- Informatics
- Earth Science Informatics (ESI)
- IEEE GRSS
- ESI Technical Committee
- Major “players” in the world
- NASA’s involvement – Earth Observing System Data and Information System (EOSDIS)
- Conclusion
NASA’s Earth Science Data Systems

“Advance understanding of Earth and develop technologies to improve the quality of life on our home planet.” -- 2014 NASA Strategic Plan

NASA’s Earth Science Data Systems Program directly supports this strategic goal by providing end-to-end capabilities to deliver data and information products to users.

NASA’s Earth Science Data and Information Policy promotes usage of data by the community:

- In effect since 1990
- No period of exclusive access - Data are available after initial checkout
- Data available at no cost to all users on a non-discriminatory basis except where agreed upon with international partners
Core Capabilities and Competed Programs

■ Core Capabilities
  ➢ Basic operational capabilities to process, archive, manage and distribute data from NASA missions
    ❖ Earth Observing System Data and Information System (EOSDIS)

■ Competitive Programs
  ➢ Peer-review-selected projects
  ➢ New data products – Making Earth System Data Records for Use in Research Environments (MEaSUREs)
  ➢ Research in Earth Science Informatics to feed into the evolution of the core components
    ❖ Applied Information Systems Technology (AIST)
    ❖ Advancing Collaborative Connections for Earth System Science (ACCESS)

■ Core and Competitive Programs collaborate through Earth Science Data System Working Groups (ESDSWG)
Earth Observing System Data and Information System (EOSDIS)

- Development and operation by Earth Science Data and Information System (ESDIS) Project – NASA Goddard Space Flight Center
- Operating since August 1994
- Provides end-to-end capabilities for managing NASA’s Earth science data.
  - Science Operations
    - Science data processing
    - Data management
    - Interoperable distributed data archives
    - On-line data access services
    - Earth science discipline-oriented user services
  - Network Data Transport to distributed system elements
Earth Observing System Data and Information System (EOSDIS)

Applications
Education

Users
Extensive Data Collection

> 11,000 data types (collections)

- Land
  - Cover & Usage
  - Surface temperature
  - Soil moisture
  - Surface topography

- Atmosphere
  - Winds & Precipitation
  - Aerosols & Clouds
  - Temperature & Humidity
  - Solar radiation

- Ocean
  - Surface temperature
  - Surface wind fields & Heat flux
  - Surface topography
  - Ocean color

- Cryosphere
  - Sea/Land Ice & Snow Cover

- Human Dimensions
  - Population & Land Use
  - Human & Environmental Health
  - Ecosystems

Global Net Primary Productivity

Net Primary Productivity is the amount of carbon absorbed by plants minus carbon released by plants, measured in grams of carbon per square meter per day. Image shows the averages over October 2016, globally. Credits - Image made by Reto Stockli, NASA's Earth Observatory Team, using data provided by the MODIS Land Science Team. 
(http://neo.sci.gsfc.nasa.gov/servlet/RenderData?si=1709924&cs=rgb&format=JPEG&width=720&height=360)
At the top of the atmosphere (TOA), incoming and outgoing radiation determine Earth’s average temperature. This image shows averaged net downward TOA radiation from the Clouds and Earth’s Radiant Energy System (CERES) instrument from 2001 to 2010. The Southern Hemisphere receives more net radiation than the Northern Hemisphere. (Courtesy D. Frierson et al., 2013, Nature Geoscience) – accessed through https://earthdata.nasa.gov/user-resources/sensing-our-planet/rooting-out-rainfall
Aerosol particle sizes – red = small (man made); green = large (natural); yellow = mixed. Map based on data from MODIS instrument on NASA’s Terra satellite. http://earthobservatory.nasa.gov/GlobalMaps/view.php?d1=MODAL2_M_AER_RA
This image of Aquarius sea surface salinity (SSS) measurements averaged for 2012 shows a global color scale of salinity intensity. Warm colors mark stronger salinity values. Values are shown in a range between 30 grams per kilogram (purple) and 40 grams per kilogram (red). (Courtesy N. Kuring/NASA) – accessed through https://earthdata.nasa.gov/user-resources/sensing-our-planet/salt-of-the-sea.
SIPSs perform forward processing of standard products, and reprocess data to incorporate algorithm improvements.
Large & Growing Archive & Distribution Volumes

![Graph showing growth in volumes over fiscal years](image)
Future Archive Growth

[Graph showing the cumulative archive volume in petabytes from 2000 to 2025, with a significant increase in volume after 2020.]
EOSDIS Product files Delivered: FY2000 thru FY2016

NOTE: FY = Fiscal Year; FY 2016 is Oct. 1, 2015 to Sept. 30, 2016
Recent and On-Going Developments (1 of 2)

- Land and Atmosphere Near real-time Capability for EOS (LANCE)
- Coherent Web Interface: [http://earthdata.nasa.gov](http://earthdata.nasa.gov) is operational
  - Provides a unified view of NASA Earth science data system resources
  - Consolidates 14 web sites, and provides links to various ways to access data and to related external sites

- User Registration System & earthdata login – uniform approach to registration across and access to EOSDIS components
Recent and On-Going Developments (2 of 2)

- Global Imagery Browse Services (GIBS)
  - Standards-based, full resolution, interactive browse capability
  - Accessible from http://earthdata.nasa.gov wiki

- Unified Metadata Model and Common Metadata Repository

- Big Earth Data Initiative (BEDI)

- Preservation Content Specification

- Digital Object Identifiers
  - ESDIS Project is a registration authority (prefix 10.5067)
  - DOI’s assigned to > 50% of datasets
Building on existing EOSDIS elements provides data from AIRS, AMSR, MISR, MLS, MODIS, OMI, and VIIRS instruments in near real-time (< 3 hours from observation).

Utilizes software for Standard Science Products, but relaxes requirements for ancillary data inputs.

High operational availability.

Applications of LANCE data include:

- Numerical weather & climate prediction/forecasting
- Monitoring of Natural Hazards
- Disaster Relief
- Agriculture
- Air quality

See: [https://earthdata.nasa.gov/earth-observation-data/near-real-time/about-lance](https://earthdata.nasa.gov/earth-observation-data/near-real-time/about-lance)
Over the four weeks indicated above, >98% of near real-time data requests were satisfied within 3 hours.
EOSDIS Evolution: Earthdata Website

What is the Earthdata Website?
- Sustainable, evolvable, and reliable Website representing community needs for NASA Earth science data and information.
- Supports collaboration within and between organizations, and for development and integration of new applications.
- Coherent and comprehensive Web presence of the Earth Science Data Systems Program.
- See Earthdata at https://earthdata.nasa.gov/.

Benefits of the Earthdata Website:
- Better represents EOSDIS programmatic investments and capabilities.
- Presents data centers clearly as elements within a larger system of systems.
- Facilitates multidisciplinary research and data integration.
- Quickly responds to emerging technologies
- Provides a platform for demonstration of interoperability throughout all of our systems.
GIBS / Worldview Goal:
To transform how users interact with and discover NASA Earth data; make it visual.

Approach:
- The Global Imagery Browse Services (GIBS) provide open access to full resolution imagery derived from NASA products to any mapping client and script
  https://earthdata.nasa.gov/gibs
- Worldview is an open source, browser-based client to interactively explore GIBS (and SEDAC) imagery and download the underlying data
  https://worldview.earthdata.nasa.gov
Goal: “Parameter Visualizations” for all EOSDIS Imagery; ~400 products available now

Standardized access via OGC WMTS / TWMS / WMS / KML

Source code for the GIBS OnEarth server and sample code available at the GIBS GitHub site

Repository of pre-prepared, hierarchically stored imagery to maximize performance for “full-resolution” browse

Clients can be built to use and display images in GIBS – WorldView is an example
Worldview: Reference Client for GIBS

http://earthdata.nasa.gov/worldview
http://earthdata.nasa.nasa.gov/gibs
Data Tools

- **Search and Order Tools** (45)
- **Data Handling** (Read/Ingest, Format Conversion, Data Manipulation) (31)
- **Subsetting and Filtering Tools** (Temporal, Spatial, Parameter, Channel) (34)
- **Geolocation, Reprojection, and Mapping Tools** (28)
- **Data Visualization & Analysis Tools** (31)
Preserving NASA Earth Science Data

PRESERVE

Reproducibility of Results
Categories of Content to be Preserved

NASA’s Preservation Content Specification for Earth Science Data

1. **Preflight/Pre-Operations**: Instrument/Sensor characteristics including pre-flight/pre-operations performance measurements; calibration method; radiometric and spectral response; noise characteristics; detector offsets

2. **Science Data Products**: Raw instrument data, Level 0 through Level 4 data products and associated metadata

3. **Science Data Product Documentation**: Structure and format with definitions of all parameters and metadata fields; algorithm theoretical basis; processing history and product version history; quality assessment information

4. **Mission Data Calibration**: Instrument/sensor calibration method (in operation) and data; calibration software used to generate lookup tables; instrument and platform events and maneuvers

5. **Science Data Product Software**: Product generation software and software documentation

6. **Science Data Product Algorithm Input**: Any ancillary data or other data sets used in generation or calibration of the data or derived product; ancillary data description and documentation

7. **Science Data Product Validation**: Records, publications and data sets

8. **Science Data Software Tools**: product access (reader) tools.
Sources of Content

- Instrument Developer/Manufacturer
- Preflight/Pre-Operations
- Data gathering project (e.g., flight project)
- Validation Team
- Ancillary data sources (e.g., NOAA)
- Science Data Product Documentation
- Instrument Teams / PI’s
- Science Data Product Software
- Science Data Products
- DAACs
- Calibration Team
- Mission Data Calibration
- Mission Operations
- Level 0 Data
- Science Data Product Validation
- Science Data Software Tools
- Mission logs
- Preflight/Pre-Operations
- Science Data Product Algorithm Input
- Science Data Products
- Product Generation Support Teams (SIPSs)
EOSDIS Technology Improvements and System Evolution

Lessons learned and information technology advances coupled with advice/comments from community supports a continuously evolving data system with growing capabilities.
Earth Science Data System Working Groups

- Focus on exploration and development of recommendations derived from pertinent community insights
- Organized around key technology and information system issues
- Members from NASA-funded core and competed data system activities

Earth Science Information Partners (ESIP)

- Established by NASA in 1998 – now sponsored by NASA, NOAA and USGS
- > 120 members – government agencies, universities, commercial entities
Examples of ESIP and NASA ESDSWG Activities

**ESIP Collaboration Areas**
- Cloud Computing
- Documentation
- Information Quality
- Discovery
- Web Services
- Earth Science Data Analytics
- VR/AR for Science
- Earth Sciences Pre-Prints
- Data Stewardship
- Data Management Training
- Semantic Technologies
- Usability

**NASA ESDS Working Groups**
- Cloud Computing
- Data Intensive Architectures
- Time Series
- Map Projections
- Data Quality
- Airborne Data & Metadata
- Search Relevance
- Dataset Interoperability
- Geospatial Web Services
- Data Recipes
- Visualization
- Users Forum
- Digital Object Identifiers & Citations
- Preservation Practices
- Provenance

**Observe**
- Process
- Archive
- Discover
- Access
- Analyze/Visualize
- Publish
- Preserve
Conclusion

- Earth Science Informatics is a rapidly developing discipline
- Many organizations around the world are actively pursuing ESI R & D
- Considerable commonality of interests among these organizations
- IEEE GRSS ESI TC, ESIP Federation, Research Data Alliance (RDA) are examples of groups promoting collaboration
