Chemical Analysis
Polymer Science and Technology Lab
Lab Overview

Mission

To develop and apply new technologies in polymer and material chemistry that benefit NASA's programs and mission

Team

2 NASA scientists, 1 co-op, and 4 contractors

Areas of Expertise

Polymer Nanocomposites
Next Generation Wire Materials
Carbon Nanotube and Nanofiber Materials
Conductive Polymers
Polymer Processing
Fire and Polymers
Foam and Insulation Materials

Numerous Collaborative Efforts

NASA Centers (JSC, LaRC, MSFC, GSFC, GRC)
KSC Directorates (Shuttle, Ares, Orion, Ground support operations)
Academia (Alberta, FIT, GT, Harding, Illinois-Urbana Champagne, UCF, UF, USF)
Industry Space Act Agreements (Thermax, DeWAL, Sharklet, Crosslink, Sabic, Amalgam)
Industry Contracts (ARCnano, Epner)
Testing and Processing Equipment

- Fire Testing
  - Cone Calorimeter
  - Oxygen Index**
  - UL94 fire test
  - NASA Std 6001 fire test
  - Radiant Panel*
  - NBS Smoke Chamber*
  - Two foot tunnel*
  - Glow wire ignition*

- Cryogenic Materials Testing
  - Cryogenic moisture uptake (CMU)**
  - Brittleness/Impact test **
  - Liquid helium cold finger test**
  - Single Pin-Socket Krytox Contamination Electrical Characterization under Cryogenic Conditions**

- Cellular Solid Analysis
  - Pycnometer (closed/open cell)**
  - Surface area measurement**

- Thermal Analysis
  - Thermogravimetric analysis (TGA)
  - Differential Scanning Calorimetry (DSC)
  - Dynamic Mechanical Analysis (DMA)

- Physical Testing
  - Tensile Test
  - Compressive Test
  - Pull/Peel Test

- Electrical Testing
  - 4-point probe
  - Surface /Volume resistance

- Polymer Processing capabilities
  - Extrusion
  - Injection molder
  - Fiber spinning equipment
  - Melt, ball, and high intensity mixers

*in collaboration with Cryogenics Test Laboratory
**in collaboration with Florida Tech
A patent-pending irreversible color changing H$_2$ gas sensor was developed at KSC in partnership with UCF and ASRC.

Changes color from a light tan to black in the presence of H$_2$.

Can be manufactured into any polymer part, tape, fiber, or fabric material for unlimited potential uses.
- Paint, Gloves, Coveralls, PPE

Operates under ambient and cryogenic temperatures.
Chemochromic Hydrogen Sensors

STS-129 Transfer Line

LPA OMBUU Deployment for STS 117, 118, 120, 122, 123
Antimicrobial Materials
In collaboration with Sharklet Technologies and UF

Orion Potable Water

5 Inconel 718 Tanks (14.3 gal)
Miles of Titanium water lines

- Efficacy studies after 21 days decreases biofilm formation
- Easy to imprint during manufacture of polymer articles through a coining process
- Can be used in conjunction with antimicrobial polymers
BIOLOGICAL ANALYSIS

Confirm efficacy of *Pseudomonas fluorescens* bacteria species with Sharklet® topography coupons and different surface treatments

- How well does it work in μG and lunar G compared to 1G?

Inks or powders suspended in air can deposit on the substrate and become a contaminant. The electrostatic forces can be used to remove these contaminants.
Screen printed polymer-composite material

Line thickness and width increases conductivity

50 Ohm resistance able to measure damage to circuits
Cryogenic Materials Development

- Foam insulation materials
  - AeroFoam (patent pending)
  - Syntactic foams

- Ice release coatings
  - Shuttle Ice Liberation Coating (SILC)
  - Dow UCAR 439 and 627
  - Luna Innovations icephobic coating

- Structural aerogel composites
  - AeroPlastic (patent pending)
    - Polyamides
    - Polyetherimides
    - Polyolefins
Fire and Polymers

- Flame retardant strategies
  - Polymethoxyamide derivatives for high temperature engineering polymers (patent issued)
  - Carbon nanotube synergistic FR properties
  - Polyhedral Oligomeric Silsesquioxanes (POSS) FR properties

- Fire risk consultation
  - Wire insulation
  - Thermal insulation
  - Ablator

- Fire standards and risk
  - Ares I
  - Ares V
  - Orion

</table>

* Approximate values.

** Tungsten halogen lamps have broader spectrum.

*** For VHO lamps; lower power lamps with electronic ballasts last up to ~20,000 hrs.

**** Green LEDs ~10% efficient.
