Persistent Identifiers Implementation in EOSDIS

H. K. “Rama” Ramapriyan
Science Systems and Applications, Inc. & ESDIS Project, NASA
Goddard Space Flight Center
ESIP Summer Meeting, July 19-22, 2016
Topics

- Ideal State
- Preservation Challenge
- Preservation Content
- DOI Implementation
Ideal State

- Traceability of everything related to a dataset to be able to answer all possible questions that user may raise, e.g.,
  - What were the inputs?
  - How was the dataset generated – software, algorithm, computer, operating system, etc.?
  - Who were the authors of algorithm?
  - What instrument(s) did data come from?
  - What satellite did it (they) fly on?
  - Who funded the development?
  - What is the quality of data? What are the limitations?
  - What can the dataset be used for?
  - What publications have used the dataset?

- Unambiguous references important for scientific understanding and reproducibility

- Long-term assumption – authors of datasets and related items not available for answering questions
1. **Preflight/Pre-Operations**: Instrument/Sensor characteristics including pre-flight/pre-operations performance measurements; calibration method; radiometric and spectral response; noise characteristics; detector offsets

2. **Science Data Products**: Raw instrument data, Level 0 through Level 4 data products and associated metadata

3. **Science Data Product Documentation**: Structure and format with definitions of all parameters and metadata fields; algorithm theoretical basis; processing history and product version history; quality assessment information

4. **Mission Data Calibration**: Instrument/sensor calibration method (in operation) and data; calibration software used to generate lookup tables; instrument and platform events and maneuvers

5. **Science Data Product Software**: Product generation software and software documentation

6. **Science Data Product Algorithm Input**: Any ancillary data or other data sets used in generation or calibration of the data or derived product; ancillary data description and documentation

7. **Science Data Product Validation**: Records, publications and data sets

8. **Science Data Software Tools**: Product access (reader) tools.

9. **Checklist**: “metadata” about the above 8 categories showing how and where items in each category are preserved

ESDIS Project started implementing DOIs in 2011 for datasets held in EOSDIS – goal is to assign DOIs to all datasets

- ESDIS is DOI issuing authority for datasets at most DAACs – prefix 10.5067
- Exceptions are ORNL and SEDAC - preceded ESDIS in DOI implementation
DOI for datasets - Implementation

Step 1: Visit ESDIS DOI wiki Website
(https://wiki.earthdata.nasa.gov/display/DOIsforEOSDIS/)

Step 2: Download DOI Submission Form
(https://wiki.earthdata.nasa.gov/display/DOIsforEOSDIS/DOI+Submission+Form/)

Step 3: Fill the New/Update Form
(check examples on the wiki)

Step 4: Submit Form to ESDIS
(ESDIS Contact Team)

Step 5: Review of DOI Information

Step 6: Process DOI Information

Step 7: Reserve/Register/Update DOI Information

Step 8: Post Information on the ESDIS wiki website

Data Provider

ESDIS DOI Team

Credit: Lalit Wanchoo, ADNet/ESDIS
DOI for Datasets – Status

Status of Digital Object Identifiers (DOI) Created with the ESDIS by the Data Providers as of 16 June 2016

- Reserved: Created with the ESDIS but not registered with EZID
- Registered: Created with the ESDIS and also registered with EZID

Under the umbrella of NASA’s ESDSWG, identifiers and citations have been themes of WG’s since 2012

- Data Stewardship WG
- DOI WG
- Citations and Identifiers WG

Topics considered:

- Past: DOI Syntax, Assignment Process, Landing Page Contents, DOI Field Formatting, Citations Reformatting, Citation Policy
- Current: Identifiers for Non-Dataset Objects (focus on software right now)
Citations and Acknowledgements

Open Data and the Importance of Data Citations: The NASA EOSDIS Perspective

Data Citations and Acknowledgements

Challenges

- Takes time to implement DOI’s for all datasets
- Identifiers for non-dataset objects still being considered
- Provenance implementation – establishing links among different objects - still in experimental stage
Acknowledgments

- Thanks to Nate James (ESDIS Project) and Amanda Leon (NSIDC DAAC) for their comments on a draft of this presentation.

- H. K. Ramapriyan's work was supported by NASA’s contract NNG15HQ01C with SSAI.
