Vision - Exploring Space In Partnership

Now
Using the International Space Station

Operating in the Lunar Vicinity (proving ground)

2020s
Leaving the Earth-Moon System and Reaching Mars Orbit

2030s
Advancing technologies, discovery and creating economic opportunities

Phase 0
Solve exploration mission challenges through research and systems testing on the ISS. Understand if and when lunar resources are available

Phase 1
Conduct missions in cislunar space; assemble Deep Space Gateway and Deep Space Transport

Phase 2
Complete Deep Space Transport and conduct Mars simulation mission

Phases 3 and 4
Missions to the Mars system, the surface of Mars

After 2030
NASA’s Journey to Mars

Space Pioneering: Achieving Earth Independence
Challenges of “Living on Mars”

- Transportation (to/from the surface)
- Radiation Protection
- Food
- Water
- Shelter
- Energy Production
- Oxygen Production
- Improved Communications
What does your Vision of “Living on Mars” look like?

Purpose
- Commercial
- Government
- Vacation
- Industry
- Species Survival
- Other?

Scale
- Outpost
- Community
- City
- Nation(s)
Learning Outcomes

Technical
- Challenge and risk analysis related to operations on Mars
- Government Deep space architecture elements
- Technical challenges and risks for ‘Living on Mars’
- NASA operational plans to support Mars Missions
- Technical aspects of in-situ resource utilization related to operations on Mars

Gap Analysis
- Interdisciplinary team skills to quickly define a vision
- Identify gap between vision and current Technology Readiness Level (TRL)
- Identify One Key Development as critical to enabling vision
NASA plans
Human Space Exploration Phases From ISS to the Surface of Mars as of November 2016

Today

Phase 0: Exploration Systems **Testing on ISS**

Phase 1: **Cislunar Flight Testing** of Exploration Systems

- Ends with testing, research and demos complete*
- Asteroid Redirect-Crewed Mission Marks Move from Phase 1 to Phase 2

Phase 2: **Cislunar Validation** of Exploration Capability

- Ends with one year crewed Mars-class shakedown cruise

Phase 3: Crewed Missions Beyond Earth-Moon System

Phase 4a: Development and robotic preparatory missions

Phase 4b: Mars Human Landing Missions

* There are several other considerations for ISS end-of-life

Planning for the details and specific objectives will be needed in ~2020

Mid-2020s 2030
International Space Station
Deep Space Gateway Functionality

• Assumptions
  • Deep Space Gateway provides ability to support multiple NASA, U.S. commercial, and international partner objectives in Phase 1 and beyond
  • The Gateway is designed for deep space environments
    • Supports (with Orion docked) crew of 4 for total mission up to 42 days
    • Supports buildup of the Deep Space Transport
    • Open trade for compatibility for operations in Low Lunar Orbit

• Emphasis on defining early Phase 1 elements
  • Gateway Power Propulsion Bus
  • Gateway Habitat
  • Logistics Strategy

• Future work to refine later elements; early feasibility trades complete
  • Airlock
  • Deep Space Transport
Deep Space Transport Functionality

• Assumptions
  • Deep Space Transport provides habitation and transportation needs for transporting crew into deep space including supporting human Mars-class missions
  • The Transport system life will be designed for:
    • Reused for 3 Mars-class missions with resupply and minimal maintenance
    • Crew of 4 for 1,000 day-class missions in deep space
    • Launched on one SLS 1B cargo vehicle - resupply and minimal outfitting to be performed in cis-lunar space

• Emphasis on supporting shakedown cruise by 2029
  • Shakedown cruise to be performed in lunar vicinity
  • Utilizes deep space interfaces and common design standards

• Future work trades
  • Shakedown cruise objectives
  • Mars reference mission functional requirements
How are we leading future human exploration?

- Maximizing utilization of the International Space Station
- Actively promoting LEO commercialization
- Resolving the human health and performance challenges
- Expanding partnerships with commercial industry
- Growing international partnerships
- Building the critical *Deep Space Infrastructure*
- Enabling the capabilities to explore multiple destinations
International Space Exploration Coordination Group
International Space Exploration Coordination Group (ISECG)
International Space Exploration Coordination Group

Need: Coordinate multiple Space Agencies to achieve a shared vision of coordinated human and robotic space exploration focused on Solar System destinations where humans may one day live and work.

Benefits:
• Scientific Knowledge
• Sustained Human Presence
• Expand Economic Influence
• Global Partnership
• Inspiration & Education

Goals:
• Search for Life
• Extend Human Presence
• Develop Exploration Technologies and Capabilities
• Perform Science to Support Human Exploration
• Stimulate Economic Expansion
• Perform Space, Earth, and Applied Science
• Engage the Public in Exploration
• Enhance Earth Safety
Objective: Destination specific Objectives were developed by ISECG, reference ISECG website

Mission: Develop Global Exploration Roadmap (GER) as a Reference Architecture

- GER 1.0 released Sept 2011
- GER 2.0 released August 2013
- GER 3.0 under development
- [https://www.globalspaceexploration.org/](https://www.globalspaceexploration.org/)
The Global Exploration Roadmap outlines the following Human Exploration Preparatory Activities to extend our presence into the solar system:

- Use of the ISS for Exploration
- Robotic (precursor) Missions
- Advanced Technology Development
- Development of New Space Systems and Infrastructure
- Analogue Activities
- Managing Health and Human Performance Risks
Capabilities and Enablers
Spaceport Evolution at KSC

Spaceport models like Kennedy Space Center are changing toward airport-like operations that include government and commercial interests.
Spaceports are getting planned by architects and city planners for these multiple interests. Includes:

- Administrative Areas
- Transportation
- Recreation
- Utilities
- Public Outreach
- Central Campus
- Horizontal and Vertical Launch and Landing Facilities
- Operational Buffers
- Notional Growth Areas Identified
These planning lessons apply not only at KSC but at spaceports all over the world. And they will apply to destination spaceports as well.

Notional image of spaceports around the world from https://integratedspaceanalytics.com/cms/portal/spaceports
Legal Framework

• Fundamental principles – Concept of space as the province of all humankind, the freedom of exploration and use of outer space by all states without discrimination, and the principle of non-appropriation of outer space.

• The primary goals of space law are to ensure a rational, responsible approach to the exploration and use of outer space for the benefit and in the interests of all humankind.

• United Nations Office for Outer Space Affairs (NOOSA) Space Law

• Space Treaties & Principles
Legal Framework
Utilization of Space Resources

• Recovery and Utilization of Space Resources – Scientific vs Commercial (Profit)

• 1967 OST (widely ratified) & 1979 Moon Agreement (poorly ratified)

• Differing views in OST Interpretation – Article 1 right to utilize resources for private commercial use consistent/not consistent for celestial bodies

• Further detailed information from UNOOSA, Legal Subcommittee 56th Session April 2017, Legal Models Utilization of Space resources

Space Resource Regulation

TITLE IV—SPACE RESOURCE EXPLORATION AND UTILIZATION

_Space Resource Exploration and Utilization Act of 2015_

(Sec. 402) The bill directs the President, acting through appropriate federal agencies, to:

- facilitate the commercial exploration for and commercial recovery of space resources by U.S. citizens;
- discourage government barriers to the development of economically viable, safe, and stable industries for the commercial exploration for and commercial recovery of space resources in manners consistent with U.S. international obligations; and
- promote the right of U.S. citizens to engage in commercial exploration for and commercial recovery of space resources free from harmful interference, in accordance with such obligations and subject to authorization and continuing supervision by the federal government.

A U.S. citizen engaged in commercial recovery of an asteroid resource or a space resource shall be entitled to any asteroid resource or space resource obtained, including to possess, own, transport, use, and sell it according to applicable law, including U.S. international obligations.

(Sec. 403) It is the sense of Congress that the United States does not, by enactment of this Act, assert sovereignty or sovereign or exclusive rights or jurisdiction over, or ownership of, any celestial body.
Commercial Engagement

- NASA Next Space Technologies for Exploration Partnerships (STEP) Habitat Systems – Phase 2
  - 6 commercial companies defining architectures for the Deep Space Gateway
  - Phase 3 Solicitation ~2019 for flight systems
- Commercial Partnerships facilitated through Space Act Agreements
  [https://www.nasa.gov/open/space-act.html](https://www.nasa.gov/open/space-act.html)
- Regulatory Barriers to commercial investment/participation
Biggest challenge to getting to the Vision?

- In-situ Resource Utilization (ISRU) – living off the land using available resources for fuel, life support, etc.
- Food Production - growing plants, fish, etc. and sustaining life using what you bring from Earth
- Human health – radiation damage during transit and at Mars and reduced gravity adaptation
- Cargo upmass and transportation to Mars – cost and availability for supplies from Earth
- Policy – legal and commercial barriers
- Many, many more...

- Distant Retrograde Orbit (DRO): 26-40 days
- Jupiter Direct: 8-21 days
- Multi-TLI Lunar Free Return: 16-26 days
- Near Rectilinear Halo Orbit (NRHO): 26-42 days
- NRHO, w/ ability to translate to/from other cislunar orbits: 26-42 days
- Ability to support science objectives in cislunar space

**Known Parameters:**
- Gateway to architecture supports Phase 2 and beyond activities
- International and U.S. commercial development of elements and systems
- Gateway will translate uncrewed between cislunar orbits

**Open Opportunities:**
- Order of logistics flights and logistics providers
- Use of logistics modules for available volume
- Ability to support lunar surface missions

These essential Gateway elements can support multiple U.S. and international partner objectives in Phase 1 and beyond.

**Known Parameters:**
- DST launch on one SLS cargo flight
- DST shakedown cruise by 2029
- DST supported by a mix of logistics flights for both shakedown and transit
- Ability to support science objectives in cislunar space

**Open Opportunities:**
- Order of logistics flights and logistics providers
- Shakedown cruise vehicle configuration and destination/s
- Ability to support lunar surface missions
