Integrating CCSDS Electronic Data Sheets into Flight Software

Jonathan Wilmot
Jonathan.J.Wilmot@NASA.gov
CCSDS Electronic Data Sheet Definition

• An Electronic Data Sheet (EDS) is a formal specification of a device, system, or software interface in a machine readable format
  – Unambiguous and machine verifiable specification
  – Delivered with the device, system, or software
  – It is not an Interface Control Document (ICD) in that it does not specify how a system or mission will use the device or software
• EDS specifies black box view of interfaces
  – Data formats, conversions, limits, exchange protocols, and state machines, ...
• A CCSDS Spacecraft Onboard Interface Services (SOIS) EDS (SEDS) is an EDS defined using the SOIS Dictionary of Terms and the SOIS EDS XML schema
  – Electronic Data Sheets and Common Dictionary of Terms - Overview and Rationale (Green 870.1)
  – XML Specification for Electronic Data Sheets for Onboard Devices and Software Components (Magenta 876.0)
  – Specification for Dictionary of Terms for Electronic Data Sheets for Onboard Components (Blue 876.1)
  – SEDS schema and dictionary of terms are keep in SPACE ASSIGNED NUMBER AUTHORITY(SANA) REGISTRY http://sanaregistry.org/r/sois/sois.html
Device and Software Component EDS

Star trackers

Thrusters

Sun sensors

Software tools

Software Component

Software Component

Software Component

Vision: device manufactures provide an EDS with each component

This is a non-ITAR presentation, for public release and reproduction from FSW website.
Use in Early Mission Design

• Automated tools used for device selection based on mission parameters
  – Orbit, lifetime, performance...
• Automated tools can generate system specs and cost estimates
• Mission designers review specs and cost estimates and adjusts mission parameters
• US Air Force Research Lab (AFRL) created prototype tools for this use case, Spacecraft Plug and Play (SPA)

This is a non-ITAR presentation, for public release and reproduction from FSW website.
This is a non-ITAR presentation, for public release and reproduction from FSW website.
Existing and Upcoming/proposed Tools

EDS

- C headers
- ESA TASTE Models
- Device Drivers
- COSMOS Database
- ASIST Database
- XTCE
- JSON
- Simulink Data interfaces

Flight Software
- ITOS Database
- LUA Scripts
- JSC Cmd/Tlm CCDDT
- Component tests
- ITOS Page Displays
- Models Based Systems Engineering tools
- Onboard Control Procedures

This is a non-ITAR presentation, for public release and reproduction from FSW website.
EDS Use in NASA’s core Flight System (cFS) software

Free, open source, reliable flight software

This is a non-ITAR presentation, for public release and reproduction from FSW website.
cFS Overview

- Layered Architecture
- Pub/Sub Messaging
- Common Services
  - Executive
  - Time
  - Message Bus
  - Events
  - Tables
  - Files
- Distributed systems
- Time/Space Partitions

Applications and libraries can be stopped, restarted, removed, and reloaded dynamically at run-time

Go get it at https://cfs.gsfc.nasa.gov/

This is a non-ITAR presentation, for public release and reproduction from FSW website.
cFS Software Component

- Each cFS component will have an associated SEDS
  - cFS AppStore will include both
  - Include in next release (TBR) of cFE and selected applications

- SEDS specifies the data formats, conversions, limits, commands, telemetry, and exchange protocols in terms of the cFS Software Bus
  - Protocols are in terms of command and response state machines

- The SEDS will be included in the component directory structure and be Configuration Managed with the component
EDS Is In Reference To What?

- An EDS is in reference to the “on the wire” spec from the point of view of the publisher
  - The publisher should be able to DMA the in memory representation to the network interface
  - A CFS Component EDS is written in terms of Big (Network) Endianness
- Tools must be developed to convert to other architectures
Standardization along Communication Stack

<table>
<thead>
<tr>
<th>Function</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Software tasks communication</td>
<td>publish/subscribe, etc.</td>
</tr>
<tr>
<td>Data representation (EDS describes)</td>
<td>Counts to units conversion</td>
</tr>
<tr>
<td>Software drivers (EDS describes)</td>
<td>Hardware-to-software I/F</td>
</tr>
<tr>
<td>Box-to-Box comm. Protocols (EDS reference)</td>
<td>SpaceWire; 1553, etc.</td>
</tr>
<tr>
<td>Conn./cable &amp; electrical I/F</td>
<td>9 pin MDM, Cat5, LVDS</td>
</tr>
</tbody>
</table>

Application(s)

- Message Transfer Service
- Device Virtualization Service
- Device Access Service

Data Link

Physical

Current cFS View of SEDS  End to End

This is a non-ITAR presentation, for public release and reproduction from FSW website.
Components and Build Time Parameters

- Each device and software component includes an associated SEDS
- SEDS specifies the data formats, conversions, limits, commands, telemetry, and exchange protocols in terms of the message bus and/or hardware interface
- Some parameter values in the message packet EDS are determined at build time
  - The original component EDS author does not know these values
  - Values are defined in mission deployment files
  - The values will be set by a tool that reads the mission files and creates a software component header file at build time
  - The EDS Schema has mechanisms for this
CCSDS SOIS EDS provides a standard mechanism to exchange interface & data definitions and automate many aspects of system development.

This is a non-ITAR presentation, for public release and reproduction from FSW website.
