Flight Awareness Collaboration Tool Development

Richard Mogford, Ph.D.
NASA Ames Research Center
Moffett Field, CA
NASA AOC Research Areas

• AOC automation
  – Applied advanced “cognitive computing” systems to airline operations
  – Objective was to improve access to documents (e.g., FAA Regulations, airline procedures, etc.) and Internet resources

• Winter weather operations
  – Developing automation tool to improve airport operations during winter storms
  – Objective is to reduce cancelations and delays due to winter weather

• Creating AOC laboratory to support research
  – At NASA Ames in the Human Systems Integration Division
Airline Operations Research Group (AORG)
Winter Weather

• Developing the “Flight Awareness Collaboration Tool” (FACT)
• Concentrates information about winter weather events on one display
• Includes predictive tools
• Supports collaboration between AOC, air traffic control, airport authority, and de-icing operators
• User interface designed completed and web-based prototype under development
• User group at Detroit airport
• Space Act Agreement with Virgin America to support FACT evaluation
  – Virgin America backup AOC located at NASA Ames
FACT Information

- Weather status and forecasts
- Reporting of runway closures for snow/ice treatment
- Runway braking action
- Visual display of surface traffic movement at airport
- Hourly arrival and departure rates
- Airport runway configuration
- De-icing areas
- Notices to Airmen
- Field conditions
- FAA Operational Information System
- Aviation Digital Data Service icing information
- Runway visual range
- Tracking of arrival flights in en route airspace
# FACT User Interface Design

Surface Map View
Information View

Gathers and “tailors” data from external web sites
Information View
Communication View

A snapshot of a communication view interface showing messages from LGA and JFK airports. LGA indicates too many aircraft in de-icing area, while JFK reports a UAL 3740 stall in the de-icing area with a 20 min delay expectation. Comments include suggestions on handling the situation and updates on the procedure.
Communication View

Hello there.
Richard Mogford 8:56:14 AM

It seems like we're getting a lot of warnings about ice and heavy freezing rain.
Richard Mogford 8:56:14 AM

The group is tracking and shows an hour or more...
Richard Mogford 8:56:14 AM

Thanks for the update, have a good one.
Before I forget, there's another front coming in, so stay tuned for additional info.
Richard Mogford 8:56:14 AM

Type your message here & press Enter or the send icon to submit...
FACT Implementation

• FACT is a web-based application
• Receives JAVA messages from the FAA System Wide Information Management (SWIM) data repository
• Surface movement data are from ASDE-X
• Data are acquired from web pages and tailored for the Information View
• Predictive tools will be built into FACT
• First one competed is Metron’s Winter Weather Airport Capacity Model (WWACM)
  – Predicts changes in airport departure rates from weather reports
WWACM for BOS for February 16, 2013
The 77 airports included in WWACM
WWACM in FACT

FACT Progress

• Web-based prototype will be completed by the end of 2016
• Example of an approach for display integration
• Plan to demonstrate to airlines and airports to seek feedback
• FACT platform will be used to host additional automation tools (e.g., diversion management, planning snow removal)
• Creating AOC simulator at NASA Ames to evaluate FACT
• Will evaluate FACT in operational settings
NASA/Industry Collaboration

• Airline Operations Workshop in August 2016
  – Around 200 attendees
  – Focused on NASA, FAA, and private sector innovations to support the airlines (AOC and flight deck)
  – Identified gaps where research is needed

• Research themes
  – AOC simulation
  – Study dispatcher workload, situation awareness, errors
  – Display/system integration
  – Managing/accessing large information databases from multiple sources
  – Display/system integration
  – Preferred routes
