Electric Potential and Electric Field Imaging with Applications

Dr. Ed Generazio
NASA Langley Research Center
Overview

• Background

• Sensor development & design issues

• Electric field measurement systems

• Application examples
Background

• NDE historically has focused technology development in propagating wave phenomena:
  • X-ray, ultrasonic, microwave, thermal, terahertz, and eddy current
  • Little attention to the field of electrostatics and emanating electric fields.

• Interest in evaluating the integrity of wire insulation in aircraft and aerospace systems

• This work is based on the original electric field sensor (e-Sensor) work disclosed by Generazio (2002).

Electric Potential and Electric Field Imaging with Applications

- Low dielectric constant/Low electric susceptibility
- Non-conductor
- Neutral triboelectric affinity
• Want to select the best materials for constructing an electric field measurement system, however, the actual electrical properties vary or are unknown in configuration to be used.

• Insulation on wiring
• Wire diameters
• Circuit elements
• Support materials

• Don’t know actual electrical properties until tested
An Example, “e - Sensor” Antenna Configuration for Wiring Inspection

New Insulation

Damaged Insulation

Electrical equipotential surfaces \((V_1, V_2, V_3, V_4)\) are distorted due to damaged or aged insulation. Some antenna elements are no longer parallel to the electrical equipotential surfaces and now are exposed to an increase in potential.

The electric field, \(\mathbf{E}\), at any point is given by 

\[
-\nabla V = \mathbf{E}
\]

where \(V\) is the electrical potential.
“e - Sensor” Data from Prototype

Wire passing through e - Sensor prototype

e - Sensor LEDs are dimmed proportionately by the presence of the spatially varying electric potential existing around statically charged insulated wire.
Electric Potential and Electric Field Imaging with Applications

2nd Prototype

Electric Potential and Electric Field Imaging with Applications

Electric Potential and Electric Field Imaging with Applications

Representation of Cable Showing Cable Orientation RG-174/U 50 OHM Cable 0.256 cm Outer Jacket Diameter

Electrostatic potential distortion around a cable carrying no current.

Electrostatic potential distortions have extremely large spatial distributions compared to cable diameters.

The electrostatic potential ranges from -3 volts (lightest areas) to -2 volts (darkest areas).

Image of actual electrostatic potential distortion around LM324 Operational Amplifier (LM324 DIP), 10 mm x 20 mm top surface is normal to reference electric field.

Electrostatic potential distortions have extremely large spatial distributions compared to amplifier dimensions.

The electrostatic potential ranges from -3 volts (darkest areas) to -4 volts (lightest areas).

Electric Potential and Electric Field Imaging with Applications

2D EFI
Individual element sensor responses due to changes in strobe circuit electrical potentials

- Strobe electrical components are activated (charged)
- Strobe starts discharging (flashes)
- Strobe components charging
- Strobe components discharged
- Measured voltage, $V$

Time (seconds)
Electric potential of stobe light circuit charging and discharging 6 times at 10Hz
Strobe lamp flash

$\Delta \tau = 0.060 \text{ sec}$
Anticipated Benefits

• NASA Programs and Commercial space industry
  • Electrostatic discharge (ESD) control requirements
  • Damaged materials characterization requirements
  • Component operations and integrity
  • Tether quality control
  • Lightening Prediction
  • Vehicle and component charging requirements
  • Design and construction of unique electronic sensors
  • Systems and human health monitoring in space.
  • Atmospheric Imaging

• The Nation
  • Medical – non-contact EKG and EMG (electromyography)
  • Intrusion detection
  • US perimeter security
  • Transportation security- personnel and baggage inspection
  • Personnel identification and access
  • Electronic signature requirements
Q & A

- Electric Field Imaging (2016) US 9279719 B2
- Quasi-Static Electric Field Generator (2016) US20160049885A1
- Solid State Ephemeral Electric Potential and Electric Filed Sensor, Serial Number: 15/177,798 (2016)
