.

B68-10503
FLUID POWER-TRANSMITTING GAS BEARING
COLLINS, D. DE FURIA, H. EZEKIEL, F. YANG, F. /DATE- NOV. 1968
BHC-10097
Fluid power-transmitting gas bearing was designed that is essentially frictionless, stable, and highly efficient. The two basic components of this design are the base assembly and the upper plate. System could be a fluidic control system, a momentum exchange or reaction jet device.

B68-10507
ELECTRONIC COMPONENT RELIABILITY ANALYSIS
BY DATA REDUCTION SYSTEM
DINH, H. M. HURT, D. G. /BOEING CO. /DATE- NOV. 1968
NPS-10253
Mechanized data reduction system has been designed to take advantage of the data handling capacity of computers and to reduce voluminous and unrelated test and performance data to a format useful for the rapid analysis of electronic component reliability.

B68-10509
ROTARY-KNIFE STRIPPER FACILITATES REMOVAL OF X-RAY FILM FROM PACK
MITCHELL, D. K. /BOEING CO. /DATE- NOV. 1968
NPS-14583
Rotary-knife stripper facilitates removal of X-ray film from the daylight pack paper sleeve. The new stripper is rectangular, approximately 4 inches wide, 5 inches high, and 7 inches long.

B68-10512
FASTENER, A POSITIVE-LATCH, SIMPLE-RELEASE
BRODQUIST, J. FENSE, T. HART, F. KATZ, M. /BENDIX CORP. /DATE- NOV. 1968
MSC-13061
Fastener /Bendix/ has recently been designed to furnish positive lock and release characteristics that positively prevent accidental adverse functions of lock or release.

B68-10515
FATIGUE OF REINFORCED CONCRETE BEAMS UNDER DYNAMIC LOADING
KATZ, G. C. /WILLY LABS. /DATE- DEC. 1968
NPS-14920
Study, consisting of a literature survey and experiments, determined the strength properties of reinforced concrete beams subjected to vibrational stresses.

B68-10530
VERTICAL BORING MILL CAPACITY IS INCREASED
YOUNG, R. J. /AM. ROCKWELL CORP. /DATE- NOV. 1968
NPS-16196
Commercially available vertical boring mill with a nominal capacity to 27 feet in diameter of workpiece has been modified in-shape to handle work up to 36 feet in diameter. Capacity was increased by adding extension saddles to the mill support columns on each side.

B68-10531
DESIGN ELIMINATES RADIAL THERMAL EXPANSION IN TURBINE STATOR COMPONENTS
ANDERSON, R. J. DIETRICH, J. A. /AM. ROCKWELL CORP. /DATE- NOV. 1968
NPS-18146
Stress levels created in turbine stator components because of differential thermal expansion was eliminated by incorporation of a semifloating design, in which the stator vanes are retained by the outer ring assembly and radially piloted in the inner ring.

B68-10534
IMPROVED THERMAL TREATMENT OF ALUMINUM
ALLOT 7075
COOKS, F. H. /TYCO LABS. /DATE- DEC. 1968
NPS-20083
Newly developed tempering treatment considerably increases the corrosion resistance of 7075-T6 alloy and concomitantly preserves its yield strength. The results of tests on samples of the alloy subjected to the above treatments show that when the overaging period is 12 hours at 325 degrees F, the alloy exhibits a yield strength of 73,000 psi.

B68-10535
FIBROTECHNIC-ACTUATED CABLE RELEASE
HANSON, R. W. /DATE- DEC. 1968
XNP-10049
Remote, unattended means has been designed and used to practice that retains and then releases an attached load by means of a restrained cable. The cable is released by an electrical impulse on signal.

B66-10537
FLUIDIC TRANSDUCER GIVES PRESSURE OUTPUT AS A FUNCTION OF TEMPERATURE
WALL, E. B. /HARVIE CO./ DATE-DEC. 1966 REAR-SEE ALSO B66-10536
KRC-10093
Fluidic transducer gives a pressure output signal that is a direct function of the differential temperature sensed by the device. The transducer is arranged as a bridge.

B66-10538
FLUIDIC ANALOG AMPLIFIER
MC EWING, C. F. /HARVIE CO./ DATE- DEC. 1968 REAR-SEE ALSO B66-10537
KRC-10102
Five-stage, high-gain, push-pull fluidic amplifier provides increased range and improved linearity. The fluidic amplifier was designed to operate in conjunction with a fluidic transducer.

B66-10540
TUBE JOINT LEAK REPAIR COUPLING
PECKWONG, W. R. /W. A. ROCKWELL CORP./ DATE- DEC. 1968
KRC-15022
Tube joint repair coupling consists of 2 split seals, 1 male split nut, 1 female split nut, and two aligning pins. Each assembly consists of 2 half-shell sections which, when engaged, are held together by a dovetail joint and an aligning pin.

B66-10549
HIGH-TORQUE PRECISION STEPPING DRIVE
KASPERWICK, W. E. DATE- NOV. 1968
R-P-14772
Stepping drive has been designed for precise incremental angular positioning of scale models of spacecraft about a horizontal axis in order to accurately measure antenna receiving and transmitting characteristics. Positioning is insured by spring-loaded, self-locking plungers.

B66-10550
CONTACT-SPRING FORKING MACHINE FOR FLAT CONDUCTOR CABLE RECEPTACLES
ANGELO, W. MARTINIEK, H. G. DATE- DEC. 1968
R-P-10246
Machine tool produces beryllium-copper contact springs for FCC /flat conductor cable/ feed-through receptacles. The springs are heat-treated and plated to impart the required electrical contact properties.

B66-10551
WELD PREPARATION TOOL FOR PIPES AND TUBING
WALLACE, R. D. DATE- DEC. 1968
KSC-09955
Improved scarfing tool consists of a mountable, roller-guided assembly. It converts a conventional routing machine for relatively precise field preparation of pipes for welding.

B66-10567
RADIAL ZPION TUBE DE DESIGN CHARTS
RMONIE, R. E. DATE- DEC. 1968
LEWIS-10720
Design charts were prepared for the selection of turbine geometry corresponding to maximum turbine efficiency. Optimum values can be determined as functions of specific speed.

B66-10573
FIXTURE FACILITATES SOLDERING OPERATIONS
WHITE, C. R. /CHRYSLER CORP./ DATE- DEC. 1968
R-P-14456
Soldering fixture, designed forprinted circuit cards, is a basic bench-mounted, self-contained integral unit combining all soldering needs into a compact, readily available work station. All tools, materials, and accessories are available to provide an ideal station to perform critical soldering.

B69-10575
HOISTING FRAME FACILITATES LIFTING OF LARGE OBJECTS
COLPER, K. V. ROLOFF, D. F. /W. A. ROCKWELL CORP./ DATE- DEC. 1968
R-P-16156
Hoisting frame can be used with a standard 5-ton forklift to handle the large spreader bars, or other bulky pieces of equipment, much faster and more efficiently than by a boom or gantry crane. In addition forklifts of this type are more readily available.

B69-10008
TAPE READING FIXTURE
SPRUN- INNOVATOR NOT GIVEN /CHRYSLER CORP./ DATE- JAN. 1969
R-P-10299
Commercially available roller type desk pad provides an efficient and orderly manner of handling rolled paper tapes for proofreading. The fixture, which is modified to accept Flex-O-Writer or similar tapes and roll them in either direction, reduces the chance of damaging or soiling the tapes through repeated handling.

B69-10009
GUN FACILITATES ADHESIVE BONDING OF STUDS TO SURFACES
Davis, E. K. SIMPSON, W. G. DATE- JAN. 1969
R-P-10299
Gun facilitates adhesive bonding of thermoplastic-backed studs to smooth, hard surfaces. Such studs can be used for mounting loads where defacement with drilled holes cannot be tolerated. These studs can be easily removed by softening the plastic bonding with heat from the gun.

B69-10016
SEMITOROIDAL-DIAPHRAGM CAVITATING VALVE
DESIGNED FOR BIPROPELLANT FLOW CONTROL
YOUNG, A. L. /CHRYSLER CORP./ DATE- FEB. 1969
R-P-09704
Valve controls the flow of bipropellant liquids in rocket engines. Thrust control and cavitation of the liquids are controlled by axial deflections of a semitoroidal metal diaphragm. The valve is highly resistant to corrosion and leakage, and should be useful in food processing and chemical industries.

B69-10018
COMPOUND TAPER MILLING MACHINE
CAMPBELL, H. R. /W. A. ROCKWELL CORP./ DATE- FEB. 1969
R-P-15178
Simple, inexpensive milling machine tapers panels from a common apex to a uniform height at panel edge regardless of the panel perimeter configuration. The machine consists of an adjustable angular beam upon which the milling tool moves back and forth above a rotatable table upon which the workpiece is held.

B69-10019
BERYLLIUM FASTENER TECHNOLOGY
BLACKS, J. J. GOREN, R. F., JR. GRESZ, G. W. DATE- FEB. 1969
R-P-20306
Program was conducted to develop, produce, and test optimum-configuration, beryllium prestressed and blind fasteners. The program was carried out in four phases - phase 1, feasibility study, phase 2, development, phase 3, evaluation of beryllium alloys, and phase 4, fabrication and testing.

B69-10021
FIFTH-WHEEL FORK TRUCK ADAPTER
SMITH, F. L. /CHRYSLER CORP./ DATE- FEB. 1969
R-P-14460
Standard fifth wheel mounted on a rectangular steel structure adapted for use with a forklift truck provides a fast, safe, and economical way of maneuvering semitrailers in close quarters at plants and warehouses. One operator can move and
locate a semitrailer without disconnecting from a fork lift truck.

**B69-10030**

**MULTIPLE-ORIFICE THROTTLE VALVE**

**PITTMAN, J. S. / J. B. ROGERS, L. A. / EB/ INC. /**

DATE- FEB. 1969

M-PS-9698

Multiple-orifice throttle valve is not subject to cold welding in a vacuum environment and is compatible with strong oxidizing fluid. The valve is all metal construction using simple components that do not slide or rotate and excludes static or dynamic seals.

**B69-10044**

**ABRASION AND RESISTANT DISCHARGE VALVE DEVELOPED**

**GOTTWALL, W. L. DATE- FEB. 1969**

ARG-10219

Discharge valve capable of withstanding intense radiation and high abrasion was developed for use in a fluidized bed reactor. The valve which employs a replaceable Teflon seal, has only one moving part and is designed for remote assembly and disassembly.

**B69-10046**

**HYDRODYNAMICS OF A NEW CONCEPT OF PRIMARY CONTAINMENT BY SECRET ABSORPTION**

**FISSTEDIS, S. H. SORENSEN, H. C. DATE- FEB. 1969**

HEM-SEE ALSO ARL-7114

ARG-10242

Fluid dynamical analysis for idealized reactor system with spherical symmetry determines the effect which the destructive component of nuclear accident produces on primary containment structures. Steel strands surrounding the reactor cavity in the biological shield exhibit plastic deformation to achieve the energy absorption.

**B69-10051**

**WELDED REPAIRS OF PUNCTURED TUBE-WALLED ALUMINUM PRESSURE VESSELS**

**JONES, D. J. /BOEING CO. / DATE- FEB. 1969**

M-PS-14836

Punctures in thin-walled aluminum pressure vessels are repaired by plugging the hole with an interference-fit disc and welding the unit. The repaired vessels withstand test pressures in excess of vessel ultimate design values for 2-, 4-, and 6-inch holes in 0.202-inch-thick aluminum alloy parent material.

**B69-10052**

**HOT CRACKING STUDIES OF INCOLOY 718 WELD-HEAT-AFFECTED ZONES**

**THOMPSON, E. G. /N. AM. ROCKWELL CORP. / DATE- FEB. 1969**

M-PS-16211

Hot ductility tests, gas-tungsten-arc fillerless fusion tests, and circle patch-weld-restraint tests were conducted on Inconel 718 to better understand and correlate the weldability /resistance to hot cracking/ of the alloy. A correlation of the test results with composition, heat-treat condition, grain size, and microstructure was made.

**B69-10059**

**REIDENTIFYING HARDWARE AFTER LOSS OF SERIAL NUMBERS**

**WILLS, H. J. /N. AM. ROCKWELL CORP. / DATE- MAR. 1969**

M-PS-10133

System traces fabrication and inspection records of special hardware back to the raw material. Reidentification of hardware, after loss of serial numbers, is established by X raying all parts against and comparing the new film with the original, whose numbers were previously recorded on serialized documents.

**B69-10062**

**TWO-AXIS WINCH INSTALLER FOR HEAVY DUCTS IN COMPRESSED SPACE**

**COX, E. P. /N. AM. ROCKWELL CORP. / DATE- MAR. 1969**

M-PS-14254

Two-axis winching and traversing device is used for installing liquid-propellant rocket-engine fuel and liquid oxygen suction ducts between the valves and the rocket engine on a test stand. The device raises and maneuvers the duct into the required position where it can be safely installed by mechanics.

**B69-10069**

**INFLATABLE BLADDER TO FACILITATE HANDLING OF HEAVY OBJECTS - A CONCEPT**

**MC GOLDRICK, G. J. /N. AM. ROCKWELL CORP. / DATE- MAR. 1969**

M-PS-16272

Inflatable bladder facilitates the removal of heavy, highly finished metal parts from tote boxes or shipping containers. The proposed concept permits removal without danger of damage to the parts or injury to handling personnel.

**B69-10071**

**FATIGUE FAILURE IN METAL BELLows DUE TO FLOW-INDUCED VIBRATIONS**

**DANIELS, C. M. FARBOO, G. G. /N. AM. ROCKWELL CORP. / DATE- MAR. 1969**

M-PS-18363

To prevent fatigue due to flow-induced vibrations in metal bellows connected to ducts carrying liquid hydrogen, a study was made which shows that the flexure lines are in general a function of the vibration coupling between the fluid and bellows structure, and the nature of the external environment.

**B69-10076**

**NOZZLES FOR SIZE RECLASSIFICATION OF MICROPARTICLES**

**LEONARDI, S. J. SMITH, J. /MOBIL RES. AND DEVELOP. CORP. / DATE- MAR. 1969**

LEWIS-10705

Reclassified reclassifying nozzles, commonly used with mist lubrication systems, creates larger particle sizes in the mist. The concept used involves the wetting out of particles within the nozzle with continuous re-atomization of the resulting liquid film by passing gas through the nozzle.

**B69-10083**

**DIRECT INDICATION OF PARTICLE SIZE IN FLUIDIZED BEDS**

**KNUDSEN, I. E. OLESEN, W. F. DATE- MAR. 1969**

HEM-SEE ALSO ARL-6907

ARG-10138

Differential pressure measurements indicate particle size and particle size distribution in fluidized beds. The technique is based on the relationship between bed particle size and the intensity and frequency of fluctuations. By measuring the fluctuations, an estimate of average particle size of the fluid-bed material can be made.

**B69-10085**

**TOBE WELDING AND BRAZING**

**POONRAM, R. M. DATE- APR. 1969**

M-PS-20348

Brochures outline the tools, equipment, materials, and techniques used for joining tubes by automatic and semiautomatic welding and brazing. A few of the metals being joined are stainless steels of various diameters and thicknesses. Techniques that have been developed for on-site or work-bench repair.

**B69-10086**

**TECHNIQUES FOR CONTROLLING WARPING AND RESIDUAL STRESSES IN WELDED STRUCTURES**

**COLE, D. G. /HARRERY ENG. LABS. / DATE- APR. 1969**

M-PS-20307

Thermal pattern alteration technique controls both distortion and residual stresses in aluminum weldments. Cryogenic liquids and auxiliary heat sources are used to produce contraction and expansion of metal in the vicinity of the weld in such a manner as to counterbalance expansion and contraction caused by welding.

**B69-10100**

**ELECTROMECHANICAL ROTARY ACTUATOR**
COLD MACHINING OF HIGH DENSITY TUNGSTEN

Electromechanical rotary actuator, which operates over wide temperature range, contains a spring stop which has been calculated to limit internal deceleration loads to a magnitude equal to stall torque. Cryogenic capability is obtained by using dry lubricant on the gears and no lubrication on the bearings.

869-10109
CALIBRATED WATER TANK FACILITATES PROOFLOADING OF CRANES AND DERRICKS
KOPPI, R. K. /BOEING CO./ DATE- APR. 1969
M-FS-15059
Calibrated steel water tank provides the weight loads required for proof-testing of cranes and derricks. The use of the water tank provides a safe, fast, economical method of proof-loading cranes and derricks.

869-10110
COLD MACHINING OF HIGH DENSITY TUNGSTEN AND OTHER MATERIALS
ZIEGLER, R. /DATE- APR. 1969
ABG-10289
Cold machining process, which uses a sub-zero refrigerated cutting fluid, is used for machining refractory or reactive metals and alloys. Special carbide tools for turning and drilling these alloys further improve the cutting performance.

869-10119
MAGNETRON TUNER HAS LOCKING FEATURE
FANTUCCI, V. J. /METCO, INC./ DATE- APR. 1969
HWP-07771
Magnetron tuning arrangement features a means of moving a tuning ring axially within an anode cavity by a system of reduction gears engaging a threaded tuning shaft of load screw. The shaft positions the tuning ring for the desired magnetron output frequency, and a washer prevents backlash.

869-10127
BATTERY CASE SHEAR
PATRO, S. DATE- MAY 1969
GSFC-10783
Hand operated shear removes a battery case without disturbing the internal components which are to be tested. It consists of three tool-steel elements, the cutter blade, and a hand lever that provides the mechanical advantage required to cut steel.

869-10120
SELF-STARTING CIRCUIT FOR SWITCHING REGULATORS
SCHROEDER, R. B. SCHL, G. /ELECTRO-OPT. SYSTEMS/ DATE- MAY 1969
LWIS-10606
Schematic is provided on a self-starting circuit for a switching regulator which uses a logic circuit to sense a change in output voltage and provides a correction signal for dc power sources. With this device, the total power consumed by the logic circuit is held to a minimum, and the circuit receives the optimum regulated supply power.

869-10137
HELICAL TAPE FORMING DEVICE
BUSH, J. E. COLT, P. T. DATE- MAY 1969
GSFC-10830
A device that is not limited to a minimum thickness or width-to-thickness ratio, a very thin metal tape or ribbon is formed into a continuous flat wound helical coil. The device imparts the desired circular shape by squeeze rolling it with an unequal force across its width.

869-10141
MECHANICAL PROPERTIES OF A LAP JOINT UNDER UNIFORM CLAMPING PRESSURE
DILLER, S. V. KETTRELL, A. F. /McDONNELL DOUGLAS CORP./ DATE- MAY 1969
N-FS-14538
Equations were derived for the load deflection relations, the energy dissipation per cycle, and the instantaneous rate of dissipation for a lap joint idealized as two overlapping plates clamped together under a uniform clamping pressure.

869-10140
ADVANCES IN ALUMINUM ANODIZING
DALE, L. R. /REYNOLDS METALS CO./ DATE- MAY 1969
M-FS-16600
White anodize is applied to aluminum alloy surfaces by specific surface preparation, anodizing, pigmenting, and sealing techniques. The development techniques resulted in alloys, which are used in space vehicles, with good reflectance values and excellent corrosive resistance.

869-10145
MIXING WELD GASES OFFERS ADVANTAGES
MAT, J. L. MENDENHALL, R. M. /NA. ROCKWELL CORP./ DATE- MAY 1969
M-FS-16813
Argon added to helium during gas tungsten arc cover-pass welding in the horizontal position results in a better controlled wider bead width, increased arc stability, and reduction in heat input. Adequate filler material wetness and penetration pass coverage is possible with only one pass.

869-10150
RENEWAL OF CORROSION PROTECTION OF COATED ALUMINUM AFTER WELDING
HEICIGS, B. R. DATE- MAY 1969
M-FS-20361
Effectiveness of conversion coatings designed to protect aluminum alloys against atmospheric corrosion is reduced after exposure to high temperature or welding. Damaged coating should be manually stripped six inches from the weld and then recoated by sponge or spray with the original solution.

869-10164
DETACHABLE CASTER ADAPTER
MORB, R. J. /NA. ROCKWELL CORP./ DATE- AUG. 1969
MSC-91275
Detachable caster adapter moves heavy welding tables when fork lift trucks are not practical. A support saddle on the adapter, connected to the caster platform by means of a hinge, fits the leg of the welding table, but can be modified to fit other leg configurations.

869-10178
DESIGN AND TESTING OF LIQUID HYDROGEN-COOLED, ULTRAHIGH-SPEED BALL BEARINGS
M-FS-19463
Large-bore, liquid hydrogen-cooled, ultrahigh-speed, rolling contact bearings of an optimum design allow optimization of large rocket engine turbopumps in which bearing speed is a limiting factor. Optimum design for the bearings resulted from an application of liquid hydrogen used as a coolant.

869-10180
SPACE-SAVING HOIST FOR TANK MANHOLES
SCHRAB, W. R., JR. /NA. ROCKWELL CORP./ DATE- JUL. 1969
M-FS-16508
Working platform and collapsible basket facilitate entry of men with equipment into the overhead manhole of a deep tank. A winch and pulley rigging hold the basket which is suspended in the manhole. The basket is suspended at three points without the rig impinging on the area of the manhole.

869-10180
JOURNAL BEARING FOR CURVED SURFACES
REDMON, J. W. DATE- JUN. 1969
M-FS-20423
Optimizing bearing length and permissible axis
B69-10183
ASTRONAUT’S TOOL FOR WITHDRAWING/REPLACING COMPUTE CARDS
WEST, R. L. /SPERRY RAND CORP./ DATE- JUL. 1969

The tool allows astronauts to withdraw and replace Apollo Telescopic Remote control computer cards. It is easily manipulated by a gloved hand, provides positive locking of a withdrawn card, and has visible locking device.

B69-10184
ADJUSTABLE WRENCH FOR ELECTRONIC CONNECTORS
JOHNSON, W. C. /ROCKWELL/ DATE- JUN. 1969

A standard crescent wrench has been modified to provide a means whereby one adjustable tool can be used with all sizes of electronic connectors. The machined wrench jaws provide leverage for engaging the standard size slots on the different connectors.

B69-10190
TOOLS FOR APPLYING LEAD TAPE TO FLAT CONDUCTOR CABLE FOR CHEMICAL STRIPPING

Two tools facilitate chemical stripping of insulation on flat conductor cables. A tape pressing tool and a tapping fixture apply adhesive lead tape with the proper amount of pressure to protect the remaining insulation from the chemical stripping solution.

B69-10199
TOOLS MADE OF ICE FACILITATE FORMING OF SOFT, STICKY MATERIALS
HARRIS, J. E. /BOEING CORP./ HANSY, J. G., JR.
SCHINBECKLER, K. D. DATE- JUN. 1969

Tools made of ice facilitate the foaming or shaping of materials that are soft and sticky in the uncured state. The low-temperature of the ice slows the curing of the material, extending the working time available before setup. Handling problems are eliminated because the material does not adhere to the tool, and the melting ice serves as a lubricant.

B69-10202
PROPOSED TECHNIQUE FOR VERTICAL ALIGNMENT OF A CRANE’S CABLE
GEA, J., JR. /N. AM. ROCKWELL CORP./ DATE- JUN. 1969

A vertical alignment technique senses the attitude of a crane’s cable and displays any deviation from the vertical. The system consists of a detector assembly fixed to the boom and a display scope located in the cabin. It has potential application with either fixed boom cranes or ganttries.

B69-10209
DETERMINATION OF THE ABSOLUTE CONTOURS OF OPTICAL FLATS
PRIER, W. DATE- JUL. 1969

Hermon’s procedure is used to determine true absolute contours of optical flats. Absolute contours of standard flats are determined and a comparison is then made between standard and unknown flats. Contour differences are determined by deviation of Pizeau fringes.

B69-10227
ELECTROCHEMICAL SINTERING PROCESS FOR PRODUCING ELECTRODES FROM CADMIUM FELT AND A NICKEL OR SILVER BASE
COLTON, L. HERRIGAN, J. P. POTTS, N. STEMMLE, J. T. WESTER, W. DATE- JUL. 1969

The electrochemical sintering process produces cadmium felt electrodes. Two pieces of cadmium felt are sandwiched around a nickel screen or silver expanded metal grid, held together by mold compression, and electrochemically sintered by being put through several charge and discharge cycles at low current density.

B69-10229
J-BEVELING OF PIPE ENDS WITH A HAND-HELD TOOL
HATUS, S. T. /BENDIX CORP./ DATE- JUL. 1969

A simple, hand-held tool is used to bevel pipe ends to facilitate welding.

B69-10231
TOOL SIMPLIFIES MACHINEING OF PIPE ENDS FOR PRECISION WELDING
HATUS, S. T. /BENDIX CORP./ DATE- JUL. 1969

A single tool prepares a pipe end for precision welding by simultaneously performing internal machining, end facing, and bevel cutting to specifications. The machining operation requires only one milling adjustment, can be performed quickly, and produces the high quality pipe-end configurations required to ensure precision-welded joints.

B69-10242
REMOTE BALANCE WEIGHS ACCURATELY AMID HIGH RADIATION
ZIEGEBRUGGER, D. R. /STRACK, A. B. DATE- JUL. 1969

Commercial beam-type balance, modified and outfitted with electronic controls and digital readout, can be remotely controlled for use in high radiation environments. This allows accurate weighing of breeder-reactor fuel pieces when they are radioactively hot.

B69-10245
REPLACEMENT OF FLUID-FILTER ELEMENTS WITHOUT INTERRUPTION OF FLOW
COUVER, J. R. /N. AM. ROCKWELL CORP. / BAND, J. B. DATE- JUL. 1969
KSC-15499

Gating-type filter assembly, preloaded with several filter elements, enables filter replacement without breaking into the operating fluid system. When the filter element becomes contaminated, a unit inner subassembly is rotated 60 degrees to position a clean filter in the line.

B69-10261
REPAIR OF HONEYCOMB PANELS WITH WELDED BREAKAWAY STUDS
BRUCE, D. F. /N. AM. ROCKWELL CORP./ DATE- AUG. 1969
KSC-15086

Damaged metallic honeycomb panels can be repaired by drilling holes and welding breakaway studs to both facing sheets. Minimal heat required for welding reduces distortion of highly stressed panels. Repairs can be made without the use of doublers and with greater strength when doublers are used.

B69-10263
PREDICTION OF PERFORMANCE OF CENTRIFUGAL PUMPS DURING STARTS UNDER PRESSURE
OSTAPINSKI, W. DATE- AUG. 1969

Method which calculates start-up characteristics of centrifugal pumps reveals a capacity to predict pressure drop characteristics of pumps with varied diffusers. Calculations are based on pump geometry, design-point flow, speed, and pressure rise, and the pump characteristics within the range of approximately ten percent of the design-point flow.
Handbook gives information on the selection and application of welding, brazing, and soldering techniques for joining various metals. Summary descriptions of processes, criteria for process selection, and advantages of different methods are given.

INSTRUCTION MANUALS FOR LIQUID PENETRANT NONDESTRUCTIVE TESTING
SP-1-09307-109309 110302 110303
Manuals provide quality control and test personnel with basic information on liquid penetrant testing. Topics covered include scope of application, equipment and materials used, test procedures, safety precautions, quality control, and comparison of liquid penetrant testing with other nondestructive testing procedures.

HANDBOOK FOR DESIGN OF CONTAINERS OF FLUIDS AND GASES FOR SPACECRAFT
CAPPS, J. E., KOEHLER, M. L. //BOEING CO./ //DATE- SEP. 1969
Handbook guides design of construction materials for liquids and gases used in rockets and spacecraft. Methods of design, fabrication, post-fabrication treatment, nondestructive testing, and repair are described in detail.

TWO-STEP ROCKET ENGINE BIPROPELLANT VALVE CONCEPT
CAPPS, J. E., FERGUSON, R. E., POHL, G. O. //DATE- AUG. 1969
Initiating combustion of altitude control rocket engines in a precombustion chamber of ductile material reduces high pressure surges generated by hypergolic propellants. Two-step bipropellant valve concepts control initial propellant flow into precombustion chamber and subsequent full flow into main chamber.

COUNTERSUNK HEADSCREW RETAINER
TUTTLE, R. S. //AM. ROCKWELL CORP./ //DATE- AUG. 1969
Pin locking technique for flush fasteners retains a screw under dynamic conditions when self-locking or lock wiring devices are not practical. Spring pin in counter sunk through one side of the screw head into the component to form a flat surface.

LEAKAGE TESTER FOR FLAT CONDUCTOR CABLE CONNECTOR
U-tube containing liquid indicates pressure differences in a leakage tester. This tube, connecting two containers, indicates the amount of leakage over a net period of time calculated from the pressure and gas volume.

TPR-PENTACARBON LINES FOR FLEXIBLE HOSES
RIGLEY, D. F. //AM. ROCKWELL CORP./ //DATE- AUG. 1969
Flexible hose handles high rates of flow under high pressures. Short lengths of tubing are overlapped to assist flexibility with much greater parallel offset.

A LABORATORY METHOD FOR PRECISELY DETERMINING THE MICRO-VOLUME-MAGNITUDES OF LIQUID FLUIDS
CLOUTIER, R. L. //BERKELEY SCI. LAB./ //DATE- AUG. 1969
Micro-volumetric quantities of ejected liquid are made to produce equal volumetric displacements of a more dense material. Weight measurements are obtained on the displaced heavier liquid and used to calculate volumes based upon the known density of the heavy medium.

ELECTROTHERMAL LINEAR ACTUATOR
DEEB, L. //DATE- AUG. 1969
Converting electric power into powerful linear thrust without generation of magnetic fields is accomplished with an electrothermal linear actuator. When treated by an energized filament, a stack of bimetallic washers expands and drives the end of the shaft upward.

FLEXIBLE HOSE FOR THERMAL COMPENSATION IN TEST MOUNTS FOR STRUCTURES
NOBAN, R. M. //DATE- AUG. 1969
Supporting system compensates automatically for the dimensional changes produced by contraction and expansion of structures undergoing thermal proofing on mounts. Structurally destructive forces would be exerted on a spacecraft in a simulator if this four bar linkage test mount was not used.

PARAMETERS FOR GOOD WELDING OF COPPER TO NICKEL
BALL, L. G. //MARTIN MARIETTA CORP./ //DATE- AUG. 1969
Quality in welding copper leads to nickel bus wires is obtained by the mass of nickel exceeding that of copper. Welding range increases proportionately with the increase in the nickel-to-copper mass ratio up to 4-to-1.

QUALITY-WELD PARAMETERS FOR MICROWELDING TECHNIQUES AND EQUIPMENT
Limited-amplitude, controlled-decay process improves the reliability of microwelding. The system consists in building a capacitor-discharge welder for control of the shape of the weld pulse. Standard welders may be modified.

REPAIRS OF WELD DEFECTS IN THIN-WALLED STAINLESS STEEL TUBES
Hand-operated tool repairs weld defects in large-diameter, thin-walled stainless steel tubes. Tool consists of a three-roll external planisher and an internal backup mandrel, both hydraulically pressurized by hand pumps, and an external restraining mandrel, which keeps the tube from turning during the planishing operations.

PRECISION MOUNTING FOR INSTRUMENT OPTICAL ELEMENTS PROVIDED BY POLYIMIDE BONDING
MOELLER, T. F. //BALL BROS. RESEARCH CORP./ //DATE- AUG. 1969
Epoxy resin-coated polyimide plastic is used for bonding materials with different thermal coefficients in applications requiring precision mounting, especially where vibrations, temperature extremes, and low pressures are encountered. Low vapor pressure of the bonding material precludes outgassing problems.
Mechanically simple, hermetically-sealed pump utilizes pumped fluid for lubrication. The rotor, having helical grooves on the outer surface, functions as both a bearing and pump.

B69-10328
A MECHANICALLY EXTENDIBLE BOOM
BACHEL, W. H. /PHILCO-FORD CORP./ DATE- SEP. 1969
NPO-11116
Series of elements connected by idle rollers and two tapes/one for extension and one for retraction/ are used in the fabrication of a telescoping boom. The boom has high strength and rigidity which will allow a gravity drop at any point in the extension cycle.

B69-10331
SHOCK-ABSORBER MOUNTINGS FOR BEARINGS
TOPITS, A., J8. DATE- SEP. 1969
NPO-10826
Inner and outer concentric rings are separated by a number of S-shaped rectangular leaf springs. The spring mounting will protect a bearing and its shaft form shock.

B69-10335
MASKING OF ALUMINUM SURFACE AGAINST ANODIZING
N-FS-12364
Masking material and a thickening agent preserve limited unanodized areas when aluminum surfaces are anodized with chromic acid. For protection of large areas it combines well with a certain self-adhesive plastic tape.

B69-10342
AUTOMATIC FILTER-BLOWBACK SYSTEMS USED WITH SINTERED-METAL FILTERS
CARLS, E. L. LEVITZ, W. M. DATE- AUG. 1969
ARG-10328
Sintered-metal filters remove entrained particulate solids from the fluid-lub effluent-gas stream. Removal prevents loss of material from the reactor or contamination of the gas stream.

B69-10343
DESIGN OF A STRAIN-GAGE PROBE
KOLBA, V. M. VESTER, D. L. DATE- AUG. 1969
ARG-10338
Strain-gage spacer probe uses the deflection of a leaf spring to measure strain in a long, slender beam nondestructively. The selected gage is of the smallest practical size, as thin as possible and yet of a standard type.

B69-10345
SURFACE PROFILOMETER FOR EXAMINING GRAIN-BOUNDARY GROOVES
JECH, R. E. RYALD, D. W. DATE- AUG. 1969
ARG-10246
Surface profilometer, consisting primarily of commercially available components, measures surface topographical features accurately and precisely. It shows improvement over the interferometric technique in measurement of grain-boundary grooves formed during annealing on nickel-oxide bicrystals.

B69-10366
IMPROVED TABLE FOR CUTTING AND WELDING
OLIVER, D. R. /W. R. ROCKWELL CORP./ BARTHEZ, M. DATE- SEP. 1969
MSC-15537
Welding table covered with parallel inverted steel angles improves metal torch cutting of various types and thicknesses.

B69-10346
VIBRATION DAMPENER FOR MILLS VERTICAL
BEER, R. J. /W. R. ROCKWELL CORP./ DATE- SEP. 1969
MSC-15529
Controlled hydraulic cylinder, which serves as a vibration damper, is used as a ram support unit. Constant pressure is exerted, minimizing the cutting tool vibration.

B69-10350
REMOVAL OF RETAINING WASHERS OF THE WAFFLE-SPRING TYPE
MARAVULLO, B. A. /W. R. ROCKWELL CORP./ DATE- SEP. 1969
MSC-15531
Special tool removes quick-locking fasteners incorporating waffle-spring retaining washers without damage.

B69-10355
SEALING A RUBBER BLADDER BETWEEN TWO SECTIONS OF AN ACCUMULATOR
SCHEITL, G. M. DATE- SEP. 1969
N-FS-20403
Leak-free clamping of a two section accumulator is accomplished by a flat metallic ring molded peripherally to the rubber flange of the bladder, and an inset rubber seal bonded to the face of the flange of each section. Method maintains constant torque on the clamping bolts.

B69-10367
STRESS-TESTING OF THE THROAT OF A ROCKET'S NOZZLE
ESTES, E. G. /BC DONELL DOUGLAS CORP. DATE- SEP. 1969
NPO-10311
Test motor in which high initial pressure can be reduced suddenly provides a method of stressing rocket nozzle throat. Motors operating pressure is increased to aggravate tensile stresses in a subembed throat. Opposing compressive stresses are limited by control of the operating plastic.

B69-10373
STUDY OF HIGH-SPEED ANGULAR-CONTACT BALL BEARINGS UNDER DYNAMIC LOAD
GEBBE, T. E. KANDEL, J. W. /BATTLE TECHNICAL EXPERIMENTAL LAB./ DATE- SEP. 1969
M-FS-15461
Research program studies behavior of specific high-speed, angular-contact ball bearings. Program is aimed at detailed investigation of ball-separator behavior and lubrication surface-finish effects in a specific gyro wheel.

B69-10375
IMPROVED DESIGN OF ITEM IN HIGH SPEED ROTATING MACHINERY
DIETRICH, J. A. /W. R. ROCKWELL CORP./ DATE- SEP. 1969
M-FS-10341
Greater centrifugal radial growth of the impeller hub with respect to the impeller and nut at operating speed alleviates clamping and alignment problems in high speed rotating machinery. Design results in axial tightness and radial piloting of the impeller.

B69-10379
CONNECT-DISCONNECT COUPLING FOR PREADJUSTED RIGID SHAFTS
BALKOWSKI, A. DATE- SEP. 1969
MSC-15540
Coupling device enables a rigid shaft to be connected to or disconnected from a fixed base without disturbing the point of adjustment of the shaft in a socket or causing the shaft to rotate. The coupling consists of an externally threaded, internally slotted boss extended from the fixed base.

B69-10379
TOOL REPAIRS TUBE COMPONENTS IN SITU
MSC-15348
MSC-15363
Two versions of a portable tool repair the seats of tube fittings and the flared ends of tubing. Each version operates on the principle of lapping to remove imperfections from tube and fitting.
interfacing surfaces.

B69-10388
QUICK-RELEASE BOOK-AND-LOOP FASTENER
WHITE, R. E. DATE- OCT. 1969
MSC-10950
Joints between two rigid materials lined with velcro fabric can now be broken with ease using any one of several methods. Three such methods are applicable to either hook or loop fabric.

B69-10393
CONVERSION OF CONTINUOUS-DIRECT-CURRENT TSC WELDER TO PULSE-ARC OPERATION
LITSCH, D. E. /AM. ROCKWELL CORP./ DATE- OCT. 1969
R-FS-16411
Electronics package converts a continuous-dc tungsten-inert-gas welder for pulse-arc operation. Package allows presetting of the pulse rate, duty cycle, and current value, and enables welding of various alloys and thicknesses of materials.

B69-10396
QUICK-ACTING BACKUP TOOL FOR WELDING DUCTS
JONES, L. L. /AM. ROCKWELL CORP./ DATE- SEP. 1969
R-PS-18404
Alignment and backup tool facilitates butt welding of large-diameter ducts. It consists of a circular three-place segmented hoop, a pneumatic piston, and two shoes.

B69-10398
ONE-HANDED HAMMER-SPANNER FOR CHECKS
HARTING, J. A. /AM. ROCKWELL CORP./ SEID, S. DATE- SEP. 1969
R-PS-18581
Modified spanner wrench with a heavy hammer-piece hinged to its handle allows one hand removal of a tool from a chuck.

B69-10399
HYDRAULIC CALIPERS
BENSON, J. A. /AM. ROCKWELL CORP./ DATE- SEP. 1969
R-PS-18052
Hydraulic calipers determine area of annular openings in irregular or concealed passages. With modifications the device could be adapted to investigations of cross-sectional changes in heat flow passages, ducts, conduits, and heat exchanger elements.

B69-10400
PNEUMATIC FLOW COMPARATOR
WILSON, A. J. /AM. ROCKWELL CORP./ DATE- SEP. 1969
R-PS-18373
Pneumatic flow comparator provides single go, no-go evaluation of individual tubes. Flow characteristics of tubes used to form the walls of regeneratively cooled combustors must be identical within very close tolerances to ensure equally distributed coolant flow throughout the combustor wall.

B69-10403
PRESSURE-CONTROL PURGE PANEL FOR AUTOMATIC BUTT WELDING
LANG, E. S. /AM. ROCKWELL CORP./ VAN NAGEL, B. H. DATE- SEP. 1969
R-PS-18465
Modification of a purge panel for use in an automatic butt weld reduces the dfc in pressure between the regulators and the weld head and tube purge fitting. The invention affects air regulators for plants, regulating circuits for pneumatic valves, and automatic welding machines.

B69-10404
GENERATION OF SONIC POWER DURING WELDING
MC CAMPBELL, W. R. DATE- SEP. 1969
R-PS-20333
Generation of intense sonic and ultrasonic power in the weld zone, close to the puddle, reduces the porosity and refinement of the grain. The acoustic induction brazing power supply is modified with long cables for deliberate addition of resistance to that circuit. The concept is extensible to the welding of metals and plastics.

B69-10408
SELF-LUBRICATING GRAB
DEMOEST, R. E. DATE- SEP. 1969
R-PS-14971
Self-lubricating gear, designed for long term operation in a vacuum at high, low, and ambient temperatures, is constructed of alternating layers of metal and a dry lubricant material, such as polytetrafluoroethylene, with a suitable reinforcing material bonded into a laminated composite unit, which is machined to form a standard gear.

B69-10422
MAGNETOROTORIC FORCING FOR PRECISION SIZING AND JOINING OF LARGE-DIAMETER TUBES
BELL RIGHTS, J. B. SCHWINGLAMER, R. J. DATE- SEP. 1969
R-PS-20481
Portable electromagnetic coil enables high precision expansion or constriction and joining of large diameter metal tubes. A nonconducting mandrel or forcing die is used on the side of the tubes wall opposite the coil. The coil is insulated from the tube by a thin plastic sleeve.

B69-10437
CALIBRABLE SOLID-STATE PRESSURE SWITCH
SPOON- INVENTOR NOT GIVEN /FAIRCHILD MILLER CORP./ DATE- SEP. 1969
R-PS-20474
Pressure switch, incorporating a semiconductor light-detector coupled to an electrically controlled actuating unit, provides accurate and reliable switching over a broad range of pressures and environments.

B69-10448
AIR-CUSHION LIFT PAD
R-PS-17702
R-PS-16485
Mathematical model is formulated for an air pad which is capable of lifting a structure to a height of 0.125 inch. Design is superior to conventional air cushion devices because it eliminates flutter, vibration, heating, and pitching.

B69-10450
IMPROVED FIRE RESISTANT RADIO FREQUENCY ANECHOIC MATERIALS
BRENNER, D. A. /AM. ROCKWELL CORP./ DATE- SEP. 1969
R-PS-16500
Protective, flameproof foam covering improves the resistance to fire and surface contamination of low-cost radio frequency absorbing and shielding anechoic materials. This promotes safety of operating personnel and equipment being tested in an otherwise combustible anechoic chamber.

B69-10456
CHECKING FLAT CONDUCTOR CABLE SPACING BY MEANS OF A MOIRE PATTERN
ANGEL, W. DATE- SEP. 1969
R-PS-20426
Moiré tester detects small variations in flat conductor cable spacing by a quick, visual inspection. This device compares the cable to be tested with the negative of a very precise standard cable. The moiré, consisting of bands of light and dark zones and its irregularities, can be interpreted as errors in spacing.

B69-10458
CALIBRATION STANDARD FOR DYNAMIC EVALUATION OF A PROFILE-PLOTTER
MOULTON, K. S. /AM. ROCKWELL CORP./ DATE- SEP. 1969
R-PS-16476
Template is used for evaluation of the dynamic characteristics and accuracy of the plotter. It has a profile composed of surfaces parallel to and at known distances from a reference plane, plane, the diverse surfaces being connected by slopes of
known angles and blended by cylindrical developments of known radii.

B69-10459
FLEXIBLE RIVET-SET
RESHEMIDES, W. H. /MC DONELLI DOUGLAS CORP./
DATE- SEP. 1969
M-PS-20317
Tool sets rivets in tight places where the riveting head of the gun cannot be laid on the rivet. Tool may be made in any of many diameters and lengths, and its principle and use are not restricted to riveting.

B69-10463
IMPROVED NICKEL PLATING OF INCONEL X-750
FARNS, R. E. /N. AM. ROCKWELL CORP./
E. KUSTERS, C. A. DATE- SEP. 1969
M-PS-18604
Electroplating technique with acid pickling provides a method of applying nickel plating on Inconel X-750 tubing to serve as a wetting agent during brazing. Low-stress nickel-plating bath contains no organic wetting agents that cause the nickel to blister at high temperatures.

B69-10471
A BIAXIAL WELD STRENGTH PREDICTION METHOD
RAWZ, R. A. /DOUGLAS AIRCRAFT CO./
DATE- OCT. 1969
M-PS-20019
Method is given for design of structures which are subjected to multi-axial loading due to internal pressure. The biaxial strength of a structure can be predicted by modifying the uniaxial formula.

B69-10483
MULTI-PURPOSE TOOL Mitten
WILCOMB, R. /RAF ANALYTIC STUDY ASSOC., INC./
DATE- SEP. 1969
BG-10047 BG-10049
Tool mitten provides a low reaction torque source of power for wrench, screwdriver, or drill activities. The technique employed prevents the attachments from drifting away from the operator. While the tools are specifically designed for space environments, they can be used on steel scaffolding, in high building maintenance, or underwater environments.

B69-10495
PEW, T-B1 CUTTING FLUID
PETZS, R. L. /N. AM. AVIATION, INC./
DATE- SEP. 1969
MSC-11486
Improved cutting fluid completely controls the heat generated from machining operations, thus providing longer tool life. Fluid is especially useful in the working of plastics and replaces less efficient contaminating oils.

B69-10495
HEAT-SHRINKABLE JACKET HOLDS FLUID IN CONTACT WITH TENSILE TEST SPECIMENS
LEGER, L. J. SPIKER, I. K. DATE- OCT. 1969
MSC-13195
Heat-shrinkable plastic tubing can be quickly sealed around a metal tensile test specimen and used as a jacket for any compatible liquid.

B69-10495
IRIS-LEAF CORE RETAINER FOR A SURFACE DRILL
OLIVARI, R. /ARTIN-ARISETTA CORP./
DATE- SEP. 1969
MSC-11602
Iris-leaf core retainer insures retention of a complete sample within the drill string. Individual overlapping leaves will not rupture or tear out when they come in contact with the oncoming core.

B69-10499
TORCISONAL TUBULAR DISCONNECT
COHEN, C. E. STARKY, D. J. DATE- OCT. 1969
NPO-10704
Torque driven disconnect maintains connection on a gas supply line until desired parting occurs at a remote location. It consists of a helical plastic tube with a disconnect coupling fitted for an interference condition slip joint, and a rotationally constrained support connected to a gas source.

B69-10506
ANALYSIS OF PROBLEMS RELATED TO SLINGSHOT SHOCK MACHINE HIGH VELOCITY SHOCK TESTING
SHIPLET, J. W. DATE- OCT. 1969
NPO-11193
Slingshot device is capable of imparting a square-pulse acceleration greater than 20,000 g with a pulse duration of up to 1.5 milliseconds. A load is applied to the bungee cord and the sled is drawn back to desired length. When released it provides the desired velocity at impact.

B69-10509
BORON FIBER-REINFORCED ALUMINUM ALLOY TUBING /EXPERIMENTAL/
SCHEIBER, R. S. /N. AM. ROCKWELL CORP./
DATE- OCT. 1969
MSC-15633
Prototype of a conceptual boron fiber-reinforced tubing meets requirements for lightweight structural members subjected to high shock loads and bending stresses.

B69-10514
AUTOMATIC LEVELING AND EQUALIZING HOIST DEVICE
BROWN, R. J. /N. AM. ROCKWELL CORP./
DATE- OCT. 1969
MSC-10549
Hoist uses six equally spaced support points with the load equalized between pairs to prevent over-stressing of any one point of support. The pickup point is automatically shifted through a motor driven feedback system to level the load throughout the lifting period.

B69-10527
FLARED-TUBE FITTINGS WITH REPLACEABLE SHUT INSERTS
BALLINGER, Y. J. /N. AM. ROCKWELL CORP./
DATE- OCT. 1969
MSC-15375
Three design modifications of conventional flared-tube fittings provide easily replaceable cone seats for specific applications in fluid flow lines.

B69-10527
TOOL FOR READING PSYCHROMETRIC CHARTS
DE ANGELO, F. T. /BOEING CO./
DATE- OCT. 1969
KSC-10358
Three-legged, clear plastic tool is designed so that the angles of each leg correspond with the angles of psychometric chart construction for each of the three required scales. The appropriate edges are tapered to the chart surface.

B69-10548
RHODIUM-PLATED BARRIER AGAINST HIGH TEMPERATURE FUSION BONDING
JANIS, E. C. /N. AM. ROCKWELL CORP./
DATE- DEC. 1969
M-PS-92135
Very thin rhodium electro-deposit plating eliminates the need for corrosion-resistant protection on silver surfaces and has no effect on the pliability characteristics of the plated surface.

B69-10545
INTEGRAL VALVE PROVIDES AUTOMATIC RELIEF AND REMOTE VENTING
GILMORE, R. P. /CHRYSLER CORP./
DATE- OCT. 1969
MSC-12134
In-line, pilot-operated, differential area, poppet type valve provides both automatic relief of a tank at a precise over-pressure and remote control of tank venting. Relief and vent operations are separate functions incorporated in an integral valve package.

B69-10547
SINGLE-ELEMENT COAXIAL INJECTOR FOR ROCKET FUEL
B69-10573
CONTROL FOR MAINTAINING CONSTANT LEVEL OF A CRYOGENIC LIQUID
LIBERNOTT, J. DATE- OCT. 1969
NPO-11177
Pressure formed as the cryogenic liquid vaporizes is used to pump new cryogenic liquid from a storage reservoir. Changes in volume of a gas resulting from changes in temperature actuate a valve which either replenishes the depleted liquid in the vessel or vents the evolving gas to the atmosphere.

B69-10588
TWO-FUNCTIONAL SEAL FOR ROSE CONNECTION
RICHARDSON, E. B. /RICHARDSON, H./DOUGLAS AIRCRAFT CO./ DATE- OCT. 1969
F-PS-14062
Seal, machined from a plastic material, prevents liquid hydrogen leakage from hose connections. It serves as a block-type seal supporting maximum loading of the poppet with slight elastic deflection or as a lip-type seal that is deformed elastically in bending, tension, or compression by the seated poppet.

B69-10590
MOUNT CARLO SIMULATION BY COMPUTER FOR LIFE-CYCLE COSTING
GRALOV, P. H. /BOEING CO./ LABSON, W. J. DATE-KOV. 1969
F-PS-14754
Prediction of behavior and support requirements during the entire life cycle of a system enables accurate cost estimates by using the Monte Carlo simulation by computer. The system reduces the ultimate cost to the procuring agency because it takes into consideration the costs of initial procurement, operation, and maintenance.

B69-10609
EXPERIMENTAL PROGRAM TO INVESTIGATE TRANSIENT FLOW AROUND PROTECTORAES
ROBERTSON, J. L. /YALE LABS./ DATE- NOV. 1969
F-PS-20037
Transverse and steady state aerodynamic flow of turbulent boundary layers are investigated for generalized cylindrical projections and several specific configurations used on the Saturn 5 launch vehicle. A transonic wind tunnel gave generalized information.

B69-10615
DESIGN OF MULTILAYER INSULATION SYSTEMS
ARC-10166
Analytical models for insulation system heat transfer studies the types of materials best suited for a near solar environment. This multilayer insulation system for spacecraft can operate at temperatures in the 300 to 700 degree K range.

B69-10634
HERETICALLY SEATED VIBRATION DAMPER
WEATLIF, D. G. /GEN. MOTORS CORP./ DATE- NOV. 1969
MSC-10959
Simple fluidic vibration damper for installation at each pivotal mounting between gimbals isolates inertial measuring units from external vibration and other disruptive forces. Installation between each of the three global axes can damp vibration and shock in any direction while permitting free rotation of the gimbals.

B69-10649
HIGH-PRESSURE SEALS FOR ROTARY SHAFTS
GOLDEN, C. P. /H. AM. ROCKETEER CORP./ DATE- NOV. 1969
F-PS-18548
High pressure seals for rotating shafts are machined from a polycrystalline. It is more durable and cheaper than the older seals of plastic coated metal and works at temperatures between minus 400 degrees and plus 500 degrees F.

B69-10661
POLE BEARING SUPPORT FOR HIGH-SPEED ROTOR
LAFAYE, L. /icip Cooper./ DATE- NOV. 1969
Eq-10315
High speed rotors are supported initially by flexible metal foil and then on an air film generated by a self-acting hydrodynamic effect. The flexibility of the bearing enables it to conform and deflect locally, wear is less severe, self-alignment and accommodation of thermal distortion is permitted.

B69-10684
A ROTATING, NONCAPILLARY HEAT PIPE
GRAY, V. H. DATE- DEC. 1969
LENIS-10298
Hollow rotating shaft operates like a heat pipe, with a small, sealed-in inventory of fluid that transfers heat by vaporizing at the hot end and condensing at the cold end. This heat pipe utilizes large centrifugal forces for pumping the condensate, and rotation to enforce liquid-vapor separation.

B69-10696
PRECISELY REPEATABLE ROTARY MECHANISM
JOHNSON, R. G. DATE- DEC. 1969
NFO-10707
Precision-finished lead screw and a fitted mating nut member produce a linear translatory motion. This motion is transformed to a rotary movement of a pivotal platform member. The transformation is achieved by coupling the nut member and the platform member through a pair of opposed, taut, flex bands.

B69-10704
IMPROVED SOLENOID VALVE DESIGN
EVANS, J. DATE- DEC. 1969
GSFC-10607
Modified solenoid valve reduces valve seat loading by eliminating off-center operation of the armature, reducing the poppet size and spring-cushioning its impact, and reducing armature impact with a poppet guide stop.

B69-10785
SHAKER SLIP-PLATE ADAPTER
RINN, G. S. /MC DONELL-DOUGLAS CORP./ DATE- DEC. 1969
F-PS-14063
Magnesium adapter ties in all of the attachment bosses on a horizontal slip table and makes a rigid coupling which terminates in a single row of attachment bosses at the edge of the horizontal plate. This eliminates ineffective dissipation of the driving force in vibration tests.

B69-10804
EXPLOSIVE BONDING OF METAL-MATRIX COMPOSITES
EECS, O. Y. DATE- DEC. 1969
F-PS-20657
Explosive bonding process produces sheet composites of aluminum alloy reinforced by high-strength stainless steel wires. The bonds are excellent metallurgically, no external heat is required, various metals can be bonded, and the process is inexpensive.

B69-10816
FLUID SAMPLE COLLECTION AND STORAGE DEVICE
CORMIER, D. /WILLIAMS CORP./ STONE, S. E. DATE- DEC. 1969
MSC-10452
Fluid sampling device collects a sample from a low-pressure fluid system and stores it for an indefinite period, with little risk of contamination of either the sample or the
surrounding environment. The collector /a plastic bladder/ is separated from the sampler after a sample is collected.

06 COMPUTER PROGRAMS

B67-10169
STUDY OF DYNAMIC RESPONSE OF ELASTIC SPACE STATIONS
NARANGA, F. W. AM. AVIATION/ DATE- JUN. 1967
NPO-10124
Analytical procedure and the requisite computer programs compute the dynamic responses of two large elastic space stations. The linearized equations of motion are derived from lagranges equations. Then the normal modes of free vibration of the nonrotating space station are used to define the elastic degrees of freedom.

B67-10172
SPACE TRAJECTORIES PROGRAM FOR IBM 7090
NPO-10125
Space trajectories Program studies the motion of a space probe confined to the solar system and influenced by the nonspherical Earth and Moon, and the point masses defined by the Sun, Venus, Mars, and Jupiter. It is written in the FORTRAN assembly program language.

B67-10173
LINEAR CIRCUIT ANALYSIS PROGRAM FOR IBM 1620 MONITOR III, 1311/1445 DATA PROCESSING SYSTEM /CIRCS/
WIFFIELD, J. DATE- JUL. 1967
NPO-10131
CIRCS in modification of INSILP Circuit Analysis Program, for use on smaller systems. This data processing system retains the basic dc, transient analysis, and FORTRAN 2 formats. It can be used on the IBM 1620/1311 Monitor I Mod 5 system, and solves a linear network containing 15 nodes and 45 branches.

B67-10193
COMPUTER PROGRAM SIMULATES PHYSICAL SYSTEMS BY SOLVING THE SIMULTANEOUS DIFFERENTIAL EQUATIONS DESCRIPTION OF THE SYSTEM/ MARKOWITZ, R. J. DATE- JUN. 1967
NPO-10019
DIANA, a digital-analog simulation program for IBM 1620 2 computer, simulates physical systems by solving the simultaneous differential equations describing the systems. It expands and optimizes the input-output capabilities, permits additional flexibility in midstream program alternation, and minimizes the computational time.

B67-10217
A MODAL COMBINATION COMPUTER PROGRAM FOR DYNAMIC ANALYSIS OF STRUCTURES
BARNFORD, R. M. DATE- JUN. 1967
NPO-10129
Computer program determines the response of a composite linear structure to sinusoidal base motion of a restrained structure or sinusoidal forces of a free structure. This program is applied to problems of testing practices and closed-loop stability of autopilot controlled space vehicles. It is written for the IBM 7094 in FORTRAN 4 language.

B67-10222
SUBROUTINES GROUP AND DEAST SIMPLIFY OPERATION OF AUTOMATIC DIGITAL PLOTTER
NWC-10094
FORTRAN language subroutines enable the production of a tape for a 360-30 tape unit that controls the CALCOMP 566 Digital Incremental Plotter. This provides the plotter with instructions for graphically displaying data points, plotting proper labeling of axes, numbering, lettering, and tic marking.
06 COMPUTER PROGRAMS

N-PS-2298
Dimensionless multiopion systems compiler
computer program constructs and analyzes a
behavioral model of any arbitrary one, two, or
three dimensional lumped parameter representation
of a physical system. It automatically optimizes
the utilization of computer core space and is more
general and versatile than BETA.

B67-10279
COMPUTER PROGRAM FOR DETERMINATION OF
NATURAL FREQUENCIES OF CLOSED SPHERICAL
SANDWICH SHELLS
WILKINSON, J. P. D. /N. AM. AVIATION/ DATE- AUG.
1967
NDC-1286
Solutions for the axial symmetric action of an
elastic spherical sandwich shell have been
obtained from a theory of shells which includes
the effects of transverse shear deformation and
rotary inertia. Frequency equations and mode
shapes are derived for the full vibrations of a
closed spherical shell.

B67-10280
MASTER CONTROL DATA HANDLING PROGRAM USES
AUTOMATIC DATA INPUT
ALLISTON, W. DANIEL, J. /BOEING CO./ DATE- AUG.
1967
N-PS-2259
General purpose digital computer in program is
applicable for use with analysis programs that
require basic data and calculated parameters as
input. It is designed to automate input data
determination for flight control computer programs,
but it is general enough to permit application in
other areas.

B67-10281
COMPUTER PROGRAM PREDICTS THERMAL AND FLOW
TRANSIENTS EXPERIENCED IN A REACTOR LOSO-
OF-FLOW ACCIDENT
HALL, C. J. /GEN. DYNAMICS/ DATE- AUG. 1967
NDC-10054
Program analyzes the consequences of a
loss-of-flow accident in the primary cooling
system of a heterogeneous light-water moderated
and cooled nuclear reactor. It produces a
temperature matrix 36 x 47 /x,y/ which includes
fuel surface temperatures relative to the time
the pump power was lost.

B67-10287
COMPUTER PROGRAM PROVIDES LINEAR SAMPLES-
DATA ANALYSIS FOR HIGH ORDER SYSTEMS
DUNN, R. B. /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-12821
Computer program performs transformations in the
order S-to-W-to-Z so that analytic functions to
be completed in the W-plane. The method is based
on a direct transformation from the S-plane to
the W-plane. The W-plane poles and zeros are
transferred into Z-plane poles and zeros using the
bilinear transformation algorithm.

B67-10306
COMPUTER PROGRAM USES MONTE CARLO TECHNIQUES
FOR STATISTICAL SYSTEM PERFORMANCE ANALYSIS
WOHL, D. F. /N. AM. AVIATION/ DATE- AUG. 1967
N-PS-2239
Computer program with Monte Carlo sampling
methods determines the effect of a component
part of a unit upon the overall system
performance. It utilizes the full statistics of the
disturbances and misalignments of each
component to provide unbiased results through
simulated random sampling.

B67-10307
COMPUTER PROGRAM DETERMINES THERMAL
ENVIRONMENT AND TEMPERATURE HISTORY OF
LUNAR ORBITING SPACE VEHICLES
HEAD, R. H. MITCHELL, K. L. /BOEING CO./ DATE-
AUG. 1967
N-PS-12916
Program computes the thermal environment of a
spacecraft in a lunar orbit. The quantities
determined include the incident flux /colder and
lunar emitted radiation/, total radiation absorbed
by a surface, and the resulting surface
temperature as a function of time and orbital
position.

B67-10309
STUDY OF RANDOM PROCESS THEORY AIDS DIGITAL
DATA PROCESSING
RODHEE, G. W. /CORNELL AERON. LAB./ DATE- AUG.
1967
N-PS-1475
Study of techniques for all random process
theory, including stationary, nonstationary,
and Gaussian bivariate, aids digital data
processing. It presents material on digital
filtering, correlation function, optimal spectral
smoothing, deterministic data processing, and
nonstationary spectrum and correlation analyses.

B67-10310
COMPUTER PROGRAM FOR MASS OPTIMAL SOLUTIONS
OF SOME ENDPOINT TRAJECTORY PROBLEMS
BENNITT, A. C. ZIMMER, C. D. CHABSON, K. S.
/BOEING Co./ DATE- AUG. 1967
N-PS-12976
Optimization of trajectories for propellant
consumption is achieved by incorporating a coast
arc device into a three-dimensional fixed
end-point steepest ascent computer program. It
calculates a trajectory between any two points in
space defined by initial and final position
tectors, without restrictions on thrust or orbit
characteristics.

B67-10319
TRANSIENT ANALYSIS GENERATOR /TAG/ SIMULATES
BEHAVIOR OF LARGE CLASS OF ELECTRICAL
NETWORKS
THOMAS, W. J. DATE- SEP. 1967
NPO-10031
Transient analysis Generator program simulates
both transient and dc steady-state behavior of a
large class of electrical networks. It generates
a special analysis program for each circuit
specified in an easily understood and manipulated
programming language. A generator or
preprocessor and a simulation system make up the
TAG system.

B67-10323
COMPUTER PROGRAM UTILIZES FORTRAN 4
SUBROUTINES FOR CONTOUR PLOTTING
BLOCH, R. GABER, R. LAWSON, C. DATE- SEP. 1967
NPO-10127
Computer program constructs lists of xy-coordinate
pairs that define contour curves for an arbitrary
given function of two variables and transmits
those lists to plotting equipment to produce
contour plots. The principal subroutines,
CONTR, is independent of any specific system of
plotting subroutines and equipment.

B67-10327
MULTIPLE CORRELATION COMPUTER PROGRAM
DETERMINES RELATIONSHIPS BETWEEN SEVERAL
INDEPENDENT AND DEPENDENT VARIABLES
KASPAR, R. /N. AM. AVIATION/ NEWSBNO, J. E.
DATE- SEP. 1967
N-PS-13024
Relationships between independent and dependent
variables are determined by multiple correlation
computer program. This is applied to research
and experimental design and development of complex
hardware and components that require test
programs.

B67-10328
COMPUTER OPTIMIZATION PROGRAM FINDS VALUES
FOR SEVERAL INDEPENDENT VARIABLES THAT
MAXIMIZE A DEPENDENT VARIABLE
WALACH, E. J. /N. AM. AVIATION/ DATE- SEP. 1967
N-PS-13030
Computer program finds values of independent
variables which maximize the dependent variable.
This optimization program has been used on the
F-1 and J-2 engine programs to establish minimum
film coolant requirements.
Computer program provides elastic analysis of highly redundant structural configurations. Punched output of flexibility and stiffness matrices are obtained for use in a natural frequency analysis. Member reaction output in card or tape form is used in conjunction with other programs to perform stress analyses.

Computer program determines steady-state performance characteristics of active and passive linear circuits. The ac analysis program solves the basic circuit parameters. The compiled program solves these circuit parameters and in addition provides a more versatile program by allowing the user to perform mathematical and logical operations.

Computer program, an Iterative Scheme using a Direct Solution, obtains double precision accuracy using a single-precision coefficient matrix. ISUDS solves a system of equations written in matrix form as X equals B, where A is a square non-singular coefficient matrix, X is a vector, and B is a vector.

Computer program VARI-QUIR 3 provides Gauss-Seidel type of solution with inner and outer iterations for steady-state, multigroup, two-dimensional neutron diffusion equations. The program has no restrictions on any of the input parameters such as the number of groups, regions, or materials.

Computerized parts list system compiles and summarizes all pertinent and available information on complex new systems. The parts list system consists of three computer subroutines - list of parts, parts numerical sequence list, and specifications list.

Computer program generates average value data tapes.

Computer program uses Bernoulli formula and Newton-Raphson method to provide steady state fluid flow analysis of line pressure drop in a system with six outlets for each of two main storage tanks. Program flexibility arises in the ease with which changes in the fluid line geometry can be made.

Computer program analyzes generalized environmental control and life support systems.

Computer program generates magnetic output tape containing time and averaged data values of a specified number of major frames over a specified time interval. A decommutation system is used to acquire the raw data, which is then reformatted and averaged.

Computer program provides steady state analysis for liquid propellant propulsion systems.

Computer program analyzes fission products inventory for U-235.

Computer program calculates fission product inventories and source strengths associated with the operation of U-235 fueled nuclear power reactor. It utilizes a fission-product nuclear
library of 254 nuclides, and calculates the time dependent behavior of the fission product nuclides formed by fissioning of U-235.

B67-10456
COMPUTER MCAP-TOSS CALCULATES
STEADY-STATE FLUID DYNAMICS OF COOLANT IN PARALLEL CHANNELS AND TEMPERATURE DISTRIBUTION IN SURROUNDING HEAT-GENERATING SOLID
LEE, A. Y. /WESTINGHOUSE ASTRONUC. LAB./ DATE- NOV. 1967
NRC-10042
Computer program calculates the steady state fluid distribution, temperature rise, and pressure drop of a coolant, the material temperature distribution of a heat generating solid, and the heat flux distributions at the fluid-solid interfaces. It performs the necessary iterations automatically within the computer, in one machine run.

B67-10457
COMPUTER PROGRAM MCAP PROVIDES FOR STEADY STATE THERMAL AND FLOW ANALYSIS OF MULTIPLE PARALLEL CHANNELS IN HEAT GENERATING SOLID
Pierce, B. L. /WESTINGHOUSE ASTRONUC. LAB./ DATE- NOV. 1967
NRC-10043
Computer program /MCAP/ calculates the temperature distribution in a heat generating solid complicated by nonuniform power and flow distributions between multiple channels. It determines the channel diameters coefficients, the effects of tolerances, the pressure drop at a given flowrate, or the flowrate for a specific pressure drop.

B67-10476
COMPUTER PROGRAM CONDUCTS FACILITIES UTILIZATION AND OCCUPANCY SURVEY
NWO-10326
Computer program identifies the various uses of all facility rooms and provides information on the net area in each room as well as the number and classification of people occupying them. The program, which is easily updated, also provides a means to indicate unsatisfactory work areas.

B67-10478
FORTRAN IV PROGRAM FOR TWO-IMPULSE RENDEZVOUS ANALYSIS
Dailing, W. H., JE. BROTHERS, W. J. /LOCKHEED MISSILES AND SPACE CO./ DATE- DEC. 1967
NSP-13971
Program determines if rendezvous in near space is possible, and performs an analysis to determine the approximate required values of the magnitude and direction of two thrust applications of the upper stage of a rocket firing. The analysis is performed by using ordinary Keplerian mechanics.

B67-10480
NUMERICAL LEAST-SQUARE METHOD FOR RESOLVING COMPLEX PULSE HEIGHT SPECTRA
Schrandebek, L. /ELPAR/ THORRGA, J. I. DATE- DEC. 1967
GSPC-10182
Linear least-square method resolves complex pulse height spectra, allowing for calculation of relative intensity, of statistical variance based on counting statistics of the correlation between library components, and of the goodness-of-fit chi square. Some applications are the gamma-ray, X-ray, and charged-particle spectroscopy.

B67-10489
COMPUTER PROGRAM CALCULATES SONIC-BOOM PRESSURE SIGNATURES
Craibol, C. B. DATE- DEC. 1967
LANGLEY-10096
Computer program calculates sonic boom characteristics of airplane configurations for a range of flight conditions. One program provides the area distribution, and another program provides the equivalent area due to lift. Program outputs are the complete near field /far field/ pressure signature, including shock wave strengths and locations.

B67-10490
COMPUTER PROGRAM USES CHARACTERISTICS METHOD FOR FREE-JET INVESTIGATION
Craibol, C. B. DATE- DEC. 1967
LANGLEY-10117
Computer program calculates the free-jet boundary contours and other flow properties within the exhaust plume from highly expanded nozzles operating in near-vacuum conditions. The calculations are made by the method of characteristics which makes use of three-dimensional irrotational equations of flow.

B67-10492
COMPUTER PROGRAM REDUCES AND PROVIDES PROFILE PLOT OF SURFACE PLATE CALIBRATION DATA
Ford, E. W. /N. AM. AVIATION/ DATE- DEC. 1967
NSP-13866
Computer program which yields CRT displays will decrease the time and labor required to reduce and provide a profile plot of surface plate calibration data. The displays depict actual and resolved data points for each individually calibrated line.

B67-10493
ASSEMBLY PROCESSOR PROGRAM CONVERTS Symbolic programming language to machine language
Pelto, E. V. /N. AM. AVIATION/ DATE- DEC. 1967
NSP-13262
Assembly processor program converts symbolic programming language to machine language. This program translates symbolic codes into computer understandable instructions, assigns locations in storage for successive instructions, and computer locations from symbolic addresses.

B67-10498
COMPUTER PROGRAM PERFORMS AEROTHERMODYNAMIC FLIGHT TEST DATA CORRELATION
NRC-10075
Computer program plots flight test data stored on magnetic tape during the flight with comparative data from other tapes /design and post-flight predictions/. Information as to which measurements are on each tape, the order in which they appear, and the exact time span is supplied by the source of the data.

B67-10495
MULTIDIMENSIONAL REACTION KINETIC ABLATION PROGRAM /SEARAP/
Acton, B. /GE/ Bink, E. Collingswood, B. DATE- DEC. 1967
NSC-10079
Multidimensional reaction kinetics ablation program provides an improved capability for analyzing thermal performance of partially penetrated charring ablative heat shields. The capability was provided for determining transient temperature histories in an ablating three-dimensional shape consisting of up to five layers of material.

B67-10504
COMPUTER PROGRAMS FOR ANTENNA FEED SYSTEM
DESIGN AND ANALYSIS
LUDWIG, A. DATE- DEC. 1967
M-10-359
Fourteen computer programs have been developed for antenna feed system design and analysis. The programs cover a large spectrum of feed design problems, from primary feed pattern synthesis to the fairfield pattern of the main reflector, including analyses of structural distortions.

B67-10509
PROGRAM COMPUTES EQUILIBRIUM NORMAL SHOCK AND STAGNATION POINT SOLUTIONS FOR ARBITRARY GAS MIXTURES
CALLIS, L. E. KEMPER, J. T. DATE- DEC. 1967
LANGLEY-10090
Program computes solutions for flow parameters in arbitrary gas mixtures behind a normal and a reflected normal shock, for in-flight and shock-tube stagnation conditions. Equilibrium flow calculations are made by a free-energy minimization technique coupled with the steady-flow conservation equations and a modified Newton-Raphson iterative scheme.

B67-10510
PROBABLISTIC APPROACH TO LONG RANGE PLANNING OF SPACEWORTHY
LIJN, E. A. /TX. A AND M UNIV.- DATE- DEC. 1967
SSC-11524
Publication presents a total long range planning model for project oriented organizations. The total model consists of planning systems which originate at the project level and consolidate into an overall plan, and /2/ from a technical ceiling and allocate to the individual projects. Analysis of /1/ and /2/ is provided for management decision making.

B67-10511
LOGIC REALIZATION OF SIMPLE MAJORITY VOTING
ANGELSON, T. O. GOLDBERG, S. W. LUSBEAUGE, W. A. DATE- DEC. 1967
JPL-777
Redundant circuitry is added to computer network to eliminate incorrect output obtained due to a component failure, noise, or some other disturbance. This circuitry provides majority operation. Only NAND gates are employed, and the modules used are among the most popular microelectronic or integrated circuits presently in use.

B67-10520
COMPUTER PROGRAM PERFORMS RECTANGULAR FITTING STRESS ANALYSIS
BERBERAN, A. E. /BOEING CO.- DATE- DEC. 1967
M-PS-13010
Computer program simulates specific bulkhead fittings by subjecting the desired geometry configuration to a membrane force, an external force, an external moment, an external tank pressure, or any combination of the above. This program generates a general model of bulkhead fittings for the Saturn booster.

B67-10521
GENERAL FREQUENCY RESPONSE PROGRAM CALCULATES FREQUENCY RESPONSE OF SYSTEM, OPEN OR AT ANY SPECIFIED ELEMENT
FROCH, J. /BOEING CO.- DATE- DEC. 1967
M-PS-12817
The general frequency response program provides the frequency response of any linear feedback control system including the open loop control system. The system characteristic matrix, obtained from the Laplace transformations of the dynamic and control equations, is input to the program. A variety of outputs are available.

B67-10522
COMPUTERIZED SCHEDULE EFFECTIVENESS TECHNIQUE /SET/ DETERMINES PRESENT AND FUTURE SCHEDULE POSITION
BALLARD, D. /BOEING CO./ BIRDSONG, J. CALVA, B. DATE- DEC. 1967
M-PS-10012
Computerized scheduling system calculates an index of overall schedule-effectiveness. The schedule-effectiveness index is a measurement of actual overall performance against the existing schedule, and a series of schedule-effectiveness values indicates the trend of actual performance. This computer program is written in FORTRAN 4.

B67-10523
ANALYSIS OF DYNAMIC SYSTEMS WITH DAPAH
ABSALON, J. G. /N. AM. AVIATION/- DATE- DEC. 1967
M-PS-13999
Dynamic Analysis Program, FORTRAN 4 Level B /DAPAH/, developed from 27 subprograms, features liberal use of the subroutines, subprograms, and skeletonization to minimize programming effort in formulating models of new systems and components. It formulates mathematical models of complex mechanical, hydraulic, and hydraulic dynamic systems.

B67-10528
DYNA - AN ADVANCED PROGRAMMING SYSTEM FOR LARGE CLASSES OF DYNAMIC AND EQUIVALENT SYSTEMS
MC CORNECE, W. J. /BOEING CO./ DATE- NOV. 1967
M-PS-12084
DYNA /dynamic analyzer/ is an advanced programming system which performs automatically the computing of a problem, as well as a major portion of the programming and analysis. The system is divided into the response and frequency response of dynamic and equivalent systems.

B67-10530
PROGRAM COMPUTES ZERO LIFT WAVE DRAG OF ENTIRE AIRCRAFT
CHADDO, C. B. HARRIS, R. V., JR. DATE- DEC. 1967
LANGLEY-10079
Computer program computes zero lift wave drag of an entire aircraft including any combination of the wing, body, pods, fins, and canard. The program computes the total resistance and frequency response of the wing and the axial area distribution of the wing equivalent body.

B67-10531
COMPUTER PROGRAM PROVIDES IMPROVED LONGITUDINAL RESPONSE ANALYSIS FOR AXISYMMETRIC LAUNCH VEHICLES
SIEB, W. W. WILTON, W. C., JR. DATE- DEC. 1967
LANGLEY-10093
Computer program calculates axisymmetric launch vehicle steady-state response to axisymmetric sinusoidal loads. A finite element technique is utilized to construct the total load vehicle stiffness matrix and same matrix by subdividing the prototype structure into a set of axisymmetric shell components, fluid components, and spring-mass components.

B67-10536
M-SAP AND G-SAP NEUTRON AND GAMMA RAY ALBEDO MODEL SCATTER FIELD ANALYSIS PROGRAM
SAPVYVIA, J. H. /WESTINGHOUSE ASTRONUC. LAB./ STANSBERRY, L. D. DATE- DEC. 1967
NRC-10126
Computer program calculates neutron or gamma ray first order scattering from a plane or cylindrical surface to a detector point. The G-A code, G-SAP and M-SAP, constitute a multiple scatter albedo model shield solution.

B67-10537
SOC-DS COMPUTER CODE PROVIDES TOOL FOR DESIGN EVALUATION OF HOMOGENEOUS TWO-MATERIAL NUCLEAR SHIELD
DZENE, E. K. /WESTINGHOUSE ASTRONUC. LAB./ BICKS, L. G. DATE- DEC. 1967
NRC-10142
SOC-DS Code /Shield Optimization Code-Direc Search/, selects a nuclear shield material of optimum volume, weight, or cost to meet the requirements of a given radiation dose rate or energy transmission constraint. It is applicable to evaluating neutron and gamma ray shields for all nuclear reactors.
06 COMPUTER PROGRAMS

B67-10543
COMPUTER PROGRAM CALCULATES PRETHRUST WATERSHED INJECTION COOLING OF AXI-SYMMETRIC SUBSONIC DIFFUSER
DEE, J. /WESTINGHOUSE ASTRONUC. LAB. / DATE- JUN. 1969
WUC-10541
Digital computer program calculates the cooling effectiveness and flow characteristics resulting from the mixing of a cool liquid coolant/water/with a hot sonic or subsonic gas stream/hydrogen/. The output of the program provides pressure, temperature, velocity, density, composition, and Mach number profiles at any location in the mixing duct.

B67-10549
COMPUTER PROGRAM FOR OPTICAL SYSTEMS RAY TRACING
FERGUSON, T. J. / WEAVER CORP. / DATE- DEC. 1967
PFO-10037
Program traces rays of light through optical systems consisting of up to 65 different optical surfaces and computes the aberrations. For design purposes, paraxial tracings with astigmatism and third order tracings are provided.

B67-10566
COMPUTER PROGRAM ETC IMPROVES COMPUTATION OF ELASTIC TRANSFER MATRICES OF LEGENDRE POLYNOMIALS P0/ AND P1/
GIBSON, G. /WESLINGHOUSE ASTRONUC. LAB. / DATE- DEC. 1967
NUC-10078
Computer program improves computation of elastic transfer matrices of Legendre polynomials P0/ and P1/ rather than carrying out a double integration numerically. One of the integrations is accomplished analytically and the numerical integration need only be carried out over one variable.

B67-10568
GRAPHIC VISUALIZATION OF PROGRAM PERFORMANCE AIDS MANAGEMENT REVIEW
LIEBERMANN, Y. B. /BELL AEROSYSTEMS CO. / DATE- DEC. 1967
WUC-10084
Chart technique /PERT/ which displays the essential status elements of a PERT system in a vertical flow array, of high graphic quality, enables visual review by management of program performance. Since the display is versatile, it can accommodate any aspect of the program which the presenter wishes to accent.

B67-10562
EQUATION RELATES FLOW AT FREE JET TO FLOW DOWNSTREAM
FENNELL, J. R. /W. A. AVIATION/ DATE- DEC. 1967
M-PS-13769
Nonlinear equation relates the flowrate at an orifice to that at a station downstream from the orifice. This equation should aid in understanding combustion instabilities and should not be subject to the substantial errors of prior analytical methods.

B67-10625
PROPPELLANT TANK PRESSURIZATION ANALYSIS PROGRAM
EDELMAN, M. /W. A. AVIATION/ DATE- DEC. 1967
M-PS-1508
Computer program for the analysis of a single propellant tank pressurization system includes many pertinent physical phenomena previously ignored in other mathematical models. This program can be used for analysis, simulation, and design of propellant pressurization systems.

B67-10626
VERSATILE ANALOG PULSE HEIGHT COMPUTER PERFORMS REAL-TIME ARITHMETIC OPERATIONS
BRENNER, R. /STRAND, R. G. DATE- DEC. 1967
ARG-10052
Multipurpose analog pulse height computer performs real-time arithmetic operations on relatively fast pulses. This computer can be used for identification of charged particles, pulse shape discrimination, division of signals from position sensitive detectors, and other on-line data reduction techniques.

B67-10630
COMPUTER PROGRAM FOR VIDEO DATA PROCESSING SYSTEM /EPSS/ BILLINGSTON, Y. C. /NESHMAN, R. DATE- DEC. 1967
NFO-10042
Video data from spacecraft photographic mission telemetry is scanned to generate digital tape computer program which prints out intensity points, cleans noise and telemetry drop-out, enhances contrast, modifies the picture, and calculates contour lines. The output is converted into new photographic film.

B67-10631
DIGITAL COMPUTER PROGRAM PREDICTS EFFECTS OF LOCAL PRESSURE TRANSIENTS ON DEFORMATION AND STRESSES IN CYLINDRICAL DUCTS
BACHOOG, T. /BELL AEROSYSTEMS CO./ LOBENICKI, W. PADLOZ, J. REISMAN, H. DATE- DEC. 1967
M-PS-12058
Digital computer program determines the dynamic response of circular cylinders subjected to pressure transient forms commonly encountered in propulsion systems. The method can be readily used to obtain solutions for all possible combinations of admissible boundary conditions.

B67-10632
AUTOMATIC DESIGN OF OPTICAL SYSTEMS BY DIGITAL COMPUTER
CASAD, T. A. SCHMIDT, L. F. DATE- DEC. 1967
MFO-12025
Computer program uses geometrical optical techniques and a least squares optimization method employing computing equipment for the automatic design of optical systems. It evaluates changes in various optical parameters, provides comprehensive ray-tracing, and generally determines the acceptability of the optical system characteristics.

B67-10651
DEVELOPMENT OF RELIABILITY PREDICTION TECHNIQUE FOR SEMICONDUCTOR DIODES
FISHER, C. M. /HUGHES AIRCRAFT CO./ DATE- DEC. 1967
BRIEER, J. L. /ROCKET CO./ DATE- DEC. 1967
DATE- DEC. 1967
GSPC-10238
New fundamental technique of reliability prediction for semiconductor diodes based on realistic mathematical models can be applied to component failure rate prediction including mechanical degradation, electrical degradation, environmental stress factors, and electrical load stress factors.

B67-10658
X-Y PLOTTER ADAPTER DEVELOPED FOR SDS-930
COMPUTER
ROBERTSON, J. E. DATE- JAN. 1968
MFO-10220
Graphical Display Adapter provides a real time display for digital computerized experiments. This display uses a memory oscilloscope which records a single trace until erased. It is a small hardware unit which interfaces with the J-box feature of the SDS-930 computer to either an X-Y plotter or a memory oscilloscope.

B67-10665
COMPUTER PROGRAM CALCULATES GAMMA RAY SOURCE STRENGTHS OF MATERIALS EXPOSED TO NEUTRON FLUENCES
HEISE, F. C. /WESTINGHOUSE ASTRONUC. LAB./ RICKS, L. O. DATE- JAN. 1968
WUC-10143
Computer program contains an input library of nuclear data for 48 elements and their isotopes to determine the induced radioactivity for gamma emitters. Minimum input requires the irradiation history of the element, a four-energy-group neutron flux, specification of an alloy composition by elements, and selection of the output.

B67-10666
COMPUTER PROGRAM CALCULATES WING AERODYNAMIC
CHARACTERISTICS FOR FIXED WINGS WITH DIEREAL AND VARIABLE-SHEEP WINGS AT SUBSONIC SPEEDS
LANAR, J. R. MARGASON, R. J. DATE- DEC. 1967
LANGLEY-10191
Vortex lattice is used to describe the lifting surface of an arbitrary wing planform in steady potential subsonic compressible flow in computer programs which calculate aerodynamic characteristics. Estimates of flow field characteristics in the vicinity of a lifting wing can also be programmed.

B67-10678
COMPUTER PROGRAM /PI-GAS/ CALCULATES THE B67-10678
GIBSON, MODERATION ABD VARIABLE-SHEEP NUC-10141
MOP
B68-10005
MOP /Matrix Operation
LANGLEY-10191
COMPUTER PROGRAM CALCULATES AND PLOTS B68-10009
GORDON, GAS THERMODYNAMIC DATA
BALPERT, COMPUTER PROGRAM FOR CALCULATION OF IDEAL SOO,
ANALYSIS OF NUC-10301
B68-10025
DAVIS, D. A. GSNGW, D. G. /BOEING CC/ DATE- FEB. 1968
M-PS-14296
Computer program calculates and plots surface area and pore size distribution data for a circular flat plate of variable thickness.

B68-10009
COMPUTER PROGRAM PERFORMS FREQUENCY ANALYSIS OF NONUNIFORM TURBINE DISK
B68-10006
COMPUTER PROGRAM PERFORMS STIFFNESS MATRIX
SUBJECTED TO TEMPERATURE GRADIENTS

B68-10005
NOS-10069
NOS-10031
Computer program determines the natural frequencies of a turbine disk of variable thickness subjected to uniform rotation and radial temperature gradients by using Rayleigh-Sitz procedure. The program involves the potential and kinetic energy expressions for a circular flat plate of variable thickness.

B68-10025
COMPUTER PROGRAM FOR CALCULATION OF IDEAL GAS THERMODYNAMIC DATA
LEWIS-10254
Computer program calculates ideal gas thermodynamic properties for any species for which molecular constant data is available. Partial functions and derivatives from formulas based on statistical mechanics are provided by the program which is written in FORTRAN 4. 

B68-10033
COMPUTER PROGRAM FOR INTERPLANETARY CONIC TRAJECTORIES
DAVIS, D. A. GSNGW, D. G. /BOEING CC/ DATE- FEB. 1968
M-PS-14296
Computer program enables study of one-way transfers, single and double planet flybys, single and double planet stopovers, or mixed flyby and stopover trajectories. In each operation it first computes the heliocentric conic which connects the centers of the launch and target planets and requires a given trip time.

B68-10044
GENERAL COMPUTER PROGRAM FOR CALCULATION OF RADIATION FROM INHOMOGENEOUS, NONDISPERSE, NONISOTHERMAL ROCKET EXHAUST PLUMES
DASH, R. J. HUFFAKER, R. M. DATE- FEB. 1968
M-PS-14394
Computer program evaluates radiation from an axisymmetric gas body with water vapor, carbon dioxide, carbon monoxide, and solid carbon particles as radiating constituents, and hydrogen as a nonradiating constituent. The program provides a convenient method of evaluating a great many problems of radiation from rocket exhaust plumes.

B68-10045
CONCEPT FOR SIMPLIFIED SERIAL DIGITAL DECODER
GREEN, R. B. DATE- FEB. 1968
NFO-10150

B68-10050
SITE SURVEY FOR OPTIMUM LOCATION OF OPTICAL COMMUNICATION EXPERIMENTAL FACILITY
SPUR, INNOVATOR NOT GIVEN /SYLVANIA ELECTRON.
SISTERS-EAST/ DATE- MAR. 1968
M-PS-13155
Site survey was made to determine the optimum location for an Optical Communication Experimental Facility /OCF/ and to recommend several sites, graded according to preference. A site was desired which could perform two-way laser communication with a spacecraft and laser tracking with a minimum of interruption by weather effects.

B68-10055
THREAD CUTTING WITH 3-AXIS N/C MILLING MACHINE
LANGLEY-10017
A generalized macro written for the APT numerical control system, cuts threads in stock too big for conventional machines or for which conventional methods are unsuitable. TAPR computes the machine tool path necessary and the information is passed on to a post-processor which produces a control tape.

B68-10095
COMPUTER PROGRAM PERFORMS STIFFNESS MATRIX STRUCTURAL ANALYSIS
M-PS-10502
Computer program generates the stiffness matrix for a particular type of structure from geometrical data, and performs static and normal mode analyses. It requires the structure to be modeled as a stable framework of uniform, weightless members, and joints at which loads are applied and weights are lumped.

B68-10097
COMPUTER PROGRAM CALCULATES VELOCITIES AND STREAMLINES IN TURBOMACHINES
KATSANIS, S. DATE- MAY 1968
LEWIS-10252
Computer program calculates the velocity distribution and streamlines over widely separated blades of turbomachines. It gives the solutions of a two dimensional, nonviscous, compressible inviscid flow problem for a rotating or stationary circular cascade of blades on a blade-to-blade surface of revolution.

B68-10127
AUTOMATIC PLANNING CONCEPT - AN ANALYSIS OF
OPTIMUM SCHEDULING
REBEK, F. R. /TRUMBULL, P. /HONEYWELL, INC./ DATE- APR. 1968 M-PF-14198
Study considers resource costs, missions, and experiment results as linear functions, insofar as possible, in an effort to develop optimum scheduling by the use of linear programming. It involves a mathematical approach in which a number of constraints are considered operative.

B68-10137
COMPUTER PROGRAM CONDUCTS FACILITIES
UTILIZATION AND OCCUPANCY SURVEY
WFO-10451
Computer program identifies the uses of all facilities and provides information on the set area in each room as well as the number and classification of people occupying them. The system also provides a means to indicate unsatisfactory work areas and may be able to be updated each month.

B68-10139
COMPUTER PROGRAM AIDS DUAL REFLECTOR ANTENNA SYSTEM DESIGN
FINBREY, P. /GERRTSEN, R. /JARVIE, P. /INFORNATICS, INC./ DATE- APR. 1968 WFO-10501
Computer program aids in the design of maximum efficiency dual reflector antenna systems. It designs a shaped Cassegrainian antennas which has nearly 100 percent efficiency, and accepts input parameters specifying an existing conventional antenna and produces as output the modifications necessary to conform to a shaped design.

B68-10150
COMPUTER PROGRAMS FOR THERMODYNAMIC AND TRANSPORT PROPERTIES OF HYDROGEN
NALL, W. J. /MC CARTY, R. D. /ROBEE, H. R. /WAT.
SUB- OF STD. MAY 1968
WUC-10537
Computer program subroutines provide the thermodynamic and transport properties of hydrogen in tabular form. The programs provide 18 combinations of input and output variables. This program is written in FORTRAN 4 for use on the IBM 7044 or CDC 3600 computers.

B68-10158
COMPUTER PROGRAM DETERMINES EXACT TWO-SIDED TOLERANCE LIMITS FOR NORMAL DISTRIBUTIONS
FRIEDMAN, M. A. /WARD, S. R. /R. AM. ROCKWELL
CORP./ DATE- MAY 1968 M-PF-18045
Computer program determines by numerical integration the exact statistical two-sided tolerance limits, when the proportion between the limits is at least a specified number. The program is limited to situations in which the underlying probability distribution for the population sampled in the normal distribution with unknown mean and variance.

B68-10159
COMPUTER PROGRAM DETERMINES VIBRATION IN THREE-DIMENSIONAL SPACE OF HYDRAULIC LINES EXCITED BY FORCED DISPLACEMENTS
DOERGE, W. G. /CR. AB. AVIATION/ DATE- MAY 1968 M-PF-12225
Computer program determines the forced vibration in three dimensional space of a multiple degree of freedom beam type structural system. Provision is made for the longitudinal axis of the analytical model to change orientation at any point along its length. This program is used by industries in which structural designs dynamic analyses are performed.

B68-10164
DIGITAL FILTER SYNTHESIS COMPUTER PROGRAM
HOEFL, R. A. /RONG, R. B. /DATE- MAY 1968 ARC-10350
Digital filter synthesis computer program expresses any continuous function of a complex variable in approximate form as a computational algorithms or difference equation. Once the difference equation has been developed, digital filtering can be performed by the program on any input data list.

B68-10187
ELAS - A GENERAL PURPOSE COMPUTER PROGRAM FOR THE EQUILIBRUM PROBLEMS OF LINEAR STRUCTURES
KUYK, P. A. /OTTO, S. /DATE- JUN. 1968 NPO-10546
Digital computer program ELAS handles the equilibrium problems of linear structures of one, two, or three dimensional continua. ELAS generates the governing equations for the unknown deflections of the mesh points that define the stationary point of the total potential energy function associated with the given loading and unknown deflections.

B68-10193
DIGITAL FILTER SUPPRESSES EFFECTS OF NONSTATISTICAL NOISE BURSTS ON MULTICHANNEL SCALING DIGITAL AVERAGING SYSTEMS
GOODMAN, L. S. /SALTER, F. O. /DATE- JUN. 1968 ARG-9042
Digital filter suppresses the effects of nonstatistical noise bursts on data averaged over multichannel scales. Interposed between the sampled channels and the digital averaging system, it uses binary logic circuitry to compare the number of counts per channel with the average number of counts per channel.

B68-10208
JPKWIC - GENERAL KEY WORD INDEX AND SUBJECT INDEX REPORT GENERATOR
JPKWIC computer program in a general key word in context and subject index report generator specifically developed to help nonprogrammers and nontechnical personnel to use the computer to access files, libraries and mass documentation. This program is designed to produce a KWIC index, a subject index, an edit report, a summary report, and an exclusion list.

B68-10216
COMPUTER PROGRAM DETERMINES SYSTEM STABILITY /DIGIT/ LOMBARD, C. F. /SCALOGI, L. /DATE- JUN. 1968 LEWIS-10395
Computer program implements a stability criterion that can be applied directly to the natural solutions of systems of differential equations. The program accepts as input the time function of the system, a time to view the transient, and an acceptable amplitude boundary for any steady-state oscillations.

B68-10217
COMPUTER PROGRAM OFFERS NEW METHOD FOR CONSTRUCTING PERIODIC ORBITS IN NONLINEAR DYNAMICAL SYSTEMS
Computer program uses an iterative method to construct precisely periodic orbits which dynamically approximate solutions that converge to precise dynamical solutions in the limit of the sequence. The method used is a modification of the generalized Newton-Raphson algorithms used in analyzing the point boundary problems.

B68-10226
COMPUTER PROGRAMS ANALYZE BUCKLING OF SHELLS WITH EXPLOSION WITH VARIOUS WALL CONSTRUCTIONS, BOSOR
Computer program performs stability analyses for a wide class of shells without unduly restrictive approximations. The program uses numerical
integration, finite difference of finite element techniques to solve with reasonable accuracy any buckling problem for shells exhibiting orthotropic behavior.

B68-10227
SEAL /Subnetwork Enumeration and Listing/
ERC-10116
SEAL/Subnetwork Enumeration And Listing/computer program uses combinatorial techniques to generate all of the nonredundant subnetwork configurations derivable from an asymmetrical network or device. This is accomplished by a systematic shorting and opening of accessible terminals to obtain the desired allowable configurations.

B68-10232
HICOV - MOSTON-PABSON CALCULUS OF VARIATION WITH AUTOMATIC TRANSVERSALITIES
HEINTSCHEL, T. J. /SE/ DATE- JUL. 1968
M-FS-14616
Computer program generates trajectories that are optimum with respect to payload placed in an earth orbit. It uses a subroutine package which produces the terminal and transversality conditions and their partial derivatives. This program is written in FORTRAN 4 and FORTRAN for the IBM 7094 computer.

B68-10287
DEVELOPMENT OF ELECTRONIC DATA PROCESSING SYSTEMS/SEGMENTED DATA MANAGEMENT SYSTEM
SCOTT, J. E. NAudpLTON, T. H. /BOEING Co./ DATE- AUG. 1968
M-FS-14715
To tailor the existing Unified Flight Analysis System to manage data rather than technical data, a pilot model could be produced in breadboard form, using electronic data processing, in a matter of a few months at very moderate cost. Such a system lends itself to continuous refinement.

B68-10298
LINEAR SYSTEMS OF EQUATIONS SOLVED USING MATHEMATICAL ALGORITHMS
BAREISS, E. H. DATE- AUG. 1968 REAR- SEE ALSO B68-7213
B68-10146
New mathematical algorithms solve linear systems of equations, AX equals B, and preserves the integer properties of the coefficients. The algorithms presented can also be used for the efficient evaluation of determinate and their leading minors.

B68-10296
COMPUTER GRAPHICS DATA CONDITIONING
HAGENAG, R. E. MC MILLEN, G. C. /BOEING Co./ DATE- AUG. 1968
M-FS-16995
Graphics data conditioning program expedites engineering analysis of flight data and ensures timely correction of measurement errors. By adding interactive computer graphic displays to existing data conditioning programs, computational results are immediately visible, enabling on-line intervention and control of computer processing.

B68-10335
COMPUTER PROGRAM ANALYZES AND DESIGNS SUPERSONIC WING-MOUNT COMBINATIONS
WOODWARD, F. A. /BOEING Co./ DATE- SEP. 1968
M-ABC-10141
Computer program formulates geometric description of the wing body configuration, optimizes wing, camber shape, determines wing shape for a given pressure distribution, and calculates pressures, forces and moments on a given configuration. The program consists of geometry definition, transformation, and paneling, and aerodynamics, and flow visualization.

B68-10354
FORTRAN OPTICAL LENS DESIGN PROGRAM
NPO-10603
Computer program uses the principles of geometrical optics to design optical systems containing up to 100 planes, conic or polynomial aspheric surfaces, 7 object points, and 200 rays. This program can be used for the autodesign of optical systems or for the evaluation of existing optical systems.

B68-10356
ANALYSIS OF AERIAL SOLITONSING PROGRAMS
ARNING, I. H. CAI. DATE- SEP. 1968 B68-7274 AND Nasa-CR-7275
HAGENAG, R. E. DATE- AUG. 1968 LEWIS-10399
Computer program is used for analysis and design of gas turbine combustors. The program analyzes fluid flow, combustion, and heat transfer in annular and rectangular combustors with diffusers, making use of currently available analytical methods and correlations.

B68-10361
REAL FLUID PROPERTIES OF NORMAL AND PARAMETROGEN
GOLDBRUG, E. M. HAFERD, A. M. DATE- SEP. 1968 LEWIS-10658
Computer program calculates the real fluid properties of normal or parahydrogen using a library of single function calls without initial estimates, accurate transport and thermodynamic properties of molecular hydrogen are needed for advanced propulsion systems.

B68-10374
AXIESTRUCTIC TWO-PHASE PERFECT GAS PERFORMANCE PROGRAM
KLIEGEL, J. E. NICKERSON, G. R. /TRW SYSTEMS/ DATE- OCT. 1968 LEWIS-10376, AND B68-10377
MSC-11774
Computer program calculates the inviscid axiymetrical nozzle expansion of propellant systems having both gaseous and condensed exhaust products. The program uses velocity and thermal lag and will perform calculations for contoured and conical nozzles.

B68-10375
ONE-DIMENSIONAL REACTING GAS NONEQUILIBRIUM PERFORMANCE PROGRAM
KLIEGEL, J. E. NICKERSON, G. R. /TRW SYSTEMS/ DATE- OCT. 1968 LEWIS-10376, AND B68-10377
MSC-11777
Computer program calculates the inviscid one-dimensional equilibrium, frozen, and nonequilibrium nozzle expansion of gaseous propellant exhaust mixtures containing the elements - carbon, hydrogen, oxygen, nitrogen, chlorine and fluorine. This program performs calculations for conical nozzles only.

B68-10376
ONE-DIMENSIONAL TWO-PHASE REACTING GAS NONEQUILIBRIUM PERFORMANCE PROGRAM
KLIEGEL, J. E. NICKERSON, G. R. /TRW SYSTEMS/ DATE- OCT. 1968 LEWIS-10376, AND B68-10377
MSC-11780
Computer program calculates the inviscid one-dimensional equilibrium, frozen, and nonequilibrium nozzle expansion of propellant exhaust mixtures containing carbon, hydrogen, oxygen, nitrogen, chlorine, aluminum, beryllium, boron or lithium. This program performs calculations for conical nozzles only.

B68-10377
AXIESTRUCTIC REACTING GAS NONEQUILIBRIUM PERFORMANCE PROGRAM
MSC-11781
Computer program calculates the inviscid one-dimensional equilibrium, frozen, and nonequilibrium nozzle expansion of propellant
exhaust mixtures containing these six elements - carbon, hydrogen, oxygen, nitrogen, fluorine, and chlorine plus either aluminum, beryllium, boron or lithium. This program will perform calculations for contoured and conical nozzles.

B68-10403
INTERNAL VELOCITY FACTORS
CANCART, K. H. FRANK, A. J. RASSAGLIA, J. L.
/PER. AM. ROCKWELL CORP./ DATE- NOV. 1968
M-PS-15002
Computer program analyzes the entrice and planetary trajectories of space vehicles. It obtains the equivalence of altitude and flight path angle, respectively, to acceleration load factor with respect to velocity for a given inertial velocity.

B68-10405
ANALYSIS OF FILAMENT REINFORCED METAL-STEEL PRESSURE VESSELS
LANSER, R. E. MORRIS, E. E. /EROJET GEN. CORP./
DATE- NOV. 1968
M-PS-15002
Computer program analyzes design requirements and computes designs for metal-lined filament-wound pressure vessels with either geodesic /helical/ or in-plane filament winding patterns on the cylindrical portion and over the ends, reinforced by circumferential winding on the cylindrical portion.

B68-10410
DSN SEVEN DAY/TWELVE WEEK SCHEDULE PROGRAM
HOLMAN, R. E. DATE- DEC. 1968
M-PS-10752
Deep Space Network scheduling program allocates resources based on the users requirements. The system reviews and allocates the requests for equipament and resources. Depending upon the program input either the seven day or the twelve week schedule is generated.

B68-10416
CIRCUS-A DIGITAL COMPUTER PROGRAM FOR TRANSIENT ANALYSIS OF ELECTRONIC CIRCUITS
BROOKS, W. T. STEINBERG, L. L. /BOEING CO./
DATE- DEC. 1968
M-PS-15002
Computer program simulates the time domain response of an electronic circuit to an arbitrary forcing function. CIRCUS uses a charge-control parameter model to represent each semiconductor device. Given the primary photocurrent, the transient behavior of a circuit in a radiation environment is determined.

B68-10421
COMPUTER PROGRAM FOR MACHINE DESIGN OF CASSEGRAIN FEED SYSTEMS
POTTER, P. D. DATE- NOV. 1968
M-PS-15002
Program designs the feed system geometry and the subreflector surface, with the main reflector configuration and frequency of operation as input data. Although the feedback is not designed, its required gain, beamwidth, and approximate radiation pattern are specified.

B68-10422
GENERALIZED NEWTON-RAPHSON TRAJECTORY OPTIMIZATION-GENERATOR 1
COPE, D. D. ESSENDGE, C. D. HANFI, L. M.
/BOEING CO./ DATE- NOV. 1968
M-PS-15002
Computer program constructs a sequence of optimal solution to dynamically-approximate linear equations. Specification of the subset and type of subspace in the optimal solution allows simultaneous satisfaction of all switching criteria.

B68-10423
SYMBOLIC REDUCTION OF BLOCK DIAGRAMS USING FORMAC
LUHNING, C. F. SWIGERT, P. DATE- NOV. 1968
L-E-10409
Two computer programs - one written in FORMAC to generate the desired symbolic expressions, the other in FORTRAN 4. Numerically evaluate the expressions are announced. The FORTRAN program accepts the symbolic punched output from the FORMAC program in either expanded or expanded form. It numerically evaluates the expressions.

B68-10435
GEOMETRIC-OR COMBINING PATHS AND LOGS OF ELECTRICAL NETWORKS
ALAN, A. PRITIKER, B. /ARIZONA STATE UNIV./
DATE- DEC. 1968
M-PS-10206
Program takes a network with multi-parameter branches and reduces it to a network having a single branch connecting source nodes to sink nodes. The program calculates probability, expected time, and variance in the time to go from each source node to each sink node of the GERT network.

B68-10445
ENVIRONMENTAL TEST PLANNING, SELECTION AND STANDARDIZATION AIDS AVAILABLE
COPELAND, R. S. FOLLY, J. T. DATE- DEC. 1968
S-W-10028
Requirements for instrumentation, equipment, and methods to be used in conducting environmental tests on components intended for use by a wide variety of technical personnel of different educational backgrounds, experience, and interests is announced.

B68-10446
MODIFIED MULTICHIP MEAN AMBER COMPUTER PROGRAM
LARAB, J. E. DATE- DEC. 1968
LANGLEY-10376
Computer program which determines the mean amber surface required to support a given set of loadings on a composite wing in subsonic compressible flow has been developed.

B68-10447
PLUME RADIATION PROGRAM
DE SOTO, S. VOY. C. A. /PER. AM. ROCKWELL CORP./
DATE- DEC. 1968
M-PS-15002
Computer program determines the radiant flux to the base region of a real gas system with an axisymmetric geometry and any axisymmetric property distribution.

B68-10448
PERFORMANCE ANALYSIS OF ELECTRICAL CIRCUITS /PAGE/
JOHNSON, K. L. STEINBERG, L. L. /BOEING CO./
DATE- DEC. 1968
M-PS-15001
Automated statistical and worst case computer program has been designed to perform dc and ac steady circuit analyses. The program determines the worst case circuit performance by solving circuit equations.

B68-10449
SINGLE DEGREE OF FREEDOM ANTENNA POINTING PROGRAM /ANTENA/
FLEISHMANN, R. G. DATE- NOV. 1968
B6-10756
Computer program optimizes the accuracy of pointing a radio-frequency antenna at a target whose position is time varying but known with respect to a certain reference frame.

B68-10450
COMPUTER PROGRAM TRACK PERFORMS TRANSIENT AND/OR STEADY STATE THERMAL ANALYSIS WITH COUPLED FLUID FLOW AND HEAT CONDUCTION
LEE, A. Y. WOODS, M. D. WOODS, E. D.
/WESTINGHOUSE ASTROEWE./ DATE- NOV. 1968
M-PS-10419
Computer program called TRACK was developed by combining a transient fluid flow computer code and the existing modified TOS heat conduction code to perform the computation.

B68-10451
A REQUEST-ORIENTED INFORMATION SELECTION PROGRAM

222
B69-10031
THE COMPATIBLE CONVERSION SYSTEM
HOFFMAN, F. KETHE, J. RANDY, J. MC VAY, L.
WINNINGCOFF, K. TEBRING, E. /BOEING CO./ DATE- FEB. 1969
M-FS-15010
Compatible conversion system centralizes the
solution of general problems arising from the use of
direct access mass storage. It also provides
a simple stable interface for the conversion of
production programs to process on third generation
computer system.

B69-10034
COMPUTER PROGRAM ANALYZES WHEEL CRITICAL
SPRINGS AND BEARING LOADS FOR SHAFTS COUPLED
BY WORMWHEEL SPRINGS TO MACHINERY HOUSING
SFEVRUD, L. K. /AEROSAT GEN. CORP./ DATE- FEB. 1969
NUC-10308
Computerized method of analysis predicts bearing
loads, shaft deflections, and critical speeds for
shafts coupled by rolling contact bearings to the
machine housing. The bearing nonlinearities,
casing as well as rotor dynamics, and
rotor-imbalance forcing functions are all included
in the system dynamics analysis.

B69-10035
GENERAL SERIES SOLUTION TECHNIQUE FOR
BENDING OF TANGENT LATERALLY LOADED
FLAT PLATES
SWANSON, J. A. /WESTINGHOUSE ASTRONUC. LAB./
DATE- FEB. 1969
NUC-10170
Computer program calculates the stresses and
lateral deflections to a uniform thickness flat
plate with a uniform pressure load. The plate to
be analyzed may have several different boundary
conditions. The program in written in FORTRAN 4
for use on the CDC 6600 computer.

B69-10036
COMPUTER PROGRAM CALCULATES THE EFFECTIVE
TEMPERATURE FOR A CRYSTALLINE SOLID /DHTS/
JOHNSON, A. S. SOWDEN, R. M. /WESTINGHOUSE
ASTRONUC. LAB./ DATE- FEB. 1969
NUC-10161
Computer program computes and prints out both the
Debye and resulting effective temperatures for
each Debye model-dependent average energy per
vibrational mode, Debye-Waller factor, and
specific heat. The program calculates by the
trapezoidal rule and then Simpson’s rule.

B69-10038
MONTE CARLO DIRECT VIEW FACTOR AND GENERALIZED
RADIATIVE HEAT TRANSFER PROGRAMS
MC WILLIAMS, J. L. SCICE, J. H. /BOEING CO./
DATE- FEB. 1969
M-FS-15051
Computer programs find the direct view factor from
one surface segment to another using the monte
carlo technique, and the radioactive-transfer
coefficients between surface segments. An
advantage of the programs is the great generality
of problems treatable and rapidity of solution
from problem conception to receipt of results.

B69-10039
SPAN C - TERMINAL STERILIZATION PROCESS
ANALYSIS PROGRAM
DATE- FEB. 1965 REAK- SEE ALSO B69-10104
R69-10005
Computer program, SPAN-C, measures the dry heat
temperature sterilization process applied to a
planetary capsule and calculates the time required
for heat application under steady state conditions,
and cooling. The program is based on the logarithmic
survival of microorganisms. Temperature profiles
must be input on cards.

B69-10040
RATIO MATCHING OF HALF-BRIDGE WELDABLE
STRAIN GAGES, COMPUTER PROGRAM
ANDERSON, K. F. BROWN, G. L. DATE- FEB. 1969
FNC-10032
Computer program reduces the unbalance of weldable
half-bridge strain gage installations. The
program calculates the two resistance ratios of each half-bridge gage, outputting a table of gages ranked according to resistance ratio. The tabulation interval is a convenient record of gage characteristics.

B69-10041
WEIGHT CONTROL SYSTEM
BERMAN, A. JR. /BOEING CO. /DATE- FEB. 1969
M-FS-15028
Weight Control System, a set of linked computer programs which provides weight and balance reports from magnetic tape files, provides weight control and reporting on launch vehicle programs. With minor forest modifications the program is applicable to aerospace, marine, automotive and other land transportation industries.

B69-10103
APTRA ON-SITE TRACKING PREDICTION PROGRAM
BERMAN, A. L. /LEPPA, F. B. /DATE- APR. 1969
NFO-10836
Computer program, APTRA, provides deep space Network tracking stations with the capability of generating spacecraft predictions with on-site computers. The program is comprised of two major sections - the main prediction portion and a trajectory subroutine which spans the desired period of time with spacecraft ephemeris data written on magnetic tapes.

B69-10104
SPAN-TERMINAL STERILIZATION PROCESS ANALYSIS PROGRAM
DATE- APR. 1969 SEE ALSO B69-10039
NFO-10804
Computer program, SPAN, measures the dry heat thermal sterilization process applied to a planetary capsule and calculates the time required for heat application, steady state conditions, and cooling. The program is based on the logarithmic survival of micro-organisms. Temperature profiles must be input on tape.

B69-10105
MIDCOURSE MANEUVER OPERATIONS PROGRAM
GORDON, H. J. /HAMBURG, H. L. /MITCHELL, R. T.
PASS, D. /ROYER, D. B. /DATE- APR. 1969
NFO-10735
Midcourse Maneuver Operations Program /MOP/ computes the required velocity change to correct a spacecraft trajectory. The program establishes the existence of maneuvers which satisfy spacecraft constraints, explores alternate trajectories in the event that some out-of-tolerance condition forces a change in plans, and codes the maneuvers into commands.

B69-10106
LABCON-LABORATORY JOB CONTROL PROGRAM
BEANS, L. T. /N. ROCHWELL CORP. /DATE- APR. 1969
M-FS-10141
Computer program LABCON controls the budget system in a component test laboratory whose workload is made up from many individual budget allocations. A common denominator is applied to an incoming job, to which all effort is charged and accounted for.

B69-10111
GEOMETRY AND DESIGN POINT PERFORMANCE OF AXIAL FLOW TURBINES
LWTO-10471
Computer program determines the alternative geometries and associated design point performance of axial-flow turbines capable of satisfying specified design requirements. The program solves the flow field within the turbine without making the simplifying assumptions that result in restrictive design.

B69-10132
/MAGNIFY/ PROGRAM FOR CALCULATING VELOCITIES IN MAGNIFIED REGION OF TURBOMACHINES
KATZSINS, T. /MC NALLY, W. /DATE- MAY 1969
LWTS-10789
Computer program, MAGNIFY, calculates the velocity distribution through the passage between and over blade surfaces of blade rows for turbines and compressors. Using the input of other programs, MAGNIFY obtains velocities on smaller than normal finite difference mesh in any part of the blade-to-blade passage.

B69-10134
MASS SPECTROGRAPH ANALYSIS
SHORE, J. P. /DATE- MAY 1969
SBC-13239
Computer program provides a means of rapid data reduction of mass spectograph data. The methods used are suited to mechanization on a digital computer since they consist of the systematic search of a large amount of tabular data and the unknown.

B69-10139
V ICAV-DIGITAL IMAGE PROCESSING SYSTEM
BILLINGSLEY, F. /BRESLIER, S. /FRIEDEN, B.
MOORE, G. /HANF, R. /KIMPELSCHE, T.
SIEBER, S. /DATE- JUN. 1969
NFO-10770
Computer program corrects various photometric, geometric and frequency response distortions in pictures. The program corrects pictures to a number of elements, with each element's optical density quantized to a numerical value. The translated picture is recorded on magnetic tape in digital form for subsequent processing and enhancement by computer.

B69-10146
BELL NOZZLE KERNEL ANALYSIS PROGRAM
ELLIOT, J. J. /STROMBER, R. B. /ROCKETDYNE /DATE- MAY 1969
M-FS-10456
Bell Nozzle Kernel Analysis Program computes and analyzes the supersonic flowfield in the kernel, or initial expansion region, of a bell or conical nozzle. It analyzes both plane and axisymmetric geometries for specified gas properties, nozzle throat geometry and input line.

B69-10148
MINIATURIZATION OF MAGNETIC LOGIC CIRCUITRY
BAEA, P. /AMPEX CORP. /DATE- MAY 1969
LABCON-10037
Magnetic logic circuit design features two ferrite materials, with different formulation and magnetic characteristics, which are bonded into a continuous structure by preparing the materials as a slurry and using the doctor blade method to form flexible ferrite sheets. After firing, the sintering process was continuous across the bond.

B69-10157
PERFORMANCE STATISTICS OF THE FORTRAN 4 SUBROUTINE LIBRARY /ROCKETDYNE /
CLARK, R. A. /CODY, W. J. /BELLSTROM, K. E.
THIELEKER, E. A. /DATE- MAY 1969 /REAN SEE ALSO
M-FS-7321
Test procedures and results for accuracy and timing of the basic IBM 360/50 FORTRAN 4 subroutine library are reported. The testing was undertaken to verify performance capability and as a prelude to providing some replacement routines of improved performance.

B69-10158
SYNTHESIS OF CALCULATIONAL METHODS FOR DESIGN AND ANALYSIS OF RADIATION SHIELDS FOR NUCLEAR ROCKET SYSTEMS
CAPQ, R. A. /WESTINGHOUSE ASTRONOMICAL DISLOY
JORDAN, E. A. /SOLTESZ, E. G. /WOODSIDE, E. C.
LANE, A. /DATE- SEP. 1969
M-FS-10447
Eight computer programs make up a nine volume synthesis containing two design methods for nuclear rocket radiation shields. The first design method is appropriate for parametric and preliminary studies, while the second accomplishes the verification of a final nuclear rocket reactor design.
INVESTIGATION OF SPACECRAFT COATINGS

SPON-INGHAM NOT GIVEN /BATTLEHE ING. INST./ DATE- JUN. 1969

A-FS-20488

Literature review provides compilation of properties of coating materials used for external application on space vehicles. Attention is given to absorption-exittance data and experimental spectral reference curves.

INVESTIGATION OF SPACECRAFT COATINGS

B69-10155

COMPUTER GRADING OF EXAMINATIONS

FRIBERG, H. A. DATE- JUN. 1969

ARG-10269

A method, using IBM cards and computer processing, automates examination grading and recording and permits use of computational programs. The student generates his own answers, and the instructor has much greater freedom in writing questions than is possible with multiple choice examinations.

B69-10169

ENCODE/DECODE FACILITY FOR FORTRAN 4

COHN, C. E. DATE- JUN. 1969

A method, using IBM cards and computer processing, automates examination grading and recording and permits use of computational programs. The student generates his own answers, and the instructor has much greater freedom in writing questions than is possible with multiple choice examinations.

B69-10171

ADVANCED MISSION ANALYSIS PROGRAMS

BJORKHAN, G. DATE- JUN. 1969

FORTRAN LIBRARY FOR SPACECRAFT COATINGS

A method, using IBM cards and computer processing, automates examination grading and recording and permits use of computational programs. The student generates his own answers, and the instructor has much greater freedom in writing questions than is possible with multiple choice examinations.

B69-10176

FORTRAN PROGRAMS FOR AXIAL FLOW COMPRESSION DESIGN

CABNEY, R. E. DATE- JUN. 1969

LEWIS-10765

Four computer programs examine effects of design parameters and indicate areas for research of multistage axial flow compressors. The programs provide information on velocity diagrams and stage-by-stage performance calculation, radial equilibrium of flow, radial distribution of total pressure, and off-design performance calculation.

B69-10175

SHELL DESIGN COMPUTER PROGRAM

GREENBACH, G. A. /TWI INC./ DATE- JUN. 1969

A computer program determines the useful strength of a thin-walled shell once it has been wrinkled. It can be used as an analytical tool by designers to determine how much wrinkling or deformation a shell can withstand when subjected to axial compression and bending loads.

B69-10181

INVESTIGATION OF SPACECRAFT COATINGS

SPON-INGHAM NOT GIVEN /BATTLEHE ING. INST./ DATE- JUN. 1969

A-FS-20488

Finite-element computer program solves for nodal point displacements in an axisymmetric solid. The options in the program include plane stress analysis, axisymmetric solids analysis, nonlinear plasticity analysis, and equivalent stress and strain.

B69-10238

FINITE ELEMENT ANALYSIS OF COMPRESSIBLE SOLIDS WITH NONLINEAR MATERIAL PROPERTIES

WILSON, E. L. /THEOJET-GENERAL CORP./ DATE- JUL. 1969

NUC-10342

Computer program predicts the spectra resulting from electronic transitions of diatomic molecules and atoms in local thermodynamic equilibrium. The program produces a spectrum by accounting for the contribution of each rotational and atomic line considered.

B69-10233

THERMAL NETWORK ANALYZER PROGRAM

SARAKURA, B. D. /THEOJET-GENERAL CORP./ DATE- JUL. 1969

NUC-10540

Computer program solves transient or steady-state heat flow problems through the concept of lumped parameters expressed as the electrical analog of the heat transfer problem using finite differences techniques.

B69-10235

TIME-SHARED CATHODE RAY TUBE

HERNDON, E. S. /BITTE CORP./ DATE- JUL. 1969

MSC-12238

Time-shared cathode ray tube provides high quality display at low cost display stations which utilize television monitors. It updates a cluster of graphic displays from a computer and is useful in systems not equipped for graphics time-sharing.

B69-10267

COMPUTER PROGRAM FOR OFF-DESIGN PERFORMANCE OF RADIAL INFLOW TURBINES

PUTZ, S. M. JR. DATE- AUG. 1969

LEWIS-10764

Computer program estimates off-design performance without making actual tests and design point performance. Turbine flow areas, diameters, and blade angles are required input information.

B69-10344

COMPUTER PROGRAM, USING NUMERICAL INTEGRATION AND FINITE DIFFERENCE TECHNIQUES, SOLVES ALMOST ANY
buckling problem for shells exhibiting orthotropic behavior. Stability analyses can be performed with reasonable accuracy and without unduly restrictive approximations.

**B69-10334**

**ON THE BOUND OF FIRST EXCERSION PROBABILITY**

YANG, J. N. DATE- SEP. 1969

B69-11358

Method has been developed to improve the lower bound of the first excursion probability that can apply to the problem with either constant or time-dependent barriers. The method requires knowledge of the joint density function of the random process at two arbitrary instants.

**B69-10337**

**ANALYSIS OF SPACE VEHICLE STRUCTURES USING THE TRANSFER-FUNCTION CONCEPT**

BERGER, L. /CALIF. INST. OF TECHNOL./ THURSTON, R. R. DATE- SEP. 1969

B50-11642

Analysis of large complex systems is accomplished by dividing it into suitable subsystems and determining the individual dynamical and vibrational responses. Frequency transfer functions then determine the vibrational response of the whole system.

**B69-10368**

**COMPUTER SIMULATION OF HIGH-FREQUENCY COMBUSTION INSTABILITY AND ITS SUPPRESSION**

BRENNER, R. L. /BETTIS AND WHITNEY AIRCRAFT/ DATE- SEP. 1969

BQ-10391

Program for simulation of gas motion illustrates the effects of some of the variables on the combustion chambers of liquid propellant rocket engines. The program is based on numerically integrating the laws of inviscid fluid dynamics by two-step Lex-Wendroff technique.

**B69-10370**

**LX LOOKANGLE PROGRAM**

BACE, W. E. /LOCHS/ ELECTRON. CO./ DATE- SEP. 1969

B5E-13179

Program computes the spacecraft look angles and the slant range, which define a spherical coordinate system located in the spacecraft body. The program is designed to reduce data from the Lunar Module missions and to output desired information.

**B69-10391**

**SONIC BOOM PROPAGATION IN STRATIFIED ATMOSPHERE**

LANGLEY-10480

Comprehensive analysis and algorithms, realized in a computer program, provides realistic calculations for sonic boom signatures in the atmosphere. Algorithms include maneuvering aircraft in a sonic boom pressure calculation, a ray-trace calculation, and results in the form of complete signatures.

**B69-10394**

**VISUAL TASK ANALYSIS /VISTA/**

BILY, T. /BOEING CO./ KELLY, A. MERRITT, R., JR. DATE- SEP. 1969

B5E-14716

Computer system VISTA, automatically plots selective PERT networks in order to develop accurate, standardized scheduling documentation as an essential element to project planning. This automation of plotting networks generates standardized networks due to a priority scheme adopted for calculating paths between events.

**B69-10409**

**EXACT MINIMAL-STATE SYSTEM RELIABILITY ANALYSIS**

BILY, R. O. /M. N. ROCKWELL CORP./ DATE- SEP. 1969

B5E-16551

System reliability equation, an exact function of component reliabilities, for a system with a finite number of points is derived from the minimal states which are found by logical analysis of the configuration. The numerical value is obtained by substituting the component reliabilities or unreliabilities.
coefficients for an odd number of equally spaced data points. The adjusting technique derivation is for a ninth order polynomial. It reduces computer time for smoothing functions.

B69-10566
SYSTEM FOR COMPUTING OPERATIONAL PROBABILITY EQUATIONS
BYAN, K. E. /NR. AM. ROCKWELL CORP./ DATE- OCT. 1965
M-FS-16410
SCPE system computes an expression relating the probability of system success to the probabilities of success of its components. It is especially designed for complex system reliability studies.

B69-10574
SPACECRAFT THERMAL RADIATION ENVIRONMENT
COMPUTER PROGRAM
PAOLETTI, C. J. /BOEING CO./ SCATES, J. B. DATE- OCT. 1969
M-FS-15054
Computer program computes the total thermal radiation flux on each of a set of exposed surface elements of a spacecraft in the vicinity of a celestial body. The incident flux consists of solar, both direct and planetary-reflected, and planetary-emitted infrared radiation as functions of time.

B69-10608
AUTOMATIC COMPUTATION OF DATA-SET DEFINITIONS
REYNOLDS, J. C. DATE- DEC. 1969
ARG-10475
Mathematical method for the construction of a computer program data set description from a computer program contains detailed declarative information. Cartesian products and disjoint-union operators are used to yield a series of recursive group equations.

B69-10656
COGENT PROGRAMMING MANUAL
REYNOLDS, J. C. DATE- NOV. 1969
ARG-10463
COGENT/COmpiler and GENeralized Translator/ programming system is a compiler whose input language enables a description of symbolic and linguistic manipulation algorithms. Primarily for use as a compiler-compiler, it is also applicable to algebraic manipulation, mechanical theorem proving, and heuristic programming.

B69-10669
HIGH PRESSURE REAL GAS EFFECTS FOR HELIUM AND NITROGEN
JOHNSON, R. C. DATE- OCT. 1969
LET-10849
Critical flow factor is calculated that permits the isentropic mass-flow rate of the gases through critical flow nozzles to be calculated from plenum conditions. Results include nozzle throat velocity, compressibility factor, entropy, enthalpy, specific heat, and ratios of throat to plenum pressure, density, and temperature.

B69-10686
ADDING CALCIUM IMPROVES LITHIUM FERRITE CORE
LASSOFF, R. DATE- NOV. 1969
EFC-10536
Adding calcium increases uniformity of grain growth over a wide range of sintering temperatures and reduces porosity within the grain. Ferrite cores containing calcium have square hysteresis loops and high curie temperatures, making them useful in coincident current memories of digital electronic computers.

B69-10720
BIOMEDICAL BULK DATA PROCESSING PROGRAM
SP05- INVENTOR NOT GIVEN /FLIGHT RES. CENTER/
DATE- NOV. 1969
FRC-10015 FRC-10016
Analog-to-digital computer accepts physiological flight data as three basic analog input signals — the ECG signal, the flowmeter signal which is a respiration monitor, and the accelerometer signal which measures the normal g-load on the subject.

B69-10760
ENGINEERING THERMAL ANALYZER /DATA 2/
SCATES, J. B. /BOEING CO./ STEINBERG, L. L. DATE- DEC. 1969
M-FS-15055
Computer program uses numerical methods to provide accurate heat transfer solutions to a wide variety of heat flow problems. This highly versatile program will solve steady state and transient problems in almost any situation that can be presented by a resistance-capacitance network.

B69-10723
OPTIMUM STRUCTURAL DESIGN BASED ON RELIABILITY AND PROOF-LOAD TESTING
SHINDO, B. YANG, J. M. DATE- DEC. 1969
NFO-11228
Proof-load test eliminates structures with strength less than the proof load and improves the reliability value in analysis. It truncates the distribution function of strength at the proof load, thereby alleviating verification of a fitted distribution function at the lower tail portion where data are usually nonexistent.
### Subject Index

The title of each Tech Brief is listed under several selected subject headings to provide the user with a variety of approaches in his search for specific information. The Tech Brief number, e.g., 869-10062, is located under and to the right of the title and is followed by a two-digit number, e.g., 05, which designates the subject category in which the entire entry can be found.

#### Abbreviations

- Liquid microscopy chamber and microsyringe designs allow more efficient microinjections
  - ARG-251
  - B67-10305 04
- Aerial-image enables diagrams and animation to be inserted in motion pictures
  - ARG-166
  - B67-10398 02
- Improved method of optical design
  - GSFC-10743
  - B69-10405 02

#### Ablation

- Computational procedure for finite difference solution of one-dimensional heat conduction problem reduces computer time
  - KSC-1120
  - B66-10566 01
- Sensors measure surface ablation rate of reentry vehicle heat shield
  - NASA-287
  - B66-10592 01
- Multidimensional reaction kinetic ablation program /BEKAP/
  - B67-10495 06

#### Ablative Materials

- Computer simulation program is adaptable to industrial processes
  - LEWIS-240
  - B66-10426 01
- Improved method facilitates debalking and curing of phenolic impregnated asbestos
  - MSC-949
  - B66-10459 05
- High intensity radiation heat source is capable of sustained operation
  - ARC-61
  - B66-10547 02
- New class of thermosetting plastics has improved strength, thermal and chemical stability
  - LEWIS-10108
  - B67-10197 03
- Improved compression molding process
  - NASA-10027
  - B67-10302 03
- Fire retardant foams developed to suppress fuel fires
  - ARC-10098
  - B66-10358 03

### New rapid-curing, stable polyimide polymers with high-temperature strength and thermal stability
- LEWIS-10576
- B69-10118 03

### Anomalities

- Phase plane displays detect incipient failure in servo system testing
  - EQ-10018
  - B67-10662 01
- Investigation of temperature dependence of development and aging
  - ARG-10145
  - B69-10022 04
- Modified cryogenic storage tank subsystem
  - KSC-10380
  - B69-10556 02

### Abrasion

- Epoxy-coated containers easily opened by wire band
  - M-FS-992
  - B66-10174 05
- Portable sandblaster cleans small areas
  - M-523
  - B66-10242 05
- Grit blasting nozzle fabricated from mild tool steel proves satisfactory
  - M-1420
  - B66-10597 05
- Abrasion and fracture testing in a high-pressure hydrogen environment
  - NF-10468
  - B69-10457 03

### Abrasion Resistance

- Epoxy blanket protects milled part during explosive forming
  - M-FS-307
  - B66-10029 03
- Polytetrafluoroethylene lubricates ball bearings in vacuum environment
  - M-379
  - B66-10081 03
- Electrical cabling withstands severe environmental conditions
  - M-1585
  - B66-10427 01
- Double copper sheath multiconductor instrumentation cable is durable and easily installed in high thermal or nuclear radiation area
  - MUC-10007
  - B67-10538 01

### Abrasives

- Stringent cleaning technique assures reliable epoxy bond
  - GSFC-176
  - B64-10142 03
- Device spot-laps spheres to very close tolerances
  - JPL-SC-119
  - B66-10175 05
- Cracks in glass electrical connector headers removed by dry blasting with fine abrasive
  - LEWIS-381
  - B67-10148 03
- Improved atmospheric particle analyzer
  - MNC-33
  - B67-10231 01
- Technique for abrasive cutting of thick-film conductors for hybrid circuits
ABSORBENTS

Purification train produces ultrapure hydrogen gas
M-PS-1913 867-10078 03

Tritiated alumina serves as reagent for self-labeling analysis
ARG-209 867-10315 03

Two systems developed for purifying inert atmospheres
ARG-10234 869-10026 03

ABSORBENTS (EQUIPMENT)

Bellows joint absorbs torsional deflections in duct system
N-PS-682 866-10332 04

Electron beam standby absorber system
N-PS-14108 867-10650 01

Pressure variable orifice for hydraulic control valve
MSC-11323 866-10120 05

ABSORBENTS (MATERIALS)

Bidirectional torque filter eliminates backlash
GSFC-335 865-10748 05

Mossbauer vibration calibration systems evaluated
N-PS-20014 869-10125 01

Improved fire resistant radio frequency anechoic materials
N-PS-16600 869-10450 05

ABSORPTANCE

Technique for measuring absorptance and emittance by using cyclic incident radiation
LEWIS-321 866-10630 02

ABSORPTION

Gas diffusion cell removes carbon dioxide from occupied airtight enclosures
N-PS-892 866-10319 03

Removable well in reaction flask facilitates carbon dioxide collection
ARC-47 865-10316 03

Bore saw drill attachment has zero force reaction
MSC-543 866-10604 05

Microprobe investigation of brittle segregates in aluminum EIG and TIG welds
N-PS-14720 868-10334 03

Investigation of spacecraft coatings
N-PS-20458 869-10181 06

Microdetermination of urea in urine using p-Dimethylaminobenzaldehyde /DDAB/
NFO-10715 869-10317 04

ABSORPTION SPECTRA

A radiometer-pyrometer
LEWIS-284 866-10606 01

Status of ultrasonic analysis for semiconductors
M-PS-2254 867-10138 03

Uranium isotopes quantitatively determined by modified method of atomic absorption spectrophotometry
ARG-210 867-10236 03

Blood oxygen saturation determined by transmission spectrophotometry of hemolyzed blood samples
MSC-11018 867-10252 04

Infrared spectroradiometer for rocket exhaust analysis

SUBJECT INDEX

M-PS-14357 868-10081 02

Optometric system facilitates colorimetric and fluorometric measurements
NFO-10233 868-10316 01

Miniaturized King furnace permits absorption spectroscopy of small samples
ARG-10177 868-10418 02

Study of actinide chemistry in saturated potassium fluoride solution
ARG-10204 869-10004 03

Coordination chemistry in fused-salt solutions
ARG-10469 869-10381 06

ABSORPTIVITY

Special coatings control temperature of structures
GSFC-444 865-10337 03

Blackbody cavity radiometer has rapid response
JPL-521 866-10679 01

Vibration analysis utilizing Mossbauer effect
N-PS-11978 867-10339 01

Practical new method of measuring thermal-neutron fluence
NCC-10086 867-10352 02

Novel RF probe eliminates need for calibration in plasma accelerators
LEWIS-10127 867-10362 01

Method prevents secondary radiation in radiographic inspection
N-PS-13383 867-10391 02

Properties of optics at high temperature and their measurement, a study
N-PS-14696 868-10240 02

Technique for predicting temperature distribution in gases
LEWIS-10918 869-10329 01

Prediction of thermal radiation from a rocket's exhaust plane
N-PS-20414 869-10371 02

ABUNDANCE

Ion-retarding lens improves the abundance sensitivity of tased mass spectrometers
ARG-10365 869-10166 02

ACCELERATORS

Method for measuring alternator voltage transients
LEWIS-10373 868-10513 01

ACCELERATING AGENTS

New shield for gamma-ray spectrometry
ARG-10388 869-10344 02

ACCELERATION

Chain friction system gives positive, reversible drive
ARC-B 863-10009 05

Design concept for pressure switch calibrator
HQ-36 866-10598 01

Computer optimization programs finds values for several independent variables that minimize a dependent variable
N-PS-13032 867-10328 06

Internal velocity factors
MSC-35002 868-10403 06

ACCELERATION (PHYSICS)

Novel shock absorber features varying yield strengths

X-2
SUBJECT INDEX

ACCUMULATORS

MSC-636  B66-10138  03

Solid state detectors monitor relay contacts
JPL-785  B66-10196  01

Design concept for pressure switch calibrator
HQ-36  B66-10598  01

A power-spectral-density computer program
NPO-10126  B67-101060  01

A modal combination computer program for
dynamic analysis of structures
NPO-10129  B67-10217  06

Rectilinear display gives acceleration load factor and velocity information
MSC-1045  B67-10248  01

Acceleration insensitive fluid expansion compensator
N-FS-10152  B69-10559  01

Mossbauer vibration calibration systems evaluated
N-FS-20014  B69-10125  01

Compensation of pulse-rebalanced inertial instruments
MSC-13098  B69-10216  01

Biomedical bulk data processing program
BFC-10015  B69-10720  06

ACCEPTABILITY

Failure rates for accelerated acceptance testing of silicon transistors
ERC-10198  B68-10541  01

Beryllium fastener technology
M-FS-20306  B69-10019  05

ACCEPTOR MATERIALS

Primary cells utilize halogen-organic charge transfer complex
JPL-926  B69-10682  02

Xenon fluoride solutions effective as fluorinating agents
ARG-217  B67-10133  03

ACCESS TIME

System monitors discrete computer inputs
N-FS-1021  B66-10389  01

ACCESSORIES

Depth indicator and stop aid machining to precise tolerances
N-FS-553  B66-10149  05

Versatile impact hand tool
M-FS-20140  B68-10371  05

ACCIDENT PREVENTION

Key-locked guard prevents accidental switch actuation
MSC-419  B66-10235  05

Proposed technique for vertical alignment of a crane’s cable
N-FS-16496  B69-10202  05

ACCIDENTS

Hydrodynamics of a new concept of primary containment by energy absorption
ARG-10242  B69-10046  05

ACCESSORIES

High-pressure regulating system prevents pressure surges
JPL-231  B63-10170  05
Nonresonant support facilitates vibration testing of structures [M-FS-224] B65-10039 05

Pulse height analyzer operates at high repetition rates, low power [WGO-046] B65-10041 01

Plastic bags in evacuated chamber make lightweight gas sampling system [FRC-31] B65-10264 01

Electronic average-hour integrator is accurate to one percent [GSFC-203] B65-10308 01

Centrifugal device separates liquid from gas [MSC-282] B65-10394 05

Pressure levels and pulsation frequencies can be varied on high pressure/frequency testing device [LEWIS-10205] B67-10360 05

Potassium plasma cell facilitates thermionic energy conversion process [ARG-10010] B67-10399 01

Design for high-temperature /1800 deg F/ liquid metal pressure transducer [LEWIS-10144] B67-10458 01

Tool samples subsurface soil free of surface contaminants [MSC-10988] B67-10473 05

Accumulator isolator prevents malfunctioning of faulty hydraulic system [M-FS-1415] B67-10528 05

Air sampler collects and protects minute particles [HQ-10037] B67-10661 01

Accumulator for shaft encoder [M-FS-13599] B66-10093 01

Performance of low-pressure thermionic converter is evaluated [ARG-10276] B69-10090 01

Integrated circuit with multiple collector current source [M-FS-20177] B69-10126 01

Torsion system for creep testing with multiple stress reversals [HQ-10039] B69-10147 03

Positive and negative output circuits [LEWIS-10175] B69-10151 01

Sealing a rubber bladder between two sections of an accumulator [M-FS-20403] B69-10355 05

A simple electrometer for measuring small photocell currents [GSFC-10603] B69-10734 01

Fluid sample collection and storage device [MSC-10962] B69-10816 05

ACCUALTORS (COMPUTERS)

Logic circuit exhibits optimum performance [LANGLEY-129] B65-10193 01

ACCURACY

Modified gas bearing is adjustable to optimum stiffness ratio [M-FS-145] B66-10050 05

Metal-bending track facilitates lightweight, close-tolerance fabrication [ARC-29] B66-10069 05

Electron-beam deflection controlled by digital signals [GSFC-385] B65-10283 02

Optical output enhances flowmeter accuracy [M-PS-462] B65-10395 02

Special mount improves remote transducer accuracy [LEWIS-269] B66-10021 01

Circuit operates as sine function generator [MSC-255] B66-10038 01

Calorimeter accurately measures thermal radiation energy [LANGLEY-173] B66-10058 02

Specimen holder design improves accuracy of X-ray powder analysis [JPL-SC-165] B66-10075 02

Corrosion of metal samples rapidly measured [NU-0041] B66-10140 03

Hollow needle used to cut metal honeycomb structures [MSC-1086] B66-10244 05

Potassium plasma cell facilitates thermionic energy conversion process [ARG-10010] B67-10399 01

Instrument calculates moments of inertia of complex plane figures [ISC-628] B66-10306 01

Design for high-temperature /800 deg F/ liquid metal pressure transducer [LEWIS-10144] B67-10458 01

Densitometer system for liquid hydrogen has high accuracy, fast response [I-FS-909] B66-10438 01

Tool samples subsurface soil free of surface contaminants [MSC-10988] B67-10473 05

Study compares methods for the numerical solution of ordinary differential equations [M-PS-830] B65-10466 01

Subroutine allows easy computation in extended precision arithmetic [M-PS-1136] B66-10504 01

A radiometer-pyrometer [LEWIS-208] B66-10606 01

Automated microsyringe is highly accurate and reliable [NPO-10142] B67-10203 01

Computer subroutine ISUDS accurately solves large system of simultaneous linear algebraic equations [NUC-10051] B67-10344 06

Computerized parts list system coordinates engineering releases, parts control, and manufacturing planning [NUC-10073] B67-10348 06

Transducer measures embedded stresses in electronic modules [M-FS-13486] B67-10367 01

Areas of irregular, discontinuous patterns rapidly and accurately measured [GSFC-10603] B67-10674 01

Synchronized circuit improves accuracy of fluid transfer measurements [KSC-11167] B66-10057 05

Performance statistics of the FORTRAN 4/Library for the IBM System/360 [ARG-3099] B66-10057 06

Gage provides audible signal to facilitate checkout of connector pins [KSC-10335] B65-10173 01

ACETALDEHYDE

Adherent protective coatings plated on magnesium-lithium alloy [M-FS-365] B65-10294 03

Aerial-image enables diagrams and animation to be inserted in motion pictures [ARG-165] B67-10398 02

Study of behavior of sterols at interfaces [ARG-10085] B68-10281 03
ACETIC ACID
Copper and nickel adherently electroplated on titanium alloy
M-FS-13952
Reducing contact resistance at semiconductor to metal or aluminum to metal interfaces
M-FS-10254
B69-10689

02

ACQUISITION
An investigation of phase-lock loop swept-frequency synchronization
M-FS-656
B66-10423
01

Acquisition of pseudonoise signals by sequential estimation
ACRYLIC ACID

Eeparin insolubilized with crosslinking agent
NPO-10834

ACRYLIC RESINS

Circular, explosion-proof lamp provides uniform illumination
MSC-382

Electrically conductive fibers thermally isolate temperature sensor
GSPC-456

Copper-acrylic enamel serves as lubricant for cold drawing of refractory metals
ARG-54

Scribable coating for plastic films
MSC-11194

ACTUATORS

Stepping switch with simple actuator provides many contacts in small space
JPL-122

Blade valve isolates compartment in pipe, opens to allow free flow
JPL-585

Explosives actuate nonmagnetic indexing device
GSPC-237

Stepping motor drive circuit designed for low power drain
JPL-585

Device disconnects several couplings simultaneously
JPL-226

Electrically conductive fibers thermally isolate temperature sensor
GSPC-237

Explosives actuate nonmagnetic indexing device
GSPC-237

Stepping motor drive circuit designed for low power drain
JPL-585

Device disconnects several couplings simultaneously
JPL-226

ACTINIDE SERIES

Study of actinide chemistry in saturated potassium fluoride solution
ABG-10204

ACTINIDE SERIES COMPOUNDS

Nitric acid-organic mixtures surveyed for use in separation by anion exchange methods
ARG-10065

ACTINUM

Daughter growth in freshly separated Ra-226, Ac-227 and U-232
ARG-10226

ACTIVATION

Study made of Raney nickel technology
N-PS-2054

Preparation of silver-activated zinc sulfide thin films
GSPC-10667

Versatile impact hand tool
N-PS-20140

ACTIVATION ANALYSIS

Computer program calculates gamma ray source strengths of materials exposed to neutron fluxes
MSC-10143

ACTIVATION ENERGY

Solenoid permits remote control of stop watch and assures restarting
FRC-17

Electrically controlled optical latch and switch requires less current
JPL-SC-117

Hydrated multivalent cations are new class of molten salt mixtures
ARG-211

ACTUATION

Level of super-cold liquids automatically maintained by leveling
JPL-397

Simple mechanism combines positive locking and quick-release features
WGO-4

One-shot valve may be remotely actuated
WGO-195

Key-locked guard prevents accidental switch actuation
MSC-419

Rugged switch responds to minute pressure differentials
N-PS-12704

Simple switch actuated by force applied
N-PS-12704

SUBJECT INDEX

over wide solid angle
IWP-09808

ANTICIPATORS

Stepping switch with simple actuator provides many contacts in small space
JPL-122

Blade valve isolates compartment in pipe, opens to allow free flow
JPL-585

Explosives actuate nonmagnetic indexing device
GSPC-237

Stepping motor drive circuit designed for low power drain
JPL-585

Device disconnects several couplings simultaneously
JPL-226

Device disconnects several couplings simultaneously
JPL-226

Selenium bond decreases ON resistance of light-activated switch
MSC-589

Quick-closing valve is actuated by explosive discharge
MSC-589

Three-position rocker switch actuator has positive centering
MS-261

Fingertip current control facilitates use of arc welding gun
MSC-10143

Three-position rocker switch actuator has positive centering
MSC-261

Compact actuator converts rotary to linear motion
JPL-786

Special sandrel permits uniform welding of out-of-round tubing
N-PS-706

Friction loading device enables accurate testing of brittle materials
NU-0051

Pneumatic binary encoder replaces multiple solenoid systems
N-PS-665

Matching flow characteristics of standard shutoff valves eliminates need for custom fabricated valves
N-PS-1069

Quick-response servo amplifies small hydraulic pressure differences
ARG-99

In-tank shutoff valve is provided with maximum blast protection
I-PS-1556

Fluid logic control circuit operates motor
MSC-1046

Fuel and oxidizer valve assembly employs single solenoid actuator
MSC-1046

Actuator device schedules rate of valve closure
N-PS-1556

Low speed, long term tracking electric drive system has zero backlash
NPO-10173

Pressure levels and pulsation frequencies can be varied on high pressure/frequency
N-PS-10468

**ADAPTATION**

**Single projector accommodates slides of different size and format**

**X-ray source uses interchangeable anodes to vary X-ray wavelength**

**Movable RF probe eliminates need for calibration in plasma accelerators**

**Phase plane displays detect incipient failure in servo system testing**

**Indium adhesion provides quantitative measure of surface cleanliness**

**Automatic patient respiration failure detection system with wireless transmission**

**Pyrotechnic-actuated cable release**

**Electromechanical rotary actuator operates over wide temperature range**

**Remotely-actuated biomedical switch**

**Torsion system for creep testing with multiple stress reversals**

**Electrothermal linear actuator**

**Remote control thermal actuator**

**Separation simulator**

**Calibratable solid-state pressure switch**

**Piezoelectric linear actuator**

**Testing the flammability of materials exposed to arcs**

**ADAPTIVE CONTROL**

**Adaptive control circuit prevents amplifier saturation**
**ADDIBG CIRCUITS**

**I**mproved circuit minimizes generation time of pseudonoise check bits
JPL-698 B65-10275 01

**Simple circuit performs binary addition and subtraction**
GSFC-399 B65-10335 01

**Linear signal noise summer accurately determines and controls S/N ratio**
JPL-SC-152 B66-10433 01

**Security warning system monitors up to fifteen remote areas simultaneously**
KSC-66-39 B66-10548 01

**Self-correcting, synchronizing ring counter using integrated circuit devices**
N-PS-13901 B68-10067 01

**METHOD**

**ADDITIVE**

Quick-hardening problems are eliminated with spray gun modification which mixes resin and accelerator liquids during application
LANGLEY-6A B63-10318 03

Didymium compound improves nickel-cadmium cell
GSFC-295 B65-10083 03

Run-in with chemical additive protects gear surface
M-PS-548 B66-10069 05

Aluminum doping improves silicon solar cells
LEWIS-206 B66-10181 02

Chromium oxide coatings improve thermal emissivity of alumina
WOO-263 B66-10227 03

Photosensitive filler minimizes internal stresses in epoxy resins
N-PS-1600 B67-10227 03

Process controls introduction of selected impurities into semiconductor wafers
GSFC-523 B67-10303 01

Steel test panel helps control additives in pyrophosphate copper plating
LEWIS-10101 B67-10358 05

High-temperature bearing lubricants
LEWIS-10408 B68-10249 05

Ignition of binary alloys of uranium
ARG-10057 B68-10280 01

Precise doping of metals by small gas flows
LEWIS-10444 B68-10526 03

**ADDS**

Adhesive for cryogenic temperature applications
LEWIS-10264 B69-10074 03

**ADDSIVERY**

Refractory thermal insulation for smooth metal surfaces
N-PS-160 B64-10099 03

Multilayer refractory nozzles produced by plasma-spray process
WOO-318 B66-10611 05

Repeparable, high-density microelectronic module provides effective heat sink
N-PS-13075 B67-10356 01

Technique for measuring magnetic tape interlayer adhesion
NFO-10011 B67-10477 03

Copper and nickel adherently electroplated on titanium alloy
N-PS-13952 B67-10532 03

**SUBJECT INDEX**

Method of disjoining adhesively bonded electronic cordwood modules
MSC-12060 B68-10086 01

Indium adhesion provides quantitative measure of surface cleanliness
SAM-10024 B68-10342 01

Gun facilitates adhesive bonding of studs to surfaces
N-PS-20299 B69-10009 05

Effect of interparticle forces on the fluidization of fine particles
ARG-10264 B69-10195 03

Pulsed high-voltage dc RF sputtering
LEWIS-10920 B69-10699 01

ADHESION TESTS

Ultrasonic emission method enables testing of adhesive bonds
M-PS-799 B66-10341 01

Dot patterns provide reproducible flaw areas for study of adhesive bonds
M-PS-062 B66-10367 05

Nondestructive determination of cohesive strength of adhesive-bonded composites
N-PS-20397 B69-10464 03

ADHESIVES

Portable flooring protects finished surfaces, is easily moved
M-PS-15 B63-10387 05

Improved electrode gives high-quality biological recordings
MSC-17 B64-10025 04

Screening technique makes reliable bond at room temperature
M-PS-227 B65-10004 03

Improved conductive paste secures biomedical electrodes
MSC-107 B65-10015 03

Adhesive for vacuum environments resists shock and vibration
MSC-56 B65-10016 03

Peel resistance of adhesive bonds accurately measured
GSFC-320 B65-10173 03

Electronic modules easily separated from heat sink
MSC-142 B65-10186 02

Fastener distributes stress evenly from sandwich-panel-hung items
MSC-236 B65-10358 05

Adhesive-backed terminal board eliminates mounting screws
MSC-173 B65-10396 01

Polymer film exhibits thermal and radiation stability
LANGLEY-100 B66-10043 03

Improved electrode paste provides reliable measurement of galvanic skin response
MSC-146 B66-10494 04

Calibrated clamp facilitates pressure application
MSC-290 B66-10059 05

Storage-stable foamable polyurethane is activated by heat
LANGLEY-187 B66-10111 03

Integral skin electrode for electrocardiography is expendable
MSC-299 B66-10118 08

**X-8**
SUBJECT INDEX

Compound improves thermal interface between thermocouple and sensed surface
   NH-0028   B66-10121  02

Insulation for cryogenic tanks has reduced thickness and weight
   M-FS-326   B66-10183  02

Improved adhesive for cryogenic applications 
   cures at room temperature
   WOO-132   B66-10185  03

Rubber-coated bellows improves vibration damping in vacuum lines
   LEWIS-273   B66-10187  02

Coating permits use of strain gage in water and liquid hydrogen
   M-FS-596   B66-10192  01

Tool permits damage-free removal of solar cell
   GSPC-467   B66-10219  05

Substituted silane-diol polymers have improved thermal stability
   M-FS-469   B66-10259  03

Electrolytic etching process provides effective bonding surface on stainless steel
   GSPC-488   B66-10299  03

Inexpensive insulation is effective for cryogenic transfer lines
   MSC-618   B66-10348  02

Impact and puncture resistant material protects parts from damage
   M-SC-747   B66-10375  05

Mylar film eliminates silk screening of equipement panels
   MSC-799   B66-10455  05

Adhesive for polyester films cures at room temperature, has high initial tack
   M-FS-938   B66-10487  03

Film coating permits low-force scribing
   MSC-990   B66-10609  03

Silver-palladium braze alloy recovered from masking materials
   M-FS-1865   B66-10631  03

Gas leak detector is simple and inexpensive
   M-FS-1206   B66-10669  01

Process sequence produces strong, lightweight reflectors of excellent quality
   LEWIS-331   B67-10010  05

Miniature capacitor functions as pressure sensor
   JPL-903   B67-10020  01

Resistance heating releases structural adhesive
   M-FS-1607   B67-10045  05

Nonwoven glass fiber mat reinforces polyurethane adhesive
   M-FS-2309   B67-10113  03

New class of thermosetting plastics has improved strength, thermal and chemical stability
   LEWIS-10108   B67-10197  03

Photosensitive filler minimizes internal stresses in epoxy resins
   M-FS-1880   B67-10227  03

Inexpensive cryogenic insulation replaces vacuum jacketed line
   NUC-10061   B67-10264  02

Flowmeter determines mix ratio for viscous adhesives

M-FS-2308   B67-10378  01

Scribable coating for plastic films
   MSC-11194   B67-10409  03

Adhesives for laminating polyimide insulated flat conductor cable
   M-FS-12066   B67-10429  03

Proposed method of rotary dynamic balancing by laser
   M-FS-12822   B67-10452  02

Solvent permits solid curing agents to be used at room temperatures
   M-FS-13434   B67-10593  03

Synthesis of pure aromatic glycidyl esters for use as adhesives
   M-FS-12705   B67-10647  03

Miniature pressure transducer for stressed member application
   MSC-11869   B68-10246  01

Fiber glass reinforced structural materials for aerospace application
   M-FS-14806   B68-10360  03

Improved radiographic image amplifier panel
   M-FS-14522   B68-10363  02

High-emittance coatings on metal substrates
   LEWIS-10325   B68-10381  03

Battery-package design provides for cell cooling and constraint
   MSC-11859   B68-10398  05

Frangible electrochemical cell and sealing technique
   XGS-10010   B69-10056  01

Adhesive for cryogenic temperature applications
   LEWIS-10264   B69-10074  03

Tools for applying lead tape to flat conductor cabling for chemical stripping
   M-FS-20429   B69-10190  05

Novel terminal strips for transformers
   M-FS-20405   B69-10246  01

Instrumentation for nondestructive testing of composite honeycomb materials
   M-FS-20405   B69-10366  03

Quick-set temporary bonding clamps
   M-FS-10695   B69-10406  03

Heat-shrinkable jacket holds fluid in contact with tensile test specimen
   M-SC-13195   B69-10495  05

Improved primer for bonding polyurethane adhesives to metals
   M-FS-30591   B69-10540  03

ADIABATIC CONDITIONS

Computer program HCAP provides for steady state thermal and flow analysis of multiple parallel channels in heat generating solid
   NUC-10043   B67-10457  06

Thermal Network Analyzer Program
   NUC-10540   B69-10239  06

ADJUSTING

Modified gas bearing is adjustable to optimum stiffness ratio
   M-FS-145   B64-10050  05

Buckle joins web straps quickly, adjusts easily
   LABLER-21   B64-10119  05

Calibrated clamp facilitates pressure application

AERODYNAMIC CONFIGURATIONS
Averaging probe reduces static-pressure sensing errors
LANGLEY-36 B65-10114 05
Computer program analyses and designs supersonic wing-body combinations
ABC-10141 B68-10335 06

AERODYNAMIC DRAG
Rough surface improves stability of air-sounding balloons
N-PS-320 B65-10326 05
Simple key locks turbine rotor blades
WOC-103 B66-10023 05

AERODYNAMIC FORCES
Flexure support system protects thermally and dynamically loaded models
LANGLEY-39 B65-10042 05
Aerodynamic forces of fluttering cylindrical and/or planar structures
N-PS-20497 B69-10781 02

AERODYNAMIC HEATING
Insulation for cryogenic tanks has reduced thickness and weight
N-PS-326 B66-10183 02
Instrument accurately measures small temperature changes on test surface
LANGLEY-174 B66-10637 01
CINDA - Chrysler Improved Numerical Differencing Analyzer computer program
N-PS-2298 B67-10270 06

AERODYNAMIC LOADS
Internal cooling increases range of immersion-type temperature probe
LEWIS-171 B65-10157 02
Computer program calculates wing aerodynamic characteristics for fixed wings with dihedral and variable-sweep wings at subsonic speeds
LANGLEY-10791 B67-10666 06

AERODYNAMIC NOISE
Study of hot wire techniques in low density flows with high turbulence levels
N-PS-1269 B66-10687 01

AERODYNAMIC STABILITY
Rough surface improves stability of air-sounding balloons
N-PS-320 B65-10326 05

ABRODYNAMICS
Computer program analyzes and designs supersonic wing-body combinations
ABC-10141 B68-10335 06

ABRONAUTICS
Titanium treatment improves brazed joints
MSC-127 B65-10153 05

ABROSOLS
Solvent residue content measured by light scattering technique
N-PS-856 B66-10320 01
Cleanroom air sampler counts, categorizes, and records particle data
N-PS-2221 B67-10076 01
Improved atmospheric particle analyzer
BRC-33 B67-10231 01
Nozzles for size reclassification of microfog particles
LEWIS-10705 B69-10076 05
Health hazards of ultrafine metal and metal oxide powders
LEWIS-10878 B69-10268 04
Conditioning of pulses from aerosol-particle detectors
BRC-10250 B69-10691 01

AEROSPACE ENGINEERING
Pressure transducer system is force-balanced, has digital output
N-PS-154 B65-10174 05
Improved electro-optical tracking system
N-PS-14791 B68-10311 01
An overview of electromagnetic interference problems in spacecraft
NPS-11170 B69-10362 01
System for computing operational probability equations
N-PS-16410 B69-10566 06

AEROSPACE ENVIRONMENTS
Test device prevents molecular bounce-back
GSFC-82 063-10546 03
Modular Porous Plate Sublimator /MPS/ requires only water supply for coolant
N-PS-1374 B66-10409 01
Study made of explosive cutting in simulated space environments
N-PS-1597 B67-10040 01
Study indicates fluid digital computation systems are feasible
N-PS-520 B67-10181 01
Environmental study of miniature slip rings
N-PS-2443 B67-10210 05

AEROSPACE INDUSTRY
Lightweight magnesium-lithium alloys show promise
N-PS-2349 B67-10301 03
Standards for compatibility of printed circuit and component lead materials
N-PS-14531 B66-10310 01
Materials data handbook, aluminum alloy 7075
N-PS-20381 B69-10065 03
Diffusion bond method of joining steel and a TFE-bronce composite

AEROSPACE INDUSTRY
Lightweight magnesium-lithium alloys show promise
N-PS-17 B63-10389 03
Bench vise adapter grips tubing securely and safely
MSC-279 B66-10056 05
Study to minimize hydrogen embrittlement of ultrahigh-strength steels
N-PS-2455 B67-10141 03
Computer program performs rectangular fitting stress analysis
N-PS-13010 B67-10520 06
Weight Control System
N-PS-15028 B69-10041 06
Countersunk head screw retainer
N-PS-16481 B69-10282 05
Removal of retaining washers of the waffle-spring type
MSC-15531 B69-10350 05
Tool for reading psychrometric charts
KSC-10358 B69-10527 05
Silphenylene elastomers have high thermal stability and tensile strength
N-PS-20256 B69-10580 03
ABBOSPACE SYSTEMS

An investigation of phase-lock loop swept-frequency synchronization M-FS-656 B66-10423 01

Fiber glass reinforced structural materials for aerospace application M-FS-18006 B66-10360 03

Thermal expansion properties of aerospace materials M-FS-18335 B66-10055 03

Diffusion of trace gases for leak detection A study M-FS-20294 B66-10067 03

A new method for the determination of particulate contamination levels for surface cleanliness of fluid systems KSC-10267 B69-10520 02

ABBOSPACE VEHICLES

Study of hydrogen slush-hydrogen gel utilization M-FS-13068 B67-10413 02

Precise gimballing mechanism NPO-11057 B69-10270 01

Optimum structural design based on reliability and proof-load testing NPO-11228 B69-10723 31

ABOSBONE

Addition of solid oxidizer increases liquid fuel specific impulse JPL-861 B67-10058 03

Effects of helium and nitrogen as pressurants in nitrogen tetroxide transfer HSC-924 B67-10083 03

AFTERBURNING

Ultraviolet photographic pyrometer used in rocket exhaust analysis M-FS-499 B66-10095 02

Vapor condensation process produces slurry of magnesium particles in liquid hydrocarbons LEWIS-263 B66-10104 03

AGE FACTOR

Study of radiation effects on mammalian cells in vitro ARG-10191 B68-10294 02

AGGLOMERATION

Experiments to investigate particulate materials in reduced gravity fields M-FS-13308 B67-10394 02

AGGREGATES

Aggregation of metallochlorophylls - Examination by spectroscopy ARG-10273 B69-10163 04

AGING

Development of technology for hot-drape forming of large torus sections M-FS-12141 B67-10341 05

Magnesium-lithium alloys developed for low temperature use M-FS-1541 B67-10365 03

Scribable coating for plastic films KSC-11194 B67-10409 03

AGING (BIOLOGY)

Investigation of temperature dependence of development and aging ARG-10145 B69-10022 04

RAPID and precise analysis for calcium in blood serum ARG-10246 B69-10160 04

AGING (METALLURGY)

Thermal stress-relief treatments for 2219 aluminum alloy are evaluated M-FS-1219 B66-10448 03

Treatment increases stress-corrosion resistance of aluminum alloys M-FS-1840 B66-10595 05

New weldable high strength aluminum alloy developed for cryogenic service M-FS-737 B66-10613 05

Heat treatment study of aluminum casting alloy M-45 M-FS-2397 B67-10159 03

Excellent spring properties developed in two nickel alloys for use at cryogenic temperatures NUC-10084 B67-10349 03

Stress-corrosion characteristics of aluminum casting alloy M-45 M-FS-14817 B68-10184 03

Resistivity measurements of neutron-irradiated pure metals and Al-Zn alloys ARG-10108 B68-10200 03

Strain-age cracking in Rene 41 alloy M-FS-1865C B69-10605 03

AGITATION

Large volume continuous counterflow dialyzer has high efficiency EQ-10055 B67-10395 04

Shortened processing time technique for color industrial radiography ARG-10235 B69-10001 02

AGRICULTURE

Sampling and handling of desert soils NPO-11171 B69-10304 04

AIR

Rapid helium-air analyzer can measure other binary gas mixtures LANGLEY-16 B63-10557 03

Sniffer used as portable hydrogen leak detector M-FS-846 B66-10356 01

Brazing retort manifold design concept may minimize air contamination and enhance uniform gas flow M-FS-707 B66-10371 05

Air bearing provides friction-free support for shaker system slip table WU-0086 B66-10708 05

High conductance vapor thermal switch GSFC-10109 B68-10519 02

Prediction of friction coefficients for gases LEWIS-10774 B69-10112 02

Plasma-heating by induction LEWIS-10528 B69-10185 02

Properties of air and combustion products of fuels with air LEWIS-11030 B69-10711 03

Chromatographic detection and analysis of traces of hydrocarbons KSC-10386 B69-10716 02

AIR CONDITIONING

New nut and sleeve improve flared connections
Bench vise adapter grips tubing securely and safely
MSC-279 B66-10056 05
Tool for reading psychrometric charts
KSC-10358 B69-10527 05

AIRCRAFT

Electron beam seals outer surfaces of porous bodies
NSC-562 B66-10033 03
Noise study of single stage compressor rotor-stator interaction
LANGLEY-137 B67-10516 02
Vacuum probe sampler removes micron-sized particles from surfaces
SAN-10003 B68-10231 04
Modified sine bar device measures small angles with high accuracy
KSC-438 B69-10322 02
Analysis of annular combustors
LWIS-10399 B69-10356 06
Automatic patient respiration failure detection system with wireless transmission
ARC-10174 B69-10365 01
An investigation of particle mixing in a gas-fluidized bed
ARB-10182 B69-10407 05
Combination probe for airflow measurements
LWIS-10281 B68-10558 01
Propagation of density disturbances in air-water flow
ARB-10260 B69-10043 02
Instrumentation for nondestructive testing of composite honeycomb materials
NSC-20405 B69-10366 03

AIR POLLUTION

Improved atmospheric particle analyzer
ERC-33 B67-10231 01
Analytical technique characterizes all trace contaminants in water
MSC-11032 B67-10243 03
Air sampler collects and protects minute particles
HQ-10037 B67-10661 01
Repetitively pulsed, wavelength-selective carbon dioxide laser
ERC-10178 B68-10564 02
Health hazards of ultrafine metal and metal oxide powders
LWIS-10878 B69-10268 04
Development and test of flexible film coupon strips for use as a sampling technique
M-PS-20448 B69-10339 03
Automatic filter-blowback systems used with sintered-metal filters
ARB-10324 B69-10342 05
Conditioning of pulses from aerosol-particle detectors
ERC-10250 B69-10691 01

AIR PURIFICATION

Gas diffusion cell removes carbon dioxide from occupied airtight enclosures
MSC-118 B64-10319 03

AIR SAMPLING

Cleanroom air sampler counts, categorizes, and records particle data
Flexible rivet-set M-PS-20317 B69-10459 05
Nondestructive determination of cohesive strength of adhesive-bonded composites M-PS-20397 B69-10464 03
Literature review on pickling inhibitors and cadmium electroplating processes M-PS-10421 B69-10606 03
Explosive bonding of metal-matrix composites M-PS-20657 B69-10804 05
AIRCRAFT INSTRUMENTS
FM/CW system measures aircraft attitude M-PS-276 B65-10290 01
Alternating current electromagnetic servo induction meter XPR-03838 B68-10100 01
AIRCRAFT MODELS
New anemometer has fast response, measures dynamic pressure directly LANGLEY-28 B63-10530 05
AIRCRAFT STRUCTURES
Drill bit design assures clean holes in laminated materials WOO-098 B65-10386 05
Program computes zero lift wave drag of entire aircraft LANGLEY-10079 B67-10530 06
AERIALS
Program computes zero lift wave drag of entire aircraft LANGLEY-10079 B67-10530 06
AERONAUTICS
Material fatigue data obtained by card-programmed hydraulic loading system LANGLEY-10042 B67-10491 03
AIRPORTS
Scanning photometer system automatically determines atmospheric layer height MSC-245 B66-10170 01
ALBINO
M-PS and O-PS neutron and gamma ray albedo model scatter shield analysis program NUC-10126 B67-10536 06
ALCOHOLs
Surfaceant for dye- penetrant inspection is insensitive to liquid oxygen M-PS-475 B66-10131 03
Gas chromatographic column enables analysis of propellant hydrazines MSC-1161 B66-10586 03
Preparation of silver-activated zinc sulfide thin films GSPC-10667 B68-10271 03
Measurement of gas flow at extremely low pressures HSC-13261 B69-10522 03
ALKYHYDEs
Microdetermination of urea in urine using p-dimethylaminobenzaldehyde /PDAB/ FPO-10715 B69-10317 04
ALGEHIS
Improved electrode paste provides reliable measurement of galvanic skin response MSC-146 B66-10049 04

SUBJECT INDEX

ALGAE
Cytology is advanced by studying effects of deuterium environment ARG-205 B67-10304 04
The preparation, identification and properties of chlorophyll derivatives ARG-10205 B67-10409 03

ALGEBRA
Algebraic Monte Carlo procedure reduces statistical analysis time and cost factors M-PS-1587 B67-10359 04
Technique for predicting temperature distribution in gases LEWIS-10918 B67-10329 01
Numerical inversion of finite Toeplitz matrices and vector Toeplitz matrices ARG-10445 B67-10415 02
COGENT programming manual ARG-10463 B67-10856 06

ALGORITHMS
Binary sequence detector uses minimum number of decision elements JPL-673 B66-10264 01
Computer program calculates monotonic maximum likelihood estimates using method of reversals M-PS-1516 B67-10136 01
Computer program provides linear sampled-data analysis for high order systems M-PS-12821 B67-10267 06
Digital filter synthesis computer program ARC-10130 B67-10164 01
Linear system of equations solved using mathematical algorithms ARC-10146 B68-10292 06
Computer program for parameter optimization ARC-10166 B68-10453 06
Improved first order interpolator RCS-11085 B69-10291 02
Sonic boom propagation in stratified atmosphere LANGLEY-10480 B69-10391 06
Numerical inversion of finite Toeplitz matrices and vector Toeplitz matrices ARG-10445 B67-10415 02
Fast Fourier Transform Spectral Analysis program M-PS-15062 B67-10834 06
Special purpose computer provides programmable digital filter for sampled-data control systems M-PS-20290 B69-10454 06

ALIGNMENT
Design of valve permits sealing even if the stem is misaligned LEWIS-38 B63-10381 05
Novel clamps align large rocket cases, eliminate back-up bars M-PS-1 B63-10376 05
Mirror device aligns machine surface perpendicular to sight lines WOO-5 B63-10421 02
Tool facilitates sealing of metal fill tubes MSC-24 B63-10519 05
Guide for extrusion dies eliminates straightening operation LEWIS-152 B64-10014 05
Pressure transducer 3/8-inch in size can be faired into surface W00-065 B64-10021 05

Attachment converts microscope to point source autocollimator JPL-499 B64-10124 05

Simple optical system used to align spectograph LANGLEY-92 B65-10071 02

New coupling compensates for shaft misalignment W0-0015 B65-10077 05

Light ray modulation controls optical alignment GSFC-171 B65-10211 02

Voltage controlled oscillator is easily aligned, has low phase noise JPL-510 B65-10223 01

Lightweight coaxial cable connector reduces signal loss JPL-720 B65-10244 01

Oil-damped mercury pool makes precise optical alignment tool GSFC-353 B65-10253 02

Titanium diaphragm makes excellent anplitron cathode support GSFC-394 B65-10298 01

Modified procedure speeds camera copy layout for offset printing GSFC-324 B65-10373 02

Photosensors used to maintain welding electrode-to-joint alignment MSC-243 B65-10401 05

Instrument quickly transposes ground reference target to eye level MSC-275 B66-10061 05

Threaded pilot insures cutting tool alignment M-FS-527 B66-10074 05

Tool post modification allows easy turret lathe cutting-tool alignment M-FS-581 B66-10191 05

Mount enables precision adjustment of optical-instrumentation mirror MSC-184 B66-10199 02

Tool enables proper rating of accelerometer and cable connector M-FS-611 B66-10208 05

Adjustable cutting guide aligns and positions stacks of material MSC-321 B66-10210 05

Fastener provides for bolt misalignment and quick release of flange W0-0074 B66-10275 05

Friction loading device enables accurate testing of brittle materials W0-0051 B66-10345 05

Direction indicator system does not require complicated optics W00-305 B66-10407 01

Alignment tool facilitates pin placement on irregular horizontal surfaces LANGLEY-219 B66-10410 05

Heavy duty precision leveling jacks expedite setup time on horizontal boring mill M-FS-1084 B66-10411 05

Simplified fixture permits precision alignment of an optical target M-FS-1181 B66-10556 01

Turbine blade root design concept promises superior alignment M-FS-1685 B66-10620 05

Teflon sheet permits valve and valve operator to move as a single unit in a cryogenic pipe line W0-0077 B66-10702 05

Visual attitude orientation and alignment system MSC-647 B67-10120 02

Spherical joint connects axially misaligned flanges M-FS-2238 B67-10273 05

Precision metal molding M-FS-13305 B67-10423 05

Lamb waves increase sensitivity in nondestructive testing ARG-10009 B67-10605 02

Tensile testing grips are easily assembled under liquid nitrogen MSC-16524 B67-10628 05

Connector shorting cap provides pin alignment, inspection, and stray voltage protection M-FS-13111 B67-10635 01

Reconnect mechanism M-FS-12968 B67-10670 05

Telescope mount with azimuth-only primary WPO-10468 B67-10671 02

Laser-Doppler gas-velocity instrument M-FS-20039 R68-10039 02

Machining technique prevents undercutting in tensile specimens LANGLEY-10281 B68-10352 05

High-torque precision stepping drive M-FS-14772 B68-10549 05

Ring laser angle encoder MSC-13099 B69-10115 01

Proposed technique for vertical alignment of a crane's cable M-FS-16496 B69-10202 05

Technique for anchoring fasteners to honeycomb panels LEWIS-10888 B69-10265 03

Precision mounting for instrument optical elements provided by polypide bonding M-FS-20293 B69-10310 05

Improved design of items in high speed rotating machinery M-FS-18441 B69-10373 05

Quick-acting backup tool for welding ducts M-FS-18404 B69-10396 05

Method of directing a laser beam with very high accuracy NPO-11087 B69-10508 02

Improved cameras for better X-ray powder photographs N0-10424 B69-10537 01

ALIPHATIC COMPOUNDS Flowmeter determines mix ratio for viscous adhesives M-FS-2308 B67-10378 01

ALKALI HALIDES Zone purification of potassium chloride
ALKALI METAL COMPOUNDS

ARG-10377 B69-10241 03
Self-discharge in bimetallic cells containing alkali metal
ARG-10347 B69-10631 01

ALKALI METAL COMPOUNDS

Double gloves reduce contamination of dry box atmosphere
LEWIS-211 B65-10147 03
Synthesis of polyethers of hexafluorobenzene and hexafluoropentanediol
N-PS-14962 B69-10636 03

ALKALI METALS

Elastomers bonded to metal surfaces seal electrochemical cells
GSPC-168 B64-10113 03
Apparatus enables accurate determination of alkali oxides in alkali metals
LEWIS-256 B66-10296 03
Process for preparing dispersions of alkali metals
JPL-734 B66-10639 03
Radiation counting technique allows density measurement of metals in high-pressure/high-temperature environment
ARG-124 B67-10316 02
Precise doping of metals by small gas flows
LEWIS-10444 B68-10526 03
Performance of low-pressure thermionic converters in evaluated
ARG-10276 B69-10090 01
Separation of traces of metal ions from sodium matrices
ARG-10341 B69-10168 03
Zone purification of potassium chloride
ARG-10377 B69-10241 03
Channel-wall limitations in the magnetohydrodynamic induction generator
ARG-10128 B69-10255 02
Production of solvated electrons
ARG-10416 B69-10430 03
Self-discharge in bimetallic cells containing alkali metal
ARG-10347 B69-10631 01
Device separates hydrogen from solution in water at ambient temperatures
NESC-13335 B69-10635 03

ALKALIES

Method of welding joint in closed vessel improves quality of seam
JPL-170 B63-10139 05
Electroless nickel resist used in alkali etching of aluminia
GSPC-284 B65-10162 03
Chemical milling solution produces smooth surface finish on aluminia
NESC-549 B66-10332 03
Primary radical yield in pulse irradiated alkaline aqueous solution
ARG-10322 B69-10167 02

ALKALINE BATTERIES

Apparatus measures swelling of membranes in electrochemical cells
GSPC-280 B65-10087 01
Composite seal reduces alkaline battery leakage
GSPC-337 B65-10271 01
Hermetically sealed cells protected from internal gas pressure
GSPC-555 B66-10692 01
Battery-package design provides for cell cooling and constraint
NESC-11839 B68-10398 05
Separator for alkaline batteries
GSPC-10175 B68-10557 03

ALKALINE BARTH OXIDES

Electrolytic separation of crystals of transition-metal oxides
ARG-10506 B69-10642 03

ALKALINES

Xenon fluorides show potential as fluorinating agents
ARG-113 B67-10185 03

ALKYL COMPOUNDS

Substituted silane-diol polymers have improved thermal stability
N-PS-469 B66-10259 03

ALLOCATIONS

Probabilistic approach to long range planning of manpower
NESC-11524 B67-10510 06

ALLOWANCES

Static seal concept to accommodate seat tolerances
N-PS-1854 B67-10285 05

ALLOYS

New method used to fabricate light-weight heat exchanger for rocket motor
LEWIS-43 B63-10346 02
Integral coolant channels supply made by melt-out method
N-PS-91 B63-10497 05
New alloy brazes titanium to stainless steel
NESC-102 B65-10060 05
New braze alloy eliminates metal-stress cracking
WOO-249 B65-10397 03
Braze alloys used as temperature indicators
N-0063 B66-10274 01
Union would facilitate joining of tubing, minimize braze contamination
NESC-777 B66-10311 05
Use of steel and tantalum apparatus for molten Ca-Nb-Zn alloys
ARG-199 B66-11594 03
Thermoelectric metal comparator determines composition of alloys and metals
ARG-235 B67-10035 01
Recommended values of the thermophysical properties of eight alloys, their major constituents and oxides
N-0095 B67-10062 03
Thermodynamic properties of solid palladium-silver alloys and other alloys are investigated by torsion-effusion technique
ARG-277 B68-10024 03
Braze joint quality tested electromagnetically
N-PS-12755 B67-10333 01
Development of technology for hot-drape forming of large torus sections

**ALUMINUM ALLOYS**

- Break-up of metal tube makes one-time shock absorber, bars rebound
- An improved atomic hydrogen frequency and time standard
- Improved high-temperature-strength nickel-base superalloy
- One-handed hammer-spanner for chucks
- Radiographic threshold detection levels of aluminum weld defects
- A method for precision anodize stripping
- Sprayed shielding of plastic-encapsulated electronic modules
- Electron interaction in matter
- Reducing contact resistance at semiconductor metal to aluminum interfaces
- Mixed ether bath for electrodeposition of aluminum
- Surface-renewal models for heat-transfer between walls and fluidized beds
- Lightweight aluminum casting alloy is useful at cryogenic temperatures
- Aluminum alloys protected against stress-corrosion cracking
- Anodization process produces opaque, reflective coatings on aluminum
- Aluminum oxide filler prevents obstructions in tubing during welding
- Diffusion technique stabilizes resistor values
- White primer permits a corrosion-resistant coating of minimum weight
- Nickel-base superalloys developed for high-temperature applications
- Brazing process using Al-Si filler alloy reliably bonds aluminum parts
- Aluminum/steel wire composite plates exhibit high tensile strength
- Differential expansion provides pressure for diffusion bonding of large diameter rings
- Valve seat pores sealed with thermosetting monomer

SUBJECT INDEX

ANALOG CIRCUITS

Field-effect transistor replaces bulky transformer in analog-gate circuit
GSFC-351  B65-10284  01

Circuit measures hysteresis loop areas at 30 Hz
N-PS-13069  B67-10519  01

Analog buffer isolates high impedance source from low impedance load
N-PS-13941  B67-10544  01

AMPLITUDES

Increased performance reliability obtained with dual/redundant oscillator systems
GSFC-36  B63-10027  01

Device calibrates vibration transducer at amplitudes up to 20 g
N-PS-86  B63-10572  01

Simple device produces accelerometer calibration pulse
N-PS-363  B65-10269  01

Noncontacting vibration transducer has constant sensitivity
LANGLEY-99  B65-10392  01

Instrument automatically selects peak acceleration signal from several accelerometers
JPL-816  B66-10462  01

Antenna simulator permits preinstallation system checkout
GSFC-522  B66-10518  01

System precisely controls oscillation of vibrating mass
N-PS-1875  B67-10276  01

Multiplexer uses insulated gate-field effect transistors
N-PS-13096  B67-10396  01

Transient sensor development
N-PS-13370  B67-10471  01

Amplitude and frequency readout overlay
GSFC-10183  B66-10054  01

Large-amplitude inviscid fluid motion in an accelerating container
MCC-11560  B68-10170  02

Electro-optic modulator for infrared laser using gallium arsenide crystal
GSFC-10686  B68-10255  02

Positive and negative output circuits
LEWIS-10715  B69-10151  01

Instrumentation for nondestructive testing of composite honeycomb materials
N-PS-20405  B69-10366  03

Magnetic forming of resistive materials
N-PS-20417  B69-10397  03

A theoretical study of radar backscatter from distributed targets with emphasis on polarization dependence
N-PS-13775  B69-10560  02

Pulse-height analyzer with digital readout
ARS-10503  B69-10640  01

AMPOULES

Radon gas, useful for medical purposes, safely fixed in quartz
AMS-2  B66-10468  04

ANALOG CIRCUITS

Field-effect transistor replaces bulky transformer in analog-gate circuit
GSFC-351  B65-10284  01

Circuit measures hysteresis loop areas at 30 Hz
N-PS-13069  B67-10519  01

Analog buffer isolates high impedance source from low impedance load
N-PS-13941  B67-10544  01

Electronic shearing circuit monitors exact position of object underwater
BSC-10146  B67-10629  01

Pneumatic analog-to-pulse frequency converter
LEWIS-10345  B69-10276  02

Current-switching technique for analog pulse circuits
ARG-10479  B69-10445  01

ANALOG COMPUTES

Zener diode function generator requires no external reference voltage
JPL-0031  B65-10131  01

Hybrid computer technique yields random signal probability distributions
ARC-39  B65-10208  01

Scanning photometer system automatically determines atmospheric layer height
MCC-245  B66-10170  01

FEV comparator detects analog signal levels without loading analog device
N-PS-503  B66-10224  01

Instrument calculates moments of inertia of complex plane figures
MCC-628  B66-10306  01

Himan transfer functions used to predict system performance parameters
LANGLEY-203  B66-10379  01

Automatic system determines moments of inertia of asymmetrical objects
N-PS-1769  B66-10636  01

Fluidic oscillator used as humidity sensor
LEWIS-340  B67-10063  05

CTFDA - Chrysler Improved Numerical Differentiating Analyzer computer program
N-PS-2296  B67-10278  06

Analog voicing detector responds to pitch
GSFC-10085  B67-10571  01

Versatile analog pulse height computer performs real-time arithmetic operations
ARG-10052  B66-10626  06

Digital computer technique for setup and checkout of an analog computer
N-PS-13969  B68-10576  06

Electronic visualization of gas bearing behavior
LEWIS-10711  B69-10073  01

Reducing quantizer deadband with a range switching** digital filter
N-PS-20415  B65-10259  01

Electronic analog equalization for vibrational testing
MCC-10946  B69-10472  01

Water-glycol system volume calculation
MCC-15193  B69-10563  02

Airborne Fraunhofer Line Discriminator
MCC-13446  B69-10594  02

ANALOG DATA

Auxiliary circuit enables automatic monitoring of EG&amp;G
BSC-106  B65-10142  01

Plant respirometer enables high resolution of oxygen consumption rates
HR-47  B66-10406  04

MOSET analog memory circuit achieves long duration signal storage
N-PS-860  B66-10603  01
**ANALOG SIMULATION**

- Fast-response frequency-to-analog converter
- Multiplexer uses insulated gate-field effect transistors
- Study made of acoustical monitoring for mechanical checkout
- Automatic testing device facilitates noise checks and electronic calibrations
- Computer program for Video Data Processing System /FDP5/
- Dynamic linearity measurement technique
- Two devices for analysis of nystagmus
- Improved VHF direction finding system
- Battery charge-discharge controller

**PRODUCT INDEX**

- Computer program performs statistical analysis for random processes
- Monitoring system determines amplitude and time of vibration channel peaks
- A conceptual, parallel operating data compression processor
- Multiplexer uses insulated gate-field effect transistors
- Automatic telemetry checkout system
- Simple first order data compression processor concept
- Improved digital TV encoding and decoding system
- Computer program for Video Data Processing System /FEP5/
- Linear analog dc voltage-to-pulse-width converter
- Small, low power analog-to-digital converter
- High resolution Ge/Li/ spectrograph reduces rate-dependent distortions at high counting rates
- Automatic calibration apparatus for telemetry systems
- Mossbauer-effect data-collection system
- Improved phase-shift-keyed detector
- Linear voltage-to-frequency converter
- Highly linear, sensitive analog-to-digital converter
- Data processing method for a weak, moving telemetry signal
- Pulse-height analyzer with digital readout
- Biomedical bulk data processing program

**ANALOGS**

- Rocket engine analog simulation

**ANALOG TO DIGITAL CONVERTERS**

- Computer determines high-frequency phase stability
- Field effect transistors used as voltage controlled resistors
- Pneumotachometer counts respiration rate of human subject
- Analog-to-digital converter has increased reliability and reduced power consumption
- Simple pulse counting circuit computes sum of squares
- Electronic charmeter provides direct digital output
- Nonlinear feedback reduces analog-to-digital converter error
- Variable word length encoder reduces TV bandwidth requirements
- Control system maintains selected liquid level
- PET comparator detects analog signal levels
SURFACE INDEX

ANGLES (GEOMETRY)

Instrumentation for nondestructive testing of composite honeycomb materials
M-FS-20405  B69-10366  03

Sonic boom propagation in stratified atmosphere
LANGLEY-10480  B69-10391  06

Root-cubing and general root-powering methods for finding the zeros of polynomials
ARG-10444  B69-10424  02

Energy-storage of a prescribed impedance
ARG-10428  B69-10431  02

Optimizing solar-cell grid geometry
EQ-10417  B69-10460  01

ANALYTIC FUNCTIONS

An orthonormalization procedure for multivariable function approximation
M-FS-1313  B66-10579  01

Analytical drafting curves provide exact equations for plotted data
LANGLEY-285  B67-10601  02

Analysis of magnetically-controlled processes in pulse-modulation systems
GSFC-10248  B67-10070  01

Prediction of thermal radiation from a rocket's exhaust plane
M-FS-20414  B69-10371  02

ANALYTIC GEOMETRY

Instrument calculates moments of inertia of complex plane figures
M-FS-620  B66-10306  01

Analytical drafting curves provide exact equations for plotted data
LANGLEY-285  B67-10601  02

ANALYTICAL CHEMISTRY

Reusable chelating resins concentrate metal ions from highly dilute solutions
JPL-758  B66-10451  03

Xenon forms stable compound with fluorine
ANG-4  B66-10467  03

Product identification techniques used as training aids for analytical chemists
SAM-10025  B68-10373  03

ANALYZERS

Servo system facilitates photoelastic strain measurements on resins
JPL-504  B64-10280  01

Pulse height analyzer operates at high repetition rates, low power
WOO-044  B65-10041  01

Multiaxial analyzer detects low-energy electrons
GSFC-329  B67-10213  01

Highly sensitive solids mass spectrometer uses inert-gas ion source
ERC-11  B66-10114  02

New electron microscope employs new video display technique
ARG-158  B67-10312  03

Analytical techniques for determining boron in graphite
ARG-10087  B68-10102  03

Welder analyzer
MSC-12066  B68-10242  01

Harmonic distortion analyzer speeds setup of magnetic tape recorders
GSFC-10198  B68-10254  01

Mossbauer-effect data-collection system

ANGLES (GEOMETRY)

Analyzing

Computer program performs flow analysis through turbines
LEWIS-236  B66-10496  01

System automatically supplies precise analytical samples of high-pressure gases
M-FS-1014  B69-10090  01

Transient Analysis Generator /TAG/ simulates behavior of large class of electrical networks
NPO-10031  B67-10319  06

Spectrophotometric technique quantitatively determines NaNBT inhibitor in ethylene glycol-water solutions
MSC-11496  B67-10573  03

Hastelloy X properties, data, and metallurgical characteristics
NUC-10302  B68-10023  03

Qualitative and quantitative analysis of mixtures of compounds containing both hydrogen and deuterium
ARG-10312  B69-10177  04

Application of cryanalytic techniques to the analysis of SiC space batteries
GSFC-10569  B69-10731  01

ANCHORS (FASTENERS)

Oceanborne transponder platform has good stability
M-FS-177  B65-10035  05

Expandable insert serves as screw anchor
MSC-301  B66-10132  05

Rock anchors restore broken swamp anchors economically
WLP-10004  B67-10498  05

Novel terminal strips for transformers
NPO-10842  B69-10246  01

ANCHOIC CHAMBERS

Improved fire resistant radio frequency anechoic materials
M-FS-1660C  B69-10450  05

ANOMETERS

New anemometer has fast response, measures dynamic pressure directly
LANGLEY-28  B63-10530  05

Fast-response cup anemometer features cosine response
ARG-90193  B68-10202  01

Compact rotating cup anemometer
NPO-10563  B68-10436  01

Dewpoint temperature inversions analyzed
ARG-10316  B69-10057  02

ANEURYSM

Sickle cell anemia should relieve hematoma pressure
MSC-599  B67-10332  04

ANEUROLOGY

Test monkeys anesthetized by routine procedure
EQ-18  B65-10332  04

ANEURSTIC

A technique for making animal restraints
ARC-25  B63-10564  05

ANGLES (GEOMETRY)

Reference black body is compact, convenient to use

I-29
ANGULAR ACCELERATION

ARC-3 B63-10004 03
Setting of angles on machine tools speeded by magnetic protractor
ARC-5 B63-10006 01
Spherical model provides visual aid for cubic crystal study
LDW-10 B65-10065 03
Beam splitter used in dual filming technique
N-PF-501 B66-10072 02
Specimen holder design improves accuracy of X-ray powder analysis,
JPL-SC-165 B66-10075 02
Sertant measures spacecraft altitude without gravitational reference
MSC-200 B66-10143 02
Multisurface fixture permits easy grinding of tool bit angles
M-PF-506 B66-10171 05
Mount enables precision adjustment of optical-instrumentation mirror
MSC-184 B66-10199 02
Adjustable cutting guide aligns and positions stacks of material
MSC-321 B66-10210 05
Tool forms right angles in component leads
N-PF-722 B66-10346 05
Versatile machine mills, saws light materials
N-PF-827 B66-10364 05
Effect of welding position on porosity formation in aluminum alloy welds
N-PF-2318 B67-10177 05
System enables dimensional inspection of very large structures
M-PF-2477 B67-10214 05
Flow liner extends operating life of high-angulation bellows
N-PF-12023 B67-10512 05
Precision trimmer aids in preparing biomedical specimen blocks for ultrathin sectioning
ARG-242 B67-10541 05
Plastic shoe facilitates ultrasonic inspection of thin wall metal tubing
MSC-10010 B67-10542 02
Flare angles measured with ball gage
N-PF-14690 B66-10030 01
Modified size bar device measures small angles with high accuracy
GSFC-438 B66-10322 02
Automatic star-horizon angle measurement system
MSC-11585 B69-10597 01
Electron interaction in matter
N-PF-14886 B69-10674 02
Photomicrometrology
N-PF-14556 B69-10736 01

ANGULAR ACCELERATION

Angular acceleration measured by deflection in sensing ring
MSC-250 B66-10105 01
Switching mechanism senses angular acceleration
GSFC-462 B66-10158 01
Precision CW laser automatic tracking system investigated
M-PF-1606 B66-10629 01

ANGULAR CORRELATION

Ring laser angle encoder
MSC-13099 B69-10115 01

ANGULAR DISTRIBUTION

Device measures reaction engine thrust vector deviations
JPL-SC-163 B66-10642 05
Helical tape forming device
GSFC-10830 B69-10137 05

ANGULAR VELOCITY

System measures angular displacement without contact
LANGLEY-46 B65-10073 01
Variable-capacitance tachometer eliminates troublesome magnetic fields
GSFC-435 B66-10126 01
Mount enables precision adjustment of optical-instrumentation mirror
MSC-184 B66-10199 02
Modified hydraulic braking system limits angular acceleration to safe values
GSFC-476 B66-10310 05
Flexible arms provide constant force for pressure switch calibration
EQ-38 B66-10317 05
Spherical pipe joint delivers loads equally to mating flange
N-PF-827 B66-10665 05
Motion drive system is accurately controlled in the 1-micron range
JPL-864 B66-10695 05
Gimbal angle sensor
GSFC-10305 B66-10315 01
Precisely repeatable rotary mechanism
NPO-10679 B69-10696 05

ANHYDRIDES

Xenon fluoride solutions effective as fluorinating agents
ABG-217 B67-10133 03
Synthesis of pure aromatic glycidyl esters for use as adhesives
N-PF-12705 B67-10647 03
Quick 4cm-decif electrode pastes
MSC-13249 B69-10598 04

ANILINE

Substituted silane-diol polymers have improved thermal stability
N-PF-469 B66-10259 03

ANIMALS

A technique for making animal restraints
ARC-25 B63-10564 05
Miniature bioelectric device accurately measures and telemeters temperature
ARC-52 B66-10057 01
Uranyl phthalocyanines show promise in the treatment of brain tumors
AMB-100 B67-10188 04
Experimental study and evaluation of radioprotective drugs
ARG-10196 B68-10320 04
Concentrations of the naturally occurring radionuclides Pb-210, Po-210, and Ba-226 in aquatic fauna
AMB-10345 B69-10258 02
Automatic bird watcher
ARG-10342 B69-10286 02
SUBJECT INDEX

ANIONS
Sodium perxenate permits rapid oxidation of manganese for easy spectrophotometric determination 886-262  E67-10421 03
Nitric acid-organic mixtures surveyed for use in separation by anion exchange methods 886-10515  E67-10425 03
Separation of the rare earths by anion-exchange in the presence of lactic acid 886-10446  E69-10377 03

ANESELE
Mixed ether bath for electrodeposition of aluminum 886-10200  E69-10737 03

ANISOTROPIC MEDIA
Finite element analysis of compressible solids with nonlinear material properties 886-10342  E69-10238 06
Proposed acousto-optic filter 886-10446  E69-10466 02
Production of crystalline polymers via liquid crystal monomers 886-10235  E69-10744 03

ANISOTROPIC SHELLS
Buckling strength of filament-wound cylinders under axial compression is investigated 886-10042  E67-10659 03

ANISOTROPY
Test device prevents molecular bounce-back 886-10546  E69-10546 03
Ignition of binary alloys of uranium 886-10057  E68-10280 01
Study of behavior of sterols at interfaces 886-10085  E68-10281 03
Correction for losses in optical birefringent networks, a concept 886-20088  E68-10571 02
Measurements of thermoelectric power in annealed and quenched gold-platinum alloys 886-10303  E69-10206 03

ANNALING
Integral ribs formed in metal panels by cold-press extrusion 886-230  E65-10161 05
Angular glass tubing drawn from round tubing 886-20  E65-10235 05
Etching process mills PH 14-8 Mo alloy steel to precise tolerances 886-270  E66-10110 03
Gage of 6.5 per cent Si-Fe sheet is chemically reduced 886-537  E66-10454 03
Process yield Co-Fe alloys with superior high temperature magnetic properties 886-333  E66-10535 03

Treatemnt increases stress-corrosion resistance of aluminum alloys 886-1840  E66-10595 05
Machining heavy plastic sections 886-12720  E67-10381 03
Aluminum and stainless steel tubes joined by simple ring and welding process 886-13120  E67-10472 05
Double copper sheath multiconductor instrumentation cable is durable and easily installed in high thermal or nuclear radiation area 886-10007  E67-10538 01

Weld microcracking in Inconel 718 minimized by minor elements 886-18185  E68-10251 03
Consolidation and fabrication techniques for vanadium-20 w/o titanium 886-10488  E69-10360 03
Inverted grounding technique for electron beam heating 886-10411 03
Conditioning flat conductors for flat conductor cable production 886-14914  E69-10429 01

Superconductivity in zirconium-rhodium alloys 886-10223  E69-10010 03
Measurements of thermoelectric power in annealed and quenched gold-platinnum alloys 886-10303  E69-10206 03
Evaluation of magnetic materials for static inverters and converters 886-10306  E69-10541 05

Production of crystalline polymers via liquid crystal monomers 886-20380  E69-10605 03
Evaluation of magnetic materials for static inverters and converters 886-10541  E69-10541 05

ANISOTROPIC SHEELS
Buckling strength of filament-wound cylinders under axial compression is investigated 886-10032  E67-10659 03

Baseline metallography of deformed pyrolytic carbon 886-11196  E69-10488 03
Strain-age cracking in Rene 41 alloy 886-10650  E69-10605 03

ANNULAR FLOW
Fluid check valve has fail-safe feature 886-10546  E69-10207 05
Miniature valve accurately controls small volume fluid flow 886-66  E66-10473 05
Cryogenic fluid flow instabilities in heat exchangers 886-20436  E69-10541 02

ANNULAR NOZZLES
Hydraulic calipers 886-18052  E69-10399 05

ANNULAR PLATES
Sleeve and cutter simplify disconnecting welded joint in tubing 886-384  E69-10240 05

ANNUL
Analysis of annular combustors 886-10399  E69-10541 03
Liquid-metal heat transfer in a cocurrent-flow, double-pipe heat exchanger is investigated 886-10261  E69-10091 02

Single-element coaxial injector for rocket fuel 886-11095  E69-10587 05

ANODES
High purity electroforming yields superior metal models 886-10007  E69-10007 05
Ring counter may be advanced or retarded by command signal 886-10144  E69-10144 01

Deposition monitor and control
NPO-10706 B69-10722 01

APOLLO PROJECT

Automatic reel controls filler wire in welding machines
MSC-416 B66-10236 05

Logic system aids in evaluation of project readiness
MSC-407 B66-10547 05

Spiral spring/strain gage combination accurately measures shock induced deflection
MSC-759 B66-10488 01

New method for critical failure prediction of complex systems
M-PS-14133 B69-10252 02

APOLLO SPACECRAFT

Predicting surface heating rates and pressures resulting from hot exhaust gases
MSC-971 B66-10633 05

Star/horizon simulator used to test space guidance systems
MSC-807 B67-10110 02

Analytical technique characterizes all trace contaminants in water
MSC-11032 B67-10243 03

Computer program provides steady state analysis for liquid propellant propulsion systems
MSC-10064 B67-10414 06

APOLLO TELESCOPE MOUNT

Improved phase-shift-keyed detector
M-PS-20064 B69-10101 01

APPLICATIONS OF MATHEMATICS

Contact stresses calculated for miniature slip rings
M-PS-280 B65-10998 05

Study of random process theory aids digital data processing
M-PS-1475 B67-10309 06

Controllability of distributed-parameter systems
M-PS-14929 B68-10346 02

Liquid-metal heat transfer in a cocurrent-flow, double-pipe heat exchanger is investigated
ARG-10261 B69-10991 02

Reducing quantizer deadband with a range switching digital filter

APPLICATIONS TECHNOLOGY SATELLITES

An overview of electromagnetic interference problems in spacecraft
NPO-11170 B69-10362 01

APPROXIMATION

An orthonormalization procedure for multivariable function approximation
M-PS-1313 B66-10579 01

Linear circuit analysis program for IBM 1620 Monitor 2, 1311/1443 data processing system /CIRCS/
NPO-10131 B67-10173 06

Calculation of resonance neutron absorption in two-region problems /the GAROL code/
NUC-10045 B67-10223 06

Computer program simplifies design of rotating components of turbomachinery
NUC-10046 B67-10235 06

Quantum mechanical calculations of reactive scattering cross sections in bimolecular encounters
M-PS-13594 B67-10527 03

The X square statistic and goodness of fit test
GSPC-10547 B68-10136 02

Independent doubly truncated gamma variables
M-PS-20143 B68-10345 02

General series solution technique for bending of irregular laterally loaded flat plates
NUC-10170 B69-10035 06

Advanced mission analysis programs
GSPC-10575 B69-10171 06

ARC CHAMBERS

Electric arc heater is self starting
LANGLEY-208 B66-10230 03

ARC DISCHARGES

Improved carbon electrode reduces arc sputtering
MSC-219 B66-10026 01

Electric arc heater is self starting
LANGLEY-2C8 B66-10230 03

Cryogenic cooling reduces high voltage arcing between electrodes operating in a vacuum
ARG-109 B66-10899 02

System measures arc energy dissipated in relay contact cycling

I-34
Spectrographic analysis of bismuth-tin eutectic alloys by spark-ignited low-voltage ac-arc excitation

ARC GENERATORS
Magnetic field controls carbon arc tail flame
Control apparatus for spectral energy source

ARC HEATING
Carbon arc ignition improved by simple auxiliary circuit
Segmented electrode increases operating pressure of MHD accelerator
Experimental investigation of megawatt dc arc heating of nitrogen
Laboratory arc furnace features interchangeable hearths

ARC LAMPS
Igniting system for mercury lamps protects transistorized sustaining supply
Water cooled anode increases life of high temperature arc lamp
Protective clothing for workers with 5-kw and 20-kw short-arc lamps

ARC HEATING
Lower-cost tungsten-rhenium alloys
Process yield Co-Fe alloys with superior high temperature magnetic properties
High-strength tungsten alloy with improved ductility

ARC SPRAYING
Intergranular metal phase increases thermal shock resistance of ceramic coating

ARC WELDING
Welding procedures improve quality of welds, offers other advantages
Photosensors used to maintain welding electrode-to-joint alignment
Fingertip current control facilitates use of arc welding gun
Standard arc welders provide high asperrity direct current source
Opposed arcs permit deep weld penetration with only one pass
Power arc welder touch-started with consumable electrode
Portable machine welding head automatically controls arc

Boron carbide whiskers produced by vapor deposition
Tungsten wire and tubing joined by nickel brazing
Argon purge gas cooled by chill box
Cold trap increases sensitivity of gas chromatography
Process yield Co-Fe alloys with superior high temperature magnetic properties
High intensity radiation heat source is capable of sustained operation
Process reduces secondary resonant emission in electronic components
An improved soft X-ray photoionization detector
Oxide film on metal substrate reduced to form metal-oxide-metal layer structure
ARGON LASERS

Welding torch and wire feed manipulator
N-PS-13102  B67-10385  05

Protected, high-temperature connecting cable
LEWIS-10149  B67-10461  01

Study made of heat transfer and pressure drop through tubes with internal interrupted fins
LEWIS-10280  B67-10555  05

Development of dual solid cryogens for high reliability refrigeration system
GSFC-10188  B67-10644  02

Reducing bubbles in glass coatings improves electrical breakdown strength
LEWIS-10278  B68-10214  03

Laser-Doppler gas-velocity instrument
N-PS-20039  B68-10349  02

Two systems developed for purifying inert atmospheres
ARG-10234  B69-10026  03

Preparation of thorium magnesium-zinc reduction
ARG-10245  B69-10079  03

Active frequency control system for argon F2 laser
N-PS-14988  B69-10099  02

Mixing weld gases offers advantages
N-PS-16413  B69-10145  05

Plasma-heating by induction
LEWIS-10528  B69-10185  02

A new solid lubricant
LEWIS-10812  B69-10250  03

Improved retort for cleaning metal powders with hydrogen
LEWIS-10716  B69-10468  03

Epitaxial crystalline growth upon cold substrates
MSC-11196  B69-10079  03

Pulsed high-voltage dc RF sputtering
LEWIS-10920  B69-10699  01

ARGON LASERS

Laser system generates single-frequency light
N-PS-2556  B67-10288  02

Method of directing a laser beam with very high accuracy
NFO-11087  B69-10506  02

ARITHMETIC

Subroutine allows easy computation in extended precision arithmetic
N-PS-1136  B66-10504  01

Versatile analog pulse height computer performs real-time arithmetic operations
ARG-10052  B67-10626  06

ARITHMETIC AND LOGIC UNITS

Transfluxor circuit amplifies sensing current for computer memories
JPL-406  B69-10100  05

Digital data averager improves conventional measurement system performance
MSC-12078  B66-10018  01

Special purpose computer provides programmable digital filter for sampled-data control systems
N-PS-20290  B69-10454  06

ARRAYS

Guidance/Decode facility for FORTRAN II
ARG-10335  B66-10504  01

Journal gas bearing for curved surfaces
N-PS-20423  B69-10102  05

Phase multiplying electronic scanning array
NFO-10302  B67-10381  01

ARSENATES

High-energy, high-power, long-life battery
LEWIS-10724  B69-10131  01

ARSENIC

As integrated circuit switch
LEWIS-10837  B69-10320  05

AROMATIC COMPOUNDS

Irradiation improves properties of an aromatic polyester
LANGLEY-115  B65-10164  03

Substituted silane-diol polymers have improved thermal stability
N-PS-2375  B66-10259  03

Process for preparing dispersions of alkali metals
JPL-318  B66-10639  03

Isostatic compression process converts polyaromatics into structural material
JPL-892  B67-10168  03

ARGON LASERS

Rotor position sensor switches currents in brushless dc motors
N-PS-18194  B68-10299  05

Improved electromechanical master-slave manipulator
ARG-10297  B68-10372  05

Hermetically sealed pump
LEWIS-10837  B69-10320  05

Improved solenoid valve design
GSFC-10607  B69-10704  05
blood pressure research
ABC-53  B65-10325  01

ARTIFACTS
Neutron activation analysis traces copper artifacts to geographical point of origin

HD-0046  B66-10134  01

High voltage pulse generator
MRC-12178  B69-10548  01

ATMOSPHERIC ATTENUATION

Optical automatic gain channel
H-FS-1550  B66-10596  02

Millimeter-wave atmospheric loss prediction method
HBO-11054  B69-10584  01

ATMOSPHERIC COMPOSITION

Improved atmospheric particle analyzer
EBC-33  B67-10231  01

Testing the flammability of materials exposed to arcs
HSC-15225  B69-10531  03

ATMOSPHERIC DENSITY

Pneumatic power is transmitted through air
bearing
MRC-8  B64-10141  05

Coatings decrease metal fatigue failure
ABC-10015  B69-10176  03

ATMOSPHERIC ENTRY

High intensity radiation heat source is capable of sustained operation
ABC-61  B66-10547  02

ATMOSPHERIC ENTRY SIMULATION

Colloidal suspension simulates linear dynamic pressure profile
WGO-266  B66-10214  05

ATMOSPHERIC MODELS

Design of multilayer insulation system
ABC-10166  B69-10615  05

ATMOSPHERIC PRESSURE

Segmented electrode increases operating pressure of MD accelerator

ATOMIC PHYSICS

Handbook explaining the fundamentals of nuclear and atomic physics
MBC-10330  B69-10705  02

ATOMIC SPECTRA

Status of ultrachemical analysis for semiconductors
H-FS-225A  B67-10138  03

Uranium isotopes quantitatively determined by modified method of atomic absorption spectrophotometry
ABO-210  B67-10236  03

ATOMIC STRUCTURE

Thermodynamic properties of solid palladium-silver alloys and other alloys are investigated by torsion-effusion technique
ABO-277  B67-10324  03

Study reveals effect of aluminum on saturation moment of Fe-Ni alloys
ABO-90259  B68-10172  03

Improved atomic resonance gas cell for use in frequency standards
MBC-11666  B68-10230  01

ATOMIZERS

Quick-hardening problems are eliminated with spray gun modification which mixes resin and accelerator liquids during application
LANGLEY-6A  B63-10318  03

Miniature paint-spray gun for recessed areas
MSC-13060  B68-10387  05

ATOMIZING

Two-fluid, impinging-sheet injector
SUBJECT INDEX

1. **AUDIO**
   - **FREQUENCIES**
     - Bodies spatially
     - Three-axis attitude and direction reference instrument has only one moving part
     - Improved head-controlled TV system produces high-quality remote image

2. **ATTITUDE CONTROL**
   - Knob linkage permits one-hand control of several operations
   - Plated nickel wire mesh makes superior catalyst bed
   - Visual attitude orientation and alignment system
   - Rectilinear display gives acceleration load factor and velocity information
   - Precise gimballed mechanism
   - Two-step rocket engine bipropellant valve concept

3. **ATTITUDE INDICATORS**
   - Hydraulic device provides accurate displacements to microinches
   - FRC/CW system measures aircraft attitude
   - Developmental instrument supplies accurate attitude and attitude-rate data
   - Visual attitude orientation and alignment system
   - Instrumentation monitors transported material through variety of parameters
   - Proposed technique for vertical alignment of a crane's cable
   - A polar graphic method for determining the attitude of rocket vehicles

4. **AUDIO EQUIPMENT**
   - High-voltage amplifier has excellent stability and low power consumption
   - Solid-state laser transmitter is amplitude modulated
   - Phonocardiograph microphone is rugged and moistureproof
   - Literal readout of identification signals in Morse code

5. **ATTITUDE (INCLINATION)**
   - Lifting clamp positively grips structural shapes
   - Analog solar system model relates celestial

6. **ATTACHMENT**
   - Quick-attach clamp
   - Microwave technique measures plasma characteristics
   - Remote rapidly varying pressures accurately measured
   - Current pulse amplifier transmits detector signals with minimum distortion and attenuation
   - Shock and vibration response of multistage structure
   - Rotary antenna attenuator

7. **ATTENUATION COEFFICIENTS**
   - The response of monoenergetic gamma rays in finite media are investigated

8. **ATTENUATORS**
   - Variable light source with a million-to-one intensity ratio
   - Small foamed polystyrene shield protects low-frequency microphones from wind noise
   - Nonlinear feedback reduces analog-to-digital converter error
   - Linear signal noise summer accurately determines and controls S/N ratio
   - Electrode amplifier operates over dynamic range of five orders of magnitude

9. **ATTITUDE (INCLINATION)**
   - Dielectric prisms would improve performance of quasi-optical microwave components
   - Combined actuator and latch for cartridge powered actuator
   - Laser-Doppler gas-velocity instrument
   - Optima PM pre-emphasis
   - A compact rotary valve attenuator

10. **ATTITUDE (INCLINATION)**
    - Lifting clamp positively grips structural shapes
    - Analog solar system model relates celestial
AUDITORY SIGNALS

- Sinusoidal pressure generator
- Ultrasonic emission method enables testing of adhesive bonds

AUDITORY SIGNALS

- Speed-sensing device aids crane operators
- Device detects unbonded areas in plastic laminates
- Microphone multiplex system provides multiple outlets from single source
- Phonocardiograph microphone is rugged and moistureproof

AUTONOMYC STAINLESS STEELS

- Stainless-steel elbows formed by spin forging

AUTOCLAYING

- Composite bulkhead fabrication development

AUTOCLAVING

- Scanning photometer system automatically determines atmospheric layer height
- PH acquisition demodulator achieves automatic synchronization of a telemetry channel
- Accuracy of laser measurements improved by pulse autocorrelator electronic system

AUTOMATIC CONTROL

- Elastic orifice automatically regulates gas bearings
- Level of super-cold liquids automatically maintained by levelometer

AUTOMATIC GAIP CONTROL

An improved atomic hydrogen frequency and time standard
GSPC-10760 B69-10341 02

AUTOMATIC GAIN CONTROL

Automatic gain control circuit handles wide input range
MSC-166 B66-10089 01

Linear signal noise summer accurately determines and controls S/N ratio
JPL-SC-152 B66-10433 01

Optical automatic gain channel
m-ps-1550 B66-10596 02

Ultraminiature television camera
H-PS-19267 B67-10469 01

New passive telemetry system
H-20214 B69-10312 01

Field Effect Transistor /FET/ circuit for variable gain amplifiers
GSFC-10116 E69-10322 01

Offset lenses add versatility to phototypesetting machine
H-9 B66-10173 02

Tape reading fixture
H-PS-14146 B69-10008 05

AUTOMATION

Automated design of optical systems by digital computer
NPO-10265 B67-10632 06

Microprobe investigation of brittle segregates in aluminum Mg and TiG welds
N-PS-14720 B66-10334 03

Microdetermination of areas in urine using p-dimethylaminobenzaldehyde /PDAB/
H-PS-10715 B69-10317 04

Determination of quadratic equation coefficients describing three-dimensional surfaces, their constraint and skewed planes, and view point areas
m-ps-15043 B69-10435 06

AUTOMOBILES

Design of a strain-gage probe
ARS-10338 B69-10343 05

AUTORADIOGRAPHY

Foot-operated cell-counter
ARS-10315 B69-10351 01

AUXILIARY POWER SOURCES

Thermionic diode switching has high temperature application
NPO-10404 B67-10672 01

Zinc-oxygen primary cell yields high energy density
N-PS-16661 B68-10218 01

AVALANCHE DIODES

Temperature-sensitive network drives astable multivibrator
GSPC-137 B63-10609 01

Blocking oscillator uses low triggering voltage
MSC-58 B64-10017 01

Zener diode function generator requires no external reference voltage
JPL-0031 B65-10013 01

Zener diode is starter for transistor regulated power supply
H-0015 B65-10052 01

Synchronized pulse generator needs no external power

SUBJECT INDEX

GSPC-274 B65-10072 01

Variable voltage supply uses Zener diode as reference
GSPC-262 B65-10697 01

Boron trifluoride nuclear detector preamplifier uses single-cable connection
LWIS-178 B65-10255 01

Zener diode controls switching of large direct currents
MSC-180 B65-10350 01

Circuit exhibits power efficiency greater than 75 percent
MSC-258 B66-10034 01

Complementary monostable circuits achieve low power drain and high reliability
GSPC-433 B66-10179 01

Circuit protects regulated power supply against overload current
GSPC-453 B66-10292 01

Electronic circuit provides accurate sensing and control of dc voltage
NU-0089 B66-10591 01

Electrometer amplifier operates over dynamic range of five orders of magnitude
ARC-75 B67-10199 01

High power dc/dc and dc/ac electrical power converter techniques developed
N-PS-13227 B67-10390 01

Development of reliability prediction technique for semiconductor diodes
GSPC-10231 B67-10651 06

Current-limiting voltage regulator
MSC-11824 B68-10305 01

Solid state high-voltage pulser operates with low supply voltage
N-PS-14034 B68-10308 01

Transistorized Marx bank pulse circuit provides voltage multiplication with nanosecond rise-time
ARG-10110 B68-10328 01

Low-cost, fast-response drive circuit for electromagnetic torque motors
LEWIS-10143 B68-10386 01

Method for measuring alternator voltage transients
LEWIS-10373 B68-17513 01

Self-starting circuit for switching regulators
LEWIS-10686 B69-10128 05

Low-cost voltage-level detector
LEWIS-10885 B69-10217 01

Improved dc voltage regulator
KXS-06467 B69-10369 01

Punch-magnet delay eliminated by modification of circuit
ARS-10333 B69-10416 01

High voltage pulse generator
MSC-12178 B69-10588 01

AVALANCHE

Improved frequency divider employs transistor avalanche effect
NPO-10008 B67-10575 01

AVERAGE

Computer program generates averaged value data tapes
N-PS-12728 B67-10411 06

Trinitiated alumina serves as reagent for self-labeling analysis ARG-209  B67-10315  03

Laser system used for dynamic balancing of gyro M-PS-12718  B68-10225  05

BALL BEARINGS
Device transmits rotary motion through hermetically sealed wall JPL-301  B63-10198  05

Quick-acting clutch disengages idle drive motor GSPC-143  B64-10028  05

Bearing transmits rotary and axial motion LANGLY-27  B64-10130  05

Ball bearing used in design of rugged flowmeter LEWIS-159  B64-10170  05

Miniature bearings lubricated by sonic dispersion method M-PS-202  B65-10106  03

Control of component differential hardness increases bearing life LEWIS-190  B65-10251  05

Friction device damps linear motion of rotating shaft WOO-214  B66-10030  05

Polytetrafluoroethylene lubricates ball bearings in vaccum environment M-PS-379  B66-10081  03

Intermediate rotating ring improves reliability of dynamic shaft seal

M-PS-575  B66-10197  05

Bearing pulley facilitates removal and replacement of bearing assemblies M-PS-1538  B66-10418  05

Spherical pipe joint delivers loads equally to mating flange M-PS-807  B66-10665  05

Improved rolling element bearings provide low torque and small temperature rise in ultrahigh vacuum environment LEWIS-389  B66-10678  05

Swing-out rail system separates overhead crane rails NW-0094  B66-10713  05

Tester for study of rolling element bearings LEWIS-305  B67-10009  01

Design concept to decrease relative speed of ball bearings M-PS-2003  B67-10212  05

Line adapter provides quick disconnect under moderate side loading M-PS-2159  B67-10256  05

Concept for modifying drafting instruments to minimize smearing KSC-10056  B67-10283  05

Vacuum-jacketed transfer line installation technique M-PS-14496  B66-10125  05

High-temperature bearing lubricants LEWIS-10408  B66-10249  05

Dynamic-reservoir lubricating device M-PS-14652  B66-10261  05

High-speed pulse camera KSC-11353  B68-10329  02

Evaluation of lubricants for ball bearings at high temperatures LEWIS-10578  B66-10032  05

Design and testing of liquid hydrogen-cooled, ultrahigh-speed ball bearings M-PS-18453  B67-10178  05

Study of high-speed angular-contact ball bearings under dynamic load M-PS-20562  B69-10367  05

Flexible rivet-set M-PS-20317  B69-10459  05

BALLAST (MASS)
Ballast barge concept for underwater structures KSC-10196  B68-10168  05

BALLASTS (IMPEDEANCES)
Increased junction lead inductance ballasts high-frequency transistors GSPC-387  01

BALLISTIC MISSILES
Computer program for mass optimal solutions of some endpoint trajectory problems M-PS-12976  B67-10310  06

BALLOON FLIGHT
Balloon batteries, charged and heated by solar energy GSPC-10769  B66-10585  01

BALLOON SOUNCING
Multichannel pulse height analyzer is inexpensive, features low power requirements NQM-10020  B67-10258  01
Balloons

New anemometer has fast response, measures dynamic pressure directly
LANGLEY-28  B63-10530  01

Rough surface improves stability of air-sounding balloons M-PS-320  B65-10326  05

Balloons

Flexible fastener allows thermal expansion
LANGLEY-40  B64-10145  05

Ball and socket joints provide accurate biaxial gimbals
JPL-658  B65-10205  05

Polytetrafluoroethylene lubricates ball bearings in vacuum environment M-PS-379  B66-10081  03

Segmented ball valve is easy to open and close
WOO-248  B66-10195  05

Torque wrench allows readings from inaccessible locations N-PS-596  B66-10204  05

Submicron metal powders produced by ball milling with grinding aids NEW-186  B66-10221  03

Braking mechanism is self actuating and bidirectional M-PS-1290  B66-10434  05

Solenoid valve design has one moving part NPO-10039  B67-10219  05

Flare angles measured with ball gage N-PS-14690  B68-10030  01

Balloon

Effects of sterilization on the energy-dissipating properties of balsa wood WOO-11207  B69-10592  03

Band Structure of Solids

Thermodynamic properties of solid palladium-silver alloys and other alloys are investigated by torsion-effusion technique ABE-277  B67-10324  03

Bandpass Filters

Frequency-shift-keyer circuit improves PCM conversion for radio transmission GSFC-80  B63-10511  01

Traveling-wave tube circuit simplifies microwave relay GSFC-299  B65-10127  01

Auxiliary circuit enables automatic monitoring of EKG's MSC-106  B65-10142  01

Device detects unbonded areas in plastic laminates WOO-206  B65-10360  01

Thin carbon film serves as UV bandpass filter ERC-8  B66-10060  02

FM acquisition demodulator achieves automatic synchronization of a telemetry channel JPL-612  B66-10271  01

High-performance RC bandpass filter is adapted to miniaturized construction ARC-60  B66-10309  01

Infrared television used to detect hydrogen fires M-PS-654  B66-10363  01

Composite filter steepens rejection slopes in microwave application GSFC-400  B66-10393  01

Subject Index

Monitor assures availability and quality of communication channels KSC-66-38  B67-10028  01

Electronic filter discriminates between true and false reflections EQ-55  B67-10071  02

TV synchronization system features stability and noise immunity JPL-915  B67-10116  01

Infrared radiometer N-PS-13373  B67-10422  01

Stable ac phase and amplitude comparator N-PS-13086  B67-10459  01

Analog voicing detector responds to pitch GSPC-10085  B67-10571  01

Unique frequency-shift-keyed demodulation system GSFC-217  B67-10668  01

Improved relay optical element for spectroradiometer using cryogenically cooled detector KSC-11688  B68-10265  02

Thermal protective visor for entering high temperature areas KSC-10285  B68-10277  05

Method of reducing time base error in digital magnetic recorders GSFC-10108  B68-10317  01

Design of dissipative linear phase filters N-PS-14988  B68-10572  01

Simple demodulator for telemetry phase-shift keyed subcarriers NPO-10050  B69-10095  01

Active frequency control system for argon PI laser N-PS-14988  B69-10099  02

Tunable bandpass filter with variable selectivity ARC-10191  B69-10130  01

RF noise suppression using the photodielectric effect in semiconductors KSC-12259  B69-10225  01

Resonant microwave dichroic surface GSFC-10658  B69-10274  01

An infrared television system for hydrogen flame detection KSC-10368  B69-10354  01

Proposed acousto-optic filter EQ-10440  B69-10466  02

Bandwidth

Bandwidth switching is transient-free, avoids loss of loop lock WOO-054  B64-10349  01

Superconductor magnets used for stagger-tuning traveling-wave maser GSFC-292  B65-10165  01

Field effect transistor prevents high input impedance in ac amplifier JPL-500  B65-10232  01

Solid-state laser transmitter is amplitude modulated IN-121  B65-10236  01

Variable word length encoder reduces TV bandwidth requirements

**BINOCULARS**

- A method for observing gas evolution during plastic laminate cure
  - HSC-15592
  - B69-10530
SUBJECT INDEX

BIOASSAY
Combustion method for assay of biological materials labeled with carbon-14 or tritium, or double-labeled
ARG-10331 B69-10208 04
Direct in-vial collection for liquid-scintillation assay of carbon-14 and tritium
ARG-10424 B69-10412 03

BIOCHEMISTRY
Reusable chelating resins concentrate metal ions from highly dilute solutions
JPL-758 B66-10451 03
Self-sealing closure enables access to several fluid containers
NPO-10123 B67-10207 04
Ultraviolet microscopy aids in cytological and biomedical research
ARG-178 B67-10590 04
Study of radiation effects on mammalian cells in vitro
ARG-10191 B68-10294 02
Micromnes and computers combined for analysis of chromosomes
ARG-10256 B69-10088 04
Qualitative and quantitative analysis of mixtures of compounds containing both hydrogen and deuterium
ARG-10312 B69-10177 04
Nutron therapy of cancer
ARG-10310 B69-10203 04

BIODYNAMICS
Integrated mobility measurement and notation system
MSC-726 B67-10114 04

BIOELECTRICITY
Subminiature biotelemetry unit permits remote physiological investigations
ARC-39 B64-10171 01

BIOINSTRUMENTATION
New low-level a-c amplifier provides adjustable noise cancellation and automatic temperature compensation
ARC-2 B63-10003 04
Improved electrode gives high-quality biological recordings
MSC-17 B64-10025 04
Subminiature biotelemetry unit permits remote physiological investigations
ARC-39 B64-10171 01
Inexpensive, stable circuit measures heart rate
MSC-95 B65-10010 01
Improved conductive paste secures biomedical electrodes
MSC-107 B65-10015 03
Photoelectric sensor output controlled by eyeball movements
MSC-274 B65-10079 01

SIMULATOR produces physiological waveforms
MSC-94 B65-10091 01
Tiny biomedical amplifier combines high performance, low power drain
ARC-41 B65-10203 01
Rugged pressed disk electrode has low contact potential
MSC-158 B65-10320 01
Direct force-measuring transducer used in blood pressure research
ARC-53 B65-10325 01
Improved electrode paste provides reliable measurement of galvanic skin response
MSC-146 B66-10049 04

MINIATURE bioelectric device accurately measures and telemeters temperature
ARC-52 B66-10057 01
Gelatin coated electrodes allow prolonged bioelectronic measurements
MSC-153 B66-10088 01
Phonocardiograph system monitors heart sounds
MSC-185 B66-10154 04
Semiconductor forms biomedical radiation probe
MSC-320 B66-10252 04
Plant respirometer enables high resolution of oxygen consumption rates
EQ-47 B66-10406 04

Multidimensional Reaction Kinetic Ablation Program /FEKAP/
MSC-193 B66-10495 05
Spray-on electrodes enable EKG monitoring of physically active subjects
MSC-36 B66-10645 04
Logarithmic current simulator generates electrical currents accurately between 10 to the minus 11 ampere to 10 to the minus 3 ampere
MSC-0007 B66-10706 01
Review of biological mechanisms for application to instrument design
EQ-33 B67-10663 04
Ultraminiature manometer-tipped cardiac catheter
ARC-10054 B67-10669 01
Nosepiece respiration monitor
MSC-10136 B68-10438 01
Pressure-sensitive bonded junction transducers
MSC-10087 B68-10563 01
Remotely-actuated biomedical switch
ARC-10105 B69-10117 01
Foot-operated cell-counter
ARC-10315 B69-10351 01

BIOLOGICAL EFFECTS
Cytology is advanced by studying effects of deuterium environment
ARG-205 B67-10304 04
Training course for radiation safety technicians
ARG-216 B67-10477 02
New passive telemetry system
EQ-10218 B69-10312 01

BIOLOGY
Purification and characterization of two fully deuterated enzymes
ARC-10314 B69-10207 04
BIOLUMINESCENCE

Quantitative determination of flavin nucleotide using the bacterial bioluminescent reaction
GSPC-10565 B69-10715 04

BIOMICS

Review of research and development in fluid logic elements
H-FS-420 B67-10438 01

BIOPHYSICS

Neutron therapy of cancer
ARG-10310 B69-10203 04

Direct determination of lead-210 by liquid- scintillation counting
ARG-10462 B69-10611 03

BIOSYNTHESIS

Qualitative and quantitative analysis of mixtures of compounds containing both hydrogen and deuterium
ARG-10312 E69-10177 04

BIOTELEMETRY

Analog device simulates physiological waveforms
MSC-51 B64-10109 01

Subminiature biotelemetry unit permits remote physiological investigations
ARC-39 B64-10171 01

Miniature telemetry system accurately measures pressure
ARC-74 B66-10624 01

A phonocardiogram simulator
MSC-67-94 B67-10239 01

Automated urinalysis technique determines concentration of creatine and creatinine by colorimetry
NFO-10169 B67-10245 04

Multichannel implantable telemetry system
ARG-10083 B68-10065 01

Automated patient monitoring system
M-FS-14552 B68-10131 01

New passive telemetry system
HQ-10214 B69-10312 01

BIRDS

Compound equation developed for postnatal growth of birds and mammals
ARG-10192 E68-10427 04

BIREFRINGENCE

Servo system facilitates photoelastic strain measurements on resins
JPL-504 B64-10280 01

Technique developed for measuring transmittance of optical birefringent networks
M-FS-14267 B69-10260 02

Synthesis of electro-optic modulators for amplitude modulation of light
M-FS-14268 B68-10275 02

Correction for losses in optical birefringent networks, a concept
M-FS-20088 B68-10571 02

BIREFRINGENT COATINGS

Sprayable birefringent coating enables strain measurements on large surfaces
M-FS-1488 B66-10578 03

BISMUTH

Dry film lubricant is effective at extreme loads
M-FS-628 B66-10256 03

Development of Curie point switching for this film, random access, memory device

SUBJECT INDEX

WO-10402 B67-10633 02

Analyses of silicon dioxide, magnesium oxide, lead fluoride, bismuth as low-pass velocity filters for neutrons
ARG-10220 B69-10211 02

Induction probe determines levels of liquid metals
ARG-10348 B69-10256 03

Analysis of secondary cells with lithium anodes and immobilized fused-salt electrolytes
ARG-10452 B69-10613 01

BISMUTH ALLOYS

Bismuth alloy potting seals aluminum connector in cryogenic application
WO-260 B66-10138 03

Vacuum chamber is remotely sealed by eutectic metal
NU-0091 B67-10059 05

New bimetallic EMF cell shows promise in direct energy conversion
ARG-10183 B68-10415 01

Spectrographic analysis of bismuth-tin eutectic alloys by spark-ignited low-voltage ac-arc excitation
ARG-10288 B69-10081 03

BISMUTH OXIDES

Th-transmission glasses formed from oxides of bismuth and tellurium
M-FS-279 B65-10190 03

BISMUTH TELLURIDES

Modular thermoelectric cell is easily packaged in various arrays
GSPC-339 B65-10199 01

BISTABLE CIRCUITS

Automatic system determines moments of inertia of asymmetrical objects
M-FS-1769 B66-10636 01

Solid-state time-to-pulse-height converter developed
ARG-170 B67-10053 01

Random access-random release relay switching matrix
M-FS-12590 B68-10301 01

BISTATIC REFLECTIVITY

Combination ranging system and mapping radar
NFO-11001 B69-10325 01

BI SYNCHRONIZATION

FM acquisition demodulator achieves automatic synchronization of a telemetry channel
JPL-612 B66-10271 01

Simultaneous message framing and error detection
MSC-12001 B68-10330 01

BITS

Improved circuit minimizes generation time of pseudonoise check bits
JPL-698 B65-10275 01

Queuing register uses fluid logic elements
M-FS-317 B66-10100 05

Multisurface fixture permits easy grinding of tool bit angles
M-FS-586 B66-10171 01

Tool separates sleeve-type unions without heat
MSC-497 B66-10253 05

Binary sequence detector uses minus number of decision elements
JPL-673 B66-10264 01
SUBJECT INDEX

System monitors discrete computer inputs
H-FS-1021 B66-10389 01

Numerical data frame readout system used in testing telemetry systems
GSFC-551 B67-10175 01

Simultaneous message framing and error detection
MSC-12001 B69-10330 01

Circuitry selectively limits data storage in general purpose computer
GSFC-10605 B69-10121 01

PCR bit detection with correction for intersymbol interference
HSC-12001 B68-10330 01

Pulse-code-modulation baseline correction for low signal-to-noise ratio
HSC-13268 B69-10153 01

BLOOD CIRCULATION

Study of random process theory aids digital data processing
I-PS-1475 E67-10309 06

Reference black body is compact, convenient to use
ARC-3 B63-10004 03

A radiometer-pyrometer
LEWIS-264 B66-10606 01

Inflatable bladder provides accurate calibration of pressure switch
M-FS-367 B65-10279 01

Welds chilled by liquid coolant manifold
M-FS-679 B66-10354 05

Knife cuts honeycomb material to specified depth
MSC-475 B66-10237 05

Tool separates sleeve-type unions without heat
MSC-497 B66-10253 05

New electrical plethysmograph monitors cardiac output
MSC-11447 B68-10220 01

BLOOD

Computer circuit calculates cardiac output
MSC-274 B66-10006 01

Blood oxygen saturation determined by transmission spectrophotometry of hemolyzed blood samples
MSC-11018 B67-10252 04

Improved sample capsule for determination of oxygen in hemolyzed blood
MSC-11017 B67-10408 04

Foot-operated cell-counter
ARG-10315 B69-10351 01

BLOOD CIRCULATION

A rotating, noncapillary heat pipe
LEWIS-10298 B69-10684 05

Rapid and precise analysis for calcium in blood serum
ARG-10246 B69-10160 04

Translator program converts computer printout into Braille language
M-PS-2061 B67-10087 01

Foot-operated cell-counter
ARG-10315 B69-10351 01

Electrical plethysmograph monitors cardiac output
MSC-11447 B68-10220 01
SUBJECT INDEX

BLOOD

Large volume continuous counterflow dialyzer has high efficiency
HQ-10055 B67-10395 04

BLOOD PRESSURE

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Direct force-measuring transducer used in blood pressure research
ABC-53 B65-10325 01

Blood pressure reprogramming adapter assists signal recording
MSC-265 B67-10475 01

BLOOD VESSELS

Multidimensional Reaction Kinetic Ablation
Program /REAP/
MSC-143 B66-10325 01

Hand-held instrument should relieve hematoma pressure
MSC-599 B67-10332 04

BLOOD PRESSURE

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Direct force-measuring transducer used in blood pressure research
ABC-53 B65-10325 01

Blood pressure reprogramming adapter assists signal recording
MSC-265 B67-10475 01

BLOOD VESSELS

Multidimensional Reaction Kinetic Ablation
Program /REAP/
MSC-143 B66-10325 01

Hand-held instrument should relieve hematoma pressure
MSC-599 B67-10332 04

BLOWERS

Portable detector set discloses helium leak rates
NPS-7733 B67-10065 01

BOATS

Discrimination of fish oil and mineral oil slicks on sea water
HQ-10412 B69-10673 02

BODIES OF REVOLUTION

Ellipsoidal optical reflectors reproduced by electroforming
GSFC-92 B63-10547 05

Averaging probe reduces static-pressure sensing errors
LANGLY-36 B65-10114 05

Program computes zero lift wave drag of entire aircraft
LANGLY-1079 B67-10530 06

Finite element analysis of compressible solids with nonlinear material properties
MSC-10342 B69-10238 06

BODY FLUIDS

Apparatus enables automatic microanalysis of body fluids
JPL-962 B66-10515 04

BODY MEASUREMENT (BIOLOGY)

Inexpensive, stable circuit measures heart rate
MSC-95 B65-10010 01

BODY TEMPERATURE

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Miniature bioelectric device accurately measures and telemeters temperature
ABC-52 B66-10057 01

BOILERS

Oxygen-hydrogen torch is a small-scale steam generator
NU-0042 B66-10120 03

Pump simulator provides variable pressure-flow characteristics
LEWIS-10122 B67-10453 05

Channel-wall limitations in the magnetohydrodynamic induction generator
ARG-10128 B69-10255 02

BOILING

Control system maintains selected liquid level
N-PS-370 B66-10039 01

Cryogenic liquid transfer system reduces residual boiloff
LEWIS-274 B66-10157 02

Silazane elastomer remains resilient at 400 deg C
NS-1144 B66-10667 05

Cryogenic liquid level measuring probe
ABC-10136 B68-10291 01

Dynamics of moving bubbles in single and binary component systems
N-PS-14845 B66-10339 02

Heat transfer coefficients for liquid hydrogen turbopumps
N-PS-18345 B68-10517 02

Electrochemical study of aluminum corrosion in boiling high purity water
ABC-10356 B69-10033 03

BOILING WATER REACTORS

Self-sustained hydrodynamic oscillations in a natural-circulation two-phase-flow boiling loop
ABC-10061 B69-10620 02

BOLOGMETERS

Improved insertion-loss tester
JPL-358 B64-10080 01

Wedge immersed thermistor bolometer measures infrared radiation
GSFC-443 B65-10330 02

Ferroelectric bolometer measures RF absolute power at submillimeter wavelengths
GSFC-422 B66-10051 01

Linear signal noise summer accurately determines and controls S/N ratio
JPL-SC-152 B66-10433 01

Detector measures power in 50 to 30,000 GHz radiation band
ERC-26 B66-10581 01

Infrared radiometer
N-PS-13373 B67-10422 01

Precision bolometer bridge
MSC-11473 B68-10156 01

BOLTS

Simple mechanism combines positive locking and quick-release features
WOO-4 B63-10420 05

Fastener provides cooling and compensates for thermal expansion
NU-0003 B65-10038 05

Screw locking cups quickly and neatly crimped
NU-0009 B65-10049 05

Lightweight door seals cryogenic container against diaphragm type loading
N-PS-476 B65-10402 05

O-ring tube fittings form leakproof seal in hydraulic systems
N-PS-481 B66-10020 05

Modified power tool rapidly drives series torque bolts
MSC-221 B66-10054 05

Calibrated clamp facilitates pressure application
MSC-296 B66-10059 05

Mechanism isolates load weighing cell during lifting of load
MSC-297 B66-10071 05

Hand drill adapter limits holes to desired depth
MSC-346 B66-10123 05

I-58
SUBJECT INDEX

Subject: Bonding

- Expandable insert serves as screw anchor
  MSC-301  B66-10132  05

- Pressure-welded flange assembly provides leak-tight seal at reduced bolt loads
  M-PS-640  B66-10247  05

- Diffusion bonding makes strong seal at flanged connector
  M-PS-637  B66-10250  05

- Fastener provides for bolt misalignment and quick release of flange
  BU-0074  B66-10275  05

- Bimetallic devices help maintain constant sealing forces down to cryogenic temperatures
  M-PS-800  B66-10325  02

- Nondestructive test method accurately sorts mixed bolts
  M-PS-1426  B66-10574  01

- Multilayer refractory nozzles produced by plasma-spray process
  NUC-318  B66-10611  05

- Pneumatic wrench retains or discharges nuts or bolts as desired
  NU-0085  B66-10707  05

- Single wrench separates nuts from free-floating bolts
  NUC-10013  B67-10158  05

- Cable clamp bolt fixture facilitates assembly in close quarters
  KSC-67-80  B67-10244  05

- Spherical joint connects axially misaligned flanges
  M-PS-2238  B67-10273  05

- Study made of transfer of heat energy through metal joints in vacuum environment
  M-PS-12534  B67-10465  02

- Tensile testing grips ensure uniform loading of bimetal tubing specimens
  LEWIS-10267  B68-10240  05

- Machining technique prevents undercutting in tensile specimens
  LANGLY-10281  B68-10352  05

- Boydbolt, a positive-latch, simple-release fastener
  MSC-13061  B68-10512  05

- Pressure transducer
  NPO-10853  B69-10364  01

- BOLZMANN TRANSPORT EQUATION
  Structure of the isotropic transport operators in three independent space variables
  ARG-10486  B69-10432  06

- GAMBIT program
  NUC-10243  B69-10433  06

- BONDSTABILIZATION
  Multiple element soft X-ray source produces wide range of radiation
  GSPC-286  B65-10082  02

- Electron beam parallel X-ray generator
  MSC-11022  B67-10372  02

- BONDING
  New method forms bond line free of voids
  LANGLY-20  B63-10558  05

- Metals plated on fluorocarbon polymers
  JPL-548  B63-10612  03

- Elastomers bonded to metal surfaces seal electrochemical cells
  GSPC-168  B64-10113  03

- Screening technique makes reliable bond at room temperature
  M-PS-227  B65-10004  03

- Thermocompression bonding produces efficient surface-barrier diode
  JPL-SC-066  B65-10007  05

- Improved conductive paste secures biomedical electrodes
  MSC-107  B65-10015  03

- Adhesive for vacuum environments resists shock and vibration
  MSC-56  B65-10106  03

- Thermistor connector assembly increases accuracy of measurements
  LANGLY-62  B65-10045  01

- Thoriated nickel bonded by solid-state diffusion method
  LANGLY-116  B65-10324  01

- Selenium bond decreases ON resistance of light-activated switch
  JPL-SC-101  B65-10324  03

- Calibrated clamp facilitates pressure application
  M-PS-298  B66-10059  05

- Reflective insulator layers separated by bonded silica beads
  M-PS-560  B66-10070  03

- Storage-stable foamy polyurethane is activated by heat
  LANGLY-167  B66-10111  03

- Split glass tube assures quality in electron beam brazing
  M-PS-562  B66-10151  05

- Brazing process using Al-Si filler alloy reliably bonds aluminum parts
  MSC-440  B66-10241  05

- Electrolytic etching process provides effective bonding surface on stainless steel
  GSPC-404  B66-10299  03

- Ultrasonic emission method enables testing of adhesive bonds
  M-PS-799  B66-10341  01

- Dot patterns provide reproducible flaw areas for study of adhesive bonds
  M-PS-862  B66-10367  05

- Composite gaskets are compatible with liquid oxygen, resist compression set
  M-PS-455  B66-10395  03

- Adhesive for polyester films cures at room temperature, has high initial tack
  M-PS-938  B66-10487  03

- Braise alloy holds bonding strength over wide temperature range
  LANGLY-337  B66-10519  03

- Composite bulkhead fabrication development
  M-PS-1264  B66-10582  03

- Composite weld rod corrects individual filler weaknesses
  M-PS-1923  B67-10107  05

- Nonwoven glass fiber mat reinforces polyurethane adhesive
  M-PS-2309  B67-10113  03

- Porous mandrels provide uniform deformation in hydrostatic powder metallurgy
  M-PS-1972  B67-10209  03

- Liquid crystals detect voids in fiber glass

I-59
laminates
LEWIS-10104

Improved ultrasonic TV images achieved by use of Lamb-wave orientation technique
ABG-203

Method of improving contact bonds in silicon integrated circuits
N-PS-1753

Metal flame spray coating protects electrical cables in extreme environment
NVC-10077

Flowmeter determines six ratio for viscous adhesives
N-PS-2308

Heavy-gage bonded honeycomb sandwich as primary load-bearing structure
N-PS-12060

Method of disjoining adhesively bonded electronic cordwood modules
MSC-12060

Glass coated single grid for charged particle acceleration
LEWIS-10106

Miniature pressure transducer for stressed member application
MSC-11869

Application of the solid lubricant polybenzen disulfide by sputtering
LEWIS-10544

Gage measures total radiation, including vacuum UV, from ionized high-temperature gases
NASA-09802

Frangible electrochemical cell and sealing technique
XGS-10010

Adhesive for cryogenic temperature applications
LEWIS-10264

Miniaturization of magnetic logic circuitry
LANGLEY-10037

Diffusion bond method of joining steel and a TFE-bronze composite
N-PS-20482

Precision mounting for instrument optical elements provided by polyimide bonding
N-PS-20293

Quick-set temporary bonding clamps
NPO-10695

Nondestructive determination of cohesive strength of adhesive-bonded composites
N-PS-20397

Improved primer for bonding polyurethane adhesives to metals
N-PS-90591

A new method for fabrication of flexible vacuum purge jackets

SUBJECT INDEX

M-PS-12646

Instrumentation for bone density measurement
MSC-11388

Carbon offers advantages as implant material in human body
N-PS-18207

Concentrations of the naturally occurring radionucleides Pb-210, Po-210, and Ra-226 in aquatic fauna
ABG-10345

BOOLEAE ALGEBRA

Logic realization of simple majority voting connectives
JPL-727

Pneumatic analog-to-pulse frequency converter
LEWIS-10345

BOOLEAE FUNCTIONS

Veitch diagram plotter simplifies Boolean functions
JFL-385

Exclusive-or logic circuit has useful properties
LANGLEY-214

Scanning means for Cassegrainian antenna
JFL-946

BOOM

Apparatus of small size can be extended into long, rigid boom
JFL-305

BOOMS (EQUIPMENT)

Metal strip forms 21 foot boom, rolls up for compact storage
GSFC-151

Scoop attachment makes helicopter recoveries easier and safer
MSC-130

Sheet metal strip unrolls to form circular boom
GSFC-423

Fixture aids soldering of electronic components on circuit board
ARC-56

Diaphragm spring gives clutch over-center toggle effect
GSFC-459

Booting frame facilitates handling of large objects
N-PS-16166

Proposed technique for vertical alignment of a crane's cable
N-PS-16496

A mechanically extendible boom
NPO-11118

BOOSTER ROCKET ENGINES

Ramping technique gives accelerometer flat frequency response
N-PS-1777

Study made of large amplitude fuel sloshing
N-PS-12381

Fortran IV program for two-impulse rendezvous analysis
N-PS-13971

Shell design computer program

</table>
Thin-film ferrites vapor deposited by one-step process in vacuum

Neutron therapy of cancer

Electrodeless discharge lamp is easily started, has high stability

Substituting gold for silver improves electrical connections

Indium adhesion provides quantitative measure of surface cleanliness

Restricted-flow junction between liquids

Ionene membrane battery separator

Study made of relationship between growth and metabolism

Economical and maintenance-free gas system operates railroad switches

Self-sealing closure enables access to several fluid containers

Compact monitoring and control console for pressurized gas bottles

Blood oxygen saturation determined by transmission spectrophotometry of hemolyzed blood samples

Equations provide tabular information on effects of uniform and variable loads on thin, flat, circular plates

General series solution technique for bending of irregular laterally loaded flat plates

Trajectory optimization using regularized variables

Experimental scaling study of fluid amplifier elements

Dynamics of moving bubbles in single and binary component systems

FORTRAN 4 program calculates velocities and streamlines in a tandem blade turbomachine

Thin-film gage measures low heat-transfer rates

Vacuum probe sampler removes micro-sized particles from surfaces

SAN-10003

Acoustic wave analysis

Instabilities encountered during heat transfer to a supercritical fluid

Experimental design for research on shock-turbulence interaction

Study of high temperature bearing materials

Controllability of distributed-parameter systems

Buckling of Shells Of Revolution with various wall constructions

Development of structural test articles from magnesium-lithium and beryllium

Double gloves reduce contamination of dry box atmosphere

Argon purge gas cooled by chill box

Epoxy-coated containers easily opened by wire band

Special tool kit aids heavily garmented workers

Inflatable bladder to facilitate handling of heavy objects - A concept

Compact retractor protects cabling loops

Camera lens adapter magnifies image

Tape reading fixture

Uranyl phthalocyanines show promise in the treatment of brain tumors

Frictional wedge shock mount is inexpensive, has good damping characteristics

Compressed gas system operates semitrailer brakes during winching operation

Air brake-dynamometer accurately measures torque

Calculations enable optimum design of magnetic brake

Modified hydraulic braking system limits angular deceleration to safe values

Braking mechanism is self actuating and
Emergency escape system uses self-braking mechanism on fixed cable

BRAKING
Compressed gas system operates semitrailer brakes during winching operation

Flexible honeycomb structure can bend to fit compound curves

Connector for thermocouple leads saves costly wire, makes reliable connectors

Mounting for diodes provides efficient heat sink

New alloy brazes titanium to stainless steel

Probe tests micro-weld strength

Titanium treatment improves brazed joints

Refractory metals welded or brazed with tungsten inert gas equipment

Inert-gas welding and brazing enclosure fabricated from sheet plastic

Brazing method produces solid-solution bond between refractory metals

Tungsten wire and tubing joined by nickel brazing

New brazing alloy eliminates metal-stress cracking

Improved tool easily removes brazed tube connectors

Split glass tube assures quality in electron beam brazing

Vacuum test fixture improves leakage rate measurements

Microminiature thermocouple monitors own installation

Braze alloy holds bonding strength over wide temperature range

Preformed stiffeners used to fabricate structural components for pressurized tanks

Silver plating technique seals leaks in thin wall tubing joints

Metal boot permits fabrication of hermetically sealed splices in metal sheathed instrumentation cables

Ultrasonics permits brazing complex stainless steel assembly without flux

High-strength braze joints between copper and steel

Aluminum and stainless steel tubes joined by simple ring and welding process

Tubing dimpling tool assures accurate dip-brazed joints

Evaluation of methods for nondestructive testing of brazed joints

Two-fluid, impinging-sheet injector

X-ray film bolter permits single continuous picture of tubing joint

</table>
Cancer

- Eigh-performance RC bandpass filter is adapted to miniaturized construction
  B66-10309

- Astronaut’s tool for withdrawing/replacing computer cards
  M-PS-20453

- Neutron therapy of cancer
  ARS-10310

Canonical Forms

- Design techniques - Stochastic controllers
  MSC-11554

Cautious Beams

- Scoop attachment makes helicopter recoveries easier and safer
  MSC-130

- Method permits mechanical and electrical checkout of piezoelectric transducers while installed in a system
  ARC-73

- Identification and evaluation of linear damping models in beam vibrations
  ARS-10275

Cautious Members

- Heat exchanger tubes supported in high vibration environment
  M-PS-1407

- Swing-out rail system separates overhead crane rails
  NU-0094

- Conceptual dead weight device to provide pressure calibration
  M-PS-14672

Capacitance

- Welded pressure transducer made as small as 1/8th-inch in diameter
  ARC-11

- Economical fabrication process produces high quality junction transistors
  JPL-SC-065

- Circuit improvement produces monostable multivibrator with load-carrying capability
  GSPC-34A

- FM oscillator uses tetrode transistor
  JPL-92

- Vibrating-membrane electrometer has high conversion gain
  ARC-38

- Thin-film resistors used in functional electronic blocks
  GSPC-380

- Capacitive system detects and locates fluid leaks
  M-PS-478

- Low-power ring counter drives high-level loads
  GSPC-431

- Variable-capacitance tachometer eliminates troublesome magnetic fields
  GSPC-435

- Transducer measures force in vacuum environment
  LEWIS-218

- Large capacitor performs as a distributed parameter pulse line
  LEWIS-176

- High-performance RC bandpass filter is adapted to miniaturized construction
  B66-10309

- New computer program solves wide variety of heat flow problems
  B66-10404

- Solid-state switch increases switching speed
  WOO-298

- Miniature capacitive accelerometer is especially applicable to telemetry
  ARC-72

- Microcomputer preamplifier effectively compensates for input capacitance
  B66-10491

- Compound equation developed for postnatal growth of birds and mammals
  ABG-10192

- Solid-state switch increases switching speed
  ABC-60

- Neutron therapy of cancer
  ABG-10310

- Scoop attachment makes helicopter recoveries easier and safer
  MSC-130

- Electronic test instrument generates extremely small current signals
  ARG-276

- Method permits mechanical and electrical checkout of piezoelectric transducers while installed in a system
  ARC-73

- Miniature electrometer preamplifier effectively compensates for input capacitance
  B66-10549

- Electronic visualization of gas bearing behavior
  LEWIS-10711

- Capacitance-coupled wiper increases potentiometer life
  ARC-10060

- High-voltage pulse generator developed for wide-gap spark chambers
  ARS-10136

- Device for diode tuning in a stripline harmonic multiplier
  M-PS-20153

- Electronic visualization of gas bearing behavior
  LEWIS-10711

- Concept for a multifunctional oscilloscope probe
  M-PS-16390

- Circuit improvement produces monostable multivibrator with load-carrying capability
  GSPC-34A

- Remote control thermal actuator
  LEWIS-10873

- Engineering thermal analyzer
  B66-10760

Capacitance Switches

- Bandwidth switching is transient-free, avoids loss of loop lock
  WOO-054

- Improved sensor counts micrometeoroid penetrations
  LEWIS-76

- Circuit switches latching relay in response to signals of different polarity
  WOO-055

- Hot-air soldering technique prevents overheating of electrical components
  GSPC-91

- Unmanned seismometer levels self, corrects drift errors
  GSPC-100

- Transistorized trigger circuit is frequency-controllable
  GSPC-111

- High efficient square-wave oscillator
  WOO-054

CAPILLARY TUBBS

get-to places
M-PS-1946

Miniature capacitor functions as pressure sensor
JPL-903

Solid-state time-to-pulse-height converter developed
ARG-170

Integrator can easily be set and reset with an electronic switch
ARG-10002

Precision capacitor has improved temperature and operational stability
ARG-189

Study made of dielectric properties of promising materials for cryogenic capacitors
M-PS-13620

Signal generator converts direct current to multiphase supplies
MSC-11043

Multiple meter monitoring circuits served by single alarm
MSC-10984

Blood pressure reprogramming adapter assists signal recording
MSC-265

Long time constant timer requires no recovery time
MSC-10091

Thin film thermal detector
JPL-943

High-temperature /1100 degrees F/ capacitors operate without supplemental cooling
LEWIS-10324

Cardiotachometer with linear beat-to-beat frequency response
ARG-10033

Multipulse current source offers low power losses and high reliability
LEWIS-68

Ferromagnetic core valve gives rapid action on minimum energy
LEWIS-10135

Temperature-stabilized, triggerable microelectronic astable multivibrator starts reliably
MSC-1173

Eddy current disk valve
LEWIS-10123

Gyator-type circuits replace ungrounded inductors
MAC-10608

Improved process for making thin-film sodium niobate capacitors
MSC-11231

Miniature pressure transducer for stressed member application
MSC-11869

Transistorized Marx bank pulse circuit provides voltage multiplication with nanosecond rise-time
ARG-10110

Automatic patient respiration failure detection system with wireless transmission
ARG-10174

High dielectric thick films for screened circuit capacitors
LEWIS-10294

Microelectronic oscillator, 2
GSFC-10387

Microelectronic oscillator
GSFC-10375

Schmitt trigger multivibrator
MSC-10955

Proposed technique for vertical alignment of a crane's cable
M-PS-16496

Quality-weld parameters for microwelding techniques and equipment
M-PS-20484

Self-shielding printed circuit boards for high frequency amplifiers and transmitters
HG-10433

Foot-operated cell-counter
ARG-10315

Dielectric materials for use in thin-film capacitors
M-PS-20471

Magnetic forming of resistive materials
M-PS-20417

Phase-locked-loop phase modulator with high modulation index, low distortion
MSC-12247

Constant-frequency, variable-duty-cycle multivibrator
XGS-10033

Lateral PBP bipolar transistor with aiding field diffusions
MSC-13072

CAPILLARY TUBBS

Tensile-strength apparatus applies high strain-rate loading with minimum shock
JPL-28

Inspection of fine wires simplified by capillary tube wire holder
MSC-359

Electrochemical milling removes burrs and solder from tubing ends
M-PS-714

Automatic cryogenic liquid level controller is safe for use near combustible substances
LEWIS-195

Continuous microbial cultures maintained by electronically-controlled device
ARG-177

CAPS (EXPLOSIVES)

Connector shorting cap provides pin alignment, inspection, and stray voltage protection
M-PS-13111

CARBAMIDERS

Static electricity of polymers reduced by treatment with iodine
NPO-10062

CARBIDES

High temperature alloy
LEWIS-10377
Nickel-base superalloys* excellent properties promote its service to 2200 degrees F
LEWIS-10355 B68-10380 03
Cold machining of high density tungsten and other materials
ABG-10289 B69-10110 05
Study of high temperature bearing materials
LEWIS-10829 B69-10252 03
Improved retort for cleaning metal powders with hydrogen
LEWIS-10718 B69-10468 03
Strain-age cracking in Rene 41 alloy
N-PS-18650 B69-10605 03

CARBOXYLATES
Inhibition of browning in foodstuffs
HQ-10177 B69-10493 04

CARBON
Nickel solution prepared for precision electroforming
WOO-070 B65-10303 03
Improved carbon electrode reduces arc spattering
MSC-219 B66-10026 01
Thin carbon film serves as UV bandpass filter
ERG-0 B66-10060 02
Refractory coating protects intricate graphite elements from high-temperature hydrogen
HD-0027 B66-10094 01
Ultraviolet photographic pyrometer used in rocket exhaust analysis
N-ZS-499 B66-10095 02
Nickel-base superalloys developed for high-temperature applications
LEWIS-226 B66-10222 03
Chromium oxide coatings improve thermal emissivity of alumina
WOO-263 B66-10227 03
Standards for electron probe microanalysis of silicates prepared by convenient method
GSFC-469 B66-10234 03
New tungsten alloy has high strength at elevated temperatures
LEWIS-336 B66-10551 03
Primary cell uses neither liquid nor fused electrolytes
NPO-10001 B67-10275 01
High-strength tungsten alloy with improved ductility
LEWIS-10257 B67-10340 03
Steel test panel helps control additives in pyrophosphate copper plating
LEWIS-10101 B67-10358 05
Wear studies made of slip rings and gas bearing components
N-TS-12882 B67-10403 05
Development of low temperature battery
LEWIS-10326 B67-10546 01
Fiber glass reinforced structural materials for aerospace application
N-PS-14806 B68-10360 03
One-dimensional reacting gas nonequilibrium performance program
MSC-11777 B68-10375 06
One-dimensional two-phase reacting gas nonequilibrium performance program
MSC-11780 B68-10376 06

ARCS
Carbon arc ignition improved by simple auxiliary circuit
MSC-103 B65-10018 01
Carbon arc rod holder has long life, reduces arc spatter
MSC-144 B65-10095 03
Magnetic field controls carbon arc tail flame
MSC-139 B65-10108 01
Light-intensity modulator withstands high heat fluxes
MSC-246 B66-10532 02
Segmented, arch-bound carbon seal is pressure loaded
N-PS-12777 B67-10325 05

CARBON COMPOUNDS
Substitution of stable isotopes in Chlorella
ARG-10258 B69-10197 04

CARBON DIOXIDE
A technique for making animal restraints
ARC-25 B63-10564 05
New inflatable liferaft is nontippable
MSC-44 B64-10001 05
Impurity diffusion process for silicon semiconductors is fast and precise
GSFC-397 B65-10300 01
Buoyant stokes litter assembly used for sea rescue operations
MSC-131 B66-10019 05
Self-inflating lifevest stores in small package
MSC-58 B66-10184 04
Freon provides heat transfer for solid CO2 calibration standard
N-PS-644 B66-10257 02
Flexible fastener effects airtight material closure
JPL-684 B66-10304 05
Development of dual solid cryogens for high reliability refrigeration system
GSFC-10188 B67-10644 02
Fluorescence radiation program
N-PS-13202 B68-10447 06
Repetitively pulsed, wavelength-selective
CARBOXYLIC ACIDS

Subject Index

CARBON DIOXIDE CONCENTRATIONS

carbon dioxide laser
MSC-10178 B68-10564 02

Techniques for controlling warpage and residual stresses in welded structures
M-PS-20307 B69-10086 05

Direct measurement of carbon-14 in carbon dioxide by liquid scintillation counting
ARG-10237 B69-10092 03

Prediction of friction coefficients for gases
LEWIS-10774 B69-10112 02

CARBON DIOXIDE LASERS

Design concepts using ring lasers for frequency stabilization
M-PS-2448 B67-10143 01

Absolute frequency stabilization of laser oscillator against laser amplifier
M-PS-2559 B67-10255 01

CARBON DIOXIDE REMOVAL

Gas diffusion cell removes carbon dioxide from occupied airtight enclosures
MSC-118 B64-10319 03

CARBON STEELS

Aluminum/steel wire composite plates exhibit high tensile strength
M-PS-601 B66-10262 05

CARBON TETRACHLORIDE

Corrosion of aluminum alloys by chlorinated hydrocarbon/methanol mixtures
MSC-11365 B67-10442 03

CARBON 13

An improved nuclear magnetic resonance spectrometer
JPL-762 B67-10234 01

CARBON 14

Direct measurement of carbon-14 in carbon dioxide by liquid scintillation counting
ARG-10237 B69-10092 03

Combustion method for assay of biological materials labeled with carbon-14 or tritium, or double-labeled
ARG-10331 B69-10143 01

Direct in-vial collection for liquid scintillation assay of carbon-14 and tritium
ARG-10424 B69-10412 03

CARBONATES

Modified developer increases line resolution in photosensitive resist
GSPC-386 B65-10270 01

Trace levels of metallic corrosion in water determined by emission spectrography
MSC-1193 B66-10701 03

Carbon offers advantages as implant material in human body
M-PS-18207 B69-10087 04

Primary radical yields in pulse irradiated alkaline aqueous solution
ARG-10322 B69-10167 02

CARBURIZING

Sensing disks for slug-type calorimeters have higher temperature stability
M-PS-1867 B67-10161 01

SUBJECT INDEX

CARDIAC VENTRICLES

Auxiliary circuit enables automatic monitoring of EKGs
MSC-106 B65-10142 01

CARDIOGRAPHY

Digital cardiometer computes and displays heartbeat rate
MSC-93 B64-10258 01

Digital-output cardiogasometer measures rapid changes in heartbeat rate
MSC-133 B65-10143 01

Ultraminiature manometer-tipped cardiac catheter
ARC-10054 B67-10669 01

CARDIOLOGY

Computer circuit calculates cardiac output
MSC-274 B66-10096 01

CARDIOTACHOMETERS

Auxiliary circuit enables automatic monitoring of EKGs
MSC-106 B65-10142 01

Ultraminiature manometer-tipped cardiac catheter
ARC-10054 B67-10669 01

CARDIOVASCULAR SYSTEM

Device induces lungs to maintain known constant pressure
MSC-50 B64-10108 04

Ultraminiature manometer-tipped cardiac catheter
ARC-10054 B67-10669 01

CARDS

Simple scale interpolator facilitates reading of graphs
LEWIS-92 B66-10302 05

Data retrieval system provides unlimited hardware design information
MSC-1144 B67-10170 01

Improved system for documenting measurement data
M-PS-18269 B69-10513 01

CARNOT CYCLE

Technical report on galvanic cells with fused-salt electrolytes
ARG-10297 B69-10155 01

CARRIAGES

Carriage system remotely moves drawer over extended distance
MU-0092 B66-10711 05

Test device prevents weld joint damage by eliminating axial pin forces on unpotted modules
LEWIS-10201 B67-10359 01

Proposed method of rotary dynamic balancing by laser
M-PS-12422 B67-10852 02

Swing arm carrier protects flexible lines during test item rotation
MSC-11464 B68-10037 05

Two devices for analysis of nystagmus
ME-10273 B69-10224 01

CARRIER FREQUENCIES

Double emitter suppressed carrier modulator uses commercially available components
M-PS-2494 B67-10101 01

FM carrier deviation measured by

Thermal expansion properties of aerospace materials
N-PS-18335 B69-10055 03

Design of a strain-gage probe
ARG-10338 B69-10343 05

Tool for reading psychrometric charts
ARG-10358 B69-10527 05

Modular chassis simplifies packaging and interconnecting of circuit boards
JPL-236A B69-10174 01

Hot-air soldering technique prevents overheating of electrical components
GSFC-91 B65-10536 01

Compressed gas system operates semitrailer brakes during winching operation
JPL-0036 B64-10306 05

Back mount device quickly inserts or extracts chassis units
SUBJECT INDEX

MSC-244  B65-10385  05
Insulator-holder protects transistors in dense electronic assemblies

MSC-214  B65-10389  01
Floating device aligns blind connections

MSC-256  B66-10007  05
Aluminum heat sink enables power transistors to be mounted integrally with printed circuit board

MSC-244  B65-10385  05
Checking FORTRAN program flow chart is automatically produced

MSC-256  B66-10007  05
Method permits mechanical and electrical checkout of piezoelectric transducers while installed in a system

MSC-235  B67-10035  01
CHELATES
Reusable chelating resin concentrates metal ions from highly dilute solutions

JPL-758  B66-10451  03
Separation of traces of metal ions from sodium matrices

ARG-10341  B69-10168  03
CHEMICAL COMPOSITION
Lightweight aluminum casting alloy is useful at cryogenic temperatures

M-FS-267  B65-10092  03
Computer program determines chemical composition of physical system at equilibrium

MSC-11777  B66-10670  01
Controlled ferrite content improves weldability of corrosion-resistant steel

M-FS-568  B67-10069  03
CHEMICAL BONDS
Synthesis of various highly halogenated monomers and polymers

M-FS-2143  B69-10495  03
Microdetermination of uranium in tissue

ARG-10039  B67-10580  03
Calibration of a resistance thermometer down to 0.04 degrees K

ARG-10049  B69-10149  01
Primary radical yields in pulse irradiated alkaline aqueous solution

ARG-10322  B69-10167  02
Microdetermination of area in urine using p-dimethylaminobenzaldehyde /PDAB/

JPO-10715  B69-10317  04
Ionone membrane battery separator

JPO-11091  B69-10501  03
Chromatographic detection and analysis of traces of hydrocarbons

KSC-10388  B69-10716  02
Effects of high-pressure hydrogen on storage vessel materials

KSC-10335  B69-10173  01
Gage provides audible signal to facilitate checkout of connector pins

E69-10062  01
CHEMICAL ATTACK
Heat-shrinkable jacket holds fluid in contact with tensile test specimen

MSC-13195  B69-10495  05
CHEMICAL REACTION
Rotating magnetic poles used to pump mercury

LEWIS-276  B66-10434  05
Effects of surface preparation on quality of aluminum alloy weldments

M-FS-13152  B69-10302  03
Effects of hydrogen on metals

M-FS-20364  B69-10372  03
Improved nickel plating of Inconel X-750

M-FS-18604  B69-10463  05
Technique for ultrasonic cleaning with volatile solvents eliminates need for hoods or condensers

MSC-15611  B69-10552  03
CHEMICAL CLEANING
Lightweight aluminum casting alloy is useful at cryogenic temperatures

M-FS-267  B65-10092  03
Computer program determines chemical composition of physical system at equilibrium

MSC-11777  B66-10670  01
Controlled ferrite content improves weldability of corrosion-resistant steel

M-FS-568  B67-10069  03
Elementary review of electron microprobe techniques and correction requirements

ARG-10062  B68-10195  03
One-dimensional reacting gas non equilibrium performance program

MSC-11777  B68-10375  06
One-dimensional two-phase reacting gas

CBEICAL IBDICATIONS

Crack detection method is safe in presence of liquid oxygen.

Isostatic compression process converts polymeric into structural material.

Electronic circuitry used to automate paper chromatography.

Tritiated alumina serves as reagent for self-labeling analysis.

Product identification techniques used as training aids for analytical chemists.

Advances in aluminum anodizing are determined.

CHEMICAL COMPOUNDS

Equilibrium performance program
MSC-11780

Axisymmetric liquid-gas nonequilibrium performance.
MSC-11781

CHEMICAL COMPOUNDS

Crack detection method is safe in presence of liquid oxygen.

Isostatic compression process converts polymeric into structural material.

Electronic circuitry used to automate paper chromatography.

Tritiated alumina serves as reagent for self-labeling analysis.

Product identification techniques used as training aids for analytical chemists.

Advances in aluminum anodizing are determined.

CHEMICAL EFFECTS

Materials physically tested in variable-environment chamber.

CHEMICAL ELEMENTS

Compilation of detection sensitivities in thermal-neutron activation.

Computer program calculates gamma ray source strengths of materials exposed to neutron fluxes.

Ignition of binary alloys of uranium.

Detection sensitivities in 3-8 MeV neutron activation.

Zone purification of potassium chloride.

CHEMICAL ENGINEERING

Materials data handbook, aluminum alloy.

Handbook for design of containers of fluids and gases for spacecraft.

CHEMICAL EQUILIBRIUM

Computer program determines chemical equilibria in complex systems.

CHEMICAL FUELS

Handbook for design of containers of fluids and gases for spacecraft.

CHEMICAL INDICATORS

Test strips detect different CO2 concentrations in closed compartments.

CHEMICAL MACHINING

Electroless nickel resists used in alkaline etching of aluminum.

Reusable neoprene jacket protects parts for chemical milling.

SUBJECT INDEX

Epoxy blanket protects milled part during explosive forming.

Etching processills Fe 14-6 No alloy steel to precise tolerances.

Electrical upsetting of metal sheet forms weld edge.

Chemical milling solution produces smooth surface finish on aluminum.

Gary of 6.5 per cent Si-Fe sheet is chemically reduced.

Modified thermocouple is effective from minus 250 deg to 5000 deg F.

Continuous internal channels formed in aluminum fusion welds.

Chemical milling solution reveals stress corrosion cracks in titanium alloy.

Acid spray technique mills aluminum alloy materials without immersion.

Substituted silazene-diol polymers have improved thermal stability.

Silazene elastomer remains resilient at 400 deg C.

New class of thermosetting plastics has improved strength, thermal and chemical stability.

High strength nickel-base alloy with improved oxidation resistance up to 2200 degrees F.

Sintering characteristics and properties of PdS and PdP are determined.

Reduction by monovalent zinc, cadmium, and nickel cations.

Ceramic-coated boat is chemically inert.

Polymer films exhibit thermal and radiation stability.

Hot-wire detector for chemically active materials used in gas chromatography.

Silazene polymers show promise for high-temperature application.

Preem provides heat transfer for solid CO2.

Chemical regeneration of emitter surface increases thermal diode life.

MSC-192  B66-10431  01

Remote preamplifier circuit maintains
stability over wide temperature range
WOO-278  B66-10432  01

Shaft encoder presents digital output
JPL-SC-191  B66-10436  01

Semiconductors can be tested without
removing them from circuitry
M-PS-1163  B66-10447  01

Simple, one transistor circuit boosts pulse
amplitude
GSPC-501  B66-10480  01

Electronic circuit delivers pulse of high
interval stability
MSC-673  B66-10501  01

Point-source light sensor circuit is
insensitive to background light
JPL-778  B66-10502  01

Solid state annunciator facilitates complex
system troubleshooting
M-PS-1258  B66-10505  01

Antenna simulator permits preinstallation
system checkout
GSFC-522  B66-10518  01

Collector/collector guard ring balancing
circuit eliminates edge effects
JPL-SC-143  B66-10563  01

Electronic circuit provides accurate
sensing and control of dc voltage
NU-0089  B66-10591  01

MOSFET analog memory circuit achieves long
duration signal storage
M-PS-860  B66-10603  01

Electrical continuity scanner facilitates
identification of wires for soldering to
connectors
MSC-626  B66-10605  01

Resistance thermometer has linear
resistance-temperature coefficient at low
temperatures
WOO-190  B66-10612  01

Magnetoresistor monitors relay performance
M-PS-1754  B66-10650  01

Actuator device schedules rate of valve
closure

ABC-170  B67-10053  01  
Control circuit ensures solar cell operation at maximum power  GSPC-402  B67-10061  01  
Portable detector set discloses helium leak rates  N-PS-1733  B67-10065  01  
Strain gage circuitry provides fatigue testing machine with accurate cycle count  BU-0114  B67-10093  01  
Heater control circuit provides both fast and proportional control  N-PS-906  B67-10097  01  
Personal communication system combines high performance with miniaturization  MSC-720  B67-10119  01  
Electrometer amplifier operates over dynamic range of five orders of magnitude  N-I-75  B67-10199  01  
Automated urinalysis technique determines concentration of creatine and creatinine by colorimetry  NO-10149  B67-10245  04  
Experimental coherent fractional frequency multiplier at S-band  N-PS-2427  B67-10250  01  
Fast-response frequency-to-analog converter  N-PS-709  B67-10257  01  
System precisely controls oscillation of vibrating mass  N-PS-1875  B67-10276  01  
Vibrator elapsed time is automatically controlled  N-PS-2573  B67-10284  01  
Circuit provides overcurrent protection to push-pull amplifier  MSC-12033  B67-10300  01  
Transistor biased amplifier minimizes diode discriminator threshold attenuation  N-PS-1063  B67-10311  01  
Electronic test instrument generates extremely small current signals  N-PS-276  B67-10318  01  
Transient Analysis Generator /TAG/ simulates behavior of large class of electrical networks  NO-10031  B67-10319  06  
Brake joint quality tested electromagnetically  N-PS-12795  B67-10333  01  
Field effect transistors improve buffer amplifier  N-PS-976  B67-10338  01  
Method of improving contact bonds in silicon integrated circuits  N-PS-1753  B67-10338  01  
Digital-to-analog converter operates from low level inputs  JPL-907  B67-10357  01  
Signal generator converts direct current to multiphase supplies  M-PS-11043  B67-10368  01  
Multiple meter monitoring circuits served by single alarm  MSC-10984  B67-10369  01  
Mechanical properties of wire insulation automatically determined  MSC-10983  B67-10370  01  
Circuit automatically calibrates flowmeter against liquid-level gauge reference  N-PS-2194  B67-10376  01  
Crack growth measured on flat and curved surfaces at cryogenic temperatures  LEWIS-389  B67-10384  01  
Computer program for network synthesis by frequency response fit  N-PS-12686  B67-10406  06  
Interference effects eliminated in random oriented space station antenna system  MSC-10004  B67-10435  01  
Stable ac phase and amplitude comparator  N-PS-13086  B67-10459  01  
Series transistors isolate amplifier from flyback voltage  MSC-11023  B67-10468  01  
Improved circuit for measuring capacitive and inductive reactances  N-PS-13083  B67-10488  01  
Improved circuit for measuring capacitive and inductive reactances  N-PS-13083  B67-10483  01  
Adaptive control circuit prevents amplifier saturation  NO-10026  B67-10484  01  
Electron beam deflected to determine focal point location  N-PS-14107  B67-10489  01  
One-shot pulse shaper circuit  KG-11379  B67-10514  01  
Synchronized circuit improves accuracy of fluid transfer measurements  MSC-11167  B67-10515  05  
Gyrator-type circuits replace ungrounded inductors  NAC-10608  B67-10584  01  
Circuit enhances vertical resolution in raster scanning systems  MSC-12123  B67-10649  01  
Compensation circuit improves operation of inductive coupling transformers  N-PS-13801  B67-10649  01  
Improved compensation circuit for direct-coupled amplifiers  NO-11167  B67-10649  01  
Tunnel diode circuit used as nanosecond-range time marker  NAC-10614  B67-10664  01  
Welder analyzer  MSC-12068  B67-10670  01  
Silicon strain sensors enable pressure measurement at cryogenic temperatures  N-PS-14703  B67-10670  01  
Improved fuel-cell-type hydrogen sensor  N-PS-14665  B67-10670  01  
Low energy chmmeter can be used to test sensitive circuits, other meters  SAN-10013  B67-10670  01
CIRCULAR CONES

System measures arc energy dissipated in relay contact cycling
M-PS-14541 B68-10312 01

Method of reducing time base error in digital magnetic recorders
GSFC-10106 B68-10317 01

Low-cont., fast-response drive circuit for electromagnetic torque motors
LEWIS-10143 B68-10386 01

Two-way digital driver/receiver uses one set of lines
N-PS-15001 B68-10448 06

Performance analysis of electrical circuits
/PANS/
N-PS-15001 B68-10448 06

Readout system for radiation detector
HSC-90180 B68-10501 01

Locating **sneak paths** in electrical circuitry
M-PS-15018 B68-10565 01

Welding skews with computerized controls
M-PS-20224 B68-10566 01

Device for diode tuning in a stripline varactor harmonic multiplier
N-PS-20153 B69-10013 01

Microelectronic oscillator, 2
GSFC-10387 B69-10063 01

Concept for a multifunctional oscilloscope probe
N-PS-16390 B69-10129 01

Schmitt trigger multivibrator
MSC-10935 B69-10143 01

Positive and negative output circuits
LEWIS-10715 B69-10151 01

A prototype high power portable lamp
M-PS-20229 B69-10189 02

Proposed technique for vertical alignment of a crane's cable
N-PS-16496 B69-10262 05

Technique for abrasive cutting of thick-film conductors for hybrid circuits
MSC-13242 B69-10235 03

Piezoelectric lock mechanism resists lockpicking
SAM-10037 B69-10281 01

Semiautomatic inspection of microfilm records
N-PS-20240 B69-10301 02

Circuit counts pulses and indicates time of occurrence of slow pulses
XMP-0623A B69-10313 01

Simple, accurate automatic frequency control circuit
KSC-10393 B69-10323 01

Improved dc voltage regulator
XRS-06667 B69-10369 01

A positive taper traveling-wave tube
LANGLEY-10263 B69-10407 01

Simplified, reliable circuit sorts binary numbers in order of magnitude
NPO-10414 B69-10503 01

Synchronizing redundant power oscillators
XOS-09377 B69-10546 01

High voltage pulse generator
MSC-12178 B69-10548 01

CIRCULAR CYLINDERS

Flexible coiled spline securely joins mating cylinders
WOO-270 B66-10172 05

Cylindrical claw clamp has quick release feature
M-PS-513 B66-10213 05

Special mandrel permits uniform welding of out-of-round tubing
M-PS-706 B66-10323 05

Friction loading device enables accurate testing of brittle materials
BD-0051 B66-10345 05

A design procedure for the weight optimization of straight finned radiators
GSFC-547 B66-10618 05

Metal flame spray coating protects electrical cables in extreme environment
NWC-10077 B66-10531 03

Digital computer program predicts effects of local pressure transients on deformation and stresses in cylindrical ducts
N-PS-13058 B67-10631 06

CIRCULAR ORBITS

Generalized Newton-Raphson trajectory optimization-generator 1
M-PS-15020 B68-10422 06

Equations provide tubular information on effects of uniform and variable loads on thin, flat, circular plates
ARG-151 B68-10501 05

Device enables calibration of microphones at high sound pressure levels
M-PS-11980 B67-10336 01

Computer program performs frequency analysis of nonuniform turbine disk subjected to temperature gradients
NWC-10301 B68-10006 06

CIRCULAR PLATES

Omnidirectional antennas transmit and receive over large bandwidth
GSFC-436 B66-10133 01

Improved circularly polarized planar-array antenna
NPO-10301 B69-10382 01

CIRCULAR SHELLS

Radial coolant channels fabricated by simplified method
BD-0070 B66-10267 05

CIRCULAR TUBES

Special mandrel permits uniform welding of out-of-round tubing
M-PS-706 B66-10323 05

SUBJECT INDEX

Flexible high-voltage supply for experimental electron microscope
ARG-10482 B69-10603 01

Pulse-height analyzer with digital readout
ARG-10503 B69-10640 01

Miniature backward-diode pressure sensor features stability and low power consumption
EHC-10229 B69-10690 01

Battery charge-discharge controller
N-PS-11837 B69-10747 01

Problem of oscillating cone in supersonic flow is solved by small perturbation techniques
M-PS-869 B66-10700 02

Cylindrical claw clamp has quick release feature
M-PS-513 B66-10213 05

Friction loading device enables accurate testing of brittle materials
BD-0051 B66-10345 05

A design procedure for the weight optimization of straight finned radiators
GSFC-547 B66-10618 05
SUBJECT INDEX

Niobium-uranium alloys with voids of predetermined size and total volume
ARG-10490 B69-10641 03

CIRCULATION
Fine-particle filter prevents damage to vacuum pumps
LEWIS-106 B63-10489 05
Welds chilled by liquid coolant manifold
M-PS-679 B66-10354 05
Two systems developed for purifying inert atmospheres
ARG-10234 B69-10026 03
Self-sustained hydrodynamic oscillations in a natural-circulation two-phase boiling loop
ARG-10461 B69-10620 02
Liquid-metal-piston MHD generator
ARG-10500 B69-10771 02

CIRCULATORS (PHASE SHIFT CIRCUITS)
Double-throw microwave device switches two lines quickly
JPL-410 B63-10258 01

CIRCULATORY SYSTEM
Improved sample capsule for determination of oxygen in hemolyzed blood
MSC-11017 B67-10408 04
Carbon offers advantages as implant material in human body
M-PS-18207 B69-10087 04

CITRIC ACID
Nonhazardous acid etches weld samples
M-PS-107 B66-10370 05
Improved pH buffering agent for sodium hypochlorite
MSC-15443 B69-10084 03

CLADDING
Zirconium alloys with small amounts of iron and copper or nickel show improved corrosion resistance in superheated steam
ARG-226 B67-10050 03
Study made of corrosion resistance of stainless steel and nickel alloys in nuclear reactor superheaters
ARG-230 B67-10051 03
Consolidation and fabrication techniques for vanadium-20 w/o titanium /IV-20/
ARG-10148 B66-10368 03

CLAMPING CIRCUITS
Increased performance reliability obtained with dual /redundant/ oscillator system
GSFC-36 B63-10027 01
Transistorized circuit clamps voltage with 0.1 percent error
GSFC-196 B65-10118 01
Simple circuit provides reliable multiple signal average and reject capability
NU-0069 B66-10282 01

CLAMPS
Reference black body is compact, convenient to use
ARC-3 B63-10004 03
Sleeve and cutter simplify disconnecting welded joint in tubing
JPL-384 B63-10240 05
Novel clamps align large rocket cases, eliminate back-up bars
M-PS-1 B63-10376 05
Buckle joins web straps quickly, adjusts easily

LANGLEY-21 B64-10119 05
Apparatus permits flexure testing of specimens at cryogenic temperatures
M-PS-257 B65-10129 02
Spiral heater coils hand-formed with fixture
LEWIS-208 B65-10192 05
Self-aligning fixture used in lathe chuck jaw refacing
NRC-21 B65-10196 05
Electrical cable connector-clamp has smooth exterior surface
MSC-154 B65-10201 05
Remotely operated clamping tool has positive grip
NU-0020 B65-10254 05
Die and telescoping punch forms convolutions in thin diaphragm
JPL-SC-135 B65-10393 05
Compact retractor protects cabling loops
M-PS-561 B66-10016 05
Resilient clamp holds fuel cell stack through resilient clamp holds fuel cell stack through thermal cycle
MSC-313 B66-10035 05
Bench vise adapter grips tubing securely and safely
MSC-279 B66-10056 05
Calibrated clamp facilitates pressure application
MSC-298 B66-10059 05
Pipe cutting tool is useful in limited space
MSC-36 B66-10102 05
Chart case opens to form briefing easel
MSC-349 B66-10135 05
Split glass tube assures quality in electron beam brazing
M-PS-564 B66-10151 05
Fixture aids soldering of electronic components on circuit board
ARC-56 B66-10162 01
Multisurface fixture permits easy grinding of tool bit angles
M-PS-506 B66-10171 05
Lifting clamp positively grips structural shapes
M-PS-593 B66-10176 05
Cylindrical claw clamp has quick release feature
M-PS-513 B66-10213 05
Hand tool permits shrink sizing of assembled tubing
MSC-504 B66-10239 05
Fixed vacuum plate clamps styrofoam for machining
M-PS-683 B66-10283 05
Extensometer automatically measures elongation in elastomers
M-PS-517 B66-10284 05
Swiveling lathe jaw concept for holding irregular pieces
M-PS-783 B66-10321 05
Adapter assembly prevents damage to tubing during high pressure tests
MSC-563 B66-10330 02
Latching mechanism operates in limited access area

Simple BCD circuit accurately counts to 24

Nonlinear feedback reduces analog-to-digital converter error

Electronic phase-locked-loop speed control system is stable

FM carrier deviation measured by differential probability method

Vibrator elapsed time is automatically controlled

CLOSED CIRCUIT TELEVISION

Infrared television used to detect hydrogen fires

Junction connectors permit strategic placement of television cameras

Closed circuit TV system monitors welding operations

Thermal neutron image intensifier tube provides brightly visible radiographic patterns

Improved head-controlled TV system produces high-quality remote image

Closed circuit TV system automatically guides welding arc

Discrimination of fish oil and mineral oil slicks on sea water

CLOSED CYCLES

Closed fluid system without moving parts controls temperature

Gas-injection valve operates at high speed

Actuator device schedules rate of valve closure

CLOSED CYLINDERS

Valve designed with elastic seat

Flexible fastener effects airtight material closure

Inflatable O-ring seal would ease closing of hatch cover plate

Self-sealing closure enables access to several fluid containers

CLOWD COVER

Scanning photometer system automatically determines atmospheric layer height

Electronic shutter gates image orthicon on

GSPC-198

Soldier flux leaves corrosion-resistant coating on metal
JPL-611

Flexible curtain shields equipment from intense heat fluxes
M-FS-48

Coating method enables low-temperature brazing of stainless steel
NU-0030

Pigmented coating resists thermal shock
JPL-SC-083

Gage of 6.5 per cent Si-Fe sheet is chemically reduced
MSC-537

Copper-acrylic enamel serves as lubricant for cold drawing of refractory metals
ARG-64

Combination spacer and gasket provides effective static seal
M-FS-1397

Crucible cast from beryllium oxide and refractory cement is impervious to flux and molten metal
ARG-22

Multilayer refractory nozzles produced by plasma-spray process
M-FS-339

Study made of anodized aluminum circuit boards
M-FS-13580

A method of determining combustion gas flow
M-FS-10257

Improved relay optical element for

SUBJECT INDEX

Mechanism facilitates coating of inner surfaces of metal cylinders
GSFC-515 B66-10698 05

Abraded cadmium-plated cable connectors repaired by conversion coating
M-PS-1424 B67-10014 03

Dispersion of borax in plastic is excellent fire-retardant heat insulator
ARG-5 B67-10016 03

An improved soft X-ray photoionization detector
GSFC-540 B67-10072 05

Liquid crystals detect voids in fiber glass laminates
LEWIS-10104 B67-10286 03

Scribable coating for plastic films
MSC-11194 B67-10409 03

Flame sprayed dielectric coatings improve heat dissipation in electronic packaging
M-PS-13569 B67-10534 01

Bacterial organoclay conformal coating for electronic components
GSFC-10007 B67-10599 03

Application of the solid lubricant polybenzylsulfide by sputtering
LEWIS-10544 B68-10340 03

High-emittance coatings on metal substrates
LXAIS-10325 B68-10381 03

Method for making small pointed thermocouples
SAN-10014 B68-10389 01

Method of making conical fiber optical components
IMP-09745 B69-10020 02

Improved pH buffering agent for sodium hypochlorite
MSC-15443 B69-10084 03

Coatings decrease metal fatigue failure
ARC-10015 B69-10176 03

Investigation of spacecraft coatings
M-PS-20458 B69-10181 06

High temperature coatings for gas bearings
LEWIS-10793 B69-10200 03

Remote balance weights accurately amid high radiation
ARG-10387 B69-10242 05

Simple test indicates degree of cure of polyamide coatings
MSC-15487 B69-10330 03

Improved vacuum deposition apparatus
NPO-11109 B69-10365 02

Improved ferrous shielding for flat cables
M-PS-14524 B69-10401 01

Improved primer for bonding polyurethane adhesives to metals
M-PS-90591 B69-10540 03

Development of improved potting and conformal coating compounds
M-PS-20219 B69-10559 03

Investigation of the development of cracks in solder joints
M-PS-20444 B69-10807 01

COAXIAL CABLES

Modified filter prevents conduction of microwave signals along high-voltage power supply leads
JFL-63 B63-10091 01

Modified RF coaxial connector ends vacuum chamber wiring problem
GSFC-150 B64-10010 01

Compact coaxial connector for printed circuit adds reliability
MSC-57 B64-10016 01

High-pass RF coaxial filter rejects dc and low frequency signals
GSFC-73 B64-10173 01

Cutter and stripper reduces coaxial cable connection time
ARG-80 B65-10094 05

Lightweight coaxial cable connector reduces signal loss
JFL-720 B65-10244 01

Boron trifluoride nuclear detector preamplifier uses single-cable connection
LEWIS-178 B65-10255 01

Antenna configurations provide polarization diversity
GSFC-74 B66-10066 01

Semiconductor forms biomedical radiation probe
MSC-320 B66-10252 04

Junction connectors permit strategic placement of television cameras
KSC-66-22 B66-10391 01

Plug-in connector socket accepts coaxial cable end
ARG-9 B66-10476 01

High frequency wide-band transformer uses coax to achieve high turn ratio and flat response
ARG-107 B66-10600 01

Connector acts as quick coupling in coaxial cable application
JFL-803 B66-10621 01

Process reduces secondary resonant emission in electronic components
JFL-934 B66-10685 01

Current pulse amplifier transmits detector signals with minimum distortion and attenuation
MSC-10055 B67-10347 01

Coaxial cable stripping device facilitates RF cabling fabrication
NPO-10315 B67-10419 05

Adhesives for laminating polyamide insulated flat conductor cable
M-PS-12066 B67-10429 03

Broadband choke suppresses spurious currents in antenna structure
MSC-10013 B67-10675 01

Cryogenic liquid level measuring probe
ARG-10138 B68-10291 01

Coaxial cable stripper for confined areas
KSC-10167 B68-10444 05

COAXIAL FLOW

Seal allows blind assembly and thermal expansion of components
NU-0005 B65-10053 05

COBALT

Vibration analysis utilizing Mössbauer effect
M-PS-11974 B67-10339 01

Practical new method of measuring thermal-neutron fluence
COBALT ALLOYS

New cobalt alloys have high-temperature strength and long life in vacuum environments.
LEWIS-47  B67-10351  03

Bearing alloys with hexagonal crystal structures provide improved friction and wear characteristics.
LEWIS-320  B66-10373  03

Process yield Co-Fe alloys with superior high temperature magnetic properties.
LEWIS-333  B66-10535  03

Cobalt-tungsten, ferromagnetic high-temperature alloy.
LEWIS-10378  B66-10095  03

High temperature alloy.
LEWIS-10377  B66-10253  03

Inspection criteria ensure quality control of parallel gap soldering.
N-FS-14530  B68-10257  05

Helical recorder.
GSFC-10614  B69-10340  01

High-temperature, gas-filled ceramic rectifiers, thyatrons, and voltage-reference tubes.
LEWIS-90271  B69-10376  01

COBALT COMPOUNDS

New class of compounds have very low vapor pressures.
ARC-115  B67-10184  03

Separation technique provides rapid quantitative determination of cesium-137 in irradiated nuclear fuel.
NUC-10047  B67-10194  03

COBALT OXIDES

Solid-film lubricant is effective at high temperatures in vacuum.
LEWIS-228  B66-10087  03

Cobalt improves nickel hydroxide electrodes for batteries.
LEWIS-10760  B69-10228  01

COBALT 60

Irradiation improves properties of an aromatic polyester.
LANGLEY-115  B65-10164  03

CODER

Translator program converts computer printout into braille language.
M-FS-2061  B67-10087  01

DSN seven-day/twelve week schedule program.
NPO-10752  B68-10410  06

Cocks

Improved sample capsule for determination of oxygen in hemolyzed blood.
MSC-11017  B67-10406  04

CODERS

Transistor voltage comparator performs own sensing.
GSFC-228  B65-10028  01

Variable word length encoder reduces TV bandwidth requirements.
LANGLEY-87  B65-10345  01

Pneumatic binary encoder replaces multiple solenoid system.
N-FS-665  B66-10374  01

Shaft encoder presents digital output.
JPL-SC-191  B66-10436  01

Multiplexing control device enables handling of wide variations in sampling rates.
N-FS-1871  B67-10150  01

Acousalator for shaft encoder.
N-FS-13599  B68-10093  01

Color-televisioned medical microscopy.
MSC-13086  B68-10314  01

High-speed pulse cameras.
N-FS-11353  B68-10329  02

Simultaneous message framing and error detection.
MSC-12001  B68-10330  01

Ring laser angle encoder.
MSC-13099  B68-10115  01

Encode/Decode facility for FORTRAN 4.
ARG-10335  B69-10169  06

CODES

Pocket-size manual tape reader device aids computer tape checking.
KSC-10058  B67-10361  01

Design for a rapid automatic sync acquisition system.
NPO-10214  B69-10538  01

CODING

Uppercase and lowercase computer printout increases readability.
HQ-12  B65-10286  01

Tester periodically registers dc amplifier characteristics.
MSC-190  B66-10146  01

Detection system ensures positive alarm activation in digital message loss.
MSO-208  B66-10287  01

Automated drafting system uses computer techniques.
M-FS-788  B66-10362  01

Data retrieval system provides unlimited hardware design information.
MSC-1194  B67-10170  01

A conceptual, parallel operating data compression processor.
NPO-10069  B67-10204  01

Run numbering system for use with data recorders.
N-FS-2557  B67-10215  01

Coded photographic proof paper could serve as convenient densitometer.
N-FS-13374  B67-10443  02

Improved digital TV encoding and decoding system.
MSC-11147  B67-10562  01

Unique frequency-shift-keyed demodulation.

SUBJECT INDEX

SYSTEM
GSPC-217 B67-10668 01

LABCON - Laboratory Job Control program
M-FS-10141 B69-10106 06

Computer grading of examinations
ARG-10269 B69-10159 06

Piezoelectric lock mechanism resists lockpicking
SAN-10037 B69-10201 01

Wide-band doubler and sine wave quadrature generator
SFQ-11133 B69-10383 01

COEFFICIENT OF FRICTION
Kinetic-energy absorber employs frictional force between mating cylinders
LEWIS-75 B63-10442 05

Lateral ring metal elastic wheel absorbs shock loading
M-FS-10312 B66-10663 05

Land landing couch dynamics computer program
MSC-1210 B66-10383 01

Soft metal plating enables hard metal seal to operate successfully in low temperature, high pressure environment
NUC-10083 B67-10350 03

Device measures static friction of magnetic tape
GSFC-10360 B67-10586 03

Rolamite - A new mechanical design concept
SAN-10001 B66-10611 05

Prediction of friction coefficients for gases
LEWIS-10774 B69-10112 02

A new solid lubricant
LEWIS-10102 B69-10250 03

COEFFICIENTS
Radiation used to temperature compensate semiconductor strain gages
LANGLEY-207 B66-10186 02

Resistance thermometer has linear resistance-temperature coefficient at low temperatures
W0-190 B66-10612 01

Glass formulation has high coefficient of thermal expansion
W0-0084 B66-10705 03

Computer subroutine ISUDS accurately solves large system of simultaneous linear algebraic equations
NUC-10051 B67-10344 06

Computer program generates averaged value data tapes
M-FS-12728 B67-10411 06

Linear systems of equations solved using mathematical algorithms
ARG-10146 B68-10292 06

Technique for predicting the thermal expansion coefficients of cryogenic metallic alloys
NUC-102554 B69-10707 02

COERCIVITY
New sintering process adjusts magnetic value of ferrite cores
GSFC-129 B63-10666 01

Process yield Co-Fe alloys with superior high temperature magnetic properties
LEWIS-333 B66-10535 03

MINIATURIZATION OF MAGNETIC LOGIC CIRCUITRY
LANGLEY-10037 B69-10148 06

ADDING CALCIUM IMPROVES LITHIUM FERRITE CORE
ERC-10036 B69-10866 06

COHERENT LIGHT
Improvement in recording and reading holograms
ERC-10151 B68-10347 02

Repetitively pulsed, wavelength-selective carbon dioxide laser
ERC-10178 B68-10564 02

COHERENT RADIATION
Detector measures power in 50 to 30,000 GHz radiation band
ERC-26 B66-10581 01

COELED RADIATION
Device measures characteristics of hot gas stream
M-FS-240 B65-10130 05

A new solid lubricant
LEWIS-10812 B66-10250 03

High permeability semiconductors permit close-tolerance soldering
GSFC-319 B65-10134 05

Spiral heater coils hand-formed with fixture
LEWIS-208 B66-10792 05

Multiple test chamber exposes materials to various environments
MSC-179 B65-10268 01

Flexible coiled spline securely joins mating cylinders
W0-270 B66-10712 05

Rectilinear accelerometer possesses self-calibration feature
M-FS-1480 B66-10452 01

Heat exchanger tubes supported in high vibration environment
M-FS-14801 B66-10567 05

Rotational fluid coupling eliminates hose entanglements
MSC-312 B66-10585 05

Electronic circuit provides accurate sensing and control of dc voltage
W0-0089 B66-10591 01

Pressure probe compensates for dimensional tolerance variations
LEWIS-302 B66-10599 01

Braze joint quality tested electromagnetically
M-FS-12795 B67-10333 01

I-101
Simplified technique demonstrates magnetic domain switching
M-PS-13153 B67-10342 02

Series transistors isolate amplifier from flyback voltage
MSC-11023 B67-10046 01

Environmental control system for cryogenic testing of tensile specimens
SHC-10523 B67-10618 02

Noisy current disk valve
LWIS-10123 B67-10630 05

Quick-attach clamp
XTR-05421 B68-10250 05

Novel terminal strips for transformers
NRC-10842 B69-10246 01

Induction probe determines levels of liquid metals
ARG-10348 B69-10355 03

Design of printed circuit coils
HO-10431 B69-10665 01

Improved sensor counts micronetecoid penetrations
LWIS-76 B63-10443 01

Pressure sensor responds only to shock wave
M-PS-238 B65-10194 01

TV synchronization system features stability and noise immunity
JPL-915 B67-10118 01

Manganese-56 coincidence-counting facility precisely measures neutron-source strength
ARG-90261 B69-10621 01

Cold cathodes
Cold cathode ionization gage has rigid metal housing
GSFC-445 B66-10041 01

Preparation of superconducting thin films of transition-metal interstitial compounds
HO-10445 B69-10470 01

Cold drawing
Copper-acrylatic enamel serves as lubricant for cold drawing of refractory metals
ARG-54 B66-10471 05

Cold pressing
Integral ribs formed in metal panels by cold-press extrusion
M-PS-230 B65-10141 05

Porous mandrels provide uniform deformation in hydrostatic powder metallurgy
M-PS-1972 B67-10299 03

Cold rolling
Radial coolant channels fabricated by simplified method
NU-0070 B66-10267 05

Process yield Co-Fe alloys with superior high temperature magnetic properties
LWIS-333 B66-10535 03

Cold traps
Liquid trap seals thermocouple leads
M-PS-686 B66-10212 05

Cold trap increases sensitivity of gas chromatography
M-PS-1617 B66-10517 03

Electronic circuit provides automatic level control for liquid nitrogen traps
KSC-10127 B66-10061 01

Combustion method for assay of biological materials labeled with carbon-14 or tritium, or double-labeled
ARG-10331 B69-10208 04

Control for maintaining constant level of a cryogenic liquid
NUC-1177 B69-10573 05

Cold working
Upseting butt edge increases weld-joint strength
M-PS-175 B66-10164 05

New weldable high strength aluminum alloy developed for cryogenic service
M-PS-737 B66-10613 05

Excellent spring properties developed in two nickel alloys for use at cryogenic temperatures
SHC-10084 B67-10349 03

Extrusion of small-diameter, thin-wall tungsten tubing
LWIS-9035 B67-10355 05

Stabilizing stainless steel components for cryogenic service
M-PS-13127 B67-10377 05

Cold machining of high density tungsten and other materials
ARG-10289 B69-10110 05

Collapse
Analysis of stability-critical orthotropic cylinders subjected to axial compression
M-PS-12069 B67-10375 03

Dynamics of moving bubbles in single and binary component systems
M-PS-14885 B68-10339 02

Collection
Technique for highly efficient recovery of microbiological contaminants
MSC-13250 B69-10273 04

Direct in-vial collection for liquid-scintillation assay of carbon-14 and tritium
ARG-10424 B69-10412 03

Collimation
Instrument performs nondestructive chemical analysis, data can be telemetered
JPL-SC-078 B65-10317 01

Small, high-intensity flasher permits continuous close-in photography
NU-0043 B66-10119 03

Thermionic scanner pinpoints work function of emitter surfaces
JPL-SC-177 B66-10444 01

Optical superfetheryne receiver uses laser for local oscillator
M-PS-1605 B66-10584 01

Neutron diffractometer allows both magnetic and crystallographic analyses
ARG-191 B67-10131 02

Wideband, high efficiency optical modulator requires less than 10 watts drive power
M-PS-12733 B67-10289 01

Improvement in recording and reading holograms
ERC-10151 B68-10347 02

Analyses of silicon dioxide, magnesium oxide, lead fluoride, bismuth as low-pass velocity filters for neutrons
ARG-10220 B69-10211 02

Laser action from a terbium beta-ketoenolate
at room temperature
GSFC-10593 B69-10324 02
Energy-storage of a prescribed impedance
NPO-10303 B69-10380 01
Oculometer for remote tracking of eye movement
JRC-10114  B69-10449 02.

COLLIMATORS
Attachment converts microscope to point source autocollimator
JPL-499 B64-10124 05
Sensitive level sensor made with spirit level, gives electrical output
LANGLEY- 49 B65-10067 01
Unique construction makes interferometer insensitive to mechanical stresses
JPL-725 B65-10295 02
Optical automatic gain channel
MSC-1550 B66-10596 02
Star/horizon simulator used to test space guidance system
MSC-607 B67-10110 02
Vibration analysis utilizing Nomhauer effect
M-PS-11974 B67-10339 01
Electron beam parallel X-ray generator
MSC-11022 B67-10372 02
Method for X-ray study under extreme temperature and pressure conditions
MSC-11232 B67-10479 02
Improved electro-optical tracking system
M-PS-14791 B68-10311 01
Modified sine bar device measures small angles with high accuracy
GSFC-438 B68-10322 02
Training manual on optical alignment
instruments
N-PS-20292 B68-10574 02
Ring laser angle encoder
MSC-13099 B69-10115 01
Method for copper staining of germanium crystals
ARG-10403 B69-10257 03
Precision mounting for instrument optical elements provided by polyimide bonding
M-PS-20293 B69-10310 05
Method of directing a laser beam with very high accuracy
N-PS-11087 B69-10508 02
Improved camera for better X-ray powder photographs
HQ-10424 B69-10537 01

COLLINEARITY
Proposed acousto-optic filter
HQ-10440 B69-10466 02

COLLOIDS
Magnetic fluid readily controlled in zero gravity environment
LEWIS-126 B65-10335 03
Colloidal suspension simulates linear dynamic pressure profile
WGO-266 B66-10214 05
Standards for electron probe microanalysis of silicates prepared by convenient method
GSFC-469 B66-10234 03
Uranyl phthalocyanines show promise in the treatment of brain tumors
ARG-100 B67-10180 04
Corrosion reduction of aluminum alloys in flowing high-temperature water
ARG-10244 B69-10299 03

COLOR
Inorganic paint is durable, fireproof, easy to apply
GSFC-366 B65-10156 03
Multicolor stroboscope pinpoints resonances in vibrating components
JPL-0033 B66-10422 01
Legibility of electroluminescent instrument panels investigated
MSC-494 B66-10316 02
Device to color modulate a stationary light source gives high intensity
EQ-44 B66-10876 01
Liquid crystals detect voids in fiber glass laminates
LEWIS-10104 B67-10286 03
New electron microscope employs new video display technique
ARG-155 B67-10312 03
Simplified technique demonstrates magnetic domain switching
M-PS-13153 B67-10342 02
Thermodynamic properties of saturated liquid parahydrogen charted for important temperature range
BRC-1001 B67-10346 03
Pocket-size manual tape reader device aids computer tape checking
MSC-10558 B67-10361 01
Use of color-coded sleeve shutters accelerates oscillograph channel selection
MSC-10599 B67-10382 01
Fuel cell life improved by metallic sinter activation after electrode assembly welding
MSC-10965 B67-10436 03
Luminescent screen composition for cathode ray tubes
MSC-19 B68-10056 01
Fluidic-thermochemical display device
BRC-10031 B68-10350 01
Production of solvated electrons
ARG-10416 B69-10430 03
Discrimination of fish oil and mineral oil slicks on sea water
HQ-10412 B69-10673 01

COLOR CENTERS
Some purification of potassium chloride
ARG-10377 B69-10241 03

COLOR PHOTOGRAPHY
Shortened procedure for obtaining reproducible copies of 35 mm color slides
ECS-09987 B68-10560 02
Shortened processing time technique for color industrial radiography
ARG-10235 B69-10001 02

COLOR TELEVISION
Video signal processing system uses gated current mode switches to perform high speed
COLOR VISION

multiplication and digital-to-analog conversion
MSC-761 B66-10429 01

scan rate converter for tape recording and playback of TV pictures
NPO-10166 B67-10676 01

Color-television medical microscopy
MSC-13086 B68-10314 01

COLOR VISION

Slide rule-type color chart predicts reproduced photo tones
MSC-1227 B66-10680 01

COLORIMETRY

Test strips detect different CO2 concentrations in closed compartments
MSC-210 B65-10390 03

Apparatus enables automatic microanalysis of body fluids
JPL-962 B66-10515 04

Automated urinalysis technique determines concentration of creatine and creatinine by colorimetry
NPO-10149 B66-10676 01

Simple colorimetric method determines uranium in tissue
ARG-10039 B67-10580 03

Optimetric system facilitates colorimetric and fluorometric measurements
MSC-10233 B68-10316 01

COLUMNS

Gas chromatographic column enables analysis of propellant hydrazines
MSC-1161 B66-10586 03

COLUMNS (PROCESS ENGINEERING)

Subminiaturized gas chromatograph gives fast, efficient analysis
JPL-735 B66-10182 01

Trace hydrazines in aqueous solutions accurately determined by gas chromatography
MSC-11222 B67-10290 03

Comparative chromatography of chloroplast pigment
ARG-10415 B69-10425 03

COLUMNS (SUPPORTS)

Extendible column can be stowed on drum
JPL-686 B65-10191 05

Computer program simplifies selection of structural steel columns
NO-0046 B66-10097 01

Cone and column solar energy concentrator
LANGLEY-210 B67-10517 01

Deployable lattice column
NPO-10228 B68-10482 05

COMBINATORIAL ANALYSIS

Binary sequence detector uses minimum number of decision elements
JPL-673 B66-10264 01

COMBUSTION

Plastic bags in evacuated chamber make lightweight gas sampling system
FRC-31 B65-10264 01

Infrared television used to detect hydrogen fires
MSC-654 B66-10363 01

Computer program determines chemical equilibria in complex systems
LEWIS-281 B66-10671 01

TOROIDAL RING PREVENTS GAS IGNITION AT VENT STACK OUTLET

Conditions for conversion

Temperature or pressure controller
LEWIS-10297 B66-10337 01

Analysis of annular combustors
LEWIS-10359 B66-10356 06

Technique for assessing potential fire hazards
NPO-10279 B69-10287 03

Improved fire resistant radio frequency anechoic materials
NPO-16604 B69-10450 05

Life detection
NPO-10510 B69-10475 04

Burn rate testing apparatus
MSC-10947 B69-10740 03

CONSUMPTION CHAMBERS

Centrifugal device separates liquid from gas
MSC-282 B65-10394 05

Combustion chamber inlet manifold separates vapor from liquid
NPO-531 B66-10052 05

Microminiature thermocouple monitors own installation
NPO-11111 B66-10463 05

Combustion chamber struts can be effectively transpiration cooled
NPO-1830 B66-10643 03

Machining heavy plastic sections
NPO-12720 B67-10381 03

Analysis of annular combustors
LEWIS-10359 B68-10356 06

Improved combustion chamber optical probe concept
MSC-10951 B69-10280 05

Computer simulation of high-frequency combustion instability and its suppression
Eq-10391 B69-10368 06

Pneumatic flow comparator
NPO-18373 B69-10400 05

Single-element coaxial injector for rocket fuel
NPO-11095 B69-10547 05

New type pressure transducer for severe thermal environments
NPO-20208 B69-10652 01

COMBUSTION CONTROL

Development of detonation reaction engine
NPO-14020 B67-10652 01

Fuel element concept for long life high power nuclear reactors
LEWIS-10369 B69-10154 03

COMBUSTION EFFICIENCY

Combustion method for assay of biological materials labeled with carbon-14 or tritium, or double-labeled
ARG-10331 B69-10208 04

COMBUSTION PRODUCTS

Improved system measures output energy of pyrotechnic devices
WGO-256 B66-10159 01

Hydrogen fire detection system features sharp discrimination
NPO-643 B66-10368 01

</table>
Electron beam seals outer surfaces of porous bodies

Isostatic compression process converts polyaromatics into structural material

Primary cell uses neither liquid nor fused electrolytes

Electromechanical flowmeter accurately monitors fluid flow

Electrical frequency discriminator

Solid state circuit averages multiple signals and rejects those varying significantly from the average

Highly linear, sensitive analog-to-digital converter

Simplified, reliable circuit sorts binary numbers in order of magnitude

Analog-to-digital converter has increased reliability and reduced power consumption

Nonlinear feedback reduces analog-to-digital converter error

System proportions fluid-flow in response to demand signals

FET comparator detects analog signal levels without loading analog device

System monitors discrete computer inputs

Digital system provides superregulation of nanosecond amplifier-discriminator circuit

Monitor assures availability and quality of communication channels

Thermoelectric metal comparator determines composition of alloys and metals

A conceptual, parallel operating data compression processor

FM carrier deviation measured by differential probability method

Run numbering system for use with data recorders

Tester automatically checks insulation of individual conductors in multiple-strand cables

Stable ac phase and amplitude comparator

Simple first order data compression processor concept

Optical system facilitates inspection of printed circuit boards

Closed circuit TV system automatically guides welding arc

Pulse-height analyzer with digital readout

Comparative chromatography of chloroplast pigment

Simple quasi-exponential slope generator

Control system maintains compartment at constant temperature

Device removes hydrogen gas from enclosed spaces

Reparable, high-density microelectronic module provides effective heat sink

Synthesis of various highly halogenated monomers and polymers

Consolidation and fabrication techniques for vanadium-20 w/o titanium

An overview of electromagnetic interference problems in spacecraft

Servo system facilitates photoelastic strain measurements on resins

Detector circuit compensates for vidicon beam current variations

Heavy duty precision leveling jacks expedite setup time on horizontal boring mill

Logarithmic current simulator generates electrical currents accurately between 10 to the minus 11 ampere to 10 to the minus 3 ampere

Polarimeter provides transient response in nanosecond range

Modified univibrator compensates for output timing errors

Compensation circuit improves operation of inductive coupling transformers

Improved compensation circuit for direct-coupled amplifiers

Technique developed for measuring transmittance of optical birefringent

Computer modification reduces time of performing iterative division
M-FS-166   B66-10005  01

Computer programs simplify optical system analysis
GSFC-306  B66-10093  01

Density trace made with computer printout
GSFC-322  B66-10200  01

Upper and lowercase computer printout increases readability
EQ-12  B66-10286  01

FORTRAN program flow chart is automatically produced
M-FS-369  B66-10062  01

Computer program developed for flowsheet calculations and process data reduction
ARG-10134 B67-10222  01

New computer system simplifies programming of mathematical equations
M-FS-441  B66-10361  01

Human transfer functions used to predict system performance parameters
LANGLEY-203 B66-10379  01

New computer program solves wide variety of heat flow problems
M-FS-421  B66-10404  01

Study compares methods for the numerical solution of ordinary differential equations
M-FS-830  B66-10466  01

Computer program performs flow analysis through turbines
LEWIS-236  B66-10496  01

Computer program determines performance efficiency of remote measuring systems
M-FS-1137 B66-10503  01

Subroutine allows easy computation in extended precision arithmetic
M-FS-1136 B66-10504  01

Computer program determines inventory size
M-FS-1135 B66-10506  01

Computer routine adds plotting capabilities to existing programs
GSFC-490  B66-10511  01

Computer program performs statistical analysis for random processes
M-FS-723  B66-10525  01

Computer program searches characteristic data of diodes and transistors
GSFC-493  B66-10529  01

Computer programs perform spectral analyses of up to seven time series
M-FS-1133 B66-10539  01

Computer used to program numerically controlled milling machine
M-FS-1608 B66-10541  01

Ultrasonic quality inspection of bonded honeycomb assemblies is automated
MSC-859  B66-10544  01
Computer programs determine chemical composition of physical systems at equilibrium
MSC-1119 B66-10670 01

Computer program determines chemical equilibria in complex systems
LBWIS-261 B66-10671 01

Equivalent circuit for a field effect transistor established for computer simulation
H-FS-1752 B66-10690 01

Program computes single-point failures in critical system designs
HSC-603 B67-10001 01

Computer program detects transient malfunctions in switching circuits
HSC-604 B67-10002 01

Computer/PERT technique monitors actual versus allocated costs
LBWIS-260 B67-10025 01

Computer program simulates design, test, and analysis phases of sensitivity experiments
H-FS-1496 B67-10077 01

Translator program converts computer printout into braille language
H-FS-2061 B67-10087 01

Polynomial manipulator AP-168
HSC-1231 B67-10103 01

Computer program reduces calculation time of normal response functions
H-FS-1517 B67-10108 01

Computer program calculates monotonic maximum likelihood estimates using method of reversion
H-FS-1516 B67-10136 01

A power-spectral-density computer program
WFO-10126 B67-10160 01

Study of dynamic response of elastic space stations
WFO-10124 B67-10169 06

Data retrieval system provides unlimited hardware design information
HSC-1144 B67-10170 01

Space trajectories program for IBM 7090
WFO-10125 B67-10172 06

Linear circuit analysis program for IBM 1620 Monitor 2, 1311/1443 data processing system /CIRCUS/
WFO-10131 B67-10173 06

Stress calculator speedily converts strain data
H-FS-2021 B67-10182 03

Computer program simulates physical systems by solving the simultaneous differential equations describing the systems
WFO-10019 B67-10193 06

A nodal combination computer program for dynamic analysis of structures
WFO-10129 B67-10217 06

Calculation of resonance neutron absorption

SUBJECT INDEX

in two-region problems /the GAROL code/ WUC-10045 B67-10223 06

Computer program calculates steady-state temperature distribution within plane or axisymmetric solids
WUC-10049 B67-10228 06

Lunar landing couch dynamics computer program
MSC-1210 B67-10233 06

Computer program simplifies design of rotating components of turbomachinery
WUC-10046 B67-10235 06

Computer program samples digital data for CRT display
MSC-999 B67-10249 01

CINDA - Chrysler Improved Numerical Differentiating Analyzer computer program
H-FS-2298 B67-10278 06

Computer program for determination of natural frequencies of closed spherical sandwich shells
MSC-1246 B67-10279 06

Computer program predicts thermal and flow transients experienced in a reactor loss-of-flow accident
WUC-10054 B67-10281 06

Computer program provides linear sampled-data analysis for high order systems
H-FS-12821 B67-10287 06

Computer program uses Monte Carlo techniques for statistical system performance analysis
H-FS-2234 B67-10306 06

Computer program determines thermal environment and temperature history of lunar orbiting space vehicles
H-FS-12916 B67-10307 06

Computer program for mass optional solutions of some endpoint trajectory problems
H-FS-12976 B67-10310 06

Computer program utilizes FORTRAN 4 subroutines for contour plotting
TPC-10127 B67-10323 06

Multiple correlation computer program determines relationships between several independent and dependent variables
H-FS-13024 B67-10327 06

Computer optimization program finds values for several independent variables that minimize a dependent variable
H-FS-13030 B67-10328 06

Computer program resolves radiative, conductive, and convective heat transfer problems for a variety of geometries
H-FS-1910 B67-10329 06

Improved computer program for elastic analysis of highly redundant structural configurations
H-FS-13087 B67-10330 06

General purpose computer programs for numerically analyzing linear ac electrical and electronic circuits for steady-state conditions
H-FS-13094 B67-10331 06

Computer subroutine TSUGS accurately solves large system of simultaneous linear algebraic equations
WUC-10051 B67-10344 06

Computer program VARI-QUIR 3 provides solution of steady-state, multigroup, two-dimensional neutron diffusion equations

I-113
Digital computer program calculates wing aerodynamic characteristics for fixed wings with dihedral and variable-sweep wings at subsonic speeds.

Computer program calculates and plots surface area and pore size distribution data.

Computer program determines exact two-sided tolerance limits for normal distributions.

Computer program offers new method for constructing periodic orbits in nonlinear dynamical systems.

Computer program analyzes Buckling Of Shells Of Revolution with various wall construction, BOROB.

SEAL/Subnetwork Enumeration And Listing.

Computer program analyzes and designs supersonic wing-body combinations.

Computer program analyzes and designs submarine wing-body combinations.

Analysis of annular combustors.

Real fluid properties of normal and parahydrogen.

Axisymmetric two-phase perfect gas performance program.

One-dimensional reacting gas nonequilibrium performance program.

Axisymmetric reacting gas nonequilibrium performance program.

Internal velocity factors.

Analysis of filament reinforced metal-shell pressure vessels.

DS3 seven day/two week schedule program.

CIRCUS--A digital computer program for transient analysis of electronic circuits.

Computer program for machine design of Cassegrain feed systems.

Generalized Newton-Raphson trajectory optimization-generator 1.

Syntactic reduction of block diagrams using FORMAC.

Conditioning flat conductors for flat conductor cable production.

Modified Malthopp mean casserer computer program.

Plane radiation program.

Trajectory optimization using regularized variables
M-PS-13370  B69-10810  02
CONCENTRATING
Uranil phthalocyanines show promise in the treatment of brain tumors
AIB-100  B67-10188  04
CONCENTRATION (COMPOSITION)
Ion exchange determines iodine-131 concentration in aqueous samples
AIB-208  B67-10129  04
Electronic circuitry used to automate paper chromatography
JPL-840  B67-10201  01
Automated xeralseize technique determines concentration of creatine and creatinine by colorimetry
MPO-10149  B67-10245  04
Dynamics of moving bubbles in single and binary component systems
M-PS-10845  B68-10339  02
Flow properties of suspensions rich in solids
AIB-10481  B68-10622  02
CONCENTRATORS
Cone and column solar energy concentrator
LAFLEI-110  B67-10517  01
CONCENTRIC CYLINDERS
Kinetic-energy absorber employs frictional force between mating cylinders
LEWIS-75  B63-10442  05
Seal allows blind assembly and thermal expansion of components
NU-0005  B65-10053  05
Rotational fluid coupling eliminates hose entanglements
M-PS-312  B66-10585  05
Torsion system for creep testing with multiple stress reversals
BQ-10039  B69-10140  03
Ultra-high-flux heat exchanger
M-PS-18135  B69-10201  02
CONCENTRICITY
Equations provide tabular information on effects of uniform and variable loads on thin, flat, circular plates
AIB-151  B66-10601  05
System for measuring roundness and concentricity of large tanks
M-PS-13362  B68-10099  05
Shock-absorbent mountings for bearings
MPO-10626  B69-10331  05
CONCRETE
Post-stressed concrete foundation may reduce machinery vibration
AIB-130  B67-10237  05
Ballast barge concept for underwater structures
KSC-10196  B68-10168  05
Fatigue of reinforced concrete beams under dynamic loading
M-PS-19980  B68-10515  05
CONDENSATES
Crystal microbalance measures condensable molecular fluxes
JPL-845  B67-10012  03
Axisymmetric two-phase perfect gas performance program
M-PS-11774  B68-10374  06
CONDENSATION
Cryopumping of hydrogen in vacuum chambers is aided by catalytic oxidation of hydrocarbons
LEWIS-15  B63-10340  05
Adhesives for laminating polyimide insulated flat conductor cable
M-PS-12066  B67-10429  03
New rapid-curing, stable polyimide polymers with high-temperature strength and thermal stability
M-PS-10576  B69-10118  03
CONDENSERS (LIQUIFIERS)
Reaction heat used in static water removal from fuel cells
M-PS-532  B66-10013  01
Vapor condensation process produces slurry of magnesium particles in liquid hydrocarbons
LEWIS-263  B68-10104  03
Reaction of steam with molybdenum is studied
ARG-295  B67-10502  03
CONDENSING
Xenon fluorides show potential as fluorinating agents
ARG-113  B67-10185  03
Quartz crystals detect gas contaminants during vacuum chamber evacuation
MPO-10144  B67-10205  01
Development of detonation reaction engine

- Improved cryogenic refrigeration system
- Water cooled anode increases life of high temperature arc lamp
- Computer program predicts thermal and flow transients experienced in a reactor loss-of-flow accident
- Development of dual solid cryogens for high reliability refrigeration system
- Viscosity and density of methanol/water mixtures at low temperatures
- Cooled miniature pressure transducers effective at high temperatures
- Dual-purpose chamber-cooling system
- A rotating, noncapillary heat pipe
- Solar-angle sensor has no moving parts
- Simple scale interpolator facilitates reading of graphs
- Device enables measurement of moments of inertia about three axes
- Simple scale interpolator facilitates reading of graphs
- Laser measuring system accurately locates point coordinates on photograph
- Subroutines GEORGE and DRASTIC simplify operation of automatic digital plotter
- Computer program utilizes FORTRAN 4 subroutines for contour plotting
- Earth orbit rendezvous evaluation program
- Simplified system displays complex curves corresponding to input data
- LM lookangle program
- Circuit board hole coordinate locator concept
- Measuring coplanarity of surfaces
- Arylenesiloxane copolymers
- Heparin insolubilized with crosslinking agent
- Refractory thermal insulation for smooth metal surfaces
- Composite gaskets are compatible with liquid oxygen, resist compression set
- Thermoplastic rubberlike material produced at low cost
- Warpage eliminated in copper-clad microwave circuit laminates
- Ionone membrane battery separator
- Method of welding joint in closed vessel improves quality of seal
- Connector for vacuum-jacketed lines cuts tubing system cost
- Improved molybdenum disulfide-silver motor brushes have extended life
- Gate valve with ceramic-coated base operates at high temperatures
- Solder flux leaves corrosion-resistant coating on metal
- Improved technique for localizing electropolishing features novel nozzles
- Mounting for diodes provides efficient heat sink
- Wide-angle sensor measures radiant heat energy in corrosive atmospheres
- Improved holder protects crystal during high acceleration and impact
- Lightweight aluminum casting alloy is useful at cryogenic temperatures
- Inert gas spraying device aids in repair of hazardous systems
- Coating method enables low-temperature brazing of stainless steel
- Adherent protective coatings plated on magnesium-lithium alloy
- Improved wire memory matrix uses very little power
- Wire bundle formed into grids with minute interstices
- Adhesive-backed terminal board eliminates mounting screws
- Copper foil provides uniform heat sink path
- Hydrogen-atmosphere induction furnace has increased temperature range

COOBDIIATBS SUBJECT IBDBX
requires only water supply for coolant

I-FS-1374 B66-10409

Improved cryogenic refrigeration system
JPL-731 B67-10128

Water cooled anode increases life of high temperature arc lamp
NPO-10180 B67-10247

Computer program predicts thermal and flow transients experienced in a reactor loss-of-flow accident
NUC-10054 B67-10281

Development of dual solid cryogens for high reliability refrigeration system
GSFC-10186 B67-10644

Viscosity and density of methanol/water mixtures at low temperatures
E-PS-10951 B68-10274

Cooled miniature pressure transducers effective at high temperatures
LEWIS-10401 B68-10370

Dual-purpose chamber-cooling system
EPO-10467 B68-10506

A rotating, noncapillary heat pipe
LEWIS-10298 B69-10684

Solar-angle sensor has no moving parts
JPL-418 B63-40260

Simple scale interpolator facilitates reading of graphs
LABGLEY-88 B65-10070

Device enables measurement of moments of inertia about three axes
GSFC-49 B65-10176

Simple scale interpolator facilitates reading of graphs
LEWIS-92 B66-10302

Laser measuring system accurately locates point coordinates on photograph
ARG-74 B66-10560

Subroutines GEORGE and DRASTIC simplify operation of automatic digital plotter
NUC-10044 B67-10222

Computer program utilizes FORTRAN 4 subroutines for contour plotting
EPO-10127 B67-10323

Earth orbit rendezvous evaluation program
E-PS-13016 B67-10407

Simplified system displays complex curves corresponding to input data
EPO-10073 B69-10247

LM lookangle program
MSC-13179 B69-10370

Circuit board hole coordinate locator concept
E-PS-14737 B69-10539

Measuring coplanarity of surfaces
MSC-12044 B67-10371

Arylenesiloxane copolymers
E-PS-1812 B67-10079

Heparin insolubilized with crosslinking agent
NPO-10834 B69-10299

Refractory thermal insulation for smooth metal surfaces
E-PS-150 B66-10099

Composite gaskets are compatible with liquid oxygen, resist compression set
E-PS-455 B66-10395

Thermoplastic rubberlike material produced at low cost
JPL-733 B66-10453

Warpage eliminated in copper-clad microwave circuit laminates
E-PS-13892 B67-10454

Ionone membrane battery separator
NPO-11091 B67-10501

Method of welding joint in closed vessel improves quality of seal
JPL-170 B63-10139

Connector for vacuum-jacketed lines cuts tubing system cost
LEWIS-56 B63-10367

Improved molybdenum disulfide-silver motor brushes have extended life
E-PS-64 B63-10479

Gate valve with ceramic-coated base operates at high temperatures
ANC-23 B63-10562

Solder flux leaves corrosion-resistant coating on metal
JPL-611 B64-10206

Improved technique for localizing electropolishing features novel nozzles
WGO-101 B66-10271

Mounting for diodes provides efficient heat sink
E-PS-197 B66-10283

Wide-angle sensor measures radiant heat energy in corrosive atmospheres
E-PS-228 B65-10019

Improved holder protects crystal during high acceleration and impact
JPL-463 B65-10037

Lightweight aluminum casting alloy is useful at cryogenic temperatures
E-PS-267 B65-10092

Inert gas spraying device aids in repair of hazardous systems
LEWIS-88 B65-10115

Coating method enables low-temperature brazing of stainless steel
WGO-0030 B65-10250

Adherent protective coatings plated on magnesium-lithium alloy
E-PS-365 B65-10294

Improved wire memory matrix uses very little power
JPL-SC-167 B65-10359

Wire bundle formed into grids with minute interstices
WGO-089 B66-10372

Adhesive-backed terminal board eliminates mounting screws
MSC-173 B65-10396

Copper foil provides uniform heat sink path
MSC-262 B66-10004

Hydrogen-atmosphere induction furnace has increased temperature range
LEWIS-153 B66-10055
Auxiliary coil controls temperature of RF induction heater
GSFC-428  B66-10067  01

Argon purge gas cooled by chill box
I-PS-560       B66-10153  02

Simple device facilitates inert-gas welding
of tubes
M-PS-558  B66-10155  05

Submicron metal powders produced by ball milling with grinding aids
LEWIS-188  B66-10221  03

Diffusion bonding makes strong seal at flanged connector
M-PS-637  B66-10250  05

Multiple temperatures sampled using only one reference junction
GSFC-485  B66-10260  01

Boron-deoxidized copper withstands brazing temperatures
M-PS-762  B66-10273  03

Bypass rod transfers heat developed in thermionic diode
JPL-SC-136  B66-10303  05

Electrochemical milling removes burrs and solder from tubing ends
M-PS-714  B66-10358  03

Hollow spherical rotors fabricated by electroplating
JPL-SC-117  B66-10366  05

Copper wire plated with nickel and silver resists corrosion
M-PS-761  B66-10421  03

Electrical cabling withstands severe environmental conditions
M-PS-1585  B66-10427  01

Rotating magnetic poles used to pump mercury
LEWIS-276  B66-10434  05

Weldable aluminum alloy has improved mechanical properties
M-PS-295  B66-10445  03

Copper-acrylic enamel serves as lubricant for cold drawing of refractory metals
ARG-54  B66-10471  05

Silver-base ternary alloy proves superior for slip ring lead wires
M-PS-1540  B66-10540  03

Tungsten fiber-reinforced copper composites form high strength electrical conductors
LEWIS-338  B66-10572  03

Nondestructive test method accurately sorts mixed bolts
M-PS-1426  B66-10574  01

Plastic tubing protects flexible copper hose
M-PS-772  B66-10588  05

Multilayer refractory nozzles produced by plasma-spray process
WGO-318  B66-10611  05

Improved memory word line configuration allows high storage density
GSFC-559  B66-10617  01

Intergranular metal phase increases thermal shock resistance of ceramic coating
M-PS-1862  B66-10651  03

Glass formulation has high coefficient of thermal expansion
M-PS-5084  B66-10705  03

Miniature capacitor functions as pressure sensor
JPL-903  B66-10020  01

Neutron activation analysis traces copper artifacts to geographical point of origin
ARG-119  B66-10036  02

Correlation established between heat transfer and ultrasonic transmission properties of copper braze bonds
ARG-247  B66-10037  02

Multipurpose instrumentation cable provides integral thermocouple circuit
MU-0108  B66-10046  01

Zirconium alloys with small amounts of iron and copper or nickel show improved corrosion resistance in superheated steam
ARG-226  B66-10050  03

Evaluation of high temperature stranded hookup wire
M-PS-2478  B66-10122  03

Clasp provides efficient connection for high-density currents
M-PS-2477  B66-10140  01

Fast-acting calorimeter measures heat output of plasma gun accelerator
LEWIS-388  B66-10192  01

Porous sandblasts provide uniform deformation in hydrostatic powder metallurgy
M-PS-1972  B66-10209  03

High-strength braze joints between copper and steel
M-PS-2519  B66-10211  05

Water cooled anode increases life of high temperature arc lamp
PPO-10180  B66-10247  02

Extrusion of small-diameter, thin-wall tungsten tubing
LEWIS-90335  B66-10355  05

Steel test panel helps control additives in pyrophosphate copper plating
LEWIS-10101  B66-10358  05

Potassium plasma cell facilitates thermionic energy conversion process
ARG-10010  B66-10399  01

Metal tube reducer is inexpensive and simple to operate
ARG-49  B66-10401  05

Study made of anodized aluminum circuit boards
M-PS-1358C  B66-10425  01

Adhesives for laminating polyimide insulated flat conductor cable
M-PS-12066  B66-10429  03

Corrosion of aluminum alloys by chlorinated hydrocarbon/methanol mixtures
MGC-11365  B66-10442  03

Warpage eliminated in copper-clad microwave circuit laminates
M-PS-13892  B66-10454  03

Method for X-ray study under extreme temperature and pressure conditions
MGC-11232  B66-10474  02

Double copper sheath multiconductor instrumentation cable is durable and easily installed in high thermal or nuclear radiation area
NUC-10007  B66-10538  01
Study of crevice-galvanic corrosion of aluminum ARG-10572 B69-10536 02

Multilayer plated wire shows promise as memory device HSC-1-106 B69-10025 01

Astronaut space suit communication antenna HSC-12101 B69-10238 01

Improved traveling wave maser amplifier MDO-10548 B69-10244 01

One hundred angstrom niobium wire LEWIS-10128 B69-10279 03

Method for making small pointed thermocouples SAN-10014 B69-10389 01

Temperature controlled strain gaged extensometer LEWIS-10353 B69-10543 01

Contact-spring forming machine for flat conductor cable receptacles M-PS-20126 B69-10550 05

Isothermal drop calorimeter provides measurements for alpha active, pyrophoric materials ARG-10186 B69-10002 02

Liquid gallium rotary electric contact LEWIS-10828 B69-10138 03

Experimental prediction of performance by superconducting cables ARG-10215 B69-10161 01

Aggregation of metallochlorophylls — Examination by spectroscopy ARG-10273 B69-10163 04

 Plasma-heating by induction LEWIS-10528 B69-10185 02

 Imprinting of confining sites for cell cultures on thermoplastic substrates LANGLEY-10495 B69-10236 04

 Diffusion bond method of joining steel and a TPE-bronze composite M-PS-20482 B69-10237 03

 Method for copper staining of germanium crystals ARG-10403 B69-10257 03

 Nondestructive evaluation of printed wiring boards by microh resistance measurements SAN-10034 B69-10272 01

 Parameters for good welding of copper to nickel M-PS-20353 B69-10302 05

 Quality-weld parameters for microwelding technicians and equipment M-PS-20484 B69-10303 05

 Self-shielding printed circuit boards for high frequency amplifiers and transmitters HQ-10433 B69-10314 01

 Analysis of problems related to slingshot shock machine high-velocity shock testing MDO-1193 B69-10506 05

 Improved method of producing oxide-dispersion-strengthened alloys HQ-10461 B69-10536 03

 Sprayed shielding of plastic-encapsulated electronic modules M-PS-13570 B69-10607 01

 Surface-renewal models for heat-transfer
COPPER OXIDES
Device removes hydrogen gas from enclosed spaces
GSPC-495 B66-10340 03

COPPER SELLENIDES
Cuprous selenide and sulfide form improved photovoltaic barriers
WOO-212 B66-10025 01

COPPER SULFIDES
Crack detection method is safe in presence of liquid oxygen
H-PS-236 B65-10107 03

Production of metals and compounds by radiation chemistry
LEWIS-10231 B69-10123 03

CORDAGE
Explosive force of primacord grid forms large sheet metal
Farts B66-10014 05

Nylon shock absorber prevents injury to parachute jumpers
MSC-226 B66-10080 05

Tool pre-tensions covers prior to lacing
MSC-631 B66-10301 05

CORROSION
Ferromagnetic core valve gives rapid action on minimum energy
LEWIS-10135 B67-10623 05

Minimization of magnetic logic circuitry
LANGLEY-10037 B66-10184 06

Adding calcium improves lithium ferrite core
ARC-10036 B69-10086 06

CORRECTION
Electrometer preamplifier has drift correction feedback
JPL-SC-074 B65-10267 01

Calorimeter accurately measures thermal radiation energy
LANGLF-173 B66-10058 02

Elementary review of electron microprobe techniques and correction requirements
ARG-10062 B68-10195 03

Variable-nash method of solving differential equations
HPO-10515 B69-10017 02

Numerical integration of ordinary differential equations of various orders
ABG-10247 B69-10089 02

Wind tower influence study
1-FS-20239 B69-10653 01

CORRELATION
Study of random process theory aids digital data processing
M-PS-1475 B67-10309 06

CORRELATION COEFFICIENTS
Multiple correlation computer program determines relationships between several independent and dependent variables
H-PS-13024 B67-10327 06

The I square statistic and goodness of fit test
GSPC-10547 B68-10136 02

Prediction of friction coefficients for gases
LEWIS-10774 B69-10112 02

CORRELATORS
Phase detector circuit synthesizes own reference signal
M-PS-247 B65-10080 01

Linear signal noise summer accurately determines and controls S/N ratio
JPL-SC-152 B66-10433 01

CORROSION
Self-contained clothing system provides protection against hazardous environments
M-PS-536 B66-10201 05

Apparatus enables accurate determination of alkali oxides in alkali metals
LEWIS-256 B66-10296 03

Diaphragm valve for corrosive and high temperature fluid flow control has unique features
LEWIS-304 B66-10365 05

Trace levels of metallic corrosion in water determined by emission spectrography
MSC-1193 B66-10701 03

Evaluation of high temperature stranded hookup wire
M-PS-2478 B67-10122 03

Xenon fluoride solutions effective as fluorinating agents
ARG-217 B67-10133 03

New class of compounds have very low vapor...
Filler device for handling hot corrosive materials
MSc-85
B64-10166 03

Solder flux leaves corrosion-resistant coatings on metal
JPL-611
B64-10206 03

Improved technique for localizing electropolishing features; novel nozzles
Woo-101
B64-10271 01

Wide-angle sensor measures radiant heat energy in corrosive atmospheres
N-FS-228
B65-10019 05

Inexpensive electrical connector is moisture- and corrosion-proof
MSc-164
B65-10196 01

New brazing alloy eliminates metal-stress cracking
Woo-249
B65-10397 03

Nickel/tin coating protects threaded fasteners in corrosive environment
MSc-253
B65-10398 03

Epoxy blanket protects milled part during explosive forming
N-FS-307
B66-10029 03

White primer permits a corrosion-resistant coating of minimum weight

B66-10207 03

System locates randomly placed remote objects
Langley-209
B66-10315 01

Valve seat pores sealed with thermosetting monomer
R-FS-900
B66-10322 03

Brazing process provides high-strength bond between aluminum and stainless steel
N-FS-308
B66-10352 05

Copper wire plated with nickel and silver resists corrosion
N-FS-761
B66-10421 03

Modified thermocouple is effective from minus 250 deg to 5000 deg F
MSc-420
B66-10461 01

Electroless nickel plating on stainless steels and aluminum
GSMC-533
B66-10479 03

Silver-base ternary alloy proves superior for slip ring lead wires
N-FS-1540
B66-10540 03

Tantalum alloys resist creep deformation at elevated temperatures
LEWIS-350
B66-10558 03

Use of steel and tantalum apparatus for molten Cd-Zr-Zn alloys
AGS-199
B66-10590 03

Treatent increases stress-corrosion resistance of aluminum alloys
N-FS-1840
B66-10595 05

Zirconium alloys with small amounts of iron and copper or nickel show improved corrosion resistance in superheated steam
ARG-226
B67-10050 03

Study made of corrosion resistance of stainless steel and nickel alloys in nuclear reactor superheaters
ARG-230
B67-10051 03

Controlled ferrite content improves weldability of corrosion-resistant steel
N-FS-568
B67-10069 03
SUBJECT INDEX

Study to minimize hydrogen embrittlement of ultrahigh-strength steels M-PS-2455 03
Heat treatment study of aluminum casting alloy M-PS-2397 03
Iron serves as diffusion barrier in thermally regenerative galvanic cell ARG-29 03
Materials data handbook, aluminum alloy 7075 M-PS-2349 03
Flowmeter determines six ratio for viscous adhesives M-PS-2306 03
Fuel cell life improved by metallic sinter activation after electrode assembly welding E67-10140 03
Aluminum and stainless steel tubes joined by simple ring and welding process M-PS-13120 03
Study made of resistance of stainless steels to zinc-vapor corrosion ARG-10055 03
Stress-corrosion characteristics of aluminum casting alloy M-PS-14017 03
Precise doping of metals by small gas flows LEWIS-10444 03
Improved thermal treatment of aluminum alloy 7075 M-PS-20083 03
Semitoroidal-diaphragm cavitating valve designed for bipropellant flow control XNP-09704 03
Corrosion reduction of aluminum alloys in flowing high-temperature water ARG-10244 03
Study of fluoride corrosion of nickel alloys ARG-10224 03
Materials data handbook, aluminum alloy 6061 M-PS-20381 03
Improved pH buffering agent for sodium hypochlorite NSC-13443 03
Corrosion protection of aluminum alloys in contact with other metals M-PS-18526 03
Advances in aluminum anodizing M-PS-14600 03
Design and testing of liquid hydrogen-cooled, ultrahigh-speed ball bearings M-PS-18453 03
Improved method of producing oxide-dispersion-strengthened alloys EO-10451 03
Development of improved potting and conformal coating compounds M-PS-20219 03

COST ESTIMATES

Improved method of producing oxide-dispersion-strengthened alloys EO-10451 03
Development of improved potting and conformal coating compounds M-PS-20219 03

COST REDUCTION

Square tubing reduces cost of telescoping bridge crane hoist ARG-13 03

COSTS

Galium useful bearing lubricant in high-vacuum environment LEWIS-12 03

COLUMNS

Battery charge regulator is coulometer B67-10233 03
Method accurately measures mean particle diameters of monodisperse polystyrene latexes
ARG-207 B67-10054 01
Cleanroom air sampler counts, categorizes, and records particle data
M-FS-2221 B67-10076 01
Strain gage circuitry provides fatigue testing machine with accurate cycle count
WU-0114 B67-10093 01
A conceptual, parallel operating data compression processor
NPO-10068 B67-10204 01
Quartz crystals detect gas contaminants during vacuum chamber evacuation
NPO-10144 B67-10205 01
FM carrier deviation measured by differential probability method
M-FS-2166 B67-10213 01
Simple first order data compression processor concept
NPO-10338 B67-10553 01
Self-correcting, synchronizing ring counter using integrated circuit devices
M-FS-13901 B68-10067 01
Recharge unit provides for optimum recharging of battery cells
GSFC-10688 B68-10273 01
Closed circuit TV system automatically guides welding arc
M-FS-20084 B68-10357 01
Tape reading fixture
M-FS-14146 B69-10008 05
Remote balance weighs accurately and high radiation
ARG-10387 B69-10242 05
Reducing quantizer deadband with a range switching digital filter
M-FS-20415 B69-10259 01
Circuit counts pulses and indicates time of occurrence of slow pulses
XEP-06234 B69-10313 01
A method for reducing sampling jitter in digital control systems
NPO-11088 B69-10338 01
Foot-operated cell-counter
ARG-10315 B69-10351 01
Simple quasi-exponential slope generator

CRYSTAL DIFFRACTION SPECTROMETER holds high-resolution gamma ray spectroscopy  
ARG-10190  B69-10005  02

CRYSTAL OSCILLATORS  
FM oscillator uses tetrode transistor  
JPL-62  B66-10555  01

Voltage controlled oscillator is easily aligned, has low phase noise  
JPL-540  B66-10223  01

Quartz crystals detect gas contaminants during vacuum chamber evacuation  
NNO-10184  B67-10205  01

Ultrasound nanometer-tipped cardiac catheter  
ARC-10054  B66-10669  01

Simple, accurate automatic frequency control circuit  
KSC-10393  B69-10323  01

Laser interferometer micrometer system  
N-P-17647  B69-10633  02

CRYSTAL RECTIFIERS  
Substituting transistor for diode improves rectifying means  
GSFC-974  B66-10295  01

Moveable RF probe eliminates need for calibration in plasma accelerators  
LEWIS-10127  B67-10362  01

Development of reliability prediction technique for semiconductor diodes  
GSFC-10231  B67-10651  06

An electronic circuit for sensing malfunctions in test instrumentation  
KSC-10209  B66-10392  01

CRYSTAL STRUCTURE  
Neutron diffractometer allows both magnetic and crystallographic analyses  
ARG-191  B67-10131  02

Crystal structure analysis of intermetallic compounds  
ARG-10092  B68-10238  03

Sintering characteristics and properties of PuS and PuF are determined  
ARG-10228  B69-10058  03

CRYSTAL SURFACES  
Process facilitates photoresist mask alignment on Sic crystals  
N-P-2394  B67-10144  01

CRYSTALLITY  
Evaluation of a fluorocarbon plastic used in cryogenic valve seals  
N-P-18185  B66-10523  03

Electron beam recrystallization of amorphous semiconductor materials  
LEWIS-10443  B66-10556  02

Production of crystalline polymers via liquid crystal monomers  
KNO-10235  B66-10744  03

CRYSTALLITES  
Preferred-orientation analysis of polycrystalline materials  
NNO-10604  B69-10336  02

Epitaxial crystalline growth upon cold substrates  
NNO-11196  B69-10494  01

CRYSTALLISATION  
Balloon batteries, charged and heated by solar energy  
GSFC-10769  B69-10585  01

I-148
SUBJECT INDEX

CRYSTALLOGRAPHY

Spherical model provides visual aid for cubic crystal study
LEWIS-108 B65-10065 03

Rotating filters permit wide range of optical pyrometry
LANGLEY-33 B65-10100 02

Neutron diffractometer allows both magnetic and crystallographic analyses
ARG-191 B67-10131 02

Grain-boundary migration in KCl bicrystals
ARG-10181 B68-10455 02

Preferred-orientation analysis of polycrystalline materials
NPO-10604 B69-10336 02

CRYSTALS

Increased performance reliability obtained with dual /redundant/ oscillator system
GSFC-36 B63-10027 01

Cesium iodide crystals fused to vacuum tube faceplates
GSFC-67 B63-10876 03

Superconductor magnets used for stagger-tuning traveling-wave maser
GSFC-292 B65-10165 01

Refractory oxides evaluated for high-temperature use
LANGLEY-121 B65-10167 03

Thin film process forms effective electrical contacts on semiconductor crystals
H-PS-2363 B67-10142 01

Ultrasonics used to measure residual stress
H-PS-12649 B67-10828 02

Nonreciprocal gain control for ring laser
H-PS-14041 B67-10653 02

Liquid crystal calibrator
H-PS-14151 B68-10221 03

Technique developed for measuring transmittance of optical birefringent networks
H-PS-14267 B68-10260 02

Correction for losses in optical birefringent networks, a concept
H-PS-20088 B68-10571 02

Computer program calculates the effective temperature for a crystalline solid /DETS/
HBC-1016 B69-10036 06

One hundred MHz voltage-controlled oscillator
NFO-11004 B69-10133 01

Method for copper staining of germanium crystals
ARG-10403 B69-10257 03

Multilayer infrared beamsplitter film system
ZGS-11036 B69-10260 02

New shield for gamma-ray spectrometry
ARG-10368 B69-10344 02

Improved camera for better X-ray powder photographs
HQ-10426 B69-10537 01

Electrolytic separation of crystals of transition-metal oxides
ARG-10506 B69-10642 03

Deposition monitor and control
NPO-10706 B69-10722 01

Pocket-sized tone-modulated FM transmitter
NPO-11100 B69-10725 01

CUBES (MATHEMATICS)

Root-cubing and general-root-powering methods for finding the zeros of polynomials
ARG-10404 B69-10424 02

CUBIC LATTICES

Spherical model provides visual aid for cubic crystal study
LEWIS-108 B65-10065 03

CULTIVATION

Mass culture of photobacteria to obtain luciferase
GSFC-10563 B69-10294 04

CULTURE TECHNIQUES

Continuous microbial cultures maintained by electronically-controlled device
ARG-177 B67-10556 04

A microcapsule technique for the culture of mammalian cells
LANGLEY-10407 B69-10554 04

Imprinting of confining sites for cell cultures on thermoplastic substrates
LANGLEY-10495 B69-10236 04

Mass culture of photobacteria to obtain luciferase
GSFC-10563 B69-10294 04

Life detection
NPO-10510 B69-10475 04

CUBIC TEMPERATURE

Process yield Co-Fe alloys with superior high-temperature magnetic properties
LEWIS-333 B69-10535 03

Development of Curie point switching for thin films, random access, memory device
NPO-10402 B67-10633 02

Adding calcium improves lithium ferrite core
ERC-10036 B69-10686 06

CUBING

Plastic molds reduce cost of encapsulating electric cable connectors
H-PS-69 B63-10568 05

Encapsulation process sterilizes and preserves surgical instruments
JPL-484 B64-10066 05

Refrahesive thermal insulation for smooth metal surfaces
H-PS-160 B64-10099 03

Plastic films for reflective surfaces reproduced from masters
GSFC-188 B64-10151 03

Flexible curtain shields equipment from intense heat fluxes
H-PS-40 B65-10044 03

Fiber glass parts cured during filament winding eliminates oven, saves time
H-PS-16 B65-10088 03

Refractory coating protects intricate graphite elements from high-temperature hydrogen
HO-0027 B66-10084 01

Improved adhesive for cryogenic applications cures at room temperature
HNO-132 B66-10185 03

Improved method facilitates debulking and curing of phenolic impregnated asbestos
MSC-949 B66-10459 05

Sprayable birefringent coating enables
strain measurements on large surfaces E66-10578 03
Composite bulkhead fabrication development B66-10582 05
Study made to control depth of potting compound for honeycomb sandwich fasteners B66-10677 05
Nanowave glass fiber mat reinforces polyurethane adhesive B67-10113 03
Photosensitive filler minimizes internal stresses in epoxy resins B67-10227 03
Substituting gold for silver improves electrical connections B67-10228 03
Multi-feed cone for Cassegrainian antenna B67-10488 03
Solvent permits solid curing agents to be used at room temperatures B67-10593 03
Epoxy resins produce improved plastic scintillators ARG-241 B67-10596 03
Bacteriostatic conformal coating for electronic components ARG-10007 B67-10599 03
Synthesis of pure aromatic glycidyl ethers for use as adhesives M-PS-12705 B67-10647 03
Cure of epoxy resins determined by simple tests M-PS-13131 B67-10199 05
Tools made of ice facilitate forming of soft, sticky materials KSC-10262 B69-10199 05
Simple test indicates degree of cure of polyimide coatings HSC-15487 B69-10303 03
A method for observing gas evolution during plastic laminate cure MSC-15592 B69-10530 03
Improved cure method for single component silicone rubber ARG-12230 B69-10749 03

CURIUM
Portable, high intensity isotopic neutron source provides increased experimental accuracy ARG-90250 B68-10243 02
CURIUM 242
alpha particle backscattering measurements used for chemical analysis of surfaces ARG-116 B67-10186 03
Neutron irradiation of Am-241 effectively produces curium B67-10501 03
Detection sensitivities in 3-8 MeV neutron activation ARG-10210 B68-10298 02
Transplutonium elements processed from rock debris of underground detonations ARG-10222 B69-10054 03

CURRENT AMPLIFIERS
Transflouro circuit amplifies sensing current for computer memories JPL-606 B63-10255 01
PCF magnetic tape system efficiently records and reproduces data GSFC-375 B65-10311 01
Circuit exhibits power efficiency greater than 75 percent MSC-254 B66-10034 01
Tester periodically registers dc amplifier characteristics MSC-190 B66-10148 01
Transistor circuit increases range of logarithmic current amplifier WU-0018 B66-10350 01
Control circuit maintains unity power factor of reactive load MSC-192 B66-10431 01
Bipolar current driver for memory circuits GSFC-213 B66-10469 01
Logarithmic current simulator generates electrical currents accurately between 10 to the minus 11 ampere and 10 to the minus 3 ampere WU-0087 B66-10706 01
Integrator can easily be set and reset with an electronic switch ARC-10002 B67-10135 01
Amplifier provides dual outputs from a single source with complete isolation NRC-10056 B67-10221 01
Laboratory pulse modulator uses minority carrier storage diodes M-PS-2442 B67-10226 01
System precisely controls oscillation of vibrating mass M-PS-1875 B67-10276 01
Current pulse amplifier transmits detector signals with minimum distortion and attenuation NRC-10055 B67-10347 01
Analog buffer isolates high impedance source from low impedance load M-PS-13481 B67-10544 01
Linear-log counting-rate meter uses transconductance characteristics of a silicon planar transistor ARG-10158 B69-10191 01
Load current sensor for a pulse width modulator power regulator GSFC-10656 B69-10578 01

CURRENT DENSITY
High purity electroforming yields superior metal models ARC-6 B63-10007 05
Simple technique determines ac properties of hard superconductive materials M-PS-1818 B66-10657 02
Mechanisms of superconductivity investigated by nuclear radiation M-PS-1944 B67-10057 02
Clamp provides efficient connection for high-density currents M-PS-2417 B67-10140 01
Thermionic diode switching has high temperature application NPO-10404 B67-10672 01
Mass transport mechanism in porous fuel cell electrodes HQ-10343 B69-10135 01
Electrochemical sintering process for
producing electrodes from cadmium felt and a nickel or silver grid

GSPC-10764  
B69-10227  05

Improved inorganic ion exchange membranes

LEWIS-10737  
B69-10451  03

Magnetic field mapper

LEWIS-10782  
B69-10746  05

Analysis of cell performance and thermal regeneration of a lithium-tin cell having an immobilized fused-salt electrolyte

ARG-10453  
B69-10453  03

CUBBBBf DISTRIBUTION

Simple circuit functions as frequency discriminator for PPI signals

GSPC-267  
B65-10102  01

Increased function lead inductance ballasts

high-frequency transistors

LANGLEY-267  
B66-10259  01

Standard arc welders provide high asperage direct current source

M-PS-13370  
B67-10471  01

Rating of electrical wires in vacuum environments

MSC-15108  
B68-10362  01

Experimental prediction of performance by superconducting cables

ARG-10215  
B69-10161  01

Use of medical and dental X-ray equipment for nondestructive testing

MSC-13389  
B69-10553  01

CURRENT REGULATORS

Constant-current regulator improves tunnel diode threshold-detector performance

GSPC-239  
B65-10282  01

Electropneumatic rheostat regulates high current

ARC-044  
B65-10299  01

Electropneumatic transducer automatically limits motor current

LEWIS-253  
B66-10160  01

Circuit protects regulated power supply against overload current

GSPC-453  
B66-10292  01

Electrically controlled optical latch and switch requires less current

JPL-SC-111  
B66-10414  01

Current steering commutator offers versatility

JPL-812  
B67-10410  01

Broadband choke suppresses spurious currents in antenna structure

MSC-10013  
B67-10675  01

Nondestructive test determines overload destruction characteristics of current limiter fuses

EVS-00566  
B68-10364  01

Improved limiter for turn-on current transient

GSPC-10413  
B68-10384  01

Bootstrap unloader

JBP-09768  
B69-10120  01

Self-starting circuit for switching regulators

LEWIS-10686  
B69-10128  05

Full wave 4e-to-4e converter using energy storage transformers

LEWIS-10375  
B69-10140  01

Magnetically coupled emission regulator

GSPC-10056  
B69-10213  01

Conversion of continuous-direct-current TIG welder to pulse-arc operation

M-PS-16411  
B69-10393  05

Instrumentation for potentiostatic corrosion studies with distilled water

ARG-10409  
B69-10413  03

Radiometric temperature reference

MSC-13276  
B69-10507  01

Battery charge-discharge controller

ISC-11836  
B69-10747  01

CUBREUTS

Accurate nine-decade temperature-compensated logarithmic amplifier

ARG-10480  
B69-10429  01

Transient sensor development

L-15-13370 B67-10471  01

Flexible curtain shields equipment from intense heat fluxes

CUBVATUBB

Rating of electrical wires in vacuum Aerial-image enables diagrams and animation environments to be inserted in moticu pictures

ISC-15108  
B68-10362  01

Experimental prediction of performance by superconducting cables

ARG-10215  
B69-10161  01

Redundancy techniques

I-PS-15075  
B69-10297  01

Use of medical and dental X-ray equipment for nondestructive testing

MSC-15075  
B69-10297  01

LEWIS-10782

Flexible honeycomb structure can bend to fit compound curves

MSC-13389  
B69-10553  01

CUBVES (GEOMETR)

Studies reveal effects of pipe bends on fluid flow cavitation

M-PS-516  
B66-10228  05

Evaporant feed device facilitates flash vapor deposition process in vacuum

MPO-10232  
B67-10320  03

Algebraic Monte Carlo procedure reduces statistical analysis time and cost factors

M-PS-1887  
B67-10434  01

Study made of large amplitude fuel sloshing

M-PS-12381  
B67-10439  03

Analytical drafting curves provide exact equations for plotted data

LANGLEY-285  
B67-10601  02

CUSHIONS

Fixed vacuum plate clamps styrofoam for machining

M-PS-683  
B66-10283  05

CUT-OFF

Safety switch permits emergency bridge crane shutdown

M-PS-549  
B66-10168  05

CUTTERS

Sleeve and cutter simplify disconnecting welded joint in tubing

JFL-384  
B63-10240  05

Cutter and stripper reduces coaxial cable connection time

ARC-40  
B65-10094  05

Threaded pilot insures cutting tool alignment

I-147
Portable power tool machines weld joints in field
Device spot-laps spheres to very close tolerances
Tool post modification allows easy turret lathe cutting-tool alignment
Special tool seals conductors with combination of plastic sleeves
Hollow needle used to cut metal honeycomb structures
Thread cutting with 3-axis N/C milling machine
Coaxial cable stripper for confined areas
Microwave interferometer controls cutting depth of plastics
J-beveling of pipe ends with a hand-held tool
Technique for anchoring fasteners to honeycomb panels
Freon, T-B1 cutting fluid

Cutting

Miniature oxygen-hydrogen cutting torch constructed from hypodermic needle
Rotating mandrel speeds assembly of plastic inflatables
Depth indicator and stop aid machining to precise tolerances
Nylon bit removes cork insulation without damage to substrate
Modified drill permits one-step drilling operation
Adjustable cutting guide aligns and positions stacks of material
Modified soldering iron speeds cutting of synthetic materials
Tool separates sleeve-type unions without heat
Mill profiler machines soft materials accurately
Versatile machine mills, maws light materials
Study made of destructive sectioning of complex structures for examination
Micromanipulation tool is easily adapted to many uses
### CYCLotron Radiation
An economical method for the continuous production of iodine-123

LEWIS-10518 B68-10433 03

### CYLinders
Superconducting technique duplicates magnetic field in second superconductor

JPL-376 B66-10237 05

Shaped superconductor cylinder retains intense magnetic field

JPL-381 B66-10238 01

Simple mechanism combines positive locking and quick-release features

Woo-4 B63-10420 05

Device induces lung to maintain known constant pressure

MSC-50 B64-10108 04

Miniature stress transducer has directional capability

JPL-591 B65-10023 01

Ionization vacuum gage starts quickly, is unaffected by spurious currents

JPL-304 B65-10036 02

Seal allows blind assembly and thermal expansion of components

H-0005 B65-10053 05

Low-cost tool minimizes damage to O-rings during installation

MSC-140 B65-10116 05

Vacuum chamber provides improved insulation and support for cryostat

M-FS-415 B65-10368 02

Light-intensity modulator withstands high heat fluxes

MSC-246 B66-10532 02

Positive displacement cylinder measures corrosive liquid volume

MSC-1038 B66-10589 05

Semitoroidal-diaphragm cavitating valve designed for bipropellant flow control

XNP-09704 B69-10016 05

Analysis of transient thermal stress in heat-generating plates and hollow cylinders caused by sudden environmental temperature changes

ARG-10274 B69-10047 02

### CYLINDRICAL BODIES
Device disconnects several couplings simultaneously

JPL-226 B65-10163 05

Sheet metal strip unrolls to form circular hoop

GSFC-423 B66-10032 05

Flexible coiled spline securely joins mating cylinders

Woo-270 B66-10172 05

Cylindrical claw clamp has quick release feature

M-FS-513 B66-10213 05

Torus elements used in effective shock absorber

Woo-114 B66-10318 05

Pressure levels and pulsation frequencies can be varied on high pressure/frequency testing device

LEWIS-10205 B67-10360 05

Single-source mechanical loading system produces biaxial stresses in cylinders

M-FS-12530 B67-10380 05

Crack growth measured on flat and curved surfaces at cryogenic temperatures

LEWIS-389 B67-10384 01

Compressible sleeve provides automatic centering for grinding or turning of cylinders

SAN-10021 B68-10318 05

Modified sine bar device measures small angles with high accuracy

GSFC-438 B66-10322 02

Electron beam selectively seals porous metal filters

LEWIS-10162 B68-10331 05

Automated measurement of thermal conductivity

M-FS-20454 B69-10283 03

Automatic leveling and equalizing hoist device

M-FS-16549 B66-10315 02

Miniature stress transducer has directional capability

JPL-591 B65-10023 01

Ionization vacuum gage starts quickly, is unaffected by spurious currents

JPL-304 B65-10036 02

Seal allows blind assembly and thermal expansion of components

H-0005 B65-10053 05

Low-cost tool minimizes damage to O-rings during installation

MSC-140 B65-10116 05

Vacuum chamber provides improved insulation and support for cryostat

M-FS-415 B65-10368 02

Light-intensity modulator withstands high heat fluxes

MSC-246 B66-10532 02

Positive displacement cylinder measures corrosive liquid volume

MSC-1038 B66-10589 05

Semitoroidal-diaphragm cavitating valve designed for bipropellant flow control

XNP-09704 B69-10016 05

Analysis of transient thermal stress in heat-generating plates and hollow cylinders caused by sudden environmental temperature changes

ARG-10274 B69-10047 02

### CYLINDRICAL SHELLS
System locates randomly placed remote objects

LANGLEY-209 B66-10315 01

Mechanism facilitates coating of inner surfaces of metal cylinders

GSFC-515 B66-10698 05

An improved nuclear magnetic resonance spectrometer

JPL-762 B67-10234 01

Computer program for determination of natural frequencies of closed spherical sandwich shells

MSC-1246 B67-10279 06

Liquid oxygen distillation cleaned by falling film method

M-FS-11816 B67-10299 03

Analysis of stability-critical orthotropic cylinders subjected to axial compression

M-FS-12069 B67-10375 03

Concept for cryogenic liquid reclamation system

EPS-10322 B67-10420 02

Buckling strength of filament-wound cylinders under axial compression is investigated

H-00032 B67-10659 03

Magnetic forming of resistive materials

M-FS-20417 B66-10397 03

Computer program determines performance efficiency of remote measuring systems

**DATA PROCESSING EQUIPMENT**

Computer program determines performance efficiency of remote measuring systems (I-PS-1137) B66-10503 01

Digital computer processing of X-ray photons (JPL-792) B67-10005 04

Recording and time expansion technique for high-speed, single-shot transient video signal (ABC-1000J) B67-10139 01

Multiplexing control device enables handling of wide variations in sampling rates (I-PS-1071) B67-10150 01

A power-spectral-density computer program (NPO-10126) B67-10160 01

Linear circuit analysis program for IBM 1620 Monitor 2, 1311/1443 data processing system (CIIRC/) (NPO-10131) B67-10173 06

Stress calculator speedily converts strain data (I-PS-2021) B67-10182 03

Subroutines GEORGE and DRASTIC simplify operation of automatic digital plotter (NWC-10044) B67-10222 06

A simplified PERT system (E-PS-2267) B67-10241 05

Master control data handling program uses automatic data input (I-PS-2259) B67-10260 06

Study of random process theory aids digital data processing (I-PS-1475) B67-10309 06

Computerized parts list system coordinates engineering releases, parts control, and manufacturing planning (NWC-10073) B67-10348 06

Automatic telemetry checkout system (I-PS-12580) B67-10402 01

Saturn S-2 Automatic Software System (SASS/) (I-PS-1741) B67-10405 06

Video synchronization processor overcomes poor signal-to-noise ratio (NWC-10062) B67-10515 01

DYNA - An advanced programming system for large classes of dynamic and equivalent systems (I-PS-12084) B67-10524 06

Computer program for Video Data Processing System (VDP/) (NPO-10042) B67-10630 06

Review of biological mechanisms for application to instrument design EQ-33 B67-10663 04

Principles of optical-data processing techniques (GSFC-10271) B66-10069 01

Silicon surface barrier detectors used for liquid hydrogen density measurement (I-PS-14115) B66-10166 01

Development of Electronic Data Processing /VDP/ supported management system (I-PS-14715) B66-10287 06

Fully automatic telemetry data processor (GSFC-10576) B66-10336 01

Non-dispersive X-ray emission analysis for geochemical exploration

**SUBJECT INDEX**

GSFC-10568 B69-10011 02

Nonshaker-effect data-collection system (ARG-10282) B66-10227 01

Structural Analysis and Matrix Interpretive System (DARIS/) (NPO-10839) B69-10093 01

On-line computer system for use with low-energy nuclear physics experiments is reported (ARG-10257) B69-10094 01

VCLN-DIGITAL image processing system (NPO-10770) B69-10139 06

Elimination of dissolved gases in hypergolic engine propellants
I-PS-16175 B69-10692 03

DEGENERATION
Conceptual techniques for reducing parasitic current gain of lateral FET transistors
MSC-13199 B69-10244 01

DEGRADATION
Analog device simulates physiological waveforms
MSC-51 B64-10109 01

Dot patterns provide reproducible flaw areas for study of adhesive bonds
M-PS-862 B66-10367 05

Nonwoven glass fiber mat reinforces polyurethane adhesive
I-PS-2309 B67-10113 03

Machining heavy plastic sections
I-PS-12720 B67-10381 03

Study made to establish parameters and limitations of explosive welding
I-PS-13006 B67-10393 05

Vibration damping composition has flush-away feature
DEGREES OF FREEDOM

Conceptual nonorthogonal gyro configuration for guidance and navigation
MSC-11363

Development of reliability prediction technique for semiconductor diodes
GSPC-10231

Heat treatment procedure to increase ductility of degraded nickel alloy
N-PS-12410

New rapid-curing, stable polysiloxane polymers with high-temperature strength and thermal stability
LEWIS-10576

A positive taper traveling-wave tube
LANGLEY-10263

Pulse-height defect due to electron interaction in dead layers of Ge/Li/gamma-ray detectors
ARG-10362

DEGREES OF FREEDOM

Visual attitude orientation and alignment system
MSC-647

Study of dynamic response of elastic space stations
NPO-10124

DYANA - An advanced programming system for large classes of dynamic and equivalent systems
N-PS-12084

Computer program determines vibration in three-dimensional space of hydraulic lines excited by forced displacements
N-PS-12226

Shock and vibration response of multistage structure
N-PS-14972

DEHYDRATION

Purification train produces ultrapure hydrogen gas
N-PS-1913

Tritiated alumina serves as reagent for self-labeling analysis
ARG-209

Zone purification of potassium chloride
ARG-10377

DEIONIZATION

Scribable coating for plastic films
MSC-11194

Fuel cell life improved by metallic sinter activation after electrode assembly welding
MSC-10965

DELIBERATING

Drill bit design assures clean holes in laminated materials
WO-096

DELAY

Polarizing keys prevent mismatch of connector plugs and receptacles
MSC-443

Novel multipurpose timer for laboratories
ARG-10147

DELEY CIRCUITS

Simple circuit functions as frequency discriminator for PPM signals
GSPC-267

SUBJECT INDEX

DELAY LINES

Gapped toroid provides infinite resolution of delay-line pickup
GSPC-370

Highly stable microwave delay line
NPO-09828

DELAY LINES (COMPUTER STORAGE)

System monitors discrete computer inputs
N-PS-1021

SIMPLIFIED, RELIABLE CIRCUIT SORTS BINARY NUMBERS IN ORDER OF MAGNITUDE
NPO-10112

DELTAD MODULATION

Improved digital TV encoding and decoding system
MSC-11147

DEMONIZATION

Apparatus alters position of objects to facilitate demagnetization
GSPC-234

DEMOUULATION

Improved head-controlled TV system produces high-quality remote image
ARO-120

Automatic telemetry checkout system
N-PS-12580

DEMONIOLOGIST

Point-source light sensor circuit is insensitive to background light
JPL-776

Improved design provides faster response time in photomultiplier
GSPC-451

Polarimeter provides transient response in nanosecond range
JPL-890

Amplifier provides dual outputs from a single source with complete isolation
NUC-10056

Electronic skewing circuit monitors exact position of object underwater
NUC-10146

DEMONIOLOGIST

Unique frequency-shift-keyed demodulation system
GSPC-217

Concept for simplified serial digital decoder
NPO-10150

Deep space FM system, a concept
MSC-11625

Simple demodulator for telemetry phaseshift keyed subcarriers
NPO-11000

DEMONIOLOGIST

Purification train produces ultrapure hydrogen gas
N-PS-1913

Tritiated alumina serves as reagent for self-labeling analysis
ARG-209

Zone purification of potassium chloride
ARG-10377

DEIONIZATION

Scribable coating for plastic films
MSC-11194

Fuel cell life improved by metallic sinter activation after electrode assembly welding
MSC-10965

DELIBERATING

Drill bit design assures clean holes in laminated materials

## DENSITY (QUALITY)

- **Novel shock absorber features varying yield strengths**
  - MSC-63A
  - B64-10138
  - 03

- **Viscosity and density of methanol/water mixtures at low temperatures**
  - N-PS-14991
  - B68-10274
  - 03

- **Fire retardant foams developed to suppress fuel fires**
  - AMC-10998
  - B68-10358
  - 03

- **Fiber glass reinforced structural materials for aerospace application**
  - N-PS-14806
  - B68-10360
  - 03

- **Propagation of density disturbances in air-water flow**
  - AMO-10260
  - B68-10083
  - 02

- **Improved gyro-flotation/damping fluids**
  - ASC-13217
  - B68-10360
  - 03

- **Flow properties of suspensions rich in solids**
  - ARO-10481
  - B69-10622
  - 02

## DENSITY (NUMBER/VOLUME)

- **Automatic tuning of hydrogen masers**
  - GSFC-10127
  - B69-10452
  - 01

## DENSITY DISTRIBUTION

- **On the bound of first excursion probability**
  - NRO-11158
  - B69-10334
  - 06

- **Wall-thickness changes predicted in hollow-drawn tubing**
  - ARO-10425
  - B69-10428
  - 02

## DENSITY MEASUREMENT

- **Microwave technique measures plasma characteristics**
  - LANGLEY-134
  - B65-10122
  - 02

- **Density trace made with computer printout**
  - GSFC-322
  - B65-10200
  - 01

- **Coaxial capacitor used to determine fluid density**
  - LEWIS-232
  - B65-10296
  - 02

- **Vibrating diaphragm measures high electrostatic field strengths**
  - MSC-189
  - B65-10352
  - 01

- **Three-dimensional wire-mesh capacitor system measures fluid density**
  - WGO-194
  - B69-10379
  - 01

- **Instrument continuously measures density of flowing fluids**
  - LEWIS-309
  - B67-10080
  - 01

- **Radiation counting technique allows density measurement of metals in high-pressure/high-temperature environment**
  - ABG-124
  - B67-10316
  - 02

- **Instruments for bone density measurement**
  - ISC-11388
  - B68-10140
  - 01

## DEOXYGENATION

- **Purification train produces ultrapure hydrogen gas**
  - N-PS-1913
  - B67-10078
  - 03

## DEOXYRIBONUCLEIC ACID

- **Cytology is advanced by studying effects of deuterium environment**
  - CO-205
  - B67-10304
  - 04

- **Study of radiation effects on mammalian cells in vitro**
  - ARO-10191
  - B66-10294
  - 02

## DEPENDENT VARIABLES

- **Multiple correlation computer program determines relationships between several independent and dependent variables**
  - N-PS-13024
  - B67-10327
  - 06

- **Computer optimization program finds values for several independent variables that minimize a dependent variable**
  - N-PS-13030
  - B67-10328
  - 06

- **General frequency response program calculates frequency response of system, open at any specified element**
  - N-PS-12817
  - B67-10521
  - 06

## DEPLETION

- **Ohmmeter senses depletion of lubricant in journal bearings**
  - LEWIS-37
  - B64-10042
  - 01

## DEPOSITION

- **Integral coolant channels supply made by melt-out method**
  - N-PS-31
  - B63-10497
  - 05

- **Valve effectively controls amount of contaminant in flow stream**
  - N-PS-1771
  - B66-10683
  - 05
Complex surfaces plated by thin-film deposition in one operation

Ion plating technique improves thin film deposition

Improved process for epitaxial deposition of silicon on prediffused substrates

A new method for the determination of particulate contamination levels for surface cleanliness of fluid systems

Modification to improve self-isolating transistor arrays

Deposition monitor and control

Reference black body is compact, convenient to use

Monitor senses amount of contamination deposited on surfaces

Detection of effect of deposits on optical windows of pyrometer measurements

Adjustable knife cuts honeycomb material to specified depth

Mill profiler machines soft materials accurately

Instrument transmits vanishing point to illustration point

Study made to control depth of potting compound for honeycomb sandwich fasteners

Study made of large amplitude fuel sloshing

Development of lunar drill to take core samples to 100-foot depths

Microwave interferometer controls cutting depth of plastics

Sleeve and cutter simplify disconnecting welded joint in tubing

Depth indicator and stop aid machining to precise tolerances

Modified algesimeter provides accurate depth measurements

Hand-held instrument should relieve hematoma pressure

Eddy current probe measures size of cracks in nonmetallic materials

Grit blasting nozzle fabricated from mild tool steel proves satisfactory

Integrated mobility measurement and notation system

Sampling and handling of desert soils

Improved process for epitaxial deposition of silicon on prediffused substrates

Chart system simplifies identification of complex design assemblies

Hydrodynamics of a new concept of primary containment by energy absorption

Force controlled solenoid drives microweld tester

Study made of destructive sectioning of complex structures for examination

Composite weld rod corrects individual filler weaknesses

High-temperature bearing-cage materials

Explosive bridgewire detonator simulator

Use of photographs speeds inspection of printed-circuit boards

Transistor voltage comparator performs own sensing

Weld leaks rapidly and safely detected

Porous glass makes effective substrate for ozone-sensing reagent

Portable self-powered device detects internal flaws in tubular structures

Microorganisms detected by enzyme-catalyzed reaction

Linear signal noise summer accurately determines and controls S/N ratio

Security warning system monitors up to fifteen remote areas simultaneously

Positive displacement cylinder measures corrosive liquid volume

Welding torch and wire feed manipulator

Concept for cryogenic liquid reclamation system
Temperature-sensed cryogenic bleed maintains liquid state in transfer line H-FS-12681 B67-10420 02
Surface-crack detection by microwave methods ARCh-10009 B67-10482 01
Damages in rolling element bearings may be detected early HQ-10031 B67-10658 01
Detection and location of metallic objects imbedded in nonmetallic structures H-FS-14790 B68-10183 01
Detection of effect of deposits on optical windows of pyrometer LBNL-10366 B68-10367 01
Automatic system nondestructively monitors and records fatigue crack growth LANGLBP-10091 R68-10379 01
Training manuals for nondestructive testing using magnetic particles H-FS-20187 B68-10391 01
Diffusion of trace gases for leak detection - A study H-FS-20254 B69-10049 03
Proposed technique for vertical alignment of a crane's cable H-FS-16496 B69-10202 05
Pressure transducer NPO-10583 B69-10364 01
Life detection NPO-10510 B69-10475 08
Burst diaphragm leak detector H-FS-14500 B69-10067 03
Quantitative determination of flavin nucleotide using the bacterial bioluminescent reaction GSFC-10565 B69-10715 04

DETECTORS

Ultra-sensitive transducer advances micro-measurement range ARC-26 B64-10004 01
Analog device simulates physiological waveforms MSC-51 B64-10109 01
Circuit detects errors in address currents for magnetic core arrays H-FS-234 B65-10047 01
Interferometer construction assures parallelism of critical components JPL-704 B65-10292 02
Device detects unbonded areas in plastic laminates WO-206 B65-10380 01
Mounting facilitates removal and installation of flame-detector rods H-FS-555 B66-10150 05
Circuit prevents overcharging of secondary cell batteries GSFC-454 B66-10492 01
Gas leak detector is simple and inexpensive H-FS-1206 B66-10669 01
An improved soft X-ray photoionization detector GSFC-540 B67-10072 02
Device enables calibration of microphones at high sound pressure levels

### DEUTERIUM COMPOUNDS

- Hydrogen flash lamps studied
- Purification and characterization of two fully deuterated enzymes
- Three-axis attitude and direction reference instrument has only one moving part
- Ultrasound wrench produces leaktight connections
- Large volume continuous counterflow dialyzer has high efficiency
- Organic reactants rapidly produce plastic foam
- Silazane polymers show promise for high-temperature application
- New rapid-curing, stable polyimide polymers with high-temperature strength and thermal stability
- Ultrasonic wrench produces leaktight connections
- Large volume continuous counterflow dialyzer has high efficiency
- Device spot-laps spheres to very close tolerances
- Manual of industrial diamonds plus dressing and grinding criteria for machining superalloys
- One hundred angstrom niobium wire
- Preparing rock powder specimens of controlled size distribution
- Pneumatic shut-off and time-delay valve operates at controlled rate
- Pneumatic shut-off and time-delay valve operates at controlled rate
- Diaphragm spring gives clutch over-center toggle effect
- Flexible arms provide constant force for pressure switch calibration
- Acceleration-compensated pressure transducer has fast response
- Diaphragm valve for corrosive and high-temperature fluid flow control has unique features
- Pneumatic wrench retains or discharges nuts or bolts as desired
- High-energy-rate magnetohydraulic metal forming system
- Iron serves as diffusion barrier in thermally regenerative galvanic cell
- Temperature responsive valve withstands high impact loading
- High impact pressure regulator withstands

DIELECTRIC PERMISSIBILITY

Resonant microwave dichroic surface
GSFC-10658

DIELECTRIC PERMISSIBILITY

Capacitive system detects and locates fluid leaks
N-FS-478

DIELECTRIC PROPERTIES

Oscillator circuit measures liquid level in tanks
N-FS-245

Capacitive system detects and locates fluid leaks
N-FS-478

Coaxial capacitor used to determine fluid density
LEWIS-232

Three-dimensional wire-mesh capacitor system measures fluid density
WOO-194

Ferroelectric bolometer measures RF absolute power at submillimeter wavelengths
GSFC-422

Dielectrometer design permits measurement in vacuum under irradiation
N-FS-359

Concept for using laser beams to measure electron density in plasmas
N-FS-962

Liquid hydrogen densitometer utilizes open-ended microwave cavity
LEWIS-390

Study made of dielectric properties of promising materials for cryogenic capacitors
N-FS-13620

Glass coated single grid for charged particle acceleration
LEWIS-10106

Cryogenic liquid level measuring probe
ARG-10138

Thermal conductivity and dielectric constant of silicate materials
N-FS-14565

Low-loss C-band parasitic probe
KSC-09348

Method for determining properties of microinstabilities of a magnetized plasma
HQ-10447

Development of improved potting and conformal coating compounds
N-FS-20219

Optical frequency waveguide and ion transmission system
HQ-10541

DIELECTRICS

Improved sensor counts micrometeoroid penetrations
LEWIS-76

High-pass RF coaxial filter rejects dc and low frequency signals
GSFC-73

Microparticle impact sensor measures energy directly
GSFC-252

Spherical electrode eliminates high-voltage breakdown
LEWIS-155

Improved wire memory matrix uses very little power
JPL-SC-167

Resonant microwave dichroic surface

SUBJECT INDEX

Polymer film exhibits thermal and radiation stability
LANGLEY-100

Electrolytic etching process provides effective bonding surface on stainless steel
GSFC-484

Dielectrometer design permits measurement in vacuum under irradiation
N-FS-359

Gage tests tube flares quickly and accurately
KSC-66-19

Triphire spark gap actuates overvoltage relay
ARC-68

Detector measures power in 50 to 30,000 GHz radiation band
ERB-26

Improved memory word line configuration allows high storage density
GSFC-559

Traveling wire electrode increases productivity of Electrical Discharge Machining /EDM/ equipment
ARG-136

Precision capacitor has improved temperature and operational stability
ARG-189

Movable RF probe eliminates need for calibration in plasma accelerators
LEWIS-10127

Standard surface grinder for precision machining of thin-wall tubing
LEWIS-10133

Dielectric prisms would improve performance of quasi-optical microwave components
ERC-10011

Technique eliminates high voltage arcing at electrode-insulator contact area
LEWIS-10163

Thin film thermal detector
JPL-943

Thermal conductors improve heat dissipation in electronic packaging
N-FS-13569

Broadband choke suppresses spurious currents in antenna structure
MSC-10013

Improved process for making thin-film sodium niobate capacitors
MSC-11231

Moebius resistor is noninductive and nonreactive
SAS-10202

Nondestructive method for measuring residual stresses in metals, a concept
KSC-10237

Improved wire memory matrix uses very little power
JPL-SC-167

Resonant microwave dichroic surface
SUBJECT INDEX

Dielectric materials for use in thin-film capacitors
M-FS-20471 B69-10387 02

Leads integral with the internal interconnection that penetrate the molded wall of a package
LANGLEY-10228 B69-10436 01

A sterilizable high-impact antenna

Pressure molding of powdered materials improved by rubber mold insert
WO-100 B64-10270 03

Screw locking cups quickly and neatly crimped
WO-0009 B65-10049 05

Fabrication method produces high-grade alumina crucibles
M-PS-216 B65-10078 05

Integral ribs formed in metal panels by cold-press extrusion
M-PS-230 B65-10141 05

Lathe attachment used to machine elliptical cones
MNC-100 B65-10168 05

Metal parts hydrosized by explosive force
M-PS-209 B65-10170 05

Hand tool bends component leads accurately
M-PS-308 B65-10181 05

Fiber glass dies speed forging of large metal sheets
M-PS-214 B65-10210 05

Die and telescoping punch form convolutions in thin diaphragm
JPL-SC-135 B65-10393 05

Forming tool improves quality of tubing flares
WO-231 B66-10001 05

Heated die facilitates tungsten forming
LEWIS-25A B66-10047 05

Hand tool permits shrink sizing of assembled tubing
MSC-504 B66-10239 05

Pressure-welded flange assembly provides leak-tight seal at reduced bolt loads
M-PS-640 B66-10247 05

Strippable grid facilitates removal of grid-surfaced conical workpiece from die
M-PS-716 B66-10334 01

Tool forms right angles in component leads
M-PS-722 B66-10346 05

Hydraulic fluid serves as mandrel for small diameter refractory tube drawing
ARG-94 B66-10523 05

DIFFERENTIAL AMPLIFIERS

Controlled release device prevents damage from dynamic stresses
KSC-66-14 B66-10628 05

Orbital tube flaring system produces tubing connectors with zero leakage
M-PS-2016 B67-10019 05

Development of technology for hot-drape forming of large torus sections
M-PS-12141 B67-10341 05

Precision metal molding
M-PS-13305 B67-10423 05

Method of making conical fiber optical components
XNP-09745 B69-10020 02

Imprinting of confining sites for cell cultures on thermoplastic substrates
LANGLEY-10495 B69-10236 04

Wall-thickness changes predicted in hollow-drawn tubing
ARG-10425 B69-10428 02

DIFFERENTIAL EQUATIONS

Computer simulation program is adaptable to industrial processes
LEWIS-240 B68-10426 01

Digital filter synthesis computer program
ARC-10130 B68-10164 06

Computer program TRACK performs transient and/or steady state thermal analysis with coupled fluid flow and heat conduction
MBC-10189 B68-10450 06

Variable-mesh method of solving differential equations
NFO-10515 B69-10017 02

Numerical inversion of finite Toeplitz matrices and vector Toeplitz matrices
ARG-10445 B69-10345 02

DIFFERENCES

Leakage tester for flat conductor cable connector
M-PS-20427 B69-10284 05

DIFFERENTIAL AMPLIFIERS

New low-level a-c amplifier provides adjustable noise cancellation and automatic temperature compensation
ARC-2 B63-10003 04

Simulator produces physiological waveforms
MSC-94 B65-10091 01

Variable-capacitance tachometer eliminates troublesome magnetic fields
GSFC-435 B66-10126 01

FET comparator detects analog signal levels without loading analog device
M-PS-503 B66-10224 01

Feedback loop compensates for rectifier nonlinearity

NFO-11033

Constant-frequency, variable-duty-cycle
multivibrator
KGS-10013

Differential Calculus

Method reduces computer time for smoothing
functions and derivatives through ninth
order polynomials
NWC-10534

Differential Equations

New computer program solves wide variety of
heat flow problems
M-FS-421

Study compares methods for the numerical
solution of ordinary differential equations
M-FS-830

Study made of application of stereoscopic

display system to analog computer simulation
M-FS-1263

Problems of oscillating cone in supersonic
flow is solved by small perturbation

techniques
M-FS-869

Subject Index

Self-starting procedure simplifies numerical
integration
MFC-50

Linear circuit analysis program for IBM
1620 Monitor 2, 1371/1443 data processing
system /CIRCS/
NFO-10131

Computer program simulates physical systems
by solving the simultaneous differential
equations describing the systems
NFO-10019

Computer program resolves radiative,
conductive, and convective heat transfer
problems for variety of geometries
M-FS-1910

General frequency response program calculates
frequency response of system, open at any
specified element
M-FS-12817

DYANA - An advanced programming system for
large classes of dynamic and equivalent
systems
M-FS-12084

Tool reconstructs data input points
corresponding to first order output graph
M-FS-18003

Computer program determines system
stability /DIGSTA/
LEWIS-10395

EICOV - Newton-Raphson calculus of
variation with automatic transversalities
M-FS-14086

Solution of differential equations by
application of transformation groups
M-FS-14802

Controllability of distributed-parameter
systems
M-FS-14929

CIRCUSS - A digital computer program for
transient analysis of electronic circuits
M-FS-15002

Solving nonlinear heat transfer constant
area fin problems
M-FS-14851

Accurate digital technique simulates flight
control system
M-FS-14767

Improved technique for digital simulation
of bending and slosh phenomena
M-FS-14788

Variable-bash method of solving
differential equations
NFO-10515

Numerical integration of ordinary
differential equations of various orders
AEG-10247

Some numerical methods for integrating
systems of first-order ordinary differential
equations

DIGITAL FILTERS

- Oscillator circuit operates as digitally controlled frequency synthesizer

- Computer program for Video Data Processing system

- Digital data averager improves conventional measurement system performance

- Analysis of flutter in tape transport systems

- Concept for simplified serial digital decoder

- Method of reducing time base error in digital magnetic recorders

- Short circuit protection for a power distribution system

- VICAR-DIGITAL image processing system

- Two devices for analysis of nystagmus

- Remote balance weighs accurately amid high radiation

DIGITAL FILTERS

- Reducing quantizer deadband with a range switching digital filter

DIGITAL INTEGRATORS

- Digital logic elements provide additional functions from analog input

- Logic circuit exhibits optimum performance

- Study indicates fluid digital computation systems are feasible

- Operational integrator

- Special purpose computer provides programmable digital filter for sampled-data control systems

DIGITAL SIMULATION

- Computer program simulates physical systems by solving the simultaneous differential equations describing the systems

- Accurate digital technique simulates flight control system

- Improved technique for digital simulation of bending and slosh phenomena

DIGITAL SPACECRAFT TELEVISION

- Improved television signal processing system

DIGITAL SYSTEMS

- Monostable circuit with tunnel diode has fast recovery

- Novel circuit combines pulse stretcher with NOR gate

- Logic redundancy improves digital system reliability

- Digital system accurately controls velocity of electromechanical drive

- Transistorized circuit clamps voltage with 0.1 percent error

- Digital-output cardiotachometer measures rapid changes in heartbeat rate

- New television camera eliminates vidicon tube

- How sensitive solids mass spectrometer uses inert-gas ion source

- Binary fluid amplifier solves stability and load problems

- Electronic phase-locked-loop speed control system is stable

- PW acquisition demodulator achieves automatic synchronization of a telemetry channel

- Pneumatic binary encoder replaces multiple solenoid system

- Digital system provides superregulation of nanosecond amplifier-discriminator circuit

- Digital system detects binary code patterns containing errors

- Positive displacement cylinder measures corrosive liquid volume

- Computer program detects transient malfunctions in switching circuits

- Electronic frequency discriminator

- Structural Analysis and Matrix Interpretive System /SAMIS/
Numerical data frame readout system used in testing telemetry systems  
GSFC-551  B67-10175  01

Improved technique for localizing electropolishing features novel nozzles
WOC-101

Pulsed plasma accelerator operates repetitively without complex controls
LANGLEY-48

Variable load automatically tests dc power supplies
GSFC-291

Variable frequency transistor inverters use multiple core transformers

SUBJECT INDEX

Rotor position sensor switches currents in brushless dc motors
GSFC-315

System measures unidirectional forces, excludes extraneous forces
LEWIS-170

Dc to ac converter operates efficiently at low input voltages
GSFC-130

Device measures fluid drag on test vehicles
LANGLEY-34

Brushless dc motor uses electron beam switching tube as commutator
GSFC-345

Inductor flyback characteristic gives voltage regulator fast response
GSFC-361

Ceramic materials purified by experimental method
LEWIS-225

Differential pressure gauge has fast response
M-PS-358

Electrostatically driven dynamic capacitor employs capacitive feedback
JPL-771

Electropneumatic rheostat regulates high current
ARC-44

Solenoid diode controls switching of large direct currents
MSC-188

Noncontacting vibration transducer has constant sensitivity
LANGLEY-99

Dual-voltage power supply has increased efficiency
LEWIS-1074

Rod and dish cathode improves penning-type vacuum gage
GSFC-847

Tester periodically registers dc amplifier characteristics
MSC-190

Circuit protects regulated power supply against overload current
GSFC-853

Circuit provides accurate four-quadrant multiplication
WOC-272

Phase inverter provides variable reference push-pull output
HQ-23

Brushless dc motor has high efficiency, long life
GSFC-181

Efficient dc to dc converter eliminates large stray magnetic fields
GSFC-863

Nonhazardous acid etches weld samples
M-PS-975

Electronic bidirectional valve circuit prevents crossover distortion and threshold effect
MSC-193

Remote preamplifier circuit maintains...
stability over wide temperature range
W00-278

Shaft encoder presents digital output
JPL-SC-191

Standard arc welders provide high asperage direct current source
LANGLY-267

Thermionic scanner pinpoints work function of emitter surfaces
JPL-SC-177

Instrument automatically selects peak acceleration signal from several accelerometers
JPL-816

Solid state circuit switches ac load
JPL-798

Solid state circuit controls direction, speed, and braking of dc motor
JPL-775

Spiral spring/strain gage combination accurately measures shock induced deflection
MSC-789

Solid state annunciator facilitates complex system troubleshooting
ARC-73

Preregulator feedback circuit utilizes Light Actuated Switch
H-FS-1160

High intensity radiation heat source is capable of sustained operation
ARC-61

Monitoring circuit accurately measures movement of solenoid valve
H-FS-1829

Electronic circuit provides accurate sensing and control of dc voltage
W0-0069

Low input voltage converter/regulator minimizes external disturbances
GSPC-527

Polarimeter provides transient response in nanosecond range
JPL-890

Variable-pulse switching circuit accurately controls solenoid-valve actuations
H-FS-1895

Heater control circuit provides both fast and proportional control
H-FS-906

Voltage regulator/amplifier is self-regulated
H-FS-1240

Glow discharge density sensor probe life is extended
H-FS-1707

Improved television signal processing system
JPO-10140

Solid state phase detector replaces bulky transformer circuit
MSC-11007

Fast-response frequency-to-analog converter
H-FS-709

System precisely controls oscillation of vibrating mass
H-FS-1875

Vibrator elapsed time is automatically controlled
H-FS-2573

Transistor biased amplifier minimizes diode discriminator threshold attenuation
ARG-163

Portable spectrometer monitors inert gas shield in welding process
H-FS-12144

Signal generator converts direct current to multiphase supplies
MSC-11043

Multiple meter monitoring circuits served by single alarm
MSC-10984

High power dc/dc and dc/ac electrical power conversion techniques developed
H-FS-13227

Standard surface grinder for precision machining of thin-wall tubing
ARC-10014

Control apparatus for spectral energy source
MSC-391

Solid state single-ended switching dc-to-dc converter
H-FS-13598

Linear analog dc voltage-to-pulse-width converter
GSPC-556

Regulated dc-to-dc converter features low power drain
GSPC-03829

Improved dc voltage multiplier
H-FS-14042

Precision helometer bridge
MSC-11473

Synthesis of electro-optic modulators for amplitude modulation of light
H-FS-14266

Analysis and design of a class-D amplifier
H-FS-14803

Concept to convert electrical power
GSPC-10222

Power consumption in acoustic amplifiers under conditions of maximum stable gain
GSPC-10067

Application of the solid lubricant molybdenum disulfide by sputtering
MSC-10544

Isolated, multiple-output voltage dc-to-dc converter
H-FS-14976

Silicon carbide diode for increased light output
H-FS-20063

Plasma-heating by induction
MSC-10526

VICAR-DIGITAL image processing system
JPL-10770 B69-10139 06

Miniaturization of magnetic logic circuitry
LANGLEY-10037 B69-10148 06

Repair of honeycomb panels with welded breakaway studs
MSC-15046 B69-10261 05

DISTRIBUTING

Controllability of distributed-parameter systems
E-PS-14929 B66-10346 02

DISTRIBUTION

Grit blasting nozzle fabricated from mild tool steel proves satisfactory
E-PS-1420 B66-10597 05

DISTRIBUTION (PROPERTY)

Program computes zero lift wave drag of entire aircraft
LANGLEY-10079 B67-10530 06

Areas of irregular, discontinuous patterns rapidly and accurately measured
GSFC-10184 B67-10674 01

Wall-thickness changes predicted in hollow-drawn tubing
ABS-10425 B69-10428 02

X-180
DONNELL EQUATIONS
Buckling Of Shells Of Revolution
LANGLEY-10441 B69-10300 06

DONOR MATERIALS
Primary cells utilize halogen-organic
cell transfer complex
JPL-926 B66-10632 02
Xenon fluoride solutions effective as
fluorinating agents
ARG-217 B67-10133 03

DOORS
Lightweight door seal cryogenic container
against diaphragm type loading
MSC-623 B66-10336 03
Concealed hinge permits flush mounting of
doors and hatches
ARG-10071 B67-10597 02

DOPPLE EFFECT
Optical superheterodyne receiver uses laser
for local oscillator
M-PS-1605 B66-10584 01
Laser Doppler flowmeter measures gas
velocity
M-PS-1747 B66-10693 02
Design concepts using ring lasers for
frequency stabilization
M-PS-1808 B67-10143 01

DOSAGE
Training course for radiation safety
technicians
ARG-216 B67-10477 02
Neutron detector simultaneously measures
fluence and dose equivalent
ARG-10071 B67-10597 02
Experimental study and evaluation of
radioprotective drug
ARG-10196 B68-10320 04

DOSIMETERS
Semiconductor forms biomedical radiation probe
MSC-320 B66-10252 04
Practical new method of measuring
thermal-neutron fluence
WUC-10086 B67-10352 02

DRAFTING
Concept for modifying drafting instruments
to minimize smearing
KSC-10056 B67-10283 05
Photographic and drafting techniques
simplify method of producing engineering
drawings
MSC-716 B68-101128 02

DRAFTING MACHINES
Automated drafting system uses computer
MSC-320 B66-10362 01

DRAG
New anemometer has fast response, measures
dynamic pressure directly
LANGLEY-18 B63-10530 05

DRAG DEVICES
Friction device removes linear motion of
rotating shaft
WUC-10214 B66-10030 05

DRAG MEASUREMENT
Device measures fluid drag on test vehicles
LANGLEY-94 B65-10195 01

DRAG REDUCTION
Quick-acting clutch disengages idle drive
motor
MSC-143 B64-10028 05

DRAWINGS
Front and back printed circuit layouts
presented on single sheet
MSC-901 B66-10324 01
Instrument transmits vanishing point to
illustration point
MSC-267 B66-10371 02

I-181
Automated drafting system uses computer techniques
K-PS-786  E66-10362 01

Computerized parts list system coordinates engineering releases, parts control, and manufacturing planning
MSC-10073  E67-10348 06

Projection transparencies from printed material
K-PS-14608  E68-10112 01

Microelectronic device data handbook
ERC-10322  E69-10687 01

Unmanned seismometer levels self, corrects drift errors
GSPC-572  E67-10102 03

Simplified method introduces drift fields into cells
GSPC-572  E67-10102 03

Electrometer preamplifier has drift correction feedback
JPL-SC-074  E65-10267 01

Tester periodically registers dc amplifier characteristics
MSC-190  E66-10148 01

Analog buffer isolates high impedance source from low impedance load
K-PS-13401  E67-10544 01

Digital-to-analog converter operates from low level inputs
JPL-907  E67-10357 01

Rock bit requires no flushing medium to maintain drilling speed
JPL-800-031  E65-10109 05

Drill bit design assures clean holes in laminated materials
WOO-098  E65-10386 05

Modified drill permits one-step drilling operation
K-PS-559  E66-10169 05

Threaded pilot insures cutting tool alignment
K-PS-527  E66-10074 05

Modified drill permits one-step drilling operation
K-PS-559  E66-10169 05

Process sequence produces strong, lightweight reflectors of excellent quality
LEWIS-331  E67-10010 05

Polarized light reveals stress in machined laminated plastics
LEWIS-10016  E67-10383 03

Transplutonium elements processed from rock debris of underground detonations
ARG-10222  E69-10054 03

Cold machining of high density tungsten and other materials
ARG-10200  E69-10110 05

Repair of honeycomb panels with welded breakaway studs
MSC-15046  E69-10261 05

Technique for anchoring fasteners to honeycomb panels
LEWIS-10888  E69-10261 03

Circuit board hole coordinate locator concept
K-PS-14737  E69-10539 01

Portable tool cleans pipes and tubing
KSC-230  E65-10375 05

Drill bit design assures clean holes in laminated materials
WOO-098  E65-10386 05

Pipe cutting tool is useful in limited space
MSC-36  E66-10102 05

Hand drill adapter limits holes to desired depth
MSC-346  E66-10123 05

Depth indicator and stop aid machining to precise tolerances
K-PS-553  E66-10149 05

Nylon bit removes cork insulation without damage to substrate
MSC-381  E66-10152 05

Gear drive automatically indexes rotary table
K-PS-753  E66-10383 05

Hole saw drill attachment has zero force reaction
MSC-543  E66-10604 05

Irradiated gases transferred without contamination or dilution
LEWIS-278  E67-10044 03

Development of lunar drill to take core samples to 100-foot depths
K-PS-13195  E67-10529 05

J-beveling of pipe ends with a hand-held tool
KSC-10356  E69-10229 05

Imprinting of confining sites for cell cultures on thermoplastic substrates
LANGLEY-10495  E69-10236 04

Multi-purpose tool mitten
SQ-10047  E69-10483 05

Iris-leaf core retainer for a surface drill
MSC-11402  E69-10496 05

A rotating, noncapillary heat pipe
LEWIS-10228  E69-10684 05

Nozzles for size reclassification of microfog particles
LEWIS-10705  E69-10076 05

Calculations enable optimum design of magnetic brake
LEWIS-251  E66-10073 05

Spiral spring/strain gage combination accurately measures shock induced deflection
MSC-789  E66-10488 01

Phase-lock loop frequency control and the dropout problem
K-PS-13941  E68-10130 01

Apparatus measures concentration of suspended droplets in gas streams
LANGLEY-31  B64-10237 01

System for measuring spatial distribution of ejected droplets, a concept
WPO-10185  E68-10402 01

Improved vacuum deposition apparatus
WPO-11009  E69-10365 02
SUBJECT INDEX

DRUMS (CONTAINERS)
Extendible column can be stowed on drum
JPL-686 B65-10191 05

DRY CELLS
Camera lens adapter magnifies image
M-PS-11955 B67-10431 02

DRY HEAT
Technique for highly efficient recovery
of microbiological contaminants
MSC-12520 B69-10273 04

DRIYING
Stringent cleaning technique assures reliable
epoxy bond
GSPC-161 B66-10341 03

DRIYING APPARATUS
Apparatus automatically measures soluble
residue content of volatile solvents
SAN-10032 B69-10292 03

DUCTED FLOW
Lightweight hinged bellows restraint has
high load capacity
WOO-151 B65-10341 03

DUCTILITY
Lightweight magnesium-lithium alloys show
promise
M-PS-17 B63-10389 03

Low power heating element provides thermal
control during swaging operations
M-PS-457 B66-10206 05

Nickel-base superalloys developed for high-
temperature applications
LEWIS-226 B66-10222 03

Pressure-welded flange assembly provides
leak-tight seal at reduced bolt loads
M-PS-640 B66-10247 05

Boron-deoxidized copper withstands brazing
temperatures
M-PS-762 B66-10273 03

Thermal stress-relief treatments for 2219
aluminum alloy are evaluated
M-PS-1213 B66-10448 03

Braze alloy holds bonding strength over wide
temperature range
LEWIS-337 B66-10519 03

Lower-cost tungsten-rhenium alloys
LEWIS-332 B66-10526 03

Silver-base ternary alloy proves superior
for slip ring lead wires
M-PS-1540 B66-10540 03

Tantalum alloys resist creep deformation at
elevated temperatures
LEWIS-350 B66-10558 03

Ductile mandrel and parting compound
facilitate tube drawing
ARG-43 B66-10571 05

Tests show that aluminum welds are improved
by bead removal
M-PS-1817 B67-10023 05

Aluminum-titanium hydride-boron carbide
composite provides lightweight neutron
shield material
NUC-10069 B67-10265 03

High-strength tungsten alloy with improved
ductility
LEWIS-10257 B67-10340 03

Excellent spring properties developed in two
nickel alloys for use at cryogenic
temperatures
NUC-10084 B67-10349 03

Steel test panel helps control additives in
pyrophosphate copper plating
LEWIS-10101 B67-10358 05

Magnesium-lithium alloys developed for low
temperature use
M-PS-1541 B67-10365 03

Study made of ductility limitations of
aluminum-silicon alloys
M-PS-12524 B67-10392 03

Heat treatment procedure to increase
ductility of degraded nickel alloy
M-PS-12410 B68-10029 03

Weld microfusing in Inconel 718
minimized by minor elements
M-PS-18185 B68-10251 03

High temperature alloy
LEWIS-10377 B68-10253 03

Fabrication techniques developed for small-
diameter, thin-wall tungsten and tungsten
alloy tubing
ARG-10100 B68-10264 05

Pre-weld heat treatment improves welds in
Rene 41
M-PS-18174 B68-10285 03

Nickel base alloy with improved stress
rupture properties
LEWIS-10263 B68-10344 03

Nickel-base superalloy* excellent
properties promote its service to 2200
degrees F
LEWIS-10355 B68-10380 03

Hot-cracking studies of Inconel 718 weld-
heat-affected zones
M-PS-18211 B68-10502 05

Two-step rocket engine bipropellant valve
concept
M-PS-10591 B69-10280 05

Effects of hydrogen on metals
M-PS-20364 B69-10372 03

Strain-age cracking in Rene 41 alloy
M-PS-18650 B69-10605 03

Retention of ductility in high-strength
steels
ARG-10497 B69-10616 03

Effects of high-pressure hydrogen on
storage vessel materials
M-PS-18605 B69-10730 03

DUCTS
External linkage tie permits reduction in
ducting system flange thickness
M-PS-623 B66-10326 05

Bellows joint absorbs torsional deflections in
duct system
M-PS-822 B66-10332 04

Brazing retort manifold design concept may
minimize air contamination and enhance
uniform gas flow
M-PS-707 B66-10371 05

Spherical pipe joint delivers loads equally
to mating flange
M-PS-807 B66-10665 05

I-183
Spherical joint connects axially misaligned flanges

Liquid oxygen dicting cleaned by falling film method

Flow liner extends operating life of high-angulation bellows

Design of fluid-duct bends with low pressure loss

Two-axis winch installer for heavy ducts in confined space

Fatigue failure in metal bellows due to flow-induced vibrations

Quick-acting backup tool for welding ducts

Hydraulic calipers

Multichannel spectroscopy guide

Strain gage network distinguishes between thermal and mechanical deformations

Electronic dummy for acoustical testing

A continuously operating source of vacuum ultraviolet below 500 angstrom

Machine tests crease durability of sheet materials

Spiral-grooved shaft seals substantially reduce leakage and wear

Compact rotating cup anemometer

Improved atmospheric particle analyzer

Vacuum probe sampler removes micron-sized particles from surfaces

Health hazards of ultrafine metal and metal oxide powders

Air sampler collects and protects minute particles

Transient sensor development

Forous glass makes effective substrate for ozone-sensing reagent

Test strips detect different CO2 concentrations in closed compartments

Surfactant for dye-penetrant inspection is insensitive to liquid oxygen

Sea dye marker provides visibility for 20 hours

Weld microsizing in Inconel 718 minimized by minor elements

Neutron therapy of cancer

Airborne Fraunhofer Line Discriminator

Dynamite characteristics

Precision C# laser automatic tracking system investigated

Materials data handbook, Inconel alloy 718

System automatically provides dynamic launch decision criteria

Torque meter aids study of hysteresis motor rings

Dynamic-reservoir lubricating device

Dynamic linearity measurement technique

Dynamics of moving bubbles in single and binary component systems

Analysis of space vehicle structures using the transfer-function concept

Study of high-speed angular-contact ball bearings under dynamic load

Dynamic calibrations of turbine flowmeters

New anemometer has fast response, measures dynamic pressure directly

Apparatus permits flexure testing of specimens at cryogenic temperatures

Pressure responsive seal handles static and dynamic loads

Mechanism continuously measures static and dynamic cable loads

Transducer measures force in vacuum environment

Controlled release device prevents damage from dynamic stresses

Aspirator increases relief valve poppet stroke

Improved control system power unit for large parachutes

Nondestructive testing of brazed rocket engine components

</table>
Bismuth alloy potting seals aluminum connector in cryogenic application

Device without electrical connections in tank measures liquid level

Special tool seals conductors with combination of plastic sleeves

Rugged microelectronic module package supports circuitry on heat sink

Polarizing keys prevent mismatch of connector plugs and receptacles

Exclusive-or logic circuit has useful properties

Device serves as hinge and electrical connector for circuit boards

Junction connectors permit strategic placement of television cameras

Flag-in connector socket accepts coaxial cable end

Optical monitor panel provides flexible test panel configurations

Process reduces secondary resonant emission in electronic components

Thermocouple-flexible cable connector insulator is highly reliable

Edge-type connectors evaluated by electrical noise measurement

Cracks in glass electrical connector headers removed by dry blasting with fine abrasive

Composite solar cell matrix is reliable, lightweight and flexible

Connector shorting cap provides pin alignment, inspection, and stray voltage protection

Inspection criteria ensure quality control of parallel gap soldering

Design concept for nonarcing electrical connector

Coaxial cable stripper for confined areas

Simple switch actuated by force applied over wide solid angle

Concept for a multifunctional oscilloscope probe

Adjustable wrench for electronic connectors

An improved method for electrical cable terminations

Modular packaging technique for combining integrated circuits and discrete components

Breakaway electrical connector

Cover protects critical electrical connectors against damage during handling

An electrical connector pin protector

Stepping switch with simple actuator provides many contacts in small space

Improved molybdenum disulfide-silver motor brushes have extended life

Contact stresses calculated for miniature slip rings

Electrical probe ensures reliable contact in socket

Lightweight coaxial cable connector reduces signal loss

Lamp automatically switches to new filament on burnout

New energy storage concept uses tapes

Integral skin electrode for electrocardiography is expendable

Diffusion technique stabilizes resistor values

Solar cell submodule design facilitates assembly of lightweight arrays

Brushless dc motor has high efficiency, long life

Junction connectors permit strategic placement of television cameras

Solid state detectors monitor relay contacts

System for etching thick aluminum layers minimizes bridging and undercutting

Plug-in connector socket accepts coaxial cable end

Device accurately measures and records low gas-flow rates

Gage accurately controls force for placing chips on substrates

Variable reluctance switch avoids contact corrosion and contact bounce

Ring counter may be advanced or retarded by command signal

New television camera eliminates vidicon tube and requires less than 500-J pulse with fast rise and fall times

Electrical heating diaphragm eliminates use of pyrotechnics

Single channel pulse-height analyzer operates in subnanosecond range

A design procedure for the weight optimization of straight finned radiators

Parallel line raster eliminates ambiguities in reading timing of pulses not more than 200 microseconds apart

Control circuit ensures solar cell operation at maximum power

Linear-log counting-rate meter uses transconductance characteristics of a silicon planar transistor

Study made of anodized aluminum circuit boards

Alpha particle backscattering measurements used for chemical analysis of surfaces

Regulated dc-to-dc converter features low power drain

Laboratory pulse modulator uses minority carrier storage diodes

Welder analyzer

Improved television signal processing system

Conceptual hermetically sealed elbow actuator

Technical report on galvanic cells with fused-salt electrolytes

Electrothermal linear actuator

Liquid-metal-piston HDG generator

Fast-response frequency-to-analog converter

Stability of a silicon planar transistor

Technical report on galvanic cells with fused-salt electrolytes

Analyzing liquid-metal-hydrodynamic generation of power

Electronic circuit delivers pulse of high interval stability

Studies of cycles for liquid-metal magnetohydrodynamic generation of power

Electronic circuit provides accurate sensing and control of d-c voltage

Electrical, continuity scanner facilitates identification of wiring for soldering to connectors

Full wave dc-to-dc converter using energy storage transformers

Magnetoresistor monitors relay performance

Brushless dc motor uses electron beam switching tube as commutator

Electrical continuity scanner facilitates identification of wires for soldering to connectors

Ball bearing used in design of rugged flowmeter

Remote control electrical switching system has 1000-output capability

Full wave dc-to-dc converter using energy storage transformers

Electrical, continuity scanner facilitates identification of wires for soldering to connectors

Electropneumatic rheostat regulates high current

Improved strain-wire flowmeter has fast response time

Thin-film resistors used in functional electronic blocks

Cuprous selenide and sulfide forms improved photovoltaic barriers

Gelatin coated electrodes allow prolonged bioelectronic measurements

Hot-wire detector for chemically active materials used in gas chromatography

Complementary monostable circuits achieve low power drain and high reliability

High-performance RC bandpass filter is adapted to miniaturized construction

Minimum permissible leakage resistance established for instrumentation systems

New computer program solves wide variety of heat flow problems

Thermocouples electrically checked while connected to data system

Equivalent circuit for a field effect transistor established for computer simulation

Solid-state recoverable fuse functions as circuit breaker

Clamp provides efficient connection for high-density currents

Fast-acting calorimeter measures heat output of plasma gun accelerator

Fused diode provides visual indication of fuse condition

Concept for cryogenic liquid reclamation system

Graphite cloth facilitates vacuum evaporation of silicon monoxide

Superconductive thin film makes convenient liquid helium level sensor

Ratio matching of half-bridge weldable strain gages, computer program

Microelectronic oscillator

Refractory-metal compound impregnation of polytetrafluoroethylene

A new solid lubricant

Nondestructive evaluation of printed wiring boards by microresistance measurements

Design of a strain-gage probe

Generation of sonic power during welding

Temperature-controlled resistor

Synchronous charge-constrained electroquasistatic generator

Thermally conducting electron transfer polymers

Engineering thermal analyzer /BETA 2/

Exploding bridgewire detonator simulator

Electrical resistivity

Indium foil with beryllia washer improves transistor heat dissipation

Cooling method prolongs life of hot-wire transducer

Improved conductive paste secures biomedical electrodes

Carbon-arc rod holder has long life, reduces arc splatter

Portable self-powered device detects internal flaws in tubular structures

Improved electrode paste provides reliable measurement of galvanic skin response

Reflective insulator layers separated by bonded silica beads

Thermal motor positions magnetometer sensors

Refractory coating protects intricate graphite elements from high-temperature hydrogen

Integral skin electrode for electrocardiography is expendable

Diffusion technique stabilizes resistor values

Mounting improves heat-sink contact with beryllia washer

Aluminum doping improves silicon solar cells

Electrical upsetting of metal sheet forms weld edge

Silver-base ternary alloy proves superior for slip ring lead wires
Tungsten fiber-reinforced copper composites form high strength electrical conductors.

Spray-on electrodes enable EKG monitoring of physically active subjects.

Simple technique determines ac properties of hard superconductive materials.

Primary cells utilize halogen-organic charge transfer complex.

Solid-state recoverable fuse functions as circuit breaker.

Hydrated multivalent cations are new class of molten salt mixtures.

Mechanisms of superconductivity investigated by nuclear radiation.

Evaluation of high temperature stranded hookup wire.

Static electricity of polymers reduced by treatment with iodine.

Oxide film on metal substrate reduced to form metal-oxide-metal layer structure.

Switching-type regulator circuit has increased efficiency.

X-ray source uses interchangeable target anodes to vary X-ray wavelength.

Substituting gold for silver improves electrical connections.

Fused diode provides visual indication of fuse condition.

Sensitive bridge circuit measures conductance of low-conductivity electrolyte solutions.

Crack growth measured on flat and curved surfaces at cryogenic temperatures.

Flame sprayed dielectric coatings improve heat dissipation in electronic packaging.

Bacteriostatic conformal coating for electronic components.

Eddy current probe measures size of cracks in nonmetallic materials.

Resistivity measurements of neutron-irradiated pure metals and Al-Zn alloys.

Moebius resistor is noninductive and nonreactive.

System for measuring spatial distribution of ejected droplets, a concept.

Point-source light sensor circuit is insensitive to background light.

Electro-optics:

Design concept for nonarcing electrical connector.

Stress-corrosion-induced property changes in aluminum alloys.

Propagation of density disturbances in air-water flow.

Refractory oxide insulated thermocouple designed and analyzed for high temperature applications.

Segmented SiGe-PbTe couples.

Field Effect Transistor /FET/ circuit for variable gain amplifiers.

Magnetic forming of resistive materials.

Improved ferrons shielding for flat cables.

Production of solvated electrons.

Improved inorganic ion exchange membranes.

Abrasion and fracture testing in a high-pressure hydrogen environment.

Preparation of superconducting thin films of transition-metal interstitial compounds.

Analysis of cell performance and thermal regeneration of a lithium-tin cell having an immobilized fused-salt electrolyte.

Technique for predicting the thermal expansion coefficients of cryogenic metallic alloys.

Electro-optical effect:

Point-source light sensor circuit is insensitive to background light.

ELECTROMAGNETIC WAVE TRANSMISSION
Optical frequency waveguide and ion transmission system
EQ-10541 B69-10746 01

ELECTROMAGNETISM
Gas-injection valve operates at high speed
EQ-49 B66-10381 05

High transients suppressed in electromagnetic devices
EBC-136 B67-10031 01

Improved fluid control circuit operates on low power input
LEWIS-325 B67-10042 01

Calibration technique for electromagnetic flowmeters
LEWIS-10328 B67-10554 01

New passive telemetry system
EQ-10214 B69-10312 01

Magnetomotive forcing for precision sizing and joining of large-diameter tubes
M-PS-20481 B69-10422 05

ELECTROMAGNETS
Device calibrates vibration transducer at amplitudes up to 20 g
M-PS-88 B63-10572 01

Magnetic field controls carbos arc tall flame
MSC-139 B65-10108 01

Neutron diffractometer allows both magnetic and crystallographic analyses
ARG-191 B67-10131 02

Rectangular configuration improves superconducting cable
ARG-90088 B68-10098 02

ELECTROMECHANICAL DEVICES
Stepping switch with simple actuator provides many contacts in small space
JPL-122 B63-10118 01

Coincident switch closing reduces error in motor-driven timer
JPL-182 B63-10143 05

Electromechanically operated camera shutter provides uniform exposure
JPL-357 B63-10227 01

Knob linkage permits one-hand control of several operations
MSC-30 B65-10022 05

Digital system accurately controls velocity of electromagnetic drive
GSPC-287 B65-10096 01

Device measures fluid drag on test vehicles
LANGLEY-34 B65-10195 01

Electromechanical flowmeter accurately monitors fluid flow
GSPC-357 B65-10273 01

Electronic chamber provides direct digital output
GSPC-363 B65-10274 01

Remote control electrical switching system has 1000-output capability
M-PS-380 B65-10318 01

Circuit operates as sine function generator
MSC-255 B66-10638 01

Electropneumatic transducer automatically limits motor current

IEP-09771 B69-10119 05

Torsion system for creep testing with
A phonocardiogram simulator
KSC-67-94 B67-10239 01

Automated tester permits precise calibration of pressure transducers from 0 to 1050 psi
NWC-10067 B67-10263 01

Liquid crystals detect voids in fiber glass laminates
LEWIS-10104 B67-10286 03

Test device prevents weld joint damage by eliminating axial pin forces on unpotted modules
LEWIS-10201 B67-10359 01

Test and inspection for process control of monolithic circuits
M-PS-13084 B67-10507 01

Analog buffer isolates high impedance source from low impedance load
M-PS-13481 B67-10544 01

Electronic load for testing power generating devices
NPO-10350 B68-10203 01

Concept for a multifunctional oscilloscope probe
M-PS-16390 B69-10129 01

Electronic Filters
Electropneumatic rheostat regulates high current
ABC-44 B65-10299 01

Electronic filter discriminates between true and false reflections
HQ-55 B67-10071 02

Electronic Modules
Welded pressure transducer made as small as 1/8th-inch in diameter
ABC-11 B63-10429 03

Use of tear ring permits repair of sealed module circuitry
M-PS-210 B65-10014 05

Electronic modules easily separated from heat sink
MSC-142 B65-10186 02

Handtool facilitates extraction of circuit modules
LANGLEY-38 B65-10231 05

Assembly jig assures reliable solar cell modules
GSFC-455 B66-10040 05

Solar cell submodule design facilitates assembly of lightweight arrays
JPL-720 B66-10231 02

Rugged microelectronic module package supports circuitry on heat sink
MSC-81A B66-10245 01

Packaging of electronic modules
JPL-801 B66-10664 01

Test device prevents weld joint damage by eliminating axial pin forces on unpotted modules
LEWIS-10201 B67-10359 01

Transducer measures embedment stresses in electronic modules
M-PS-13486 B67-10367 01

Aluminum heat sink enables power transistors to be mounted integrally with printed circuit board
M-PS-13663 B67-10426 01

Composite solar cell matrix is reliable, lightweight and flexible

Electronic Transducers

Electronic Packaging

Modular chassis simplifies packaging and interconnecting of circuit boards
JMPL-236A B63-10174 01

Rugged microelectronic module package supports circuitry on heat sink
MSC-81A B66-10245 01

Study made of anodized aluminum circuit boards
M-PS-1358C B67-10425 01

Ultraminiature television camera
M-PS-11967 B67-10469 01

Electroplating dielectric coatings improve heat dissipation in electronic packaging
M-PS-13569 B67-10534 01

Method of disjoining adhesively bonded electronic modules
M-PS-12060 B68-10086 01

Multichip packaging with thermal insulating support
M-PS-14076 B68-10119 02

Nondestructive evaluation of printed wiring boards by microa resistance measurements
SAM-1003A B69-10272 01

Modular packaging technique for combining integrated circuits and discrete components
GSFC-10369 B69-10453 01

Folded stick module
WPO-1085A B69-10498 01

Sprayed shielding of plastic-encapsulated electronic modules
M-PS-1357C B69-10607 01

Electronic Transducers

Pressure sensor responds only to shock wave
M-PS-238 B65-10184 01

Control system maintains selected liquid level
M-PS-470 B66-10039 01

Noncontacting transducer measures shaft torque
M-PS-47A B66-10048 01

Sensor detects hydrocarbon oil contaminants in fluid lines
M-PS-522 B66-10068 01

Capacitive system detects and locates fluid leaks
M-PS-478 B66-10099 01

ENCAPSULATING

Connector for thermocouple leads saves costly wire, makes reliable connectors
LANGLIEY-26 B63-10529 01

Plastic molds reduce cost of encapsulating electric cable connectors
I-PS-69 B63-10568 05

Encapsulation process sterilizes and preserves surgical instruments
JPL-40B B64-10066 05

PTC thermistor protects multiloade power supplies
GSPC-236 B64-10281 01

Seismometer designed for remote operation in random orientation
JPL-320 B66-10085 01

Phonocardiograph system monitors heart sounds
M-PS-185 B66-10154 04

Phonocardiograph microphone is rugged and moistureproof
M-PS-212 B66-10314 04

RF inductor has high Q, is stable at higher temperatures
JPL-109 B67-10106 01

Transducer measures embedment stresses in electronic modules
I-PS-13466 B67-10367 01

Multiplexer uses insulated gate-field effect transistors
I-PS-13096 B67-10396 01

Encapsulation technique eliminates thermal stresses in welded electronic modules
I-PS-14561 B68-10307 01

Leads integral with the internal interconnection that penetrate the molded wall of a package
LANGLIEY-10226 B69-10436 01

Development of improved potting and conformal coating compounds
M-PS-20219 B69-10559 03

Improved cure method for single component silicone rubber
M-PS-12230 B69-10749 03

ENCLOSURES

Portable lightweight cell provides controlled environment
M-PS-648 B66-10370 05

ENDFIRE ARRAYS

Improved circularly polarized planar-array antenna
WPO-10301 B69-10382 01

ENDOTHERMIC REACTIONS

Electrochemical cell has internal resistive heater element
GSPC-10358 B68-10325 01

Subjects of hydrogen on metals
I-PS-20364 B69-10372 03

ENERGY

Lamp enables measurement of oxygen concentration in presence of water vapor
M-PS-10043 B67-10387 01

Improved method of rotary dynamic balancing by laser
I-PS-12422 B67-10452 05

Welder analyzer
M-PS-12068 B68-10242 01

ENERGY ABSORPTION

Frictional wedge shock mount is inexpensive, has good damping characteristics
JPL-IT-1001 B63-10289 05

Break-up of metal tube makes one-time shock absorber, bars rebound
LANGLIEY-11A B63-10304 05

Kinetic-energy absorber employs frictional force between mating cylinders
M-PS-75 B63-10442 05

Materials physically tested in variable-environment chamber
JPL-799 B66-10130 01

Torus elements used in effective shock absorber
M-PS-114 B66-10318 05

High energy forming facility
I-PS-14026 B67-10588 05

Electron beam standby absorber system
M-PS-14108 B67-10650 01

Thick transducers used for generating short-duration stress pulses in thin specimens
ARG-10232 B69-10045 01

Hydrodynamics of a new concept of primary containment by energy absorption
ARG-10242 B69-10046 05

ENERGY ABSORPTION FILMS

Modular thermoelectric cell is easily packaged in various arrays
GSPC-339 B65-10199 01

Detector measures power in 50 to 30,000 MHz radiation band
M-PS-26 B66-10581 01

ENERGY CONVERSION

New method used to fabricate gallium arsenide photovoltaic device
M-PS-906 B64-10019 01

Laser beam transmits electric power
GSPC-293 B65-10158 01

Potassium plasma cell facilitates thermionic energy conversion process
ARG-10010 B67-10399 01

New bimetallic EMF cell shows promise in direct energy conversion
ARG-10163 B68-10415 01

Technical report on galvanic cells with fused-salt electrolytes
ARG-10297 B69-10155 01

Magnetohydrodynamic generators using two-phase liquid-metal flows
ARG-10168 B69-10162 01

Segmented SiGe-PbTe couples
GSPC-10746 B69-10233 01
Optimizing solar-cell grid geometry B69-10460 01

Energy conversion efficiency
Modular thermoelectric cell is easily packaged in various arrays B66-10159 01

Energy dissipation
Improved system measures output energy of pyrotechnic devices B66-10141 05
System measures arc energy dissipated in relay contact cycling B68-10312 01
Four pi-recoil proportional counter used as neutron spectrometer B68-10326 02
Radial inflow turbine design charts LEWIS-10720 B66-10567 05
Mechanical properties of a lap joint under uniform clamping pressure M-PS-14538 B69-10141 05
Effects of sterilization on the energy-dissipating properties of balsa wood HQ-11207 B69-10592 03
Energy distribution
Semiconductor forms biomedical radiation probe MSC-320 B66-10252 01
Dielectric prisms would improve performance of quasi-optical microwave components ERC-10011 B67-10416 01
Detection of molecular infrared spectra HQ-10377 B69-10172 02
Energy levels
Solar X-ray spectrum reproduced in vacuum BSC-228 B66-10169 02
Low energy ohmmeter can be used to test sensitive circuits, other meters SAN-10013 B68-10269 01
Energy sources
Closed fluid system without moving parts controls temperature LEWIS-222 B65-10331 02
Fluidic-thermochromic display device ERC-10031 B68-10350 01
Self-starting circuit for switching regulators LEWIS-10686 B69-10128 05
Energy spectra
Alpha particle backscattering measurements used for chemical analysis of surfaces ABO-116 B67-10186 03
Ion-retarding lens improves the abundance sensitivity of tandem mass spectrometers ARG-10428 B69-10431 02
Energy storage
Large capacitor performs as a distributed parameter pulse line LEWIS-176 B66-10291 01
Study made of dielectric properties of promising materials for cryogenic capacitors M-PS-13594 B66-10596 02
Eddy current disk valve LEWIS-10123 B67-10638 05
Full wave dc-to-dc converter using energy storage transformers LEWIS-10375 B69-10140 01

Additional entries include:
- Energy storage of a prescribed impedance ARG-10428 B69-10431 02
- Energy transfer
- Flexible arms provide constant force for pressure switch calibration HQ-38 B66-10317 05
- Optical automatic gain channel M-PS-1550 B66-10596 02
- Computer program determines chemical composition of physical system at equilibrium M-PS-1119 B66-10670 01
- Quantum mechanical calculations of reactive scattering cross sections in biomolecular encounters M-PS-13594 B67-10527 03
- Advances in light-gas gun technology M-PS-14270 B66-10288 05
- Feasibility study of wireless power transmission systems M-PS-14691 B68-10309 01
- Axially symmetric two-phase perfect gas performance program M-PS-11774 B68-10374 06
- Technique for assessing potential fire hazards HQ-10279 B69-10287 03
- High voltage pulse generator M-PS-12178 B69-10548 01
- Engine control
- Analysis of dynamic systems with DAPU computer program M-PS-13999 B67-10523 06
- Engine design

Environment Simulation

Miniature piezoelectric triaxial accelerometer measures cranial accelerations
ARC-71 B66-10534 01

Method for X-ray study under extreme temperature and pressure conditions
MSC-11232 B67-10474 02

Environment simulators
Simulator effects partial gravity conditions
MSC-152 B66-10339 05

Heat-load simulator for heat sink design
MSC-15170 B68-10510 02

Environmental Control

Self-contained clothing system provides protection against hazardous environments
E-FS-536 B66-10201 05

Critical parts are stored and shipped in environmentally controlled reusable container
E-FS-703 B66-10258 05

Portable lightweight cell provides controlled environment
for harmonic power generation
H-Q-61 B67-10166 01

Improved process for epitaxial deposition
of silicon on prediffused substrates
M-FS-14910 B68-10390 03

Conceptual techniques for reducing
parasitic current gain of lateral pnp
transistors
HSC-13199 B69-10244 01

Epitaxial crystalline growth upon cold
substrates
HSC-11196 B69-10494 01

Modification to improve self-isolating
transistor arrays
M-FS-20499 B69-10678 01

Lateral pnp bipolar transistor with
aiding field diffusions
B69-10741 01

EPOXY COMPOUNDS

Epoxy blanket protects milled part during
explosive forming
B69-10029 03

Thermocouple-flexible cable connector
insulator is highly reliable
BU-0082 B66-10709 01

Standards for compatibility of printed
circuit and component lead materials
M-FS-14531 B69-10310 01

Electron beam selectively seals porous metal
filters
LEWIS-10162 B69-10331 05

Cooled miniature pressure transducers
effective at high temperatures
LEWIS-10401 B69-10370 01

EPOXY RESINS

Integral coolant channels supply made by
melt-out method
M-FS-91 B63-10497 05

New method forms bond line free of voids
LANLERT-20 B63-10558 05

Plastic molds reduce cost of encapsulating
electric cable connectors
M-FS-69 B63-10568 05

Compact coaxial connector for printed circuit
adds reliability
HSC-59 B64-10016 01

Stringent cleaning technique assures reliable
epoxy bond
GSFC-161 B64-10142 03

Screening technique makes reliable bond at
room temperature
M-FS-227 B65-10004 03

Adhesive for vacuum environments resists shock
and vibration
HSC-56 B65-10016 03

Optical arrangement increases useful light
output of semiconductor diodes
JPL-SC-064 B65-10020 05

Miniature stress transducer has directional
capability
JPL-591 B65-10023 01

Wide-aperture solar energy collector is light
in weight
JPL-SC-055 B65-10046 02

Transducer measures temperature differentials in
presence of strong electromagnetic fields
ARX-27 B65-10089 01

Aluminum alloys protected against stress-
corrosion cracking
M-FS-235 B86-10172 03

Epoxy-resin patterns speed shell-molding of
aluminum parts
M-FS-303 B86-10177 05

Modular thermoelectric cell is easily packaged
in various arrays
GSFC-339 B86-10199 01

Thermocouple-to-instrumentation connector
features quick assembly
BU-0022 B86-10246 05

Composite seal reduces alkaline battery
leakage
GSFC-337 B86-10271 01

Epoxy blanket protects milled part during
explosive forming
M-FS-307 B86-101029 03

Spray-on technique simplifies fabrication of
complex thermal insulation blanket
M-FS-497 B86-10053 03

Hydrogen-atmosphere induction furnace has
increased temperature range
LEWIS-153 B86-10055 05

Compound improves thermal interface between
thermocouple and sensed surface
BU-0028 B86-10121 02

Bismuth alloy potting seals aluminum connector
in cryogenic application
BUO-269 B86-10138 03

Phonocardiograph system monitors heart sounds
in cryogenic application
B86-10154 04

Epoxy-coated containers easily opened by
wire hand
M-FS-592 B86-10174 05

Insulation for cryogenic tanks has reduced
thickness and weight
M-FS-326 B86-10183 02

Improved adhesive for cryogenic applications
cures at room temperature
BUO-132 B86-10105 03

Coating permits use of strain gage in water
and liquid hydrogen
M-FS-594 B86-10192 01

Rugged microelectronic module package supports
circuitry on heat sink
B86-10285 01

Phonocardiograph microphone is rugged and
moistureproof
B86-10314 04

Fiber length and orientation prevent migration
in fluid filters
M-FS-547 B86-10319 05

Strippable grid facilitates removal of
grid-surfaced conical workpiece from die
M-FS-716 B86-10334 01

Sprayable birefringent coating enables
strain measurements on large surfaces
M-FS-1484 B86-10578 03

Study made to control depth of potting
compound for honeycomb sandwich fasteners
LEWIS-370 B86-10677 05

Solid-state recoverable fuse functions as
circuit breaker
GSFC-560 B86-10691 01

Metal boot permits fabrication of
hermetically sealed splices in metal
sheathed instrumentation cables B66-10704 05

Miniature capacitor functions as pressure sensor JPL-903 B67-10020 01

RF inductor has high Q, is stable at higher temperatures JPL-1019 B67-10106 01

Photosensitive filler minimizes internal stresses in epoxy resins M-FS-1800 B67-10227 03

Pipe joints reinforced in place with fitted aluminum sleeves MSC-11109 B67-10271 05

Low-energy gamma ray inspection of brazed aluminum joints MSC-1189 B67-10337 02

Transducer measures embedment stresses in electronic modules M-FS-13066 B67-10367 01

Flowmeter determines mix ratio for viscous adhesives M-FS-2308 B67-10378 01

Multiplexer uses insulated gate-field effect transistors M-FS-13096 B67-10396 01

Technique eliminates high voltage arcing at electrode-insulator contact area LEWIS-10133 B67-10470 01

Multi-feed cone for Cassegrainian antenna ARG-10025 B67-10484 03

Flame sprayed dielectric coatings improve heat dissipation in electronic packaging M-FS-13569 B67-10534 01

Epoxy resins produce improved plastic scintillators ARG-241 B67-10596 03

Bacteriostatic conformal coating for electronic components GSPC-10027 B67-10599 03

Synthesis of pure aromatic glycidyl esters for use as adhesives M-FS-12705 B67-10647 03

Cure of epoxy resins determined by simple tests M-FS-13131 B68-10043 03

Method for reinforcing tubing joints MSC-11108 B68-10115 05

Miniature pressure transducer for stressed member application MSC-11869 B68-10246 01

Encapsulation technique eliminates thermal stresses in welded electronic modules M-FS-14581 B68-10307 01

Fiber glass reinforced structural materials for aerospace application M-FS-14806 B68-10360 03

Pressure-sensitive bonded junction transducers BNC-10067 B68-10563 01

Adhesive for cryogenic temperature applications LEMS-10264 B69-10074 03

Novel terminal strips for transformers BKG-10842 B69-10246 01

Automatic bird watcher

MSC-1148 B66-10133 01

Millivolt signal limiter
LBRIS-90237 B69-10015 01

Remote control thermal actuator
LWIS-10873 B69-10307 01

Pulse-height analyzer with digital readout
ARCO-10503 B69-10640 01

FEEDBACK CIRCUITS

Increased performance reliability obtained with dual/redundant oscillator system
GSFC-36 B63-10027 01

Simplified electrometer has excellent operating characteristics
JPL-413 B65-10125 01

Voltage controlled oscillator is easily aligned, has low phase noise
JPL-510 B65-10223 01

Electromechanical flowmeter accurately monitors fluid flow
GSFC-357 B65-10273 01

Hybrid circuit achieves pulse regeneration with low power drain
GSFC-382 B65-10314 01

Phase inverter provides variable reference

I-240
Feedback loop compensates for rectifier nonlinearity

High power dc/dc and dc/ac electrical power conversion techniques developed

Light-controlled resistors provide quadrature signal rejection for high-gain servo systems

Method for reducing snap in magnetic amplifiers

Linear-log counting-rate meter uses transconductance characteristics of a silicon planar transistor

FEEDBACK CONTROL

Igniting system for mercury lamps protects transistorized sustaining supply

Unanneled seismoneter levels self-correcting drift errors

Apparatus measures very small thrusts

Feedback oscillator functions as low-level pulse stretcher

Variable frequency transistor inverters use multiple core transformers

High-gain amplifier has excellent stability and low power consumption

Pressure transducer system is force-balanced, has digital output

Ball and socket joints provide accurate inclination gimbals

Closed loop operation eliminates need for auxiliary gas in high pressure pumping

I-241
FILAMENTS

Buckling strength of filament-wound cylinders under axial compression investigated.

Solid state high-voltage pulser operated with low supply voltage.

Analysis of filament reinforced metal pressure vessels.

Adhesive for cryogenic temperature applications.

FIBERS

LEWIS-10280 B67-10555 05

FIBERS

Program computes zero lift wave drag of entire aircraft.

LANGLEY-10079 B67-10530 06

Solving nonlinear heat transfer constant area fin problems.

M-PS-14851 B68-10504 02

FIRE CONTROL

Dispersion of borax in plastic is excellent.

ARG-5 B67-10016 03

FIRE EXTINGUISHERS

Fire extinguisher control system provides reliable cold weather operation.

M-PS-13031 B67-10622 05

Fire retardant foams developed to suppress fuel fires.

ARC-10098 B68-10358 03

FIRE PREVENTION

Solar film is fire-retardant in oxygen atmosphere.

MSC-11604 B68-10177 03

Ambient temperature catalyst for hydrogen ignition.

LEWIS-10551 B68-10520 03

Technique for assessing potential fire hazards.

NG-10279 B68-10287 03

Improved fire resistant radio frequency aerospace materials.

M-PS-16600 B68-10450 05

FIREPROOFING

Inorganic paint is durable, fireproof, easy to apply.

GSF-366 B65-10156 03

Glass fabric fire barrier for silicone rubber parts.

MSC-15555 B69-10629 03

FIBERS

Infrared television used to detect hydrogen fires.

M-PS-654 B66-10363 01

Hydrogen fire detection system features sharp discrimination.

M-PS-643 B66-10368 01

Emergency escape system protects personnel from explosion and fire.

KSC-66-12 B66-10634 05

FIRING (IGNITING)

Computer program provides steady state analysis for liquid propellant propulsion systems.

MSC-10064 B67-10414 06

Preparation of silver-activated zinc sulfide thin films.

GSF-10667 B68-10271 03

FIRST AID

Buoyant stokes litter assembly used for sea rescue operations.

MSC-131 B66-10019 05

Miniature oxygen resuscitator.

KSC-10398 B69-10319 04

FISHES

Concentrations of the naturally occurring radionuclides Pb-210, Po-210, and Ra-226.

ARG-10345 B69-10258 02

Inhibition of browning in foodstuft.

I-246
Telescoping of instrumentation tubing eliminates swaging
N-PS-586 B66-10116 05

Seal surfaces protected during assembly
N-PS-0067 B66-10266 05

Portable fixture facilitates pressure testing of instrumentation fittings
N-PS-2032 B67-10121 03

Computer program performs rectangular fitting stress analysis
N-PS-13010 B67-10520 06

Determining gas leakage from bubble formations
N-PS-14841 B67-10393 05

Hand-tightened, high-pressure seal
N-PS-18416 B68-10417 05

Teflon-packed flexible joint
LBWIS-90252 B69-10049 03

FIXED WINGS
Computer program calculates wing aerodynamic characteristics for fixed wings with dihedral and variable-sweep wings at subsonic speeds
LANGL-19191 B67-10666 06

FIXING
Technique for abrasive cutting of thick-film conductors for hybrid circuits
MSC-13242 B69-10235 03

FIJTTURES
Jig and fixture aid fabrication of tungsten rivets
LEWIS-185 B65-10101 05

Multisurface fixture permits easy grinding of tool bit angles
N-PS-586 B66-10171 05

Vacuum test fixture improves leakage rate measurements
MSC-271 B66-10286 01

Nonwoven glass fiber mat reinforces polyurethane adhesive
N-PS-2309 B67-10113 03

Cable clamp bolt fixture facilitates assembly in close quarters
KSC-67-80 B67-10244 05

Fixture facilitates soldering operations
K-PS-14456 B68-10573 05

Tape reading fixture
K-PS-14146 B69-10008 05

PIZZAU EFFECT
Determination of the absolute contours of optical flats
ARG-10352 B69-10209 05

PLANKING
Simple test indicates degree of cure of polysulfide coatings
KSC-15497 B69-10330 03

Improved nickel plating of Inconel X-750
N-PS-18604 B69-10463 05

PLANE DEFLECTORS
Process produces chlorinated aromatic isocyanate in high yield
N-PS-1658 B66-10646 03

PLANE HOLDERS
Mounting facilitates removal and installation of flame-detector rods
N-PS-555 B66-10150 05

PLANE IONIZATION
Chromatographic detection and analysis of traces of hydrocarbons
K-PS-13569 B67-10534 03

PLANES
Magnetic field controls carbon arc tail flame
MSC-139 B65-10108 01

An infrared television system for hydrogen flame detection
KSC-10368 B69-10354 01

PLANARITY
Improved head-controlled TV system produces high-quality remote image
ARG-128 B67-10317 01

Thermal protective visor for entering high temperature areas
MSC-10285 B68-10277 05

Testing the flammability of materials exposed to arcs
MSC-12225 B69-10531 03

Burn-rate testing apparatus
KSC-10947 B69-10740 03

PLANAR BLENDING CASES
Sniffer used as portable hydrogen leak detector
N-PS-846 B66-10356 01

Infrared television used to detect hydrogen fires
N-PS-654 B66-10363 01

Hydrogen fire detection system features sharp discrimination
N-PS-643 B66-10368 01

Design concept for nonarcing electrical connector
N-PS-14937 B69-10404 01

Heat-shrinkable jacket holds fluid in contact with tensile test specimen
MSC-13195 B69-10495 05

PLANES
Plunge on microwave antenna subreflector cuts ground noise
JPL-362 B69-10229 01

Pressure transducer 3/8-inch in size can be fastened into surface
WGO-206 B64-10021 05

Connector seals fluid lines at cryogenic temperatures and high vacuums
GSFC-253 B64-10327 05
Metal parts hydrosized by explosive force

Hydraulic system

Pressure seal ring may be effective over wide temperature range

Pressure vessels fabricated with high-strength wire and electroformed nickel

Pressure-welded flange assembly provides leak tight seal at reduced bolt loads

Diffusion bonding makes strong seal at flanged connector

Radial coolant channels fabricated by simplified method

Fastener provides for bolt misalignment and quick release of flange

Remotely controlled system couples and decouples large diameter pipes

External linkage tie permits reduction in ducting system flange thickness

Rubber and alumina gaskets retain vacuum seal in high temperature ERF cell

Feed-thru flange is useful in vacuum applications to cryogenic temperatures

Spherical pipe joint delivers loads equally to mating flange

Weld procedure produces quality welds for thick sections of Hastelloy-X

Spherical joint connects axially misaligned flanges

Static seal concept to accommodate seat tolerances

Study made to establish parameters and limitations of explosive welding

Study made of transfer of heat energy through metal joints in vacuum environment

Lead plated aluminum ring provides static high pressure seal for large diameter pressure vessels

Development of helical seal for high temperature /2000 degrees F/ application

Asbestos and Inconel combined to form hot-gas seal

M-PS-1573  B66-10546  05

Check valve installation in pilot operated relief valve prevents reverse pressurization
M-PS-1925  B66-10655  05

Solenoid valve design has one moving part
MPO-1039  B66-10219  05

Temperature responsive valve withstands high impact loading
MPO-10186  B66-10225  05

Dual photochemical replenisher system reduces chemical losses
KSC-67-111  B66-10485  02

Butterfly valve with metal seals controls flow of hydrogen from cryogenic through high temperatures
MSC-10034  B66-10567  05

Ferromagnetic core valve gives rapid action on minimum energy
LEWIS-10135  B66-10623  05

Solenoid hammer valve developed for quick-opening requirements
LEWIS-2510  B66-10639  05

Dynamically stable check valve concept for wide flow range
M-PS-14579  B66-10247  05

Dynamic-reservoir lubricating device
M-PS-14652  B66-10261  05

A method for using surface tension to determine the size of holes in hardware
MSC-15194  B69-10595  03

FLOW RESISTANCE
System automatically supplies precise analytical samples of high-pressure gases
M-PS-1814  B66-10090  01

FLOW STABILITY
Binary fluid amplifier solves stability and load problems
ERC-15  B66-10177  01
