The document contains information about the NASA GES DISC Aerosol Analysis and Visualization Services. It highlights the Data Quality Visualization (DQViz) project and the Multi-sensor Aerosol Products Sampling System (MAPSS) Explorer, which are supported by NASA HQ through the ROSES 2009/2011 ACCESS Program. The project aims to help research communities inter-compare and validate aerosol data from different sensors, including Terra, Aura, MISR, OMI, and MODIS. The data is available in L2 format with specific metadata and provenance information. The document also mentions the inclusion of Data Provenance, QA/QC, and Ground-based Reference Information in the user interface. Additionally, the project features an Interoperable Services component, helping users find and access different aerosol products.
