About NASA

The National Aeronautics and Space Administration (NASA) was established in 1958 by President Dwight D. Eisenhower encouraging peaceful applications in space science. It’s the United States government agency that is responsible for the civilian space program as well as for aeronautics and aerospace research.

Since its inception, NASA has accomplished many great scientific and technological feats in air and space. NASA technology also has been adapted for many none-aerospace uses by the private sector.

NASA remains a leading force in scientific research and in stimulating public interest in aerospace exploration, as well as science and technology in general.
The Best Places to Work in the Federal Government 2013

Congratulations to
National Aeronautics and Space Administration
Ranked First: Large Federal Agency

PARTNERSHIP FOR PUBLIC SERVICE
NASA Centers

- Ames Research Center, Moffett Field, CA
- Glenn Research Center, Cleveland, OH
- Dryden Flight Research Center, Edwards, CA
- Goddard Space Flight Center, Greenbelt, MD
- NASA Headquarters, Washington, DC
- Langley Research Center, Hampton, VA
- Jet Propulsion Laboratory, Pasadena, CA
- Johnson Space Center, Houston, TX
- NASA Shared Services Center, SSC, MS
- Stennis Space Center, SSC, MS
- Marshall Space Flight Center, MSFC, AL
- Kennedy Space Center, KSC, FL
Our Mission

Innovate
Explore
Discover
Inspire

www.nasa.gov
“NASA's missions of the future are going to depend on new technologies that will be evolvable and applicable across a broad range of missions. We are dedicated to extending human presence into the solar system and to the surface of Mars, and new technologies and advanced capabilities are essential to safely taking us from Earth-reliant to Earth-independent missions, and the surest path to an eventual crewed landing on Mars. Sustained investment in these technologies advances the agency's exploration capabilities and supports the innovation economy.” June 3, 2014
NASA’s Culture

Recognizing and Rewarding Innovative Performance

CULTURE OF INNOVATION

Building Model Supervisors and Leaders

Engaging and Connecting the Workforce
Recognizing & Rewarding Innovative Performance

• Lean Forward; Fail Smart Award
  – Dare to Try
  – Perseverance
  – Learning
  – Collaboration

• Champion of Innovation Award
  – Leadership
  – Visionary
  – Relationship Builder
  – Role Model
Recognizing and Rewarding Innovative Performance

Reward and appreciate employees for their innovative performance and contributions to their workplace.

Supervisors and Leaders take an active role fostering innovation by:

- Engaging with employees and getting to know their strengths
- Tailoring employees’ projects to their strengths
- Building trust with employees and giving them autonomy
- Providing opportunities for collaboration and cross-pollination
- Advocating for and lifting employees whose projects aren’t successful
Develop supervisors and leaders who view developing employees as an important and productive use of time.
Engaging & Connecting the Workforce

• Workforce Initiatives
  – Creativity and Innovation Initiatives
  – Science Engineering Collaboration Program (SECP) & Research Engineering Program

• Fairs and Symposia
  – Innovation Forum/Innovation Day/Innovation Expo
  – Internal Research & Development Poster/Networking

• Open Innovation Platforms, Prizes, and Challenges
  – Centennial Challenges
  – Mars Challenge

• Facilities and Creative Spaces
  – Concurrent Engineering Design Teams & Facilities
Dr. Stephanie Getty
GSFC Innovator of the Year!

- Stephanie Getty was in SECP-1 group
- Selected as 2012 Goddard’s Innovator of the Year for her trailblazing work in the area of advanced mass spectrometer instrumentation
- Won $1.2 million from NASA’s Astrobiology Science and Technology Instrument Development to advance the Organics Analyzer for Sampling Icy Surfaces (OASIS) to study the chirality of amino acids on the icy moons of the outer planets, asteroids, and Kuiper Belt Objects
- Serves as mentor to other SECP participants
• Don Wegel (SECP-2) featured in NASA Tech Briefs on his Sample Collecting Comet Harpoon work
• Popular Science Magazine Publishes Comet Harpoon Story
• Comet Nucleus Sample Return II featured on Ripley’s Believe it or Not
Engaging & Connecting the Workforce

Over the course of three hours, this year’s IRAD Poster Session attracted hundreds of visitors, as evidenced by this photo taken from the audio/visual skybox overlooking the Building B auditorium.

The theme of this year’s annual IRAD Poster Session — Goddard Technology: Enabling Science Through Innovation — captured in just a few words the principal goal of the center’s internal research and development program. Principal Investigator Semion Kizhner is in the background.

Students from Montgomery County’s Bethesda-Chevy Chase High School talk with Principal Investigator Fred Minetto, who has created a novel way to clean mirrors and lenses in clean rooms using a one-atmosphere electron gun whose prototype hardware is displayed on the table.

Concurrent Engineering Design Teams

An environment that facilitates multi-disciplinary, concurrent, collaborative, space system engineering design and analysis activities, to enable innovation and rapid development of science instrumentation, mission, and mission architecture concepts.
Facilities

State-of-the-art engineering workstations, software and information technology to ensure engineering excellence.

Mission Design Lab (MDL)

Comfortable, well-equipped workspaces to facilitate dynamic interaction within team.

Instrument Design Lab (IDL)
Engaging and Connecting the Workforce

Engage employees in the NASA mission and enable them to cooperate, collaborate, and network with one another.

* Wording change in 2013; previous surveys were worded “The people I work with cooperate to do my job well.”
** Question first introduced in 2010 EVS.
Styles of Innovation

- Innovation through Discovery and Invention
- Innovation in Assigned Work
- Program Innovation
“Developing the capabilities to land humans on Mars will require considerable resources and technological innovation in many disciplines to accommodate the environments to be encountered in space and during surface operations.”
