Global Precipitation Measurement (GPM) Mission Products and Services at the NASA Goddard Earth Sciences (GES) Data and Information Services Center (DISC)

Zhong Liu¹, ⁴, D. Ostrenga², ⁴, B. Vollmer⁴, B. Deshong², ⁴, M. Greene³, ⁴, W. Teng², ⁴, and S. J. Kempler⁴

¹CSISS, George Mason University
²ADNET Systems, Inc.
³Wyle Information Systems, LLC
⁴NASA GES DISC
Outline

• Overview of data services during the TRMM (Tropical Rainfall Measuring Mission) era
• Data services during the GPM (Global Precipitation Measurement) era
• Future plans
• Summary
• Launched on Nov 27, 1997; reboost on Aug. 24, 2001
• Geospatial coverage: Latitude: 38°S - 38°N; Longitude: 180°W - 180°E
• GES DISC – the official EOSDIS archive and distribution center
TRMM Data Products

• Orbital data products from VIRS (2.4 km), TMI (5.1 km at 85.5 GHz), and PR (5 km), at the sensor's resolution
• Gridded data products from VIRS, TMI, and PR, at a range of spatial and temporal resolutions. In particular, the TMPA 3-hourly (RT and research) and monthly products.
• Value added products, TMPA daily, 10-day, climatology, etc.
• Field experiment data
• Level-2 subsets
List of Data Services

- Mirador (Google like search capability, format conversion, other products, etc.)
- Giovanni TOVAS (data visualization and analysis, no data and software needed, data for further analysis, etc.)
- Simple Subset Wizard (easy to use, NetCDF, products from other NASA data centers)
- GDS, OPeNDAP, WMS
- HDF read software
Data Services during the GPM Era

- GPM was launched in Japan on Feb. 27, 2014
- International network of satellites that provide the next-generation global observations of rain and snow
- GMI (10-183 GHz); Dual-Frequency Radar (DPR), KuPR (13.6 GHz) and KaPR (35.5 GHz)

Inclination: 65° (vs. 35° for TRMM)
GPM data overview

- L-1 and L2 (GPROF, DPR) orbital products
- L-3 gridded products (IMERG, GPROF daily, monthly products)
- Value-added products (similar to TRMM)
- TMPA for comparison
- Other non-standard products (MERRA, NLDAS, GLDAS, etc.)
- Data from users for comparison
More parameters, higher data volume

Parameters in the **IMERG** 0.1 deg. 30-min products (vs. 0.25 deg. 3-hourly TMPA):

- precipitationCal
- randomError
- precipitationUncal
- HQprecipitation
- HQprecipSource
- HQobservationTime
- IRprecipitation
- IRkalmanFilterWeight
- probabilityLiquidPrecipitation
Mirador

- All GPM data (Google like data search and discovery; access to data product services, such as subsetting, format conversion, etc.)
- Not just GPM. Can search other data as well
Simple Subset Wizard

- Spatial subsetting and format conversion (i.e., NetCDF)
- Not just data at GES DISC. Can order data from other NASA data centers as well.
New Giovanni-4
Sample Parameters in IMERG

Able to trace back to the Level-2 data?
Ongoing and Proposed Basic Data Services

- L-2 subsetting, format conversion (HDF => NetCDF)
- L-2 subsets for ground validation data
- Satellite-satellite intersect/subset
- Customized products at different temporal and spatial resolutions
- Customized products for modeling community
- Customized products for socioeconomic applications (shapefile-based subsets)
- Land surface types, terrain info, coastlines, etc.
- Uploading capability for comparison
Future Plans – GV Information Sharing

- GV work available around the world (government agencies, universities, etc.)
- Journal publications, reports, etc.
- But, no effort to share this info for users
- Can Google Earth help visually locate such info?
- Development of a knowledge base?
- Community based
- Funding source?
Summary

• Quite successful during the TRMM era, but more can be done, especially for Level-2 products
• New challenges and opportunities during the GPM era (basic services, GV info sharing, etc.)
