The NASA Fireball Network Database

Danielle E. Moser, Dynetics/Meteoroid Environment Office

The NASA Meteoroid Environment Office (MEO) has been operating an automated video fireball network since late-2008. Since that time, over 1,700 multi-station fireballs have been observed. A database containing orbital data and trajectory information on all these events has recently been compiled and is currently being mined for information. Preliminary results are presented here.
The NASA Fireball Network Database

Danielle Moser
Dynetics/MEO
Objectives of the NASA Fireball Network

1. Determine the speed distribution of cm-sized meteoroids
2. Determine the major sources of cm-sized meteoroids (showers/sporadic sources)
3. Characterize meteor showers (numbers, magnitudes, trajectories, orbits)
4. Determine the size at which showers dominate the meteor flux
5. Discriminate between re-entering space debris and meteors
6. Locate meteorite falls
Objectives of the NASA Fireball Network

1. Determine the speed distribution of cm-sized meteoroids
2. Determine the major sources of cm-sized meteoroids (showers/sporadic sources)
3. Characterize meteor showers (numbers, magnitudes, trajectories, orbits)
4. Determine the size at which showers dominate the meteor flux
5. Discriminate between re-entering space debris and meteors
6. Locate meteorite falls

Database Computing Environment

- Programmer: Ellen Jones/MITS
- OS: Linux
- Development Language: PHP
- DB design: Navicat
- Database: MySQL
- Data browsing: PhpMyAdmin
- Custom file parsing/loading code
  - 52,000 files
Database Contents

- **Trajectory**
  - Beg/end location: lat, lon, ht
  - Speed
- **Orbit**
  - Radiant info
  - Orbital elements
- **Media file links**
  - Calibration plates
  - Movies
  - Images
  - Summary graphic

- **Shower identification**
- **Camera data**
  - Cams that saw event
  - GPS status
  - Number of frames detected
Database Interface

phpMyAdmin
