Earthdata Search Client

Usability review process, results, and implemented changes, using Earthdata Search Client as a case study

Goals
- What are the key difficulties users encounter when using Earthdata Search Client?
- How important is discoverability and relevance, given user search patterns?
- Are the map and timeline useful and intuitive tools, given user search patterns?
- Is the “download all” paradigm sufficient as opposed to positive selection?

Design Solutions

Analyze Results

Qualitative Approach
There is great value sitting in a room with someone watching them use an application. Hearing deep breaths, watching facial expressions, and many other non-verbal communication points provides a deeper level of insight than solely relying on metric gathering. We have found that the opportunity to observe these feedback points as well as the opportunity to discuss underlying issues or desires with participants allows us to better understand how to move the application forward to meet user needs.

Lessons Learned
- Conduct studies in user’s own space
- Ensure a wide variety of testers
- Reserve time for unstructured use
- Users prefer familiarity
- New features can generate excitement

Results

Natural Language Processing
Gone are the days of having to know exact search syntax. Earthdata Search supports natural language searches!

Expanded Map Interface
Removing unnecessary header elements and styles made more room for the things that improve your search experience.

Consolidated Search Summary
Search keywords, temporal constraints, and spatial filters are now summarized in the same location.

Clear, Colorized Call-To-Action
Confusing iconography and ambiguous buttons have been updated to ensure user confidence.

New Color Palette
Color palette has been updated to provide more contrast, subconscious association, and an easier reading experience.

More (Meaningful) Detail
Inline collection details were added to collection lists to help users more quickly understand differences in datasets.

As Earthdata Search functionalities are improved and added to, we are moving toward the future retirement of Reverb. Does Reverb have a feature you can’t live without? Let us know!
