Mission Status for Earth Science Constellation
MOWG Meeting @ GSFC

June 13, 2017

Dominic Fisher
Aura Mission Director - Code 584
phone 301-286-3171
dominic.m.fisher@nasa.gov
Topics

• Mission Summary
• Spacecraft Subsystems Summary
• Recent Activities
• Planned Activities
  – CRMS Process Improvement
  – Spring 2018 IAM Draft Schedule
• Propellant Usage & Lifetime Estimates
  – FDS Decommissioning Analysis
  – End of Mission Plan (EOMP)
• Overall Summary
• Additional Slides:
  – Spacecraft Maneuvers & Ground Track History
  – CA, Data Capture, & Ops Error Statistics
EOS Aura Mission Summary
(Updates since Sept 2016 MOWG in Albuquerque, NM)

- 07/15/04: Launch
  - 6-Year Design Life
- 09/30/10: End of Prime Mission Review
  - #4 Ranked Earth Science Mission
  - Mission extension through FY17
- 07/15/16: Aura 12-Year Anniversary
- 01/25/2017: ESMO Annual Review #10
- 03/03/2017: Senior Review Proposal #5
  - Reliability Estimates thru 2022
  - Consumables through 2022
Aura Spacecraft Subsystems
(Updates since Sept 2016 MOWG in Albuquerque, NM)

- Command & Data Handling (CDH) – Nominal
  - Formatter Multiplexer Unit (FMU) / Solid State Recorder (SSR) Anomaly
    » Initial symptoms occurred December 4-18, 2007
    » Newest symptoms started in January 2017 and remain active (impacting S-Band HK data capture)

- Communications (COMM) – Nominal

- Electrical Power System (EPS) – Nominal
  - Solar Panel Connector Anomaly – ARE-3C (01/12/2005)
  - Solar Array Offset (Reported 11/17/09, Corrected 06/29/10 and each year since)
  - Array Regulator Electronics (ARE) 5A Anomaly (03/12/2010 & 04/25/2013)
    » 03/12/2010: Simultaneous with GN&C Attitude Disturbance – attributed to MMOD Strike
  - Other older ARE Anomalies:
    ARE-5C (9/27/12 & 2/4/13), ARE-1A (3/12/10 & 11/5/11), ARE-6A (9/14/13), & ARE-4A (12/08/14)
    » Estimated that Aura has lost 24 strings of solar cells out of a total of 132 strings
    » Aura continues to have significant power margin where the life limiting item is fuel

- Flight Software (FSW) – Nominal

- Guidance, Navigation & Control (GN&C) – Nominal
  - Reaction Wheel Assembly (RWA) #3 Anomaly (12/03/2016) – Recovered on 12/13/16

- Propulsion (PROP) – Nominal

- Thermal Control System (TCS) – Nominal

All subsystems configured to primary hardware

6/13/2017
Recent Activities
(October 2016 – May 2017)

• 10 CARA High Interest Orbital Debris Events (Tiers 1-4) (As of 4/26/17)
  – 5 required significant action (T3 / T4)
  – Last significant action: DMU #102 rescheduled due to post-maneuver concern
• 2 Spacecraft Bus Anomalies
  – RWA #3 Spin-down (12/3/16) – recovered 12/13/16
  – FMU/SSR Anomaly – new symptoms since January 2017 – on-going
• 6 Instrument Anomalies
  – MLS: R2 Phased Locked Loop (PLL) loss of lock – adjusted 3/08/17
  – OMI: 1 Instrument Survival Event (3/12/17) – recovered 3/16/17
  – TES: 5 ICS Stall Events (2016: 10/24; 2017: 2/5, 2/18, 2/26, 3/12) – on-going
• 7 Spacecraft Maneuvers
  – 6 Drag Make-up Maneuvers (DMUMs # 97 – 102)
    » (3) Routine: 11/15/16, 12/15/16, 1/20/17,
    » (3) Impacted by CA: 10/13/16 (altered DMU), 3/26/17 (DAM), 5/3/17 (resched)
  – 4 Inclination Adjust Maneuvers (IAMs # 49 – 52)
    » 3/2/17, 3/9/17, 3/23/17, 3/30/17
• 1 Instrument Calibration Maneuvers
  – MLS Yaw & Moon Scan #12 (3/14/17) (GSFC Code Red – FOT support remotely)
Planned Activities

• June 2017: Drag Make Up Maneuver (DMUM) #103
• July 2017: Update Lifetime & Decommissioning Analysis
• September 2017: OMI Science Team Meeting
• December 2017: Earth Science Constellation (ESC) MOWG (12/5-7 / Location TBD)
  – Update propellant budget, decommissioning analysis, reliability predictions,…
• January 2018: ESMO Annual Review #11
• Spring 2018: Annual Inclination Adjust Maneuvers (DRAFT SCHEDULE)
• April 2018: Draft Aura Decommissioning Review
  – Document Phase F spacecraft activities, any new products to be developed for SC / Inst Calibration, proposed Engineering Tests, and Passivation Sequence

• Mid-to-Long-Term Plans
  – Continue to improve RMM / DAM execution
    » See additional details on CA automation (CRMS) in the following slide
  – Aqua/Aura Maneuver Working Group
    » Develop retrograde maneuver capability and explore any fuel saving options
  – EOS Automation (EA) – automation of routine operations
    » Phase II (Monitoring / Alerting) ORR – July 2017; Phase III - TBD
Collision Risk Management System (CRMS) Process Improvements

- In response to the constantly increasing number of predicted close approaches with orbital debris and operational satellites (High Interest Events – HIEs) and anticipated updates to the US Air Force Space Fence which will significantly increase size of the Space Catalog (20K ➔ 150-200K)

- ESMO has been developing new ground system capabilities to autonomously identify and develop maneuver options to assist in Debris Avoidance Maneuver (DAM) planning

- CRMS capabilities to include:
  - Goal is to develop an automated debris avoidance maneuver planning process
  - User defined collision risk thresholds
  - Maneuver optimization to address multiple conjunctions with secondary object conjunctions

- EOC is currently operating with CRMS Release 5.0 (ORR 2/9/17)
### Inclination Adjust Plan

*6/13/2017 ESC MOWG - June 2017*
Aura Propellant Usage
(Updated report January 2017)

- **2006:** Initial Aura lifetime fuel analysis
- **2008:** Detailed Aqua & Aura lifetime analysis
  - Presented to MOWG and at Aura End of Prime Mission Review in September 2010
- **2012 (September): Initial Aura Decommissioning Plan**
  - Updated Lifetime Estimates
- **2013 (August): Updated Decommissioning Plan**
  - Updated propellant trends for IAMs & DMUMs
  - Updated definitive fuel usage and predicted solar flux levels
  - Updated Constellation Exit Plan
    - Safely exiting the Afternoon Constellation requires that Aura’s final apogee be at least two kilometers below the minimum perigee of the other constellation members (692 km target)
    - Perform orbit lowering maneuvers centered at apogee and perigee (pairs of maneuvers)
- **2014 (September): Updated Decommissioning Plan**
  - Updated propellant trends for IAMs & DMUMs
  - Updated definitive fuel usage and predicted solar flux levels
- **2015 (September): Decommission Plan Update Postponed**
  - Postponed to allow additional time to evaluate long-term plan and decommissioning maneuvers
- **2016 (December): Updated Decommission Plan (v1.1)**
  - Updated definitive fuel usage & predicted solar flux levels
  - Updated propellant estimates for IAMs & DMUs
  - Jan. 2017 update v1.2 delivered (included MLT Drift Impact with L8)
- **Annual updates will be provided each July (starting in 2017)**
  - Final will be produced 60 days before start of decommissioning
Remaining Fuel Estimate
(Updated December 2016)

• Long-term orbit simulations were run for Aura through Feb 2023
  – Used mean nominal Schatten solar flux predictions (Nov 2016)
  – Estimated the frequency of drag make-up maneuvers to maintain Aura’s WRS-2 ground track requirements
  – Estimated the required number of annual inclination maneuvers for Aura to maintain its mean local time (MLT) requirement (25 IAMs through 2023)
  – Did not include potential debris avoidance maneuvers
  – Utilized FreeFlyer 6.7.2 which incorporated the solid earth tide model allowing greater accuracy for long term predictions of inclination, beta angle, and mean local time

• Lifetime predictions for Aura shows that the spacecraft will have sufficient fuel to maintain its current orbit within the Afternoon Constellation through 2022 (before 2023 IAM series).

• Aura will hold sufficient fuel in reserve after exiting the constellation to lower perigee such that reentry will meet the NASA 25-year reentry requirement.

• Analyses are updated annually by ESMO Flight Dynamics Team
  – Currently investigating various retrograde maneuver options and inclination/mean local time options to extend the potential lifetime
Fuel reserved to safely exit constellation, lower perigee and meet Agency 25-year reentry requirement is approximately 21 kg to exit 4km outside the constellation or 18kg to exit executing an active pitch maneuver, both of which include a 10kg fuel buffer.
The Debris Assessment Software (DAS) was created by the Orbital Debris Office at Johnson Space Center and is the Agency standard for end of mission life analyses and lifetime estimations (Version 2.0.2)

DAS requires several inputs describing the spacecraft’s mission:
- Start apogee – Average Height (~691 km, at constellation exit)
- Spacecraft dry mass (2796.546 kg) – includes 1.2 kg of unusable fuel and 4.8 kg of uncertainty
- Tumbling Area (46.1 m²) (FDSS-II-07-0085_Aura Average Area _V1.0 (3/1/17))
- Area-to-Mass Ratio = Tumbling Area/Dry mass (0.016485 m²/kg)
- Start inclination (98.2°)
- Launch date (07/15/2004)

In turn, DAS outputs:
- If the mission is compliant with NASA requirements for limiting orbital debris
- A recommended apogee and perigee that will allow the spacecraft to reenter within a specific period and satisfy the NASA requirements

Aura has a waiver to the 30-years from launch requirement
Aura will hold sufficient fuel in reserve to meet the 25-year requirement
For a 4 km Constellation Exit using reaction wheels for reorientation, Aura will not have enough fuel to perform IAMs beyond 2022.
Aura End of Mission Plan (EOMP)  
(Updated March 2017)

• Initial draft February 2009
• Produced the first “Interim” End of Mission Plan (EoMP) in May 2011
  – Approved by NASA HQ July 2011
• Produced EoMP Rev A: February 2013
  – Updated Lifetime Estimates (09/2012)
  – Added Small Object Collision Assessment
• Produced EoMP Rev B: February 2015
  – Updated Lifetime Estimate (09/2014)
• Produced EoMP Rev C: March 2017 (in Review Cycle)
  – Updated Lifetime (12/2016) & Reliability estimates
• Final will be produced 60 days before End of Mission
• Synopsis
  – Safely exit the A-Train Constellation
  – Passivate Aura to the extent possible for uncontrolled reentry
  – Aura has five (5) approved waivers for passivation
    » Pressurant Passivation
    » Large Object Collision Probability
    » Small Object Collision Probability
    » Orbital Lifetime (30-Year)
    » Re-entry Risk (Un-controlled)
  – Waivers were approved in May 2013

6/13/2017  ESC MOWG - June 2017
Summary

- **Spacecraft Status** – **GREEN**
  - CDH: FMU/SSR Anomaly - No HK data recording to Partition 31 since 03/21/17
  - GNC: RWA #3 Spin-down 12/03/16 – Successful Recovery 12/13/16
- **Instrument Status** - **GREEN**
  - HIRDLS: Chopper Stalled 03/17/08 – Not collecting science data
  - MLS: Operating Normally – Only periodic Band 13 measurements
    » 08/06/13: Band 12 Shut down (reached end of useful life – 2-year design)
    » THz module in Standby Mode – Expect final set of measurements to be in Aug. 2017
    » 02/25/2017: R2 Lock Status Yellow Alarms (due to aging, voltage fine-tuned 03/08/17)
  - OMI: Operating Normally
    » Field-of-View Anomaly started in September 2007 – currently stable
    » 03/12/17: OMI Survival Mode Transition (Recovered 03/16/17)
  - TES: Operating Normally
    » 01/22/17: Laser A testing resulted in laser fringes; Science mode transition 01/24/17
    » TES ICS Stalls (#11 - 15) - 10/24/17, 02/05/17, 02/18/17, 02/26/17, and 03/12/17
- **Data Capture/L0 Processing Status** – **GREEN**
  - SSR Data Capture to 04/30/2017: 99.99573138%
- **Ground Systems** – **GREEN**
  - EOS Automation (EA) – R2.7 Testing w/ Online Build 20.01 – ORR ~July 2017
  - 04/11/2017: MMS Build 24.2.0 (RHEL7) Transition for Aura
Additional Charts

Maneuvers & Ground Track History
Orbital Trends

Aura Conjunction Assessment
High Interest Events (HIEs)

Data Capture & Operations Errors
Orbit Maintenance

- **Mission Requirements:** Perform Drag Make-Up Maneuvers (DMUMs) to maintain Aura’s Ground Track Error (GTE) with respect to the World Reference System (WRS-2)
  - Requirement: +/-20 Km as measured at the Descending Node
- To meet coincident viewing requirements, Aura’s initial ground track was offset from Aqua’s by one WRS path plus 25.4 Km
  - Aura was maintained -5.4 to -45.4 Km west of Aqua until late 2007
  - Since May 8, 2008, a new control box, +/- 10 Km from a +18 Km (east) offset of the Aqua WRS-2 path is used to maintain MLS-CALIPSO viewing request
- To date a total of **102** routine DMUMs have been performed
  - 07/19/2012: DMUM # 43 No Yaw Slew Maneuver (NYS) #1 – NYS Maneuvers (37)
  - Last maneuver 05/03/2017 (#102) – Next maneuver ~06/21/2017 (#103)
  - Variation in performance from -3.5% (cold) to +3.3% (hot)
- **Conducted 12** series of inclination adjustment maneuvers
  - Fall ‘04 (4), Fall ‘06 (4 of 6), Spring ‘07 (4), Spring ‘09 (9), Spring ‘10 (3), Spring ‘11 (3), Spring ‘12 (4), Spring ‘13 (4), Spring ‘14 (4), Spring ‘15 (5), Spring ‘16 (4), & Spring ‘17 (4)
  - Variation in performance from -4.5% (cold) to +1.9% (hot)

ESC MOWG - June 2017
Aura and Landsat-8 (LS-8)

Orbit Phasing

With Aura in the intersection point, LS-8 will be ~ 77 seconds away from the intersection point. In the worse case, Terra is ~ 30 min behind LS-7.

Typically, 265 – 365 seconds.

1 Orbit = ~ 100 minutes

By Design – LS-8 and LS-7 are ½ orbit apart.
