ATRIAL ARRHYTHMIAS AND THEIR IMPLICATIONS FOR SPACE FLIGHT -
INTRODUCTION
J.D. Polk¹, Y.R. Barr², P. Bauer¹, D.R. Hamilton², E. Kerstman², B. Tarver¹
¹NASA Johnson Space Center, Houston, TX, ²The University of Texas Medical Branch,
Galveston, Texas,

This panel will discuss the implications of atrial arrhythmias in astronauts from a variety of
perspectives; including historical data, current practices, and future challenges for exploration
class missions. The panelists will present case histories, outline the evolution of current NASA
medical standards for atrial arrhythmias, discuss the use of predictive tools, and consider
potential challenges for current and future missions.
