Lunar Module ECS
(Environmental Control System)
Design Considerations & Failure Modes
Part I
Upon completion of the lesson, the student will be able to:

- Describe the Lunar Module (LM) Environmental Control System (ECS) generic design considerations philosophy.

- Summarize the LM ECS general testing regime.
For the best understanding of this material, the student should have viewed the Lunar Module (LM) Environmental Control System (ECS) Familiarization lesson prior to viewing this lesson.
Overview of LM ECS

- Oxygen Supply and Cabin Pressurization Section
- Atmosphere Revitalization Section
- Water Management Section
- Heat Transport Section
Oxygen Supply and Cabin Pressurization Section

Overview of LM ECS

- Oxygen Supply and Cabin Pressurization Section

Diagram showing flow of oxygen supply and pressure control system,
including components like oxygen tank, control module, valves, and regulators.

R denotes redundant component.

Overview of LM ECS

Water Management Section

- Ascent H2O tanks
- Reclaimed metabolic H2O
- Secondary coolant H2O sublimator
- Suit-circuit H2O sublimator
- Primary coolant H2O sublimator

Water control module

- Water tank selector valve
- Pressure regulator

- Ascent stage
- Descent stage
- Guillotine

R denotes redundant component.
Overview of LM ECS

Water Management Section

- Ascent H2O tanks
- Shutoff valves (5)
- H2O hose
  - PLESS refill
  - Drinking
  - Food preparation
  - Fire extinguisher
- Water tank selector valve
- Pressure regulator
- Reclaimed metabolic H2O
- Pressure regulator
- Secondary coolant H2O sublimator
- Suit-circuit H2O sublimator
- Primary coolant H2O sublimator
- R denotes redundant component.
Overview of LM ECS

Water Management Section

- Ascent H2O tanks
- Reclaimed metabolic H2O
- Pressure regulator
- Secondary coolant H2O sublimator
- Suit-circuit H2O sublimator
- Primary coolant H2O sublimator
- Water control module
- Water tank selector valve
- Pressure regulator
- Ascent stage
- Descent stage
- Descent H2O tank
- Guillotine
- H2O hose
  - PLESS refill
  - Drinking
  - Food preparation
  - Fire extinguisher
- Shutoff valves (5)

R denotes redundant component.

Water Management Section

- Ascent H₂O tanks
- Reclaimed metabolic H₂O
- Pressure regulator
- Water tank selector valve
- Water control module
- Descent H₂O tank
- Guillotine
- Shutoff valves (5)
- H₂O hose
  - P L S S refill
  - Drinking
  - Food preparation
  - Fire extinguisher
- Secondary coolant H₂O sublimator
- Suit-circuit H₂O sublimator
- Primary coolant H₂O sublimator

R denotes redundant component.
Heat Transport Section

- Coolant recirculator assembly
- Pump
- Low-temperature electronics
- Aft equipment bay electronics
- Suit regenerative heat exchanger
- Suit heat exchanger
- Suit water cooling assembly
- Primary sublimator
- Secondary sublimator
- Ascent batteries
- Descent batteries
- Coolant accumulator
- To coolant recirculator assembly

R denotes redundant component
Heat Transport Section

Overview of LM ECS
Overview of LM ECS

- Heat Transport Section

- Coolant recirculator assembly
- Low-temperature electronics
- Aft equipment bay electronics
- Ascent batteries
- Descent batteries
- Coolant accumulator
- Suit heat exchanger
- Suit water cooling assembly
- Suit regenerative heat exchanger
- Primary sublimator
- Secondary sublimator
- To coolant recirculator assembly

  - Control position telemetry switches
    - Most not needed
    - Switch plunger travel length
  - Difficult to install
Generic Design Considerations - Modularization

- Reliability
- Flight Instrumentation

◆ Modularization
Generic Design Considerations - Modularization

→ Modularized by subsystem
Generic Design Considerations - Modularization

- Modularized by subsystem
  ➔ Dense packaging
Generic Design Considerations - Modularization

- Modularized by subsystem
- Dense packaging

⇒ Replacement in the field
Generic Design Considerations - The Change to Batteries

- Reliability
- Flight Instrumentation
- Modularization

◆ The change from fuel cells to batteries
Generic Design Considerations -
The Change to Batteries

→ Change to high pressure oxygen vs. LOX
Generic Design Considerations - The Change to Batteries

- Change to high pressure oxygen vs. LOX
  ➔ Very high pressure/high capacity O2 tank in descent stage
Generic Design Considerations - The Change to Batteries

- Change to high pressure oxygen vs. LOX
- Very high pressure/high capacity O2 tank in descent stage

→ Staging and cutter assemblies (guillotine)
Generic Design Considerations -
The Change to Batteries

- Change to high pressure oxygen vs. LOX
- Very high pressure/high capacity O2 tank in descent stage
- Staging and cutter assemblies (guillotine)

→ Interstage quick disconnects (QDs)
Generic Design Considerations - QDs
Cutoff valves not needed, as will automatically seal.
- Cutoff valves not needed, as will automatically seal

- No retention mechanism
Generic Design Considerations - QDs

- Cutoff valves not needed, as will automatically seal
- No retention mechanism
- No risk of impact ignition
Generic Design Considerations -
The Change to Batteries

- Change to high pressure oxygen vs. LOX
- Very high pressure/high capacity O2 tank in descent stage
- Staging and cutter assemblies (guillotine)
  - Interstage quick disconnects (QDs)
    ➔ Original design
Generic Design Considerations - Original QDs
Poppet seal was on the ascent stage portion
Generic Design Considerations - Original QDs

Exterior leak path seal was on the descent stage portion
Redundant seal was needed on the glycol loop because it leaked.

Not needed on the oxygen QD.
Very susceptible to installation damage

- Redundant seal used on coolant loop disconnects for LM-3 through LM-6 vehicles
- Poppet seal
- Ascent stage
- Descent stage
- Exterior leak path seal
- Original design of interstage disconnect
- Very susceptible to installation damage
- External leak path seal can impact here
Generic Design Considerations - Original QDs

- Very susceptible to installation damage
- Poppet seal can be impacted by head of descent stage portion
Generic Design Considerations - The Change to Batteries

- Change to high pressure oxygen vs. LOX
- Very high pressure/high capacity O2 tank in descent stage
- Staging and cutter assemblies (guillotine)
  - Interstage quick disconnects (QDs)
    - Original design
    - Final design
Generic Design Considerations - Final QDs
Built in redundancy
Built in redundancy

Generic Design Considerations - Final QDs

- Primary poppet seal
- Primary poppet
- Secondary poppet seal
- Secondary poppet
- Ascent stage
- Descent stage

Final design of interstage disconnect
Built in redundancy

Generic Design Considerations - Final QDs

- Primary poppet seal
- Secondary poppet seal
- Primary exterior leak path seal
- Secondary exterior leak path seal

Final design of interstage disconnect
Generic Design Considerations - Final QDs

- Highly resistant to installation damage

The poppet seals are protected behind metal
Better protection to the sealing surfaces

Exterior leak path seals embedded in grooves

Final design of Interstage disconnect
Upon completion of this part of the lesson, the student will be able to:

- Describe the Lunar Module (LM) Environmental Control System (ECS) generic design considerations philosophy.

- Summarize the LM ECS general testing regime.
General Testing -- Feasibility

◆ Feasibility
General Testing -- Feasibility

◆ Feasibility
→ Original concept to use pre-production hardware
General Testing -- Feasibility

- Feasibility
  - Original concept to use pre-production hardware
  - Tests conducted on component, logic group, and system levels
Feasibility

- Original concept to use pre-production hardware
- Tests conducted on component, logic group, and system levels

- Pre-production hardware very much resembled eventual production hardware, reducing the need for design verification testing
General Testing - Design Verification
