Occupational Surveillance for Spaceflight Exposures

William Tarver, MD, MPH
Chief, Clinical Services
NASA Johnson Space Center

Your Health is Our Mission
• Medical- What risks you bring to the table (cholesterol, hypertension, etc)
• Occupational- What risks you come away with as a result of the occupation
The Work Environment

Your Health is Our Mission
Controls

- OSHA and NIOSH do not dictate controls or reporting for space work
- Hazards are controlled by the individual programs
- Ethical and moral obligation to perform surveillance, but no legal obligation currently
Occupational Hazards in Space

- Radiation of the Space Variety
- Bone loss
- Lasers
- Cadmium
- Hydrazine
- Nitrogen Tetroxide
- Ammonia
- Noise
- Weightlessness

From Scientific American

Your Health is Our Mission
Conversion from a Study to a Lifetime Surveillance Program

- Benchmarked off similar programs in DoD and the Department of Energy
- Allows insight into longterm sequelae from exposures in the workplace
Brief History of Longitudinal Study of Astronaut Health

- Phase 1
- Phase 2
- Workforce controls for comparison
- Low Statistical Power
- No Consent
Institute of Medicine Recommendations

1. Must serve two sometimes conflicting goals of research and occupational surveillance...

2. No comparison group can meet every goal or need, it should be individualized...

3. Increase the quality and quantity of preventive care to increase the data...

4. NASA should assume responsibility for the lifelong health care of its active and former astronauts.
- **Preventive Medicine Protocols**
  - Age Based (40, 45, 50, 60, etc)
  - Ultrasound
  - Mammography
  - MRI
  - Colonoscopy
  - Stress Test
  - Complete Physicals
  - Derm Surveys
  - DEXA
  - Etc, etc.

- **Occupational Health Surveillance Protocols**
  - Radiation
  - Bone
  - Eye
  - Cadmium
  - Hydrazine
  - Lead
  - Etc, etc.
Improving the Research

Before

• Query the data and compare to 3 NASA workers for each astronaut....
• No consent obtained, just implied.
• Poor statistical power.
• No flight data incorporated!!!!

After

• Query the database and find the best comparison group to answer the question being asked.
• Much more statistically powerful.
• Consent for direct studies, no consent needed for generic occ health trends.
• Flight data incorporated.
Identifying long term health risks and employing preventive medicine
• Meets Ethical and Moral obligation
• Increases data available to research
• Identifies and prevents exposure related disease
• Allows feedback into spacecraft design
• Allows NASA to follow long term health impacts

Your Health is Our Mission
