MSFC PROPULSION SYSTEMS DEPARTMENT
Knowledge Management Project
NASA KM International Conference
17 - 19 July 2007

Collaborate... Communicate... Innovate... Motivate
Agenda

MSFC PROPULSION SYSTEMS DEPARTMENT
Knowledge Management Pilot Project

- PSD KM Project Overview / Approach / Purpose
- Strategic Planning of PSD KM Initiative
- Systems Requirements / Design Definition
- KM Technology Architecture Description
- PSD KM System UI / Custom Features
- Future Planning
- PSD KM Search Functionality Demo
Overview/Approach

- KM Needed to Support Knowledge Capture/Preservation and an Information Sharing Culture

  - "If MSFC is to remain world-class in rocket propulsion systems design and development, substantial improvement in access to current and historical design, development and operational information must be made." *
  - "NASA has not demonstrated the characteristics of a learning organization after investigators observed mistakes being repeated..." **

- MSFC PSD KM initiative approach
  - Develop a KM Pilot project, within the context of a 3-5 year KM strategy
  - Introduce and evaluate the use of KM within PSD
    - IT Infrastructure, Turbomachinery Community of Practice (CoP)
    - Extend KM system functionality using results-based methodology

*MSFC Knowledge Management Evaluation Proposal, BASIS for PSD KM Initiative Funding  ** CAIB report
**MSFC PSD KM Initiative**

**Project Purpose**

- Develop a Knowledge Management Strategic Plan for MSFC PSD
- Define and Prioritize KM requirements, tailored to PSD's goals and objectives
- Provide KM IT infrastructure, processes and tools to enable and promote a learning / sharing culture
- Assure enterprise alignment and extensibility of PSD KM solution
- Apply leading edge Knowledge Management technologies and organizational practices to institutionalize NASA's experiences—promoting NASA engineer's competencies and growth.
MSFC PSD KM Initiative

KM Project Key Priorities

- Improve Safety, Reliability and Quality
- Reduce risk and impact of knowledge attrition associated with an aging workforce.
- Enable Learning Sharing Culture
  - Communities of Practice, collaboration, knowledge sharing/capture
  - Training
- Provide Efficient, Effective Access To Propulsion Systems And Component Knowledge Data
  - Apply cutting edge technologies and innovation to PSD knowledge assets
  - Infuse experiential knowledge, lessons learned, best practices into decision process
  - Reduce Test/Fail/Fix cycle resulting from failures and anomalies
- Demonstrate KM utility and functionality
- Increase stakeholders' awareness of KM technical innovations and benefits
- Extend PSD KM system functionality
  - ARES propulsion systems and component designs
  - Engineering Directorate
  - MSFC...
Data Gathering

• Formed PSD KM Team
• Conducted Two Day Group Work-Session for PSD KM Strategy Formulation
  • Developed PSD KM Purpose, Objectives, Priorities
• Conducted Structured Interviews
  • Examined Engineering Process Workflows
    • Collaborative, Resource and Analytical Tool Interfaces
• Surveyed Personnel
• Performed Independent Research
MSFC PSD KM STRATEGIC PLANNING
Cultural Change

Cultural Change Survey

➢ PSD Benchmarking

Working Together
Knowledge Sharing Incentives
Enterprise KM Strategy
Existing KM Infrastructure, capabilities
Senior Management Advocacy
Skills & Competencies
Change Management
Workforce Development
Organizational Alignment
Operational Processes
Performance Measurement
Evaluation & Feedback
Accountability & Empowerment

PSD is perceived by survey respondents as being ready to accept cultural change.

Challenges identified:
KM Infrastructure/Tools,
Knowledge Sharing Motivation & Incentives,
Leadership Advocacy
MSFC PSD KM STRATEGIC PLANNING

Solutions Map

PSD KM Strategic Objectives

1. Access-Links to External Databases, and Repositories
2. Intelligent Search Capabilities
3. Enterprise System Architecture and Design
4. Access-Links to Internal Databases, and Repositories
5. Collaborative Engineering Community of Practice
6. Leverage Data-ServerOwnership
7. User-Derived Interface – Presentation Layer
8. PSD KM Process Definition

Top 10 Day-to-Day Needs

1. Access to All External Servers, Databases, and Repositories (SSME Tech, NEXPRISE, etc.)
2. Single Sign-On (SSO) for All Resources
3. Ability to Search Adobe, Image Files, Hardcopy Old Reports
4. Capture of Tacit Knowledge from All Personnel During All Project Lifecycles
5. A Collaborative Engineering Community of Practice Organized by Discipline
6. Intelligent Search and Index Tool (Multi-Tiered Search, Advanced/Boolean)
7. A Customizable User Interface Tool for Desktop for Each User
8. Utilization of the NASA Taxonomy to Structure Project Documentation
9. Access to All Internal Servers, Databases, and Repositories (Stennis RAMS, etc.)
10. Pedigree Assurance for All Project Documentation

KM Solution Aligns With Team Defined Objectives and Needs
## Vendor Ranking

### Functional Rating

### Notes:
- **Green**: Meets all functional requirements.
- **Yellow**: Meets most functional requirements.
- **Red**: Meets some functional requirements.

### Programmatic Rating:
- **Green**: D&B Good, >4 Years, >250, 3 or more, Product Currently Used, >$100,000, Works w/ current funding plan.
- **Yellow**: D&B Fair, 2 to 4 Years, 100 to 250, 1 or 2 Clients, Requires funding plan.
- **Red**: D&B Limited, <2 Years, <100, None, Not workable.
System Requirements and Design Summary

- Rigorous systems engineering approach employed at project outset; User defined, user centric, concept to solution
  - Formed initial MSFC team using Integrated Product Team constituency
  - Included Shuttle Project & Engineering, ER Component Design, ED Disciplines, S&MA participants
  - CIO, Enterprise Architect, CLV Projects, CLV KM, NASA Engineering Network (NEN) represented in requirements / design reviews

- PSD KM Project Milestones Achieved
  - Strategy developed, Strategic Plan delivered February 2006
  - System Requirements defined, System Requirements Specification delivered May 2006
  - Conceptual Design Review conducted June 2006
  - Critical Design Review conducted October 2006

- System designed to align with CLV, Constellation and Enterprise Architecture
- Compliant with NIST / FIPS standards, application security plan is approved
- Delta Design Review will address final system design implementation
  - Open Source Portal Platform

Solution traceable to user defined objectives, user needs and system requirements

What is PSD KM?

Engineering Communities (IPTs)

- Project
- Component Design
- Test Data Analysis
- Disciplines

Available with a Point and Click

Engineering Data, Collaboration and Experiential Knowledge

Web based User Interface

Broad Range of Data Resources/Types Across the Enterprise

Network Infrastructure

SOA Integrated Tool Suite

Program Structured File System
Project Planning, Scheduling/EVM
Requirements management
Risk Management

Legacy Data
- MSFC Repository
- Shuttle/Apollo technical
- LASSe/CASSI/RSIC...

ICE
- Technical/Design Standards
- Workflow and Graphics drill down tools
- Voice/Audio
- Video

Internet/ Web Pages
Community Discussion Forums
Expertise Locator/Knowledge Capture

IEC / DDMS
- Product Data Structure
- Configuration / Document Management
- Hardware CAD Environment
- Evaluation/approval workflow/routing
Key KMS Features:

- Single sign-on access and advanced data search of unstructured & structured technical data archives (Super "Google")
  - Global Search Returns from all Knowledge Sources
- Human expertise locator (Ask The Expert?)
- IPT and/or discipline focused on-line "Community of Practice" Collaboration Environment
- Knowledge capture/retrieval of discussion board/e-mail threads via on-line "Community of Practice"
- Process capture/viewer with point and click navigation to each process step instructions and all relevant data
- 3D Graphics/CAD Viewer with point and click navigation to all relevant "piece-part" data
PSD KM Data Architecture Solution

- PSD KM Aligns with key CLV, Constellation and Enterprise data architecture needs

  - **Data integration and user requirements definition**
    - Engineering Community (IPT) defined requirements
    - Engineering process models (value steams)
    - Enabling data architecture, tools, collaborative, training and knowledge resources identified, mapped, integrated

  - **IT Solution User Interface Definition**
    - Develops / extends IT solution to establish a web base engineering community interface
    - Provides immediate access to mission enabling resources

  - **Leverages pilot system infrastructure and SOA KM technology investment to offer critical data architecture solutions**

Overview Map

110%

Process Model
- Impound Hardware and Records
- Request Formation of Investigative Team
- Engage Existing Contingency Team(s)
- Determine Investigative Team/Board Formation
- Approve Investigative Team/Board Formation
- Convene Team/Board (to begin Investigation)
- Early Investigation Analysis
- Refine Investigation Plan and Action Items
- Travel to Event Site
- Perform On-Site Analysis
- Perform Full Analysis of Event
- Research System/Component
- Update/Maintain "Event" Timeline
- Update & Maintain "Failure Scenario" Matrix
- Finalize Fault Tree Analysis
- Produce Credible/Necessary Evidence
- Categorize Findings: Pro/C
- Cause is Relevant or Incorrect
- Cause is NOT Relevant to FA
- Conduct Testing/Analysis (as needed)
- Determine Reasonable Event Cause
- Develop Documented Findings
- Determine/Recommend Design/Proc
- Approval/Redirection of Findings and Recommendations
- Publish Findings & Recommendations
- Document/Submit Lessons Learned
- Implement Design/Proc/Progra
- Prepare Final Close-Out Package/B
- Release Final Close-Out Package/B
- Approve Program Resumption
- Archive Documentation

Overview Map

Develop / Update Fault Tree Matrix / Pro Con Chart

The Fault Tree Matrix supports the Fault Tree Analysis Diagram by providing a worksheet of failure causes, fault tree cross references, pros (evidence supporting contribution to the observed condition), and cons (evidence exonerating the cause as a contributor to the observed condition) and status. This enable working document and will be updated until the investigation is complete and all credible causes dispositioned.

Notes / Procedures:
- Mishap & Anomaly Procedure, NPR-R6021, NASA Procedure
**Community of Practice Process Workflow Navigation**

1. **Examine Existing Fault Trees & FMEA for Applicability**
   - This step examines existing hazards analysis fault logic diagrams to assess relevance to observed conditions.

2. **Identify All Possible Causes & Contributions**
   - The purpose of this step is to identify and list all possible failure/anomaly causes and contributing elements. Subsequent steps will rule potential causes in or out based upon analysis, modeling, testing and/or inspections. In some cases, causes may be classified as Unknown or Inconclusive.

3. **Tailor Existing or Create Failure Path Diagrams**
   - The purpose of this step is to create Failure Path Diagrams to support the Fault Tree Diagram. Tailoring existing component fault trees (EHAZARDS)

4. **Tailor Existing or Construct the Fault Tree**
   - This step compiles failure scenarios and fault path diagrams into a specific failure logic model.
**Process Description**
This step compiles failure scenarios and fault path diagrams into a specific failure logic model.

**Procedure(s)**
NPR 8621.1A_Fault Trees

**Affected Disciplines**
Design Engineering, S&MA and support contractors

**General Notes**

**Data Resources**
EHAZARD, FMEA, DOCUMENTUM, Design Drawings, dedicated data server/computer

**Input Artifacts**
EHAZARD, FMEA, Design Drawings, observed HW conditions

**Examine Existing Fault Trees & FMEA for Applicability**
This step examines existing hazards analysis fault logic diagrams to assess relevance to observed conditions.

**Typical process decomposition**

**Typical Instant Access**
hyperlinked data in *blue italics*

**Example Cases**
SSME 0523 902-772 Failure Invest. 0523, 902-772 FT (entire report)
pg16 Event FT Graphic (specific element)

**Training**
Process Worksheet

Process Description
This step compiles failure scenarios and fault path diagrams into a specific failure logic model.

Procedure(s)
NPR 8621.1A_Fault Trees

Affected Disciplines
Design Engineering, S&MA and support contractors

General Notes

Data Resources
EHAZARD, FMEA, DOCUMENTUM, Design Drawings, dedicated data server/computer

Input Artifacts
EHAZARD, FMEA, Design Drawings, observed HW conditions

Output Artifacts
Event Fault Tree Graphic, Hernandez engineering, CAFTA modeling tool

Templates
Fault Tree Template

Example Cases

Material: Super Alloy Hydrogen Flow

Space Shuttle Main Engine
SSME 0520, 902-772 Incident Investigation
Damage to the HPFTP/AT
Turbine inlet housing
1st Stages
Turbine rotor shaft and 1st stages rotation were excised. The surface of a segment of 1st stages were excised through widening that segment's inner diameter to impact the 2nd stages.
The 1st stages blades and other downstream hardware have been damaged from impact. Pump-end hardware was damaged by rub and the loss of roller bearing support.

Pilot Indexed | Phase II
MOU Negotiation Underway | Long range
Unique Functionality

- **Community of Practice** – Provides a forum for individuals with shared interest or expertise to exchange ideas and experiential knowledge
  - Collaboration / Sharing, Knowledge Capture, Expertise Locator, Training
- **Single Sign On** – MSFC domain log in provides authenticated user access to PSD KM and all authorized accounts
- **Automatic Profiling** – Monitors user data interaction preferences and automatically forms profiles of their interest and expertise
- **Categorization** – Automatically categorizes data without the need for manual intervention
- **Disparate Repository / Unstructured Data Interface** – Access data where it resides within or outside of product structure / data management system environment
- **Conceptual Retrieval** – Extracts meaning from key words and complex terminology embedded in query information; Returns search results based on concept matching
MSFC PSD KM PROJECT
Unique Functionality (Cont'd)

- **Hardware Graphics Viewer** – Point and click access from graphic image to broad range of related design information, subject matter expertise, lessons learned and training

- **Process Workflow Viewer** – Enables the user to locate relevant information within the context of a process step
  - Search and retrieval functionality from Failure/Anomaly and Design Engineering Analysis workflow navigation, "process-based" data associations

- **Expertise Locator** – Automatically identifies individuals with expertise in organizations and identifies subject matter knowledge in any required field

- **KM awareness, cultural change/motivational training** - Integral to CoP roll out

KM Pilot System Data Security

Security Policy

- Designed for Compliance with Enterprise Architecture
- Enforcement of internal authentication models for repositories, proprietary applications, and software.
- Portal LDAP ensures automatic verification against user, group and role level entitlement
  - Will align with the NDC active directory, migrating to NISE
- KM Program will comply with NPR 2810.1, NIST 800-53
  - Moderate security classification based on FIPS 199, NIST 800-60
- Application Security Plan is in Work
