OMI Near-UV Aerosol Algorithm (OMAERUV)

**Purpose:** Retrieval of Aerosol Single Scattering Albedo and Absorption Optical Depth

**Measurements:** Radiances at 354 and 388 nm.

**Physical Basis:** Radiative interaction between particle absorption and molecular scattering in the UV.

*In spite the sensor’s coarse resolution for aerosol retrieval, valuable information on particle absorption can be derived from OMI near UV observations.*

**Retrieval Products:**
- AOD and SSA (388 nm)
- Absorbing Aerosol Index

**Inversion Scheme:**
For a given aerosol type and ALH, satellite measured radiances at 354 and 388 nm are associated with a set of AOD and SSA values.

Combined use of OMI, CALIOP and AIRS observations in OMAERUV Aerosol Retrieval

OMAERUV uses a CALIOP-based Aerosol Layer Height Climatology and real-time AIRS carbon monoxide data for aerosol type identification [Torres et al., 2013]

The combined use of Al and CO allows the identification of smoke layers over arid areas.

AIRS CO allows the identification of heavy aerosol loads over China, and other regions, otherwise undistinguishable from cloud contamination.

OMAERUV SSA assessment: Comparison at selected AERONET sites

51% (75%) of matched pairs agree within 0.03 (0.05)

• OMI and AERONET are within their expected uncertainties (±0.03) for AOD>0.4 and UV-Al>1.0
• Closer agreement for larger aerosol loading

Summary

Significant progress on the quantification of aerosol absorption has been achieved during the first decade of OMI operation.

- A ten year data set of 388 nm AOD and SSA has been derived from OMI observations.
- The capability of retrieving aerosols above clouds using UV/VIS observations has been developed.

The decadal OMI AOD and SSA records have been evaluated by direct comparison to independent ground-based AERONET observations.

The OMI SSA and AAOD data sets are the first ever quantitative multi-year records on aerosol absorption from satellite-based observations.

Continuation of the OMI record on aerosol absorption is required for conclusive analyses of global/regional trends.
