Boots on Mars: Earth Independent Human Exploration of Mars

Josephine Burnett/NASA Kennedy Space Center
Kim Ellis/Earth Space Technology Pty Ltd
Tracy Gill/NASA Kennedy Space Center
NASA’S JOURNEY TO MARS

SPACE PIONEERING: Achieving Earth Independence
Outline

• Vision (Josie)
• NASA plans (Josie)
• International Space Exploration Coordination Group (Tracy)
• Capabilities and Enablers
  • Spaceport Evolution (Tracy)
  • Legal Framework (Kim)
  • Commercial Partnerships (Kim)
• Barriers and Challenges (Tracy)
• Team Activity Kickoff (Kim)
Learning Outcomes

Technical

• Challenge and risk analysis related to operations on Mars
• Government Deep space architecture elements
• Technical challenges and risks for ‘Boots on Mars’
• NASA operational plans to support Mars Missions
• Technical aspects of in-situ resource utilization related to operations on Mars

Gap Analysis

• Interdisciplinary team skills to quickly define a vision
• Identify gap between vision and current Technology Readiness Level (TRL)
• Identify One Key Development as critical to enabling vision
The Year is 2030

NASA’s long term effort of ‘pioneering space’ for current and future generations is now approaching the ‘Earth Independent Phase’ of Operations.

Following the technical briefing your team will;

1. Develop a vision for future “Pioneering on Mars”
2. Identify the single greatest challenge to achieving that vision
3. Draft a Request for Proposals (RFP) response which supplies a solution to the greatest challenge that your team identifies
4. Present the vision, challenge and solution to the RFP evaluation team.
What does your Vision of “Boots on Mars” look like?

**Purpose**
- Commercial
- Government
- Vacation
- Industry
- Species Survival
- Other?

**Scale**
- Outpost
- Community
- City
- Nation(s)
NASA plans
Exploring Space In Partnership

2020s
Operating in the Lunar Vicinity (proving ground)

2030s
Leaving the Earth-Moon System and Reaching Mars Orbit

Now
Using the International Space Station

Phase 0
Solve exploration mission challenges through research and systems testing on the ISS. Understand if and when lunar resources are available

Phase 1
Conduct missions in cislunar space; assemble Deep Space Gateway and Deep Space Transport

Phase 2
Complete Deep Space Transport and conduct Mars simulation mission

Phases 3 and 4
Missions to the Mars system, the surface of Mars

Advancing technologies, discovery and creating economic opportunities
Human Space Exploration Phases From ISS to the Surface of Mars as of November 2016

Today

Phase 0: Exploration Systems **Testing on ISS**

Phase 1: **Cislunar Flight Testing** of Exploration Systems

- Ends with testing, research and demos complete*
- Asteroid Redirect-Crewed Mission Marks Move from Phase 1 to Phase 2
- Ends with one year crewed Mars-class shakedown cruise

Phase 2: **Cislunar Validation** of Exploration Capability

- Planning for the details and specific objectives will be needed in ~2020

Phase 3: Crewed Missions Beyond Earth-Moon System

Phase 4a: Development and robotic preparatory missions

Phase 4b: Mars Human Landing Missions

Mid-2020s 2030

* There are several other considerations for ISS end-of-life
Deep Space Gateway Functionality

- **Assumptions**
  - Deep Space Gateway provides ability to support multiple NASA, U.S. commercial, and international partner objectives in Phase 1 and beyond
  - The Gateway is designed for deep space environments
    - Supports (with Orion docked) crew of 4 for total mission up to 42 days
    - Supports buildup of the Deep Space Transport
    - Open trade for compatibility for operations in Low Lunar Orbit

- **Emphasis on defining early Phase 1 elements**
  - Gateway Power Propulsion Bus
  - Gateway Habitat
  - Logistics Strategy

- **Future work to refine later elements; early feasibility trades complete**
  - Airlock
  - Deep Space Transport
Deep Space Transport Functionality

• Assumptions
  • Deep Space Transport provides habitation and transportation needs for transporting crew into deep space including supporting human Mars-class missions
  • The Transport system life will be designed for:
    • Reused for 3 Mars-class missions with resupply and minimal maintenance
    • Crew of 4 for 1,000 day-class missions in deep space
    • Launched on one SLS 1B cargo vehicle - resupply and minimal outfitting to be performed in cislunar space

• Emphasis on supporting shakedown cruise by 2029
  • Shakedown cruise to be performed in lunar vicinity
  • Utilizes deep space interfaces and common design standards

• Future work trades
  • Shakedown cruise objectives
  • Mars reference mission functional requirements
How are we leading future human exploration?

- Maximizing utilization of the International Space Station
- Actively promoting LEO commercialization
- Resolving the human health and performance challenges
- Expanding partnerships with commercial industry
- Growing international partnerships
- Building the critical *Deep Space Infrastructure*
- Enabling the capabilities to explore multiple destinations
International Space Exploration Coordination Group
International Space Exploration Coordination Group (ISECG)
International Space Exploration Coordination Group

Need: Coordinate multiple Space Agencies to achieve a shared vision of coordinated human and robotic space exploration focused on Solar System destinations where humans may one day live and work.

Benefits:

- Scientific Knowledge
- Sustained Human Presence
- Expand Economic Influence
- Global Partnership
- Inspiration & Education

Goals:

- Search for Life
- Extend Human Presence
- Develop Exploration Technologies and Capabilities
- Perform Science to Support Human Exploration
- Stimulate Economic Expansion
- Perform Space, Earth, and Applied Science
- Engage the Public in Exploration
- Enhance Earth Safety
Objective: Destination specific Objectives were developed by ISECG, reference ISECG website

Mission: Develop the Global Exploration Roadmap as a Reference Architecture

• GER 1.0 released Sept 2011
• GER 2.0 released August 2013
• GER 3.0 under development
• https://www.globalspaceexploration.org/
GER – Preparation for Boots on Mars

• The Global Exploration Roadmap outlines the following Human Exploration Preparatory Activities to extend our presence into the solar system:
  • Use of the ISS for Exploration
  • Robotic (precursor) Missions
  • Advanced Technology Development
  • Development of New Space Systems and Infrastructure
  • Analogue Activities
  • Managing Health and Human Performance Risks
Capabilities and Enablers
Spaceport Evolution at KSC

Spaceport models like Kennedy Space Center are changing toward airport-like operations which includes government and commercial interests.
Spaceports are getting planned by architects and city planners for these multiple interests. Includes:

- Administrative Areas
- Transportation
- Recreation
- Utilities
- Public Outreach
- Central Campus
- Horizontal and Vertical Launch and Landing Facilities
- Operational Buffers
- Notional Growth Areas Identified
These planning lessons apply not only at KSC but at spaceports all over the world. And they will apply to destination spaceports as well.

Notional image of spaceports around the world from https://integratedspaceanalytics.com/cms/portal/spaceports
Legal Framework

• Fundamental principles – Concept of space as the province of all humankind, the freedom of exploration and use of outer space by all states without discrimination, and the principle of non-appropriation of outer space.

• The primary goals of space law are to ensure a rational, responsible approach to the exploration and use of outer space for the benefit and in the interests of all humankind.

• Space Treaties & Principles
Legal Framework
Utilization of Space Resources

- Recovery and Utilization of Space Resources – Scientific vs Commercial (Profit)
- 1967 OST (widely ratified) & 1979 Moon Agreement (poorly ratified)
- Differing views in OST Interpretation – Article 1 right to utilize resources for private commercial use consistent/not consistent for celestial bodies
- Further detailed information from UNOOSA, Legal Subcommittee 56th Session
  April 2017, Legal Models Utilization of Space resources

Space Resource Regulation

TITLE IV--SPACE RESOURCE EXPLORATION AND UTILIZATION

Space Resource Exploration and Utilization Act of 2015

(Sec. 402) The bill directs the President, acting through appropriate federal agencies, to:

• facilitate the commercial exploration for and commercial recovery of space resources by U.S. citizens;

• discourage government barriers to the development of economically viable, safe, and stable industries for the commercial exploration for and commercial recovery of space resources in manners consistent with U.S. international obligations; and

• promote the right of U.S. citizens to engage in commercial exploration for and commercial recovery of space resources free from harmful interference, in accordance with such obligations and subject to authorization and continuing supervision by the federal government.

A U.S. citizen engaged in commercial recovery of an asteroid resource or a space resource shall be entitled to any asteroid resource or space resource obtained, including to possess, own, transport, use, and sell it according to applicable law, including U.S. international obligations.

(Sec. 403) It is the sense of Congress that the United States does not, by enactment of this Act, assert sovereignty or sovereign or exclusive rights or jurisdiction over, or ownership of, any celestial body.
Commercial Engagement

• NASA Next Space Technologies for Exploration Partnerships (STEP) Habitat Systems – Phase 2
  • 6 commercial companies defining architectures for the Deep Space Gateway
  • Phase 3 Solicitation ~2019 for flight systems

• Commercial Partnerships facilitated through Space Act Agreements
  [https://www.nasa.gov/open/space-act.html](https://www.nasa.gov/open/space-act.html)

• Regulatory Barriers to commercial investment/participation
Identify and present the biggest challenge to getting to the Vision?

These are some of the types of things your team may see as challenges:

- **In-situ Resource Utilization (ISRU)** – living off the land using available resources for fuel, life support, etc.
- **Food Production** - growing plants, fish, etc. and sustaining life using what you bring from Earth
- **Human health** – radiation damage during transit and at Mars and reduced gravity adaptation
- **Cargo upmass and transportation to Mars** – cost and availability for supplies from Earth
- **Policy** – legal and commercial barriers
- **Many, many more...**
Inspiration: Video – Mars Exploration Zones
Team Activity Kickoff

• Restate what is asked of the team for defining the vision and identifying the greatest challenge, the timeframe they have, and the format for the outbrief – see slide after the video
The Year is 2030

NASA’s long term effort of ‘pioneering space’ for current and future generations is now approaching the ‘Earth Independent Phase’ of Operations.

Following the technical briefing your team will;

1. Develop a vision for future “Pioneering on Mars”
2. Identify the single greatest challenge to achieving that vision
3. Draft a Request for Proposals (RFP) response which supplies a solution to the greatest challenge that your team identifies
4. Present the vision, challenge and solution to the RFP evaluation team.
RFP & Statement of Work

RFP
Issued under: Commercial and Financial Advisory Services Panel for Infrastructure and Capital Asset Projects, and Commercial Transactions NASA Pioneering Mars Earth Independent Program

Engagement details:
DTP Authorization Number: RFP 7512017-001-002-003 Mars NASA Pioneering Mars

This request for proposal ( request for proposal ) is issued in accordance with clause 7.1 of the open standing offer agreement ( " OSA " ) between your organization and the department of treasury and finance for the " Commercial and Financial Advisory Services Panel for Infrastructure and Capital Asset Projects, and Commercial Transactions ".

You are required to submit a response to Pioneering Mars, Earth Independent Program (PMEIP) RFP Statement of Work in accordance with this request.

SECTION A. Project Brief – For the Provision of Pioneering Mars, Earth Independent Program (PMEIP) solutions
A.1.1.1. PROJECT OVERVIEW

Project Background
No output currently exists.

Project Objectives
To identify a vision for pioneering mars and to address challenges to establishing Earth Independent Human settlement on Mars within Exploration Zones.

Proposed deliverables of the Engagement:
1. Develop a vision for future "Pioneering on Mars"
2. Identify the single greatest challenge to achieving that vision
3. Draft an RFP response which supplies a solution to the greatest challenge that your team identifies
4. Present the vision, challenges and solution to the RFP evaluation team.

Group Details
(To be submitted by Service Provider with its Plan)

[We offer to supply the Services specified in the RFP and Request for Proposals at the fees and charges offered within the periods offered, and in accordance with the terms and conditions in the open standing Offer agreement executed with the Department of Treasury and Finance for the "Commercial and Financial Advisory Services Panel for Infrastructure and Capital Asset Projects, and Commercial Transactions".]

## Known Parameters:
- Gateway to architecture supports Phase 2 and beyond activities
- International and U.S. commercial development of elements and systems
- Gateway will translate uncrewed between cislunar orbits
- Ability to support science objectives in cislunar space

## Open Opportunities:
- Order of logistics flights and logistics providers
- Use of logistics modules for available volume
- Ability to support lunar surface missions

2027
- SLS Block 1B Cargo P/L Capability: 41t TLI
- SLS Block 1B Crew: 4
- CMP Capability: 10t

2028 / 2029
- SLS Block 1B Cargo P/L Capability: 41t TLI
- SLS Block 2 Crew: 4
- CMP Capability: 13t

2030+
- SLS Block 2 Cargo P/L Capability: 45t TLI
- SLS Block 2 Crew: 4
- CMP Capability: 13t

Reusable Deep Space Transport supports repeated crewed missions to the Mars vicinity

Known Parameters:
- DST launch on one SLS cargo flight
- DST shakedown cruise by 2029
- DST supported by a mix of logistics flights for both shakedown and transit
- Ability to support science objectives in cislunar space

Open Opportunities:
- Order of logistics flights and logistics providers
- Shakedown cruise vehicle configuration and destination/s
- Ability to support lunar surface missions
GER backup
Detail on GER Goals and Objectives

Common Goals and Objectives

The Global Exploration Roadmap is driven by a set of goals and supporting objectives that reflect commonality while respecting each individual agency’s priorities. They demonstrate the rich potential for exploration of each of the target destinations, delivering benefits to people on Earth. The definitions listed below remain largely unchanged and demonstrate the synergy between science and human exploration goals and objectives.

Develop Exploration Technologies and Capabilities
Develop the knowledge, capabilities, and infrastructure required to live and work at destinations beyond low-Earth orbit through development and testing of advanced technologies, reliable systems, and efficient operations concepts in an off-Earth environment.

Engage the Public in Exploration
Provide opportunities for the public to engage interactively in space exploration.

Enhance Earth Safety
Enhance the safety of planet Earth by contributing to collaborative pursuit of planetary defense and orbital debris management mechanisms.

Extend Human Presence
Explore a variety of destinations beyond low-Earth orbit with a focus on continually increasing the number of individuals that can be supported at these destinations, the duration of time that individuals can remain at these destinations, and the level of self-sufficiency.

Perform Science to Enable Human Exploration
Reduce the risks and increase the productivity of future missions in our solar system, characterizing the effect of the space environment on human health and exploration systems.

Perform Space, Earth, and Applied Science
Engage in science investigations of, and from, solar system destinations and conduct applied research in the unique environment at solar system destinations.

Search for Life
Determine if life is or was present outside of Earth and understand the environments that support or supported it.

Stimulate Economic Expansion
Support or encourage provision of technology, systems, hardware, and services from commercial entities and create new markets based on space activities that will return economic, technological, and quality-of-life benefits to all humankind.
