Sonia Balcer, Aerojet Rocketdyne
ISS Li-Ion Battery - Outline

• Configuration of Existing ISS Electric Power System
• Final Flight Adapter Plate and Battery Design
• Launch and Installation
• Battery Charge Control and LEO Cycle Test Data
• On-Orbit cycling data
• Cell and ORU Life Test
ISS Configuration - Battery Locations

Batteries are located in the 4 Integrated Equipment Assemblies (IEAs)

2 Power Channels per IEA
8 Power Channels total

6 Ni-H$_2$ ORUs per channel – 48 total
1 Li-Ion and 1 Adapter Plate to replace
2 Ni-H$_2$ – 24 total Li-Ion batteries
ISS Configuration - EPS Schematic

Electrical Power Channel – 1 of 8

Note: 2-Battery ORUs will be replaced by 1 Li-Ion Battery and an Adapter Plate

EPS:: Electric Power System
BCDU: Battery Charge / Discharge Unit
DCSU: DC Switching Unit
DDCU: DC-to-DC Converter Unit
MBSU: Main Bus Switching Units
ISS Upgrade to Li-Ion

**Ni-H₂**
(76 cells in series)

- **BCDU**: Battery Charge / Discharge Unit
- **Ni-H₂ Cells**: Nickel Hydride Cells
- **Battery**: Battery A and Battery B
- **BSCCM**: Battery Signal Conditioning and Control Module

**Li-Ion**
(30 cells in series)

- **BCDU**: Battery Charge / Discharge Unit
- **Li-Ion Cells**: Lithium Ion Cells
- **Battery**: Battery
- **Adapter Plate**: Adapter Plate
- **BIU**: Battery Interface Unit

BSCCM: Battery Signal Conditioning and Control Module
ISS Li-Ion Orbital Replacement Units
(Direct drop in replacement for Ni-H₂)

**Adapter Plate ORU**
- Dimensions (LxWxH): ~ 41” x 36” x 15”
- Spec Weight: 85 Lbs

**Li-Ion Battery ORU**
- Dimensions (LxWxH): ~ 41” x 37” x 21”
- Spec Weight: 435 Lbs
ISS Li-Ion Flight Battery Status

• 6 Flight Li-Ion Adapter Plates integrated with Exposed Pallet in Japan, Tomioka: April 2016
• 6 Flight Li-Ion Batteries integrated with Exposed Pallet in Japan, Tanegashima: May 2016
• Final charge to 4.1V: May-June 2016
• Launch on HTV6: December 9, 2016
  • Each IEA will have 3 Li-Ion ORUs and 3 Adapter Plate ORUs
• Installation and start-up on ISS:
  S4 3A channel – Jan. 6, 2017
  S4 1A channel, Jan. 13, 2017
Docking of HTV6 to ISS

• Launch Date December 9, 2016
• EP (Exposed Pallet) Captured and Attached to POA 12/13/2016
• Installation and startup (next slides)
Removal of Exposed Pallet with Li-Ion ORUs

- 12/13/2016  After docking, robotic removal of EP with Li-Ion ORUs
Moving the Li-Ion ORUs

- 12/13/2016  After ISS docking, EP taken out of HTV6
- EP moved to ISS truss for Battery installation
Robotic Installation of Li-Ion Battery ORU

- **S4 3A Batteries**
  - Robotically installed 12/31–1/2/2017
  - EVA and start up 1/6/2017

- **S4 1A Batteries**
  - Robotically installed 1/8–1/12/2017
  - EVA and start up 1/13/2017
EVA Adapter Plate Installation

- S4 3A EVA and start up 1/6/2017
- S4 1A EVA and start up 1/13/2017
Robotic Disposal of Exposed Pallet
with 9 Ni-H$_2$ ORUs

1/22/2017 Robotic arm
moving EP with 9 Ni-H$_2$
ORUs towards HTV6
Robotic Disposal of Exposed Pallet with 9 Ni-H$_2$ ORUs

- 1/22/2017  Robotic arm inserting EP with 9 Ni-H$_2$ ORUs back into HTV6
- 1/27/2017  Undocking
- 2/5/2017  Reentry
Li-Ion Battery Status

• Starting January 13, 2017, S4 Channels 3A and 1A are being operated using only Li-Ion Batteries
  • Batteries are performing well – capacity tests at EOCV of 3.95 V
    • 3A: 109.3, 110.3, 110.9 Ah (see page 18)
    • 1A: 114.0, 110.3, 112.3 Ah
  • Minor operational observations / forward work
    • Battery Charge Discharge Unit advisory message – upper Voltage Limit of 122 V exceeded (Limit to be updated to 124 V)
    • Occasional switchovers of redundant heaters (A to B, B to A) (Persistence time to be updated)
    • State of Charge calculation to be updated to increase accuracy
    • Adjustments to Charge Profile to be evaluated

• 17 of 27 Li-Ion batteries have been built and delivered
  • 6 on orbit, 11 in cold storage at KSC
• 16 of 25 Adapter Plates have been built and delivered
  • 6 on orbit, 10 in storage at KSC

• Future Launches
  • Next Lithium-Ion Battery launch on HTV7, NET Feb. 2018
  • Subsequent launches on HTV8- 2019, HTV9- 2020
ISS Li-Ion Charge Control and Cycling

- Li-Ion charge current profile is based on cell voltages
- Cell bypass/balancing at EOCV every orbit
- EOCV ground command-able

Life Test Program

- Cell Life Testing performed at Crane Lab and NASA-GRC
Life Test Program

Li-Ion Battery ORU Life Testing at Aerojet Rocketdyne Voltage Retention Test Data

Week 16 Test error resulted in ~ 1.15 A-Hr discharge

Week 22 Chamber Condenser failure resulted in temperature change

Chamber Temperature at 78 °F (first 21 weeks)

70 to 73 °F (week 23 on)

Elapsed Weeks

Ongoing Series, Life Test Apr. 2017
ISS Li-Ion Battery Future Plans

- Data analysis for NESC (NASA Engineering & Safety Center) Thermal runaway propagation test performed October 2016 at the White Sands Test Facility
- Launch of remaining Li-Ion Batteries and Adapter Plates in 2018, 2019, 2020 to provide a full complement on ISS

➢ First six batteries (2 power channels) operating successfully on orbit
