Growing Food for Space and Earth: NASA’s Contributions to Vertical Agriculture

Raymond M. Wheeler
NASA Exploration Research and Technology Directorate
Kennedy Space Center, Florida, USA

American Society of Horticultural Science
Aug. 4-7, 2015
Plants for “Bioregenerative” Life Support

**HUMANS**

- **Metabolic Energy**
- **food**
  
  \[(\text{CH}_2\text{O}) + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}\]

- **Clean Water** ➔ **Waste Water**

**PLANTS**

- **Light**
- **food**
  
  \[(\text{CH}_2\text{O}) + \text{O}_2^* + \text{H}_2\text{O} \leftarrow \text{CO}_2 + 2\text{H}_2\text{O}^*\]

- **Clean Water** ➔ **Waste Water**
Crop Considerations for Space

- High yielding and nutritious (CHO, protein, fat)
- High harvest index (edible / total biomass)
- Horticultural considerations
  - planting, watering, harvesting, pollination, propagation
- Environmental considerations
  - lighting, temperature, mineral nutrition, CO₂
- Processing requirements
- Dwarf or low growing types
Recirculating Hydroponics with Crops

Conserve Water & Nutrients
Eliminate Water Stress
Optimize Mineral Nutrition
Facilitate Harvesting

Root Zone Crops in Nutrient Film Technique (NFT)

Evapotranspiration from Plant Stand (potato)

Fig. 7

Water, Nutrient, and pH Control

High Yields from High Light and CO₂ Enrichment

Wheat - 3-4 x World Record
Potato - 2 x World Record
Lettuce - Exceeded Commercial Yield Models

Potential Energy Conversion to Biomass

Assuming a maximum 12% conversion efficiency from PAR to biomass

\[ 1.6 \text{ g dry mass / mol PAR} \]

Some Upper Limits to Energy Conversion and Productivity

### Field Crops Observations

<table>
<thead>
<tr>
<th>Crop</th>

Edible Biomass

Studies Include:
- Wheat (4)
- Soybean (4)
- Potato (4)
- Lettuce (3)
- Tomato (2)

Effect of Light on Crop Yield

Electrical Power for BPC

- 96 400-W HPS lamps with dimming ballasts
- Two 30 kW blowers (400 m$^3$ min$^{-1}$)
- Two 15-ton (52 kW) chillers for cooling
- 100 kW water heater for air re-heat

→ Not designed for energy efficiency!!
## The Importance of Lighting

### Electric Lamp Options

<td>&gt;40%</td>
<td>100,000</td>
<td>Narrow</td>
</tr>
</tbody>
</table>

* Approximate values.
** Tungsten halogen lamps have broader spectrum.
*** For VHO lamps; lower power lamps with electronic ballasts last up to ~20,000 hrs.
**** State-of-Art Blue and Red LEDs most efficient.

Some Lessons Learned from NASA CEA / Vertical Ag work

- Over half of maintenance / upkeep time dedicated to nutrient system management
  - If condensate water is retrieved, pay attention to elemental content
- Extensive work for optimizing hydroponic solution replenishment recipes
  - We made no attempts to reduce nitrate in tissue
- Consider ability to reach all sections of the growing area; it was not easy for use to inspect the back of our trays; consider shelf-to-shelf height
- Initially we sanitized hydroponic hardware following crops, but later abandoned in favor of thorough cleaning
- Consider innovative means for improving energy efficiency, e.g., if possible use heat from lamps and power supplies for air “re-heat”
- Worker safety—consider sunglasses for working around bright red and blue LEDs
Agriculture in Space

As we explore sustainable living for space, we will learn more about sustainable living on Earth.
