Contributing Technologies to ATD-2

**Spot and Runway Departure Advisor (SARDA)**

**Traffic Flow Management System (TFMS)**
Decision support system for planning and mitigating demand-capacity imbalances in the NAS.

**Time-Based Flow Management (TBFM)**
Decision support system for metering based on time to optimize the flow of aircraft.

**Terminal Flight Data Management (TFDM)**
A new decision support system for airport surface management and ATC tower functions.

**Precision Departure Release Capability (PDRC)**
ATD-2 Partners

### IADS Data Exchange and Integration

#### Key Areas
- **Airline Operations**
- **ARTCC**
- **Airport Operations**
- **TRACON**
- **ATCT**

#### Data Exchange & Integration

#### Data Quality Updates
- Runway Utilization
- Flow Direction
- Runway Assignments
- MIT restrictions
- Grounds Stops
- Runway Closures
- Dep Fix Closures
- Flight Cancellations
- Gate Conflicts
- Ramp Closures
- Long on Board
- Data quality updates

Development of Real Time Dashboard

Initially developed as a researcher tool

Prototype development based on S-CDM and TFDM requirements

Field user sessions: agile development process led to user input and refinement of requirements

Held a series of nine user sessions with operational personnel from the Tower, Ramp, Center, and airport operations

ATD-2 System Processing

Real Time Dashboard
General Functionality

- Situational Awareness
- Monitoring Metrics
- Benefits Metrics
- Data Fidelity
General Functionality

- Configuration and Flow Information
- Ramp Status
- Metering Mode

Situational Awareness

Monitoring Metrics

Benefits Metrics

Data Fidelity
General Functionality

Situational Awareness

Monitoring Metrics

Benefits Metrics

Data Fidelity

Throughput

- Predicted and actual runway capacity rates
- Delay values
- Arrival and Departure Taxi Time
- Excess Queue Time
General Functionality

Situational Awareness

Monitoring Metrics

Data Fidelity

Benefits Metrics

CO₂ Savings

Monetary Benefits
General Functionality

- Situational Awareness
- Monitoring Metrics
- Benefits Metrics
- Data Fidelity

Fidelity of incoming data feeds
System wide data deterioration
Overview

- ATD-2 Background

Current dashboard features both vertical and horizontal display capability

Consistent configuration information and other icons across the system

Feedback button with a link to an online form

Pull down menu with quick look display and in depth metrics
Specific metrics will show across the last 15 minutes, the last rolling hour, and the last cardinal hour.
Overview

- ATD-2 Background

- Motivation for real time monitoring tool and analysis and method of developing requirements

- Description of data sources

- User interface and initial metrics

- Next steps
Next Steps

• Complete requirements for the real time dashboard leading up to Phase I go live date during which a version will be available to center, tower, and ramp controllers

• Constant iteration with operational users on the metric definitions, graphical views, and numerical information conveyed

• Refine requirements for additional features and develop new metrics based on input from operational users focused on predicative information that provides information to mitigate demand capacity imbalances
Backup material
Phase 1: Baseline IADS Demonstration

Phase 1 Demonstration Goals
- Evaluate the Baseline IADS capability
- Enhance American Airlines CLT “departure sequencing” procedure with ATD-2 surface tactical metering
- Demonstrate improved compliance for a significant percentage of tactical TMIs
- Mature strategic Surface CDM capability via operational use, analysis, and feedback
- Reduce ATCT workload by replacing paper strips with EFD

ATCT Control
- Baseline electronic flight data capability via TFDM EFD

Ramp Control
- Tactical pushback advisories via RTC/RMTC display

Surface CDM
- Predictive mode: strategic metering info for situational awareness and analysis

Airspace Components
- Tactical departure scheduling capability via STBO display
- Tactical departure scheduling via modified TBFM/IDAC

Surface Components
- Interfaces to external systems via SWIM plus ATD-2 SWIM extensions

Airline Ops
- ★ = IADS user interface
Surface Metering Process Flow Diagram

1. Generate Demand and Capacity Predictions
   - ATC TMC Runway Utilization Intent
   - TRACON controller runway intent
   - Highly accurate TBFM de-conflicted ON time estimates
   - TFM SWIM ETAs
   - TMIs, Controlled Take Off Times (CTOT)
   - Carrier provided EOBTs
   - Tactical airline intent (ramp controller)
   - IADS Automation Assisted Capacity Predictions
     - Surface modeling logic
     - Earliest IN time estimate
     - Earliest OFF time estimate
     - Latest OUT estimate
     - Pushback duration model
     - Ramp and AMA taxi time
     - Hovering logic
     - Scheduling Logic:
       - Converging runways
       - Flight spacing requirements
       - Dual use runways
       - Runway crossing delays
       - Departure fix separation
       - Use of flight state

2. Monitor Surface Demand Capacity Imbalances
   - Runway Delay
     - Time

3. If Surface Metering, Go to Step
   - Advisory TMAT

4. Honor TOBT and TMAT advisories
   - TOBT Advisory 6 min
   - TMAT Advisory

5. Evaluate Metering Effectiveness
   - AAL705 A321 E BOBZSFO C6 9 18C P1056
   - AAL705 A321 E BOBZSFO T1941 9 18C
IADS Tactical Departure Scheduling

APREQ/CFR departures merging into overhead streams

Flights subject to EDCTs due to downstream flow constraints

IDAC-style scheduling between IADS at CLT and TBFM at ZDC

Washington ARTCC (ZDC)
Concept Overview – Users
