Shape Memory Alloys: An Introduction

- Alloys that have a “memory.” These materials have the ability to remember and recover their original shapes with load or temperature.
- SMAs exhibit a solid-to-solid, reversible phase transformation

**Simplified 2D**

- How?
  1. Bain strain → (lattice deformation)
  2. Lattice invariant shear → (accommodation)

**Variant selection**

**Microstructure**

SMA actuators can generate motion in one dimension (wire form), two dimensions (bending of a bar) or even motion in a more complex three dimensions (springs, honeycombs).

Functionality: Tension (e.g., wires, springs), compression (e.g., rods, springs), bending (e.g., beams, plates), torsion (e.g., rods, tubes, and springs)

Thermomechanical Testing

Uniaxial (tension/compression)

- Isothermal monotonic
- Isothermal cyclic
- Isobaric cyclic
- Isostrain cyclic

Multiaxial

- Proportional/non-proportional loading
- 3D strain measurement
- Torque/force/twist/displacement control capability

Geometries

Torsion

Hot grip testing

Durability

- New frames for durability testing are underway
  - Durability analysis of sample and components
  - Generate data for existing materials

Shape Memory Alloy Applications

**Space**

**SMA Bellows**
- Dynamic sealing
- Fluid handling
- Flexibility (structure alignment)

**SMA Spring Tire**
- Superalelastic technology
- Lunar rovers
- Terrestrial tires

**SMA Docking Coupling**
- Cryogenic transfer coupling
- Orbital propellant depots
- Propellant handling/protection

**SMA Thermal Switch**
- Thermal management
- Clean & spark-free operation
- Passive or active control

**SMA rock splitters**

**SMA Bearings**
- Corrosion resistant
- Non-galling properties
- High yield

Shape Memory Alloy Applications

Adaptive Fan Blade
- Embedded SMA actuators
- Aerodynamic efficiency
- Specific fuel consumption reduction

SMA Cellular Structures
- Airframe and engine components
- Morphing airfoils
- Light weight trusses

The Mars Atmosphere and Volatile Evolution (MAVEN) mission.
- SMA Pinpullers (From TiNi Aerospace) were used to secure and release deployables

Variable Area Nozzle
- High bypass turbofan
- SMA torque tubes provide flap rotation
- Engine noise reduction
Shape Memory Alloy Applications
Non-Aerospace Potential

Oil and Gas Industry
- SmartRAM™ actuators (LMP)
- SMA couplings (Aerofit Inc)
- Deep-water valves/shut off valves
- Self-torquing fasteners

Medical Industry
- Surgical tools
- Stents and implants
- Glasses frames

Automotive Industry
- Louvers
- Quiet actuators
- Door handle

Other Applications
- Home appliances
- Electronics
- Transportation
- Air conditioners
Development of Shape Memory Alloys: Challenges

High transformation temperatures
- Above 100 °C
- Good work output
- Thermal stability

Durability
