The Space Launch System: NASA’s Exploration Rocket

Christopher Blackerby
June 3, 2013
“To reach for new heights…
and reveal the unknown so that what we do
and learn will benefit all humankind.”

SLS Launches
in 2017

- Extend & sustain human activities
  across the solar system.
- Expand scientific understanding
  of the Earth & the universe in
  which we live.

NASA 2011 Strategic Plan
The Next Great Ship
The Space Launch System [will] be the backbone of its manned spaceflight program for decades. It [will] be the most powerful rocket in NASA’s history…and puts NASA on a more sustainable path to continue our tradition of innovative space exploration.
Exploration Systems Development

- Space Launch System
- Orion Multi-Purpose Crew Vehicle
- Ground Systems Development and Operations
SLS Launch Schedule

Asteroid Detection, Characterization, & Selection Segment
- 2013: SST
- 2014: PS-2
- 2016: Geosynchronous Earth Orbit-hosted payload detection
- 2017: Enhanced Ground Assets & Initial candidates
- 2018: Final target selection
- 2019: Mission Launch & Solar Electric Propulsion Demo
- 2020: Asteroid Rendezvous & Capture
- 2021: Asteroid Maneuver to Cis-Lunar Space
- 2022: NOTIONAL – SUBJECT TO CHANGE AS MISSION CONCEPT EVOLVES

Asteroid Redirection Segment

Orion & SLS Crewed Asteroid Exploration Segment
- 2013: Exploration Flight Test: Un-crewed Orion Flight in Earth Orbit
- 2015: EM-2: Crewed Orion Flight Beyond the Moon

www.nasa.gov/sls
Unsurpassed Mission-Enabling Capability

Earth-Sun Libration Points
Serviceable Large Diameter Telescopes

Asteroids
Human missions
Robotic missions with sample return

Mars, Phobos, Deimos
Human missions
Single-launch robotic sample return

Deep Space/Planetary
Robotic sample return missions
Reduced flight time (years)

Earth-Moon Libration Points
Waystations

Commercial Space Stations
Large diameter
Single launch

Moon
Large-scale robotic precursor missions
Human settlement with resource utilization

Entirely New Missions Never Before Possible
Mars: Making the Ultimate Goal a Reality

Mars Landing: Heading for the High Ground

SLS Driving Objectives

◆ Safe
  • Human-rated to provide safe and reliable systems.
  • Protecting the public, NASA workforce, high-value equipment and property, and the environment from potential harm

◆ Affordable
  • Maximum use of common elements and existing assets, infrastructure, and workforce
  • Constrained budget environment
  • Competitive opportunities for affordability on-ramps

◆ Sustainable
  • Initial capability: 70 metric tons (t), 2017–2021
    - Serves as primary transportation for Orion and human exploration missions
  • Evolved capability: 105 t and 130 t, post-2021
    - Offers large volume for science missions and payloads
    - Reduces trip times to get science results faster
    - Minimizes risk of radiation exposure and orbital debris impacts

Platform for Missions Beyond Earth’s Orbit
Building on the U.S. Infrastructure

**INITIAL CAPABILITY, 2017–21**

- **Orion Multi-Purpose Crew Vehicle (MPCV)**
  - Lockheed Martin

- **Interim Cryogenic Propulsion Stage**
  - Early flight certification for Orion
  - Flexible for a range of payloads
  - Boeing

- **5-Segment Solid Rocket Boosters**
  - Upgrading Shuttle heritage hardware
  - ATK

- **Launch Abort System**

- **Core/Upper Stage**
  - Common design, materials, & manufacturing
  - Boeing
  - Avionics
    - Builds on Ares software
    - Boeing

**EVLoved CAPABILITY, Post-2021**

- **130 t 384 ft**

- **Fairings (27.5’ or 33’)**
  - Right-sized for the payload
  - Received industry input in FY13

- **Upper Stage**
  - Commonality with Core Stage
  - Optimized for Mission Capture

- **Advanced Boosters**
  - Competitive opportunities for affordable upgrades
  - Risk-reduction contracts awarded in FY13

- **Advanced Development contracts awarded in Fiscal Year 2013 (FY13)**

- **RS-25 Core Stage Engines**
  - Using Space Shuttle Main Engine inventory assets
  - Building on the U.S. state of the art in liquid oxygen/hydrogen
  - Initial missions: Pratt & Whitney Rocketdyne
  - Future missions: Agency is determining acquisition strategy

**Working with Industry Partners to Develop America’s Heavy-Lift Rocket**
Core Stage Progress

Next Big Steps

| Tooling Availability | May 2013 - Enhanced Robotic Weld Tool (ERWT)  
June 2013 - Vertical Weld Center (VWC) |

Manufacturing Layout
Michoud Assembly Facility  
(New Orleans, LA)

Vertical Assembly Center (VAC)

Circumferential Dome Weld Tool (CDWT)

Segmented Ring Tool (SRT)

Vertical Weld Center (VWC)

Enhanced Robotic Weld Tool (ERWT)
RS-25 Core Stage Engines In Stock

- Inventory at Stennis Space Center for first 4 SLS flights
- Utilizing proven, existing hardware supports SLS safety and affordability goals
- Preparations under way for RS-25 engine testing

Proven Performance for Human Missions
5-Segment Solid Rocket Booster Progress

Development Motor Testing Completed
DM Test 3
September 8, 2011
ATK Promontory, Utah

Qualification Motor Testing Begins in 2013
QM Casting, July 2012

Developing the World’s Largest Solid Rocket Booster
Multi-Purpose Crew Vehicle Stage Adapter (MSA) Progress

Production of MSA at Marshall Space Flight Center in early 2013, for Orion’s Exploration Flight Test to Earth Orbit in 2014

Assembling the MSA pathfinder hardware in 2012

Delivering MSA rings to Marshall in Dec 2012
Interim Cryogenic Propulsion Stage

- ICPS provides in-space power to send Orion to destinations beyond Earth’s orbit
- Modified version of commercially available Delta Cryogenic Second Stage

Partnering with Industry for Cost-Effective Solutions
SLS 130 metric ton Expanded View

Evolving to Mars-Class Capabilities
J-2X Engine: In Testing

Technology Research & Development:

- Yielded Common Engine Controller for RS-25 Core Stage Engine
- Testing includes Selective Laser Melted engine part manufactured in days rather than weeks

Shortest Time to Full Power Level Ever Recorded
Advanced Research and Development

Enabling Affordable Performance Upgrades
Pursuing Affordability Solutions

- Lean, Integrated Teams with Accelerated Decision Making
- Robust Designs and Margins
- Risk-Informed Government Insight/Oversight Model
- Right-Sized Documentation and Standards
- Evolvable Development Approach
- Hardware Commonality

Sustainability through Life-Cycle Affordability
[A] monumental effort … has gone into this Program…. I don’t think anyone would have thought in September [2011] that this Program might be this far so fast.

Leroy Cain, Chair
Standing Review Board
NASA Directorate Program Management Council
June 29, 2012
NASA’s Space Launch System

On Course for First Flight in 2017

**Engines**
Tested selective laser melted part on J-2X at Stennis Space Center
(March 2013)

**Boosters**
Conducted Thrust Vector Flight Control Test at ATK in Promontory, UT
(Jan 2013)

**Core Stage**
Produced Core Stage test panel at AMRO Fabricating Corp. in South El Monte, CA
(Dec 2012)

**Preparing segmented ring tool for Core Stage construction at the Michoud Assembly Facility in New Orleans**

**Spacecraft & Payload Integration**
Produced Multi-Purpose Crew Vehicle Stage Adapter for 2014 Exploration Flight Test at the Marshall Space Flight Center
(Feb 2013)

**Advanced Development**
Conducted F-1 engine hot-fire testing at Marshall
(Jan 2013)

**Systems Engineering & Integration**
Tested buffet model in Langley Research Center’s Transonic Dynamics Wind Tunnel
(Nov 2012)

SAFE, AFFORDABLE, SUSTAINABLE
SLS Partnerships Nationwide

- Engaging the U.S. Aerospace Industry
- Strengthening Sectors such as Manufacturing
- Advancing Technology and Innovation

208 Subcontracts in 28 States
Exploring Space for America’s Future

New National Capability

National Security

Scientific Knowledge

Inspiration

Economic Prosperity

Global Partnerships

Technology Development
Summary

- Powerful, versatile, and capable vehicle for entirely new missions to deep space
- Vital to NASA’s exploration strategy and the Nation’s space agenda
- Safe, affordable, and sustainable
- Engaging the U.S. aerospace workforce and infrastructure
- Competitive opportunities for innovations that affordably upgrade performance
- Successfully meeting milestones in preparation for Preliminary Design Review in 2013
- On course for first flight in 2017
A National Infrastructure Asset

For Beyond-Earth Orbit Exploration

2017
Somewhere, something incredible is waiting to be known.

— Carl Sagan
