NASA Simulation Capabilities

Aug 7, 2017
ver. 072517b
Simulation Tool Overview

- The Future ATM (Air Traffic Management) Concepts Evaluation Tool (FACET) has provided a core capability to conduct air traffic management research for NASA’s Aeronautics Research Mission Directorate (ARMD) since 2000.

- Under the NASA-CAE agreement, FACET will be adapted to support simulations and analyses of Shanghai Pudong International Airport (IATA: PVG, ICAO: ZSPD) arrival and departure operations.
FACET Overview

- National Airspace System (NAS) - wide simulations and planning on a laptop computer
- Ability to model airspace operations at U.S. national level (~50,000 aircraft per day)
- Alternative navigation modes available
  - Flight Plan Routing
  - Great Circle Routing
  - Wind Optimal Routing
- Software written in ‘C’ and ‘Java’ programming languages
- Can be used for both off-line analyses and real-time applications
Sample of FACET Supported Studies

- “What-if” capabilities for evaluating traffic flow options to avoid bad weather and airspace congestion while minimizing air traffic delays
- Airspace performance metrics using operations data
  - Relationships between traffic, weather and delay
  - Techniques for clustering and data mining to identify similar types of days/operations
- U.S. domestic and Pacific wind optimal routing studies
- Aggregate air traffic flow models
  - Transform collections of similar trajectories into flow streams
  - Linear models with 100-fold order reduction

Sample “what-if” evaluation display
High-level FACET Architecture

- National Weather Service
  - Winds
  - Severe Weather

- Real-time and Historical Air Traffic Data
  - Tracks
  - Flight Plans

- Aircraft Performance Data
  - Climb
  - Descent
  - Cruise

- Adaptation Data
  - Airspace
  - Airways
  - Airports

FACET Core Features

- Route Parser & Trajectory Predictor
- Traffic & Route Analyzer
- User Interface

Sample Applications

- Airborne Self-Separation
- Data Visualization
- Direct Routing Analysis
- Controller Workload
- System-Level Optimization
- Traffic Flow Management
**FACET Inputs**

- **FACET Interface Control Document (ICD)** provides a comprehensive description of the system’s airspace adaptation and air traffic data requirements.

- Airspace adaptation requirements included for navigational aids, waypoints, airways, airport locations, Flight Information Regions (FIRs), sectors, Special Use Airspace (SUA), standard arrival and departure routes and airspace capacities.

- **FACET formatted ASCII air traffic data format** derived from the FAA’s System Wide Information Management (SWIM) data provided.

*Note: FACET ICD is currently being reviewed and will be released shortly.*
FACET Inputs :: Airways Example

<table>
<thead>
<tr>
<th>Airway Identifier</th>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- **TRACK_TIME**: Unix epoch time in seconds since Jan. 1 1970 (midnight UTC/GMT)

- **TRACK**:
  - **NASA1**: aircraft identifier
  - **B772**: aircraft type
  - **375900**: current latitude
  - **835700**: current longitude
  - **516**: ground speed
  - **366**: flight level
  - **69**: heading
  - **ZID**: current center
  - **ZID93**: current sector

- **FP_ROUTE**: KDFW..MEM359067..RBV..RIFLE..ACK..TUSKY..YQX..NATY..LIMRI..DOLIP..CRK..EXMOR..GIBSO..EGKK

- Flight plan route

![Flight Plan Route](image1.png)
FACET Application Programming Interface

- FACET Application Programming Interface (API) enables scripting of FACET functionality from Java, Jython, Matlab, etc.
- Over 600 methods for accessing FACET functionality
FACET Outputs

- Predefined FACET output capabilities provide:
  - Aggregate aircraft counts in FIRs/Centers/Sectors, arrivals, departures and user defined traffic streams
  - Aircraft-level statistics available for displaying aircraft state information (e.g., heading, speed, altitude, etc.) versus time, fuel burn, path distance and length, etc.

- FACET Application Programming Interface (API) provides complete access to all aircraft state information for user defined metrics calculations
