Global Long-Term SeaWiFS Deep Blue Aerosol Products Available at NASA GES DISC

Overview of SeaWiFS Deep Blue Aerosols

Long-term climate data records about aerosols are needed in order to improve understanding of air quality, radiative forcing, and for many other applications. The Sea-viewing Wide Field-of-view Sensor (SeaWiFS) provides a global well-calibrated 13-year (1997–2010) record of top-of-atmosphere radiance, suitable for use in retrieval of atmospheric aerosol optical depth (AOD). Recently, global aerosol products derived from SeaWiFS with Deep Blue algorithm (SWDB) have become available for the entire mission, as part of the NASA Making Earth Science data records for Use in Research for Earth Science (MEaSUREs) program.

The latest Deep Blue algorithm retrieves aerosol properties not only over bright desert surfaces, but also vegetated surfaces for the entire mission, (AOD). The dataset is southwest Asia region, this presentation shows seasonal variations of AOD, and the result of comparisons of 5 of aerosols are needed in order to improve

Seasonal Variations of Aerosols over Southwest Asia

The image to the left is the mission-averaged SWDB-AOD at 550nm, illustrating the global distribution of aerosols. The time series, right plot, show AOD over the southwest Asia region, which is higher significantly than both the global and northern hemisphere average. Lower images show seasonal variations of AOD at 550nm over the southwest Asia region. The aerosols over this region are from both local sources and long-range transport. The largest aerosol loadings appear during the summer and are mostly associated with dust transported from Arabian Peninsula by southwest summer monsoon. The data sampling is low during summer over India due to very high cloudiness.

Comparisons with Aerosols from MODIS

Time series are monthly AOD at 500nm (upper panels) and valid data points (lower panels) from SWDB (red), MYD DB (blue), and MYD DT (black) over land (left panels) and ocean (right panels) over southwest Asia (6°E-90°E, 9N-36°N). The differences are small over the ocean; and in general, are less than 0.1 over land except the summer, which may be partially due to significant lower sampling during the monsoon rainfall season.

Spatial patterns of differences of AOD between SWDB and MYD DT (upper panels) or MYD DB (lower panels) for Jan, Apr, Jul, and Oct (from left to right), respectively. Interestingly, differences show seasonal variations with larger differences in the spring and summer. SWDB is lower significantly than both MYD DT and MYD DB over India during pre-monsoon season. In July, over land, the number of matching data points between SWDB and MODIS, in particular MYD DT, is very low, which may cause artifact in calculating area mean.

Where and How to Obtain SeaWiFS Deep Blue Aerosols Data

SeaWiFS Deep Blue (SWDB) aerosol products is one of seven MEaSUREs products that are archived and distributed at NASA GES DISC:

Data format: HDF5

Product Name Processing Resolution File Size (MB)
SWDB_L2_003 Level 2 swath 13.5 km 5.2
SWDB_L3_S05 Level 3 daily 0.5 Deg 7.6
SWDB_L3_L010 Level 3 daily 1 Deg 2.4
SWDB_L3_M005 Level 3 monthly 0.5 Deg 15.0
SWDB_L3_M003 Level 3 monthly 1 Deg 4.4

Data Services:
- MeaSuReS Portal
- Reverb
- GCMD
- OPeNDAP
- Giovanni
- Direct FTP

Visualization and Analysis with Giovanni

Visualization Features:
- Single Parameter Exploration:
  - Lat-Lon area plots of time-averaged parameters
  - Time-series plots of area-averaged parameters
  - Animations of composites Lat-Lon area plots
- Multi-parameter Intercomparison:
  - Time-series plots of multiple parameters
  - Time-series of two parameter differences
  - Lat-Lon area plot of two parameter differences
  - Scatter plots with regression statistics

Download:
- data in formats ASCII, HDF, netCDF
- image: PNG, KMZ for Google Earth

Accessing Data in OPeNDAP

OPeNDAP has been added recently to serve SWDB products for increasing the interoperability of the data. A user is able to access the data remotely with applications, such as Panoply, GrADS, IDV, and Ferret, etc.

Remote access

To simplify visualizing L2 swath products, we provide a WED-based service to view daily true-color images and are working on adding the aerosol products. Filtering by aerosol and CA will also be available.

Acknowledgments:

This project is supported by NASA through ROSES 2006 NNH06ZDA001N – Science and Technology for Earth Observing Systems (STEOS), with the technical support of the Giovanni and data archive groups at GES DISC. It has a drastically simplified, clean interface and employs the Google mini appliance for metadata searches and features, such as Panoply, GrADS, IDV, and Ferret, etc.
