Global Precipitation Measurement (GPM) mission

Precipitation Processing System (PPS)

GPM Mission Gridded Text Products

Provide Surface Precipitation Retrievals

Erich Franz Stocker, O. Kelley, C. Kummerow, G. Huffman, W. Olson, J. Kwiatkowski

NASA/GSFC Code 610.2

Erich.F.Stocker@nasa.gov
Topics

• Standard GPM mission products available
• Obtaining GPM mission products
• Background of the gridded text products
• Content of the gridded text products
• Available tools for the gridded text products
• Plans for future gridded text products
Obtaining All GPM Mission products

• **Must be a registered PPS user**
  – Register at URL: [http://registration.pps.eosdis.nasa.gov](http://registration.pps.eosdis.nasa.gov)
  – Must provide information
    • Valid, reachable email
    • Affiliation
    • GPM product interest
  – Will receive an email to the registered address and must then validate

• **Registered email address is username AND password for both the query and search interface**
  – STORM: [http://storm.pps.eosdis.nasa.gov](http://storm.pps.eosdis.nasa.gov)
  – ftp location: arthurhou.pps.eosdis.nasa.gov

• **All data included gridded text products are online and available in either of the ways**

• **Ftp access is really a special anonymous ftp implementation.**
  – For Linux and MAC it is possible to make a .netrc entry
  – Such an entry will facilitate access via scripts without requiring manual entry of username and password.

- 1C for each contributing radiometer (size depending upon instrument)
- GPROF for each contributing radiometer (size depending upon instrument)
Background of Gridded Text Product

• First provided during the Tropical Rainfall Measuring Mission (TRMM) (3G series of products) to provide just surface precipitation retrievals in an easy to use format

• Was determined that space delimited fields of ASCII text terminated by a newline character was the easiest to use

• In TRMM the 3G products had an internal compression scheme that made lines have different number of fields on a line.
  – NOT done in GPM gridded text product
  – In GPM gridded text product every line always has same number of fields

• In TRMM text products so become among the most popular products for users

• Basic objectives
  – Keep format simple
  – Provide just basic information about the surface precipitation
  – Maintain hourly information (helps with diurnal studies)
  – Package as a daily file to minimize number of download necessary
  – Use information from the swath products directly
Content of GPM Gridded Text Products

• Details of product including calculations used in poster 2015-1387
• Five lines of metadata describing the product
• Hourly grids at .25 deg x .25 deg

• Each data line contains
  – Row number of global grid, column number of global grid
  – Hour (starting at 0), Minute (starting at 0)
  – Four surface precipitation retrievals in grid box
    • GMI GPROF
    • KU
    • DPR matched (Ku/Ka) swath (dual-frequency retrieval)
    • Combined matched (GMI/Ku/Ka) swath
  – Each retrieval type (of the four used) has:
    • Total pixels
    • Number of precipitating pixels
    • Mean precipitation rate
    • Convective fraction
    • Liquid fraction
    • Retrieval quality
Available tools for the Gridded Text Products

- **Tool High-resolution Observation Review (THOR)**
  - Data viewing and analysis tool
  - Allows looking through the gridded text product and finding the value of variables
  - See image (next slide)
  - Download URL: pps.gsfc.nasa.gov

- **Combining tool**
  - C programs
  - Allows combining all the daily gridded text products into a single file
  - Can retain the hourly grids or collapse all hours into a single hour grid (thereby providing a total aggregation)
  - If interested email: erich.f.stocker@nasa.gov
  - Within 6 months will be available in python
Example of THOR with Gridded Text Product
Plans for Future Gridded Text Products

• Current plans call for two additional type of gridded text products to be produced in time for the first major GPM reprocessing in September 2015

• GPROF retrievals from partner constellation microwave conical scanning radiometers
  – SSMIS (F16-F19)
  – AMSR2
  – This expected to be available by the beginning of August

• GPROF retrievals from partner constellation cross track radiometers
  – MHS (NOAA18, NOAA19, MetopA, MetopB)
  – Saphir
  – ATMS
  – Not expected to be ready until September
