Overview and Scope

- Ares I Scale Model Acoustic Test (ASMAT) is a 5% scale model test of the Ares I vehicle, launch pad and support structures conducted at MSFC to verify acoustic and ignition environments and evaluate water suppression systems.

- Test design considerations:
  - 5% measurements must be scaled to full scale requiring high frequency measurements.
  - Users had different frequencies of interest:
    - Acoustics: 200 - 2,000 Hz full scale equals 4,000 - 40,000 Hz model scale.
    - Ignition Transient: 0 - 100 Hz full scale equals 0 - 2,000 Hz model scale.
  - Environment exposure:
    - Weather exposure: heat, humidity, thunderstorms, rain, cold and snow.
    - Test environments: Plume impingement heat and pressure, and water deluge impingement.

- Several types of sensors were used to measure the environments.
- Different instrument mounts were used according to the location and exposure to the environment.
- This presentation addresses the observed effects of the selected sensors and mount design on the acoustic and pressure measurements.
Overview and Scope

• 5% ASMAT model includes
  • Vehicle
  • Tower
  • Mobile Launcher (ML)
  • Launch Mount (LM)
  • Launch Pad Trench (LPT)

• ASMAT measurements included
  • Liftoff Acoustics (LOA): 4,000-40,000 Hz
  • Ignition Overpressure (IOP) and transient wave: 0-2,000 Hz (10,000 Hz for CFD)
  • Ground Acoustics (GA): 4,000-40,000 Hz
  • Spatial Correlations (SC): 4,000-40,000 Hz
Sensors

• A combination of microphones and pressure sensors were used throughout the model to measure the environments
  • Microphone
    • B&K 4944B – LOA and GA
  • Pressure Transducers
    • Kulite XTL 123B-190-30 SG and -65 SG – IOP
    • PCB 122A22 - GA
    • Kulite XCEL-12-100-2D - SC
Sensor Effects

• Each instrument used has a diaphragm resonant frequency above the frequency of interest
  • B&K 4944B – 60 KHz
  • Kulite XTEL-123B-190 – 175 kHz
  • PCB 112A22 – ≥250 kHz
  • Kulite XCEL-12-100-2D – ≥150kHz

• Protective screens introduced additional resonances
  • B&K 4944B – 31.5 kHz peak
  • Kulite XTEL-123B-190 - 41kHz peak
Sensor Effects – B&K Grid

**B&K Grid Effects**

1/3 Octave Band Analysis

Measured Grid Resonance ~ 31,500 Hz

Mounts

• Instrument mounts were designed according to the model location
Mounting Effects

• Some of these mounts introduced either cavity or tube resonances in the measurements
  • Calculated Tube Resonances
    • IOP: South Side Tower Blocks - ~4,500 Hz
    • IOP: Mobile Launcher Underside Blocks - ~5,000 – 5,500 Hz
    • IOP: Launch Mount Blocks – 3,300 – 6,300 Hz
    • IOP: Launch Pad Trench Blocks - ~ 5,100 Hz
    • IOP: Exhaust Hole Blocks - ~5,000 – 5,500 Hz
    • GA*: 1/8” Recessed - ~14,300 Hz
  • Calculated Cavity Resonances
    • IOP: Vehicle Mounts - ~27,500 – 29,200 Hz
    • GA**: Covers - ~9,300 Hz
    • SC: All Mounts - ~22,300

Note:
*GA 1/8” Recessed only during Vert9 South Side Tower Level 1 and 2 except for G02 and G07 which were flushed
**GA Covers only for Vert7 G02 and Vert8 South Side Tower Level 1 and 2

- LOA Vert7 Zone 6 270°
Conclusions

• Appropriate sensors were selected for the measurements
  • IOP Kulite grid and mount resonances occurred beyond the frequency range of interest.
  • LOA measurements will be corrected to remove the grid resonance.
  • GA and SC sensor resonances beyond the frequencies of interest.

• Proper mount design
  • Mount induced resonances occur beyond the user’s frequency of interest.
  • The mounting measures used during the ASMAT program protected most of the sensors exposed to the plume environments and resulted in low sensor loss.
  • Attempts to protect the GA sensors from the plume environments resulted in mount induced resonances that limited the frequency range of useful data.

• The measured and calculated resonances agree; the data can be corrected for both grid and mount induced resonances.

Resonance Equations

• Tube Resonance

\[ f = \frac{c}{4(L + 0.4D)} \]

c = speed of sound (in/sec)
L = tube length (in)
D = tube diameter (in)

• Cavity Resonance

\[ f = \frac{c}{2\pi} \sqrt{\frac{S}{(L + 0.4D)V}} \]

c = speed of sound (in/sec)
S = neck area (in²)
L = neck length (in)
D = neck diameter (in)
V = chamber volume (in³)
Data Acquisition Parameters

• Coupling
  • DC - IOP and SC measurements
  • AC – LOA and GA measurements

• Sample Rates
  • 4000 sps – IOP
  • 256000 sps – LOA, IOP, GA and SC

• Data converted and delivered in engineering units
  • IOP and SC – psi
  • LOA and GA - Pa
Data Processing Parameters

- DC component removed during post processing
- Processing parameters selected according to sample rate in order to keep a consistent number of blocks
  - 256,000 sps
    - Time Domain
      - Time Window: -0.5 – 4.492 seconds
      - Reduction Time: 0.032 seconds
    - Frequency Domain
      - 1/3 Octave Band Range (Center Frequency): 50 – 128,000 Hz
      - Frequency Resolution: 1.953 Hz
      - Fast Fourier Transform Block Size: 131,072 samples
      - Frequency Analysis Time Window: 0.5 – 2.036
      - Window Type: Rectangular
      - Reference Pressure
        - 2.9x10^-9 for measurements in psi
        - 2x10^-5 for measurements in Pa
    - N Average: 3
PRODUCT DATA

1/2" DeltaTron® Pressure-field Microphones — Types 4944-A and 4944-B

Types 4944-A and 4944-B are 1/2” Pre-polarized Pressure-field Microphones laser welded to 1/2” DeltaTron preamplifiers.

The preamplifier connects to CCLD input conditioning and supports IEEE P1451.4V 0.9 TEDS (Transducer Electronic Data Sheet).

USES
- High-level measurements
- High-frequency measurements
- Flush mounting

FEATURES
- Sensitivity: 0.9 mV/Pa
- Frequency: 16 - 70000 Hz
- Dynamic Range: 48 dB(A) - 120 dB
- Temperature: -20 to 100°C (-4 to 212°F)
- TEDS: IEEE P1451.4
- 5/8 or 10-32 UNF socket
- Connects to CCLD input

Description

Uses of Types 4944-A and 4944-B

A pressure-field microphone is designed to be used in small closed couplers close to hard reflective surfaces or flush-mounted. The sensitivity has been optimised to allow measurements of high sound pressure levels without clipping in the built-in DeltaTron preamplifier.

Design and Robustness

The shape of the microphone front ensures excellent microphone performance when flush-mounted. The laser-welded diaphragm on the microphone housing ensures that the sensitivity is resistant to rough handling during flush mounting.

Microphone Data CD

The microphone is supplied with a mini CD. This mini CD carries all individual calibration data as well as random-noise and free-field corrections. The influence of 1/2” Noise Cone UA-0385 is also available.

Calibration

The sensitivity can be calibrated at 250 Hz using Fixator Type 4228 with 1/2” Adaptor DP-0775. The pressure-field response can be measured using Actuator UA-0033 with Adaptor DB-0284. The pressure-field response is equal to the actuator response.

Optional Versions (Optional versions have identical specifications and accessories as listed for standard model except where noted below. More than one option may be used.)

- E - Emittance coating [4]
- Coating | Entrainment | Entrainment |
- Electrolysis | 17 ohm | 17 ohm |
- Supplied Accessory: Model 065A08 Isolation ring, 0.250” OD x 0.219” ID x 0.027” thick, anodized aluminum |
- Supplied Accessory: Model 065A22 Isolation Seal, 0.250” OD x 0.219” ID x 0.015”, Teflon of Vespel |
- H - Hermetic Seal |
- Sealing | Welded Hermetic | Welded Hermetic |
- J - Ground Isolated [4] |
- N - Negative Output Polarity [4] |
- S - Stainless Steel Diaphragm [4] |
- D - Water Resistant Cable [4] |
- Supplied Accessory: Model 060A03 Clamp nut, 5/16-24-2A thd, 1/4” hex, stainless steel (for Series 111, 112 and 113) [4] |
- W - Water-Resistant Cable [4] |
- Supplied Accessory: Model 060A05 Clamp nut, M7 x 0.75-65 thd (for Series 111, M112 and M113) [4] |

Notes

1. For ±10 volt output, minimum 24 VDC supply voltage required. Negative 10 volt output may be limited by output bias.
2. Zero-biased, least-squares, straight line method.
3. See PCB Declaration of Conformance P8223 for details.
4. For sensor mounted in thread adaptor, see adaptor installation drawing for supplied accessories.
5. Used with optional mounting adaptor.
6. Clamp nut installed prior to cable attachment.

**Supplied Accessories**

- 060A03 Clamp nut, 5/16-24-2A thd, 1/4” hex, stainless steel (1)
- 060A05 Clamp nut M7 x 0.75-65 thd (1)
- 065A02 Seat ring, sensor flush mount, 0.240” OD x 0.219” ID x 0.015” thick, brass (3)
- 065A05 Seat sleeve sensor recess mount, 0.240” OD x 0.221” ID x 0.240” thick, 0.15” (1)
