¹ NASA Goddard Space Flight Center
² International Fund of Animal Welfare
³ Bureau of Ocean Energy Management
⁴ Catholic University of America
The International Fund for Animal Welfare (IFAW) provided summary records of their responses to Mass Stranded (MS) cetaceans in Cape Cod, Massachusetts.

(Mass Stranding: 2+ animals in proximity, during one tidal cycle, not mother/calf pair)
IFAW MS Event Data
Summary for Cape Cod

Avg Monthly Wind: Stn 44013

Linear Regression w/ One-Month Shift

y = 7.98 x + 0.10

R² = 0.93

12/11/2017

AGU Fall Meeting, OS14A: General Oceanography
Summary

• Avg. monthly aggregated wind correlates strongly with aggregated MS events.
  – Other parameters were investigated for correlation, but none were as strongly correlated.

• Cannot conclude that wind is a factor in MS events based on this data alone.
  – Correlation is not causation.
  – We cannot say that the wind is causing mass strandings.

• Additional data, concepts and alternate approaches are welcome.
