

The Space Launch System: Building a Vehicle for Sustainable Space Exploration

Sheri Kittredge

Deputy Manager, SLS Engines Element

Katherine Van Hooser

SLS Deputy Chief Engineer (Acting)

David Beaman

Manager, SLS Spacecraft & Payload Integration Office

September 2012

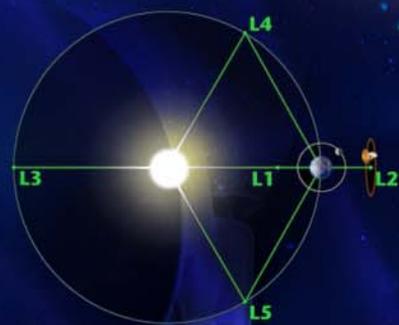

The background of the slide is a detailed space scene. On the left, a large, bright yellow sun glows. In the center, the Earth is shown with its blue oceans and white clouds, with a small satellite orbiting it. To the right of Earth is the Moon. Further right is the reddish-orange planet Mars, with a small satellite orbiting it. In the foreground, a large field of brown, rocky asteroids is scattered across the dark blue space, which is filled with numerous small white stars.

Sheri Kittredge
Deputy Manager, SLS Engines Element
NASA's Vision and SLS Missions

“To reach for new heights...

and reveal the unknown so that what we do and learn will benefit all humankind.”

National Aeronautics and
Space Administration

- Extend and sustain human activities across the solar system.
- Expand scientific understanding of the Earth and the universe in which we live.

NASA 2011 Strategic Plan

SLS Launches in 2017

NASA's Capability-Driven Framework

Mars: Ultimate human destination in the next decades

Incremental *steps* to steadily build, test, refine, and qualify capabilities that lead to affordable flight elements and a deep space capability

Planetary Exploration

- Mars
- Solar System

Exploring Other Worlds

- Low-Gravity Bodies
- Full-Capability Near-Earth Asteroid Missions
- Phobos / Deimos

Into the Solar System

- Lunar Surface
- Initial Near-Earth Asteroid Missions
- Interplanetary Space

Extending Reach Beyond LEO

- Cis-Lunar Space
- Lunar Flyby & Orbit
- High-Earth Orbit / Geostationary Orbit
- Lunar Flyby & Orbit

Initial Exploration Missions

- International Space Station
- Space Launch System
- Orion Multi-Purpose Crew Vehicle
- Ground Systems Development & Operations
- Commercial Spaceflight Development

Space Launch System:
130t configuration

High Thrust In-Space Propulsion Needed

Long Duration Habitat

Surface Capabilities Needed

Advanced Propulsion Needed

Moon

ISS

Commercial Crew & Cargo

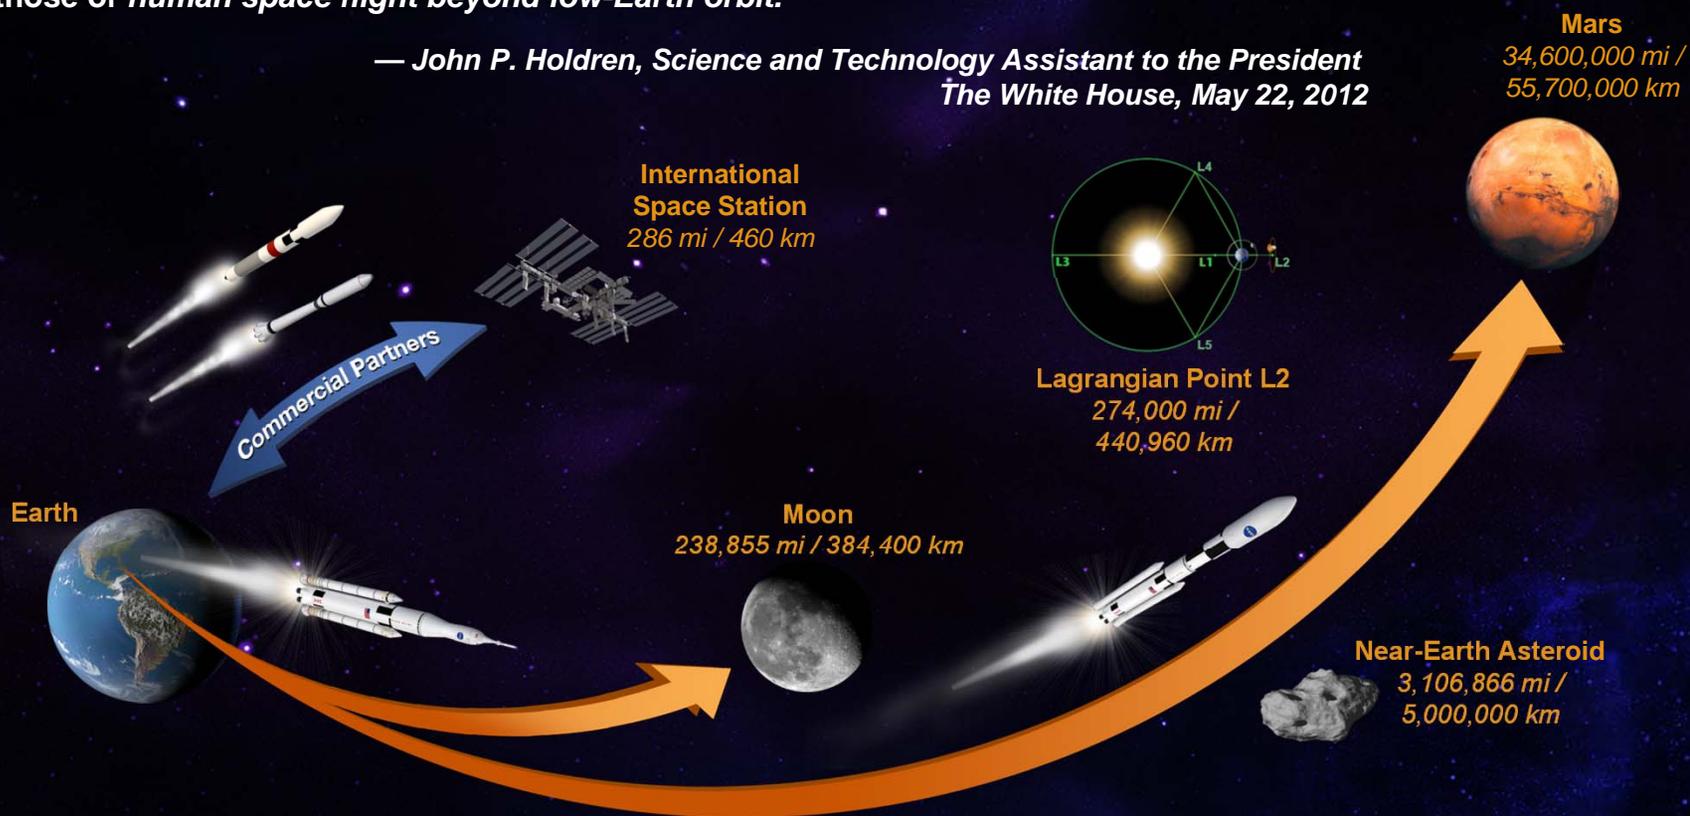

SLS — Going Beyond Earth's Orbit In 2017

The Future of Exploration

“This expanded role for the private sector will free up more of NASA’s resources to do what NASA does best — tackle the most demanding technological challenges in space, including those of *human space flight beyond low-Earth orbit.*”

— John P. Holdren, Science and Technology Assistant to the President
The White House, May 22, 2012

“My desire is to work more closely with the human spaceflight program so we can take advantage of synergy. We think of the SLS as the human spaceflight program, but it could be hugely enabling for science.”

— John Grunsfeld, Associate Administrator
NASA Science Mission Directorate
Nature, Jan 19, 2012

Building a National Infrastructure Asset

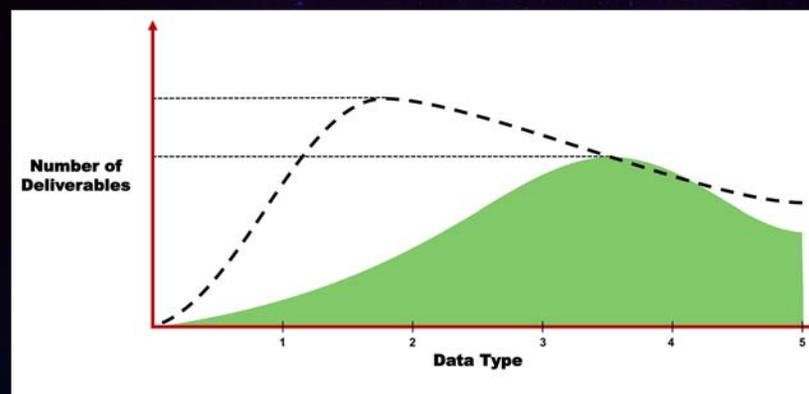

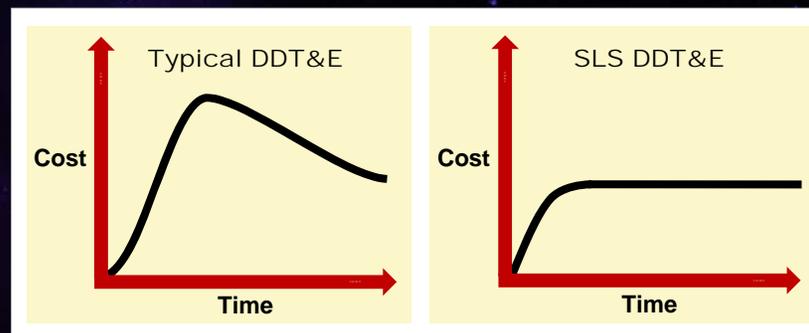

For Beyond-Earth Orbit Exploration

Pursuing Affordability Solutions

- ◆ Lean, Integrated Teams with Accelerated Decision Making
- ◆ Robust Designs and Margins
- ◆ Risk-Informed Government Insight/Oversight Model
- ◆ Right-Sized Documentation and Standards
- ◆ Evolvable Development Approach
- ◆ Hardware Commonality

Focuses on the Data Content and Access to the Data

Sustainability through Life-Cycle Affordability

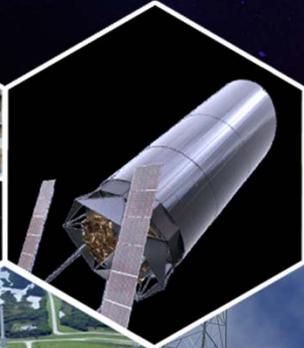

Building on Heritage Hardware and Facilities

NASA Research Announcements (NRAs)

◆ Advanced Booster Engineering and Risk Reduction

- Industry Day – December 15, 2011
- Competition via NRA released - February 2012
- Advanced Booster Proposals Received – April 2012
- NASA Selects 6 Advanced Booster Proposals – July 2012
- **Contract Award – October 2012**

◆ Advanced Development

- Industry Day – February 15, 2012
- Competition via NRA released - March 20, 2012
- Authority to Proceed for “In-House” Work – April 19, 2012
- Advanced Development Industry Proposals Received – April 2012
- NASA Selects 6 Advanced Development Proposals – July 2012
- **Contract Award – October 2012**

SLS: Being Built Today in the USA!

First ring forging prepared for Orion Stage Adapter, Cudahy, WI, April 2012.

Stages Industry Day at Michoud Assembly Facility, New Orleans, Nov 2011.

Solid Rocket Booster development motor test, Promontory, Utah, Sep 2011.

KSC is preparing Launch Complex 39B for SLS/Orion operations, 2012.

Installing the J-2X powerpack in test stand at SSC.

RS-25 Core Stage Engine in the KSC Engine Processing Facility, 2011.

J-2X Upper Stage Engine powerpack test, Stennis Space Center (SSC), MS, Feb 2012.

Meeting with Space Campers at U.S. Space & Rocket Center, Huntsville, AL, Feb 2012.

Education & Public Outreach

Pass the Torch Lecture at U.S. Space & Rocket Center
February 2, 2012

National Space Symposium with Dr. Tyson
April 16 – 19 2012

Student Launch Projects
April 19, 2012

Shuttle *Discovery* Celebration at Udvar-Hazy
April 19 – 22, 2012

Space Ops 2012
June 11 – 15, 2012

Shuttle *Enterprise* Celebration at
Intrepid with Leland Melvin
July 19 – 22, 2012

NASA's Space Launch System

- ◆ *Vital to NASA's exploration strategy and the U.S. space agenda*
- ◆ Key tenets: safety, affordability, and sustainability
- ◆ Partnerships with NASA Headquarters, Orion, Ground Operations, and other NASA Centers
- ◆ Prime contractors on board, work is in progress
- ◆ Competitive opportunities for innovations that affordably upgrade performance
- ◆ Completed System Requirements Review / System Definition Review

Preliminary Design Review 2013

Launching in 2017

Building on the U.S. Infrastructure

INITIAL CAPABILITY, 2017–21

EVOLVED CAPABILITY, Post-2021

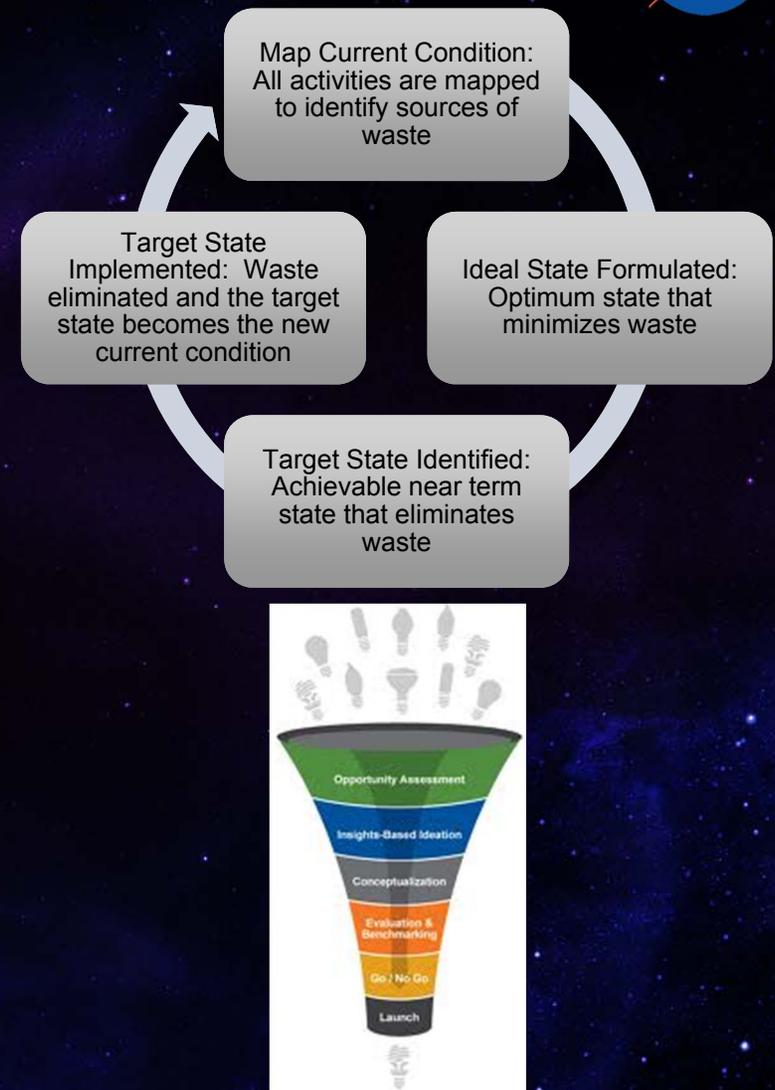

Working with Industry Partners to Develop America's Heavy-Lift Rocket

SLS Lean Systems Engineering & Integration Model

- ◆ **Benchmarked against diverse practices**
 - Design-to-cost
 - Front-loaded product development
 - Using R&D and Knowledge Funnel approach to drive innovation and cost savings
 - Organized to balance functional expertise and cross-functional integration
 - Integrating suppliers in the product development system
 - Accelerated decision-making
 - Fewer control boards
 - Continuous Improvement
 - Contractor initiated processes to reduce contract value
 - Value-stream mapping
 - Supply Chain Management
 - Commonality
 - Simple targets and metrics for improving cost performance
 - Focus on early prototyping and testing
- ◆ **Benchmarked companies: 3M, ATK, Boeing, HP, IDEO, Nucor, P&G, Raytheon, Toyota, and Commercial Crew providers**

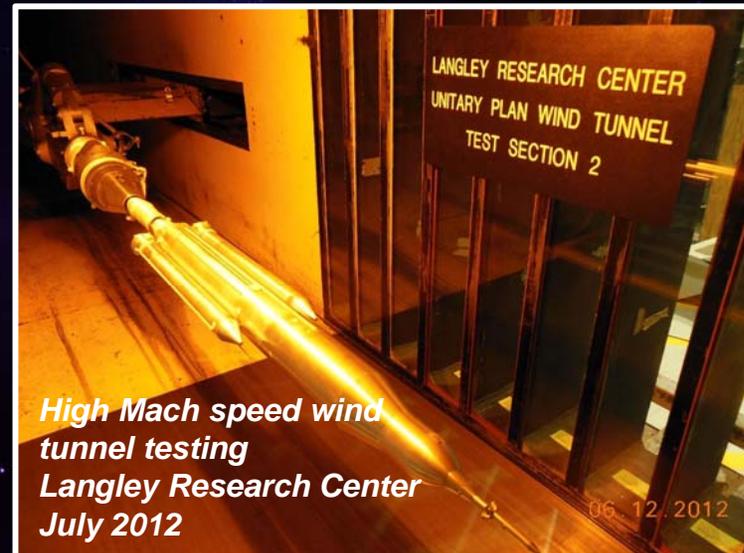

Focused on Safety, Affordability, and Sustainability

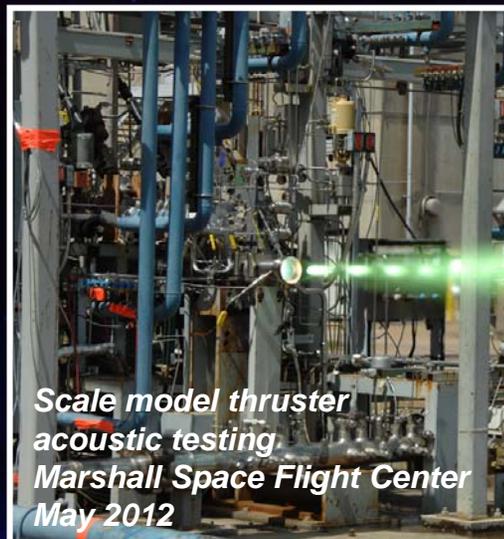

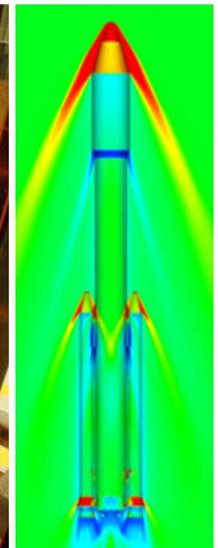

Systems Engineering & Integration

- ◆ Early wind tunnel testing completed
- ◆ Analyses and documents completed in support of SRR / SDR
- ◆ Scale Model Acoustic Testing completed for RS-25
- ◆ Environments and loads defined

High Mach speed wind tunnel testing

July 2012

Top Accomplishments – Stages/Avionics

Stages Industry Day at MAF –
November 2011

Redundant Inertial Navigation Unit –
Completed initial integration with
flight software – December 2011

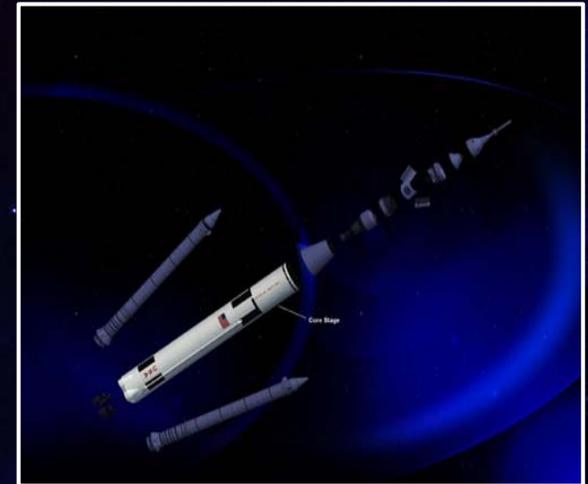

Completed Orbiter Vehicle 103 MPS
hardware removal – March 2012

Stages manufacturing demos and tooling
preparation for friction stir welding –
April 2012

Avionics Test Beds delivered to MSFC – May 2012

Core Stage SRR completed – June 2012

Top Accomplishments - Boosters

Development Motor Test 3
September 8, 2011
Promontory, Utah

Subscale SRM Test @ MSFC
March 14, 2012

SRM Value Stream Mapping
Completed
March 2012

Avionics Flight Control Test-1
March 2012
Promontory, Utah

Qualification Motor First Cast
July 16, 2012
Promontory, Utah

Booster Readiness Review Completed
August 28, 2012

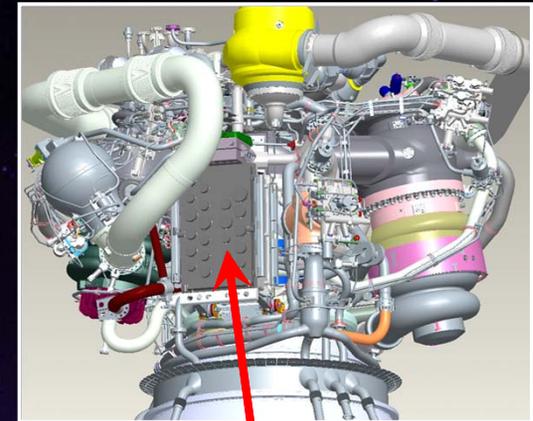

Top Accomplishments - Engines

J-2X PowerPack-2 testing began at SSC
February 2012

Final RS-25 core stage engines transported from KSC to SSC
April 9, 2012

Common engine controller SRR
May 1-2, 2012

550-sec J-2X E10001 test @ SSC
July 13, 2012

1,350 sec PowerPack-2 test @ SSC
July 24, 2012

- ◆ Upcoming events in FY13:
- RS-25 Engine controller unit PDR – October 2012
 - Complete J-2X E10001 test series – December 2012
 - Assemble J-2X E10002 – October 2012
 - Assemble J-2X E10003 – December 2012

David Beaman

Manager, Spacecraft & Payload Integration Office

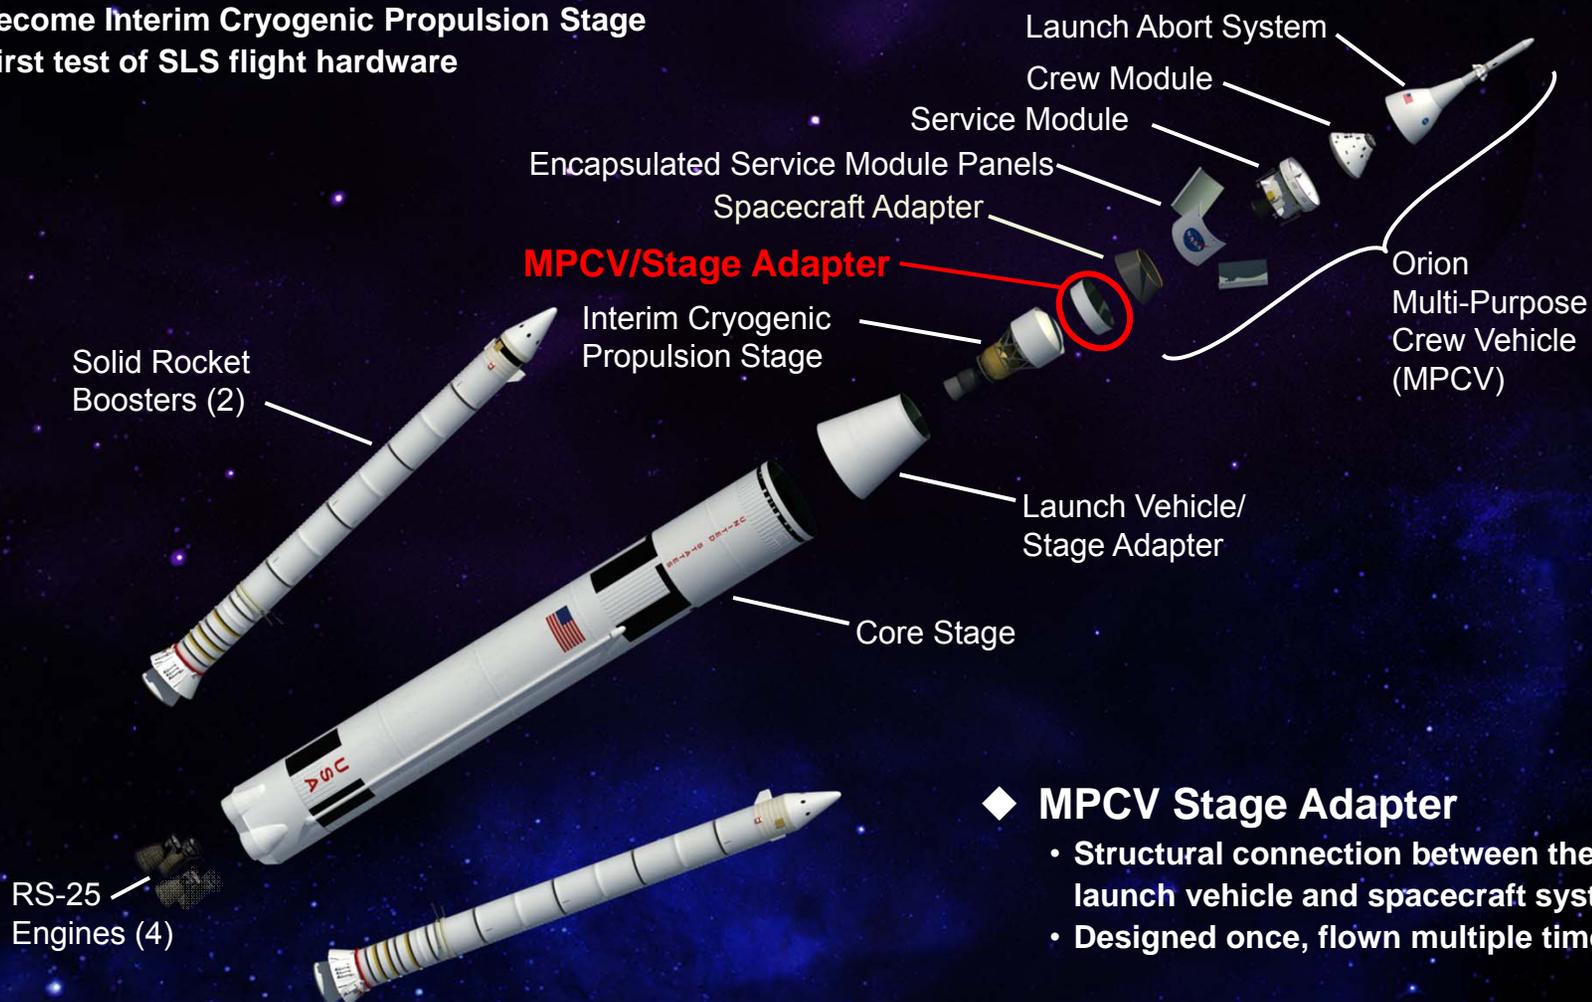

*Spacecraft & Payload Integration and
Exploration Flight Test (EFT)-1 Status*

SLS 70t Expanded View

◆ EFT-1

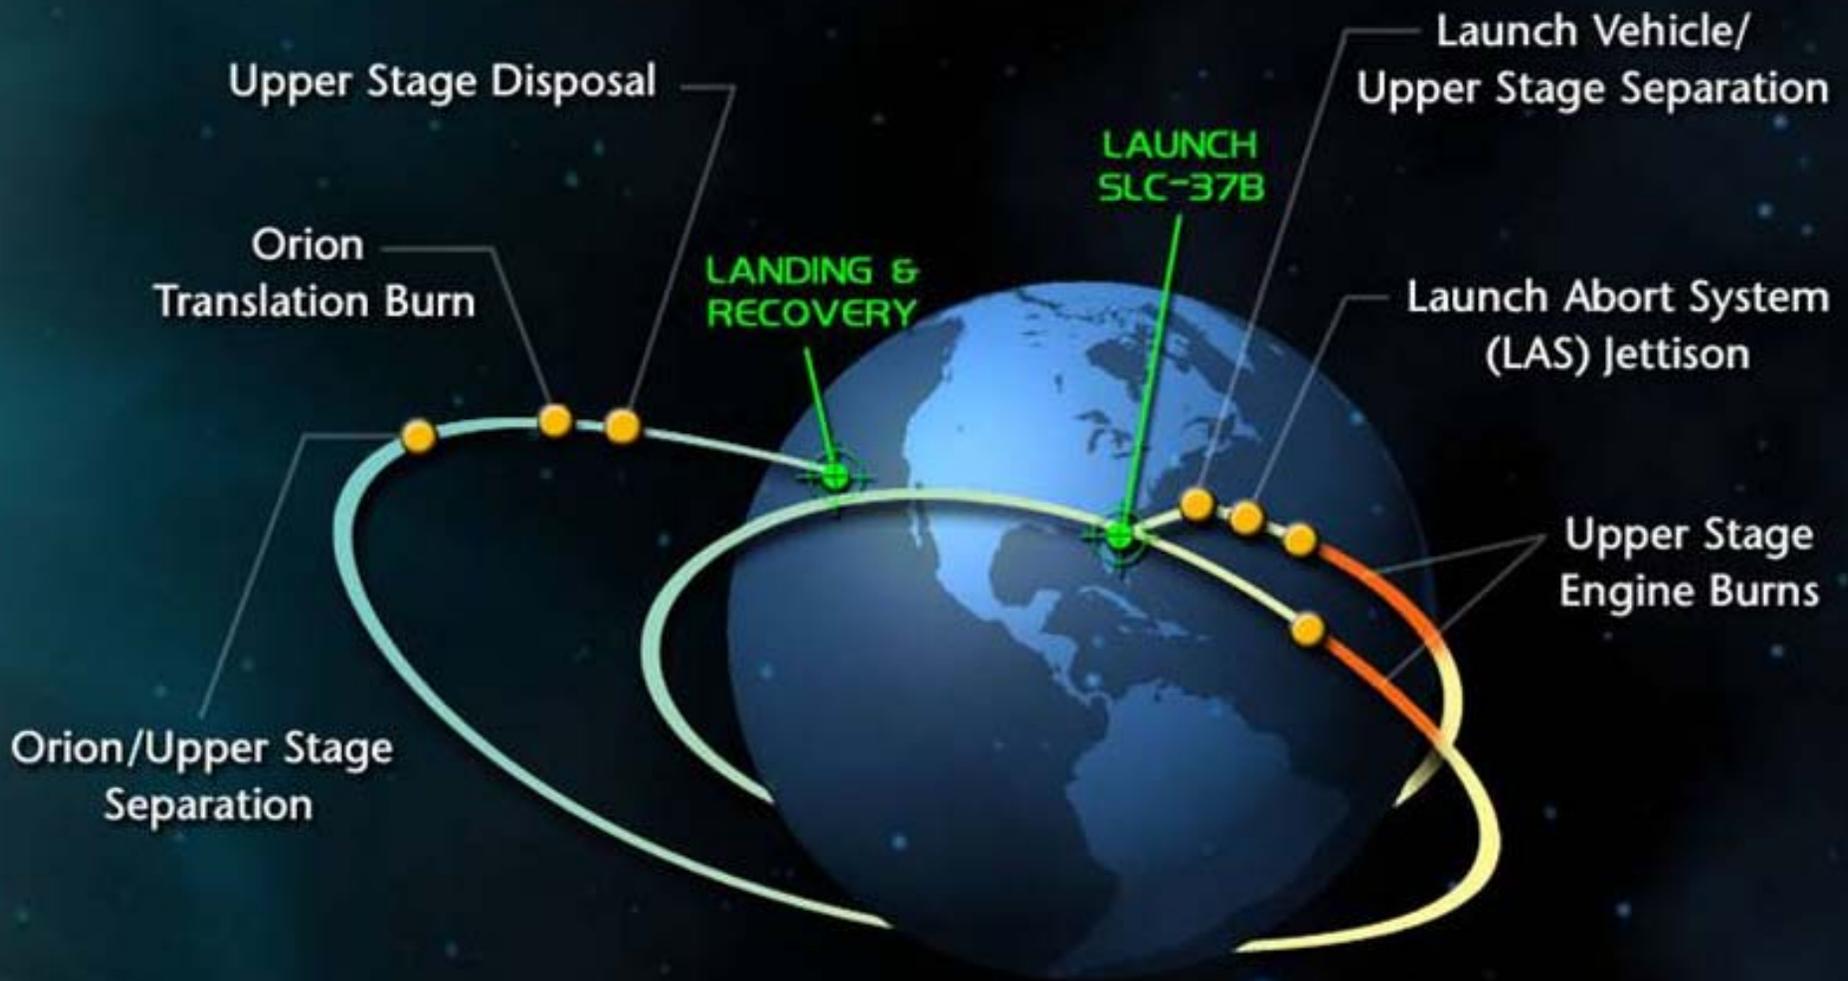

- Orion boosted to high-Earth orbit by Delta Cryogenic Second Stage, which will be modified to become Interim Cryogenic Propulsion Stage
- First test of SLS flight hardware

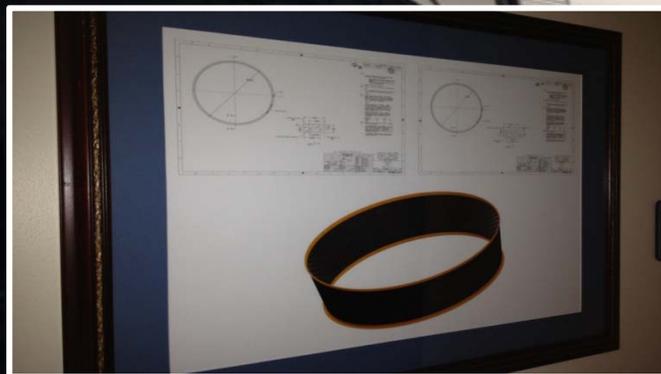

◆ MPCV Stage Adapter

- Structural connection between the launch vehicle and spacecraft systems
- Designed once, flown multiple times

Exploration Flight Test-1 (2014) Mission Overview

Exploration Flight Test-1 in 2014 MPCV Stage Adapter

*EFT-1 MPCV Stage Adapter
Design Review in March 2012*

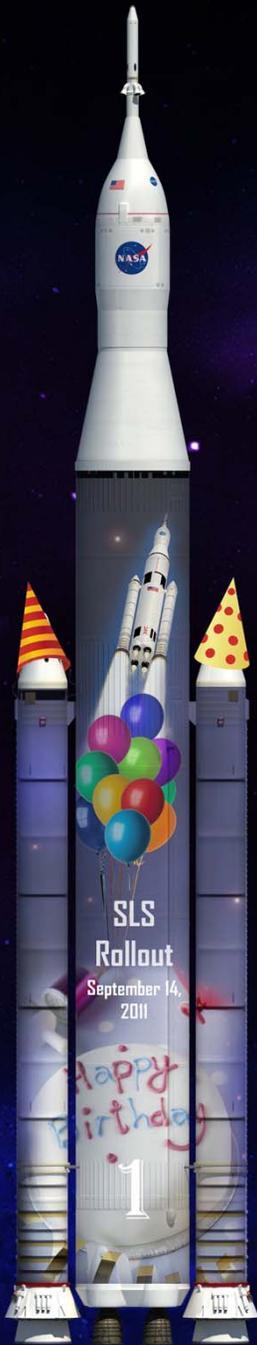

NASA's Space Launch System

- ◆ *On track for a 2017 first flight*
- ◆ Key tenets: safety, affordability, and sustainability
- ◆ Progress being made on all elements of the vehicle
- ◆ Prime contractors on board, work being done across the country
- ◆ Completed System Requirements Review / System Definition Review, now working toward Preliminary Design Review in 2013
- ◆ Flight hardware being tested on EFT-1 in 2014
